IBM SolutionsConnect 2014

A New Era of Smart

Mar 13-2014 | Edsa Shangri-La, Manila, Philippines

Testdrive Your Cloud to
Fuel the New "Innovation
as a Service"

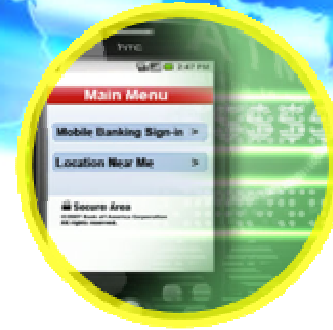

Agenda

- Introduction
- IBM DevOps for Cloud
- IBM DevOps Solution Walkthrough
- Customer Success
- What's Next

Software drives today's innovation for a smarter planet
Transforming the way we live, work, and play

Software and systems delivery is undergoing rapid change
Market dynamics and technological innovations create opportunity and challenges

Increased globalization

Complicates collaboration

Technology Explosion

Drives faster demand for change

Disruptive technologies

Adds complexity to cycle times

Software's increasing value in innovation

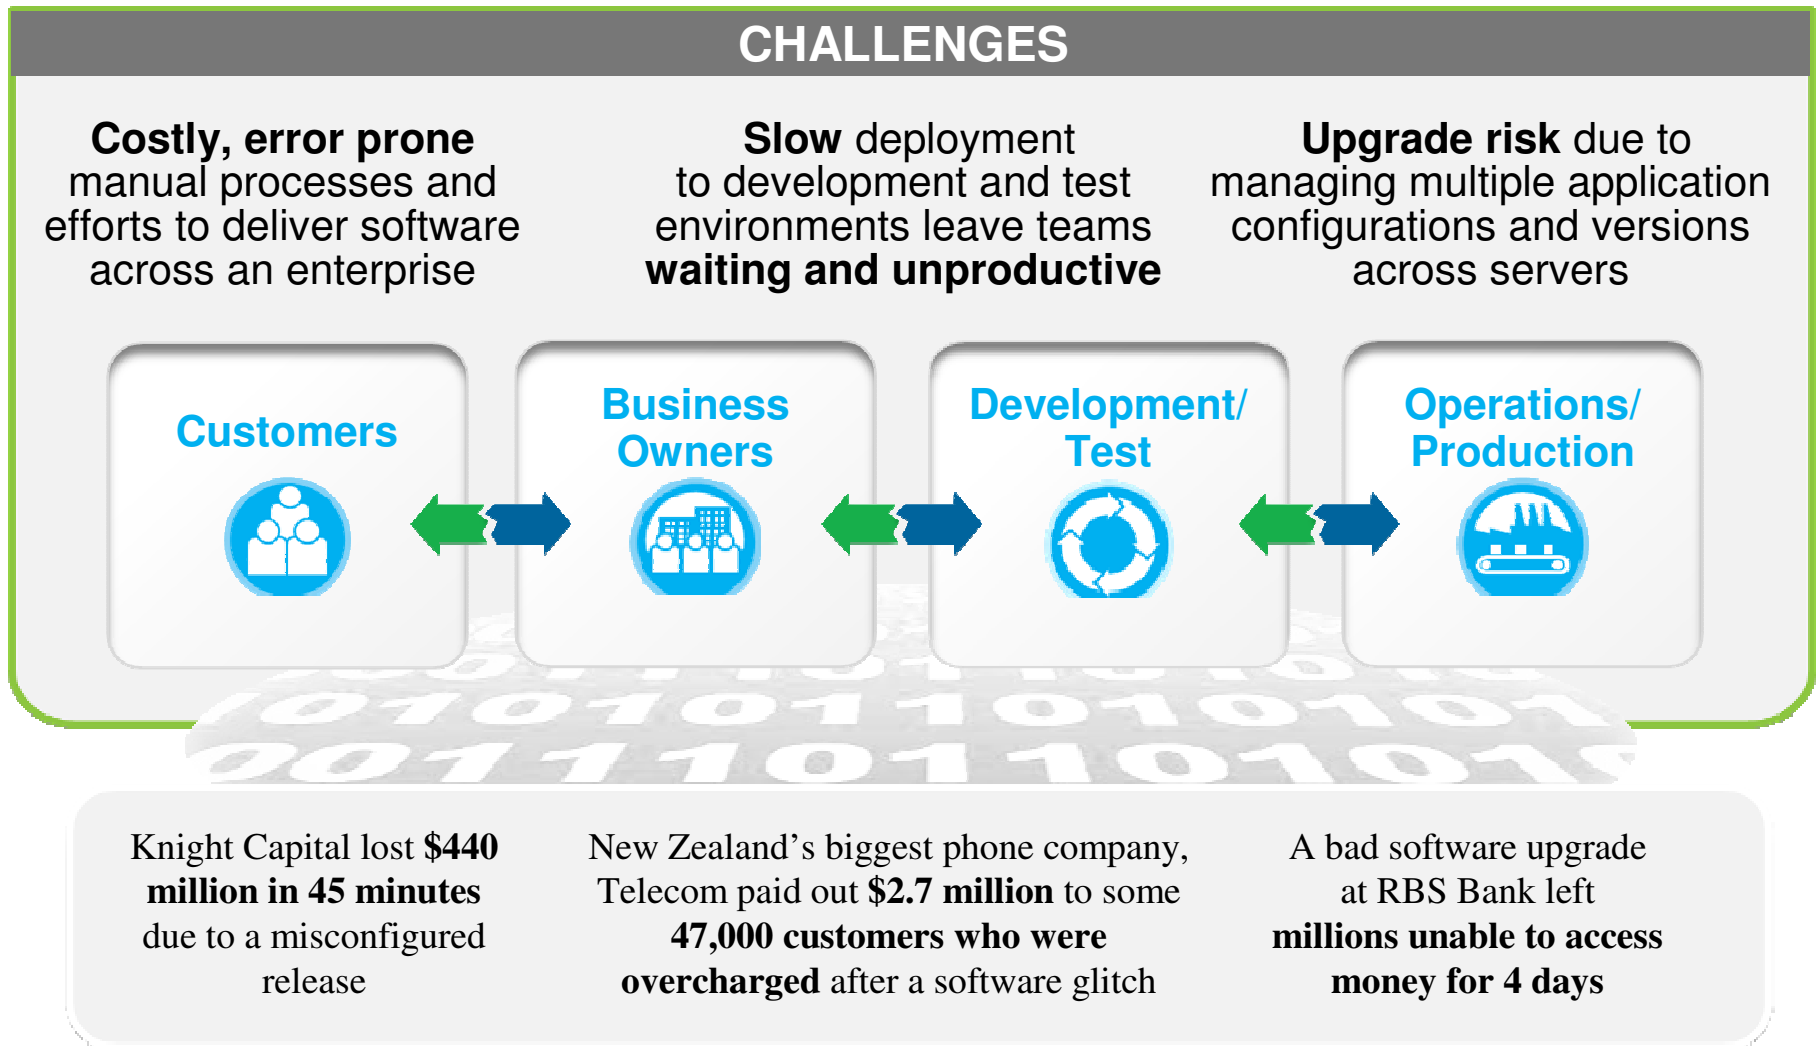

Demands increased governance

Requires accelerated delivery

And a lack of continuous delivery impacts the entire business

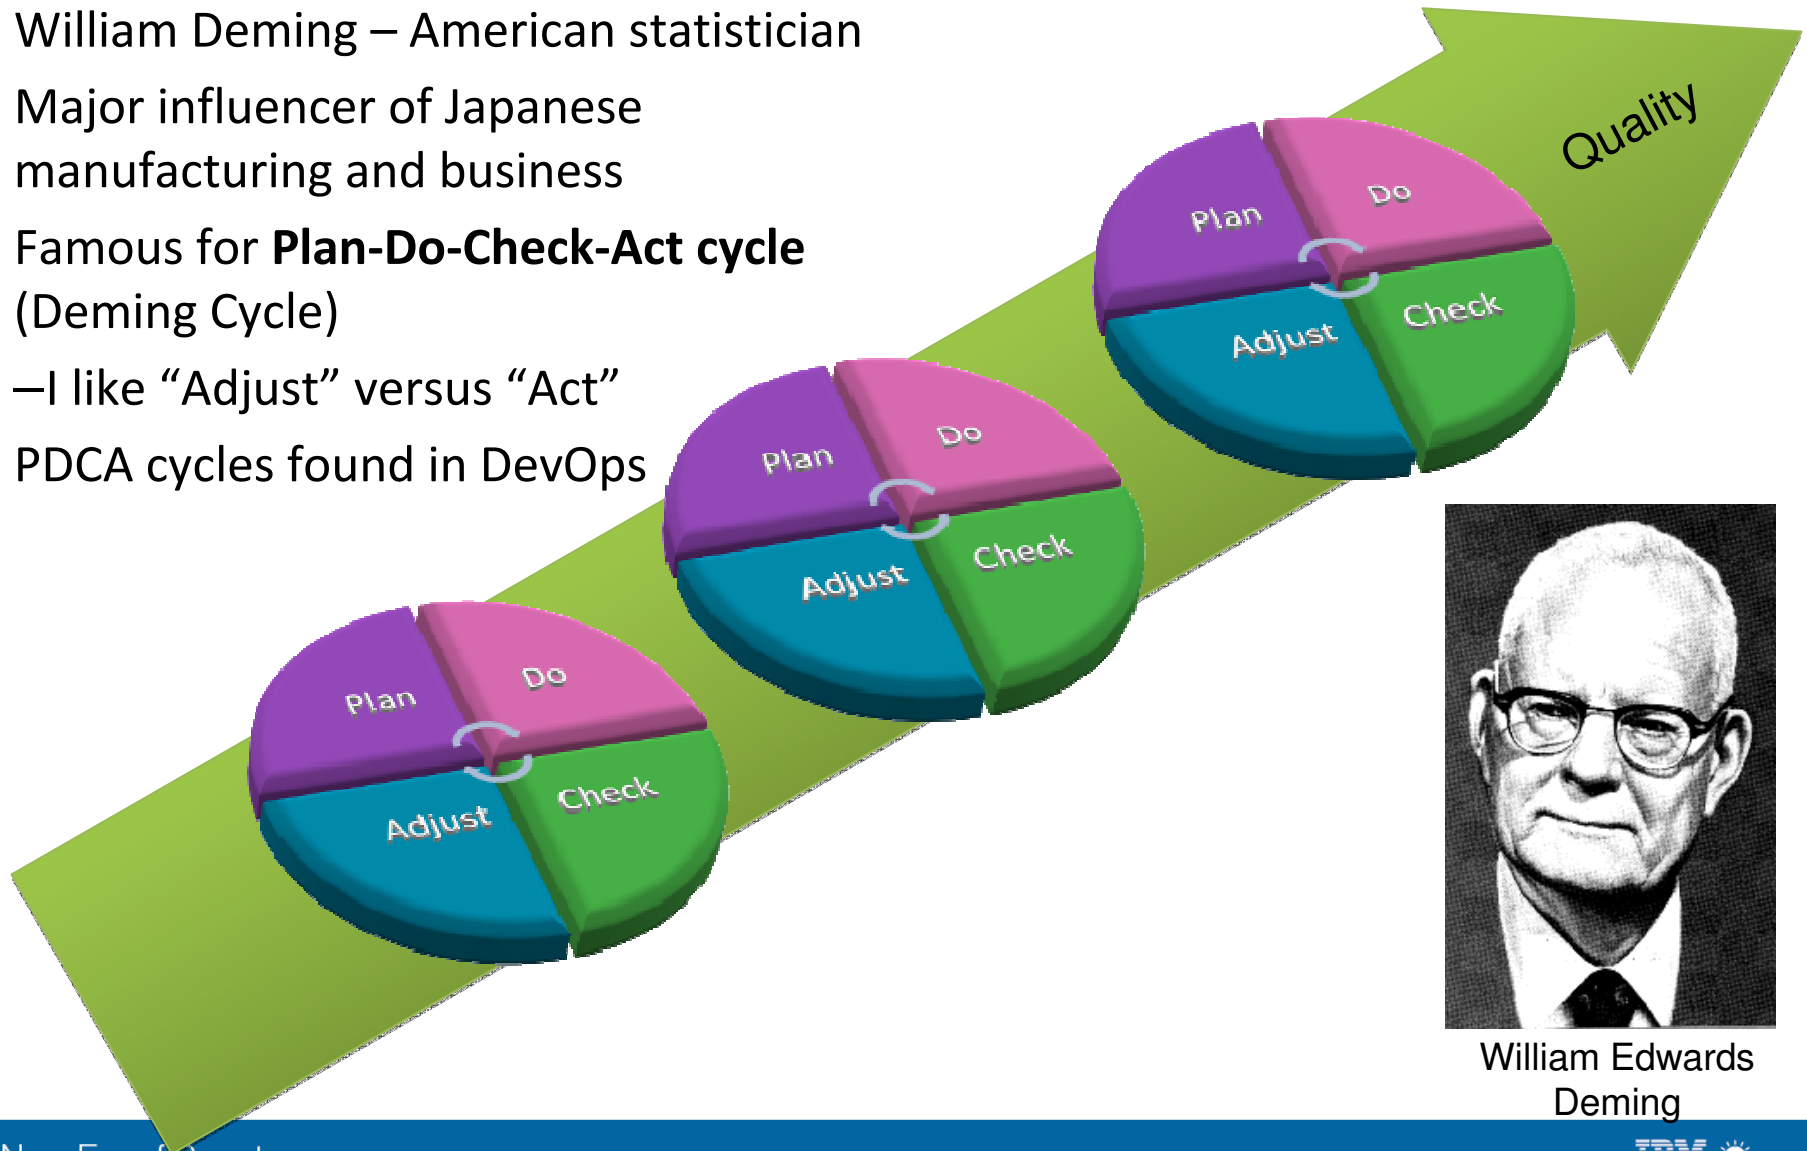

Agenda

- Introduction
