About Sellegi Technologies

Sellegi

Sellegi Technologies focus is to help companies scale their agile and lean efforts with training, consultancy and tools.

- ▶ Sellegi offers tools, services and training for complex projects with top of the line experts in the areas
 - ways of working
 - agile and lean development
 - automated information analysis
 - tool integrations
- ▶ Sellegi ACT is an agile tool for portfolio and program management
- ▶ Sellegi Technologies is a tooling and service partner to Scaled Agile Inc

SCALED AGILE PARTNERS

Agenda

- DevOps Planning Scenarios
- SAFe Overview
- Program Information Flow
- Consistent Prioritization
- References

DevOps Business Pain Points

- **Inability to** **Slow** needs and changes become a bottleneck for new applications, processes, technologies, and tooling
- **Unremarkable** **Hard to use** value stream becomes fragmented, needs are lost in translation from business planning to deployment
- **Unintended** **Broken** release delivery due to inability to integrate

Addressing Business Pain Points

How do we track delivery of value to our customers across multiple inter-dependent teams??

Empower Program Delivery

- Synchronize program-wide changes with **multi-level planning**
- Accelerate delivery of value with **joined application delivery pipeline** in synchronized Agile Release Trains
- Focus on delivery of value through **customer & delivery analytics**

Key Scenarios – Deliver Corporate Initiative

Sub-Scenarios	Core Solution	Roles
#&@\$! Happens	Synchronize program-wide changes and roadmap with multi-level planning	<ul style="list-style-type: none">• Program Management Team• Enterprise IT Architect• Execution Teams• Business Owner
Implement and Deploy the #&@\$!	Accelerate delivery of value with comprehensive Multi level planning application delivery pipeline in synchronized Agile Release Trains	<ul style="list-style-type: none">• Program Management Team• Enterprise IT Architect• Execution Teams
Why isn't the #&@\$! Getting to Customers?	Focus on delivery of value through customer & delivery analytics	<ul style="list-style-type: none">• IT Director• Lean Improvements Team

 Drive Results.

SAFE OVERVIEW

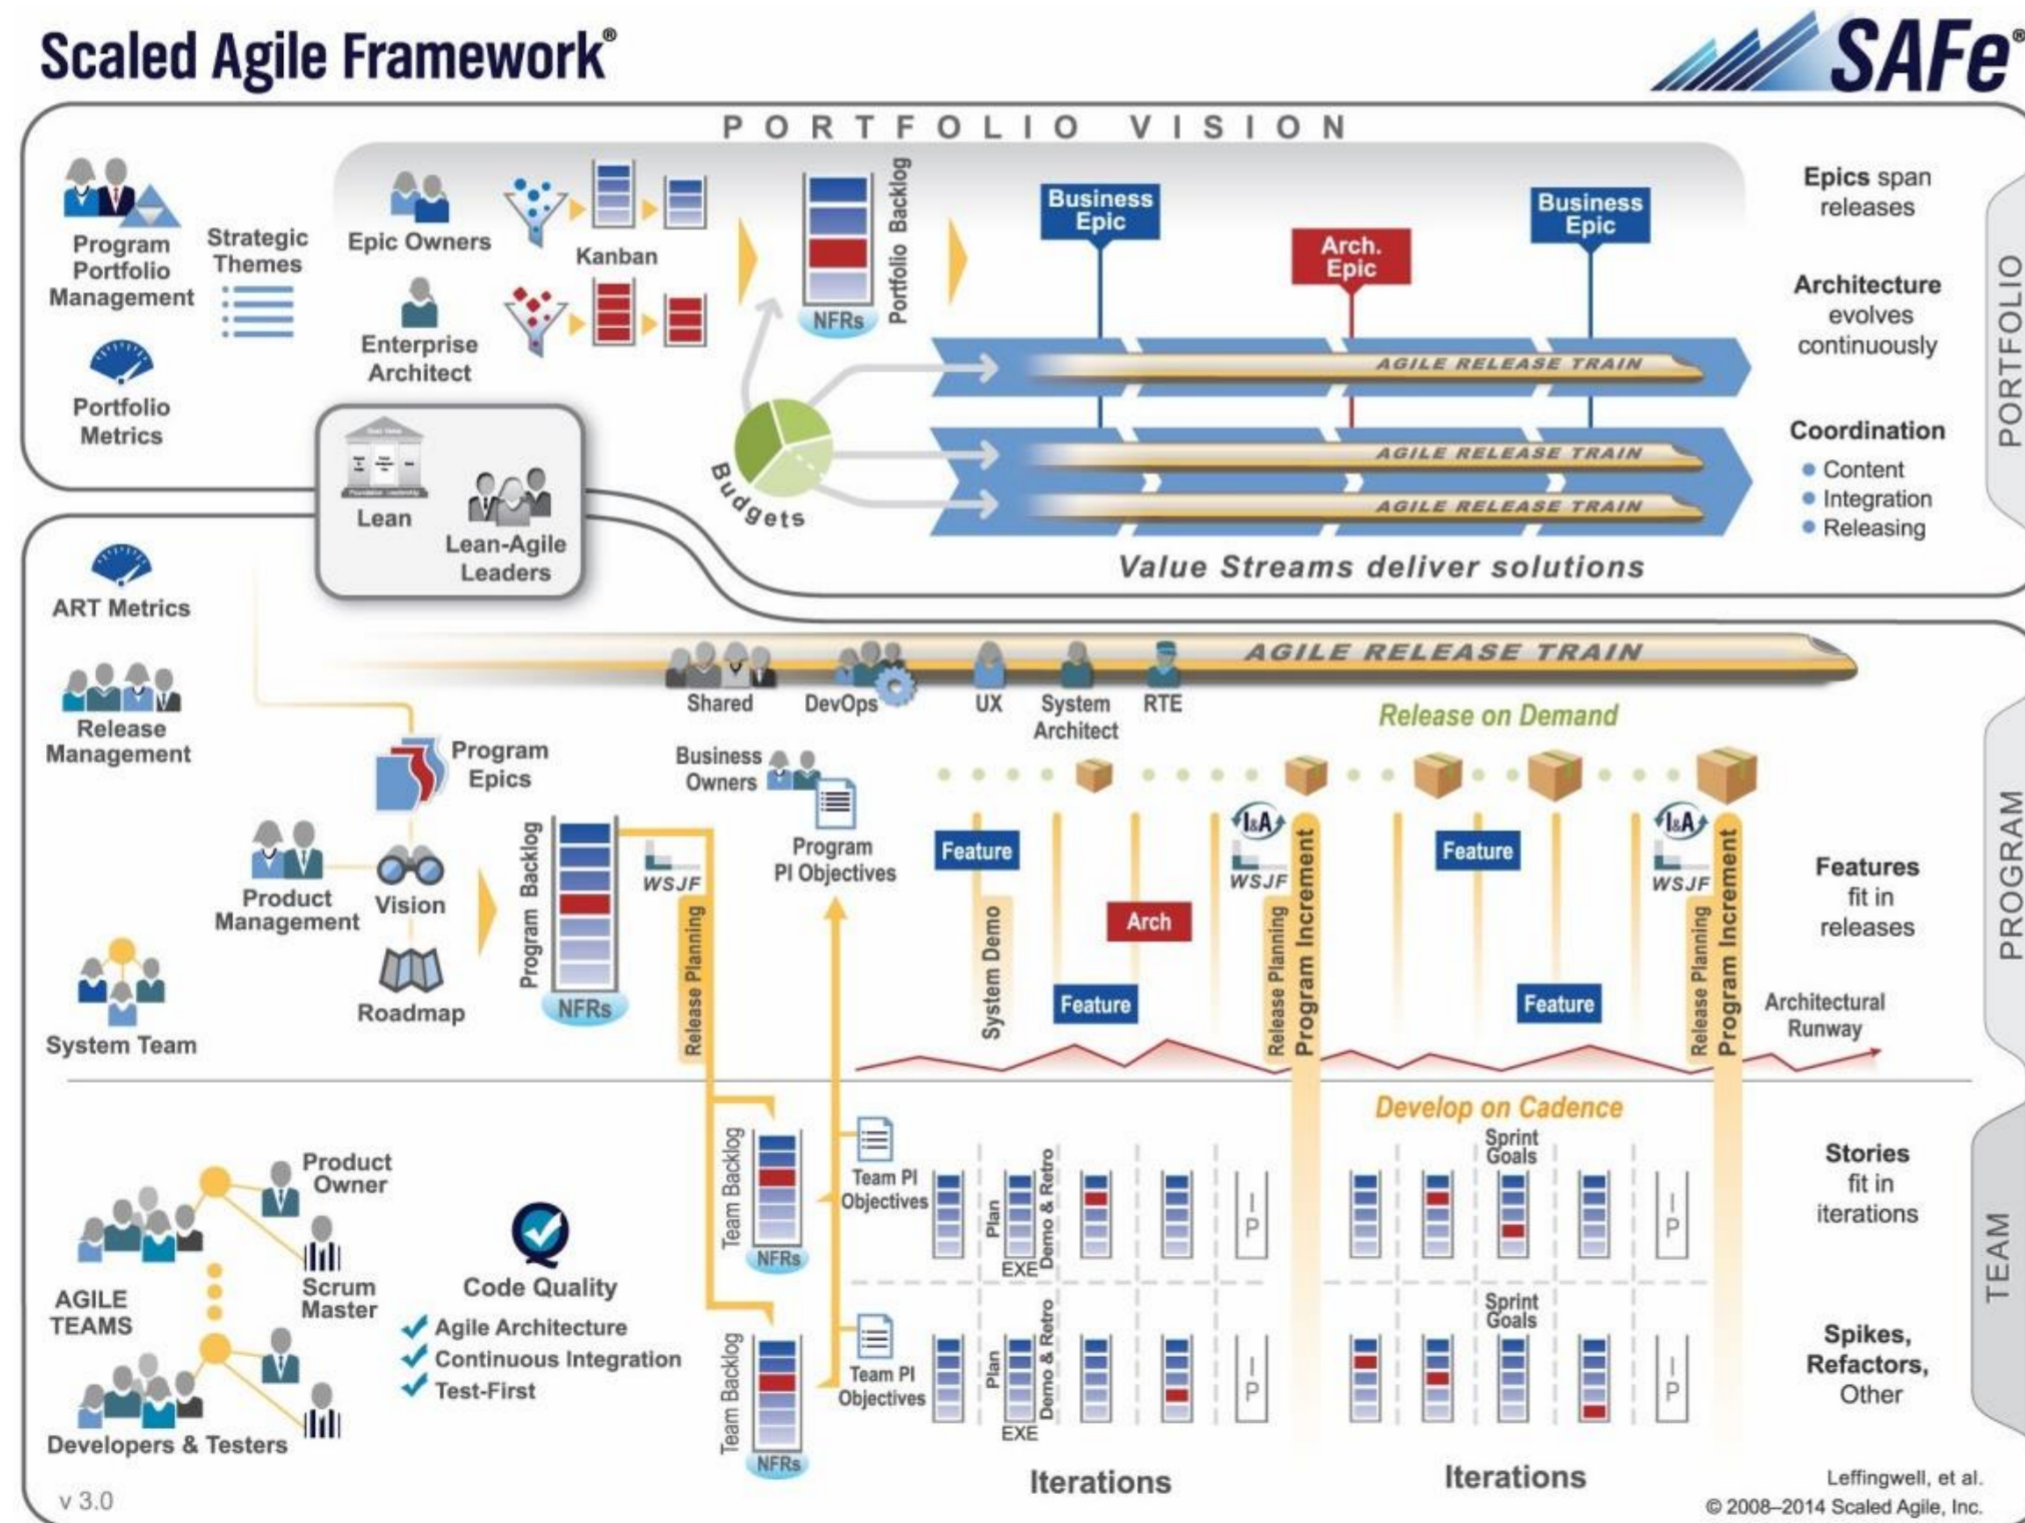

IBM

RUC2014
Rational User Conference
8

The Scaled Agile Framework (SAFe)

A proven, publicly-facing framework for applying Lean and Agile practices at enterprise scale

