

Innovate2012

The Premier Event for Software and Systems Innovation

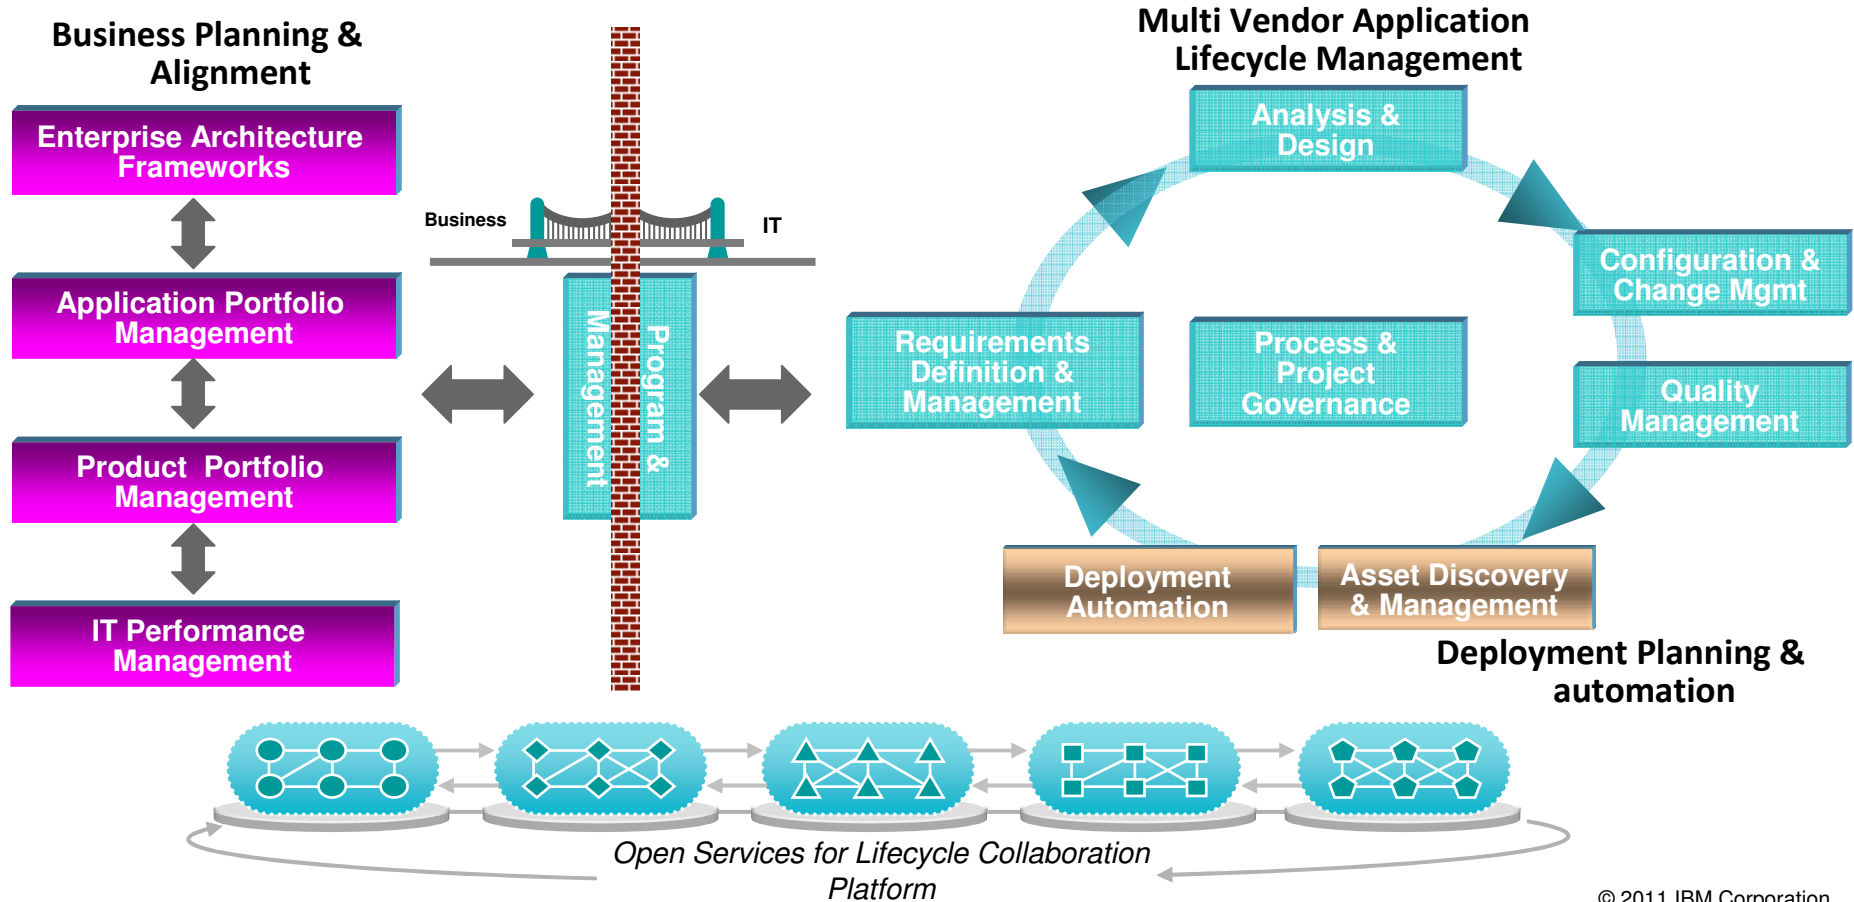

Smarter Software Delivery

Kedar Walimbe
Client Technical Professional Leader
IBM Rational ASEAN.

