Summary of changes	xxiii

Part 1. User's guide	1
---------------------------------------	----------

Chapter 1. Introduction	3
System requirements	3
Hardware environment	3
Software environment	4
Chapter 2. Installing UnifiedPOS	5
Installation for Windows	5
Interactive installation	5
Silent installation	6
Unattended installation flags	6
Uninstallation	7
Installation for IRES	8
Chapter 3. Configuring devices	9
JavaPOS configuration	9
Creating a jpos.xml file	9
Device configuration	10
POS Control Center utility	12
SurePOS 300-33x, JavaPOS second cash drawer support and NVRAM detection	12
IBM SurePoint Display (4820) Touch Support	12
JavaPOS Auto-configuration (Linux only)	13
USB device access	21
Microsoft Windows	21
Linux	21
OPOS configuration	21
Using the OPOS Configuration utility	22
Navigation	23
Configuring devices	23
Testing connectivity	25
Removing devices	26
Deploying OPOS device configurations	26
IBM SurePoint Display(4820) Touch Support	27
Chapter 4. Problem determination	29
JavaPOS problems	29
Tracing	29
Tracing for Javax.usb for Windows with UPOS 1.9.2 or later	30

	Javax.usb for Linux	31
	Logging	33
	OPOS problems	35
	Tracing	35
	OPOS Gateway	36
	Trace activation	36
	Trace files location	36
	Getting help	37
	Support Web site	37
	Reporting problems	37

Part 2. Programming reference 39

	Chapter 5. Common settings and configuration options	47
	JavaPOS	47
	Configuration options	47
	USB firmware update files for JPOS	49
	EIA-232 PosPrinter device detection	50
	OPOS	50
	Configuration options	50
	USB firmware update files for OPOS	51
	Modifying device behavior (USB, RS-485 and PS/2 devices)	51
	Ignoring non-IBM USB devices	52
	OPOS Gateway	52
	Supported DirectIO calls	52
	Provided DirectIO XML Converter access and calls	53
	Chapter 6. Cash drawer	57
	Cash drawer Supported devices	57
	Supported properties and methods	57
	JavaPOS configuration	59
	signalsReversed	59
	deviceNumber	59
	Additional JavaPOS information.	59
	4610 printer-attached cash drawer (EIA-232, RS-485 and USB)	59
	Loading the Cash Drawer device driver for Linux	59
	OPOS configuration	60
	Additional OPOS information	60
	OEM Cash drawer support	60
	Chapter 7. Check scanner	61
	Check scanner supported devices	61
	Supported properties and methods	61
	JavaPOS DirectIO calls.	64
	CHK_DIO_SCANNER_CALIBRATION_CMD	64
	CHK_DIO_PRINT_SCANNED_IMAGE_CMD	65
	CHK_DIO_SET_CHECK_SIDE_CMD	66
	CHK_DIO_GET_CHECK_SIDE_CMD	66
	CHK_DIO_SCANNER_IMAGE_QUALITY_CMD	67
	Additional OPOS information	67
	Multiple devices	67
	Chapter 8. Fiscal printer	69
	Fiscal printer supported devices	69
	Supported properties and methods	69
	JavaPOS DirectIO calls.	73

	FISCAL_INFORMATION subcommand	73
	FISCAL_READ subcommand	74
	FISCAL_WRITE subcommand	76
	FISCAL_Notify subcommand	77
	FISCAL_ERROR DirectIOEvent	78
	FISCAL_STATUS DirectIOEvent	79
	FISCAL_DATA_AVAIL DirectIOEvent	80
	FISCAL_RAW_STATUS event	81
	FISCAL_IPL_END_STATUS DirectIOEvent	82
I	Chapter 9. Hard totals	83
I	Hard totals supported devices	83
	Supported properties and methods	83
	OPOS configuration	85
	Chapter 10. Keylock	87
	Supported devices	87
	Two-position keylock	88
	Three-position keylock	89
	Four-position keylock	90
	Five-position keylock	90
	Six-position keylock	91
	Supported properties and methods	91
	JavaPOS configuration	93
	PositionCount	93
	OPOS configuration	93
	Additional OPOS information	94
	Two-position keylock	94
	Position count	95
I	Chapter 11. Line display	97
	Supported devices	97
	Supported properties and methods	97
	JavaPOS configuration	103
I	CharacterSetASCIIBehavior	103
I	CursorState	103
	lineDisplayId	103
	NumberOfRows	103
	JavaPOS DirectIO calls	103
	DirectIO.SELECT_PLUVFDIIAPA_DISPLAY_TEXT_MODE	104
	DirectIO.SELECT_APA_VFD_CURSOR_TYPE	104
	DirectIO.SELECT_APA_NUMBER_OF_ROWS	105
	DirectIO.SELECT_ROTATE_TEXT_180	105
	Additional JavaPOS information	106
I	Descriptors	106
	Capability definitions	106
	Property definitions	106
I	Character sets supported by line display devices for JPOS	107
	OPOS configuration	108
	Additional OPOS information	108
I	USB APA font download	108
I	Character sets supported by line display devices for OPOS	109
	Chapter 12. Magnetic Ink Character Recognition	111
	Supported devices	111
	Supported properties and methods	111

	Magnetic Ink Character Recognition data	113
	JavaPOS configuration	113
	com.ibm.jpos.sdi.config.MICR.MinMicSignalLevel.	113
	com.ibm.jpos.sdi.config.MICR.stripAccountDashes	114

About this guide

This guide contains reference information for IBM® Unified Point of Service (UnifiedPOS or UPOS) implementations. This guide also includes information about IBM keyboards and code pages.

Who should read this guide

This guide is intended for use by point-of-sale application developers who need to access IBM point-of-sale hardware using UnifiedPOS.

How this guide is organized

This guide is organized into the following parts:

- Part 1, “User’s guide,” on page 1 introduces UnifiedPOS and describes the installation and device configuration for IBM UnifiedPOS implementation.
- Part 2, “Programming reference,” on page 39 provides the UnifiedPOS properties and methods, and information on resolving problems.
- Part 3, “Keyboards and code pages,” on page 247 provides information about the available keyboards and character sets.

Related publications

This section lists related publications for product components. For information about ordering these publications, contact your IBM authorized dealer or marketing representative.

The latest softcopy version of this guide is available on the IBM Retail Store Solutions web site: www.ibm.com/solutions/retail/store/support

- Click **Publications**.
- Look for *Point of Sale Driver Subsystems* under *IBM Store Systems Hardware Publications*.

UPOS publications

Unified Point of Service (UPOS) Retail Peripheral Architecture publications can be found at: www.nrf-arts.org/UnifiedPOS/default.htm

Related software

Utility software, LAN drivers, video drivers, and diagnostic software are available. See the latest list on the IBM® Retail Store Solutions Web site at: www.ibm.com/solutions/retail/store

Select **Support**, and then click the appropriate hardware or peripheral driver.

Summary of changes

August 2008 - GC30-4078-11

This edition includes UPOS 1.9.6.

Changed or new information is indicated by a revision character (|) in the left margin.

April 2008 - GC30-4078-10

This edition includes UPOS 1.9.5.

Changed or new information is indicated by a revision character (|) in the left margin.

October 2007 - GC30-4078-09

This edition includes UPOS 1.9.4.

May 2007 - GC30-4078-08

This edition includes UPOS 1.9.3.

September 2006 - GC30-4078-07

This edition includes UPOS 1.9.2.

April 2006 - GC30-4078-06

This edition includes UPOS 1.9.1.

Appendix A, “JavaPOS support for UnifiedPOS device statistics properties,” on page 365 has been added.

November 2005 - GC30-4078-05

This edition includes UPOS 1.9.

In this edition Line Scanner and Omni Scanner are added.

Properties and methods tables are updated.

July 2005 - GC30-4078-04

This edition includes new information about UPOS 1.7.5.

January 2005 - Web-only update

This update contains new or additional information related to the IBM Anyplace Kiosk (4836/4838).

December 2004 - GC30-4078-03

This edition contains new or additional information about OLE for Retail Point of Sale (OPOS).

September 2004 - GC30-4078-02

This edition contains new or additional information on device-specific notes, JavaPOS-supported properties and methods, and POS keyboard layouts and scan codes.

May 2004 - GC30-4078-01

This edition includes information about IBM Retail Environment for SuSE Linux (IRES) IBM Retail Environment for SuSE Linux® (IRES).

Chapter 1. Introduction

UnifiedPOS is an architectural specification developed by the UnifiedPOS technical committee, of which IBM Corporation is a member. The UnifiedPOS architectural specification is for application interfaces to point-of-service (POS) devices that are used in the retail environment. The architectural specification standard is independent of a specific operating system and language, and defines a set of retail device behaviors sufficient to support a range of POS solutions.

IBM UnifiedPOS includes driver packages for both JavaPOS and Object Linking and Embedding (OLE) for Retail Point of Sale (OPOS).

- **JavaPOS** is an implementation of the UnifiedPOS specification written in Java™ for the support of Java applications.
- **OPOS** is an implementation of the UnifiedPOS specification for Windows® systems. The drivers are implemented using COM, and are delivered as ActiveX controls.
- **OPOS Gateway** provides an OPOS interface to the IBM JavaPOS drivers. The OPOS Gateway provides access to functions that are available in JavaPOS but have not been implemented in OPOS, enabling application developers to choose the best level of supported function for OPOS.

System requirements

This section describes the hardware, software, disk space, and memory that are required for the IBM UnifiedPOS 1.9.6 Subsystem.

Hardware environment

This section lists the hardware devices that UnifiedPOS supports.

Point of sale terminals

The following point-of-sale terminals are supported:

Table 1. Point-of-sale terminals supported by UnifiedPOS

Terminal	Models
4674 POS Terminal (Japan only)	All
4694 POS Terminal	2x5, 2x6, 2x7, 3x7
	OPOS only: 0x1, 0x4, Sx1, Sx4, 1x4, 2x4
SurePOS 100 Series	All
SurePOS 300 Series	All
SurePOS 500/600 Series	All
SurePOS 700 Series	All
Kiosk	All
IBM SureOne® POS system	All

Software environment

The IBM UnifiedPOS system requires the following software environment:

Table 2. Software environment for IBM UPOS

Operating system	One of the following: <ul style="list-style-type: none"> • Microsoft® Windows® 2000 Service Pack 4 • Microsoft Windows XP Service Pack 2 • Microsoft Windows Embedded Point of Service (WEPOS) • Microsoft Windows Vista Business • Microsoft Windows Vista Ultimate • Novell Linux Point of Service (JavaPOS only)
Java Virtual Machine (JVM)	IBM Java runtime environment (JRE) or software development kit (SDK), version 1.4.2 SR10. To determine JVM version, at the command prompt enter: <code>java -fullversion</code> .
Control Objects	OPOS common control objects are required to run the IBM OLE for Retail Subsystem. They can be obtained from http://www.monroecs.com/oposccos.htm or the IBM UPOS installer.

Chapter 2. Installing UnifiedPOS

This chapter describes UnifiedPOS installation for Windows and IBM Retail Environment for SuSE Linux (IRES).

Installation for Windows

You have two options for installing the IBM UnifiedPOS for Retail POS Suite: interactive installation and silent installation.

Interactive installation

1. Run the Setup.exe file and follow the directions on each panel. You might be prompted to install the Microsoft .Net Framework.
2. In the Features dialog (Figure 1), you can choose either of the following features:
 - OPOS Device Support
 - JavaPOS Device Support

The system unit information will be displayed to the user if the system is recognized.

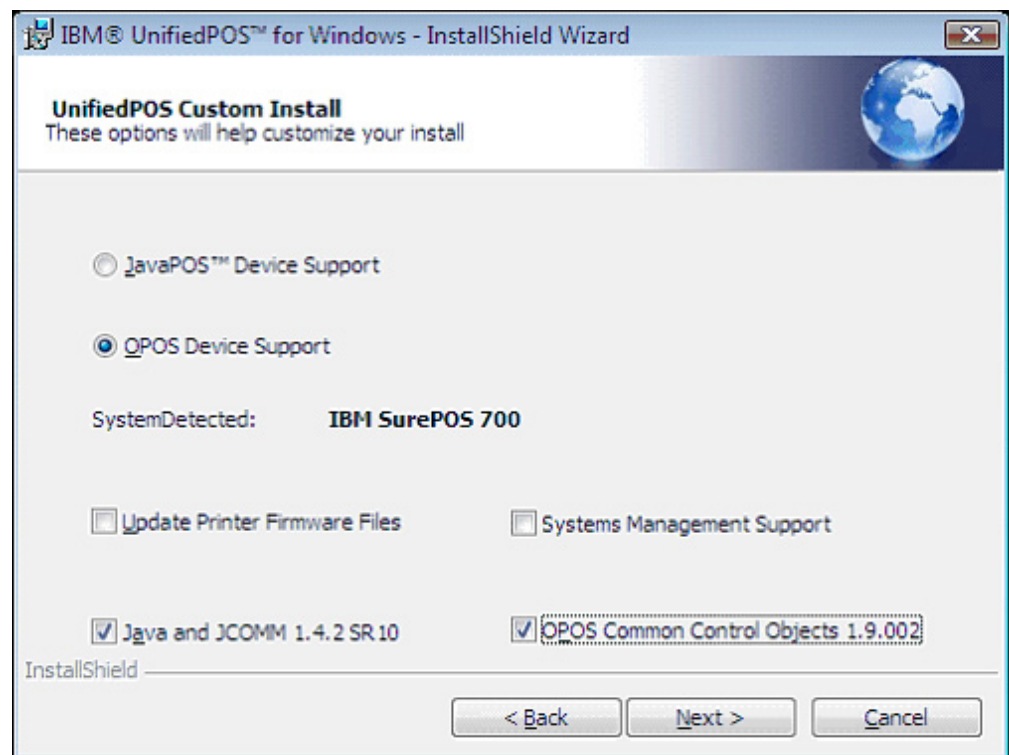

Figure 1. Features dialog

3. After the installation is complete, you must restart your system for the configuration changes to take effect.

Notes:

1. If you select OPOS Common Control Objects during OPOS installation, the installation will override any existing OPOS Common Control Objects on your system.
2. It is the your responsibility to re-register the OPOS Common Control Objects if IBM UnifiedPOS is uninstalled.

Silent installation

IBM UnifiedPOS can be installed and updated silently (unattended) using a response file. The response file, C:\UposSetup.iss is created during the initial installation of the package on a POS system. This response file can then be used to perform an unattended install or update on other systems.

When installing silently on Vista, the user will see both the User Access Control and logo signing messages. To hide these messages, the user must disable both the UAC and the logo signing messages.

To deploy the installation to another system, copy the setup.exe file and the response file to the target system. The response file must be placed in the Windows root directory.