CORE VALUES

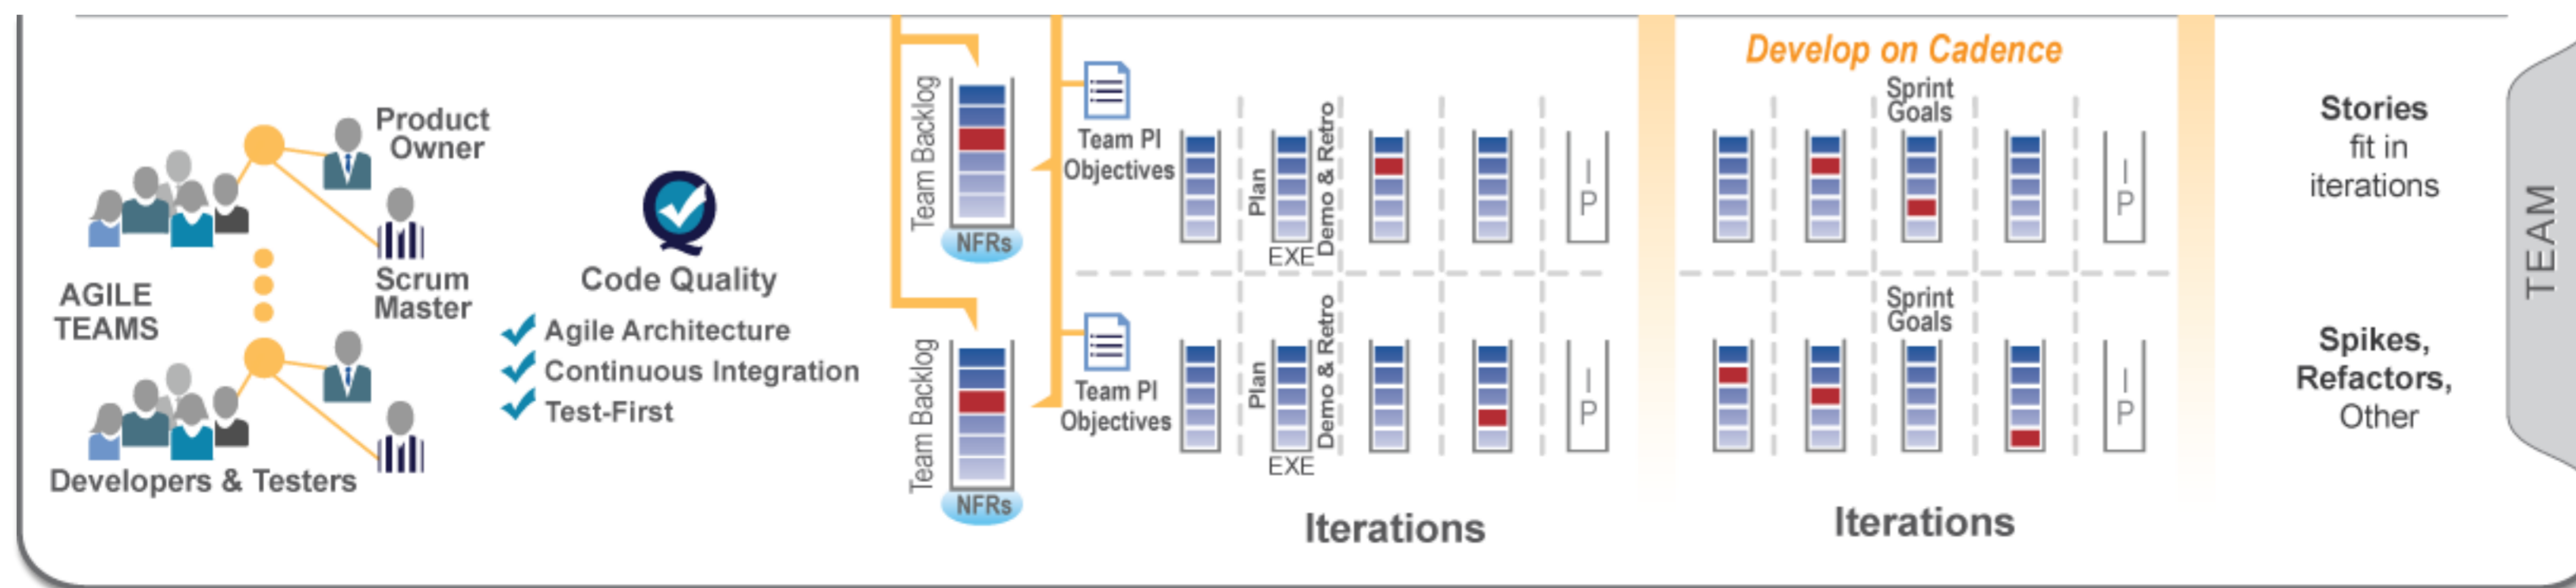

1. Program Execution
2. Alignment
3. Code Quality
4. Transparency

Synchronizes alignment, collaboration and delivery for large numbers of teams

ScaledAgileFramework.com

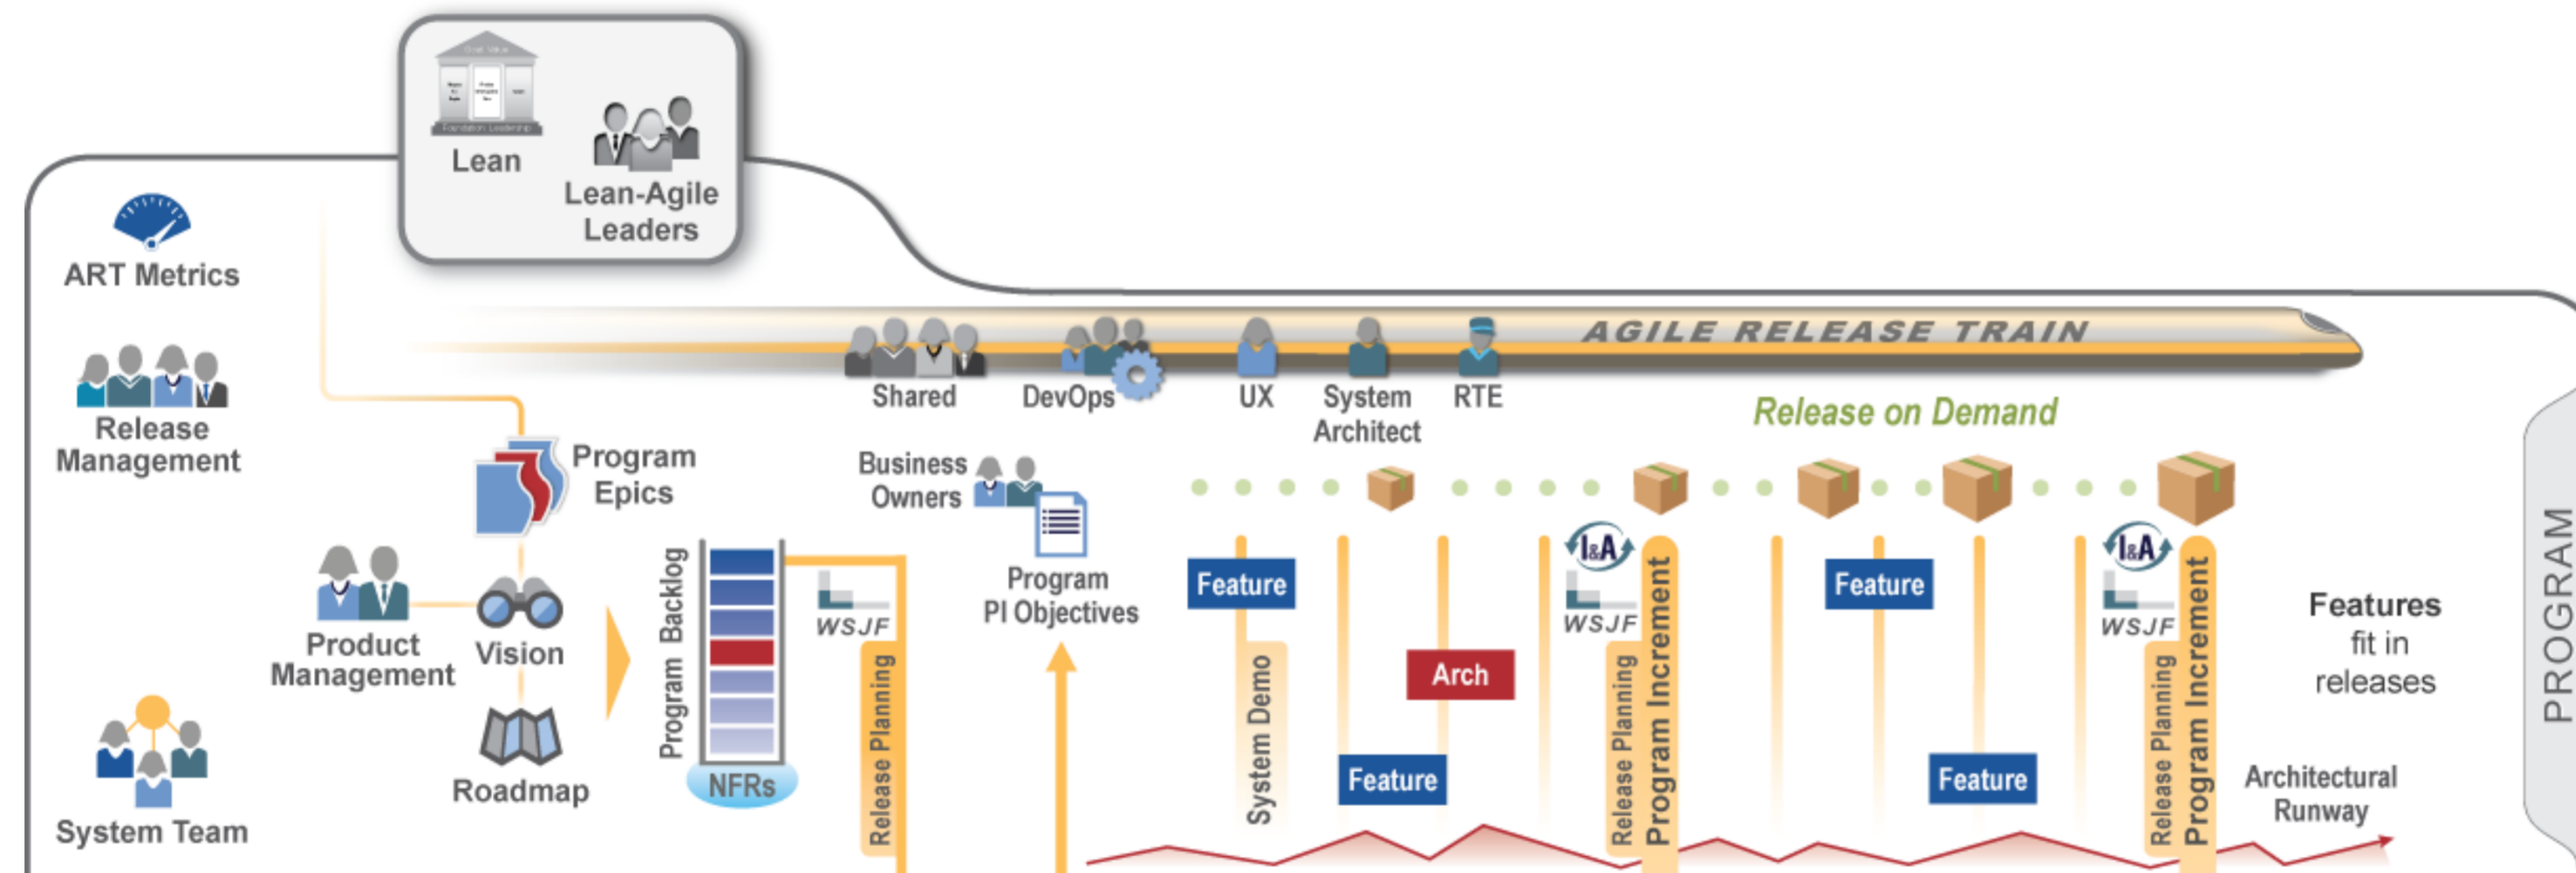

Nothing Beats an Agile Team

- ▶ Valuable, fully-tested software increments every two weeks
- ▶ Empowered, self-organizing, self-managing cross-functional teams
- ▶ Teams operate under program vision, architecture and user experience guidance
- ▶ Scrum project management and XP-inspired technical practices
- ▶ Value delivery via **User Stories**

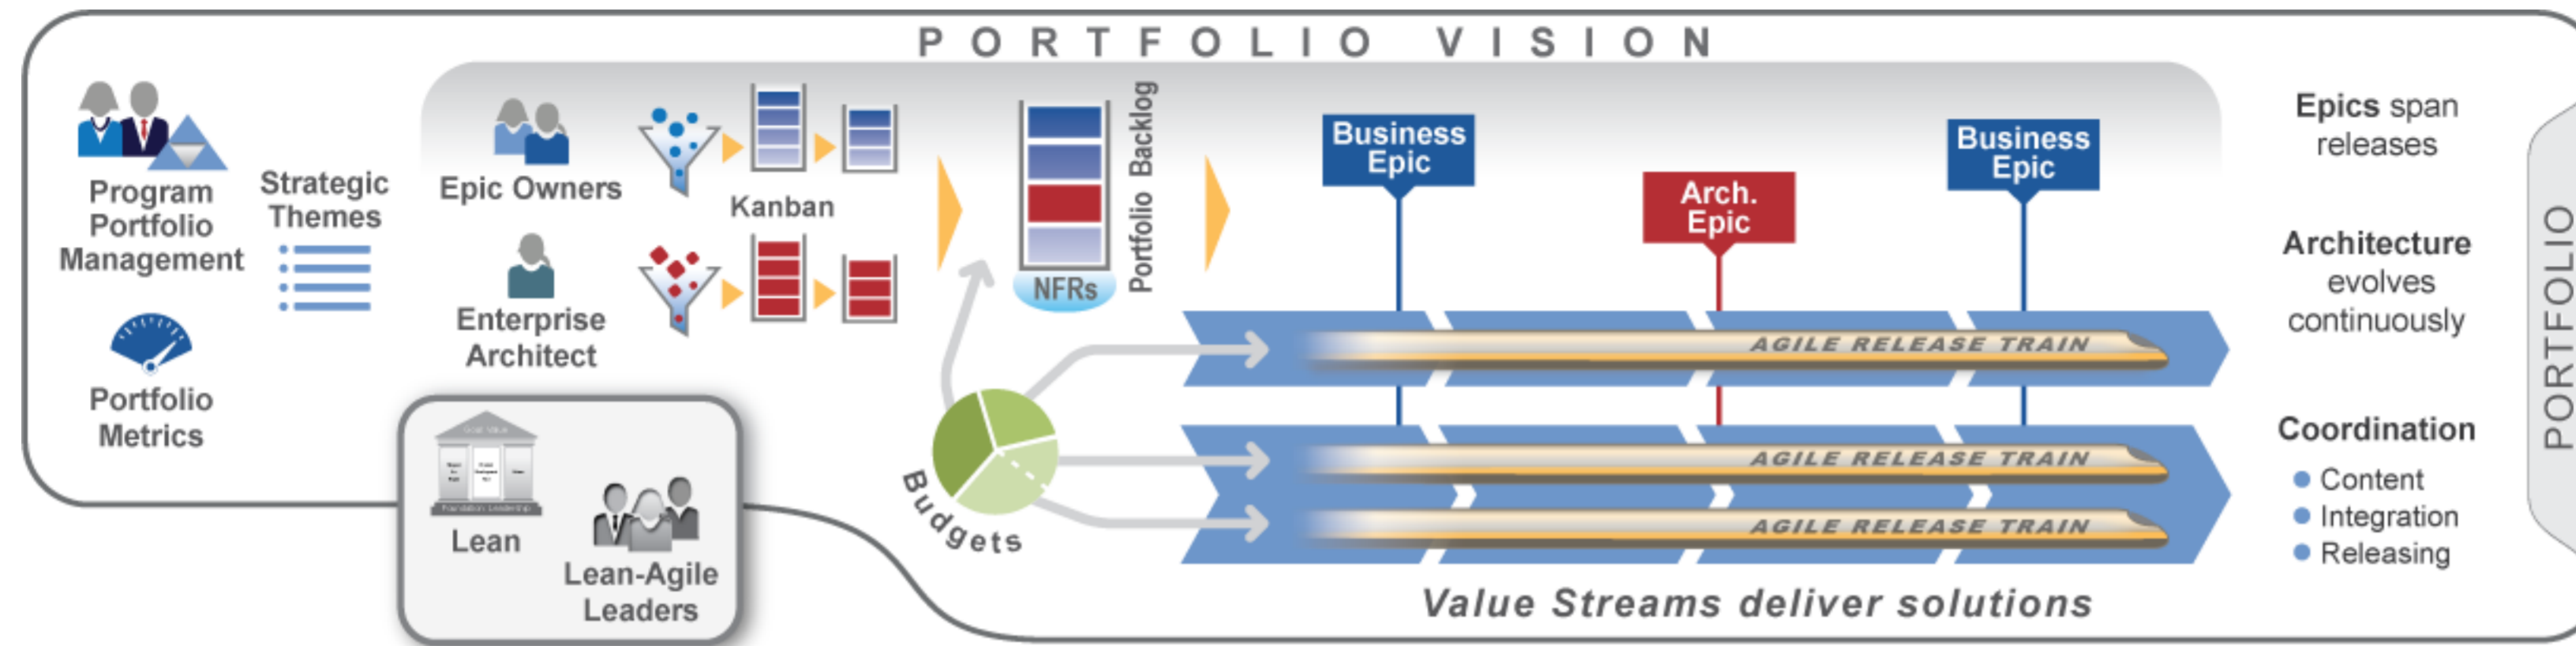

Scale to the Program Level

- ▶ Self-organizing, self-managing team-of-agile-teams
- ▶ Working, system increments every two weeks
- ▶ Aligned to a common mission via a single backlog

- ▶ Common sprint lengths and estimating
- ▶ Face-to-face release planning cadence for collaboration, alignment, synchronization, and assessment
- ▶ Value Delivery via **Features and Benefits**

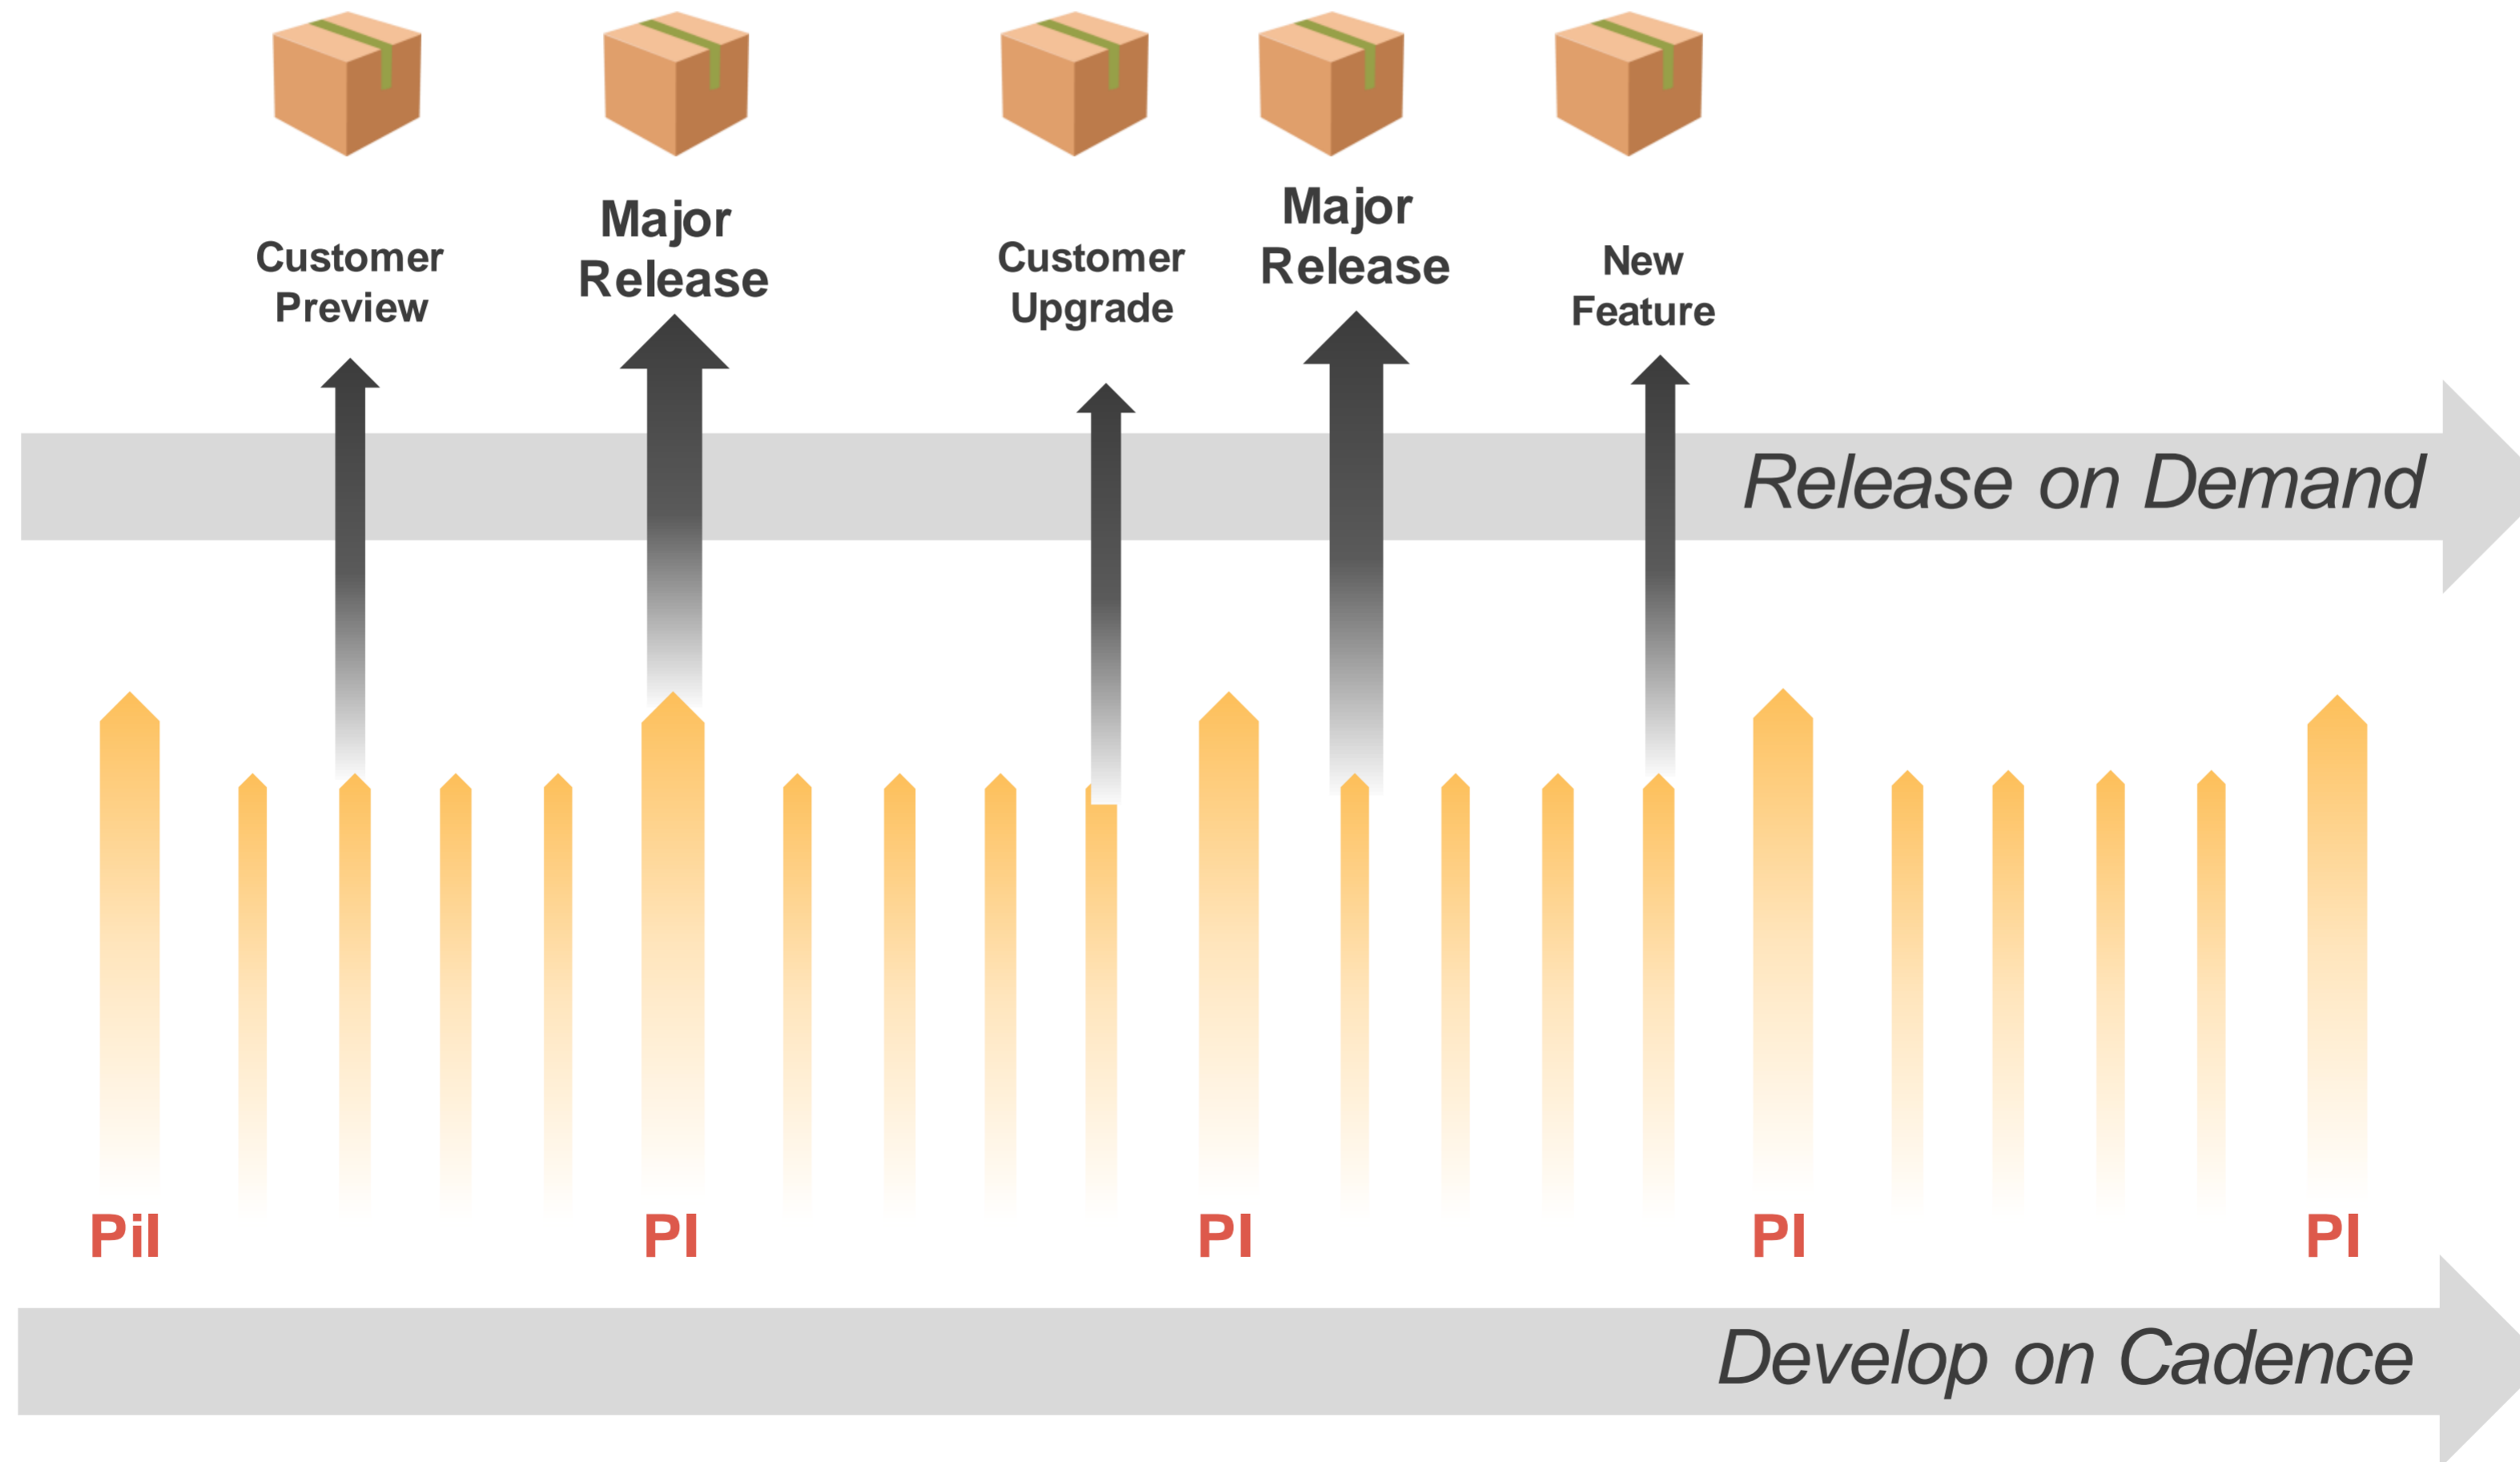

Scale to the Portfolio

- ▶ Centralized strategy, decentralized execution
- ▶ Lean-Agile budgeting empowers decision makers
- ▶ Kanban systems provide portfolio visibility and WIP limits
- ▶ Enterprise architecture is a first class citizen
- ▶ Objective metrics support governance and kaizen
- ▶ Value description via **Business** and **Architectural Epics**

Develop on Cadence. Release on Demand.

