IBM Rational DOORS Requirements Management Framework Add-on - Release 6.0.0.1

1 Introduction

This document describes the procedure to install **IBM® Rational® DOORS® Requirements Management Framework Add-on** on your computer. This software has been previously delivered by Telelogic as a Professional Service Asset named **DOORS T-REK. IBM® Rational® DOORS® Requirements Management Framework Add-on** is now an IBM Rational product in the continuity of **DOORS T-REK**. Depending on the context, customers installing **IBM® Rational® DOORS® Requirements Management Framework Add-on** may install the add-on on top of DOORS or they may upgrade an existing install of **DOORS T-REK**. The two cases are supported by the software.

The install Wizard will drive the installation for you but some restrictions are applied and will be specified in the next chapters.

In the body of this document IRDRMFAO or RMF means **IBM®** Rational® **DOORS®** Requirements Management Framework Add-on.

The Installation Wizard allows you to install IRDRMFAO in several ways:

- Full installation : it means that all the IRDRMFAO files will be installed on your computer, either :
 - In the directory where the DOORS client was installed (default mode)
 - In another directory (mode called "out of place" installation)
- Workstation installation : it means that your IRDRMFAO installation will depend on a full installation done on a file server. The main advantage of this installation mode is the ease of maintenance : when upgrading to a newer version of IRDRMFAO, you only need to perform one single installation, on the file server.

BEWARE !

To upgrade a workstation installation of DOORS T-REK 5.3p2 (or earlier) to IRDRMFAO 6.0.0.1 you have to (re)install IRDRMFAO on all the client computers because the client installation is not backward compatible starting from T-REK 5.3p2

The Installation Wizard is available in three languages: English, French and German.

IRDRMFAO also supports **Silent installation**. In this mode the interactions with the user are replaced by a parameter file. See § 4 "Silent Installation" to learn how to setup and run a silent installation.

IRDRMFAO contains also a binary component, allowing using the graph layout capabilities of Graphviz. This binary component is the program GraphvizContainer.exe. It is executed when the **Explorer** is called, in order to generate the graph layouts.

2 Check that you meet the prerequisite

Before installing any version of IRDRMFAO , it is required to uninstall any previous version of IRDRMFAO or of DOORS T-REK.

- To install IRDRMFAO, you must have Administrator rights.
- Your computer must have at least 43 MB of free disk space for a full installation, or only 1 MB for an installation in workstation mode.
- IRDRMFAO 6.0.0.1 is restricted to Windows platforms for :
 - DOORS 8.3
 - ► DOORS 9.0
 - ► DOORS 9.1
 - DOORS 9.2
 - > DOORS 9.3
- Because the DXL encryption schema used by DOORS 9.1 is not compatible with the previous schema, IRDRMFAO is delivered in two different versions:
 - ratlDOORS_RequirementsFrmwork_6-0-0-1_setup83_90.exe for DOORS 8.3 and DOORS 9.0
 - ratlDOORS_RequirementsFrmwork_6-0-0-1.exe for DOORS versions 9.1 up to 9.3

You must install a version consistent with the DOORS version you have, if you install the wrong version all IRDRMFAO operations will fail to be executed.

- The WEXP and the irdrmfao.dot modules of IRDRMFAO are compliant only with version of Word greater or equal to Word 2000, including Word 2007 (Word 97 is not supported).
- Check that you have rights to create files into the DOORS Home directory (directory where DOORS has been installed) and to modify the Windows Registry.
- Only one version of IRDRMFAO may be installed with the Wizard. This install is not compatible with the existence of a previous version of IRDRMFAO or of DOORS-TREK, whatever the version, except in the case where the two installations are for two different versions of DOORS.

3 Install IRDRMFAO

Installing IRDRMFAO with its Installation Wizard is an easy action. Just follow the screenshots, don't forget the prerequisite and everything will be fine.

3.1 Select the language to be used by the installer

Installer Language							
Please select a language.							
	English	*					
	OK Cancel						

This choice only define the language used by the installer. This has no effect on the language for IRDRMFAO (always in english).