- IBM DevOps for Cloud
- IBM DevOps Solution Walkthrough
- Customer Success
- What's Next

Deming Cycle

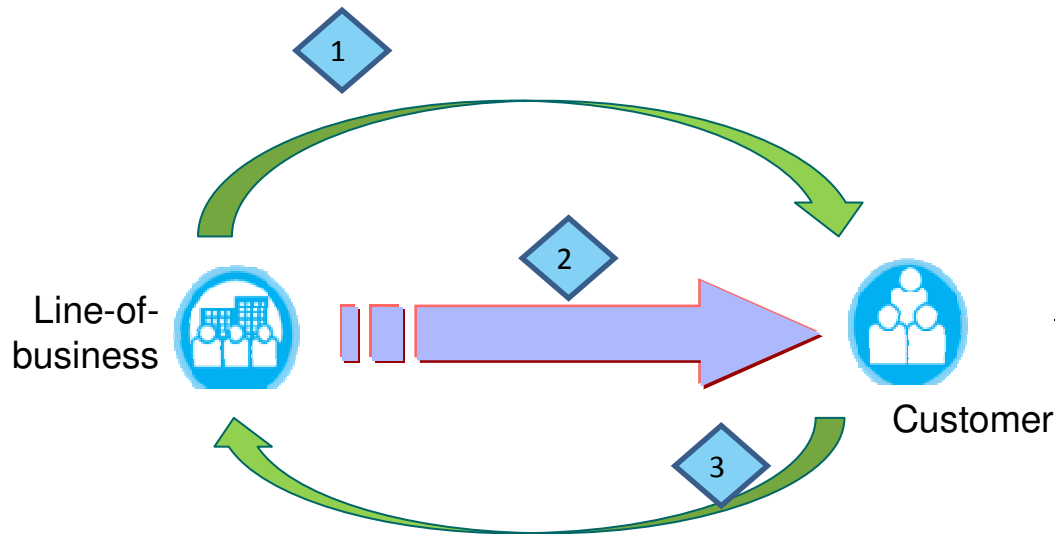

- William Deming – American statistician
- Major influencer of Japanese manufacturing and business
- Famous for **Plan-Do-Check-Act cycle** (Deming Cycle)
 - I like “Adjust” versus “Act”
- PDCA cycles found in DevOps

William Edwards
Deming

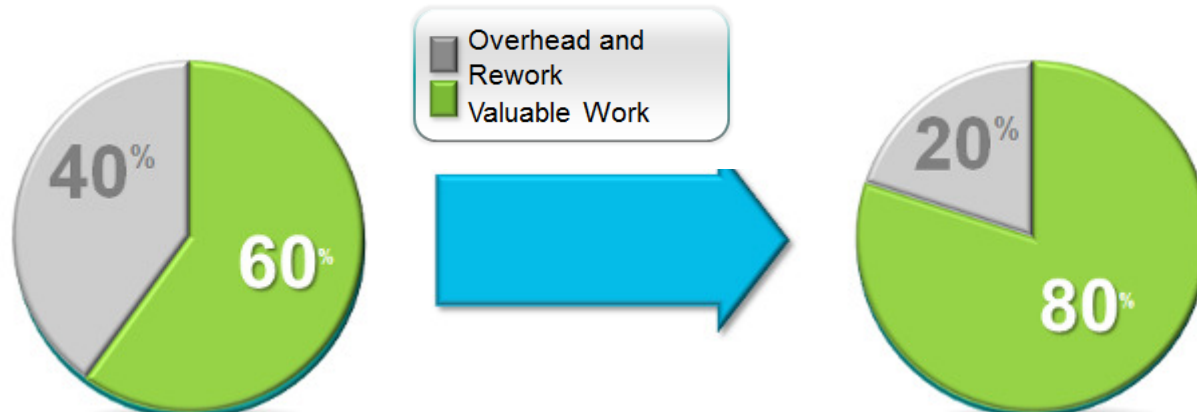

DevOps approach: Apply Lean principles to software innovation and delivery to create a continuous feedback loop with customers

1. Get ideas into production fast
2. Get people to use it
3. Get feedback

Adopt DevOps approach to continuously manage changes, obtain feedback and , deliver changes to users

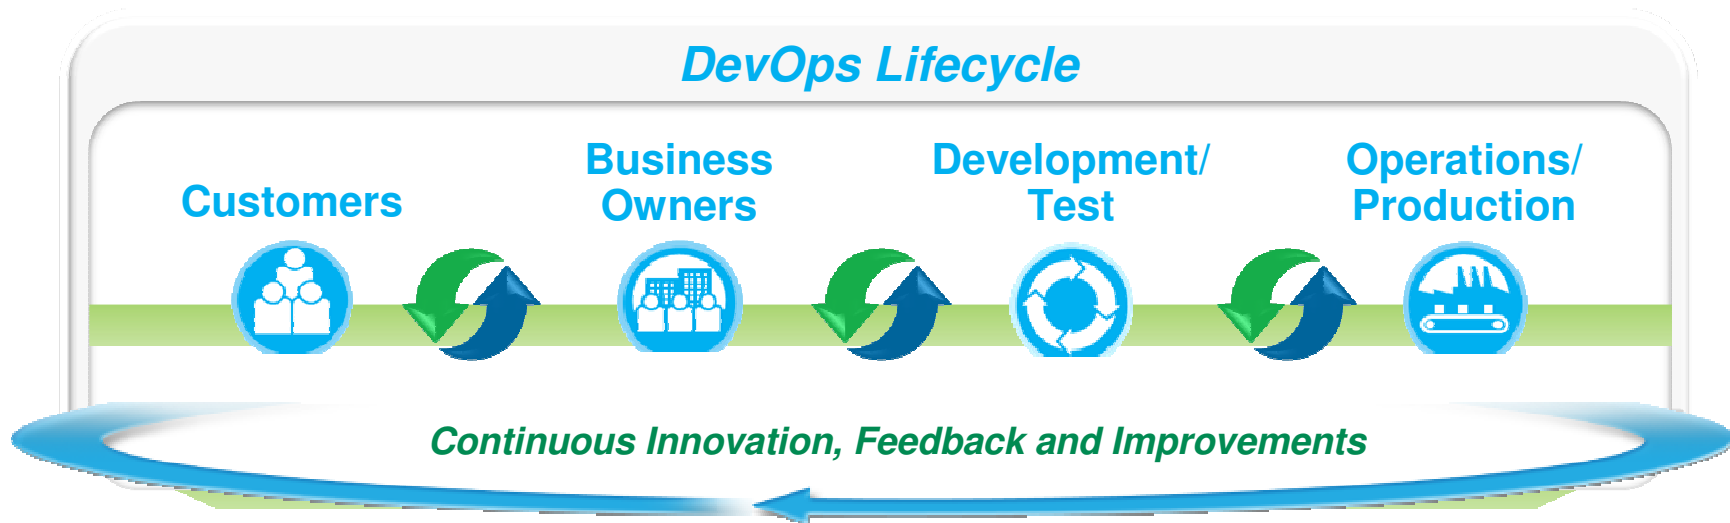

Eliminate any activity that is not necessary for learning what customers want

DevOps

Enterprise capability for continuous software delivery that enables clients to seize market opportunities and reduce time to customer feedback