Development occurs on a fixed cadence.
The business decides when value is released.

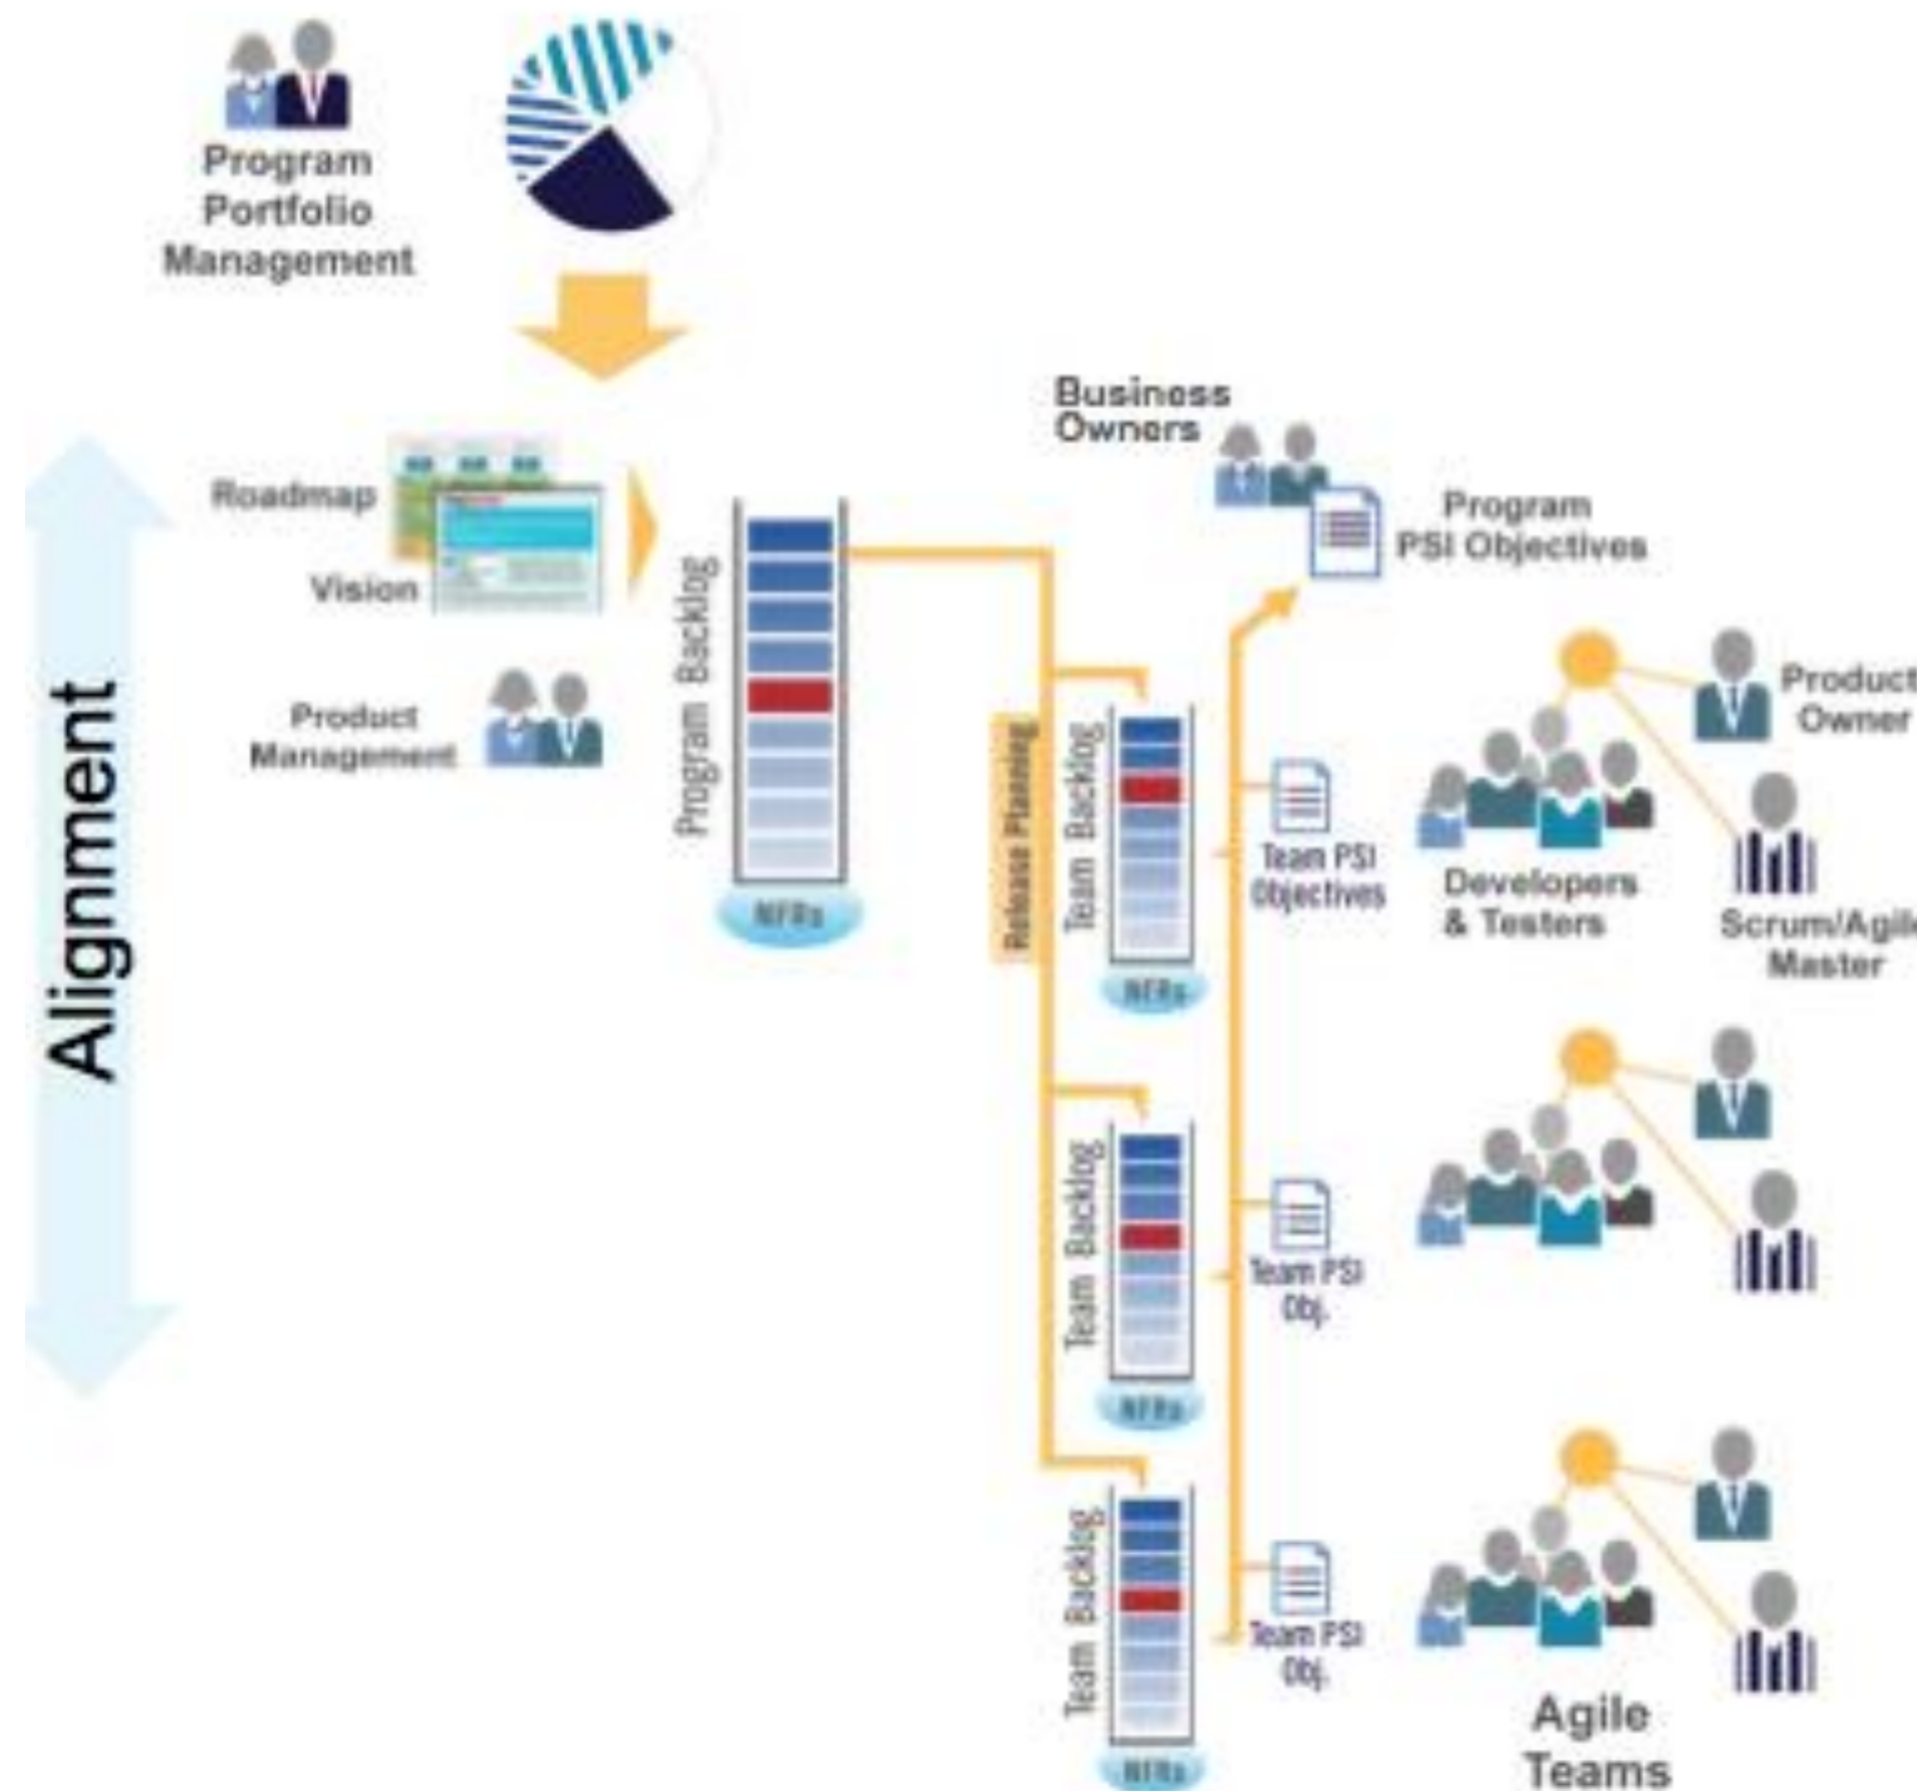

Transparency builds confidence, alignment and trust

- ▶ All backlog and progress visible to all stakeholders
- ▶ Objective reporting based on working, tested, evaluated code
- ▶ Evereveryone understands backlog, capacity, velocity, WIP
- ▶ Managements leads and fosters open environment

Alignment

“There is more value created with overall alignment than with local excellence.” – D. Reinertsen

- ▶ Clear content authority
- ▶ Face to face planning
- ▶ Aligned Team, Program and Business owner objectives
- ▶ Cross-team and cross-program coordination
- ▶ Architecture and UX guidance
- ▶ Match demand to throughput