Smarter Software Delivery

Use Case 1: Managing “Systems of Systems”

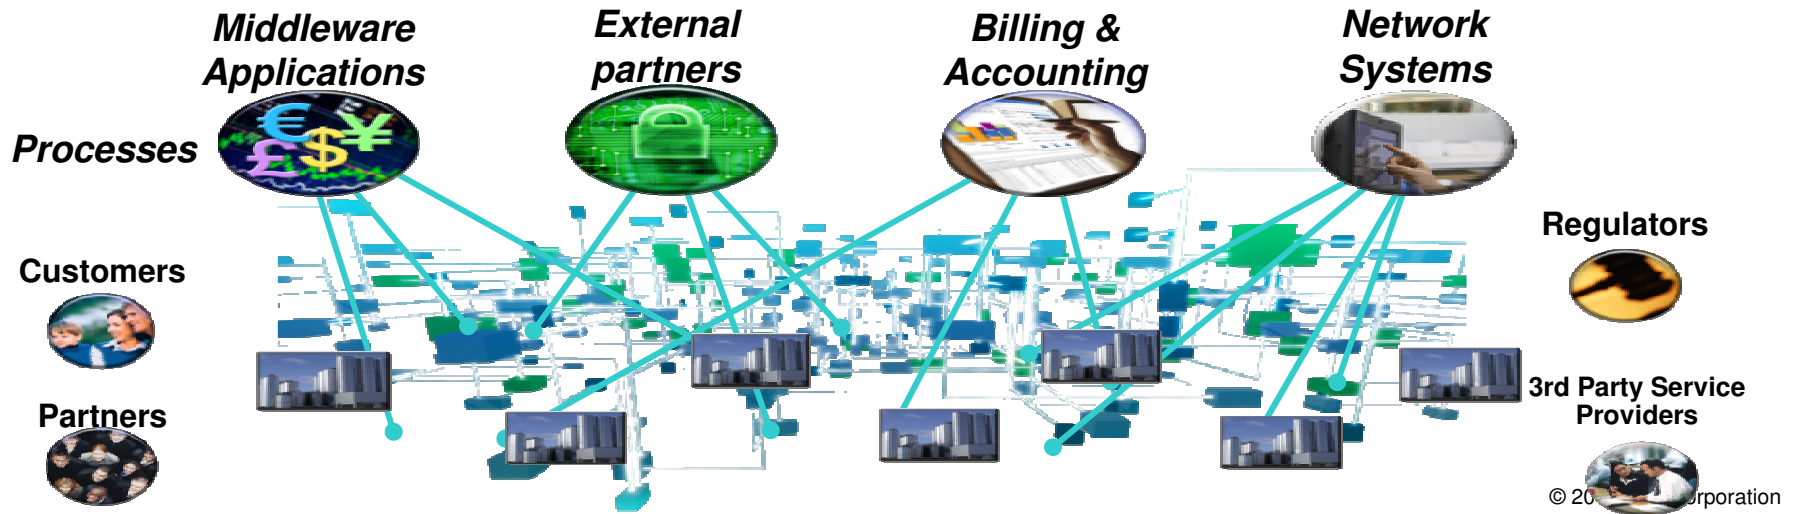

From back-end software to customer facing portals, systems of systems

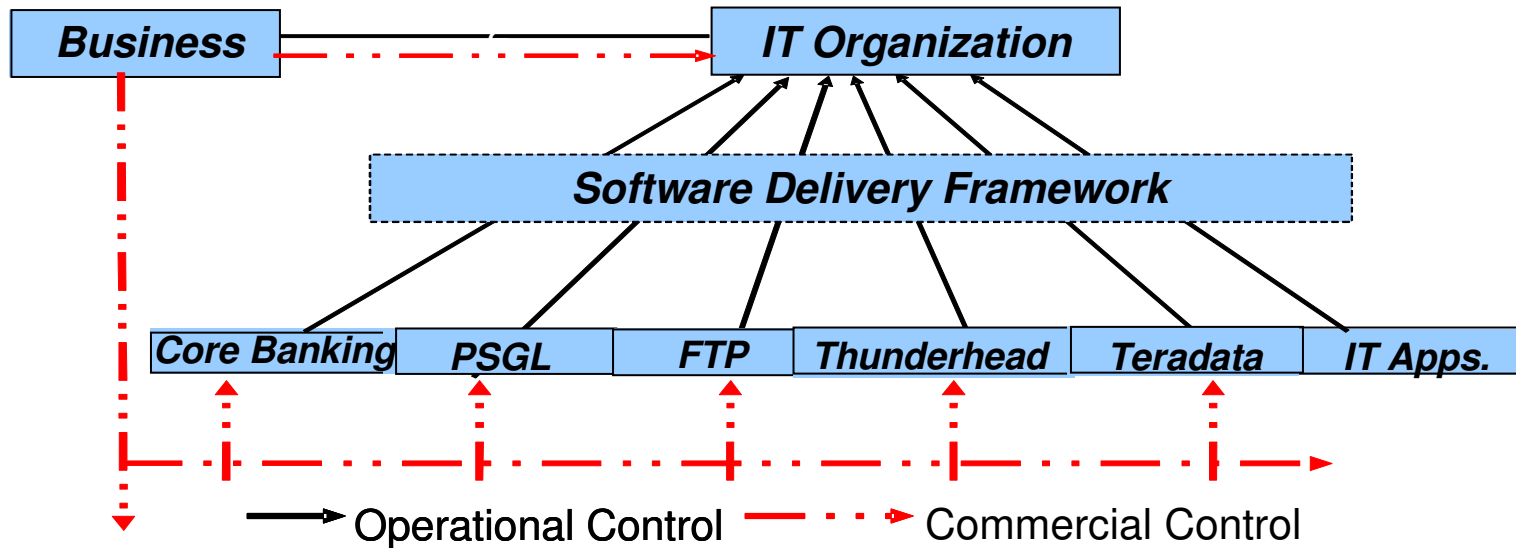

drive your relationships with customers, suppliers and business partners © 2011 IBM Corporation

