Container Terminal Operations – Reliability Challenge

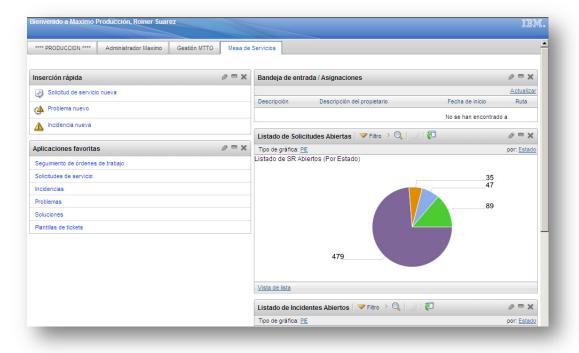

Container Handling Equipments

maximo® 7.5 (October 2012)

- Maximo 7.1, implementation lasted 10 months
- Live since October 1st 2010
- Supported and advised by IBM Global Services
- 5 Organizations in 1 Maximo instance, 2 different financial systems
- Two people trained for in house support, improvement and new developments

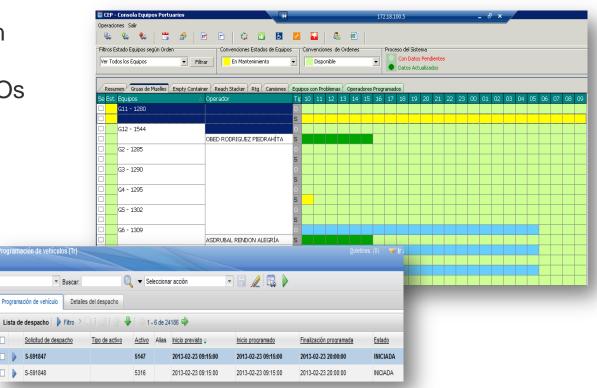

Equipment Availability - Operations vs. Maintenance

- Quay Crane working plan (WOs) are amalgamated with QC maintenance WOs
- QC status is shown and updated from a central console on "real time"
- QC are dispatched using "Transportation"

Consolidated view of equipment's status, offer and demand

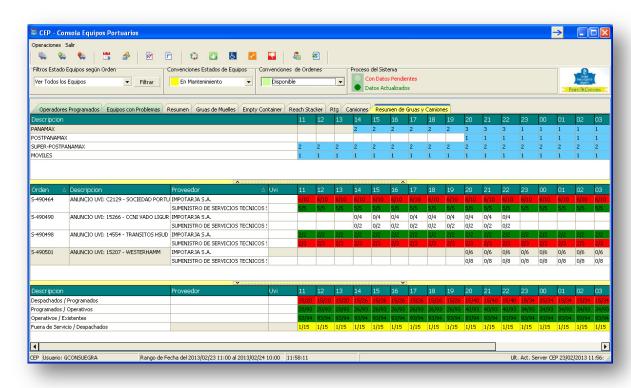

Truck Availability and Dispatch Control

- Trucks are required in quantities and related to QC plans
- Trucks are dispatched by Manpower outsourcing companies
- QC plans, dispatched and available trucks are displayed