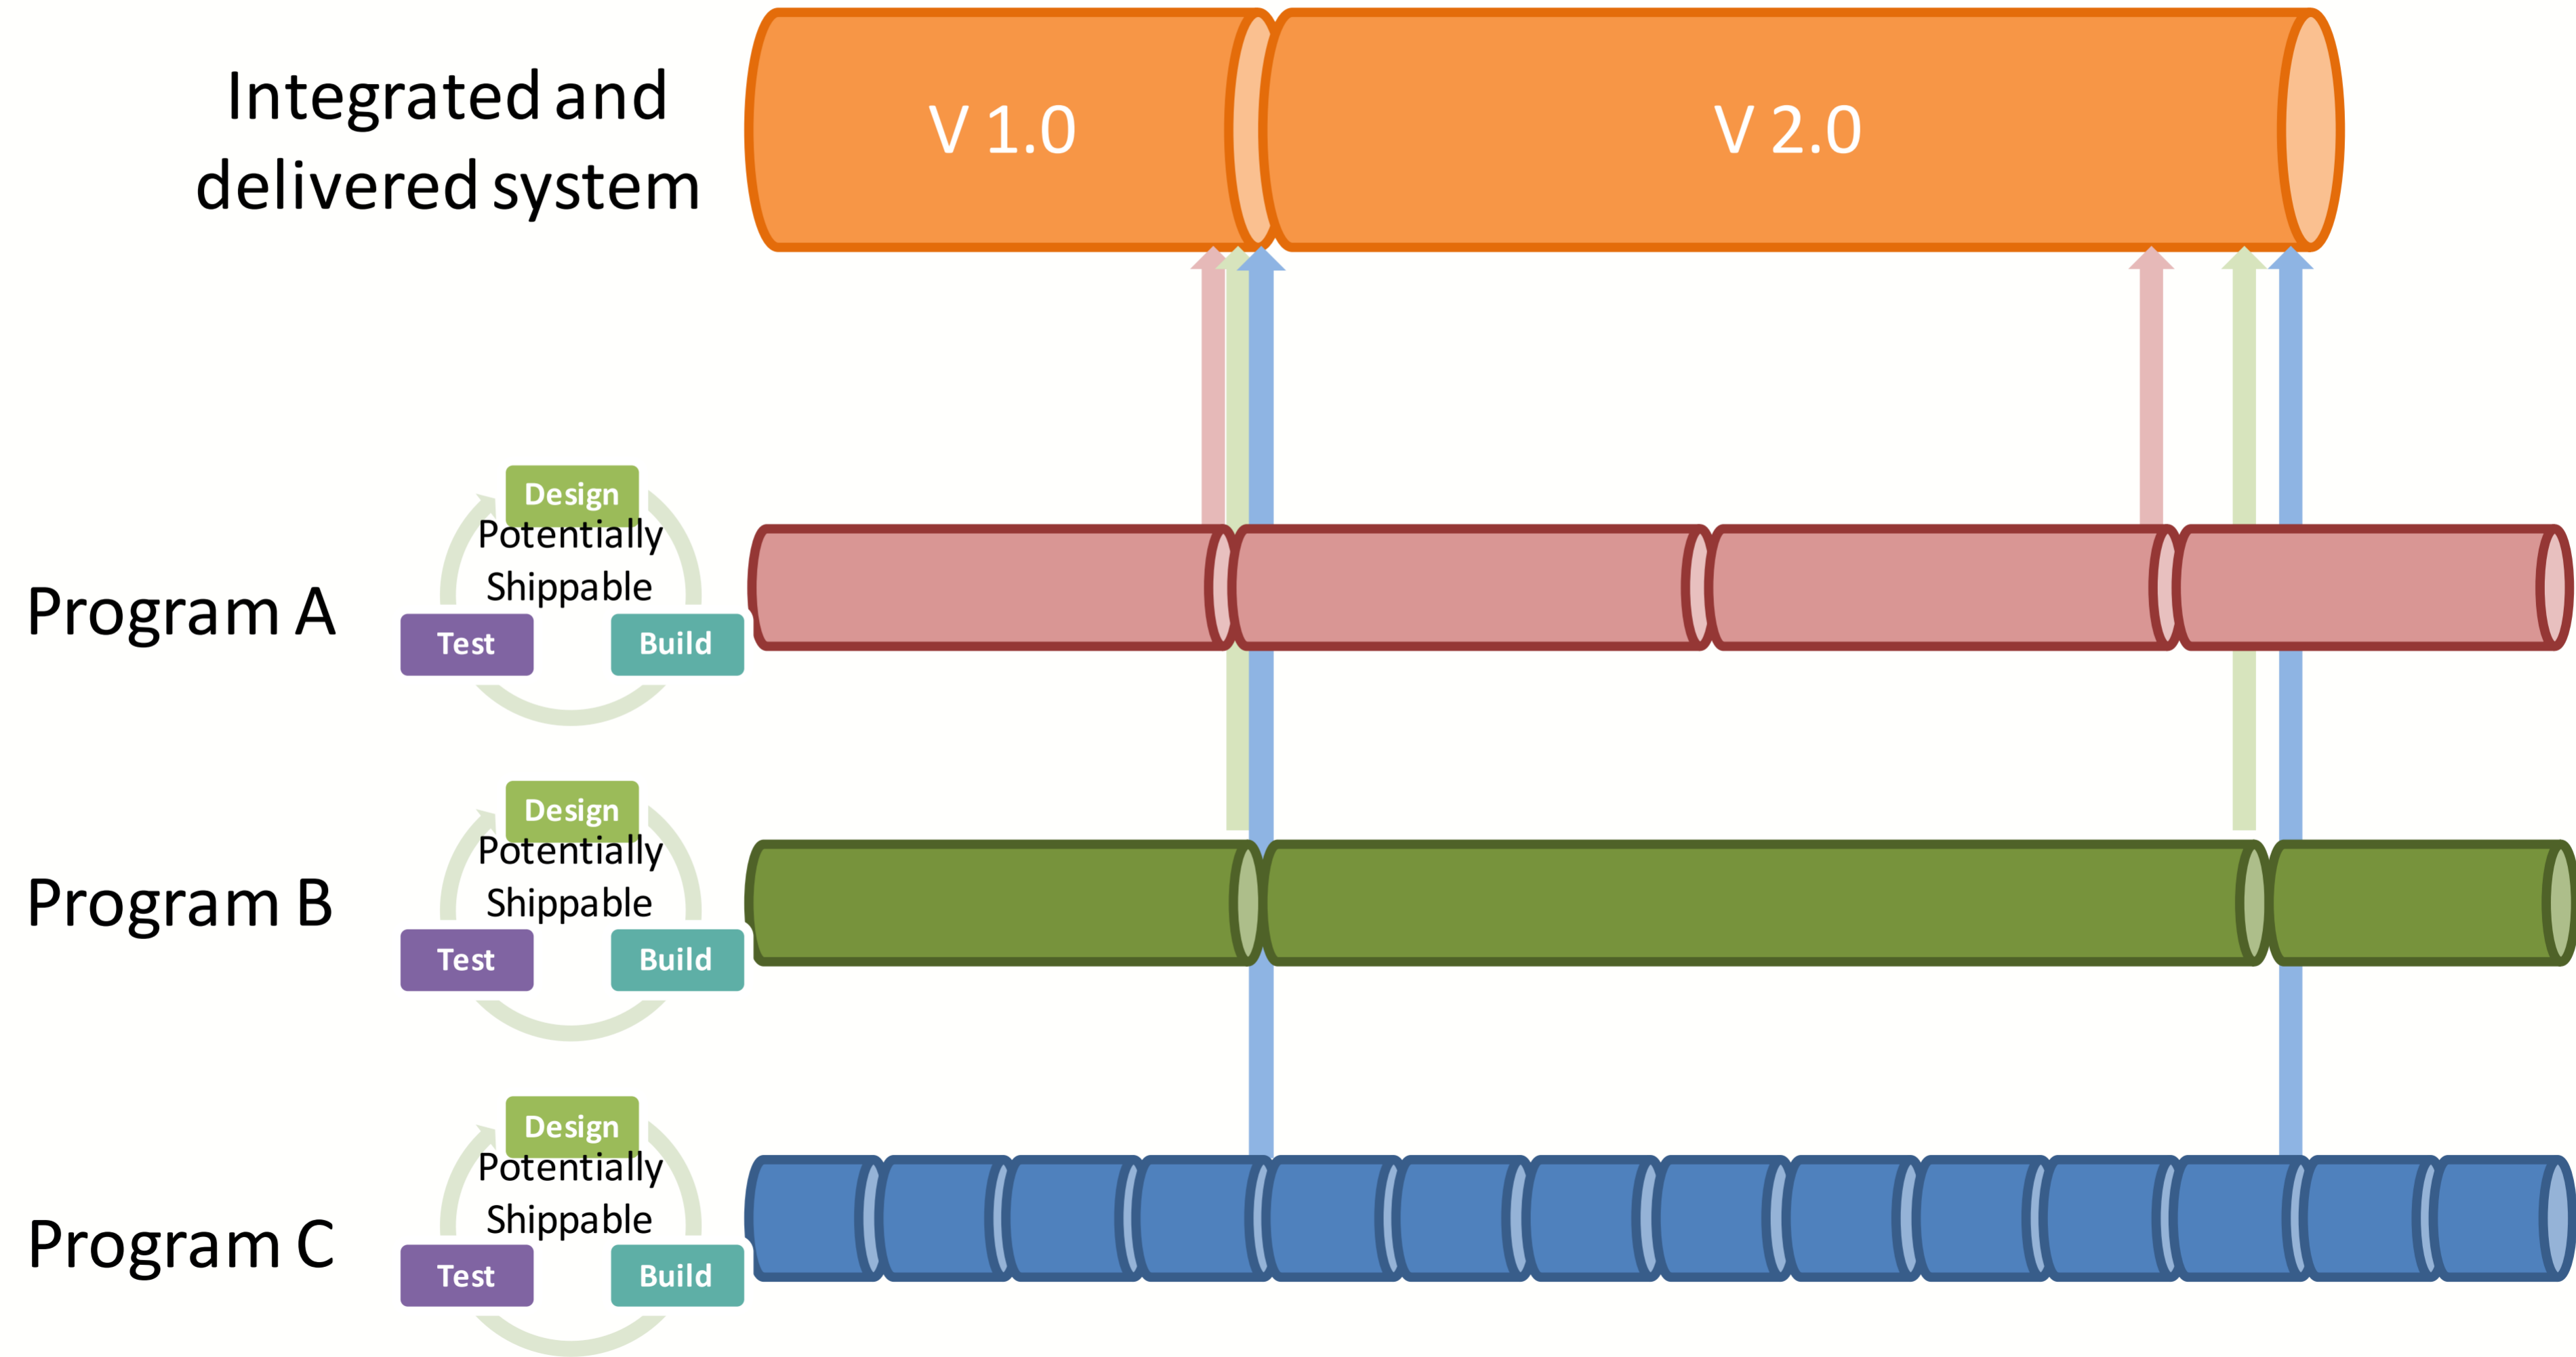

PROGRAM INFORMATION FLOW AND CONSISTENCY

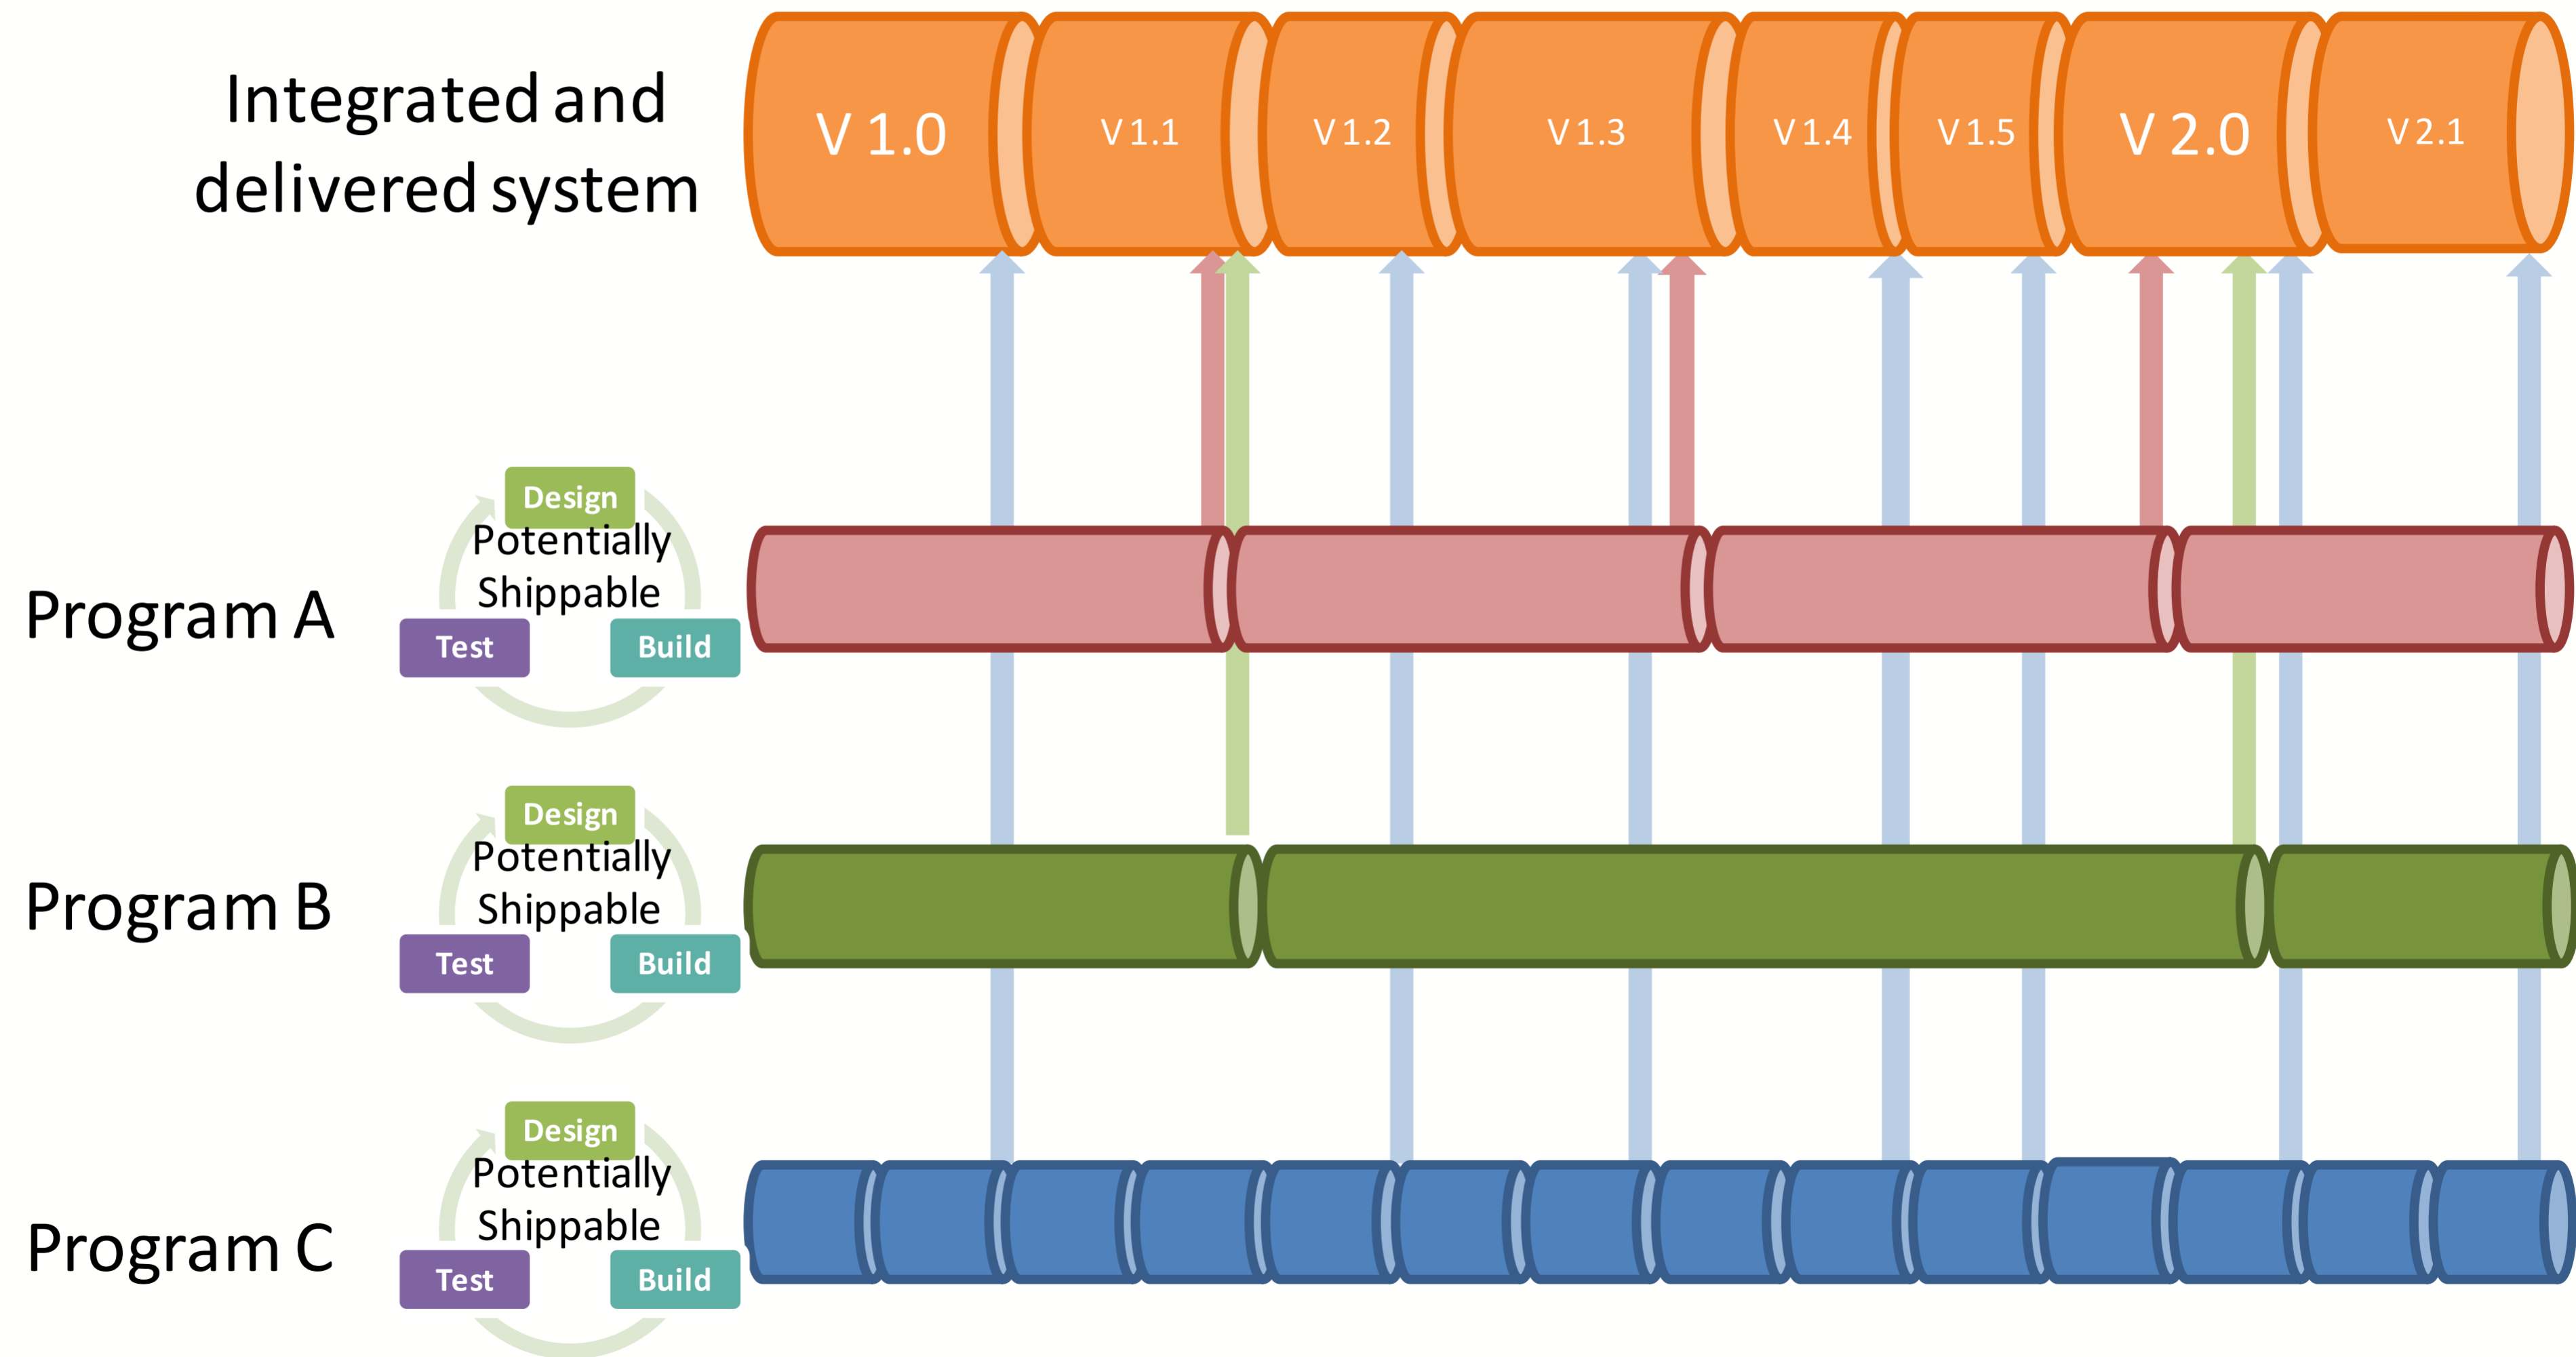

Traditional, finished programs

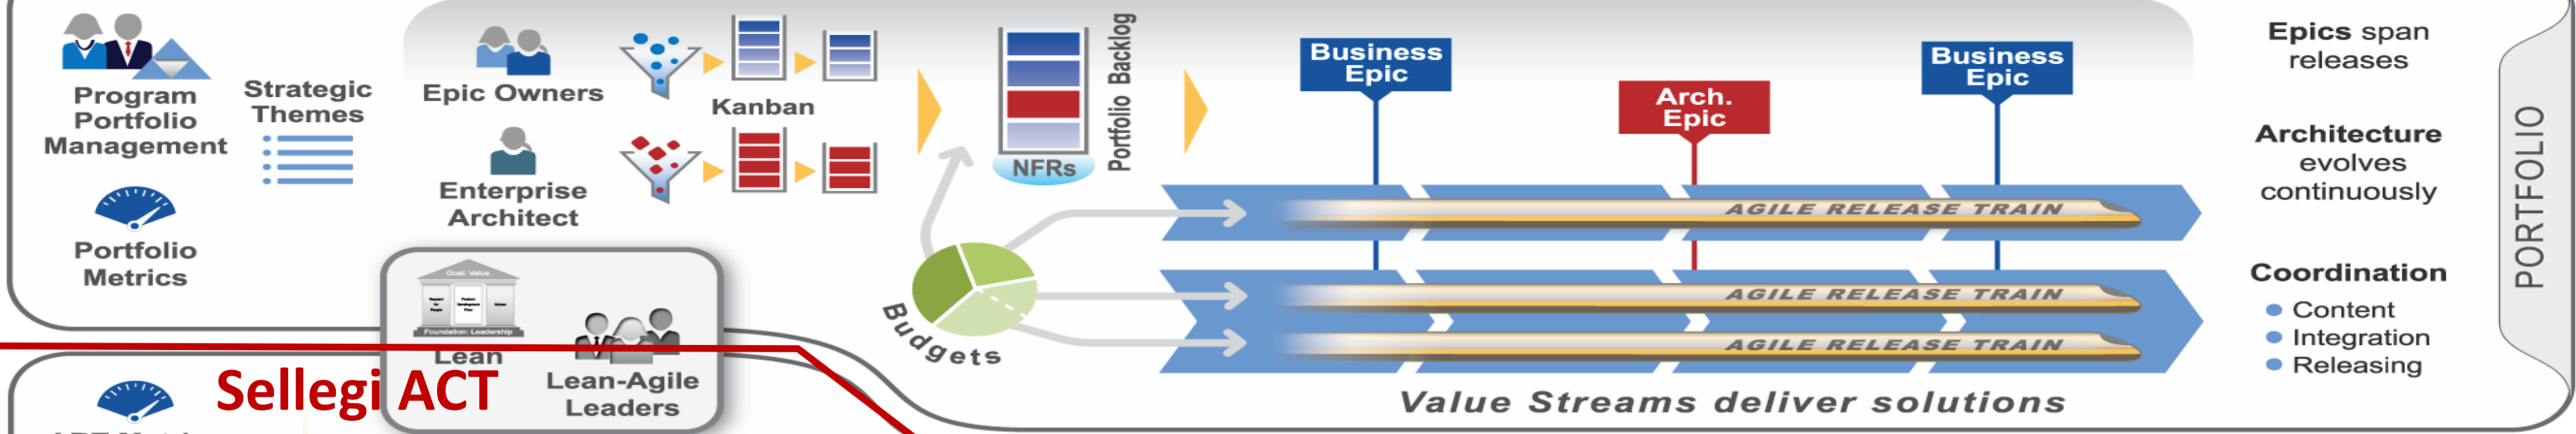

Agile, synchronized programs

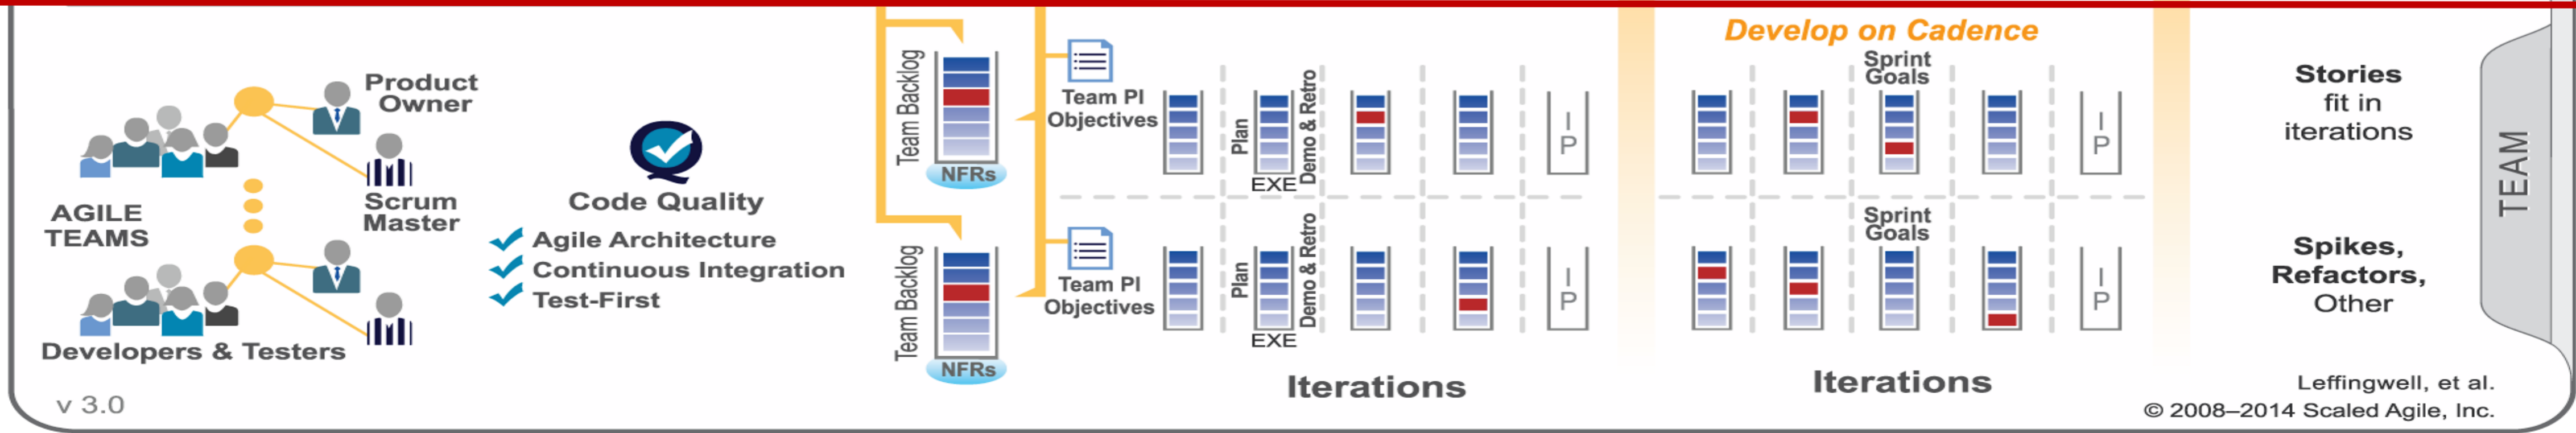