3.2 Warning

IBM Rational DOORS Requirements Management Framework Add-on 6.0.0.1					
2	Please note that for each version of DOORS only one version of IBM Rational DOORS Requirements Management Framework Add-on is allowed. Older versions of IBM Rational DOORS Requirements Management Framework Add-on need to be uninstalled before continuing (if applicable). Continue?				
	Yes No				

The installation wizard can succesfully install IRDRMFAO 6.0.0.1 only if no previous version of IRDRMFAO (whatever the version) was installed for the same version of DOORS. Whenever another version of IRDRMFAO has been installed for another version of DOORS, the installation will be successfully performed.

Click "Yes" after checking that IRDRMFAO is not already installed for the version of DOORS that you plan to install IRDRMFAO 6.0.0.1 against. Otherwise, click « No » and then unistall IRDRMFAO before running the installed again.

	ODORS 9.2	
	O DOORS 9.3	
IBM Rational DOORS Require	ements Management Framework Add-on 6.0.0.1	
	< Back Next >	Cancel

In this page, simply choose for which version of DOORS, IRDRMFAO will be installed. To install IRDRMFAO on several DOORS versions, you have to execute the Installation Wizard several times.

The installer automatically detects which version of DOORS is installed so that the choice of a version that is not installed, is disabled (greyed out).

	< Back	Next > Cancel

In this page, you are asked to choose either to fully install IRDRMFAO on your computer, or rely on a remote installation of IRDRMFAO.

This second possibility called "workstation installation" consists in configuring the selected version of DOORS to use a remote installation. The advantage of this workstation installation is the simplicity to upgrade to a newer version of IRDRMFAO later on. There is no need to upgrade IRDRMFAO on each DOORS client computer: only the shared installation of IRDRMFAO shall be changed.

3.6 Select the installation Directory

Depending on the installation mode that has been chosen, you are asked to enter in this page :

- in the "<u>full installation</u>" mode : the directory where IRDRMFAO should be installed

🕞 IBM Rational DOORS Requirements Management Framework Add-on 6.0.0.1 🛛 🖃 🗆 🔀
IEM Pational 200RS Requirements Management Hamework Add-On
IBM Rational DOORS Requirements Management Framework Add-on will be installed into the directory indicated below. If you like to use a different target directory click Browse and select an appropriate directory. Click Next To continue.
C:\Program Files\IBM\Rational\DOORS\9.2\ Browse
Space required: 42.0MB Space available: 18.1GB IBM Rational DOORS Requirements Management Framework Add-on 6.0.0.1
< Back Next > Cancel

in the "<u>workstation installation</u>" mode : the path to a remote installation of IRDRMFAO.

This path to be entered is the directory where IRDRMFAO has been installed (in the "full installation" mode), i.e the following sub-directories should exist in that directory: "lib" and "IRDRMFAO".

Important: To make it easier to install IRDRMFAO in workstation mode, the right path can be automatically provided to the user.

To achieve that, you have to create a file called "IRDRMFAO.INI" containing this path, and run the installer in a directory containing this "IRDRMFAO.INI" file.

The "IRDRMFAO.INI" file shall have the following content:

[Server]							
IrdrmfaoDir= <directory< td=""><td>of</td><td>the</td><td>remote</td><td>installation</td><td>of</td><td>IRDRMFAO></td><td></td></directory<>	of	the	remote	installation	of	IRDRMFAO>	

Example:

[Server] IrdrmfaoDir=\\UKSERV1\DOORS\irdrmfao

1. A new menu will appear in the Windows start menu and you will have some shortcuts to the IRDRMFAO documentation and the shortcut to uninstall IRDRMFAO.

m IRDRMFAO 6.0	DOORS9.2	🕨 🛗 Manuals	Dashboard Manual
		🐻 Uninstall IRDRMFAO 6.0	🔂 DOC Manual
		🔁 User Guide	🔁 Exchange Manual
			🔁 Explorer Manual
			🔁 PFM Manual
			🔂 RCM Manual
			🔂 Word Exporter Manual
1			🔀 Word Importer Manual

2. Execute the DOORS client to access to the DOORS data base.

You should have a RMF menu in the DOORS explorer tool, and also in the module windows.

