Smart Work for a Smarter Planet

Bart Lautenbach | Director – WW Lotus Tiger Team

lotusknows.com

Our world is changing and
the demand for progress is clear…

2 Billion people will be on the web by 2011.*

4 Billion mobile phone subscribers worldwide by the end of 2008.*

1 Trillion connected intelligent devices in the world

$650 Billion in productivity is lost because of unnecessary business process interruptions
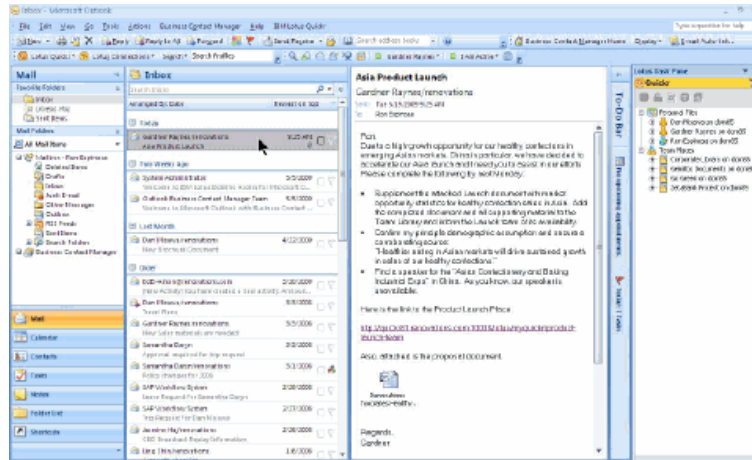

85% of computing capacity sites idle

*Sam Palmisano speech, November 12, 2008

Work patterns are more complex.

Not everyone works the same way or in the same place

phoners

capture their knowledge before they retire

texters

Attract and retain; harness their collaborative style

emailers

Relieve their stress; increase their effectiveness

Finding the right people and information fast is essential.

- Accomplishing more with less

- Working with the most current information

- Discovering and reaching credible resources

- Finding instant answers

-

We need to work smarter

IBM

How can you capture new opportunities in this new world?

▪Imagine if…

- … you could consistently **beat your competition** to market by a full year

- …you could **deliver your expertise** anywhere in the world without stepping on an airplane

- …you could **expand your company's brain power** by a factor of 5 without hiring a single new employee
Building deeper relationships

improves your ability to respond to market needs

by enabling smarter collaboration with your customers and partners

Yesterday's customer had limited interaction with companies beyond advertisements, call centers and sales people

Today's customer demands a more dynamic experience and utilizes

- Static web pages to push information
- Reliance on call centers to respond to customer needs
- Advertising and PR as the main channel to drive awareness

- Customers need dynamic self-service capabilities
- Customers rely on social networking to drive purchase decisions
- A single point of contact is essential, with real-time access to experts

Does your business have the capabilities to support these new customer demands?

IBM

Increase **workforce productivity** for people to act quickly

by enabling smarter collaboration within the walls of your organization

Yesterday's employees spent excessive time locating information, connecting with the right people and navigating disparate communications systems

- Phone and paper-based communications
- Dispersed workforce is not connected or limited accessibility
- Escalating meeting expenses and travel costs

Today's employees can collaborate from anywhere, through any device, and find information and experts in real time

- Employees need flexibility in where they work and what they use for work
- Businesses need more efficient ways to manage critical processes
- Businesses need to limit expenses

Do your employees have the tools to support a more efficient organization?

Capitalize on today's opportunities through innovation

by creating a more participatory business culture that fosters new ideas

Yesterday's business has made generating new ideas less of a priority given the current market conditions

- Static talent is difficult to engage and develop
- Workforces shrinking
- Costly innovation projects are not an option today
- Organizational silos limit idea generation and sharing

Today's business is focusing on leveraging the downturn to come up with new ideas and tap new opportunities

- Businesses need to engage their broader ecosystem to generate new ideas
- Ideas need to be transparent and shared within an organization
- Businesses need to be more adaptable to capitalize on new ideas

Does your organization have the capabilities to capture innovation to deliver better business results?

IBM.