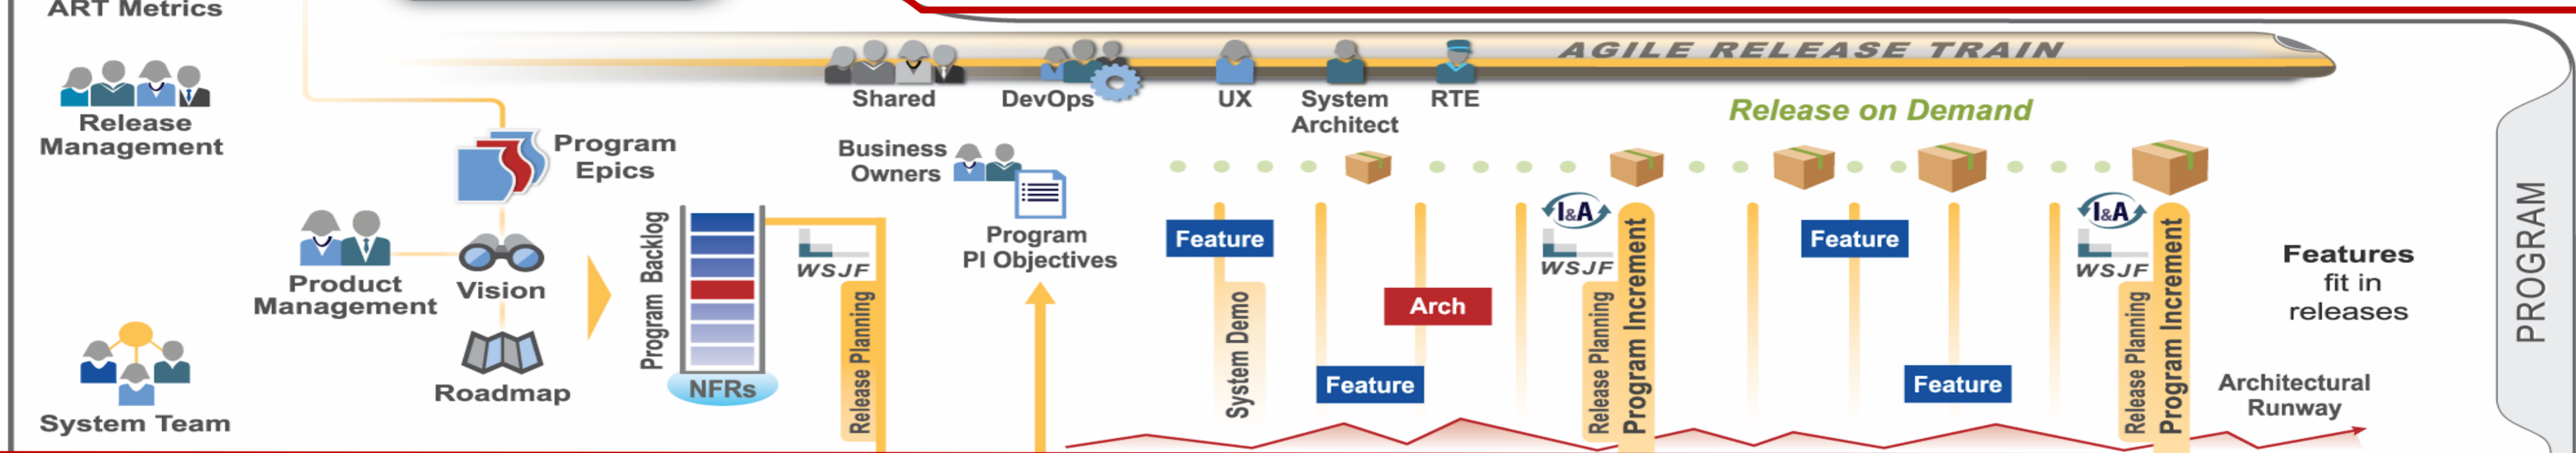

Scaled Agile Framework®

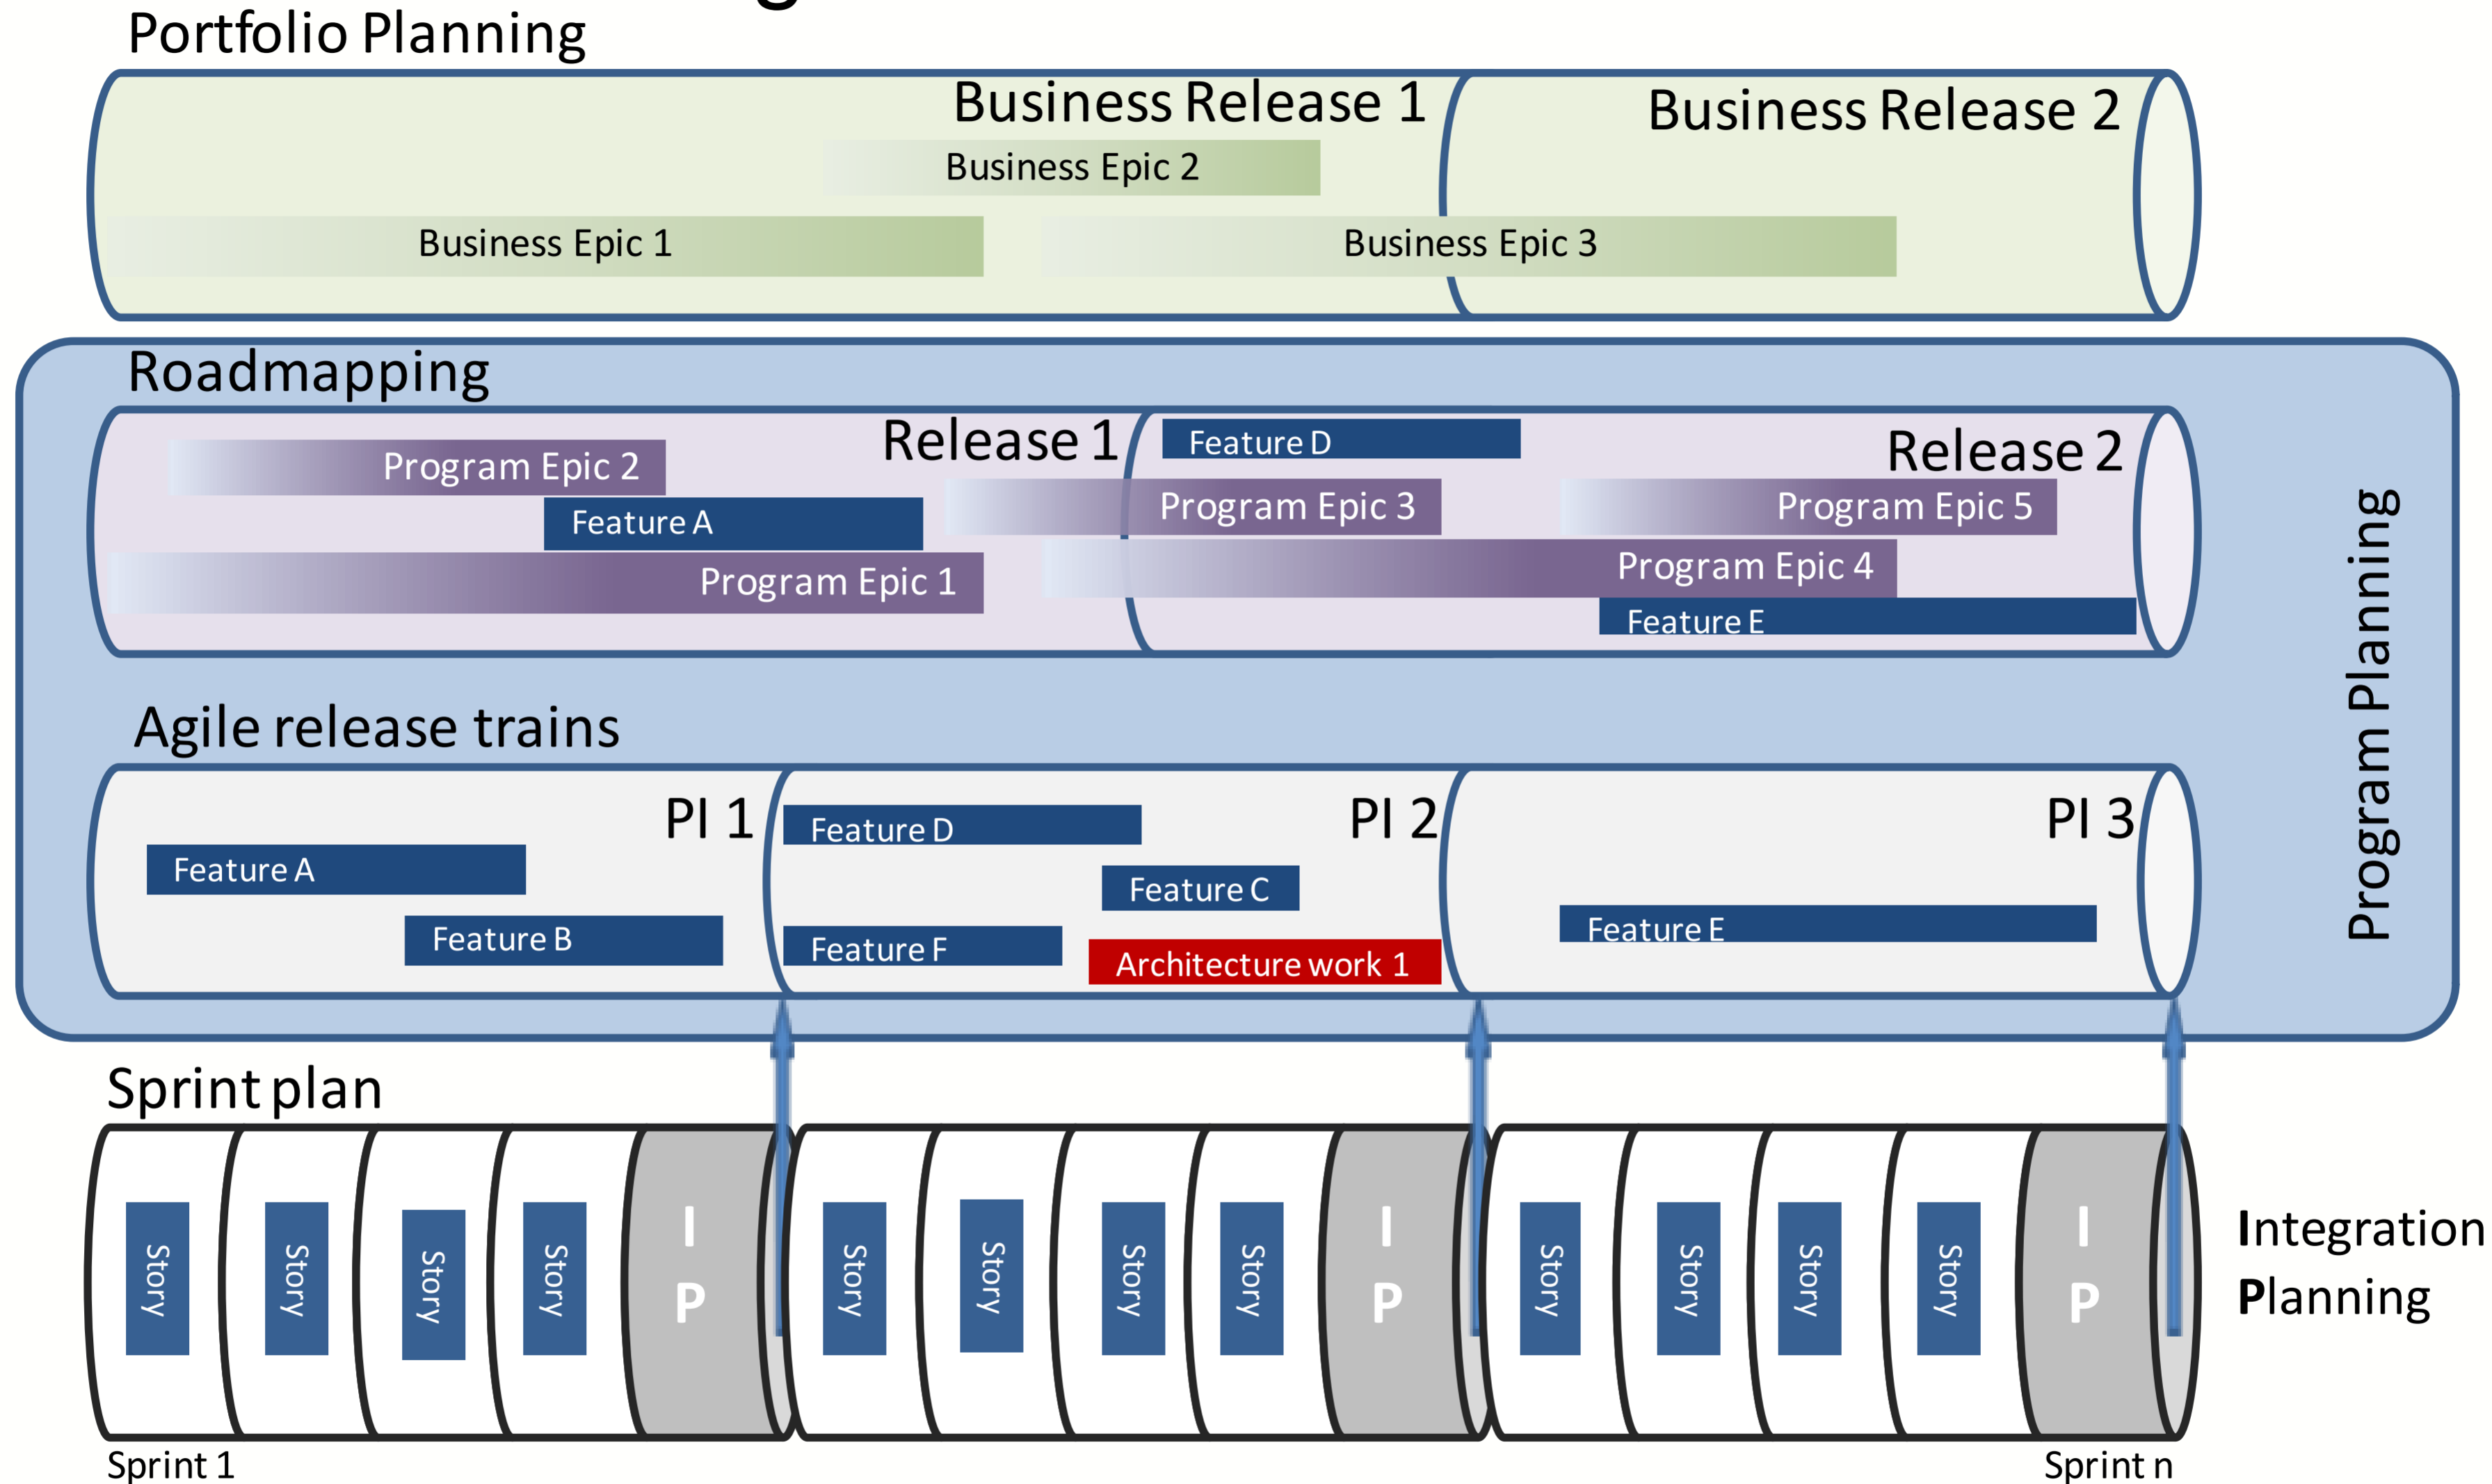

PORTFOLIO VISION

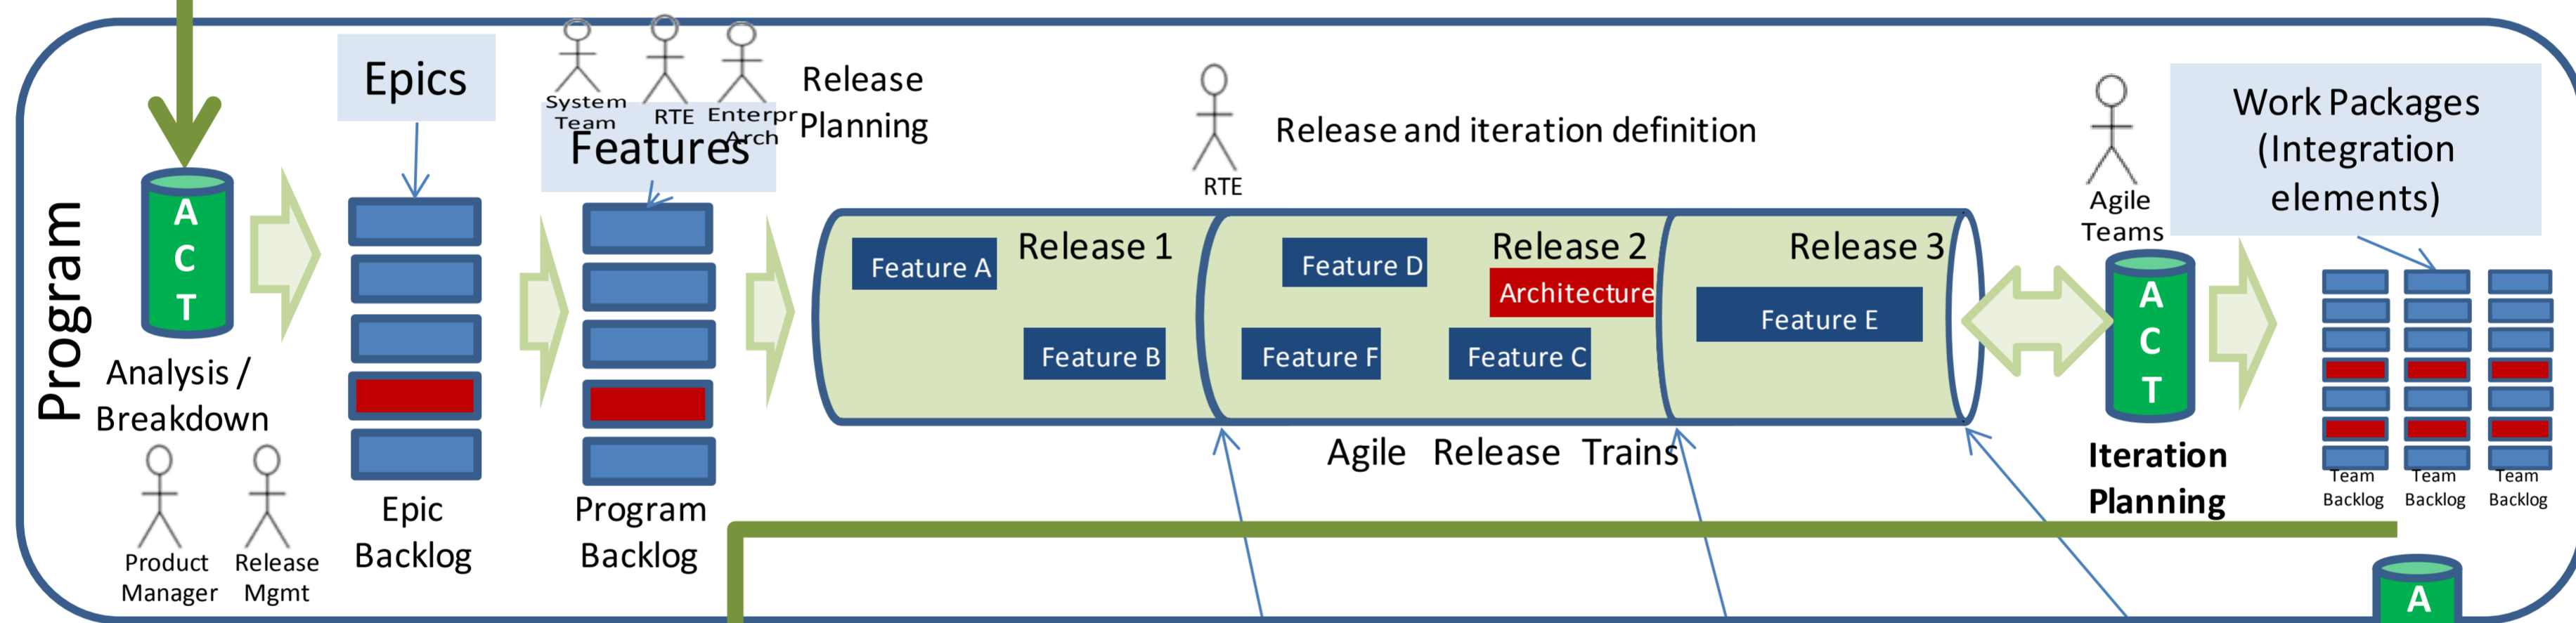

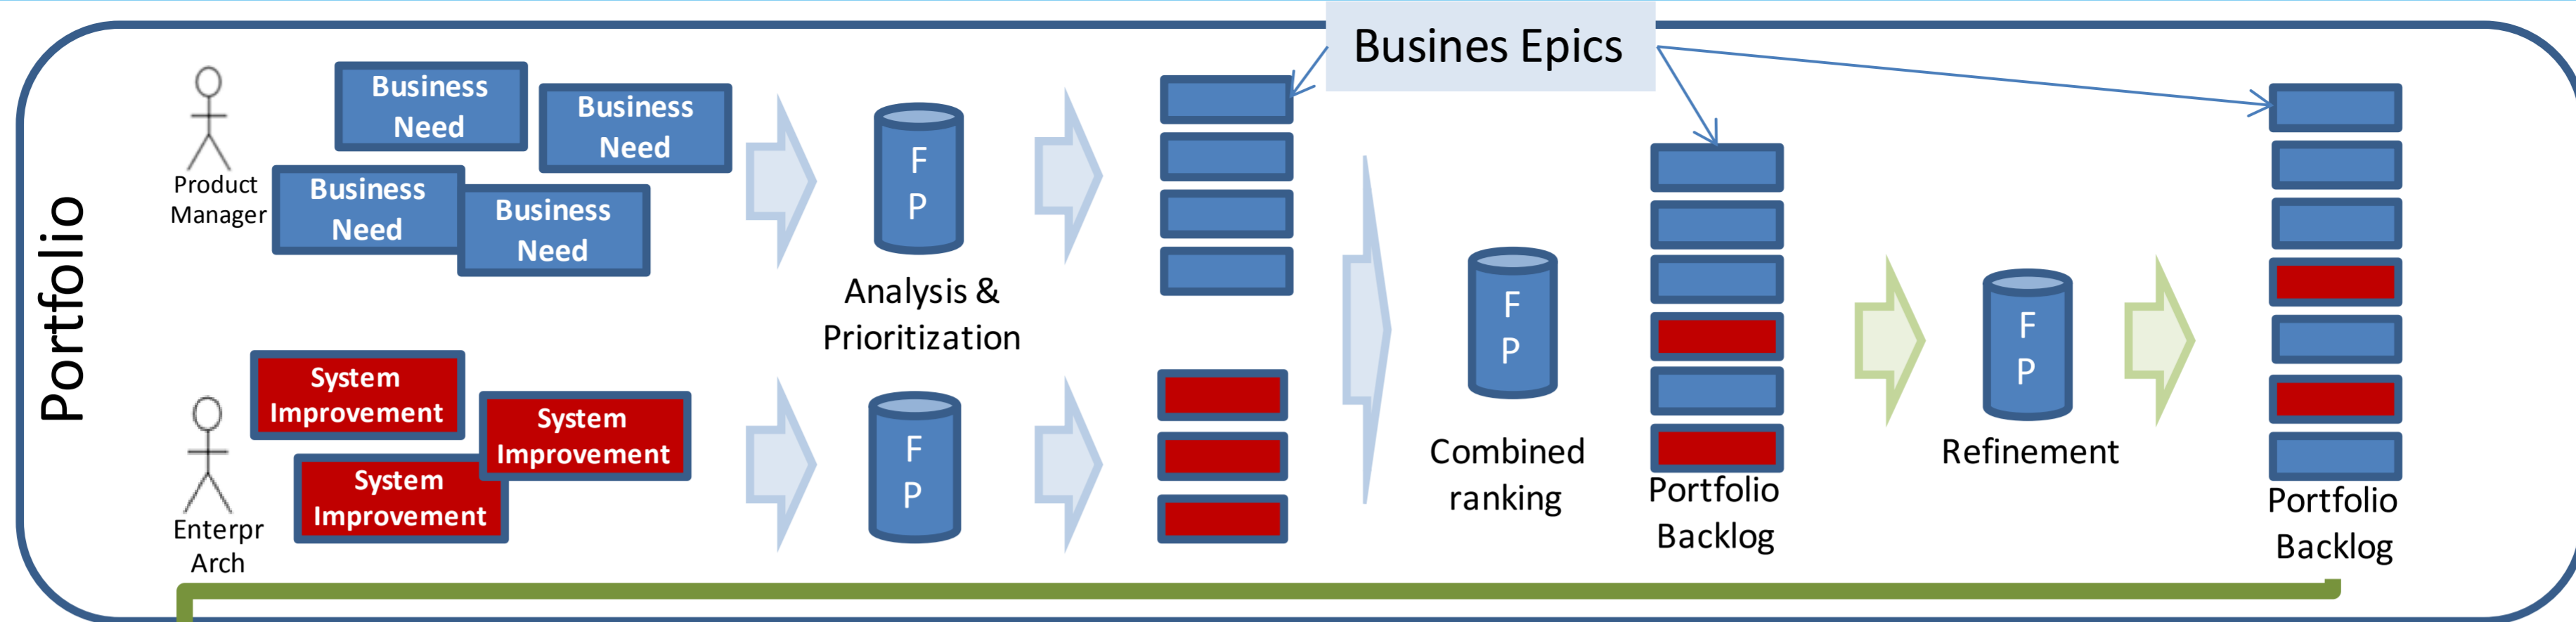

Sellegi ACT

Agile Release Trains Aligned with Business Release

