

## Optim

**Drop-In ID:** OPDM-09.01.00-015  
**Product:** IBM® InfoSphere® Optim™ Runtime  
**Release:** 9.1.0  
**APARs:** IC98782  
**Date:** January 24, 2014

**Description:** This iFix includes fixes for APAR IC98782.

The following fixes are included from previous iFixes:

- Fixed Optim Server SSL registration problem. When Optim Server is in SSL mode it will not register properly and can't be seen by the manager

**Prerequisites:** IBM® InfoSphere® Optim™ 9.1.0.4-34, OPDM-09.01.00-014  
**Supersedes:** None

**Special Notes:** If changes are made to the Optim Server http port or SSL mode with out changing the server name then a duplicate entry will appear in the server list for the stand alone and embedded manager. It is recommended that after make changes to the http port or SSL mode that you delete the old server entry and restart any instances of the Designer that are running. You can delete the old server entry from the server sub tab of stand alone managers configuration tab.

**OS Platforms Corrected:** All supported OS platforms

### Corrective Actions:

#### Section I

1. Extract this zip file to a directory.

For example:

Windows: c:\temp\OPDM-09.01.00-015RuntimePatch

Linux and UNIX: /temp/OPDM-09.01.00-015RuntimePatch

2. Open a command prompt for the directory

Windows: <install\_dir>\IBM\Installation Manager\eclipse

Linux and UNIX: /<install\_dir>/IBM/Installation Manager/eclipse

3. Run the command:

Windows: IBMIM -input c:\temp\OPDM-09.01.00-015RuntimePatch\install.xml

Linux and UNIX: IBMIM -input /temp/OPDM-09.01.00-015-RuntimePatch/install.xml

4. When Installation Manager starts, click Update to start the Update wizard.

5. Continue through the Update wizard to install the fix.

6. Verify the patch has installed successfully

a) In Installation Manager, select the File Menu

b) Select "View Installed Packages." The Installed Packages dialog will appear.

c) You should see the patch installed.

#### Section II