Use Case 2: Increased Focus *Service Innovation*

Single Business Service has many touch points

Use Case 3: Establish *Software Delivery Governance*

- **SRACI**, roles and responsibilities defined between the bank, SI and the application vendors **LA's** - To ensure strict adherence to the delivery quality and schedule
- **RACI** - Roles & responsibilities defined between the bank IT, SI & application vendors
- **Delivery Process** - Framework including delivery processes, change management
- **Deliverables & Acceptance criteria** for each of the deliverables clearly laid out

Smarter Software Delivery

◀ Improving Performance of IT Software Delivery

* Program & Release Planning

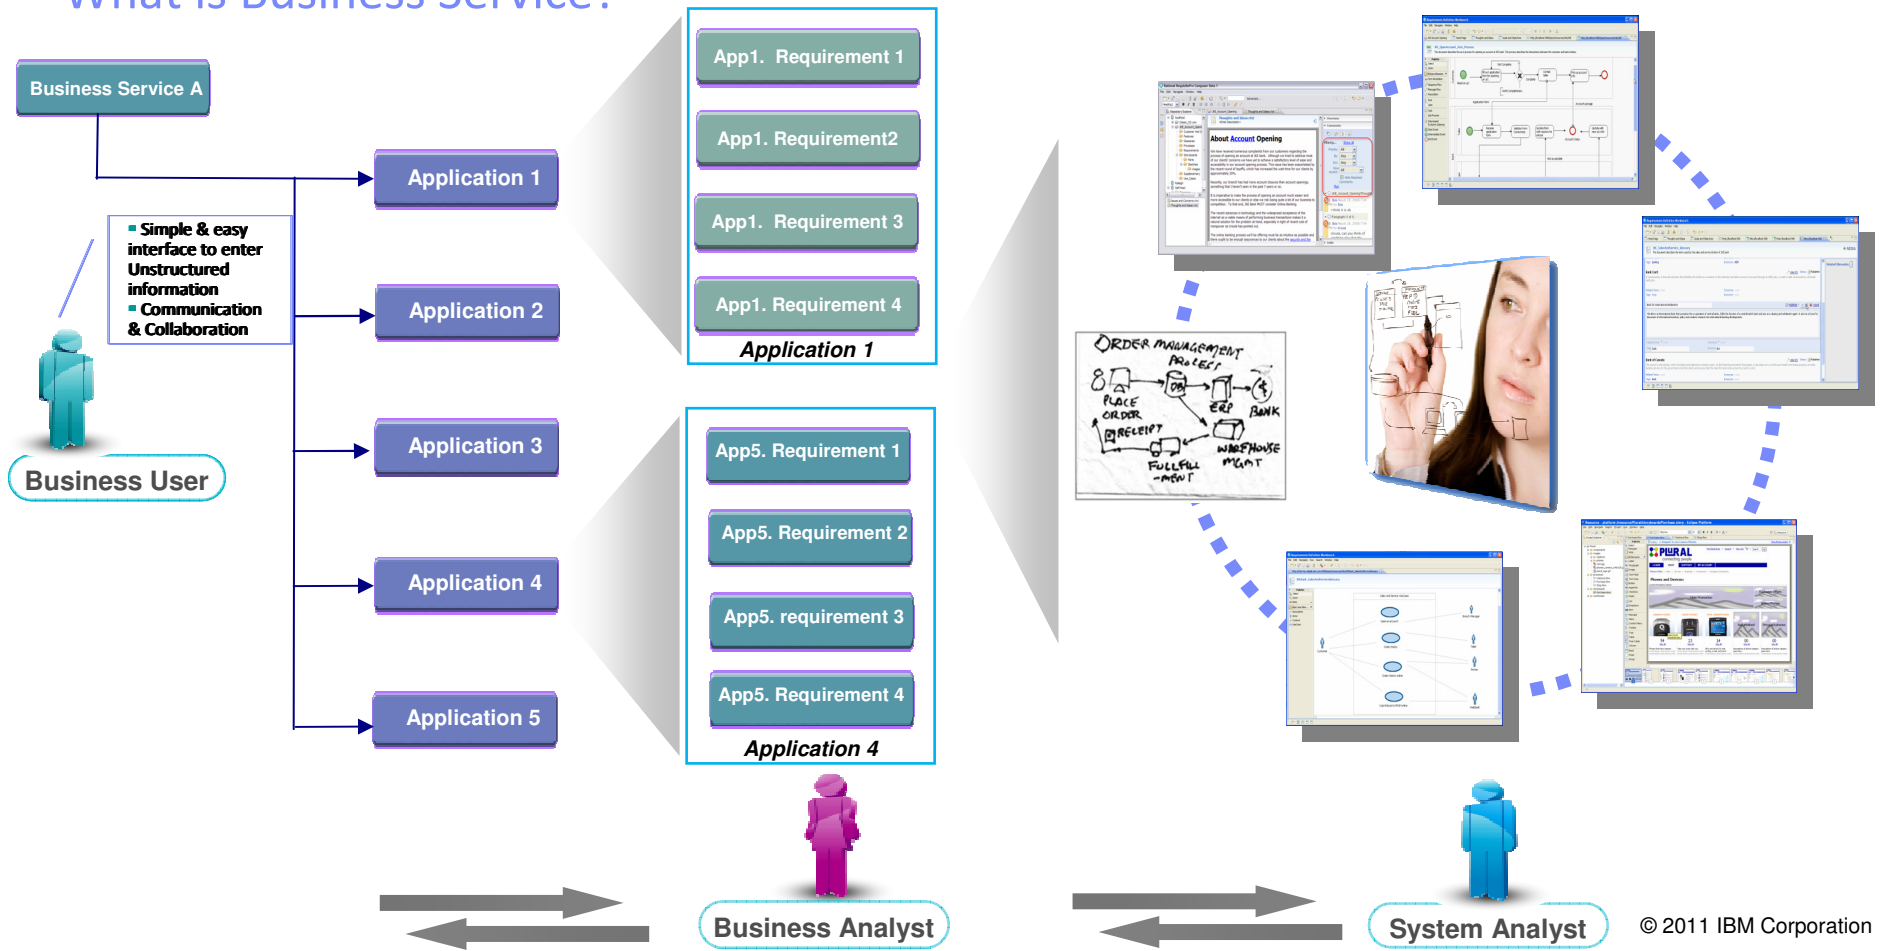

- Business Requirements Management
- Product Roadmap Planning
- Realistic Release Plans