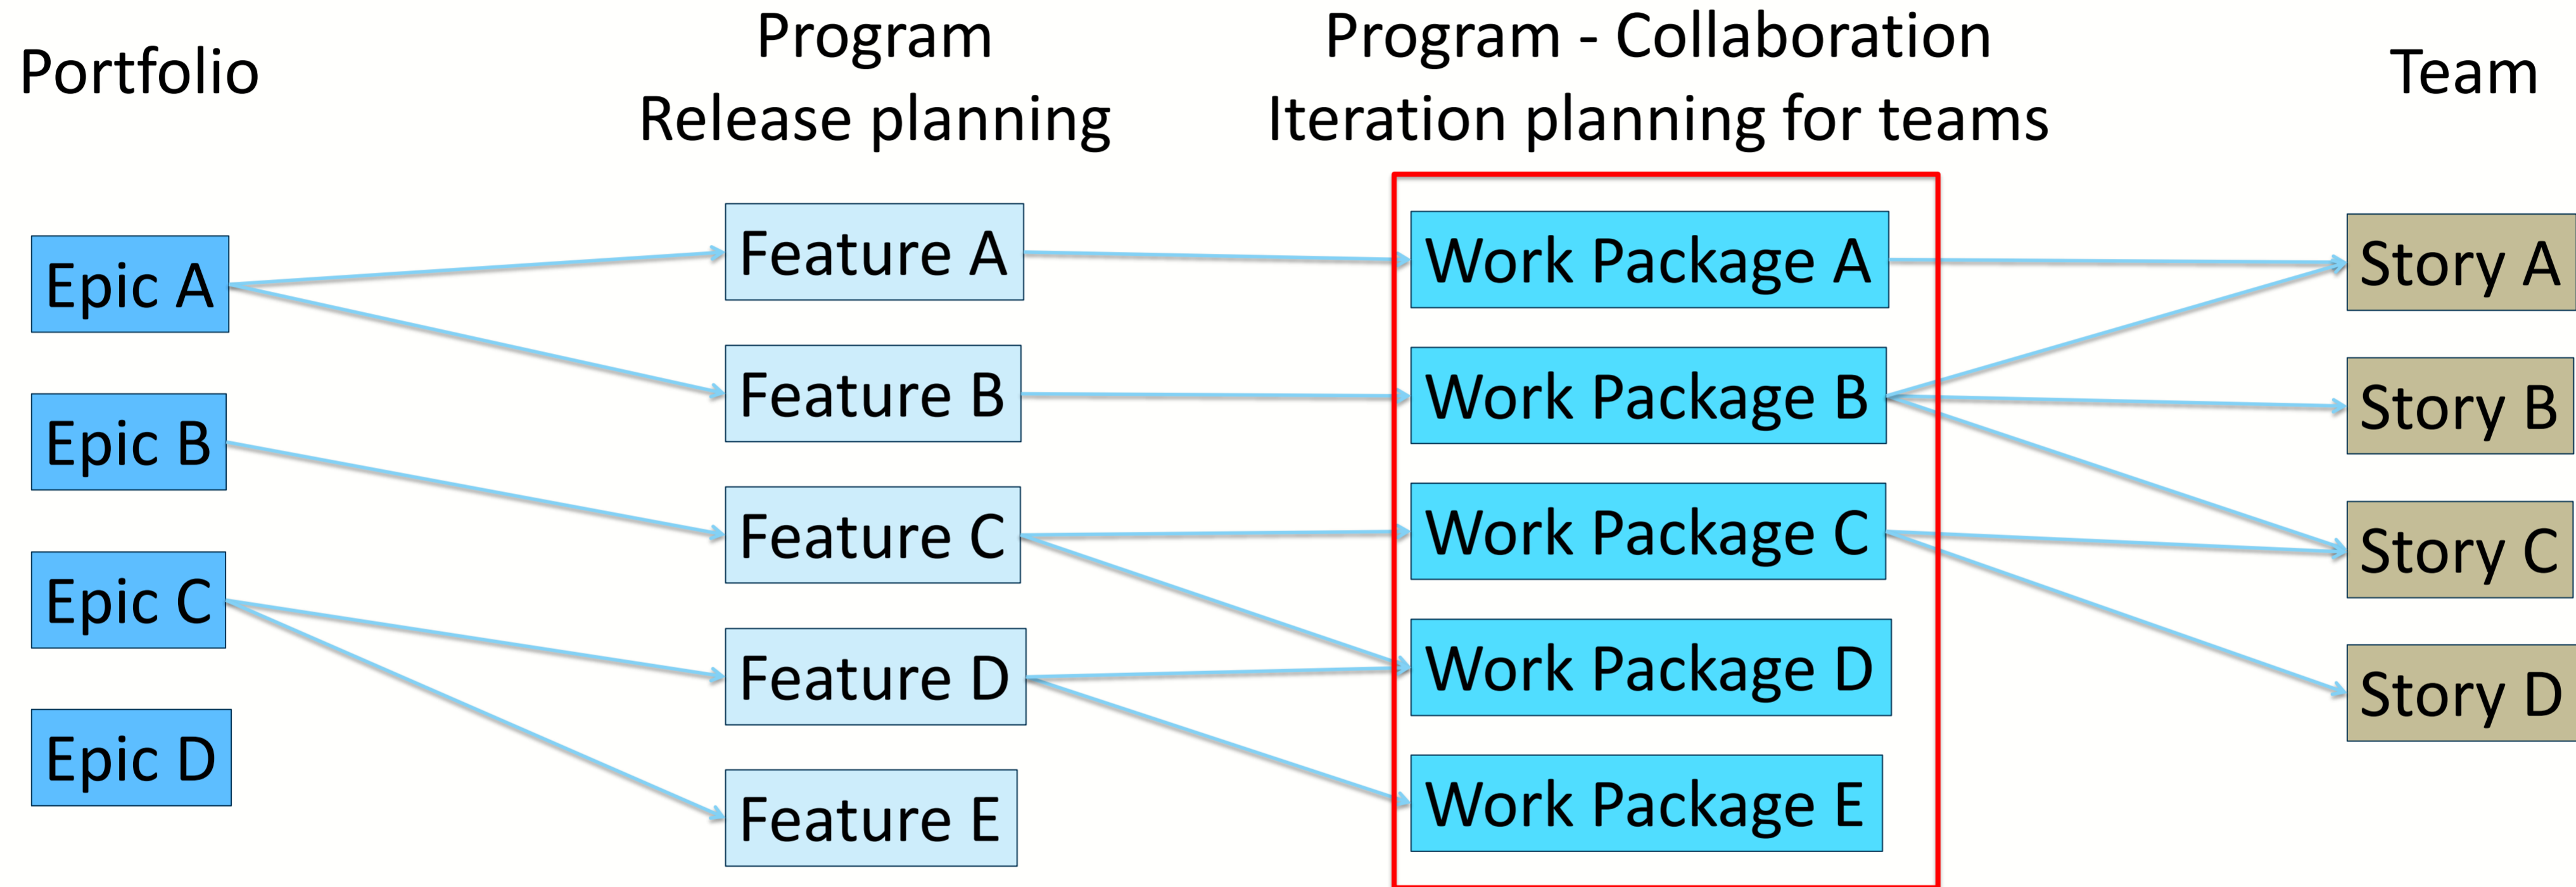

At the end of each sprint, the system is executable, testable and there are no open dependencies between teams

Backlog, breakdown and information flow

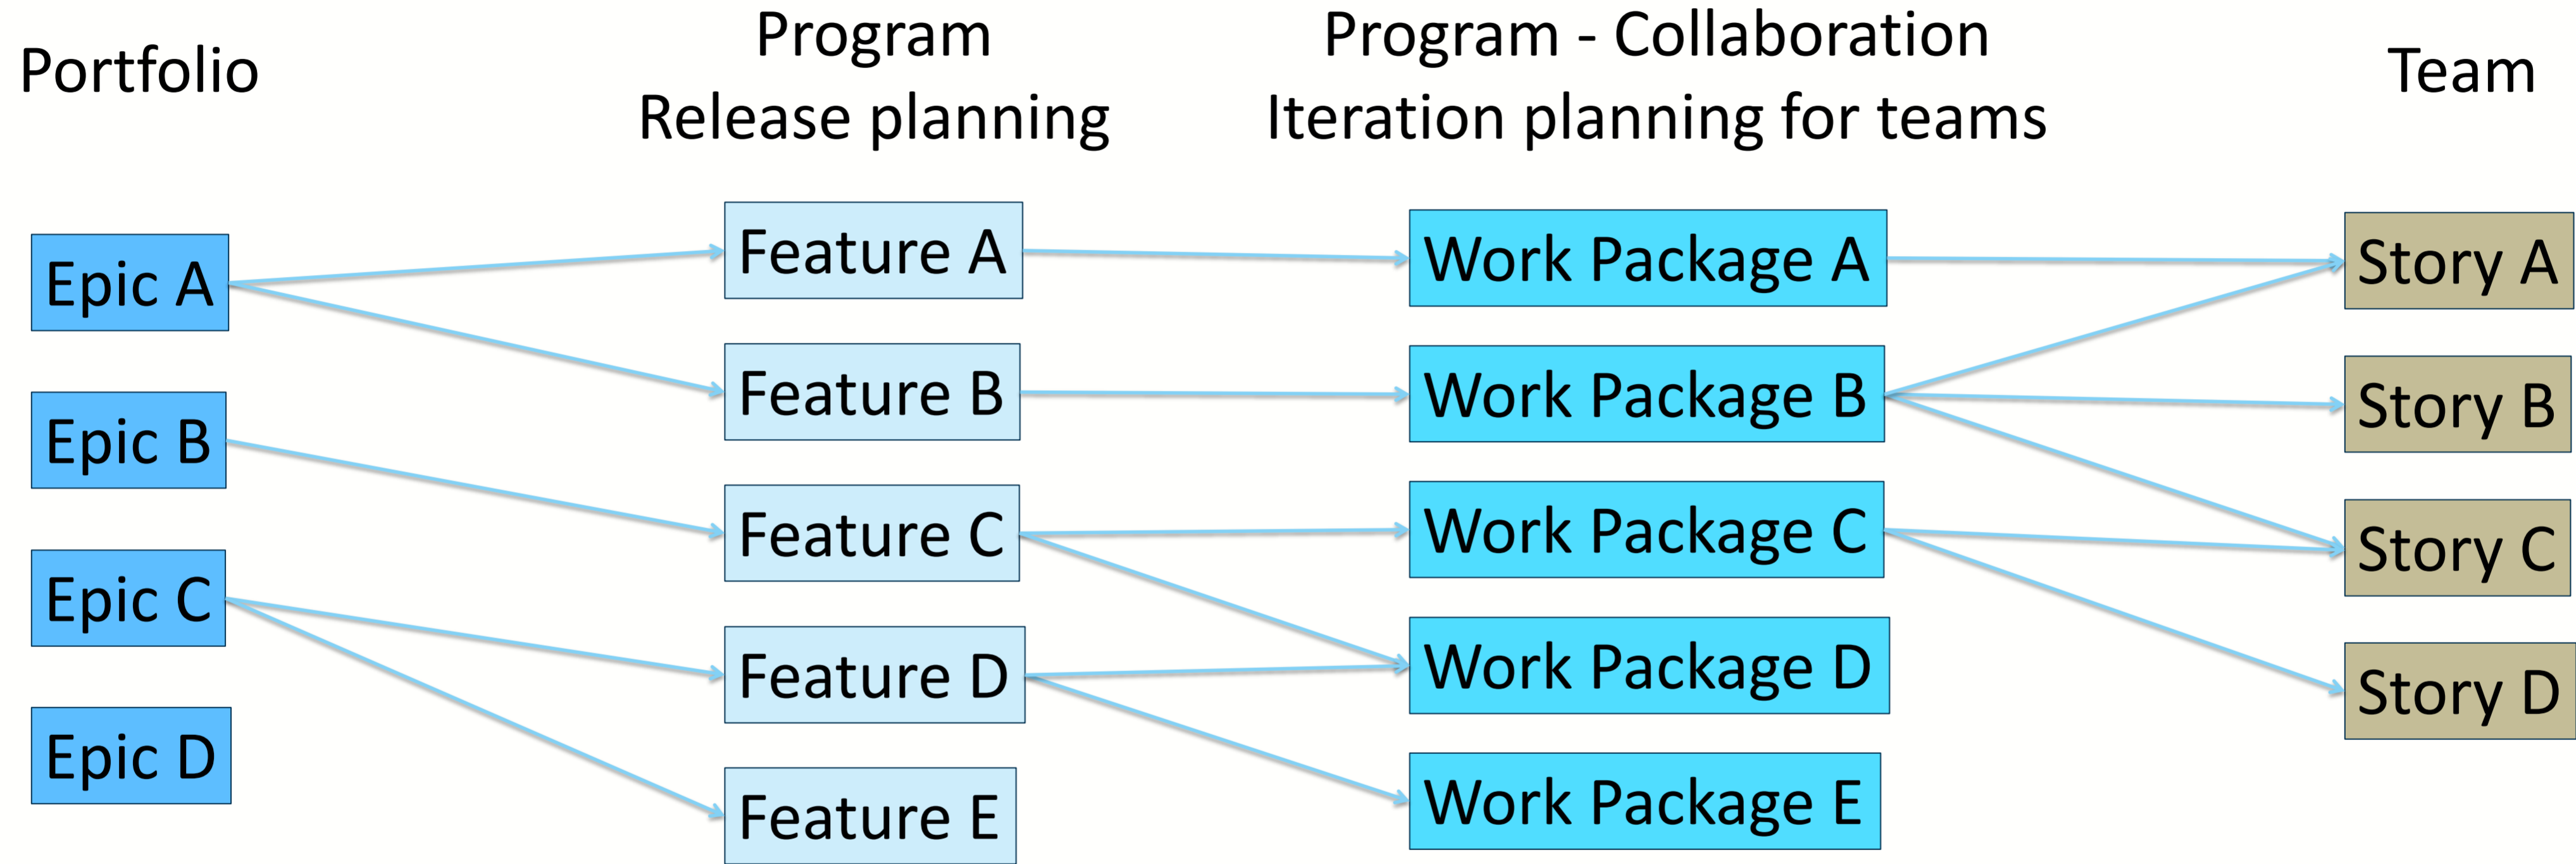

Integration elements

"A team can implement this in one sprint"