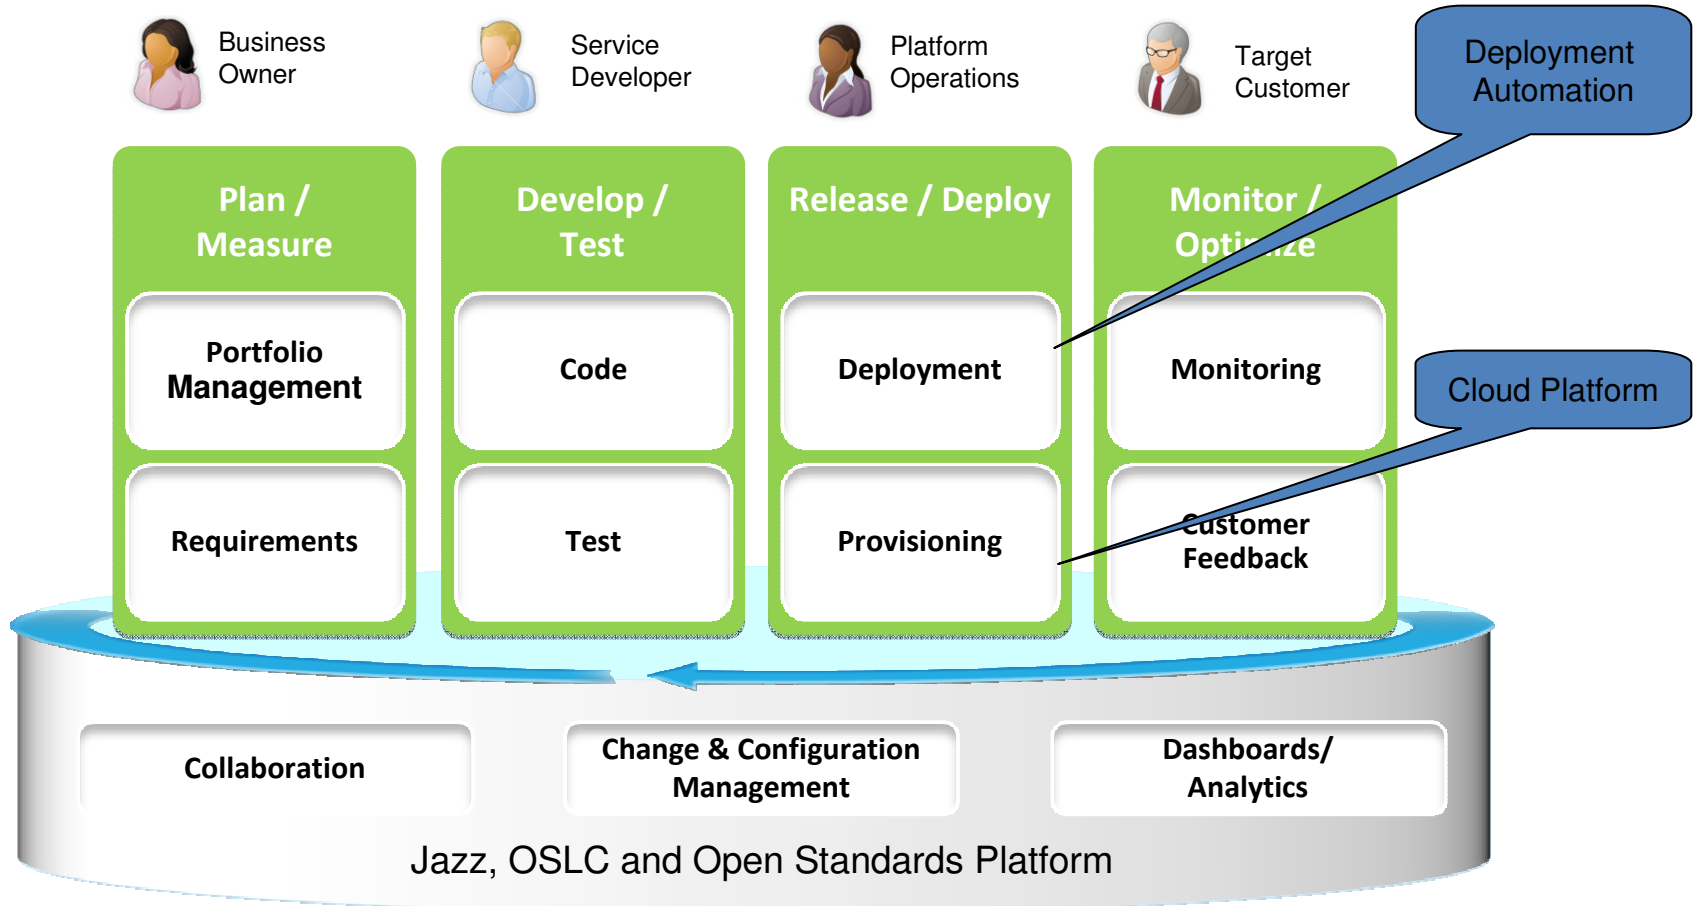

Accelerate Software Delivery

Balance speed, cost, quality and risk

Reduce time to customer feedback

DevOps Solution: Adoption paths, open platform and key capabilities

DevOps Principles and Values

- Develop and test against a production-like environments
- Iterative and frequent deployments using repeatable and reliable processes
- Continuously monitor and validate operational quality characteristics
- Monitor and improve

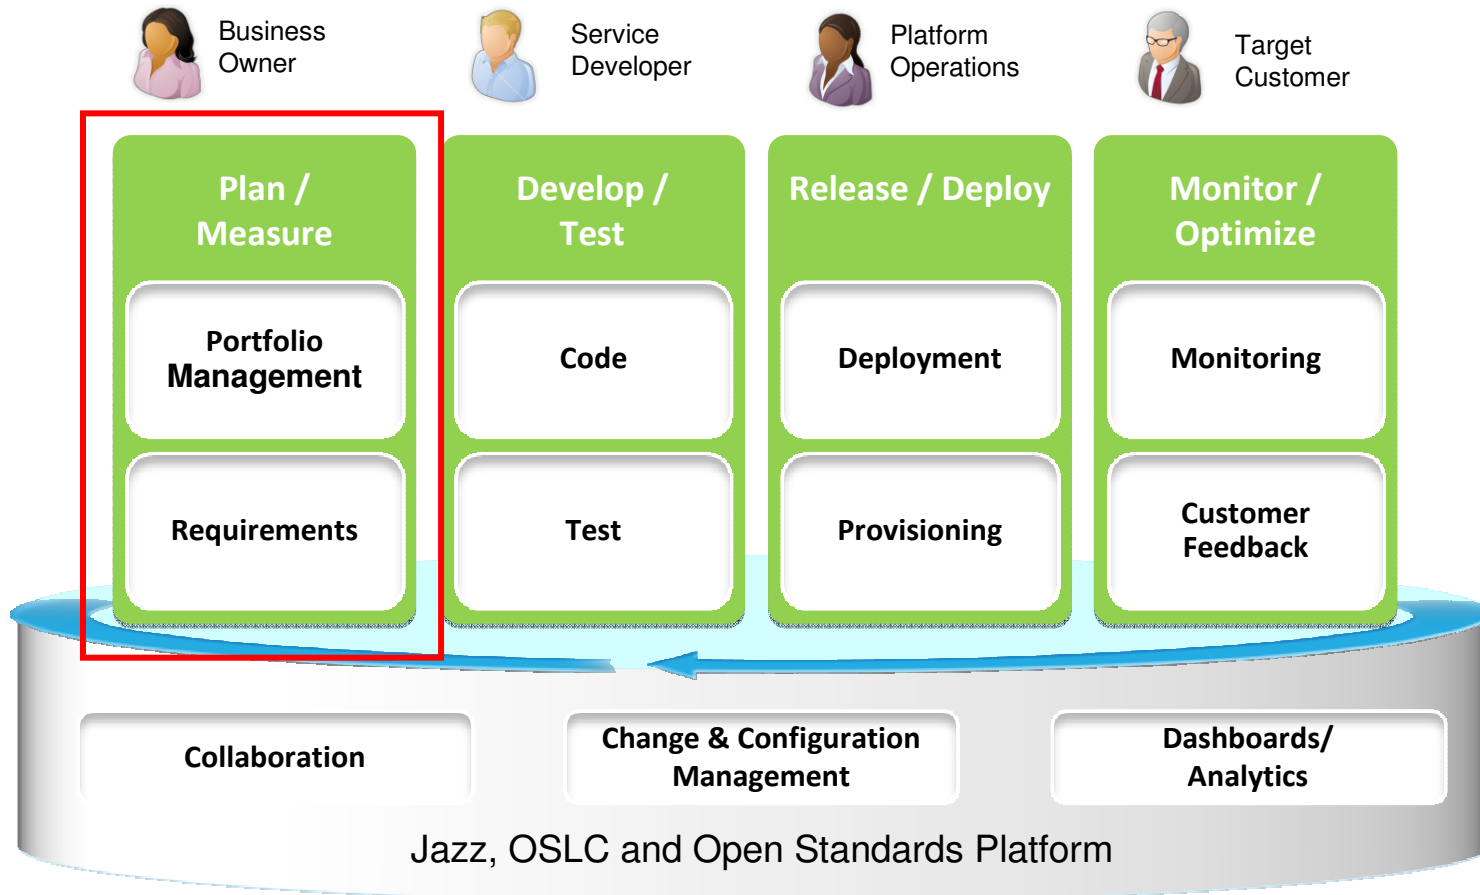

Agenda

- Introduction
- IBM DevOps
- **IBM DevOps Solution Walkthrough**
- Customer Success
- What's Next

