

*“With Visual Warehouse from IBM,
we can build an application
faster than we can talk about it.”*

–Jim Sutter, Senior Data Administrator, Ryder® System, Inc.

How fast are we talking here? IBM's Visual Warehouse™ can be up and running in *days*. This quick-start package has everything you need to tap all major databases on the back end, and run your software of choice on the front end. All the “middleware,” including DB2® Universal Database for Windows NT™, is integrated right out of the box, sparing techs months of work vs. any competitive product. Actually, since the difference in cost is just as dramatic, there really aren't any competitive products. As you'll see when you visit www.software.ibm.com/vwarehouse to download the free demo. Better yet, to reach the people who can make Visual Warehouse happen for real, e-mail us at vw@vnet.ibm.com.

Solutions for a small planet™