Backlog, breakdown and information flow

Breakdown

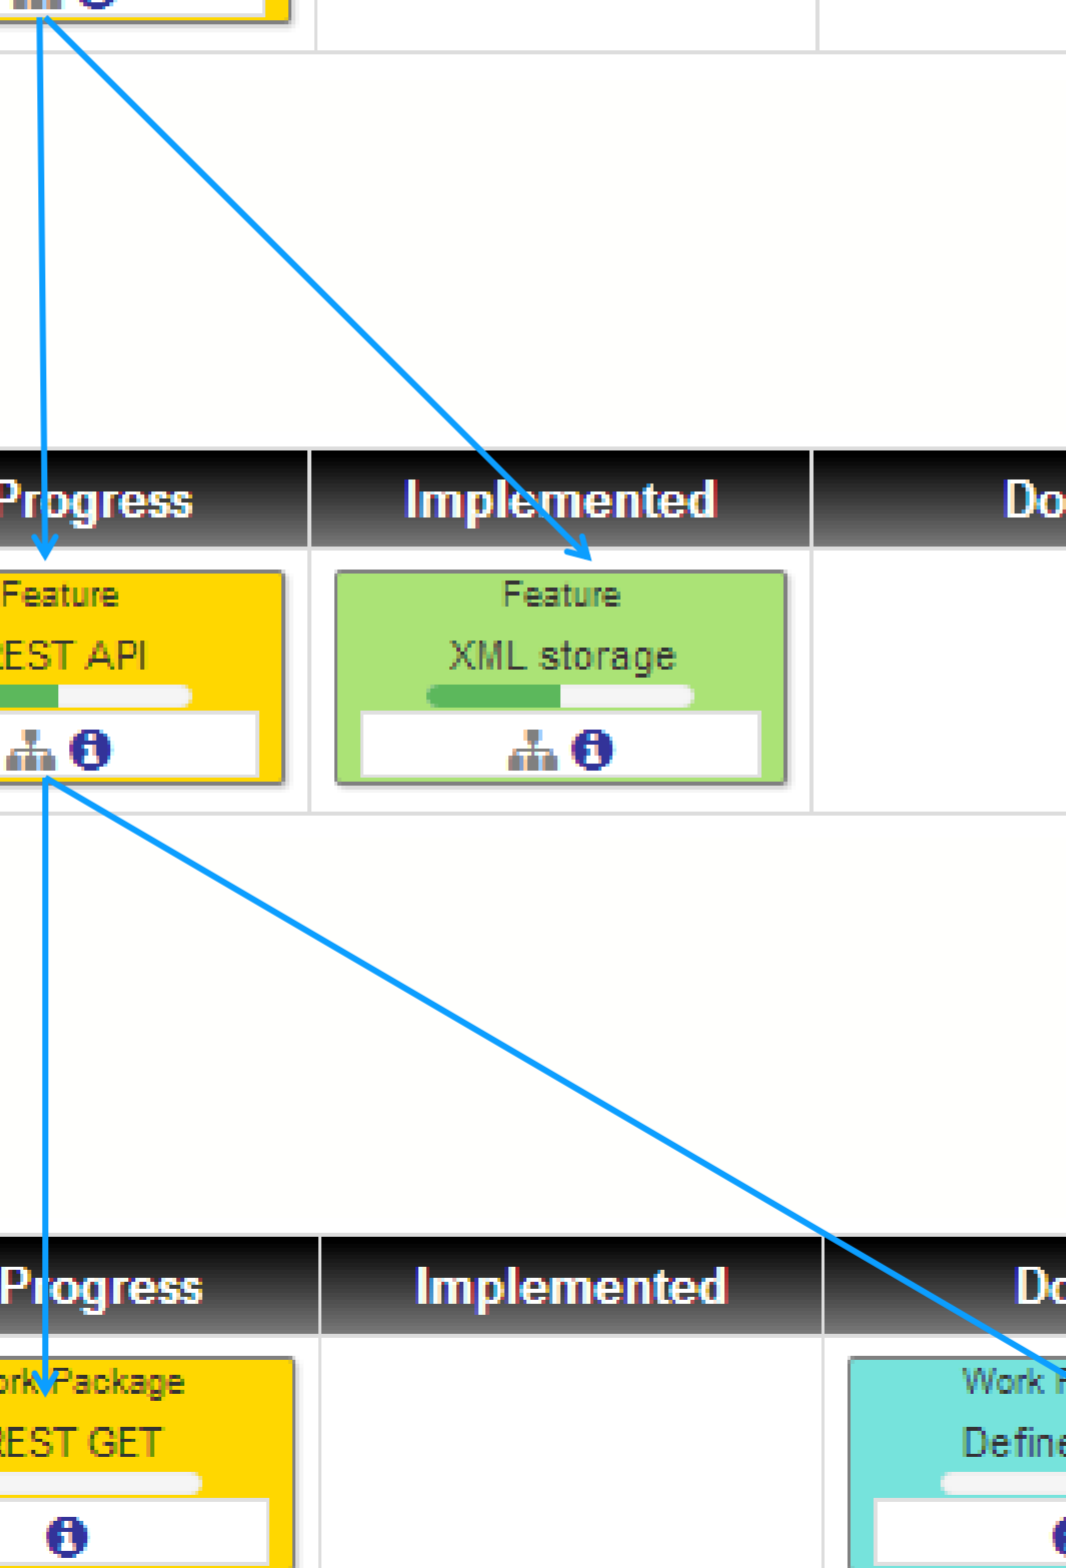

Information updates

Backlog, breakdown and information aggregation

Not Set	New	In Progress	Implemented	Done	Reopened	Deferred	Rejected
	<div style="border: 1px solid gray; padding: 5px; background-color: #ffffcc;"> Epic SSO   </div>	<div style="border: 1px solid gray; padding: 5px; background-color: #ffff00;"> Epic Common storage   </div>					

Not Set	New	In Progress	Implemented	Done	Reopened	Deferred	Rejected
		<div style="border: 1px solid gray; padding: 5px; background-color: #ffff00;"> Feature REST API   </div>	<div style="border: 1px solid gray; padding: 5px; background-color: #90ee90;"> Feature XML storage   </div>				

Not Set	New	In Progress	Implemented	Done	Reopened	Deferred	Rejected
		<div style="border: 1px solid gray; padding: 5px; background-color: #ffff00;"> Work Package REST GET  </div>		<div style="border: 1px solid gray; padding: 5px; background-color: #7fffd4;"> Work Package Define REST  </div>			

Backlog, breakdown and information aggregation

Not Set	New	In Progress	Implemented	Done	Reopened	Deferred	Rejected
	<div style="border: 1px solid black; padding: 5px; background-color: #ffffcc;"> Epic SSO </div>		<div style="border: 1px solid black; padding: 5px; background-color: #c8e6c9;"> Epic Common storage </div>				

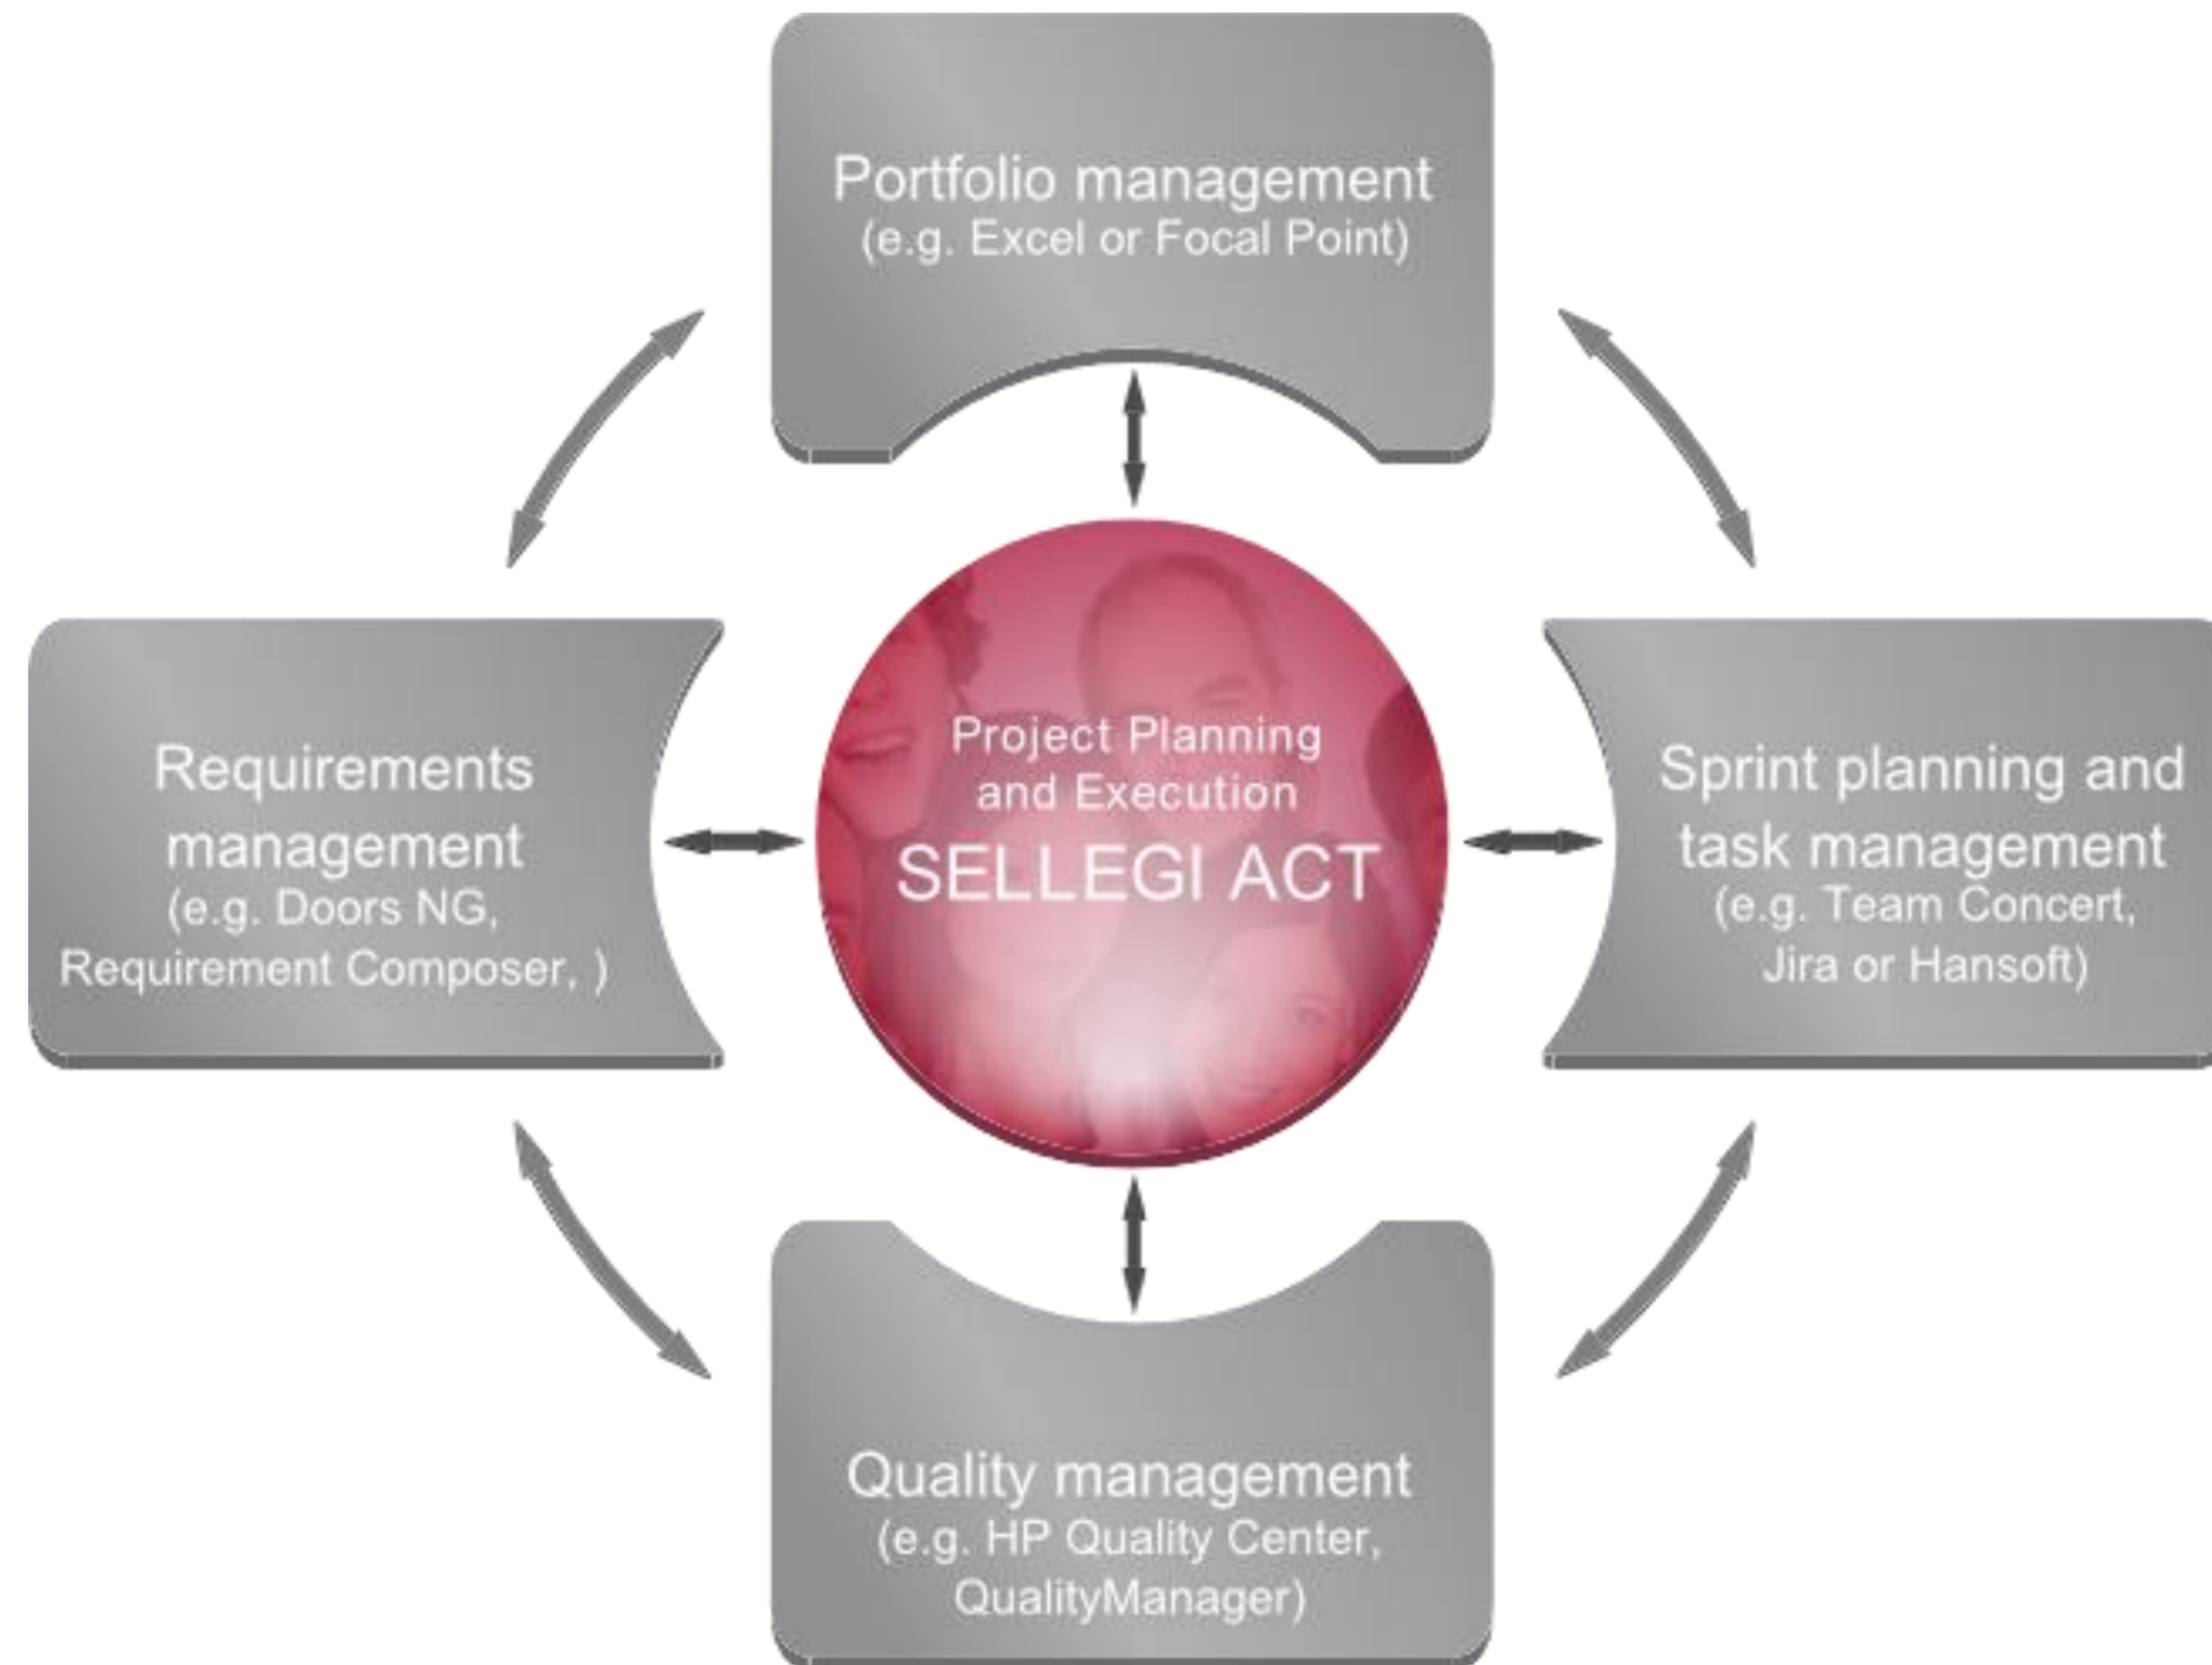

Not Set	New	In Progress	Implemented	Done	Reopened	Deferred	Rejected
			<div style="border: 1px solid black; padding: 5px; background-color: #c8e6c9;"> Feature REST API </div> <div style="border: 1px solid black; padding: 5px; background-color: #c8e6c9;"> Feature XML storage </div>