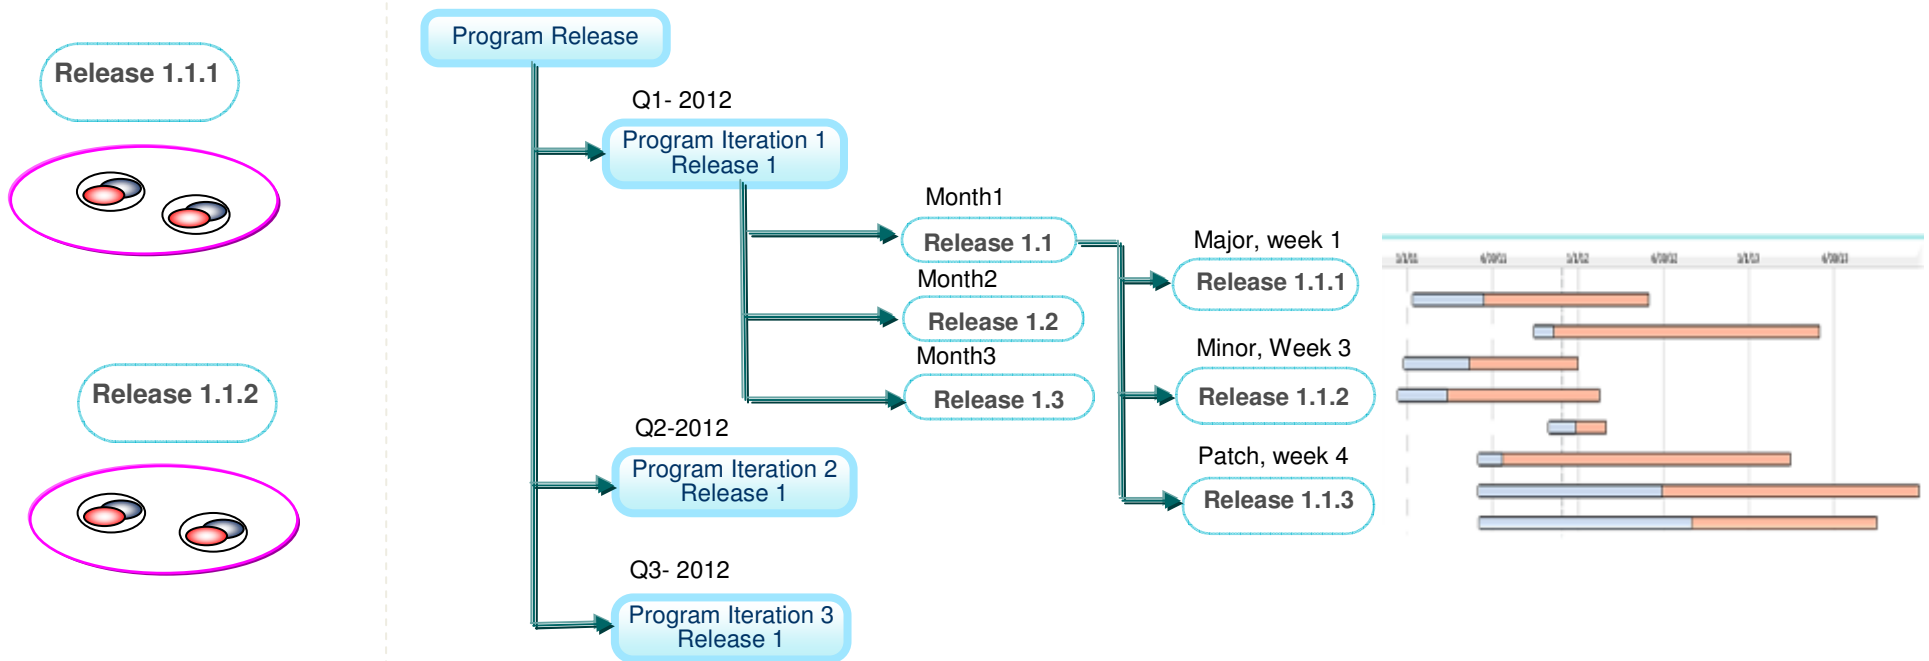

DevOps Solution: Adoption paths, open platform and key capabilities

Develop Continuous Pipeline of Innovative Services & Releases

Integrating Business Demand Management with Release Planning

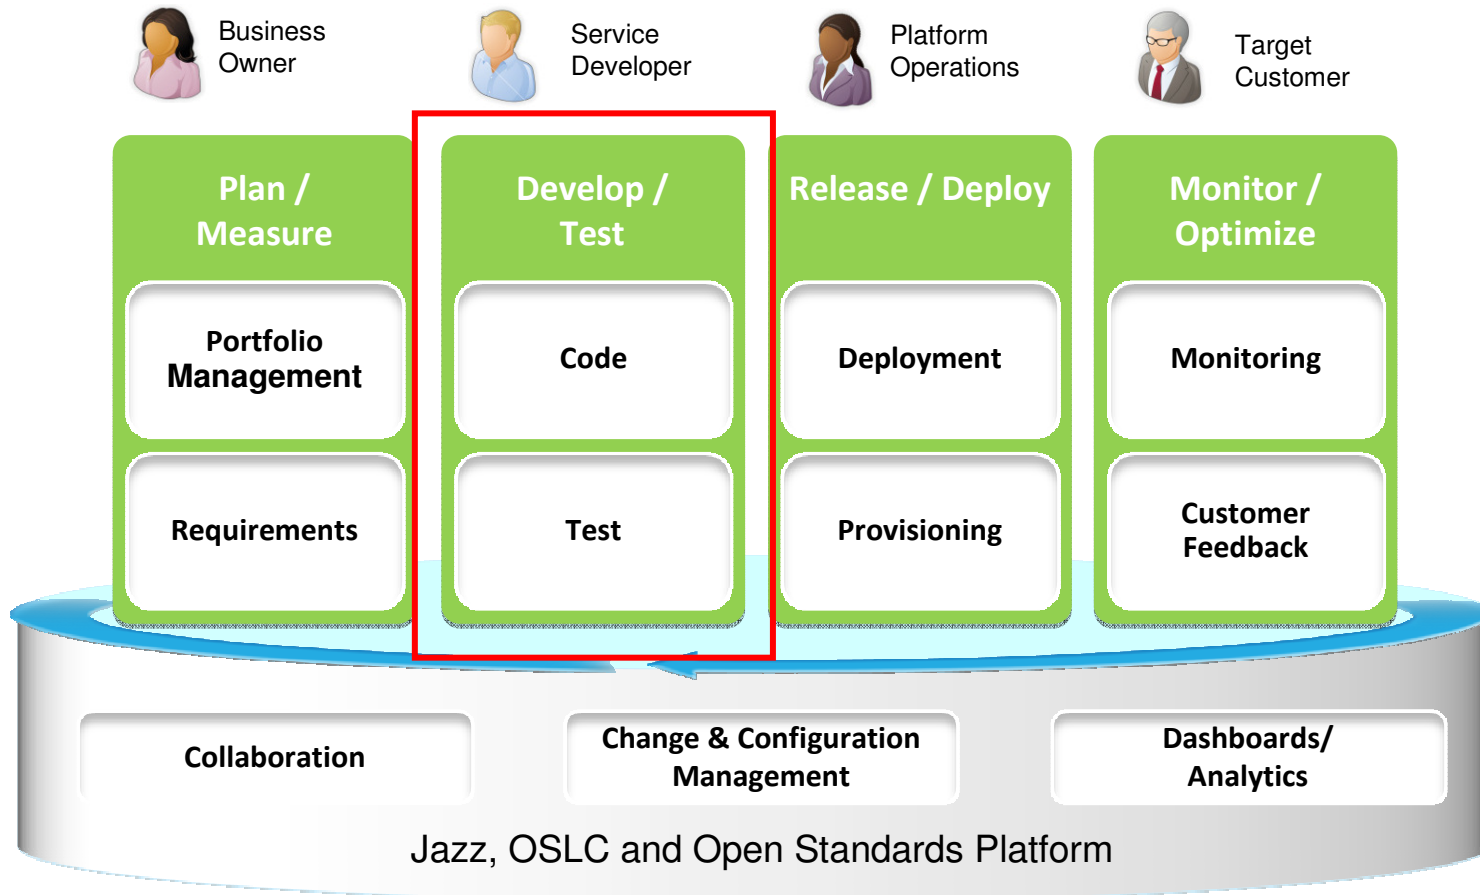

Plan and Measure Demonstration Scenario

A bank is undergoing a major IT transformation to prepare itself for a regional expansion.

- How to capture and prioritize the new business demands amidst current backlog
- How to plan the releases
- How to track release progress

