Life is too short to spend rewriting code. VisualAge for Java is the first enterprise-aware, incremental-compile development environment on the planet. It extends the “write once/run anywhere” promise of Java to include “Don’t rewrite what’s already there.” Instead, you visually program extensions to existing server data, transactions or apps – and VisualAge for Java generates the connectivity code to your Java clients. Seeing is believing. Visit www.software.ibm.com/ad/vaj2j, and see why the fastest way to the Web is also the fastest way to the beach.

Take advantage of our \$70 competitive upgrade offer to get VisualAge for Java Professional Edition for only \$29.*

Solutions for a small planet™