Run the About operation in the RMF menu (for project and for module), a dialog box should be displayed as :

If any error is displayed, you have some trouble during the installation.

3. Open a Word document.. You should be able to see the IRDRMFAO menu bar, as in:

If the menu bar is not visible, the **DoorsIrdrmfao.dot** file has not been copied into the Office startup directory and is not visible as a Word complement.

You should check that your Word security options allow the execution of the macro.

4 Silent Installation

IRDRMFAO supports Silent Installation mode.

When the installer is run, it does not ask anything to the used but instead read some parameters into a response file.

4.1 Create the response file

The response file shall be called "IRDRMFAO.INI" and be located in the same directory as the installer.

This "IRDRMFAO.INI" file shall have the following content :

```
[SilentInstall]
InstallMode=full OR workstation
DoorsVersion=<version number (see examples below)>
InstallDir=<directory in which IRDRMFAO will be installed - useful ONLY in full mode>
IrdrmfaoDir=<directory of the remote installation of IRDRMFAO - required ONLY in workstation
mode>
```

NB:

- 1. in full installation mode, if the parameter "InstallDir" is missing, then IRDRMFAO will be installed in the Installation directory of DOORS.
- 2. DOORS version number format : <major>.<minor>

Example: 9.2

3. If the DOORS version provided is not one of the available DOORS versions, then IRDRMFAO is by default installed for the most recent version of DOORS.

Some examples below:

```
[SilentInstall]
InstallMode=workstation
DoorsVersion=9.2
IrdrmfaoDir=\\uranus\rmf6.0
```

```
[SilentInstall]
InstallMode=full
DoorsVersion=9.2
```

```
[SilentInstall]
InstallMode=full
DoorsVersion=9.2
InstallDir=D:\Software\RMF\v6.0
```

4.2 How to run the installer in silent mode

The response file shall be located in the same directory as the installer.

Then simply run the installer passing /S on the command line (case sensitive) :

```
ratlDOORS RequirementsFrmwork 6-0.exe /S
```

You can allo request the creation of a log file that will contain an error message whenever the installation fails.

```
ratlDOORS RequirementsFrmwork 6-0.exe /S /LOG=<file path>
```

Exemples :

```
ratlDOORS_RequirementsFrmwork_6-0.exe /S
/LOG=C:\temp\IRDRMFAO.log
ratlDOORS_RequirementsFrmwork_6-0.exe /S
/LOG="C:\IRDRMFAO\IRDRMFAO.log"
```

The IRDRMFAO installer returns an error level as a result of its execution, and write the following error messages into the log file :

Error level	Comment	Content of the log file
0	Normal execution (no error)	
2		IRDRMFAO installation aborted : the response file IRDRMFAO .ini is missing
3	Installation aborted by script	IRDRMFAO installation aborted : invalid parameter 'InstallMode' in the file : IRDRMFAO.ini
4		IRDRMFAO installation aborted : none of the supported DOORS versions is installed
5		IRDRMFAO installation aborted : bad or missing parameter 'IrdrmfaoDir' in the file : IRDRMFAO.ini

5 Uninstall IRDRMFAO

To uninstall IRDRMFAO, use the shorcut directly present in the start menu or go directly to "Add/remove Programs" in the Control Panel.

5.1 Confirm uninstallation

Before beginning the uninstallation, the Wizard will ask you if you want to remove IRDRMFAO.

5.2 Do uninstall

After this window, there is no way to return if you decide to uninstall IRDRMFAO. If yes, you will have the next window as follows:

6 Modifications in the environment

When installing IRDRMFAO, some modifications of your standard DOORS environment occur. Several files are added into the IRDRMFAO standard directories.