DevOps Solution: Adoption paths, open platform and key capabilities

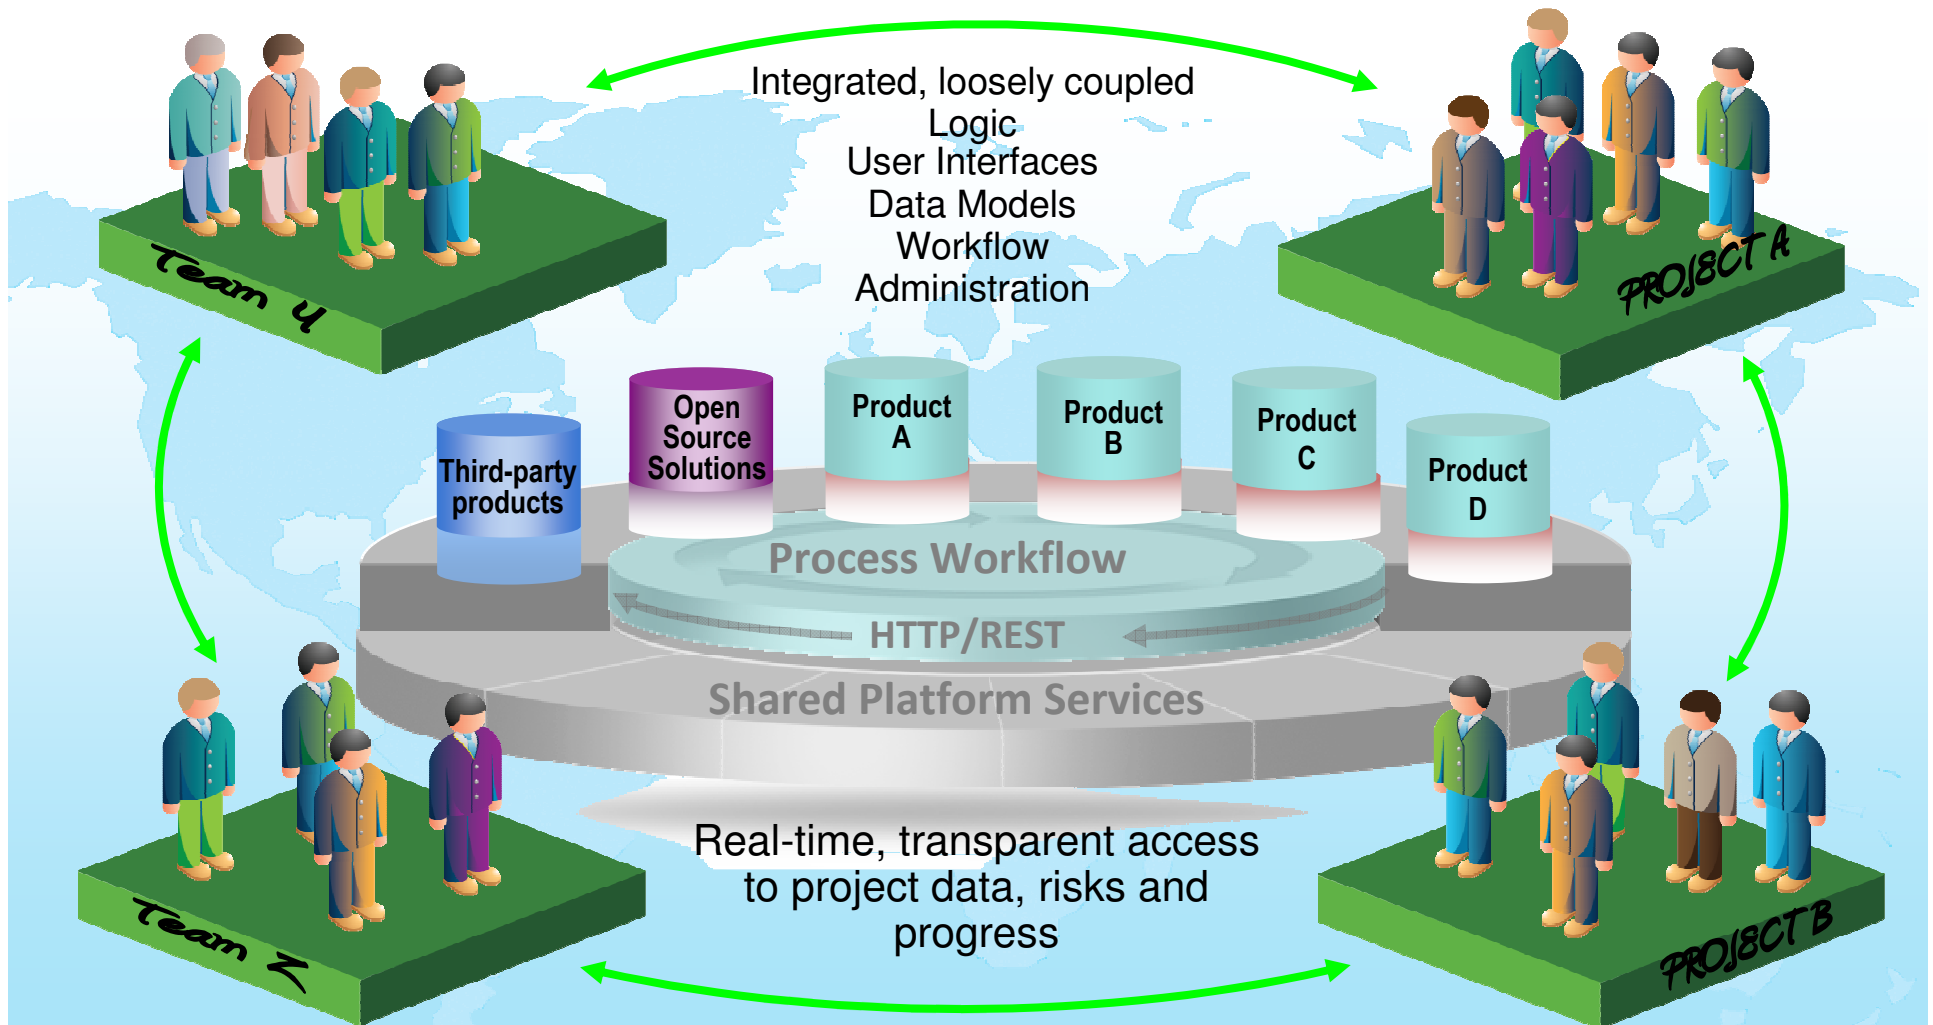

Traditional software delivery environments limit productive collaboration: Islands of People, Process and Information

- Little to no project visibility
- Data locked in proprietary APIs
- Poor process and workflow integration
- High maintenance and administration costs
- Persistent functional, geographic and organizational silos

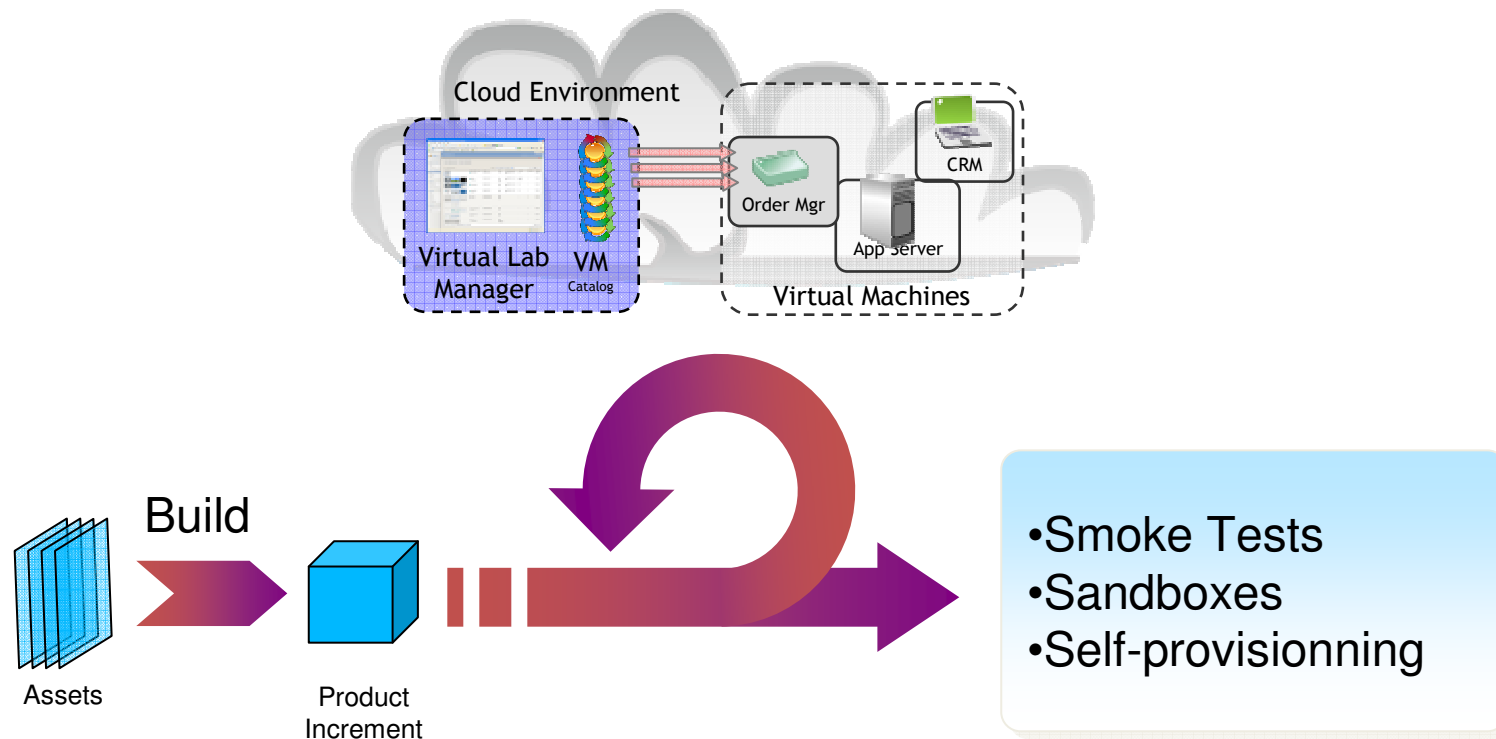

Collaborative Lifecycle Management - A platform for software integration and collaboration

Streamline your process with continuous integration & test

- Avoid time spent installing and configuring software just to discover basic build issues
- Smoke tests can be integrated as part of the continuous integration process through deployment automation and test virtualization
- Regression test results are made available to the entire team to shorten resolution

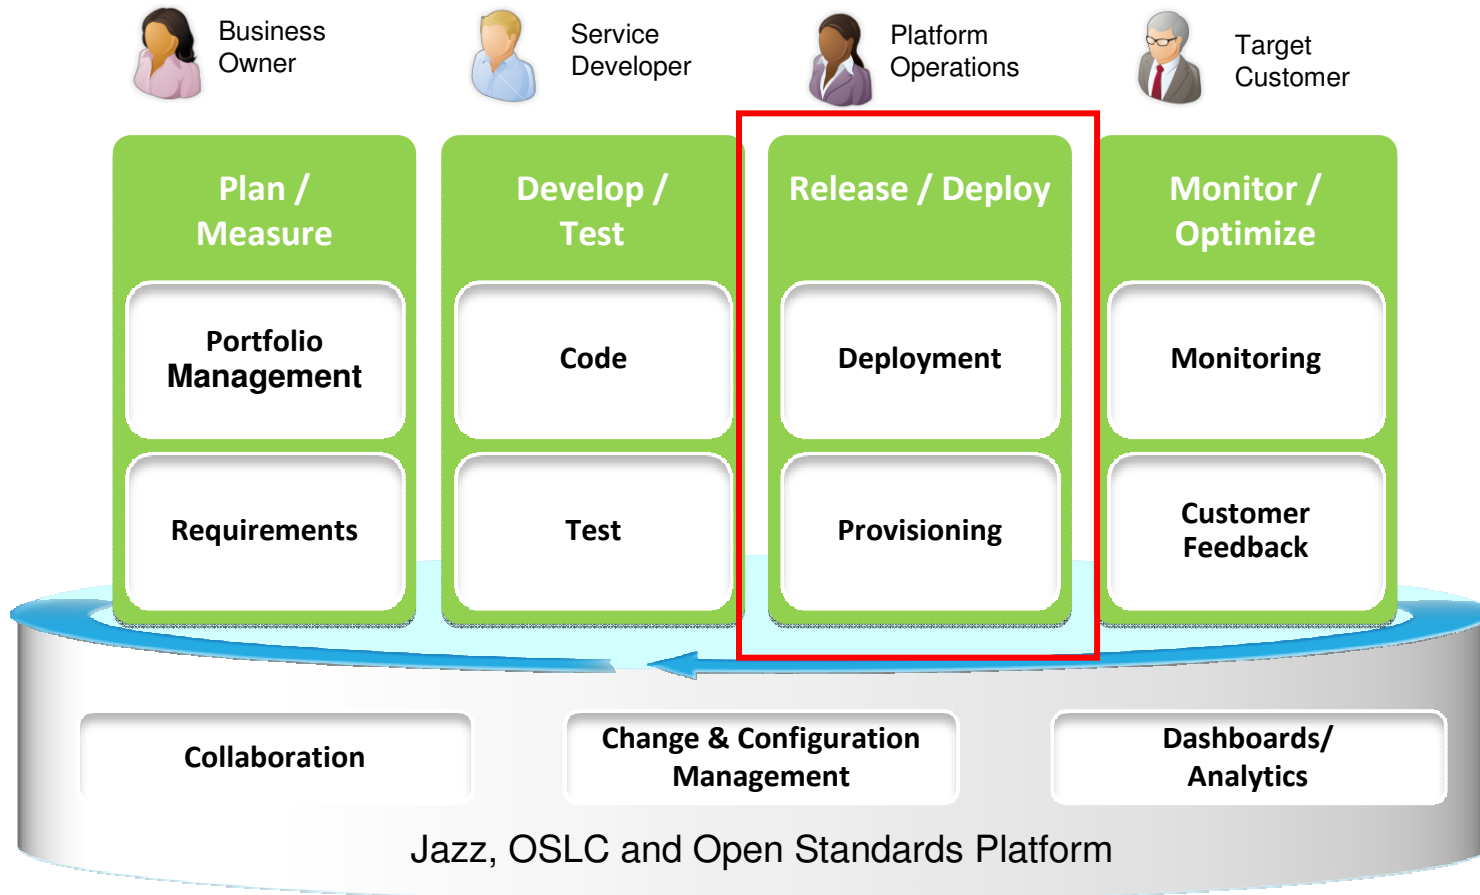

Develop & Test Demonstration Scenario

A bank IT team consisting of system analyst, developer and tester are collaborating to rollout a release.