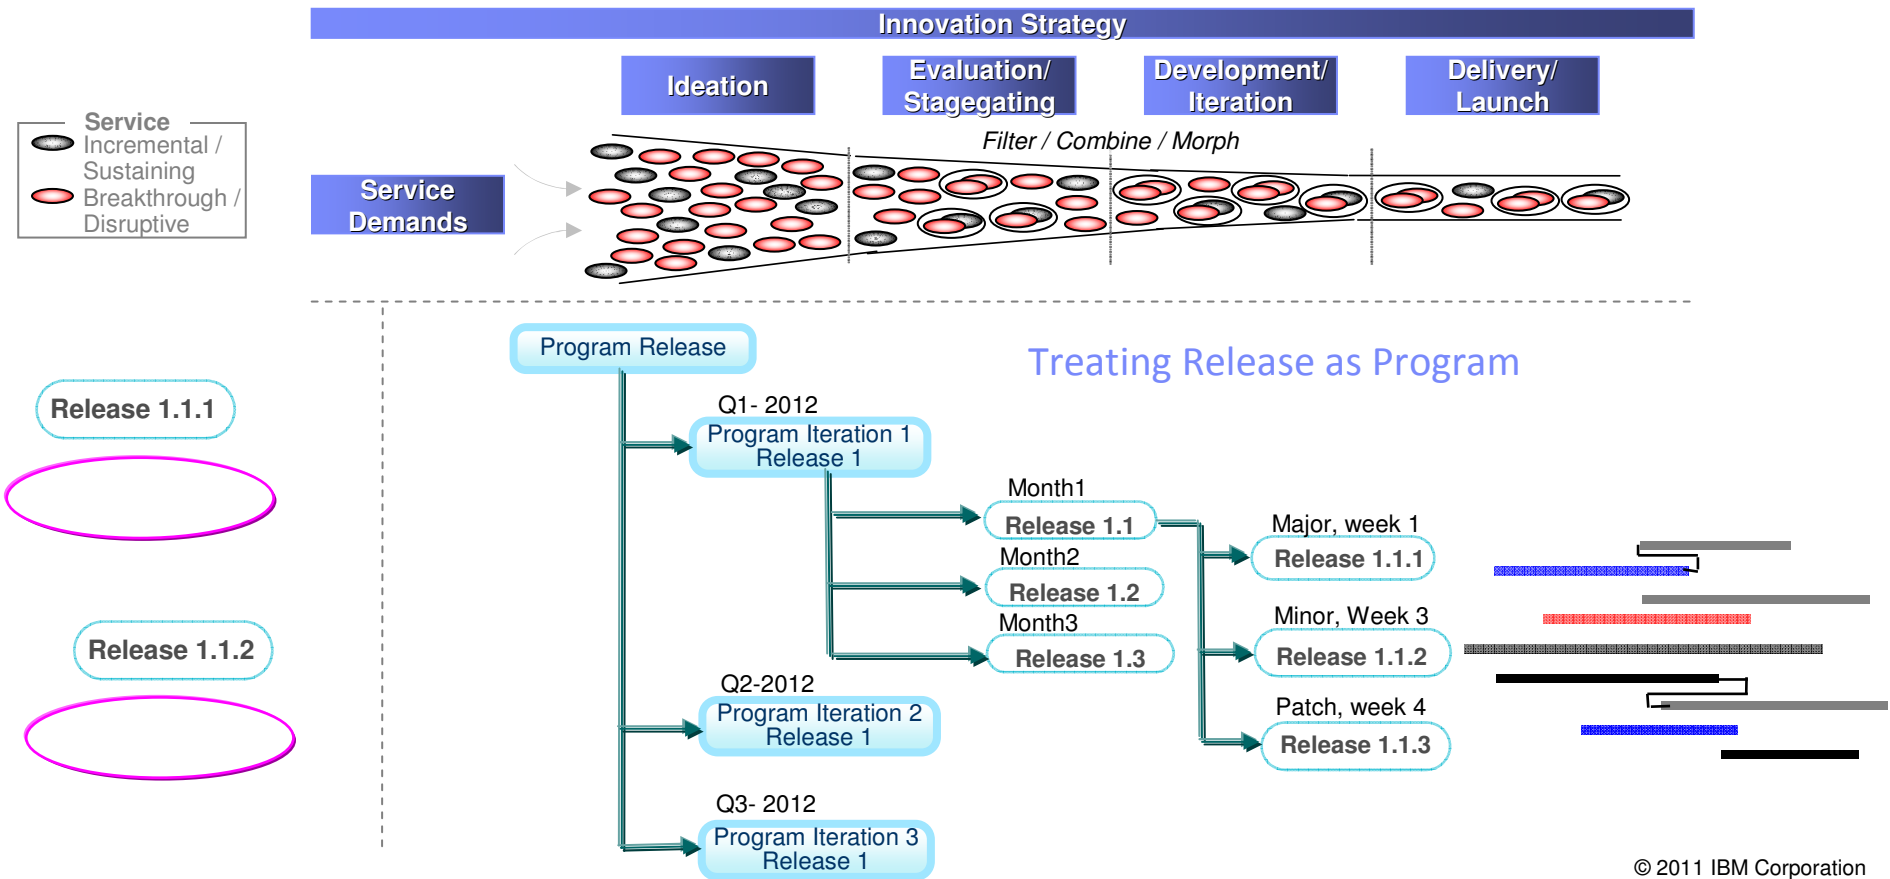

* Design, Development & Deployment Framework

- Single framework managing in-house, outsource, packaged ALM on various technologies and platforms.
- Automated deployment of multiple Applications across multiple environments with improved control & predictability.