Unattended installation with reboot

To perform an unattended installation or update without a user interface, use the following command:

```
setup.exe /s /v/qn
```

To perform an unattended installation or update with a basic user interface showing progress, errors, and completion, use the following command:

```
setup.exe /s /v/qb
```

To enable logging for the installation, use one of the following commands:

```
setup.exe /s /v"/qn /l*vx C:\msilog.txt"
setup.exe /s /v"/qb /l*vx C:\msilog.txt"
```

Unattended installation without reboot

To prevent the automatic reboot following installation or update, use one of the following commands:

```
setup.exe /s /v"/qn REBOOT=A"
setup.exe /s /v"/qn REBOOT=A /l*vx C:\msilog.txt"
```

Notes:

1. There is no space between **/v"** and **/qn** or between **/v"** and **/qb**.
2. The commands **/qn** and **/qb** are interchangeable in all the examples shown.
3. The double quotes are required as shown.
4. The file C:\msilog.txt contains the install log.

Unattended installation flags

In addition the default flags available, the user can also set the following parameters:

USEINI

Allows the user to specify the location of the .iss file to use during silent install. If this parameter is not specified, the default value of [WindowsVolume]UposSetup.iss is used.

SAVEINI

Allows the user to specify where to save the .iss file during installation. If this parameter is not specified, the default value of [WindowsVolume]UposSetup.iss is used.

REMOVEINI

Setting this value to 1 will remove the .iss file from the target machine. Specify the USEINI parameter to remove a file saved in a non-default location.

ONLYINI

Setting this parameter to 1 allows the user to run the UI installation and generate an iss file without actually installing on that system. The installation will exit right after clicking "Install" in the "ReadyToInstall" dialog.

Some examples of these commands are as follows:

```
setup.exe /s /v"/qn USEINI=C:\UposSetup.iss"  
setup.exe /v"SAVEINI=C:\UposSetup.iss"  
setup.exe /x /v"REMOVEINI=1"  
setup.exe /v"ONLYINI=1"
```

Uninstallation

You can uninstall UnifiedPOS from Windows by interactively using the **Add/Remove Programs** option in the Windows Control Panel.

To perform an unattended uninstall, use one of the following commands:

```
setup.exe /s /x /v/qn  
setup.exe /x /s /v/qb
```

Note: There is no space between /v and /qn.

For 4840 systems

Before installing UPOS, in Device Manager under "Multifunction adapters", you will see:

IBM 4840-xx3 PCI Multi-I/O Controller

No driver files are required or loaded for this device.

After installing JPOS, in Device Manager under "Multifunction adapters", you will see:

IBM 4840 System Port

This replaces the 4840-xx3 PCI port listed above.

The driver for the IBM4840 System Port is:

c:\windows\system32\drivers\aipmtn.sys

After uninstalling UPOS (and the IBM 4840 System Port), when you reboot, the hardware manager will display IBM 4840-xx3 PCI Multi-I/O Controller. The device manager will prompt you to reload the drivers for this device.

Installation for IRES

JavaPOS drivers are included with IRES and have been tested with SUSE Linux Retail Solution 8 (SLRS 8) with SSP4 and Novell Linux Point of Service 9 (NLPOS 9) with SSP3. To understand how the JavaPOS drivers are integrated into IRES, refer to the IRES Developer's Guide at www2.clearlake.ibm.com/store/support/html/pubs.html.

For more information about SLRS 8 and the NLPOS 9, see the following Web site:

- www.suse.com
- www.novell.com/documentation/nlpos9

Chapter 3. Configuring devices

This chapter describes the configuration process for JavaPOS devices, OPOS devices, and USB access.

JavaPOS configuration

The JavaPOS devices are configured using the jpos.xml file. This section describes how to create a jpos.xml file and provides the information you need to configure certain devices.

Creating a jpos.xml file

Locating sample jpos.xml files

During installation, a sample XML file is installed onto your system. The sample file is named 'jposSample.xml'.

It can be found in the following folders:

- Linux - /opt/ibm/javapos/docs
- Windows: - c:\pos\ibmjpos\docs

The sample XML files contain JPOS entries for all IBM JavaPOS-supported devices.

To create the jpos.xml file

You can create a new jpos.xml file using one of the following methods.

Creating a jpos.xml file using your favorite text editor: To create a jpos.xml file using your favorite text editor, follow these steps:

1. Create an empty jpos.xml file.
2. Copy the header information from the sample XML file into your new jpos.xml file.
3. Copy only those JposEntries that correspond to devices on the target system from the sample XML file into your jpos.xml file.
4. Change the Logical Name in each JposEntry so that it matches the Logical Name for that device in your JavaPOS application.
5. Save the jpos.xml to the pos\ibmjpos\config directory in Windows, or to the /opt/ibm/javapos/etc directory in Linux. Update the CLASSPATH if jpos.xml file is saved to another location.
6. In your new jpos.xml file, keep only those JposEntries that correspond to devices on the target system.

Creating a jpos.xml file using the JavaPOS Configuration Editor: You can create a jpos.xml file using the JavaPOS Configuration Editor by following these steps:

1. Copy the sample XML file to the jpos.xml file.
2. Change the directory to the location of the jpos.xml file.
3. Open the JavaPOS Configuration Editor by typing:

```
java jpos.config.simple.editor.JposEntryEditor
```

Note: The JavaPOS Configuration Editor can also be accessed from **Programs->IBM JavaPOS->JavaPOS Configuration Editor**.

4. Change the Logical Name in each JposEntry to match the Logical Name for that device in your JavaPOS application.
5. In your new jpos.xml file, keep only those JposEntries that correspond to devices on the target system.

Changing the logical name of JposEntry

Follow these steps to change the logical name of JposEntry:

1. Select a device entry.
2. Click **Edit > Copy**.
3. Enter a new Logical Name in the JposEntry dialog box. Select **OK**.
4. Click **Yes** to delete the old entry.
5. For each device that is not on the target machine, perform the following steps:
 - a. Click the JposEntry for that device.
 - b. Click **Edit > Delete**.
6. Click **File > Save JposEntryRegistry As...** to save jpos.xml.

Device configuration

The devices are configured based on the entries in the jpos.xml file. Because JposEntries consume resources, it is recommended that jpos.xml contain only those JposEntries that correspond to devices on the target system. For example, if you are working with only EIA-232 devices, the jpos.xml should not include entries for RS-485 or USB devices.

The logical name used for a given device during open must match the LogicalName specified in the JposEntry in the jpos.xml for that device.

The entries in the jpos.xml file are organized by device type.

EIA-232 device communication

Entries for the EIA-232 devices in the jpos.xml file include the EIA-232 communication configuration properties. Acceptable values for each EIA-232 communication property are documented in Table 3.

Table 3. EIA-232 device communication properties

JCL property name	Type	Possible values (typical values)	Default Value
portName	String	Valid port name such as: "COM1"	"" (empty string)
baudRate	String	"2400", "4800", "7200", "9600", "14400", "19200", "38400", "57600", "115200"	"9600"
dataBits	String	"4", "5", "6", "7", "8"	"8"
parity	String	"Even", "Odd", "None", "Mark", "Space"	"None"
stopBits	String	"1", "1.5", "2"	"1"
flowControl	String	"Xon/Xoff", "Hardware", "None"	"None"

Notes:

1. The value for the portName depends on the POS system to which the device is attached. All the ports start with the letters "COM"; a number is appended to identify the port, for example: "COM2".
2. In Linux the designations COM1 and COM2 are still used instead of the standard Linux terminology.

Device-specific EIA-232 Configuration

Possible values for the device communication properties for specific EIA-232 devices are shown in Table 4. The *dataBits*, *parity* and *stopBits* properties are omitted from the table and from jpos.xml entries.

Notes:

1. Values different than those described here will cause the device to fail.
2. In the following table, Not required means that the user does not have to type these values into the xml.
3. For the embedded devices in the 4610 Printer, such as magnetic ink character recognition (MICR) and CheckScanner, the jpos.xml must include the JposEntry for the 4610 Printer and the embedded devices.

Table 4. Specific values for EIA-232 devices in JavaPOS

Device	portName	baudRate	flowControl
CashDrawer 4610-A CashDrawer 4610-B	Port where the printer is attached "COM1" (default)	"9600" "19200" "115200" (Must match printer configuration)	Only "Xon/Xoff" or "Hardware" (Must match printer configuration)
CashDrawer 4840-A CashDrawer 4840-B	"COM4" (default)	Not required	Not required
CheckScanner 4610-TI8/TI9	Port where the printer is attached. Default: "COM1"	"9600" "19200" (Must match printer configuration)	Only "Xon/Xoff" or "Hardware"
Fiscal Printer 4610-Kx3 Fiscal Printer 4610-Kx4 Fiscal Printer 4610-Kx5 Fiscal Printer 4610-Gx3 Fiscal Printer 4610-Gx4 Fiscal Printer 4610-Gx5	Port where the printer is attached Default: "COM1"	"9600" "19200" "28800" (Windows only)	Only "None"
Fiscal Printer 4610-Sx6	Port where the printer is attached Default: "COM1"	"115200"	Only "None"
Line Display 4840 APA	Default: "COM4"	"9600"	"Hardware"
Line Display 4810/4840/SureOne VFD	Default: "COM4"	Not required	Not required
MICR 4610 TI2/4/8/9	Port where the printer is attached Default: "COM1"	"9600" "19200" (Must match printer configuration)	Only "Xon/Xoff" or "Hardware"
MSR 4820/4836/4838/4840 ISO MSR 4830/4840 JUCC	Default: "COM3"	"19200"	Not required

Table 4. Specific values for EIA-232 devices in JavaPOS (continued)

Device	portName	baudRate	flowControl
POSPrinter 4610 TI1/2/3/4/8/9 TM6/7, TF6/7	Port where the printer is attached Default: "COM1"	"9600" "19200" (Must match printer configuration)	Only "Xon/Xoff" or "Hardware"
POSPrinter SureOne	Only "COM3"	"9600"	Only "Xon/Xoff"
IBM Anyplace Kiosk Line Scanner	Default: "COM4"	"19200"	Not required
IBM Anyplace Kiosk Omni Scanner	Default: "COM4"	"9600"	Not required
Tone Indicator 4610 TM/TF 6/7	Port where the printer is attached Default: "COM1"	"9600" "19200" (Must match printer configuration)	Only "Xon/Xoff" or "Hardware"

POS Control Center utility

The POS Control Center displays information for devices found on the system and from device entries from the jpos.xml file. For multiple, identical devices, such as cash drawer and displays, the deviceNumber property becomes important. For a given device, the device number displayed in the Device Information section of the POS Control Center must match the deviceNumber in the JposEntry.

To access the IBM POS Control Center:

- In Windows, click **Programs > IBM JavaPOS > POS Control Center**.
- In Linux, enter POSControlCenter.
- From a command prompt in either operating system, enter:

```
java com.ibm.jpos.tools.sdicc.ControlCenterApp
```

SurePOS 300-33x, JavaPOS second cash drawer support and NVRAM detection

The 4810-x3x POS hardware has an embedded setting which shows that there is a second cashdrawer, as well as nonvolatile random access memory (NVRAM) through JavaPOS. Neither the second cashdrawer nor the NVRAM are valid I/O devices on the SurePOS 300-33x POS hardware. Although these devices are present on the JavaPOS ControlCenter, they are not configurable, and must not be configured in the jpos.xml file as valid devices.

You should be aware that when using the IRES POS client configuration utility, these devices (second cashdrawer and NVRAM) will be generated as valid entries. However, this is an invalid configuration and must not be used as configurable devices.

IBM SurePoint Display (4820) Touch Support

The touch support is not provided for the following:

1. IBM SurePoint Display (4820) RS485 device on Windows Vista
2. IBM Retail Environment for SuSE Linux Version 2

JavaPOS Auto-configuration (Linux only)

JavaPOS Auto-configuration can detect most POS devices that are physically connected to the system. It will create a new JCL entry with the default values for each device it detects. However, some configuration must be done manually. For example, the following devices must be manually configured.

- All EIA-232 devices except for SurePOS 500 cash drawers
- Cash drawers on IBM 4610 POS printers

See “Manual device configuration” for more information.

Any device settings can be changed by editing the specific device properties file. For example, scanner and scale settings need to be manually configured.

Note: The Auto-configuration utility is supported through the IRES POS Client Configuration utility. For details on the use of this utility, refer to the *IBM Retail Environment for SUSE Linux Version 2 Developer's Guide* at www.ibm.com/solutions/retail/store/support,

- Under *Operating Systems*, click **IRES**.
- Click on the latest version of the **Developers Guide**.
- To open the pdf, click on the language you want.

Configuring the JCL

There are three modes of JCL operation for device configuration:

1. Auto-configuration only

This mode creates a JCL table with entries created through auto-configuration only. To enable this mode, copy the file located in the `/opt/ibm/javapos/etc/jpos/res/jpos.properties.autocfg` directory to the `/opt/ibm/javapos/etc/jpos/res/jpos.properties` directory.

2. XML and auto-configuration

This mode creates a JCL table with entries created from both the `jpos.xml` file and auto-configuration. To enable this mode copy the file located in the `/opt/ibm/javapos/etc/jpos/res/jpos.properties.xmlautocfg` to the directory `opt/ibm/javapos/etc/jpos/res/jpos.properties` directory.

3. XML only

This mode creates a JCL table with entries created from the `jpos.xml` file only. To enable this mode copy the file located in the `/opt/ibm/javapos/etc/jpos/res/jpos.properties.xmlcfg` directory to the `opt/ibm/javapos/etc/jpos/res/jpos.properties` directory.

Manual device configuration

When using Auto-configuration (JCL operation mode (1) or (2) above), there is an additional configuration file for every device. The device properties files are located in the `/opt/ibm/javapos/etc` directory. Table 5 shows the name of the file associated with each device type.

Table 5. Auto-configuration properties files

Device	Properties file name
CashDrawer	posj.autoconfig.CashDrawer.properties
CheckScanner	posj.autoconfig.CheckScanner.properties
FiscalPrinter	posj.autoconfig.FiscalPrinter.properties
HardTotals	posj.autoconfig.HardTotals.properties

Table 5. Auto-configuration properties files (continued)

Device	Properties file name
Keylock	posj.autoconfig.Keylock.properties
LineDisplay	posj.autoconfig.LineDisplay.properties
MICR	posj.autoconfig.MICR.properties
MSR	posj.autoconfig.MSR.properties
MotionSensor	posj.autoconfig.MotionSensor.properties
POSKeyboard	posj.autoconfig.POSKeyboard.properties
POSPrinter	posj.autoconfig.POSPrinter.properties
Scale	posj.autoconfig.Scale.properties
Scanner	posj.autoconfig.Scanner.properties
ToneIndicator	posj.autoconfig.ToneIndicator.properties

Note: All of these additional configuration files that support EIA-232 configuration include a section related to EIA-232 settings. The configuration for an EIA-232 device must contain at least the following properties:

- deviceBus.1=RS232
- portName.1=COM1
- baudRate.1=9600
- flowControl.1=Xon/Xoff

By default, all EIA-232 properties are commented out in these configuration files. To enable an EIA-232 device, its corresponding file must be edited to include the lines that configure the settings for the device.