- Requirements Elaboration
- Development Progress Tracking
- Test Tracking
- End to end traceability

DevOps Solution: Adoption paths, open platform and key capabilities

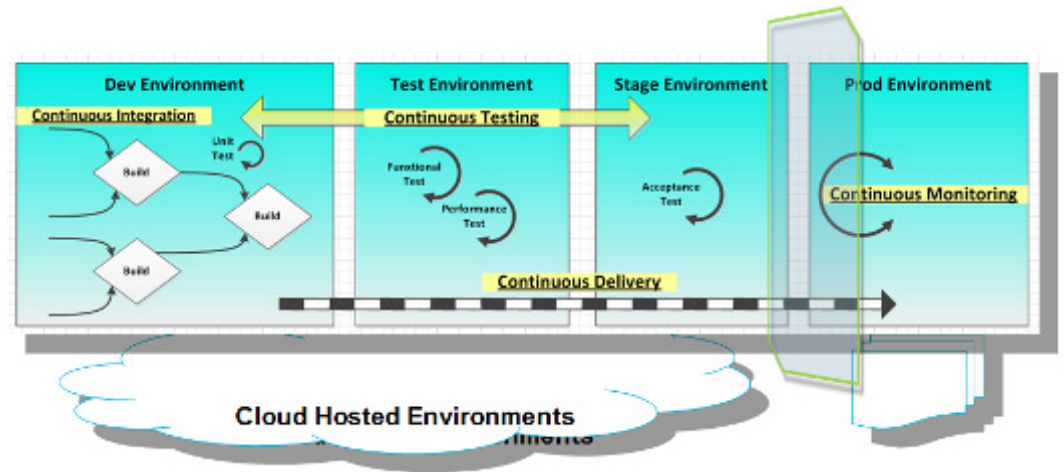

Addressed Cloud Workloads :

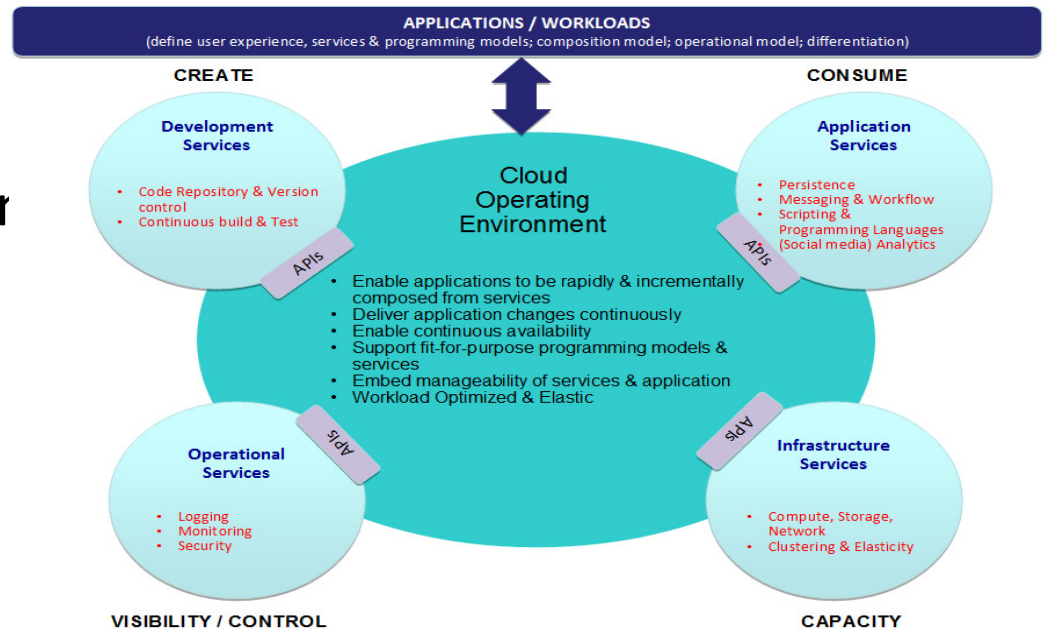

• Dev-Test

- Developer/QA *Self-service*
- Access to Production-like Environments
- Environment and Middleware Configuration Management
 - Infrastructure as Code