What is Business Service?

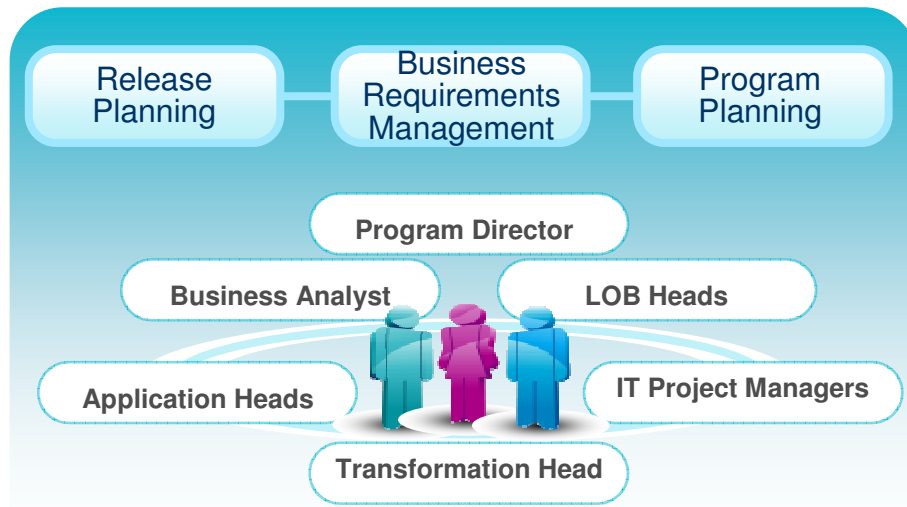

Continuous pipeline of Innovative Services

*Release & Program Planning with
Requirements Management*

Program Management & Release Planning Benefits

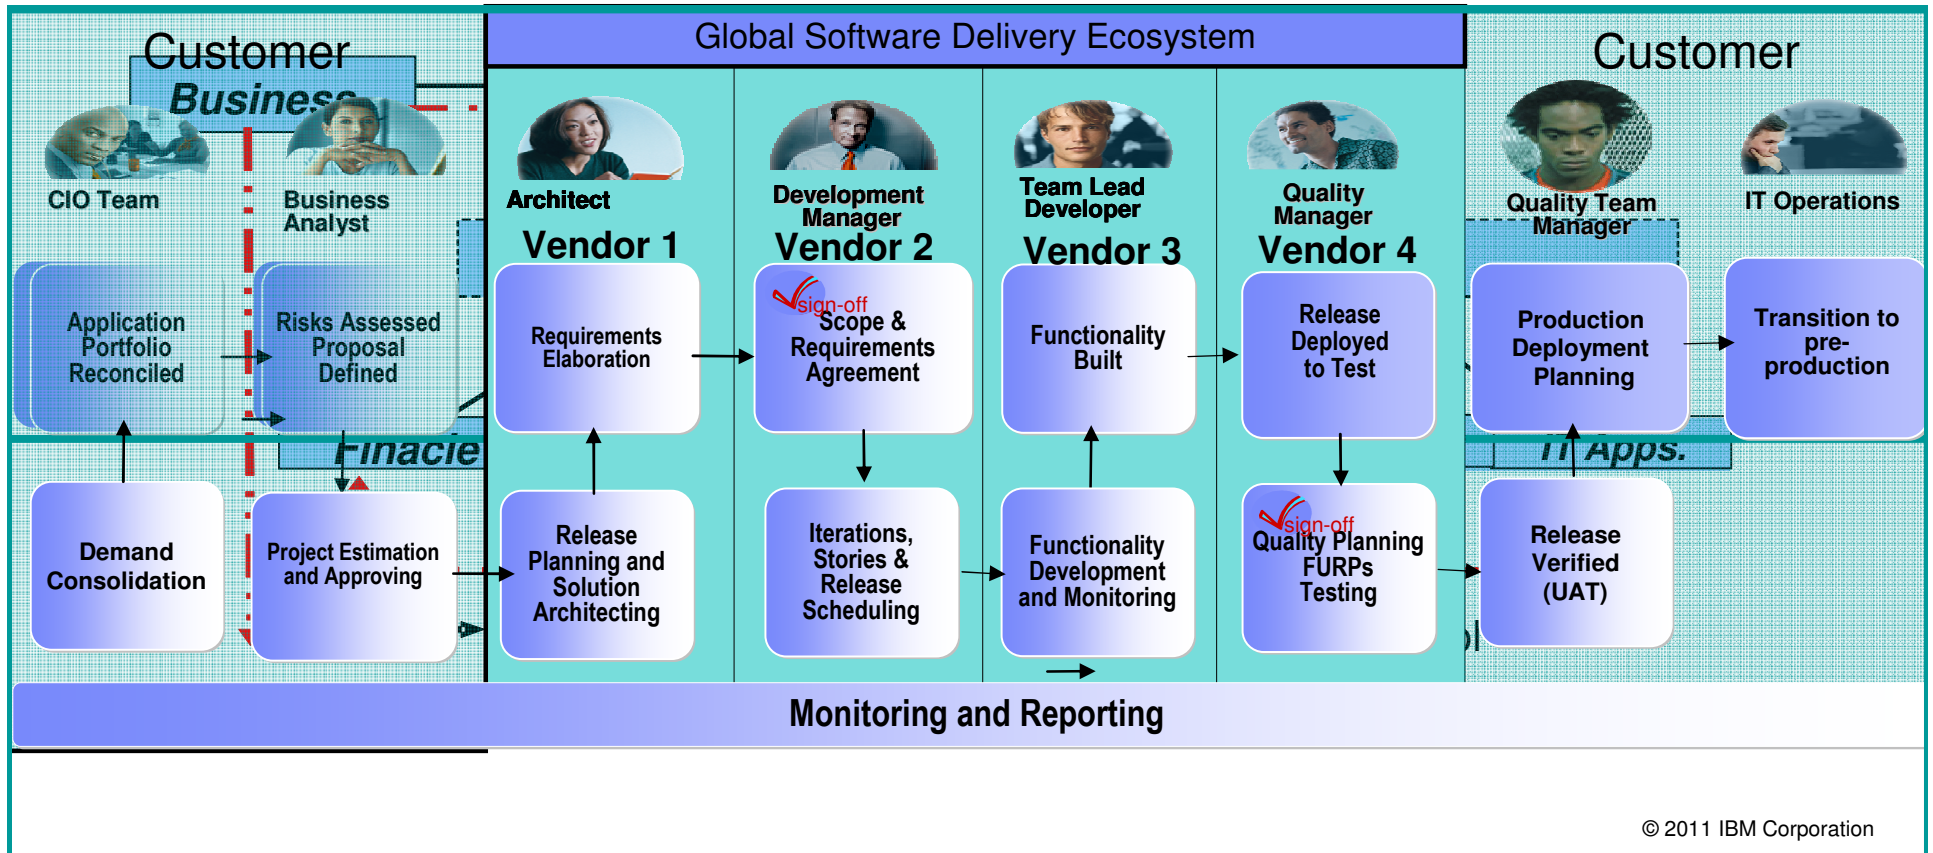

Mitigate Risks in Software Delivery Lifecycle

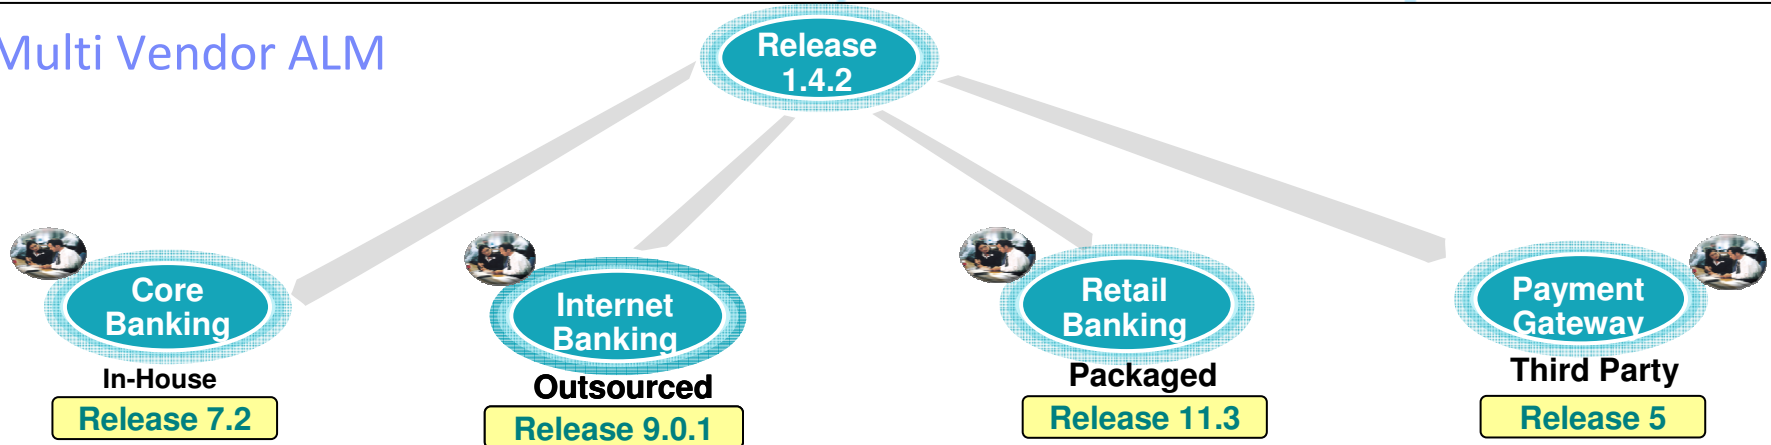

- **Manage & Balance Software Delivery Risks**
Capture resource, Schedule & dependency constraints to identify potential risks
- **Build the Right Things** Integrated Business & IT Requirements Management
- **Create Realistic Delivery Plans** Define initiatives based on resources & Schedule.
- **Visibility into Project & Process Outcomes**
Get Real-time visibility into key performance indicators
- **Linking Business Plans with IT delivery**
Delegate delivery Plans to development teams using integrated platform

Multi Vendor Software Delivery Governance

Nearly any slice in the SDLC can be outsourced today.