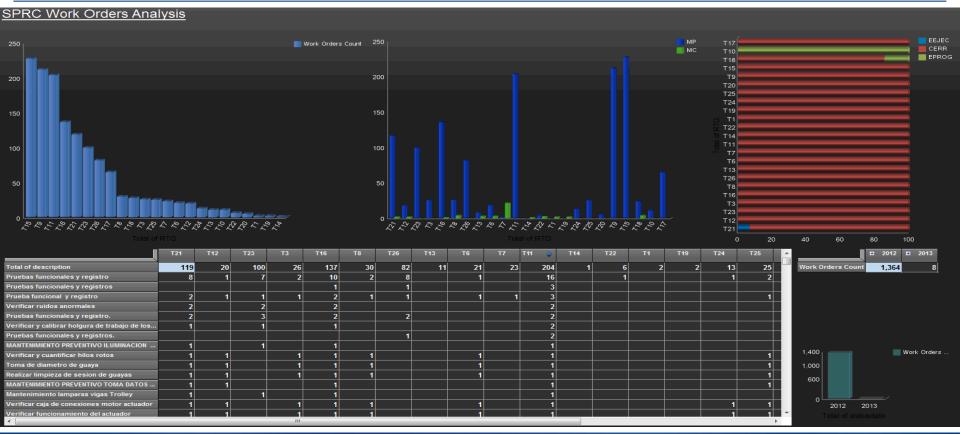

Consolidated view of quantities and status of dispatched trucks

Work Orders Analysis

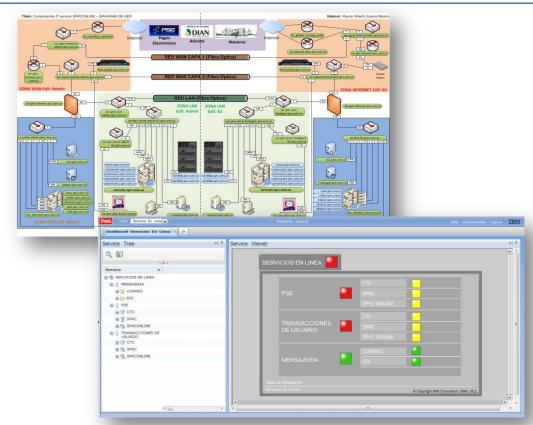

Tivoli - ISM Implementation

- IT related Services
 - More "complex" one
 - 4 months implementation time
- Maximo Integration triggers automatic WOs
- Learning process for IT people and starting point for rest of business areas

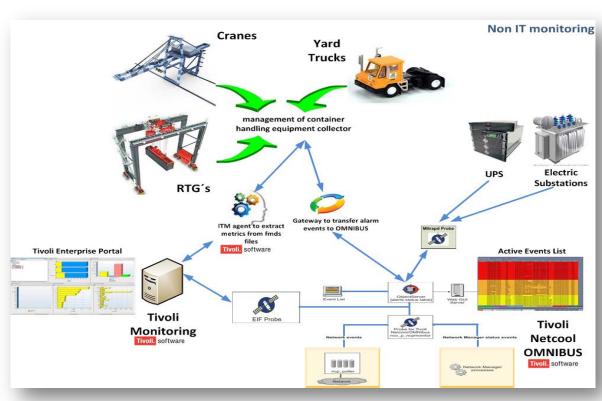

Monitoring of Non IT Equipment

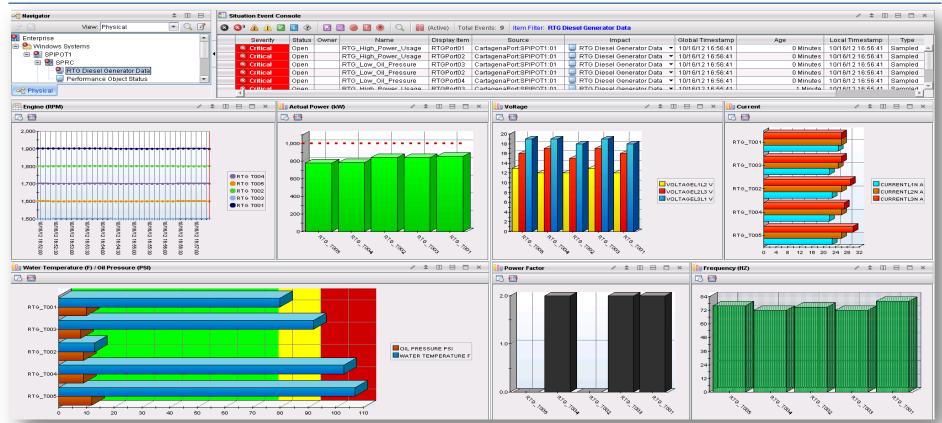

- Non IT equipment metrics and events collector
- Business Services
 Dashboards combining
 IT and non IT assets
- Predictive Analytics for preventive maintenance
- iLOG for events correlation and automation

Cranes (Non IT Equipment)