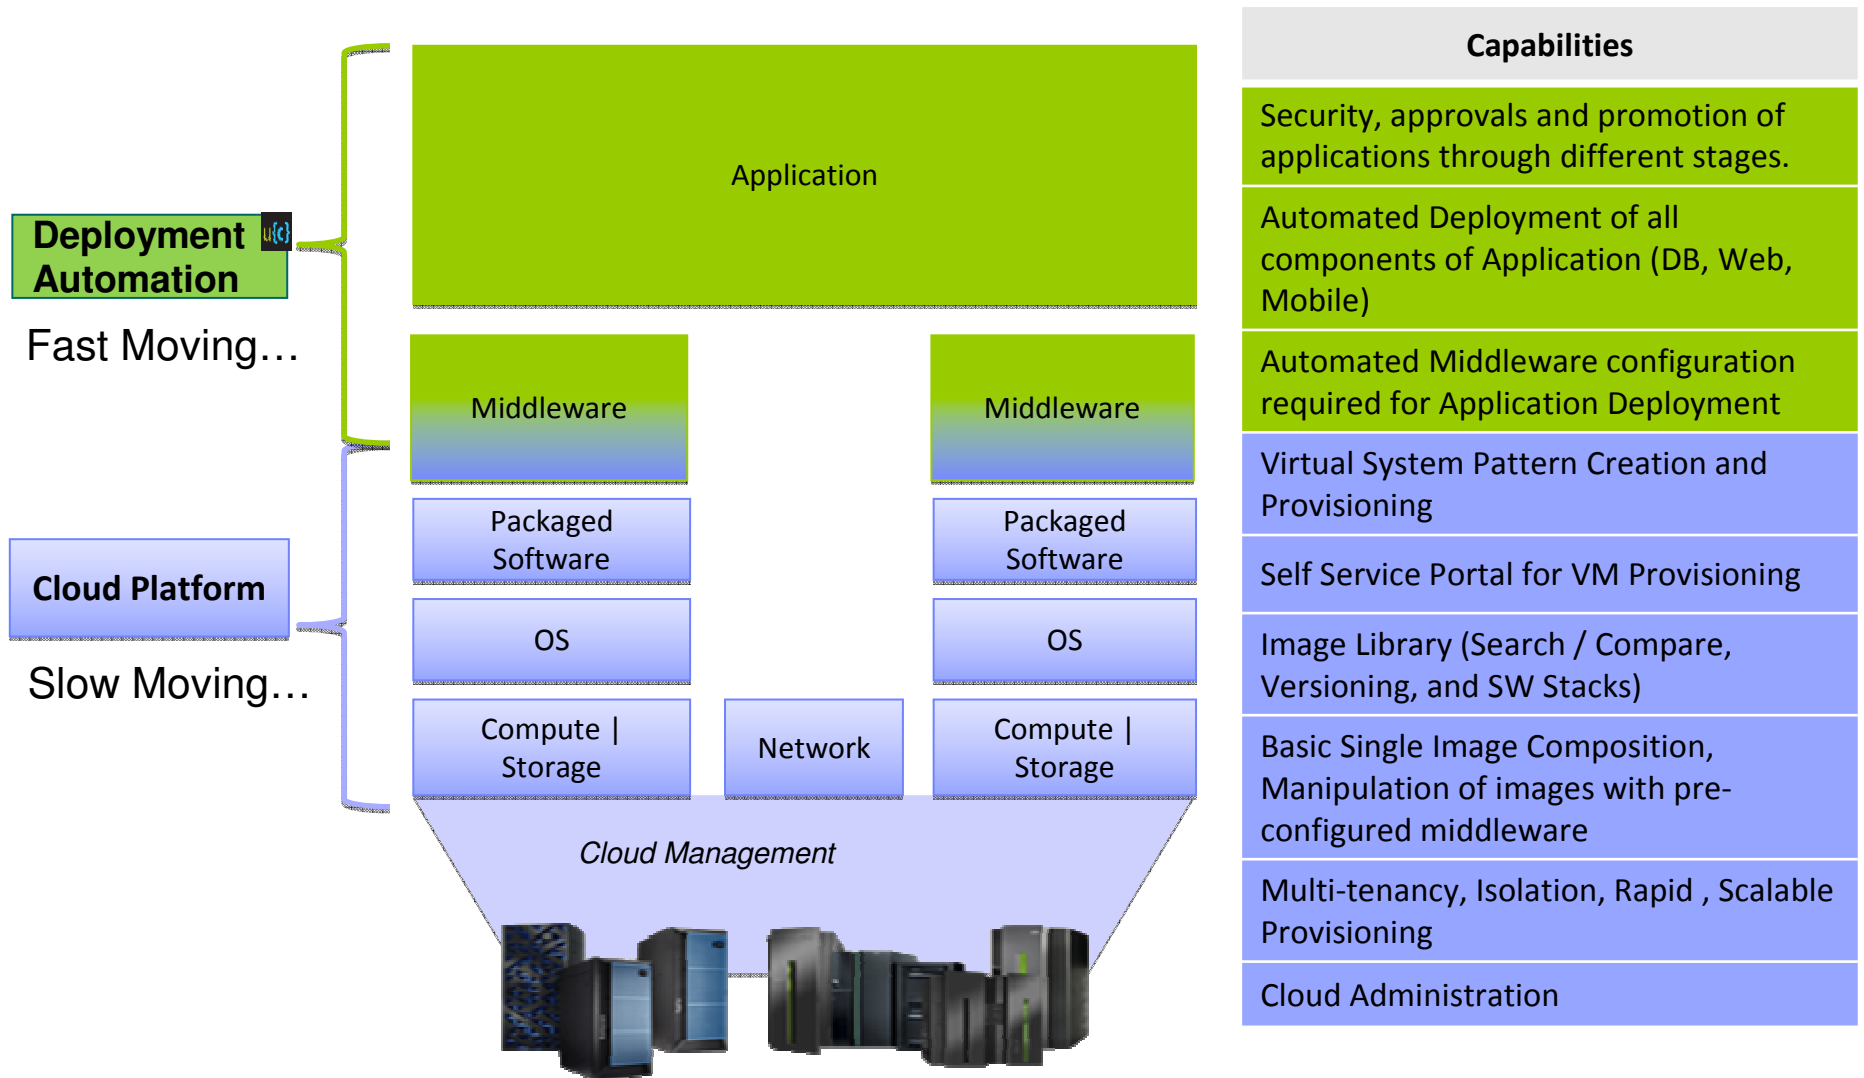

• Cloud Operation Environment

- Expendable Environments
- Promotable Environments

Release Automation : Application Deployment + Environment Provisioning

UrbanCode: Premier Release and Deploy Automation Solution

Enabling clients to more rapidly deliver mobile, cloud, big data and traditional applications with high quality and low risk

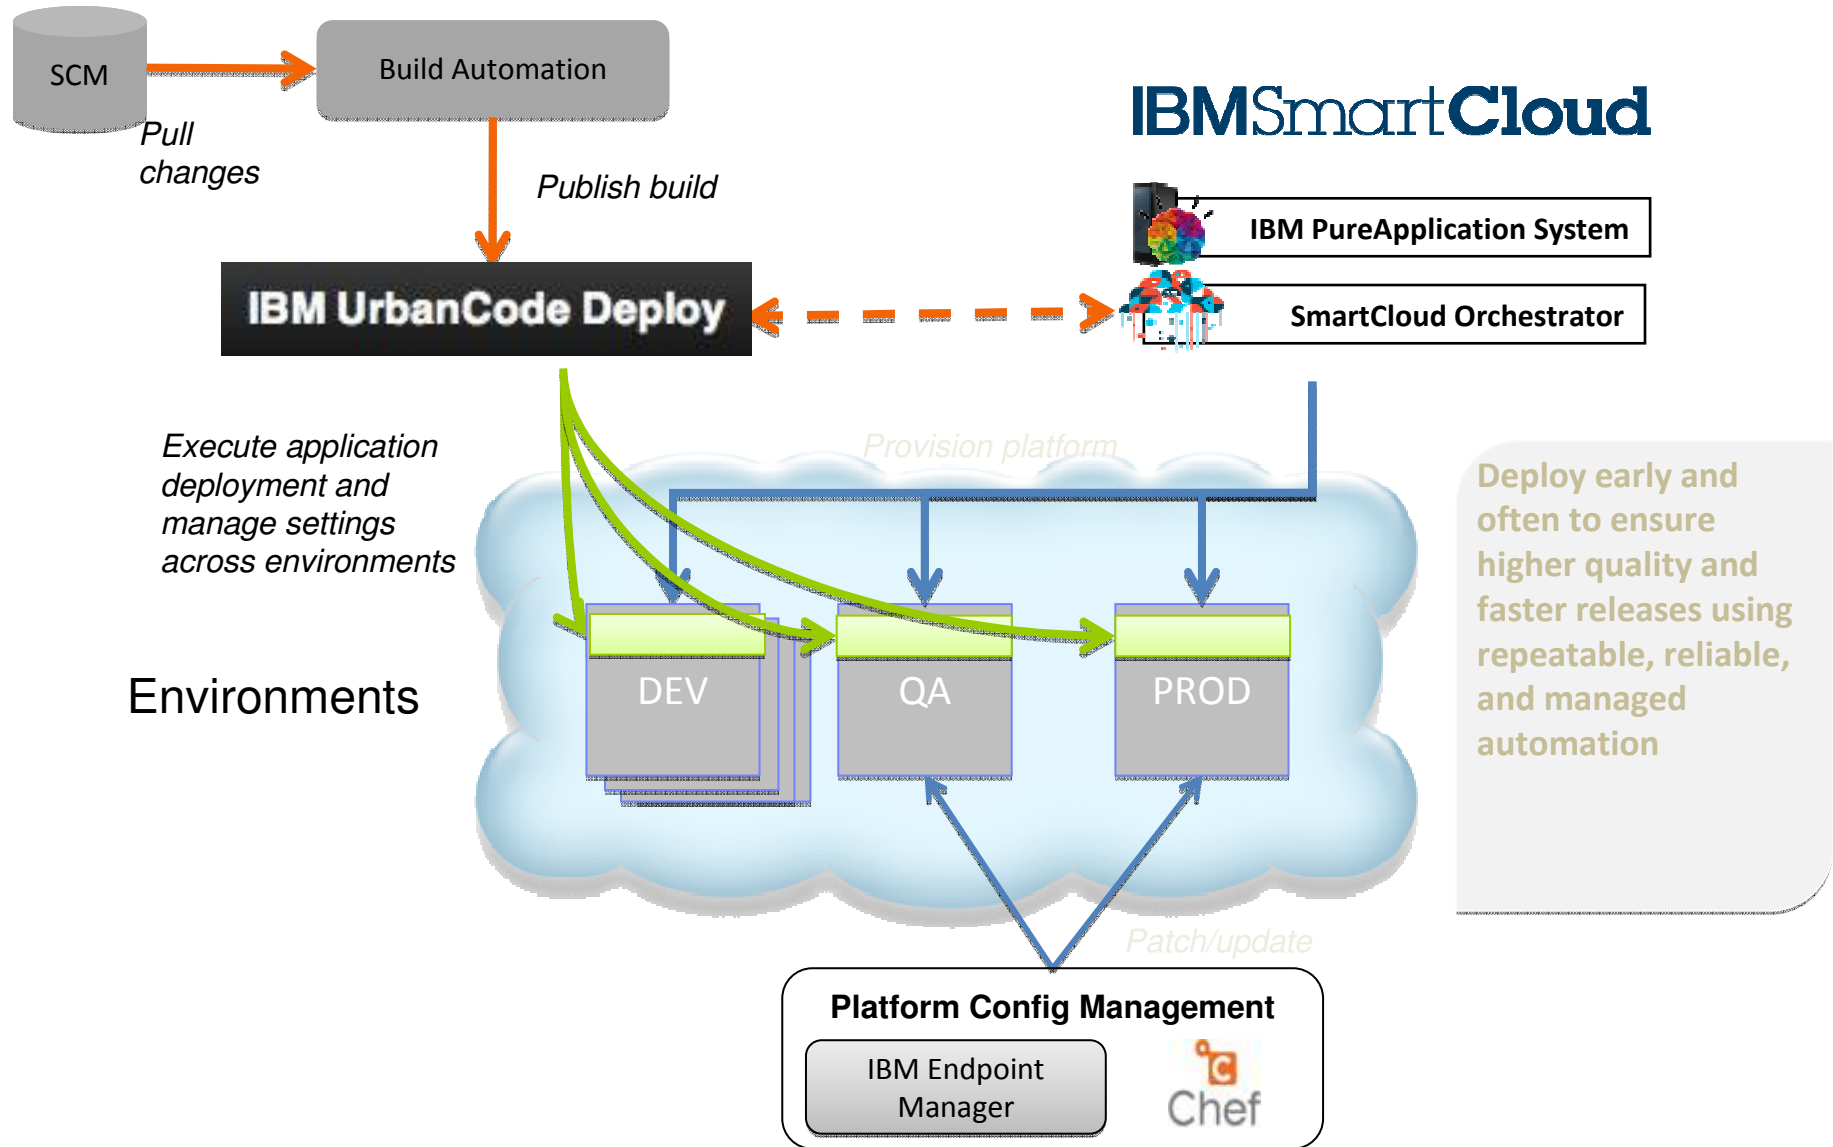

IBM UrbanCode Deploy

IBM UrbanCode Release

Start Time	Duration	Name	Application	Type	State	User	Referrer
3/6/13 9:28 AM	00:15	Connect Database to use Oracle RAC system	None	Manual	Admin	admin	
3/6/13 9:43 AM	00:00	Do something else	None	Manual	Admin	admin	
3/6/13 9:42 AM	00:15	Connect Database to use Oracle RAC system	None	Manual	Admin	admin	
3/6/13 9:47 AM	00:15	Update the database	None	Manual	Admin	admin	