Auto-configuration properties files format

For some properties it may be necessary to specify a different value than the one assigned by default. Every property can be set in 2 different formats:

Default format:

Used to set a value to a property that will be used for all devices of the same class. Its format is:

property = value

Number-specific format:

Used to set a property value only for a specific device. Other devices of the type will keep the default values.

property.number = value

where:

- property = Any of the device properties available for the device
- number = A numeric sequence of the devices of the same category, starting at 1, which must match to the one assigned to the LogicalName property, so this property can be associated to the correct device.
- value = Any valid value for the property

The following examples show how to set the value for a property in the 2 formats:

- To enable the property stripTransitDashes for all the MICR devices autodetected in the system the default format is used:

```
com.ibm.jpos.sdi.config.MICR.stripTransitDashes=true
```

- To enable the property `stripTransitDashes` for only the first MICR device the number-specific format is used:

```
com.ibm.jpos.sdi.config.MICR.stripTransitDashes.1=true  
com.ibm.jpos.sdi.config.MICR.stripTransitDashes=false
```

LogicalName property considerations:

The `logicalName` property must be unique to a particular device so it can only be set using the number-specific property format. If no Number-specific `logicalName` property is defined for a detected device, Auto-configuration automatically generates a `logicalName` for the device by combining the device category and the enumeration number of that device.

For example, the `logicalName` of the first `CashDrawer` enumerated would be `CashDrawer1` and the `logicalName` of the third `LineDisplay` enumerated would be `LineDisplay3`.

The `logicalName` can be modified by editing the `posj.autoconfig.<device>.properties` file for the specific device.

EIA-232 device configuration

EIA-232-connected devices are difficult to auto-detect, so the specific device properties file must be edited to specify some or all of the EIA-232 settings. These settings must be specified in number-specific format.

At a minimum, the EIA-232 `portName` and `deviceBus` must be set. The following example shows how the settings should look to configure an EIA-232 IBM 4610 printer:

```
logicalName.1=POSPrinter1  
deviceBus.1=RS232  
portName.1=COM1  
baudRate.1=19200  
flowControl.1=Xon/Xoff
```

Note: A cash drawer connected to a SurePOS 500 is the only auto-detected EIA-232 device; the EIA-232 settings should not be specified.

Configuring cash drawers on IBM 4610 POSPrinters

Cash drawers attached to the IBM 4610 POS Printer cannot be automatically detected, even when connected to the printer.

To enable the cash drawers, modify the file `posj.autoconfig.POSPrinter.properties` and enable the cash drawer properties. For example:

```
autoconfig.hasCashDrawerA.1=true  
autoconfig.hasCashDrawerB.1=true
```

MICR exception tables configuration

Auto-configuration handles exception table entries using a list of entries saved in a file, one entry per line. The following example shows how this file might look:

```
com.ibm.jpos.sdi.config.MICR.exceptionTable1= B778899001D154R  
com.ibm.jpos.sdi.config.MICR.exceptionTable2= B667788990D153R  
com.ibm.jpos.sdi.config.MICR.exceptionTable3= P123456780AAAAAXSSS
```

The `posj.autoconfig.MICR.properties` file should be edited to specify the name of the MICR exceptionTable file in the `autoconfig.exceptionTableFile` property.

```
autoconfig.exceptionTableFile=<micrentries.txt file>
```

Note: Refer to “MICR exception tables” on page 114 for information about the formats.

Displaying Auto-configuration detected devices

The auto-config.tool shows, in html format, all the devices that were detected by Auto-configuration, along with the assigned logicalName and properties. At a command prompt, type:

```
java com.ibm.jpos.tools.autoconfig.tool.ReadJCL <output.html file>
```

where:

output.html is the file that will contain the information generated by auto-configuration, listing all the detected devices and its properties.

This tool also performs basic operations (open, claim, enable) on each detected device and store the result in the <output.html>. The following image is an example of the output when HardTotal and POS keyboard device and sub devices are detected.

Logical Name	Open	Claim	Enable
1. HardTotalsI	OK	OK	OK
2. KeylockI	OK	N/A	OK
3. MSRI	OK	OK	OK
4. POSkeyboardI	OK	OK	OK
5. ToneIndicatorI	OK	OK	OK

HardTotals I		
Property Name	Property Value	Property Type
abstractionClass	com.ibm.jpos.services.IBMHardTotals	class java.lang.String

Auto-configuration supported devices

The JavaPOS Auto-configuration code detects a subset of devices supported by the JavaPOS drivers. The following tables present the devices that can be detected.

Cash drawers:

Table 6. List of supported cash drawers

Device	Connectivity
SurePOS 500/600 family built-in cash drawer	EIA-232
SurePOS 700 family built-in cash drawer	USB/Integrated

Table 6. List of supported cash drawers (continued)

Device	Connectivity
4694 family built-in cash drawer	RS-485
SurePOS 300 family	Integrated
SureOne family built-in cash drawer	Integrated

CheckScanners:

Table 7. List of supported CheckScanners

Device	Connectivity
4610-TI8 CheckScanner	RS-485/USB
4610-TI9 CheckScanner	RS-485/USB

Fiscal printers:

Table 8. List of supported Fiscal Printers

Device	Connectivity
4610 Kxx/Gxx Fiscal Printer family	RS-485/USB/Rs232
4610 Sx6 Fiscal Printer family	USB/Rs232
4679 3xx Fiscal Printer family	RS-485

HardTotals:

Table 9. List of supported HardTotals

Device	Connectivity
4694 NVRAM	Integrated
SurePOS 700 Series NVRAM	Integrated/USB
SureOne built-in NVRAM	Integrated

Keylocks:

Table 10. List of supported keylocks

Device	Connectivity
Alphanumeric POS Keyboard keylock	PS/2 / RS-485 / USB
Alphanumeric POS Keyboard keylock with mouse pointer, MSR	PS/2
50-key Keyboard keylock	RS-485/USB
133-key Keyboard keylock	RS-485/USB
4820 keylock	RS-485/USB
SureOne keylock	Integrated
Alphanumeric POS Korea Keyboard keylock	PS/2 / RS-485 / USB

LineDisplays:*Table 11. List of supported LineDisplays*

Device	Connectivity
SBCS 40-character VFD II	RS-485/USB
SBCS Two-sided VFD II	RS-485/USB
SBCS 40-character VFD II (Japan)/4674	RS-485
SBCS Character Graphic (C/G) APA	RS-485/USB
SBCS 40-character LCD	RS-485/USB
SBCS 50-key keyboard LCD	RS-485/USB

MICRs:*Table 12. List of supported MICRs*

Device	Connectivity
4610 Printer family MICR	RS-485/USB

MSRs:*Table 13. List of supported MSRs*

Device	Connectivity
Alphanumeric POS Keyboard MSR	PS/2 / RS-485 / USB
Alphanumeric POS Keyboard keylock with mouse pointer, MSR	PS/2
50-key keyboard MSR	RS-485/USB
133-key keyboard MSR	RS-485/USB
4820 MSR	RS-485/USB
SureOne built-in	PS/2
CANPOS keyboard(firmware version 1.2.3 or higher)	PS/2

MotionSensors:*Table 14. List of supported MotionSensors*

Device	Connectivity
SurePOS 500/600	Integrated
Kiosk	Integrated

POS keyboards:*Table 15. List of supported POS keyboards*

Device	Connectivity
Alphanumeric POS Keyboard tone	PS/2 / RS-485 / USB

Table 19. List of supported ToneIndicators (continued)

Device	Connectivity
Alphanumeric POS Keyboard with mouse pointer tone	PS/2
50-key Keyboard tone	RS485/USB
133-key Keyboard tone	RS485/USB
4820 tone	PS/2 / RS-485 / USB
PC POS Keyboard	RS485/USB
4610 SST Tx6/Tx7	RS-485/USB

Note: Not all OEM devices have been tested and verified.

USB device access

Microsoft Windows

With one exception, IBM peripherals are USB 1.1 compliant, which can cause communications problems when connected to a USB 2.0 controller. It is strongly recommended that USB 2.0 be disabled in the terminal BIOS settings.

The exception to this is the IBM 4610 2NR/2CR printer, which is a 2.0 compliant device and does not require that USB 2.0 be disabled.

Linux

The IBM JavaPOS drivers use the `javax.usb` subsystem to access the USB POS devices connected to the system. The `javax.usb` subsystem on Linux uses the USB filesystem, `usbfs`, to access the USB devices directly. The permissions on this filesystem default to access only by the root user. This security model prevents unauthorized users from accessing USB devices connected to your system. However, if the JavaPOS application (for example, JVM) is running as a non-root user, the `usbfs` permissions must be changed to allow non-root access. To do this you must change the mount parameters for `usbfs`. You can edit the `/etc/fstab` file to modify the mount parameters for `usbfs` (fourth field) or you can manually remount `usbfs`, specifying the required parameters on the `mount` command.

The most secure way to accomplish non-root access to the USB device nodes is to change the ownership of the USB device nodes to the `userid` which is running the JavaPOS application. To do this, mount `usbfs` with the parameter, `devuid=n`, where *n* is the numeric ID of the JavaPOS application's user. For example, if the JavaPOS application is running as user, `javaposapp`, and `javaposapp` has a User ID (uid) of 1000, then specify `devuid=1000` when mounting `usbfs`. The user running the JavaPOS application must be considered a privileged user because this user can directly access all USB devices. Users who do not need to run the JavaPOS application or the JavaPOS drivers should use a different login.

A less secure way to accomplish non-root access to the USB device nodes is to create a special group for the users who run JavaPOS applications. Two parameters must be used in mounting `usbfs`: `devgid=n`, where *n* is the numeric group id for the JavaPOS application group, and `devmode=0664`, which changes the permissions of the USB device nodes to read/write by owner and group. The group given permission to access the USB devices should be considered a privileged group and handled the same as a privileged user. Only those users that need to run JavaPOS applications and drivers should be made part of that group.

See the Linux man pages for `useradd`, `usermod`, `groupadd`, and `groupmod` for information about creating and modifying users and groups.

OPOS configuration

IBM OPOS drivers must be configured to access the point-of-sale devices you have attached to your system. To locate the Configuration Utility, select **Programs > IBM OLE for Retail Point of Sale > Configuration Utility**. OPOS provides defaults for all resources associated with supported devices. This section discusses how the application can configure a device to use a value different from the assigned default and how to specify some resource values.

Using the OPOS Configuration utility

The OPOS configuration window has a separate tab for each of the four POS Terminal types supported by the IBM OPOS package (see Figure 3).

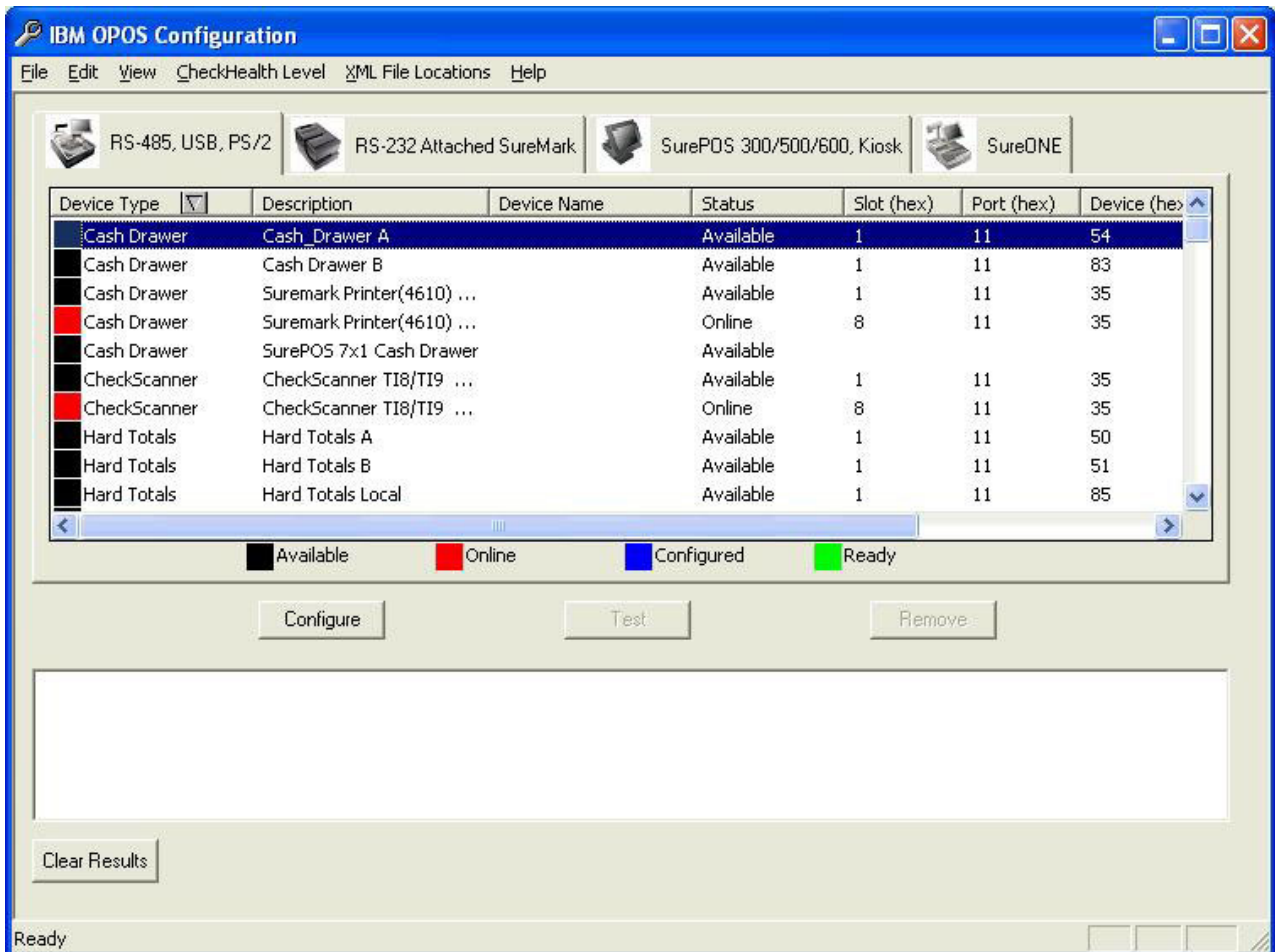

Figure 3. OPOS configuration window

Each tab contains a list of devices that are supported on the POS Terminal. Each device entry contains descriptive information and the device's current status. The status shows what level of configuration is completed using a status description. Table 20 on page 23 explains the meaning of each status type.

