SMARTER BUSINESS PLANNING AND TRANSFORMATION
Enterprise architecture management solutions from IBM

Prioritize and optimize your portfolio

Transform with agility

ERP and core systems governance

END HERE

Improve governance and control

An IT planning and optimization solution

END HERE

- Can you easily identify redundant or inefficient processes and resources?
- Have you recently restructured?

- Is it difficult to identify IT capabilities that can be service enabled?
- How do you find the IT capability gaps in addressing business needs?
- How do I trace from operational incidents to the underlying software assets?

- Are maintenance costs keeping you from more innovative projects?
- Are you under pressure to cut IT costs?

- Are your ERP deployments being delayed?
- Can you qualify ERP license and application purchases?

Add a cost analysis platform

A solution for maintaining business efficiency

END HERE

Gain visibility into enterprise composition

- Are your systems development programs attaining milestone funding?
- Are you effectively managing defense architecture frameworks?

Use analytics for spotting inefficiency and opportunity

Boost collaboration between business and IT

A service architecture management solution

Plan for acquisitions and define requirements

END HERE

More-effective management of systems of systems

END HERE

Understand existing capabilities and operations

Implement a workflow for strategy to execution

Query and retrieve reusable software assets from a definitive software library

START HERE

MAINTENANCE COSTS ARE INHIBITING GROWTH
SYSTEM INTEGRATION ISSUES ARE IMPEDING PROGRESS
BUSINESS PROCESSES AND SERVICES ARE INEFFICIENT
OPERATIONS AREN'T ALIGNED WITH BUSINESS NEEDS
ERP IMPLEMENTATIONS ARE CHALLENGING

A service architecture management solution
Construct effective solutions out of enterprise and business elements that may create new or updated elements that can be used in future projects.

Enterprise resource planning (ERP) and core systems governance
Attain control of your ERP deployments by standardizing components, data and functions as well as understanding dependencies to the organization.

More-effective management of systems of systems
Evaluate architectures across multiple systems, perform capability analysis planning and help maximize funding.

A solution for maintaining business efficiency
Execute business transformation that helps eliminate organizational waste, resulting in increased productivity.

An IT planning and optimization solution
Build an effective IT portfolio by identifying areas for consolidation and reuse and unlocking operational budgets required for investment and growth.
