IBM dashDB Services

Accelerate your deployment of a cloud-based infrastructure for warehousing and analytics

IBM dashDB™ is a fast, fully managed, cloud data warehouse that leverages integrated analytics to deliver answers --- fast! dashDB provides the simplicity of a data warehouse appliance with the agility and flexibility of the cloud for any size organization. Powered by in-memory database technology, users will experience a powerful, simple, and agile cloud solution for running analytics queries.

Highlights:

- Leverage IBM technology and expertise to quickly implement a powerful, agile data warehousing and analytics solution on the cloud

- Quickly take advantage of the built-in analytics to analyze data to get more precise insights

- Leverage proven practices and tools to accelerate data movement

- Build dashDB skills quickly and effectively with expert advice and knowledge transfer directly from our experienced consultants

What we offer

Our Analytics Services team has a number of services which can accelerate your adoption of this new exciting technology. Any client looking for rapid prototyping and deployment of a data warehouse and analytics service on the cloud will benefit from these services.

IBM dashDB QuickStart

We will help you implement the foundation for an IBM dashDB solution. This offering will include an introduction to dashDB and its architecture, how to create and load database data objects, how to administer dashDB, the tools and interfaces available and other relevant topics. At the conclusion of the engagement, you will have a functioning dashDB environment, including client data loaded.

Data Movement from IBM DB2 to IBM dashDB

We will help you leverage your existing data warehouse, by helping you to move data from an existing IBM DB2® data warehouse to IBM dashDB. This offering includes the database data objects but does not include stored procedures, user functions, ETL or the re-design of the new solution. Inclusion of such items in the project content will require those activities to be scoped separately. This cost effective service offering will help to move data as quickly as possible and get you up and running with your first application.

Data Movement from IBM PureData® System for Analytics to IBM dashDB

We will help you leverage your existing data warehouse appliance, by helping you to move database data objects from an existing IBM PureData System for Analytics, powered by Netezza technology, appliance data warehouse to IBM dashDB. This cost effective service offering will help to move data as quickly as possible and get you up and running.

Custom projects

Our technical experts will support your existing data warehouse and analytics service on the cloud solution or any other type of custom project you may have.

Your independence is our greatest success

Nothing is more important than transferring IBM expert knowledge to your organization. This provides long-term self-sufficiency through a mentored approach.

Engage today

With a world-wide team of highly trained professionals, the IBM Analytics services team can help build your solution with confidence while assuring that the business needs and expectations of your organization are met.

Our experts are ready to assist your organization with:

- Establishing project goals and expectations
- Maximizing the return on your investment
- Reducing project delivery times, complexity and risk through the delivery of proven offerings
- Reducing total cost of ownership
- Information sharing through our mentoring approach

Available for any delivery approach, the IBM Analytics services team will produce results quickly, and will help to put your project on the road to success.