Table 20. Device status types

Status	Color	Description
Available	Black	The device is supported on the selected POS Terminal. It can only be used to add a new configuration. Its settings will not be modified. No device name is given.
Online	Red	The device is supported on the selected POS Terminal, and is detected to be online and available on the current system. It can only be used to add a new configuration. Its settings will not be modified. No device name is given.
Configured	Blue	The device is supported on the selected POS Terminal and has a configuration entry in the registry. It can be modified, tested for connectivity, or removed.
Ready	Green	The device is supported on the selected POS Terminal and is ready to use. It is online and has a configuration entry in the registry. It can be modified, tested for connectivity, or removed.

RS-485, PS/2, and USB devices are detected (and listed as Online) automatically. The system tone and HardTotals are always listed as Online. Other devices can be listed as Online after testing.

Navigation

For finding specific device entries, you can sort a column by clicking its heading. The column is sorted in ascending order first; click again to sort in descending order. The current sort order is indicated by the up/down arrow in the column heading.

Note: The order is based on ASCII values. (For example, a baud rate of 19200 is listed before 9600 when the column is sorted in ascending order.) Only one column can be sorted at a time.

Configuring devices

To configure a device, perform the following steps:

1. Select an entry in the device list. The **Configure** button is enabled.
2. Click the **Configure** button to display the configuration dialog for the selected device. The dialog differs depending on the POS Terminal type and the device type. Figure 4 on page 24 shows the configuration dialog for an RS-485 or USB device; Figure 5 on page 25 shows the configuration dialog for an EIA-232 device.
3. Enter a name for the device.
4. For USB, RS-485, and System devices, select the correct slot and port for the device (see Figure 4 on page 24). Slot can have the following values:

Slot	Description
0	System devices (keyboard, NVRAM)
1	Most RS-485 devices
2	Some RS-485 devices (4674 devices)
8	USB devices

Port can have the following values:

Port (hex)	Description
0	System devices (keyboard)
11	Most RS-485 devices
22	RS-485 devices (46x3 Model 2)

Note: The device number cannot be modified because that number is specific to the type of device, and changing it could change the device type.

The image shows a 'Device Properties' dialog box. The title bar is blue with the text 'Device Properties' and a close button (X). The main area is light gray. It contains the following fields:

- Device Type:** Cash Drawer
- Description:** Cash_Drawer A
- Device Name:** An empty text input box.
- Slot:** A dropdown menu with '1' selected.
- Port:** A dropdown menu with '11' selected.
- Device:** A dropdown menu with '54' selected.

At the bottom of the dialog are two buttons: 'OK' and 'Cancel'.

Figure 4. Device properties dialog (RS-485/USB)

For EIA-232, select the correct Com Port, Baud Rate, and Flow Control for the device (See Figure 5 on page 25).

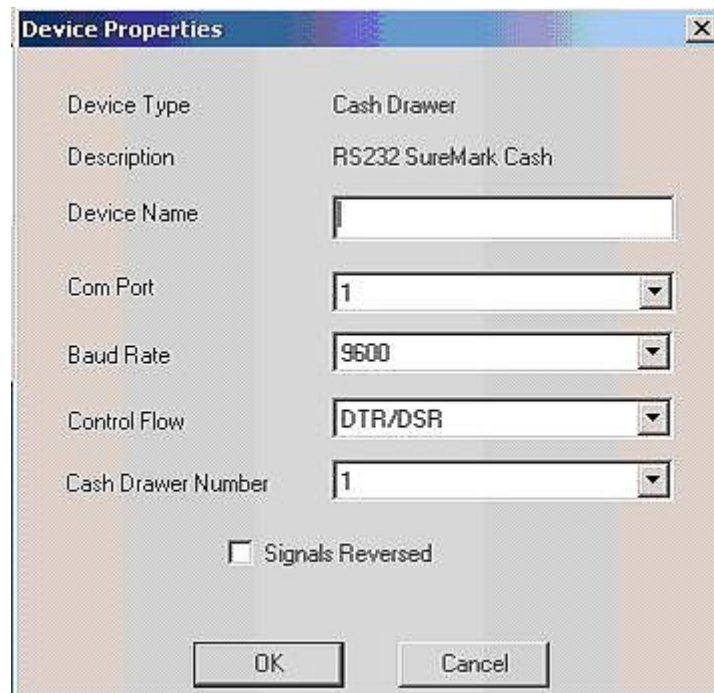

Figure 5. Device properties dialog (EIA-232)

5. Click **OK**. The entry is added to the device configuration list.

Notes:

1. Devices that are not attached can still be configured.
2. For RS-485 and USB devices, Slot and Port should not have to be changed.
3. RS232 devices will not show as Online in the OPOS configuration tool until they are configured.
4. For more information about Slot, Port, and Device numbers, see the *Point of Sale Subsystem: Programming Reference and User's Guide*.

Testing connectivity

Selecting a Configured or Ready device enables the **Test** and **Remove** buttons, as well as the **Configure** button. Clicking on the **Test** button tests the connectivity and configuration of the device. While the device does not need to be attached to configure or remove a device configuration entry, it must be attached for a successful test. The **Test** button uses OPOS to open, claim when necessary, and enable the device. It then performs a CheckHealth method. The CheckHealth level is set from the menu.

If all of these steps are completed successfully, then the test is considered successful. If the device configuration entry is not yet marked as Ready, it is updated as such.

The list box at the bottom of the window is updated with the test results (see Figure 6 on page 26).

Figure 6. Results of connectivity test

Removing devices

You can delete entries during configuration. The results are displayed in the list box at the bottom.

Deploying OPOS device configurations

You can use the configuration utility to import and export configuration information to and from an OPOS Device Registry (ODR) file. These options are available on the **File** menu.

To export configuration information, perform the following steps:

1. Select the devices (on all the tabs) that you want to export. Use the **Shift** and **Ctrl** keys to select more than one. (See Figure 7 on page 27.)

Figure 7. Selecting devices to export

2. Select **File > Export**. The configuration information is exported.

Only configured entries with device names are exported. This enables you to create files for different configurations, or for deploying new configurations to stores.

To import configuration information, perform the following steps:

1. Select **File > Import**. A file dialog window is displayed.
2. Select an ODR file and click **Open**. The configuration information is imported and the device listing and registry information are updated.

IBM SurePoint Display(4820) Touch Support

Touch support is not provided for the IBM SurePoint Display (4820) RS485 device on Windows Vista.

Chapter 4. Problem determination

This chapter describes the logging files that record device events. These events allow you to determine and resolve problems.

JavaPOS problems

Tracing

UPOS 1.9.1 or later tracing can be configured using the UPOS Support Tool. See Appendix B, “UnifiedPOS support tool,” on page 387 for more information.

Note: The tracing facility described here does not work when you’re using JavaPOSAutoConfig from IRES V2. Refer to the *IBM Retail Environment for SUSE LINUX Version 2 Developer’s Guide*, form number GC30-9723 for more information.

The POS Control Center provides a facility to enable device tracing to collect trace information. This facility is described in the following list:

1. Start POS Control Center in one of two ways:
 - a. **Programs > IBM JavaPOS > POS Control Center,**
 - b. Command line: **java com.ibm.jpos.tools.sdicc.ControlCenterApp**

2. Select **File > Properties.**

3. Select the **jutil** tab.

4. Modify the applicable properties; press enter key after each change:

```
com.ibm.jutil.tracing.TracerOutputToFile (default).
com.ibm.jutil.tracing.TurnOnAllNamedTraces=OFF (default), to enable set to ON.
com.ibm.jutil.tracing.TracerOutputFileLocation=~/.ibmjpos (default)
com.ibm.jutil.tracing.TracerOutFileName=traceroutput.txt (default)
com.ibm.jutil.tracing.TracerLevel=Maximum (default).
com.ibm.jutil.tracing.TimeStampFormat = DATE (default)
    Use TimeStampFormat to give format in milliseconds [1140564390381]
    or in Date plus hour [yyyy.MM.dd H:mm:ss:SSS]=[2006.02.24 12:42:17:039]
    give TimeStampingFormat property one of the following values :
    for milliseconds: MSECS
    for Date: DATE ( default value )
com.ibm.jutil.tracing.TracerOutputFileMaxSize=10000000(default) contents the
maximum number of bytes that a file can handle and store
--default is 10000000 ( 10 Mbytes ).
com.ibm.jutil.tracing.TracerOutputFileMaxFiles=10 (default) contents the maximum
number of files where the data traced is stored --default 10 file.
```

Example: If a trace contains 500 bytes, the TracerOutputFileMaxSize property is set to 100, and the TracerOutputMaxFiles is set to 4, then four files of 100 bytes each will be created:

- traceroutput1.txt
- traceroutput2.txt
- traceroutput3.txt
- traceroutput4.txt

The file traceroutput1.txt contains the end of the tracing, while traceroutput4.txt contains the second 100 bytes of the trace. The first 100 bytes of the trace are lost.

Note: In Windows, the property `com.ibm.jutil.tracing.TracerOutputFileLocation` must not end with a single backslash. A single backslash indicates that the line continues. Use two backslashes.

Refer to the POS Central Center manual for details about properties. To access the manual, go to **Programs > IBM JavaPOS > POS Control Center > Help > Manual**.

Optionally, the tracer output file can be sent to a logging facility, which can rotate the trace files. The following steps describe how to send the tracer output file to logging:

1. In `jutil.properties` set the value of the property `com.ibm.jutil.tracing.TracerOutputTo` to **Logging**. This sends all the trace messages through logging.
2. In `log4jConfig.properties`, modify the following properties as needed:

```
log4j.appender.rootAppender.File = <home>/ .ibmjpos/logging/root.log (default)
log4j.appender.rootAppender.MaxFileSize=100000 (default)
# Keep one backup file
log4j.appender.rootAppender.MaxBackupIndex=1
```

If `MaxBackupIndex` is greater than 1, then the log file is rotated.

Tracing for Javax.usb for Windows with UPOS 1.9.2 or later

Release 1.9.2 for UPOS introduced new tracing capabilities, requiring version 1.0.2 or later of `jsr80_ri.jar`. There are two layers:

- Java and DLL layer tracing
- kernel driver tracing

Java and DLL layer tracing

Tracing is controlled by `javaxusb.properties` using the following properties:

- The `WindowsUsbTracer` property specifies the tracer to use. In this example, tracing is directed to the console (default) by "`WindowsUsbTracerStdOut`".

```
com.ibm.jusb.os.windows.WindowsUsbTracer=com.ibm.jusb.os.windows.util.
WindowsUsbTracerStdOut
```
- The `nativeTraceLevel` property sets the debug level for the DLL tracing.

```
com.ibm.jusb.os.windows.WindowsUsbServices.nativetracelevel=TRACE_CRITICAL
```
- The `currentLevel` property sets the debug level for the `javax.usb` for Windows layer. Setting this property to `TRACE_OFF` disables `javax.usb` for Windows tracing.

```
com.ibm.jusb.util.WindowsUsbTracer.currentLevel=TRACE_OFF
```

The following lines show part of a console trace.

```
NATIVE: [TopologyMonitor]-->
NATIVE: [EnumerateJxDevices]Dev path
      \\?\usb#vid_04b3&pid_4526#no_serial_number#{136e983a-096c-
49bb-a6c6-e608a0a0cdbbc}
NATIVE: [JxGetDescriptor]getting javaxusb descriptor type: 1. Pass 1
NATIVE: [JxGetDescriptor]getting javaxusb descriptor. Pass 2 with size: 18
NATIVE: [EnumerateJxDevices]Device descriptor return length:18
NATIVE: [JxGetDescriptor]getting javaxusb descriptor type: 3. Pass 1
NATIVE: [JxGetDescriptor]getting javaxusb descriptor. Pass 2 with size: 34
NATIVE: [EnumerateJxDevices]Total JavaxUsb Devices found: 1
```

Note that *NATIVE* identifies DLL tracing, and *STATIC* identifies static methods.

JavaPOS tracing support: In order to use the JavaPOS tracing capabilities, the provided JUtilUsbTracer must be specified in javaxusb.properties:

```
com.ibm.jusb.os.windows.WindowsUsbTracer=com.ibm.jutil.tracing.javaxusb.  
JUtilUsbTracer
```

Here is an example:

```
...  
</com.ibm.posj.bus.hid.javaxusb.factory.ignoreInterface>  
[1153764821690] [POSJ] [PosSystemManager] -->startPopulators()  
[1153764821690] [POSJ] [PosSystemManager] -->startPopulators()  
[1153764821841] [JavaxUsb] [NATIVE] [EnumerateJxDevices]Dev path  
\\?\usb#vid_04b3&pid4526#no_serial_number#{136e983a-096c-49bb-a6c6-e608a0a0cdbc}  
[1153764821841] [JavaxUsb] [NATIVE] [JxGetDescriptor]getting javaxusb descriptor  
type: 1. Pass 1  
[1153764821861] [JavaxUsb] [NATIVE] [JxGetDescriptor]getting javaxusb descriptor.  
Pass 2 with size: 18  
[1153764821871] [JavaxUsb] [NATIVE] [EnumerateJxDevices]Device descriptor return  
length:18
```

In this example Javaxusb tracer is identified as [JavaxUsb]. [NATIVE] is tracing generated by the DLL, and [STATIC] is tracing generated by static methods from the Java layer. Any other tracers come from the Java layer.

The advantage of this feature, apart from integrating JavaPOS-javaxusb tracing, is that all JavaPOS tracing capabilities are incorporated into javaxusb. These include output to file, logging, TCP/IP tracing server, and so on.

Note that in this mode you can filter javaxusb tracing by adding the following line in jutil.properties:

```
com.ibm.jutil.tracing.Tracer.JavaxUsb = OFF
```

Kernel driver tracing

In order to debug the kernel, programs like DebugView from Sysinternals may be used, or use MS Debugger from another computer connected to the serial port.

DebugView requires no special settings to view the trace. If you use it, you might see DLL tracing as well, depending on the DLL tracing configuration of javaxusb.properties.

Javax.usb for Linux

The Linux implementation of javax.usb has JNI tracing only. To change the settings for JNI tracing, edit the javaxusb.properties file. The available settings are:

- #com.ibm.jusb.os.linux.LinuxUsbServices.JNI.tracing = true

A value of false disables tracing entirely; a value of true enables some amount of tracing.

- #com.ibm.jusb.os.linux.LinuxUsbServices.JNI.trace_output = 2

This defines where the JNI tracing output is sent. The default is stderr file mode. Note that if append mode is used, the trace file will grow ever-larger every time javax.usb is run; its size should be managed. In file mode, the file size is not managed or limited by javax.usb.

- 1 - stdout
- 2 - stderr
- 3 - file (truncate mode)
- 4 - file (append mode)

- #com.ibm.jusb.os.linux.LinuxUsbServices.JNI.trace_filename =

This is the filename to trace to, if trace_output is set to file tracing. There is no default. It must be set if trace_output is set to file tracing.