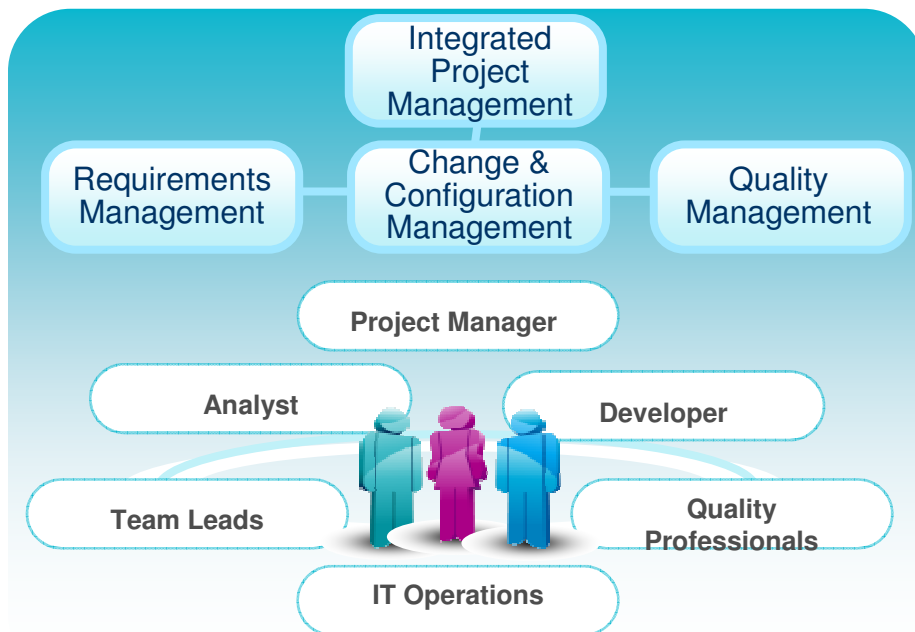

Multi Vendor ALM

*Multi Vendor Application
Lifecycle Management*

Multi Vendor Application Lifecycle Management

Deliver High Value & Low Risks Projects

- **Better Project Management Approach**
Lean Development methodology for software delivery Projects with real-time planning.
- **Connecting Strategy to Delivery** Effectively connecting business needs to application requirements with test cases.
- **Getting it Right for the first time** Improved requirements definition, elicitation and Management.
- **Visibility into Project & Releases**
Performance measurement & Development Intelligence
- **Efficient Process Governance** Quick-start process templates integrating to project execution

Rational Collaborative Lifecycle Management

Open Services for Lifecycle Collaboration

REQUIREMENTS MANAGEMENT

Manage all requirements
with full traceability across the lifecycle

Rational Requirements Composer

QUALITY MANAGEMENT

Achieve “quality by design” with an
integrated, automated testing process

Rational Quality Manager

ARCHITECTURE & DESIGN

Use modeling to validate requirements, architecture
and design throughout the development process