Example for DOORS 9.1:

These files are added in case of default installation or out of place installation. In case of an out of place installation, the IRDRMFAO install may be anywhere in the file system. These file are source DXL files, but they do not contain DXL definition, but only includes to DXL source files that are located always in the IRDRMFAO install directory.

The structure of the IRDRMFAO files is displayed in the next figure:

In case of default installation, the "IRDRMFAO " directory is replaced by the DOORS install directory, for example: "C:\Program Files\IBM\Rational\DOORS\9.2".

The **irdrmfao.dot** Word complement file should be automatically installed into the standard Office startup directory, if not; it is required to copy by hand the irdrmfao.dot file into the right place.

In case of out of place install, the setup program modifies the registry key **Addins**, allowing defining the list of complementary directories:

7 Menus configuration

All the IRDRMFAO menus are dynamically created and checked. The corresponding code is not uncrypted, and it is possible to change these menus. Only people with a good knowledge of DOORS and IRDRMFAO should modify these files that are coded into DXL.

🔄 config File Edit View Favorites Tools Help 🛩 🔁 Go Address 🛅 C:\Irdrmfao_6.0\ib\dxl\addins\irdrmfao\config Folders x basewindowmenufiles 🗋 formalfile 🖃 🚞 Irdrmfao_6.0 formalpopupfiles 🗉 🚞 irdrmfao mod_irdrmfao.inc: 🗆 🧰 lib menu creation for 🗉 🧰 dxl modules 🖃 🚞 addins 🖃 🚞 irdrmfao 🚞 check comparetransfer 🖃 🚞 config asewindowmenufiles popup_irdrmfao.inc: formalfiles menu creation for formalpopupfiles objects 🗄 🚞 dashboard 🚞 exchange prj_irdrmfao.inc: 🚞 includes check, callbacks 🗄 🚞 menu calls and menu 🗄 🚞 plm creation for irdrmfao.dxl: 🗉 🚞 relationships projects include the file for check and 표 🚞 startup 🗄 🚞 wexp callbacks of module and 🗉 🚞 plm object level menus 🗉 🚞 trek 🚞 batchstartupfiles 🗉 🚞 config 🚞 startupfiles 🗉 🦳 utils 🔙 My Computer 3 objects (Disk free space: 1,85 GB) 0 bytes

The different files that are involved into the IRDRMFAO menu creation are:

Example: RMF menu for projects

```
void RMF declareItem (string sName, int checkFunction(), void executeFunction())
{
    createItem (checkFunction, executeFunction, sName, null, null, modKeyCtrl, null
            ,null, sName, sName)
}
const string RMF MENU RMF = "RMF"

     RMF_declareItem (RMF_ITEM_SCOPE, RMF_ITEM_SCOPE_check, RMF_ITEM_SCOPE_exec)
     separator
     RMF declareItem (RMF ITEM EXPLORE MODEL, RMF ITEM EXPLORE MODEL check,
             RMF_ITEM_EXPLORE_MODEL exec)
     RMF declareItem (RMF ITEM EXPLORE PROJECT, RMF ITEM EXPLORE PROJECT check,
            RMF ITEM_EXPLORE_PROJECT_exec)
     RMF declareItem (RMF ITEM EXPLORE MODULE, RMF ITEM EXPLORE MODULE check,
             RMF ITEM EXPLORE MODULE exec)
end menu
```

8 Troubleshooting

If DOORS reports some errors after the installation of IRDRMFAO, check:

- That the file named **irdrmfao.dxl** exists in the **config** and **startupfiles** directories of DOORS.
- Checks the content of the other files in the same directories, to detect any conflict between the IRDRMFAO files and the other files.
- Checks the content of the file "...Migration.dxl", in the startupfiles directory. Suppress any IRDRMFAO file inclusion found in this file.
- Check the content of the predefined **startup.dxl** file.

Always remove the previous version of IRDRMFAO (or any installed T-REK version) before reinstalling IRDRMFAO.