- #com.ibm.jusb.os.linux.LinuxUsbServices.JNI.trace_level = 0

This sets the tracing level. Higher levels mean more tracing. This level applies to ALL tracers. See each tracer for their levels.

- #com.ibm.jusb.os.linux.LinuxUsbServices.JNI.trace_default = true

This enables or disables default tracing. This is the most used tracer. The trace_data must also be enabled. The levels for this tracer are:

- 0 - CRITICAL
- 1 - ERROR
- 2 - INFO
- 3 - FUNCTION
- 4 - DEBUG
- 5 - OTHER

- #com.ibm.jusb.os.linux.LinuxUsbServices.JNI.trace_hotplug = true

This enables or disables hotplug tracing. The trace_data must also be enabled. These are the levels for this tracer:

- 0 - CRITICAL
- 1 - ERROR
- 2 - CHANGE
- 3 - DEVICE
- 4 - OTHER

- #com.ibm.jusb.os.linux.LinuxUsbServices.JNI.trace_xfer = true

This enables or disables xfer tracing. The trace_data must also be enabled. These are the levels for this tracer.

- 0 - CRITICAL
- 1 - ERROR
- 2 - REQUEST
- 3 - METADATA
- 4 - DATA
- 5 - OTHER

- #com.ibm.jusb.os.linux.LinuxUsbServices.JNI.trace_urb = false

This enables or disables urb tracing. The trace_data must also be enabled.

Note: DATA-level tracing will generate a LOT of output. These are the levels for this tracer.

- 2 - METADATA
- 3 - DATA

The default settings are tracing enabled at level 0. The level should be increased to a desired level. Also, the output can be changed from stdout to a file or stderr. Finally, as the default is not to trace actual URB data, since it is a lot of trace info, if URB data should be traced the trace_urb must be changed to "true" (and uncommented).

Logging

Files are named by device. For example, logging for MSR is stored in a file named MSR.log, for MICR it is MICR.log, and so on. If a message being logged is not device specific, it is stored in a file named AllDevices.log.

The properties file for logging can be created and accessed as follows:

1. Start the POS Control Center in one of two ways:
 - a. GUI: **Programs > IBM JavaPOS > POS Control Center**
 - b. Command line: **java com.ibm.jpos.tools.sdicc.ControlCenterApp**
2. Select **File > Properties**.
3. Select the **log4jConfiguration** tab.
4. Modify applicable properties.

The location for log files is <HOME>/.ibmjpos/logging/;

where <HOME> is the fully qualified path to the user's home directory.

The root.log file will contain all the messages logged, regardless if they were logged for a specific device or for AllDevices category.

To enable, disable or change the level and or category for logging, you must change the <HOME>/.ibmjpos/config/log4jConfiguration.properties file. The following example shows how to disable logging for MSR:

```
change: log4j.logger.MSR=ALL, MSRAppender
to:     log4j.logger.MSR=FATAL, MSRAppender
```

If you want to disable logging for all the categories, change the level of logging to FATAL for the root/rootloggerCategory:

```
change: log4j.rootLogger=ALL, rootAppender
to:     log4j.rootLogger=FATAL, rootAppender
```

Details of levels and categories hierarchy are found in "Logging details" on page 34. If categorized logging for other devices is desired, add the corresponding entries for those devices to the file mentioned before in the following way:

1. First set the new category, its level and appenders. For example:

```
log4j.logger.MyLogger=ALL, MyAppender
```

The type of the appenders must be defined.
2. Next, set the appenders type. For example:

```
log4j.appender.MyAppender=org.apache.log4j.RollingFileAppender
or
log4j.appender.MyAppender=org.apache.log4j.ConsoleAppender
```
3. Set the file name for the FileAppenders. Notice that absolute paths are required in the value of this property. For example:

```
log4j.appender.MyAppender.File=/home/user/.ibmjpos/logging /MyLogFile.log
```

The file path can include a reference to the home path as follows:

```
log4j.appender.MSRAppender.File=<home>/.ibmjpos/logging/MSR.log
```

The maximum file size is set using the following:

```
log4j.appender.MSRAppender.MaxFileSize=1000
```

The length is specified in bytes.

4. Set the specific layout that each appender is going to use. For example, if `PatternLayout` is used, the `conversionPattern` determines the way in which the data will be displayed. The conversion pattern is closely related to the conversion pattern of the `printf` function in C language. A conversion pattern is composed of literal text and format control expressions called conversion specifiers. You may insert any literal text within the conversion pattern. Each conversion specifier starts with a percent sign (%) and is followed by optional format modifiers and a conversion character.

The conversion character specifies the type of data. For example; category, priority, date, thread name. The format modifiers control such things as field width, padding, left and right justification. See

<http://logging.apache.org/log4j/docs/api/org/apache/log4j/PatternLayout.html>

for the meaning of each conversion specifier.

See the following example:

```
log4j.appender.MyAppender.layout=org.apache.log4j.PatternLayout
log4j.appender.MyAppender.layout.ConversionPattern=%d %-5p %c - %m%n
```

Logging details

The levels of logging are as follows in decreasing order of detail: ALL, DEBUG, INFO, WARN, ERROR, FATAL and OFF. The logging is categorized to assign a level to each category. If a category has a level equal to or less than the level that you are using to log, then that log entry is stored, otherwise the logEntry is ignored.

The next rule is quoted from the log4j manual (logging.apache.org/log4j/docs/manual.html)

A logging request is said to be enabled if its level is higher than or equal to the level of its Logger. Otherwise, the request is said to be disabled. A Logger without an assigned level inherits one from the hierarchy.

The Loggers are in a hierarchy, so if a specific logger does not have a level assigned, it inherits the level of its ancestor. A `rootCategory` always exists, so if you set the level of the `rootCategory` to FATAL, the logging is OFF regardless of the level of its children.

Logging output

JavaPOS drivers define settings for the log4j `rootLogger`. This causes all logging statements from JavaPOS and the application logging to be sent to the same output file, called *root.log*. The location of *root.log* file is defined by the following property:

- properties file name: `Log.properties`
- location:
 - Windows: `<pos install dir>\ibmjpos\config`
 - Linux: `/opt/ibm/javapos/etc`
- property: `com.ibm.jutil.logging.default.Log4jLogStore.LogFilePath=<home>/ibmjpos/logging`

How to disable JavaPOS defined logging

In case of JavaPOS defined log4j conflicts, you can disable JavaPOS logging by modifying the following properties:

- properties file name: `log4jConfiguration.properties`
 - location:
 - Windows: `<pos install dir>\ibmjpos\config`

- Linux: /opt/ibm/javapos/etc
- property: log4j.rootLogger=ALL, rootAppender (*comment out this property*)
- File name: Log.properties
- location:
 - Windows: <pos install dir>\ibmjpos\config
 - Linux: /opt/ibm/javapos/etc
- property: com.ibm.jutil.logging.LogStoreName=NONE (set this property to NONE as shown)

If the application has defined log4j.rootLogger property, and JavaPOS logging has been disabled, then the logging output is redirected to the defined application output.

OPOS problems

Tracing

For IBM OPOS device drivers, the following steps are used to gather trace information.

1. Using a command line prompt, type in AIPTRCCFG. The application will appear.

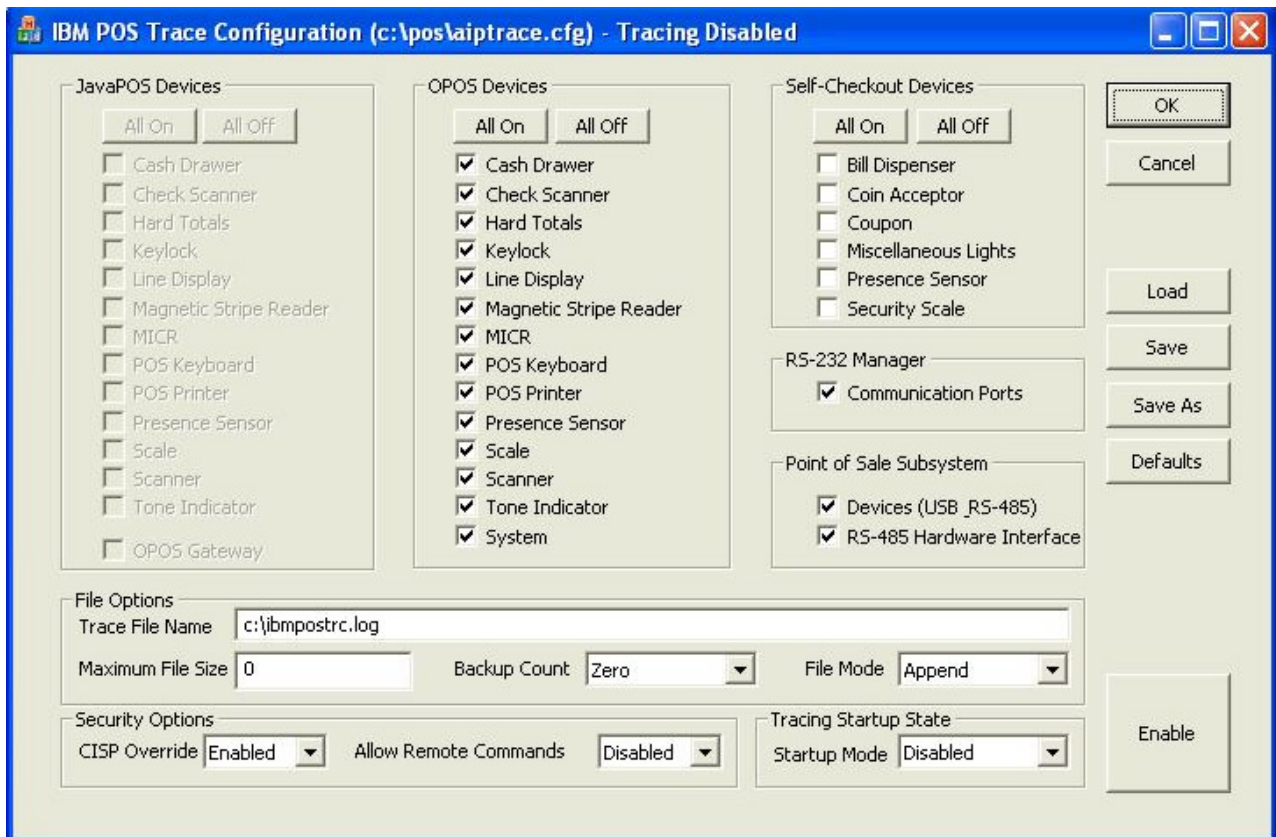

Figure 8. POS tracing facility

2. Choose items requested for tracing.

When diagnosing printer problems, it is normally recommended to enable tracing for all logical printer devices (cash drawer, check scanner, MICR, POS Printer, Tone Indicator).

When diagnosing OPOS problems remember to check Communications Ports checkbox (for EIA-232 devices) or Devices checkbox (for USB & RS4-485 devices).

The Maximum File Size is measured in bytes; 0 implies no maximum.

3. When trace configuration is complete, click **Save** and then click **Enable**.

OPOS Gateway

Trace activation

For OPOS Gateway, you can activate tracing for all devices or for particular devices.

To activate trace for all devices:

1. Go to **Control Panel -> System -> Advanced (Tab) -> Environment Variables** and add the following Environment Variables as SYSTEM Variables:
 - AIP_OPOS_TRACE=ON
 - AIP_OPOS_TRACE_ALL=ON

To activate trace for one or more particular devices:

1. Go to **Control Panel -> System -> Advanced (Tab) -> Environment Variables** and add/modify following Environment Variables as SYSTEM Variables:
 - AIP_OPOS_TRACE=OFF
 - AIP_OPOS_TRACE_ALL=OFF
2. At Windows Registry, locate:

```
HKEY_LOCAL_MACHINE\SOFTWARE\OLEforRetail\ServiceOPOS Key
```
3. Add a value of type DWORD called TraceFlags.
4. Set TraceFlags to a value of 1 up to 4.

Where value 1 relates to the highest tracing level such as errors and warnings and value 4 relates to the lowest tracing level which shows all method calls.
5. In addition, locate the device key for which the trace is desired:

```
HKEY_LOCAL_MACHINE\SOFTWARE\OLEforRetail\ServiceOPOS\[DeviceCategory]\[DeviceName] key
```

Where:

- [DeviceCategory] applies to the Device Category name. For example: POSPrinter
 - [DeviceName] applies to the specific Device name. For example: MyPOSPrinter2
6. Add a value of type DWORD called TraceFlags
 7. Set TraceFlags to a value of 1 up to 4. Where value 1 relates to the highest tracing level such as errors and warnings and value 4 relates to the lowest tracing level which shows all method calls.

Trace files location

OPOS GW Trace Files are located at POS\Log directory, the files generated are:

- Oposgw.POSService.Out
which contains OPOS GW Service related information
- Oposgw.COM[DeviceCategory].Out
which contains OPOS GW COMProxy layer tracing for a certain DeviceCategory

- Oposgw.so.[DeviceCategory].Out
which contains OPOS GW ServiceObjects layer tracing for a certain DeviceCategory

Notes:

1. When OPOS Gateway Trace has been activated, the JavaPOS Tracing Files will also be located at POS\Log and these file names will be javapos_oposgw[Number].txt
2. When using a non-administrator account which has no write access to POS\Log, the Oposgw.COM[DeviceCategory].Out files will be located in [Drive]:\Documents and Settings\[UserName]\.ibmjpos.

Where:

- [Drive] relates to the letter where Windows is running. For example: C.
[UserName] relates to the User Account Name.

Getting help

Support Web site

The IBM Retail Store Solutions Web site contains the latest version of the IBM OPOS software as well as fixes to known problems, hints, and tips for using the software. The URL for our Web site is: <http://www.ibm.com/solutions/retail/store/support>

Your first stop for help should be the IBM Retail Store Solutions *Knowledgebase*. It is filled with the latest tips, hints and FAQs on our product lines. It is indexed and you can search on keywords such as **OPOS and printer** to find all related articles. At the bottom of the home page you will see a link to the Knowledgebase. The address is:

<http://www2.clearlake.ibm.com/store/support/html/knowledgebase.html>

Your next stop is to check for updated driver modules. Go to the registration page for the POS drivers you are using and look for the **module update** link. Click it and all changed modules, along with information about where to use them will be listed.

If you have general pre-sale or usage questions about our drivers not answered in the publications and are an IBM Business Partner, you can submit questions to the Partnerline team from our Knowledgebase Web page.

Chapter 5. Common settings and configuration options

This chapter describes implementation and support of UPOS. For each device type, there is a list of the specific devices that are supported and a list of the UPOS properties, methods, and events that are supported. For some devices, there is additional information specific to the JavaPOS and OPOS implementations including additional configuration options as well as DirectIO documentation.