Rational Design Manager

COLLABORATION, PLANNING & CHANGE MANAGEMENT

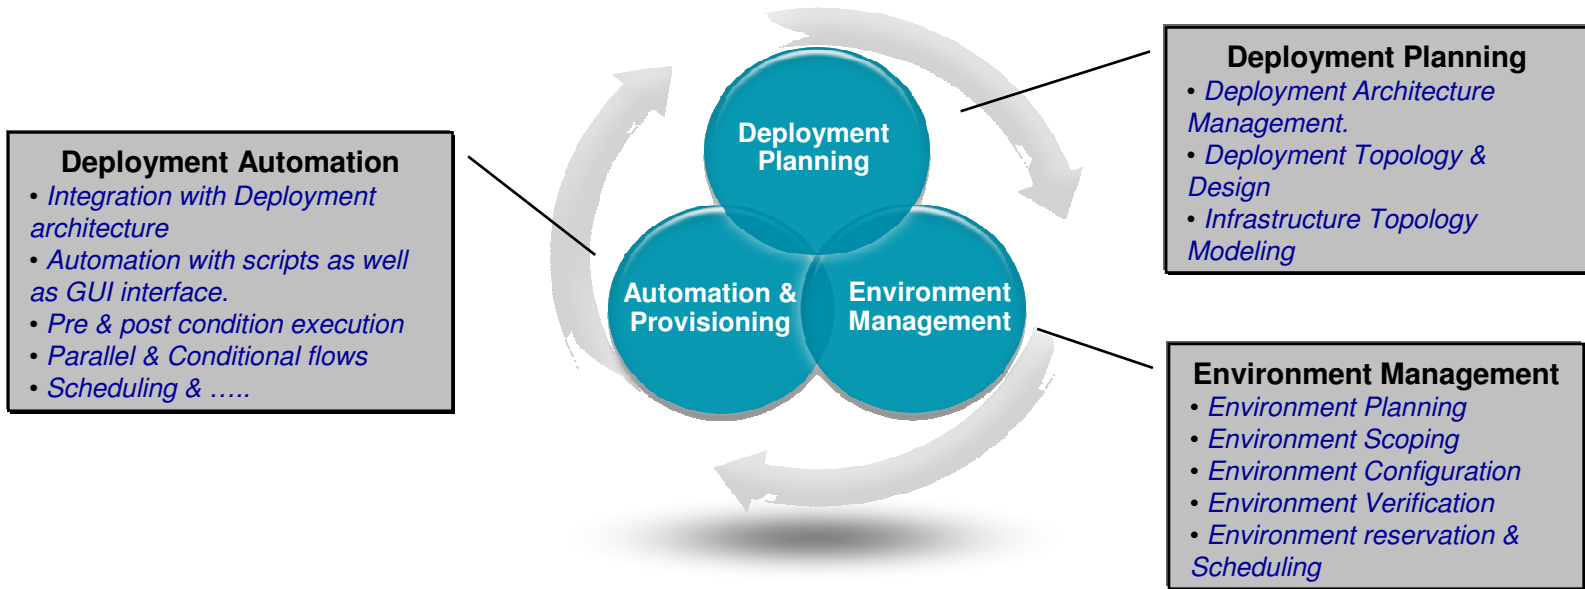

Collaborate across diverse engineering disciplines and development teams

Rational Team Concert

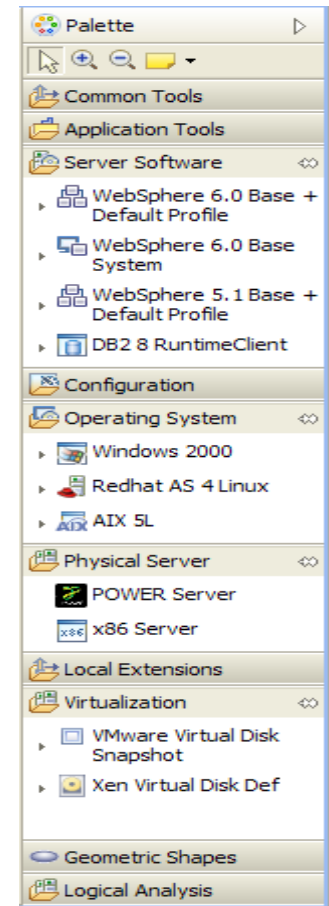

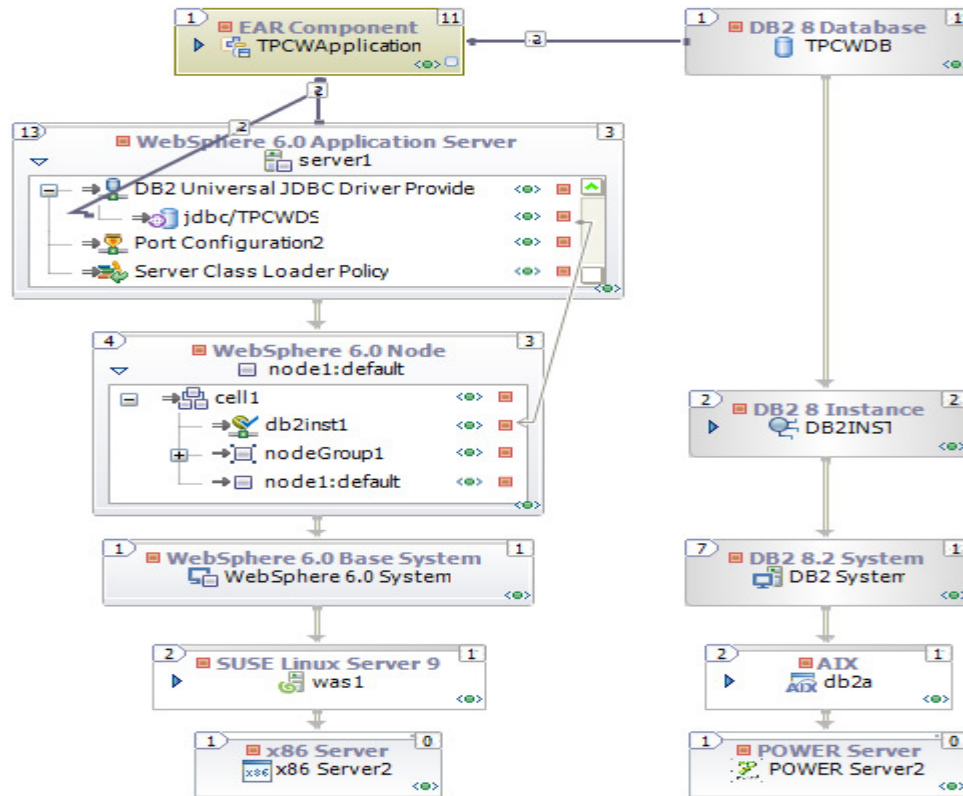

Deployment management & Environment Management

key components for Accelerating Software Delivery

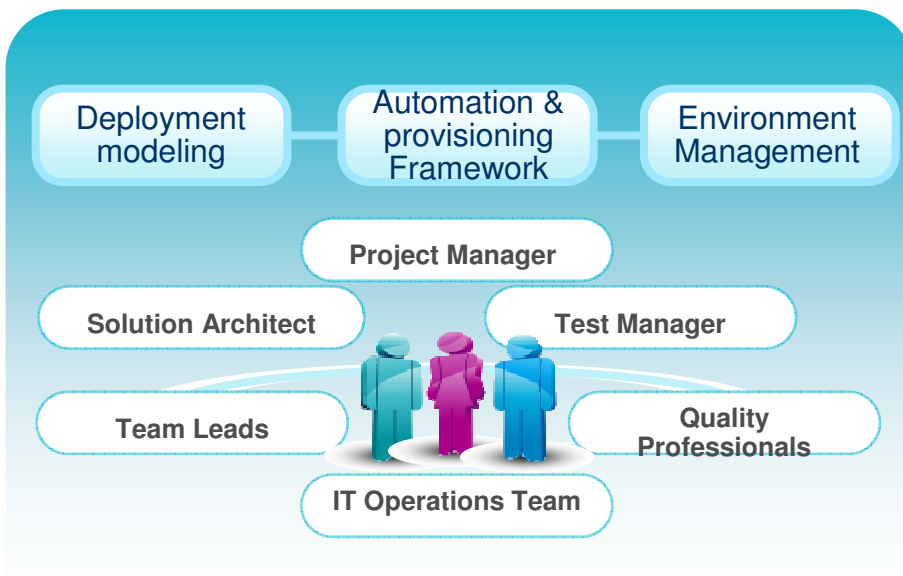

Infrastructure Topology Modeling

*Deployment Planning & Test Lab
Management*

Deployment & Environment Management

Improve Predictability & Speed of Delivery

- **Achieve Consistency in deployments**
Design & dictate accurate deployment models
- **Communicate efficiently across teams**
Leverage standard configurations, templates and artifacts
- **Leverage highest level of Automation**
Automate all manual & repetitive tasks increasing frequency of deployments
- **Establish governance for deployments**
Utilize deployment plans & workflows to provide automated application deployment
- **Single Source of truth** Central repository of assets for auditing & compliance requirements.

Summary