CONSISTENT PRIORITIZATION

Prioritization and Cost of Delay

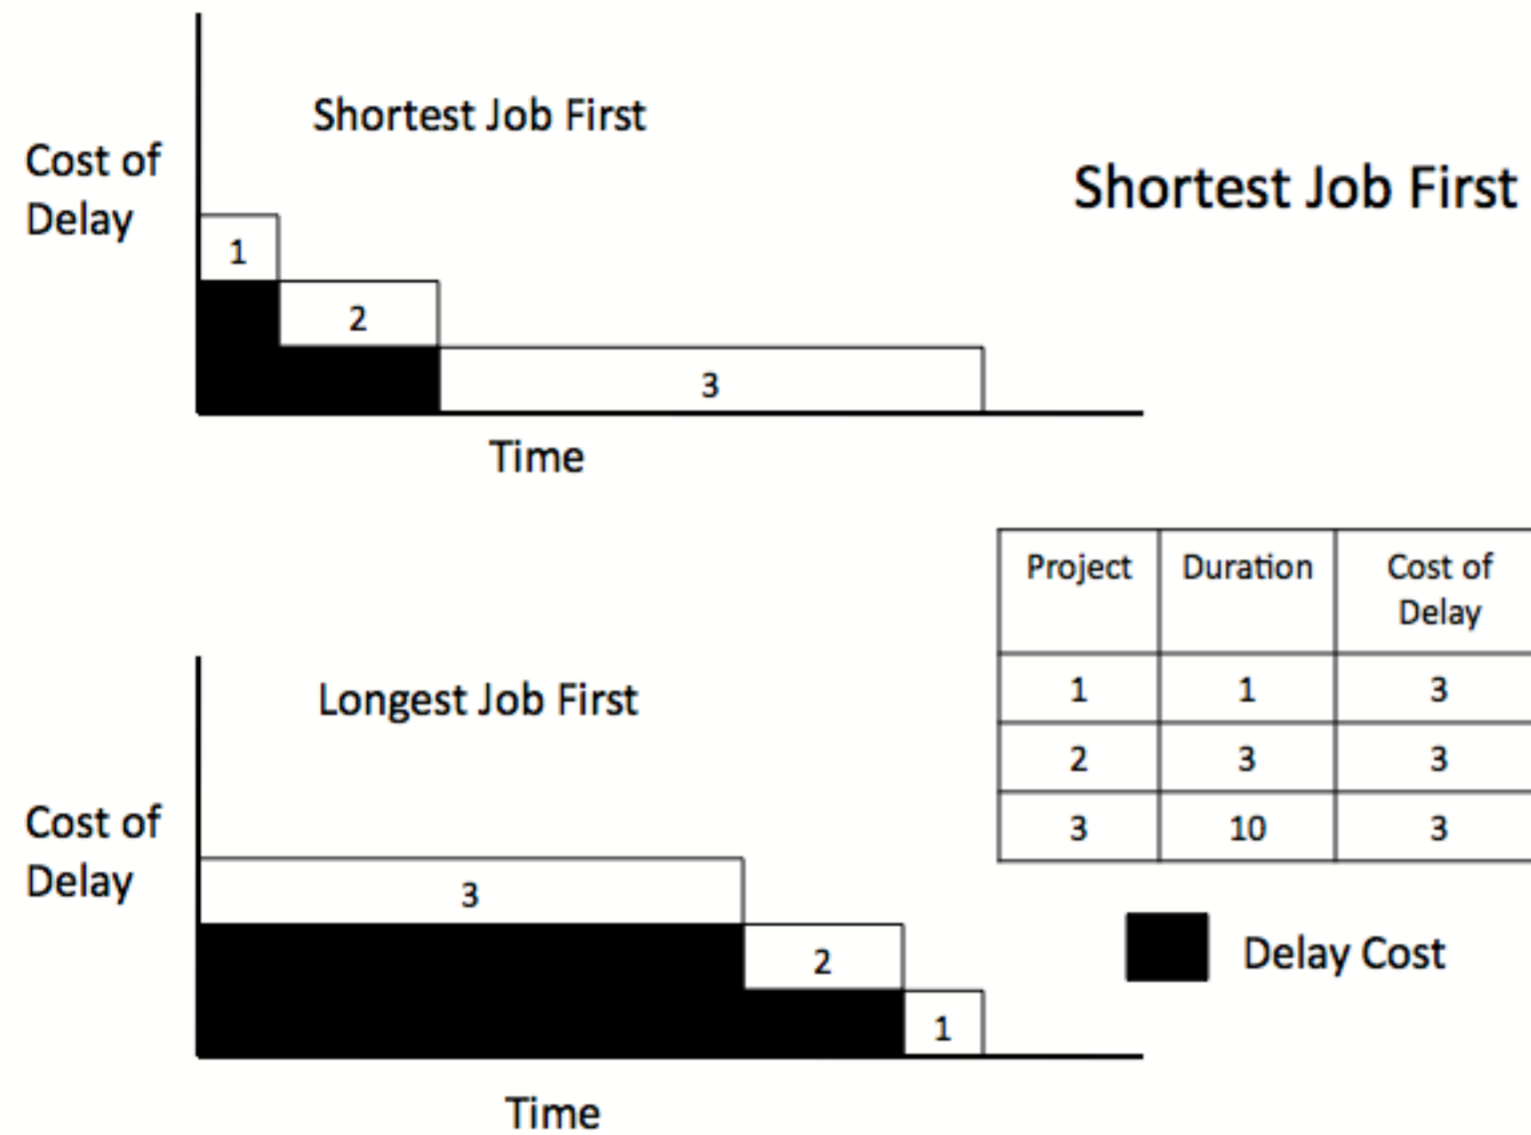

“Developers measure development cycle time and seek to make it shorter. However, when you ask them how much life-cycle profit will decrease due to a week of delay they don’t know”

“If you only quantify one thing, quantify the cost of delay”

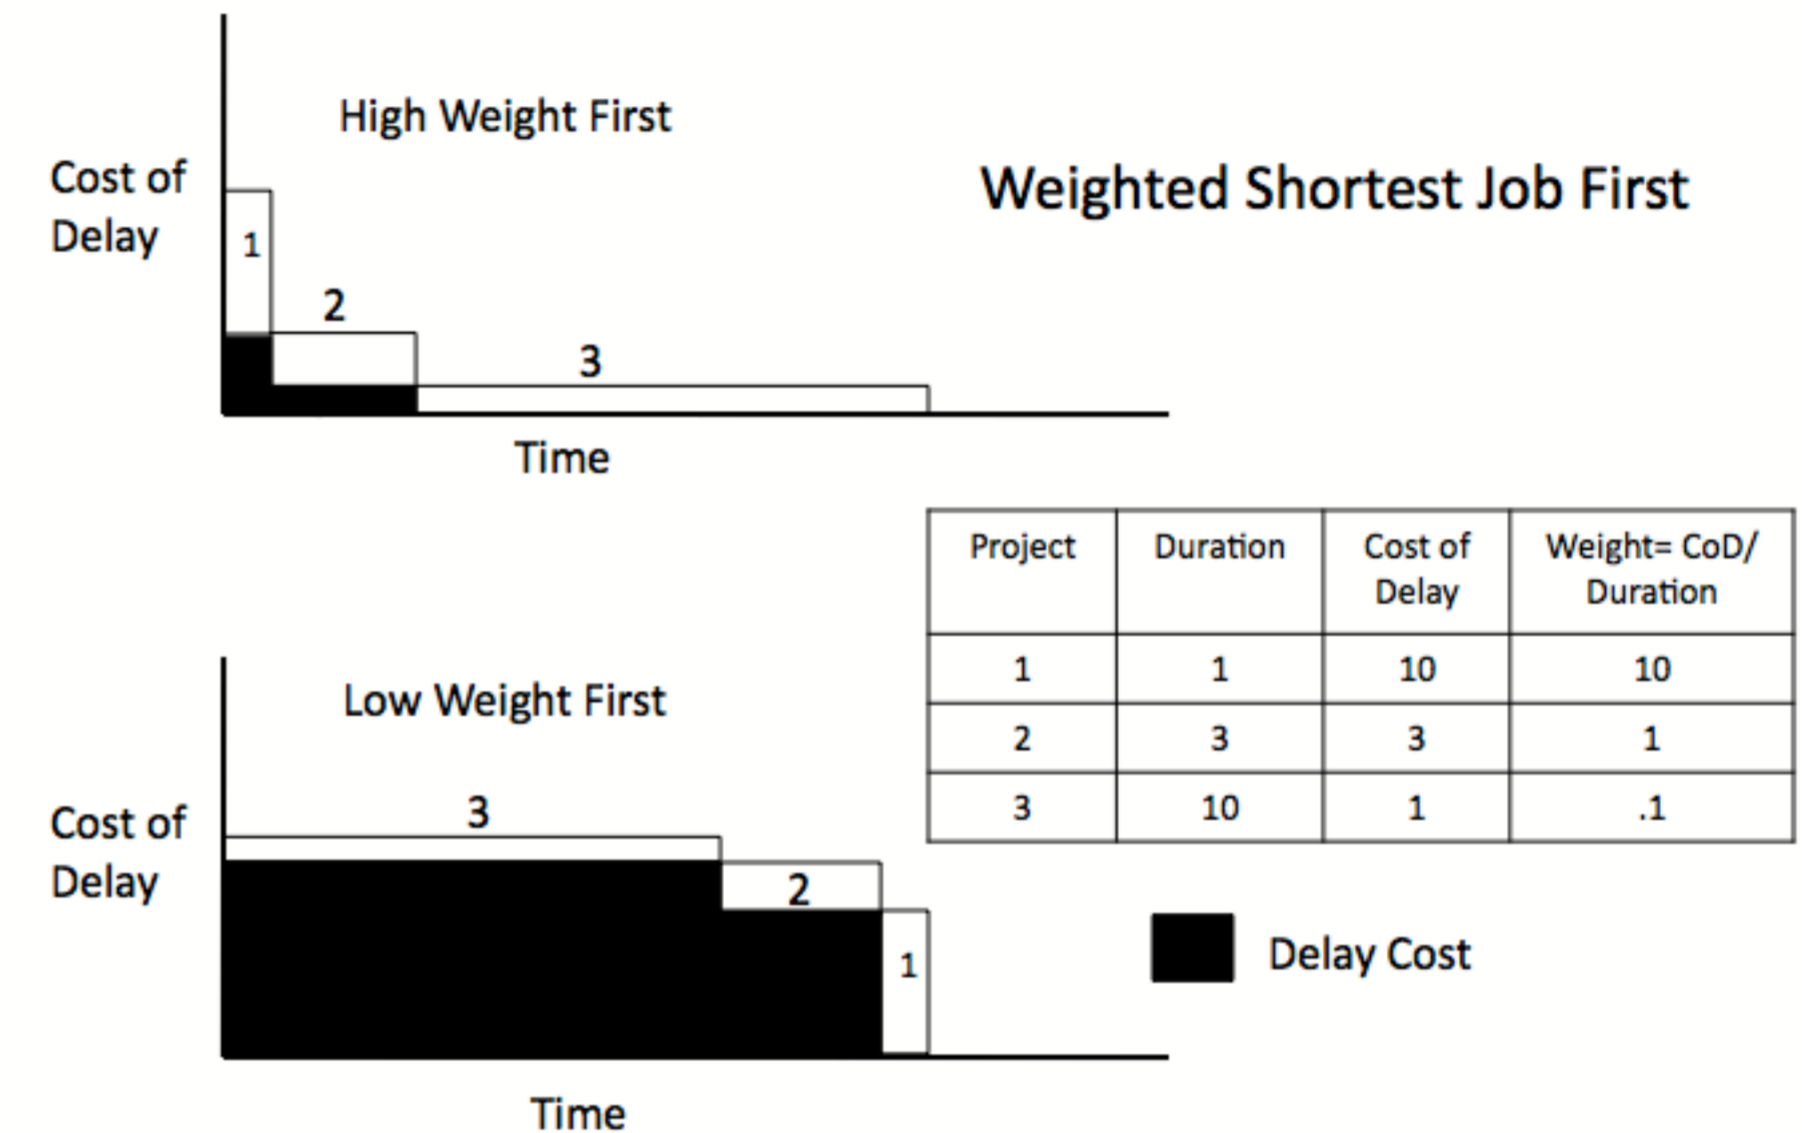

Don Reinertsen, The Principles of Product Development Flow

Prioritize fastest delivery of **business value** with WSJF

From "The Principles of Product Development Flow," by Donald G. Reinertsen.
 Celeritas Publishing: 2009. Copyright 2009, Donald G. Reinertsen

From "The Principles of Product Development Flow," by Donald G. Reinertsen.
 Celeritas Publishing: 2009. Copyright 2009, Donald G. Reinertsen

Cost of Delay / WSJF according to SAFe

$$\text{WSJF} = \frac{\text{User | Business Value} + \text{Time Criticality} + \text{RR | OE Value}}{\text{Job Size}}$$

Suggestion:
Use the relative fibonacci
scale for each variable

Interconnected backlogs part 1: WSJF feature prioritization

Unassigned	User value <i>i</i>	RR / OE value <i>i</i>	Duration <i>i</i>	Ranking
	Feature C <i>i</i>	Feature A <i>i</i>	Feature C <i>i</i>	Feature A <i>i</i>
	Feature A <i>i</i>	Feature B <i>i</i>	Feature B <i>i</i>	Feature D <i>i</i>
	Feature D <i>i</i>	Feature C <i>i</i>	Feature D <i>i</i>	Feature C <i>i</i>
	Feature B <i>i</i>	Feature D <i>i</i>	Feature A <i>i</i>	Feature B <i>i</i>

Interconnected backlogs part 2: WSJF prioritization effects on team planning

Ranking	
Feature A	<input type="text"/>
Feature D	<input type="text"/>
Feature C	<input type="text"/>
Feature B	<input type="text"/>

		Sprints	
		Not associated	
	Work Packages	Sprint-1	Sprint-2
		Work Package A-1 <input type="text"/>	Work Package C-1 <input type="text"/>
		Work Package D-1 <input type="text"/>	Work Package B-1 <input type="text"/>

 Ranking inconsistent with delivery: Feature "B" with ranking 4 is delivered before Feature "C" with ranking 3

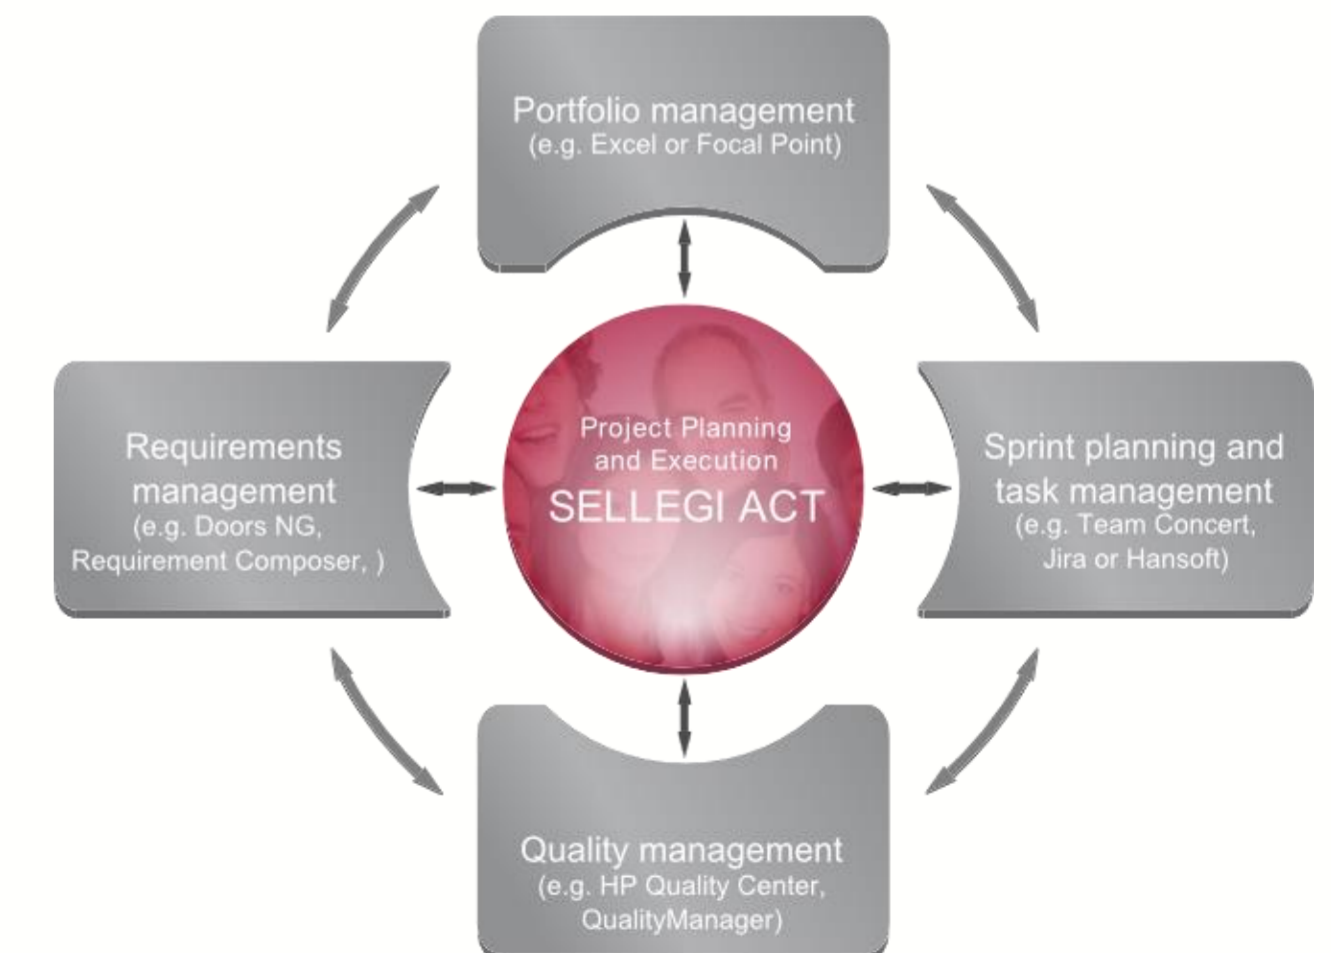

Scaling agile has two main challenges

You can scale from scratch or you can use an established standard

- SAFe is a proven, public facing collection of **best practices**
- SAFe relies heavily on transparency, information breakdown and **connected backlogs**
- Use **regular prioritizations** to reflect on new information
- If you quantify one thing, quantify the **Cost of Delay**

Transparency with real-time Insight

- Quick decisions have to be fact-based
- Facts have to be available in real-time
- Integrated information with traceability between all levels