The following properties are used only in OPOS:

- BinaryConversion
- OpenResult
- ResultCode
- ResultCodeExtended

Some properties have different names in OPOS. Table 21 lists the UnifiedPOS and OPOS names for these properties.

Table 21. Alternate property names used in OPOS

UnifiedPOS name	OPOS name
DeviceControlDescription	ControlObjectDescription
DeviceControlVersion	ControlObjectVersion
DeviceServiceDescription	ServiceObjectDescription
DeviceServiceVersion	ServiceObjectVersion
PhysicalDeviceDescription	DeviceDescription
PhysicalDeviceName	DeviceName
claim	ClaimDevice
release	ReleaseDevice

JavaPOS

Configuration options

baudRate

```
<prop name="baudRate" type="String" value="9600"/>
```

Determines the baud rate to use for the EIA-232 device. The value to use depends on the device. Some hardware devices cannot have their flow control value changed.

Refer to the hardware manual for the device to determine the correct value.

deviceBus

```
<prop name="deviceBus" type="String" value="RS232"/>
```

The deviceBus property determines how the device is physically attached to the POS terminal.

It can be one of the following values:

- Proprietary

- RS232
- RS485
- HID

flowControl

```
<prop name="flowControl" type="String" value="Xon/Xoff"/>
```

Determines the flow control used for EIA-232 devices. The value to use depends on the device. Some hardware devices cannot have their flow control value changed.

It can be one of the following values:

- Xon/Xoff
- None
- Hardware

impClass

```
<prop name="impClass" type="String" value="com.ibm.jpos.services.sdi.ToneIndicatorServiceImp"/>
```

The impClass specifies the name of the Java class that is responsible for implementing the UPOS specification for a particular device. It uses the Java class specified in the abstractionClass entry to communicate with the physical hardware.

The abstractionClass and impClass are a matched pair of configuration entries that together determine how an application using JavaPOS communicates with a specific device.

Current XML entries should have an impClass entry that contains one of the following values:

```
com.ibm.jpos.services.sdi.CashDrawerServiceImp
com.ibm.jpos.services.sdi.CashDrawer4610ServiceImp
com.ibm.jpos.services.sdi.CheckScannerServiceImp
com.ibm.jpos.services.sdi.FiscalPrinterServiceImp
com.ibm.jpos.services.sdi.HardTotalsServiceImp
com.ibm.jpos.services.poss.IBMHardTotalsImp
com.ibm.jpos.services.sdi.KeylockServiceImp
com.ibm.jpos.services.sdi.LineDisplayAPAServiceImp
com.ibm.jpos.services.sdi.LineDisplayVFDSERVICEImp
com.ibm.jpos.services.poss.LineDisplayAnop0Imp
com.ibm.jpos.services.poss.LineDisplayShopperImp
com.ibm.jpos.services.sdi.LineDisplayServiceImp
com.ibm.jpos.services.sdi.MICRServiceImp
com.ibm.jpos.services.poss.IBMMICRImp
com.ibm.jpos.services.sdi.MotionSensorServiceImp
com.ibm.jpos.services.sdi.MSRServiceImp
com.ibm.jpos.services.sdi.POSKeyboardServiceImp
com.ibm.jpos.services.sdi.IBM4610PrinterServiceImp
com.ibm.jpos.services.sdi.IBMSureonePrinterServiceImp
com.ibm.jpos.services.sdi.IBM4689PrinterServiceImp
com.ibm.jpos.services.poss.POSPrinter4Imp
com.ibm.jpos.services.sdi.ScaleServiceImp
com.ibm.jpos.services.sdi.ScannerServiceImp
com.ibm.jpos.services.sdi.ToneIndicatorServiceImp
```

You should not need to manually change this value.

portName

```
<prop name="portName" type="String" value="COM1"/>
```

Determines the port to use for EIA-232 devices.

Valid port names are determined by how many ports the POS terminal physically has.

Port names are the same format on Windows and Linux (COMx).

ProprietaryBusSubType

```
<prop name="com.ibm.posj.bus.ProprietaryBusSubType" type="String" value="Embedded"/>
```

For system devices (those have a deviceBus value of Proprietary), this determines whether the device is connected via PS/2 (keylock, tone indicator, MSR, POS Keyboard) or is physically built into the terminal (hard totals, motion sensor, keylock, cash drawer).

It can be one of the following values:

- Embedded
- PosKbd

sioDeviceNumber

```
<prop name="com.ibm.posj.bus.rs485.sioDeviceNumber" type="String" value="0x54"/>
```

A unique number that indicates the type of device. For valid values, refer to the *IBM Point of Sale Subsystem Programming Reference and User's Guide*.

Since RS-485 devices are detected automatically by the driver you should not need to manually change this value.

sioPortNumber

```
<prop name="com.ibm.posj.bus.rs485.sioPortNumber" type="String" value="0x11"/>
```

Determines the logical port number for RS-485 peripheral devices.

Valid values are:

- 0x11 - RS485 devices attached to the primary controller
- 0x22 - RS485 devices attached to the secondary controller

Since RS-485 devices are detected automatically by the driver you should not need to manually change this value.

sioSlotNumber

```
<prop name="com.ibm.posj.bus.rs485.sioSlotNumber" type="String" value="0x01"/>
```

Determines the logical slot number for RS-485 peripheral devices.

- 1 - RS-485 devices attached via the ISA or PCI bus
- 5 - RS-485 devices attached via the micro-channel bus

Since RS-485 devices are detected automatically by the driver you should not need to manually change this value.

USB firmware update files for JPOS

All IBM USB peripheral devices contain firmware to control the USB bus, in addition to the firmware that controls the device itself.

Depending on the device, the firmware for the USB can be packaged in a number of different ways:

1. Separate from the main device firmware (IE, 4610 Tx3/4/5/6/7)

2. Contains the USB bus firmware embedded in the main device firmware (IE 4610 Tx8/9)
3. Contains the main device firmware embedded with the USB bus firmware (IE, USB 2x20 display)

The JavaPOS driver will automatically update the firmware, if necessary, when the terminal first boots. It will not update the firmware if a device is hot-plugged while the terminal is running.

New firmware files may be downloaded from the IBM website and placed into the relevant folder on the terminal.

Windows: \pos\ibmjpos\res\flash\usb

Linux: /opt/ibm/javapos/flash/usb

EIA-232 PosPrinter device detection

When you are using a logical device on an EIA-232 attached printer, you must ensure that the jpos.xml file contains an entry for the device you want to use (for example, MICR) and an entry for the printer itself.

If your jpos.xml file does not contain an entry for the printer then you will be unable to use your logical device.

OPOS

Configuration options

OPOS configuration settings are stored in the registry per the Unified POS specification.

The settings in Table 22 apply to PS/2, RS485 and USB devices. Used in combination they will uniquely identify a peripheral device.

Because the devices are detected automatically by the driver you should not need to change any of the values.

The settings in Table 23 on page 51 apply to EIA-232 devices. Devices attached via EIA-232 cannot be automatically detected by the driver and will have to be configured manually.

Table 22. Service Object settings for non EIA-232 devices

Keyword	Type	Description	OPOS Gateway Support
slotNumber	String	Logical slot (0-8) to which the device is connected. Typical values are: 0 - System devices 1 - RS485 devices attached via the ISA or PCI bus 5 - RS485 devices attached via the micro-channel bus 8 - USB devices	No
portNumber	String	Logical port to which the device is connected. Typical values are: 0 - System devices X'11' - RS485 devices attached to the primary controller X'22' - RS485 devices attached to the secondary controller	No

Table 22. Service Object settings for non EIA-232 devices (continued)

Keyword	Type	Description	OPOS Gateway Support
deviceNumber	String	Unique number that indicates the type of device. For valid values, refer to <i>IBM Point of Sale Subsystem Programming Reference and User's Guide</i> .	No

Table 23. Service Object settings for EIA-232 devices

Keyword	Type	Description	OPOS Gateway Support
ComPort	String	Serial port that the device is attached to. Valid values are determined by the operating system.	Yes
BaudRate	String	Baud rate used for serial port. Valid values are determined by the specific peripheral device. Typical values are 9600, 19200 and 115200.	Yes
ControlFlow	String	Control flow for serial device. Valid values are DTR/DSR or XON/XOFF.	Yes

USB firmware update files for OPOS

All IBM USB peripheral devices contain firmware to control the USB bus, in addition to the firmware that controls the device itself.

Depending on the device, the firmware for the USB can be packaged in a number of different ways:

1. Separate from the main device firmware (IE, 4610 Tx3/4/5/6/7)
2. Contains the USB bus firmware embedded in the main device firmware (IE 4610 Tx8/9)
3. Contains the main device firmware embedded with the USB bus firmware (IE, USB 2x20 display)

The OPOS driver will automatically update the firmware, if necessary, when the terminal first boots. It will not update the firmware if a device is hot-plugged while the terminal is running.

New firmware files may be downloaded from the IBM website and placed into the \POS\USB folder on the terminal. The status of the USB firmware can be checked by viewing \POS\LOG\AIPFLASH.LOG

Modifying device behavior (USB, RS-485 and PS/2 devices)

For USB, RS-485, and PS/2 devices, additional device configuration can be done through the resource file, `aipsys.res`. Use of this file is documented in *Point of Sale Subsystem: Programming Reference and User's Guide (SC30-3560)*. For general information about using `aipsys.res`, see Chapter 3, *Customizing the IBM Point Of Sale Subsystem*. For device-specific resources that can be specified in `aipsys.res`, see Chapter 21, *Resource Sets*.

Notes:

1. Resource names and values are case sensitive.
2. Resource names appear in the documentation as PosNxxxXxxx. However, when specifying resources names in the `aipsys.res` file, the PosN prefix must be removed.

3. Defined macros for resource values are documented as PosXXXX_XXXX. However, when using these macros in the aipsys.res file, the Pos prefix must be removed.
4. Changes to the aipsys.res file will not take effect until the system is rebooted.
5. On Windows, aipsys.res is located in the default install directory, C:\POS.
6. On Linux systems, aipsys.res is located in the /etc directory.

Ignoring non-IBM USB devices

In some situations it might be necessary to configure the OPOS driver to ignore USB devices manufactured by other vendors.

This can be accomplished by creating a new value in the registry using the information below.

Table 24. Registry value information

Location	HKLM\Software\IBM\Point of Sale Subsystem
Name	DisableNonIBMUSB
Type	String
Value	TRUE

OPOS Gateway

The OPOS Gateway provides an OPOS interface to the IBM JavaPOS drivers. The OPOS Gateway provides all the function provided by JavaPOS but in the case of DirectIO, special handling is required when converting the OPOS DirectIO BSTR * parameter to the JavaPOS DirectIO object parameter. For specific DirectIO methods that require object parameters, the string data must be passed in as an XML representation of the JavaPOS object. The gateway converts the XML string to a JavaPOS object during the DirectIO call. You should use the provided XML Converter utility to create and parse the XML data.

Supported DirectIO calls

Table 25 and Table 26 on page 53 lists the DirectIO calls that are supported in OPOS Gateway.

Table 25. Printer DirectIO calls supported in OPOS Gateway

Printer Commands	Data[]/ LONG *	Object/ BSTR *	Comments
DOWNLOAD_PROP_FONT_ID - use Objects	N/A	DirectIOFontInfo	Download Proportional Font; the object holds data describing the font.
DOWNLOAD_NON_PROP_FONT_ID - use Objects	N/A	DirectIOFontInfo	Download Non-proportional Font; the object holds data describing the font.
GET_FONT_INFO_ID	N/A	PrintGetDirectIOFontInfo	Get Font Information. Note: In OPOS Gateway, set the DirectIO Command parameter to 23.
DOWNLOAD_DBCS_FONT_ID	N/A	DBCSFontInfo	Download DBCS Font to the printer; the object contains font information.

Table 26. Fiscal Printer DirectIO calls supported in OPOS Gateway

Fiscal Printer Commands	Data[]/ LONG *	Object/ BSTR *	Comments
FISCAL_WRITE - uses a byte array	FISCAL_WRITE	byte[]	Write to Fiscal Printer
FISCAL_READ - uses a byte array	FISCAL_READ	byte[]	Read from Fiscal Printer
FISCAL_INFORMATION - uses a Object	FISCAL_INFORMATION	Object FiscalInformation	Retrieve Fiscal information

Provided DirectIO XML Converter access and calls

A COM interface called IDirectIOXMLConverter has been created to facilitate support for DirectIO calls requiring BSTR * to Java Object conversion. To use it, follow these steps:

1. Install the UPOS package containing the OPOSSDI Gateway components.
2. Add a reference for IDirectIOXMLConverter to your project.

The following list describes all of the methods provided by the DirectIOXMLConverter COM interface:

- Function GetByteArray(XML As String, byteArray() As Byte) As String
 - converts an XML string containing an encoded byte array into an array of bytes
 - returns Success when it works or a string with the reason if it fails
 - used to do Fiscal_Read and Fiscal_Write DirectIO calls
- Function GetByteArrayXML(byteArray() As Byte) As String
 - converts an array of bytes into an XML string that contains the array of bytes encoded
 - used to do Fiscal_Read and Fiscal_Write DirectIO calls
 - The byte array passed must have the correct number of elements for a Fiscal_Read. The proper number of elements is passed as an argument to the event handler when a Fiscal_Data_Avail directIO event is fired. (Fiscal_Write is sent to the Fiscal Printer so the length is based on the Fiscal command.)
- Function GetDBCSFontInfo(XML As String, FileName As String) As String
 - extracts the FileName field from a DBCSFontInfo object encoded in an XML string
 - returns Success when it works or a string with the reason if it fails
 - not needed by the application but is provided for convenience
- Function GetDBCSFontInfoObject(XML As String, obj As DBCSFontInfo) As String
 - converts an XML string containing an encoded DBCSFontInfo object into a DBCSFontInfo object
 - returns Success when it works or a string with the reason if it fails
 - not needed by the application but is provided for convenience
- Function GetDBCSFontInfoXML(FileName As String) As String
 - returns an XML string containing an encoded DBCSFontInfo object or empty string if it fails
 - used to download a DBCS font to the POS Printer