9 Upgrade of IRDRMFAO projects

IRDRMFAO 6.0.0.1 operations are available only for project updated or created for IRDRMFAO 6.0.0.1. An "upgrade" operation is provided with IRDRMFAO 6.0.0.1. This upgrade operation makes the project configuration compatible with IRDRMFAO 6.0.0.1, for any previous IRDRMFAO or DOORS T-REK version.

The project data are not modified by the upgrade, nor the existing module types in project configuration, except in case of migration of a previous DOORS T-REK version, with the RCM component deployed on the project. In this last case, because of the modification of the RCM trigger management, the old RCM triggers at **project level** are deleted and created again, but at **module level**.

Some technical templates in the **Module Types** folder may be also replaced. The templates that are associated with tools and not to the user data model are:

- CR: Change Request template. Used by RCM.
- DASHBOARD: Dashboard template, used by Dashboard functionality.
- DI: Document Index, used by DOC.

No existing module of your project is modified by the Upgrade.

To complete the upgrade of your project, you will probably have to upgrade your already existing templates and your project modules as well.

10 Client configuration

DOORS allow you to give parameters on the command line of the shortcut used to execute the DOORS client. The list of parameters may be found in the DOORS standard documentation.

Here you can find some useful examples.

Connexion to a database server different from the standard one

-data 36677 @ my_server

may be used to define the DOORS server from which the data should be downloaded (in the example on the port *36677* of the *my_server* computer)

Connexion with a user name already defined

-user my_name

may be used to define the DOORS login name.

Installation of IRDRMFAO on an application server (or file server)

-addins or -a "\\app_server\IRDRMFAO\lib\dxl "

to define a directory to find the IRDRMFAO addins. This information may be also entered in the registry configuration of the DOORS client, or in the "ADDINS" environment variable. In the example *app_server* is the name of the computer used as application server.

-dxl "#include <\\\\app_server\\IRDRMFAO\\lib\\dxl\\startupfiles\\irdrmfao.dxl>"

to specify a startup file. This parameter cannot be defined in the registry.

These parameters allow you to have different IRDRMFAO contexts. You should notice that the command line has a limited size, in case of overflow you may define these three values as a combination of registry/environment variables values and command line.

Also, it is required to add the irdrmfao.dxl files in the standard DOORS config directory.

11 Complements

IRDRMFAO is delivered with some sample or utility DXL script files. For example, the "Kitchen" scripts are delivered as a ZIP archive named RMF_kitchen.zip in the directory IRDRMFAODIR\misc\addins. To install it, you may unzip it in the directory DOORSDIR\lib\dxl\addins.

Content of Misc:

addins: complement utilities

History.zip (complement DOC) irdrmfao_lib.zip (minimum files to include for RMF views) RMF_kitchen.zip (RMF kitchen scripts)

attributes: DXL attributes

ie puid.dxl (example of DXL attribute for "IE PUID")

migration: to update existing data (only for old projects developed on old DOORS versions and/or old T-REK versions)

migrate-rcm.dxl
patch-dashboard.dxl
patch-puid.dxl

model: datamodel level utilities

define_description.dxl (set the descriptions of views and attributes according the configuration file model.txt)

synchronize_definitions.dxl (example of project
synchronization alternative to the use of create/tag
operation)

other: restore links from history and unlock baseline set

restore_cancelled.dxl (example of restoration of a requirement from the information saved into a cancel CR) restore_links.dxl (use of history to restore links) unlockbsd.dxl (unlock a baseline set definition)

project_index: creation/modification of a project index in batch

create_index.bat
create index.dxl

update_index.bat
update_index.dxl

wexp: execution of WEXP without any GUI (maybe not up to date)
batchwexp.dxl

wexp_spooler: batch management of the WEXP spooler

spooler_getlog.bat
spooler_pause.bat
spooler_remall.bat
spooler_remlocks.bat
spooler_restart.bat
spooler_stop.bat
startspooler.bat

12 Notices

This information was developed for products and services offered in the U.S.A. IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send written license inquiries to:

IBM Director of Licensing IBM Corporation North Castle Drive Armonk, NY 10504-1785 U.S.A.