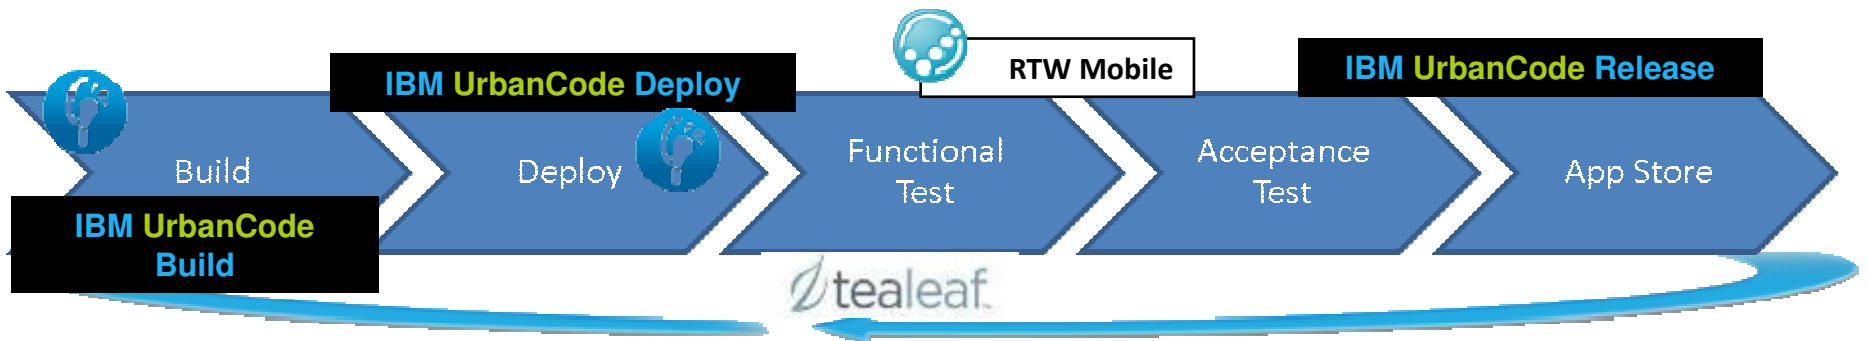

Improve Delivery Lifecycle with Software Defined Environments

DevOps for Mobile

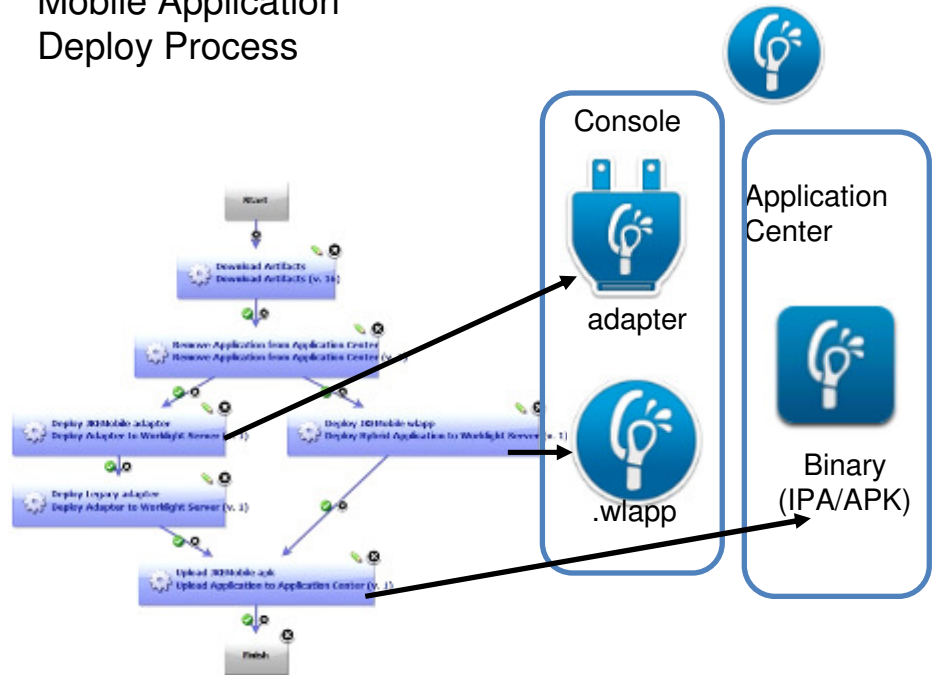

Accelerate delivery of mobile apps focusing on quality and user experience – Automate deployment of Worklight mobile applications as part of end-to-end delivery process.

Continuous Feedback and Optimization using Tealeaf helps monitor user sentiment and usage, letting teams react to poor feedback before it spirals

Mobile Application Deploy Process

Worklight

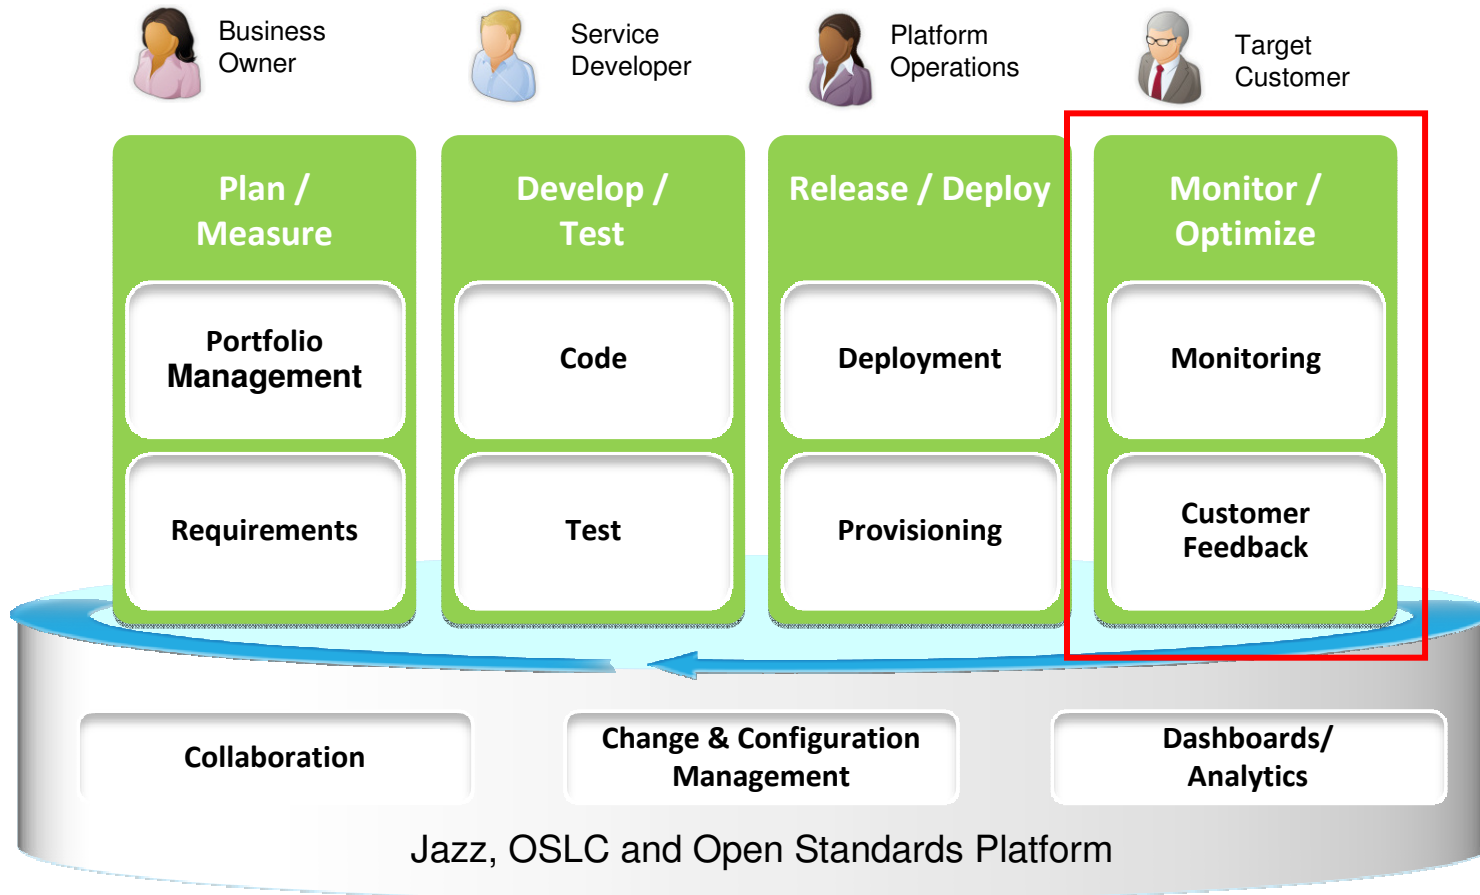

Release & Deploy Demonstration Scenario

An online trading company is governing and automating the deployment of online web application.

- Deployment of application from development to test
- Snapshot of test environment configuration i.e. Golden Image
- Approval of production deployment
- Deployment of application from test to production

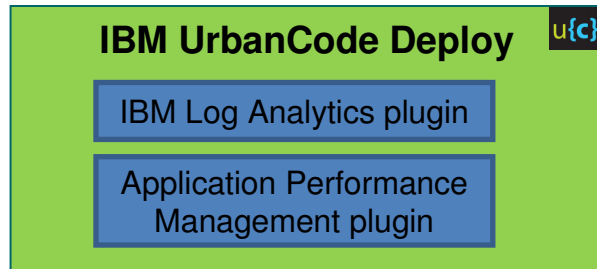

DevOps Solution: Adoption paths, open platform and key capabilities

Application Lifecycle Integration – Monitoring & Log Analytics

Application Dashboard

DevOps

Enterprise capability for continuous software delivery that enables clients to seize market opportunities and reduce time to customer feedback

Accelerate Software Delivery

Balance speed, cost, quality and risk

Reduce time to customer feedback

Agenda

- Introduction
- IBM DevOps
- IBM DevOps Solution Walkthrough
- **Customer Success**
- What's Next

Case Study: TIAA-CREF

Do the right things right

- Attack the high value and high risk items first
- Predict and quantify the outcomes and resources
- Measure honestly with distributions of outcomes
- Learn what customers really want and steer with agility

“We’ve achieved a 1600% increase in delivery velocity, in 7 months, using a DevOps approach.”

John Kosco
Director of IT Operations

Case Study: WebMD

Accelerate delivery of usable increments for continuous outside-in feedback

- Provide a continuous delivery pipeline that automates deployments to test and production environments
- Reduce overhead with push-button deployments
- Quantify change stability and measure transparently for compliance

“Before it took 2 days to deploy a build, with uDeploy and our new processes, it takes us less than 60 seconds.”

Matthew Wilson
Director, Consumer Web Operations

DevOps maturity model

Industry norm

	Plan / Measure	Development / Test	Release / Deploy	Monitor / Optimize
Scaled	<p>Define release with business objectives Measure to customer value</p>	<p>Improve continuously with development intelligence Test Continuously</p>	<p>Manage environments through automation Provide self-service build, provision and deploy</p>	<p>Automate problem isolation and issue resolution Optimize continuously</p>
Reliable	<p>Plan and source strategically Dashboard portfolio measures</p>	<p>Deliver and integrate continuously Manage data and virtualize services for test</p>	<p>Standardize and automate cross-enterprise Automate patterns-based provision and deploy</p>	<p>Optimize applications Use enterprise issue resolution procedures</p>
Repeatable	<p>Link objectives to releases Measure to project metrics</p>	<p>Deliver and build with test Centralize test management Link lifecycle information</p>	<p>Plan departmental releases and automate status Automated deployment with standard topologies</p>	<p>Monitor using business and end user context Centralize event notification and incident resolution</p>
Practiced	<p>Document objectives locally Manage department resources</p>	<p>Manage Lifecycle artifacts Schedule SCM integrations and automated builds Test following construction</p>	<p>Plan and manage releases Standardize deployments</p>	<p>Monitor resources consistently Collaborate Dev/Ops informally</p>