- Function `GetDirectIOFontInfo(XML As String, Station As Long, FontNumber As Long, FileName As String) As String`
 - extracts the Station, FontNumber and FileName fields from a DirectIOFontInfo object encoded in an XML string
 - returns Success when it works or a string with the reason if it fails
 - not needed by the application but is provided for convenience
- Function `GetDirectIOFontInfoObject(XML As String, obj As DirectIOFontInfo) As String`
 - converts an XML string containing an encoded DirectIOFontInfo object into a DirectIOFontInfo object
 - returns Success when it works or a string with the reason if it fails
 - not needed by the application but is provided for convenience
- Function `GetDirectIOFontInfoXML(Station As Long, FontNumber As Long, FileName As String) As String`
 - returns an XML string containing an encoded DirectIOFontInfo object or empty string if it fails
 - used to download a Proportional or Non-Proportional font to the POS Printer
- Function `GetFiscalInformation(XML As String, FiscalCountry As Long, FiscalPowerInterrupted As Boolean, FiscalVersion As Long) As String`
 - extracts the FiscalCountry, FiscalPowerInterrupted and FiscalVersion fields from a FiscalInformation object encoded in an XML string
 - returns Success when it works or a string with the reason if it fails
 - used to get the FiscalCountry, FiscalPowerInterrupted, and FiscalVersion data from the Fiscal Printer (GetFiscalInformationObject can also be used)
- Function `GetFiscalInformationObject(XML As String, obj As FiscalInformation) As String`
 - converts an XML string containing an encoded FiscalInformation object into a FiscalInformation object
 - returns Success when it works or a string with the reason if it fails
 - used to get the FiscalCountry, FiscalPowerInterrupted, and FiscalVersion data from the Fiscal Printer using the FiscalInformation object (GetFiscalInformation can also be used)
- Function `GetFiscalInformationXML(FiscalCountry As Long, FiscalPowerInterrupted As Boolean, FiscalVersion As Long) As String`
 - returns an XML string containing an encoded FiscalInformation object or empty string if it fails
 - not needed by the application but is provided for convenience
- Function `GetPrintGetDirectIOFontInfo(XML As String, receiptCharacterSet() As Long, slipCharacterSet() As Long, dBCSCodePage As Byte, matrixImpactCodePage As Byte, matrixUDThermalCodePage1() As Byte, matrixUDThermalCodePage2() As Byte, matrixUDThermalCodePage3() As Byte, matrixUDThermalCodePage4() As Byte, matrixUDImpactCodePage1() As Byte, matrixUDImpactCodePage2() As Byte, dBCSAddressVector1 As Long, dBCSAddressVector2 As Long, dBCSAddressVector3 As Long) As String`
 - extracts the all of the fields from a PrintGetDirectIOFontInfo object encoded in an XML string
 - returns Success when it works or a string with the reason if it fails
 - used to get the Font Info data from the Fiscal Printer (GetPrintGetDirectIOFontInfoObject can also be used)

- Function `GetPrintGetDirectIOFontInfoObject(XML As String, obj As PrintGetDirectIOFontInfo) As String`
 - converts an XML string containing an encoded `PrintGetDirectIOFontInfo` object into a `PrintGetDirectIOFontInfo` object
 - returns `Success` when it works or a string with the reason if it fails
 - used to get the Font Info data from the Fiscal Printer (`GetPrintGetDirectIOFontInfo` can also be used)
- Function `GetPrintGetDirectIOFontInfoXML(receiptCharacterSet() As Long, slipCharacterSet() As Long, dBCSCodePage As Byte, matrixImpactCodePage As Byte, matrixUDThermalCodePage1() As Byte, matrixUDThermalCodePage2() As Byte, matrixUDThermalCodePage3() As Byte, matrixUDThermalCodePage4() As Byte, matrixUDImpactCodePage1() As Byte, matrixUDImpactCodePage2() As Byte, dBCSAddressVector1 As Long, dBCSAddressVector2 As Long, dBCSAddressVector3 As Long) As String`
 - returns an XML string containing an encoded `PrintGetDirectIOFontInfo` object or empty string if it fails
 - not needed by the application but is provided for convenience

The public classes and the public data members of each of the COM objects in `DirectIOXMLConverter` are

- `DBCSFontInfo`
 - `filename` as String
- `DirectIOFontInfo`
 - `Station` as Long
 - `FontNumber` as Long
 - `FileName` as String
 - `Len` as Long
- `FiscalInformation`
 - `FiscalCountry` as Long
 - `FiscalPowerInterrupted` as Boolean
 - `FiscalVersion` as Long
- `PrintGetDirectIOFontInfo`
 - `receiptCharacterSet(0 to 3)` as Long
 - Note:** array of Longs
 - `slipCharacterSet(0 to 1)` as Long
 - `dBCSCodePage` as Byte
 - `matrixImpactCodePage` as Byte
 - `matrixUDThermalCodePage1(0 to 1)` as Byte
 - `matrixUDThermalCodePage2(0 to 1)` as Byte

JavaPOS configuration

signalsReversed

```
<Prop name="signalsReversed" type="Boolean" value="false"/>
```

Reverses the wiring polarity of the cash drawer when the cash drawer is attached to a 4610 printer. Some OEM drawers are wired in reverse to the standard IBM drawer, so will require this value to be changed to TRUE.

Valid values are TRUE and FALSE. Default is FALSE.

deviceNumber

```
<prop name="com.ibm.posj.bus.deviceNumber" type="String" value="0"/>
```

Used to properly identify the cash drawers present. The values 0 - 3 are reserved for the cash drawer attached to the system unit. For example, 0 means the cash drawer attached to port 3A on the system, and 1 means the cash drawer attached to port 3B on the system. Cash drawers attached to RS-485 and USB 4610 printers will have a deviceNumber starting with 4.

Additional JavaPOS information

4610 printer-attached cash drawer (EIA-232, RS-485 and USB)

JavaPOS supports regular IBM cash drawers and OEM cash drawers attached to the IBM 4610 Printer.

For an IBM cash drawer, set the signalsReversed property to *false*. For example:

```
<Prop name="signalsReversed" type="Boolean" value="false"/>
```

For some OEM cash drawers, the signalsReversed property will need to be set to *true*. For example:

```
<Prop name="signalsReversed" type="Boolean" value="true"/>
```

Note: In the jpos.xml.<os>Sample, the signalsReversed property is in the JposEntries with the following logicalName values:

- "CashDrawer RS232 4610-A"
- "CashDrawer RS232 4610-B"
- "CashDrawer RS485 4610-A"
- "CashDrawer RS485 4610-B"
- "CashDarwer USB 4610-A"
- "CashDrawer USB 4610-B"

Loading the Cash Drawer device driver for Linux

To load the correct Cash Drawer driver in Linux, the /opt/ibm/javapos/etc/machine.conf file needs to be modified. The format of machine.conf is:

```
<keyword> <number of entries>  
<machine type><model number>
```

"<keyword>" represents the device for which a driver is needed and "<number of entries>" indicates the number of "<machine type><model number>" pairs that

follow. If the system on which JavaPOS is running matches one of the specified "<machine type><model number>" pairs, the device driver for that "<machine type><model number>" will be loaded.

For the cash drawer, machine.conf might have the following entries:

```
CD 1
4810321
```

OPOS configuration

Table 33. Service Object settings for cash drawer

Keyword	Type	Description	OPOS Gateway Support
CashDrawerNumber	String	Cash drawer number. Valid values are 1 (default) and 2.	No
PulseWidthOnTime	String	Pulse on time (0-512) for firing the cash drawer. The default value is 100. Note: This setting cannot be modified with the Configuration tool.	No
PulseWidthOffTime	String	Pulse off time (0-512) for firing the cash drawer. The default value is 100. Note: This setting cannot be modified with the Configuration tool.	No
SignalsReversed	String	Reverses the wiring polarity of the cash drawer. Valid values are: True Reverse polarity (other value) Standard polarity (default)	No

Additional OPOS information

OEM Cash drawer support

Some OEM cash drawers are wired the opposite of IBM cash drawers. Use the Signals Reversed check box in the configuration utility to indicate that your cash drawer is one of these OEM cash drawers. OPOS support for the USB SureMark printer assumes the IBM cash drawer wiring. The OPOS support for EIA-232 SureMark printers prior to release 1.7.1 assumes the OEM wiring. Starting with release 1.7.1 OPOS support for the EIA-232 SureMark Printer cash drawer has been changed to match the behavior of the USB Printer cash drawer. Therefore, it may be necessary to reconfigure your EIA-232 SureMark printer cash drawer modifying the Signals Reversed check box.

Chapter 7. Check scanner

Check scanner supported devices

Table 34. Check scanner supported devices

storeImage	All	All

Table 39. Check scanner events

Event	JavaPOS and OPOS Gateway	OPOS
DataEvent	All	Supported
DirectIOEvent	All	Supported
ErrorEvent	All	Supported
StatusUpdateEvent	All	Supported

JavaPOS DirectIO calls

The following directIO commands are supported for the check scanner device. The syntax is as follows:

```
directIO ( command: int32, inout data: int32 , inout obj: object):
void { raises-exception }
```

To access DirectIO constants: import com.ibm.jpos.services.DirectIO.

CHK_DIO_SCANNER_CALIBRATION_CMD

Calibrate the check scanner in IBM 4610 Printer Models T18 and T19.

Table 40. CHK_DIO_SCANNER_CALIBRATION_CMD information

Parameter	Value
command	DirectIO.CHK_DIO_SCANNER_CALIBRATION_CMD
data	Any value. A null value is accepted.
obj	Any value. A null value is accepted.

Remarks

A white document must be inserted in the DI station. The printer scans the document two or three times to update the printer's calibration data. Then directIO is paired with the beginInsertion method for controlling check insertion.

Errors A UposException may be thrown when this method is invoked. A possible value of the exception ErrorCode property is listed in the following table.

Table 41. *UposException* information

Value	Possible cause
E_ILLEGAL	The device is not in check insertion mode.

CHK_DIO_PRINT_SCANNED_IMAGE_CMD

Prints the specified scanned image to the thermal station.

Table 42. *CHK_DIO_PRINT_SCANNED_IMAGE_CMD* information

Parameter	Value
command	DirectIO.CHK_DIO_PRINT_SCANNED_IMAGE_CMD
data[0]	DirectIO.CHK_DIO_MEMORY_IMG prints the most recently scanned image. DirectIO.CHK_LOCATE_BY_FILEINDEX prints the image file using the FileIndex property.
data[1]	The numeric identifier for the defined crop area. If the values is CHK_CROP_AREA_ENTIRE__IMAGE then the entire area of the scanned image is printed.
data[2]	Percentage to scale image in x direction. (A value of 100 or 0 results in no scaling.)
data[3]	Percentage to scale image in y direction. (A value of 100 or 0 results in no scaling.)
data[4]	DirectIO.CHK_DIO_ROTATE_90 rotates the image counter clockwise 90%. DirectIO.CHK_DIO_NO_ROTATE does not rotate the image.
obj	Any value. A null value is accepted.

Remarks

Printing stored images causes the printer to pause momentarily while the printer formats the data to be printed. This time varies depending on the amount of formatting required.

If cx and cy defined at the crop area extend the printer area further than the boundaries of the image, the values are truncated to the image boundary. If the size of the print area is greater than the thermal print head is capable of printing (either from image size or scaling), the image is truncated to the width of the print head. Currently, the only scaling options are 100% (no scaling) and 200% (double). Printing resident images in the work area memory with CheckScannerConst.CHK_IF_JPEG format is not supported.

Errors A UposException may be thrown when this method is invoked. Some possible values of the exception ErrorCode properties are:

Table 43. *UposException* information

Value	Possible cause
E_ILLEGAL	<ul style="list-style-type: none"> Some parameter values are not correct. The image data file could not be located due to an invalid value stored in either the FileIndex or ImageTagData properties that was being used with data[0] value. Resident images in the work area memory with CheckScannerConst.CHK_IF_JPEG format.

CHK_DIO_SET_CHECK_SIDE_CMD

Set the side of the check to scan. This command assumes that the check is inserted face down.

Table 44. CHK_DIO_SET_CHECK_SIDE_CMD information

Parameter	Value
Command	DirectIO.CHK_DIO_SET_CHECK_SIDE_CMD
Data[0]	<ul style="list-style-type: none"> DirectIO.CHK_DIO_SIDE1 selects the front of the check. DirectIO.CHK_DIO_SIDE2 selects the back of the check. DirectIO.CHK_DIO_OPPOSITE selects the opposite face of the check from the current side selected.
Obj	Any value. A null value is accepted.

Remarks

This allows a check scan to occur on both sides of the document. If a document is not inserted, an error is returned. If data[0] is different from the value returned by DirectIO.CHK_DIO_GET_CHECK_SIDE_CMD or data[0] is DirectIO.CHK_DIO_SIDE_OPPOSITE, the side of the document is changed and the document is fed. If data[0] is the same as the value returned by DirectIO.CHK_DIO_GET_CHECK_SIDE_CMD, nothing occurs and the method returns.

Errors A UpoException may be thrown when this method is invoked. Some possible values of the exception ErrorCode properties are:

Table 45. ErrorCode property for CHK_DIO_SET_CHECK_SIDE_CMD information

Value	Possible cause
E_ILLEGAL	Some parameter values are not correct.

CHK_DIO_GET_CHECK_SIDE_CMD

Return the current setting for the side of the check to be scanned. This command assumes the check is inserted face down. After calling this DirectIO, data[0] is populated with one of the values in the following table:

Table 46. CHK_DIO_GET_CHECK_SIDE_CMD information

Parameter	Value
Command	DirectIO.CHK_DIO_GET_CHECK_SIDE_CMD
Data[]	<ul style="list-style-type: none"> DirectIO.CHK_DIO_SIDE_UNKNOWN (Indicates no check is inserted.) DirectIO.CHK_DIO_SIDE1 (Indicates the front of the check is selected.) DirectIO.CHK_DIO_SIDE2 (Indicates the back of the check is selected.)
Obj	Any value. A null value is accepted.

Remarks

This property value can be changed using the DirectIO.CHK_DIO_SET_CHECK_SIDE_CMD method. When a check is inserted the value returned is DirectIO.CHK_DIO_SIDE1.

Errors A UpoException may be thrown when this method is invoked. A possible

value of the exception `ErrorCode` properties is described in the following table:

Table 47. *UposException* information

Value	Possible cause
E_ILLEGAL	Some of the parameters are not correct.

CHK_DIO_SCANNER_IMAGE_QUALITY_CMD

Check the quality of the image scanned on Model T19 printers. The check scanner automatically checks the image quality of each check scanned against a set of internal quality attributes. After calling this DirectIO, `data[0]` is populated with a value of 0 or 1.

- 0 indicates image quality is acceptable.
- 1 indicates image quality may not be acceptable.

Table 48. *CHK_DIO_SCANNER_IMAGE_QUALITY_CMD* information

Parameter	Value
Command	DirectIO.CHK_DIO_SCANNER_IMAGE_QUALITY_CMD
Data[]	An array with at least one element
Obj	Any value. A null value is accepted.

Remarks

This directIO is supported only for the 4610 T19 model.

Errors A `UposException` may be thrown when this method is invoked. A possible value of the exception `ErrorCode` property is listed in the following table.

Table 49. *UposException* information

Value	Possible cause
E_ILLEGAL	Some of the parameter values are not correct.

Additional OPOS information

Multiple devices

A POS machine can not have both RS-485 and USB checkscanners operating at the same time.

Chapter 8. Fiscal printer

Fiscal printer operations are supported through `directIO()` calls. The `directIO()` functions do not perform any verification of commands sent to the fiscal printer or of data returned from the printer. The functions provide a simple pass-through operation, allowing an application to access the fiscal functions on the printer.

Fiscal printer supported devices

USB Fiscal printers are not supported on Linux.

Table 50. Fiscal printer supported devices

Device	Connectivity
1. IBM SureMark Printer Fiscal Printer Models Kx3	EIA-232

Example:

```

public void readFiscalInformation()
{
    FiscalInformation fi=new FiscalInformation();
    int[] cmd = { DirectIO.FISCAL_INFORMATION};
    try
    {
        //sends the command
        printer.directIO(DirectIO.FISCAL_ID, cmd, fi);
        //shows fiscal information
        System.out.println("Fiscal Country: "+fi.getCountry());
        System.out.println("Fiscal Power Interrupted: "+
            fi.getFiscalPowerInterrupted());
        System.out.println("Fiscal Version: "+fi.getVersion());
    }
    catch (JposException e1)
    {
        //handle the exception;
    }
}

```

For the FiscalInformation object,

- `getCountry()` returns the Country Code value that is specified in the Fiscal Printer Hardware Supplements.
- `getVersion()` returns the microcode version (EC level).
- `getFiscalPowerInterrupted()` returns `true` if the printer was turned Off in the middle of a command; otherwise, it returns `false`. (For more information refer to the Fiscal Printer Hardware Supplements available on the Web at www.ibm.com/solutions/retail/store.)

FISCAL_READ subcommand

Read data from the fiscal device. This subcommand should be issued after receiving a FISCAL_DATA_AVAIL directIOEvent from the fiscal device.

Table 57. Parameters for FISCAL_READ subcommand

Parameter	Value
int command	com.ibm.jpos.services.DirectIO.FISCAL_ID
int [] data	com.ibm.jpos.services.DirectIO.FISCAL_READ
Object	A byte [] to be filled with data.

Example:

```

public void directIOOccurred(DirectIOEvent arg0)
{
    switch(arg0.getEventNumber())
    {
        case DirectIO.FISCAL_DATA_AVAIL:
            System.out.println("Fiscal data available");
            //as fiscal data is available, we do the reading.
            int len=((Integer) (arg0.getObject())) .intValue();
            int[] cmd = { DirectIO.FISCAL_READ};

```

```
byte [] buf=new byte[len];
try
{
    printer.directIO(DirectIO.FISCAL_ID, cmd, buf);
    //here we can do something with the
    //data in buf (data that we have just read).
    System.out.println("Fiscal Read: "+buf);
}
catch (JposException e1)
{
    //handle the exception;
}
break;
default:
    //in this example we do nothing.
    break;
}
}
```

If a FISCAL_DATA_AVAIL event is received and the application has not read the previous fiscal data, the old data is replaced by the new incoming data. The next FISCAL_READ command reads the new data.

FISCAL_WRITE subcommand

Write data to the fiscal device.

Table 58. Parameters for FISCAL_WRITE subcommand

Parameter	Value
int command	DirectIO.FISCAL_ID
int [] data	DirectIO.FISCAL_WRITE
Object	A byte [] with the data to send. The byte [] (object parameter) must contain the exact data to send. This data is a Fiscal Command without the prefix {X'1B',X'66'}.

Example:

```
public void directIOOccurred(DirectIOEvent arg0)
{
    //command that prints a memory dump.
    Byte [] obj={ 0xFF, 0x10,
        '0','0','0','0','0','0',
        '0','0','0','0','0','F'};
    int[] cmd = { DirectIO.FISCAL_WRITE };
    try
    {
        printer.directIO(DirectIO.FISCAL_ID, cmd, obj);
    }
    catch (JposException e1)
    {
        //handle the exception;
    }
}
```

DirectIO is a synchronous method and returns successfully when the data is written to the device; however, command execution is not complete until a FISCAL_STATUS or FISCAL_ERROR event is received. If another command is submitted before the reception of these events, the second command is ignored. This means that there is no buffering of FISCAL_WRITE subcommands.

FISCAL_Notify subcommand

Set fiscal notification On or Off. If fiscal notification is On, every fiscal command returns a status event to the application.

Table 59. Parameters for FISCAL_NOTIFY subcommand

Parameter	Value
int command	DirectIO.FISCAL_ID
int [] data	DirectIO.FISCAL_NOTIFY
Object	An Integer object with one of the following values: DirectIO.FISCAL_NOTIFY_ON or DirectIO.FISCAL_NOTIFY_OFF

Example:

```
public void turnOnNotify()
{
    //here we will turn on notify
    int[] cmd = { DirectIO.FISCAL_NOTIFY};
    Integer fiscalNotify=new Integer(DirectIO.FISCAL_NOTIFY_ON);
    try
    {
        printer.directIO(DirectIO.FISCAL_ID, cmd, fiscalNotify);
    }
    catch (JposException e1)
    {
        //handle the exception
    }
}
```

FISCAL_ERROR DirectIOEvent

Indicates that a fiscal error has occurred. The DirectIOEvent parameters are shown in Table 60.

Table 60. Parameters for the FISCAL_ERROR event

Parameter	Value
int Event Number	DirectIO.FISCAL_ERROR
int Data	Cause of the fiscal error event (Fiscal Printer Command Return Code).
Object	Integer object that indicates the error codes as in the POS Subsystem (see Table 61). The Integer value is the result of an OR operation of the current error codes (printer status).

Table 61. Error codes for FISCAL_ERROR event

Error code	Value
PosSTATUS_COVER_OPEN	X'0001'
PosSTATUS_TRANSPORT_ERROR	X'0002'
PosSTATUS_SJ_PAPER_ERROR	X'0004'
PosSTATUS_DOCUMENT_AT_FRONT	X'0008'
PosSTATUS_DOCUMENT_AT_TOP	X'0010'
PosSTATUS_DOCUMENT_READY	X'0020'
PosSTATUS_HEAD_PARKED	X'0040'
PosSTATUS_INSERTED_FORWARD	X'0080'
PosSTATUS_ERROR_PENDING	X'0100'
PosSTATUS_DI_FRONT_LOAD_ERROR	X'0200'
PosSTATUS_DI_TOP_LOAD_ERROR	X'0400'
PosSTATUS_PRINTER_ONLINE	X'1000'
PosSTATUS_MICR_INSTALLED	X'2000'
PosSTATUS_CR_PAPER_LOW	X'4000'
PosSTATUS_SJ_PAPER_LOW	X'8000'

Example:

```
public void directIOOccurred(DirectIOEvent arg0)
{
    switch(arg0.getEventNumber())
    {
        case DirectIO.FISCAL_ERROR:
            System.out.println("Fiscal Error");
            System.out.println("mp1: "+arg0.getData());
            System.out.println("mp2: "+(Integer) (arg0.getObject()) .intValue());
            break;
        default:
            //in this example we do nothing.
            break;
    }
}
```

FISCAL_STATUS DirectIOEvent

Indicates that the last fiscal command completed successfully. Fiscal notification must be On to receive these events. The DirectIOEvent parameters are shown in Table 62.

Table 62. Parameters for the FISCAL_STATUS event

Parameter	Value
int Event Number	DirectIO.FISCAL_STATUS
int Data	Always 0
Object	Integer object that indicates the last command executed. For example for the command {X'FF', X'10', '0', '0', '0', '0', '0', '0', '0', '0', 'F'}, the object returns the value X'FF' (the first byte indicating the command.) See the Fiscal Printer Hardware Supplements available on the Web at www.ibm.com/solutions/retail/store for more information.

Example:

```
public void directIOOccurred(DirectIOEvent arg0)
{
    switch(arg0.getEventNumber())
    {
        case DirectIO.FISCAL_STATUS:
            System.out.println("Fiscal Status");
            System.out.println("Last Command: "+
                ( (Integer) (arg0.getObject()) ).intValue());
            break;
        default:
            //in this example we do nothing.
            break;
    }
}
```

FISCAL_DATA_AVAIL DirectIOEvent

Indicates that data is available to be read from the fiscal device. The DirectIOEvent parameters are shown in Table 63.

Table 63. Parameters for the FISCAL_DATA_AVAIL event

Parameter	Value
int command	DirectIO.FISCAL_DATA_AVAIL
int Data	Always 0
Object	Integer object that indicates the size in bytes of the data to be read.

Example:

```
public void directIOOccurred(DirectIOEvent arg0)
{
    switch(arg0.getEventNumber())
    {
        case DirectIO.FISCAL_DATA_AVAIL:
            System.out.println("Fiscal Data Available");
            System.out.println("Length to read: "+
                ( (Integer) (arg0.getObject()) ).intValue());
            break;
        default:
            //in this example we do nothing.
            break;
    }
}
```

FISCAL_RAW_STATUS event

Indicates status has been received. The directIO parameters are shown in Table 64.

Table 64. Parameters for the FISCAL_RAW_STATUS event

Parameter	Value
int command	DirectIO.FISCAL_RAW_STATUS
int Data	Always 0
Object	Byte [] object containing the raw status data

The object parameter is filled with bytes reported by the Fiscal Printer Device. The processing of these bytes must be done according to the Fiscal Printer Hardware Supplements available on the Web at www.ibm.com/solutions/retail/store.

Example:

```
public void directIOOccurred(DirectIOEvent arg0)
{
    switch(arg0.getEventNumber())
    {
        case DirectIO.FISCAL_RAW_STATUS:
            System.out.println("Fiscal Raw Status");
            System.out.println("Raw status: " + (byte[]) arg0.getObject());
            break;
        default:
            //in this example we do nothing.
            break;
    }
}
```

FISCAL_IPL_END_STATUS DirectIOEvent

Indicates that the IPL process is complete and that the application can start sending commands to the Fiscal Printer.

When the Fiscal Printer is reset or powered on, an initial program load (IPL) occurs. During IPL, the printer is not operational and rejects fiscal commands. The IPL process can take more than one minute in some situations.

If the application tries to write a command before it receives a FISCAL_IPL_END_STATUS, the driver ignores the command.

The directIO parameters are shown in Table 65.

Table 65. Parameters for the FISCAL_IPL_END_STATUS event

Parameter	Value
int Event Number	DirectIO.FISCAL_IPL_END_STATUS
int Data	Always 0
Object	Always null

Example:

```
public void directIOOccurred(DirectIOEvent arg0)
{
    switch(arg0.getEventNumber())
    {
        case DirectIO.FISCAL_IPL_END_STATUS:
            System.out.println("Fiscal IPL End");
            System.out.println("IPL process finished.  Printer Ready.");
            break;
        default:
            //in this example we do nothing.
            break;
    }
}
```

Four-position	19. 4685-K03	RS-485, USB
Two-position	20. Modular alphanumeric keyboard and two-position keylock	PS/2, USB
Two-position	21. Modular Compact alphanumeric keyboard and two-position keylock	PS/2, USB
Two-position	22. Modular 67 Key keyboard and two-position keylock	PS/2, USB

Two-position keylock

The keylocks for Modular ANPOS (NANPOS V2), Modular CANPOS, NANPOS,50–Key, Modular 67 Key and 133–Key POS Keyboards and 4820 display all have two positions and report them as LOCK_KP_NORM and LOCK_KP_SUPR.

Figure 9. NANPOS, 50-key POS keyboard and 133-key POS keyboard two-position keylock

Key position	Description	Key position value
1	Operator	LOCK_KP_NORM
2	Manager	LOCK_KP_SUPR LOCK_KP_LOCK (OPOS only)

Figure 10. 4820 Two-position keylock

Key position	Description	Key position value
Lock	Operator	LOCK_KP_NORM
Unlock	Manager	LOCK_KP_SUPR LOCK_KP_LOCK (OPOS only)

Three-position keylock

The keylock for the SureOne has three positions.

Figure 11. SureOne three-position keylock

Key position	Description	Key position value
Lock	Inactive	LOCK_KP_LOCK
1	Operator	LOCK_KP_NORM
2	Manager	LOCK_KP_SUPR

The keylock for the SurePOS 100 has three positions.

Figure 12. SurePOS 100 three-position keylock

Key position	Description	Key position value
1	Operator	LOCK_KP_NORM
2	Manager	LOCK_KP_SUPR
Lock	Inactive	LOCK_KP_LOCK

Four-position keylock

The keylocks for the ANKPOS, KeyboardV, Keyboard K02 Ultra VII (4685), the 50-Key with Jucc MSR keyboards, and Keyboard 4685-K03 all have four positions.

Figure 13. Four-position keylock

Key position	Description	Key position value
1	System	4
2	Inactive	LOCK_KP_LOCK
3	Operator	LOCK_KP_NORM
4	Manager	LOCK_KP_SUPR

Five-position keylock

The keylock for the IBM 4674 keyboard has five positions.

Figure 14. Five-position keylock

Key position	Description	Key position value
1	PC Mode	5
2	Inactive	LOCK_KP_LOCK
3	Operator	LOCK_KP_NORM
4	Manager	LOCK_KP_SUPR
5	System	4

Six-position keylock

The keylock for the Ultra 7 keyboard with MSR Encoder has six positions. The abstraction and implementation classes are as follows:

- `com.ibm.jpos.services.IBM6PositionKeylock`
- `com.ibm.jpos.services.poss.IBM6PositionKeylockImp`

Figure 15. Six-position keylock

Key position	Description	Key position value

JavaPOS configuration

PositionCount

```
<prop name="com.ibm.jpos.sdi.config.Keylock.PositionCount" type="String" value="4"/>
```

For some IBM keylocks, the number of keylock positions cannot be reliably determined:

- RS-485 4685-K03 - 4 positions
- RS-485 4685-K02 Keyboard with MSR Encoder - 6 positions

In these situations, use the PositionCount property to define the number of keylock positions.

Values accepted

Any value on Integer range

Device support

All

OPOS configuration

Table 79. Service Object settings for keylock

Keyword	Type	Description	OPOS Gateway Support
SecondKeyPosition	String	When present, the additional position on the Japanese ANPOS keyboard is mapped to a LOCK_KP_LOCK.	Yes

Table 79. Service Object settings for keylock (continued)

Keyword	Type	Description	OPOS Gateway Support
PositionCount	DWORD	4685-K02 only. Number of keylock positions (1-6).	Yes
PositionMapFrom	Binary	4685-K02 only. Keylock position code mapping (from).	Yes
PositionMapTo	Binary	4685-K02 only. Keylock position code mapping (to).	Yes
LetLastKeepAcquired	String	Allows the last interface to access the physical POS keyboard interface to keep the device acquired instead of passing it on to the next device that attempts to acquire it. Note: This setting is an <i>unsupported and untested</i> option used to modify Service Object behavior only in very limited cases. Use it only when directed to do so by IBM Support.	No
OnlineTimeout	String	Time in milliseconds to wait for device to come online. Note: This setting cannot be modified with the Configuration tool.	No

Additional OPOS information

Two-position keylock

The keylocks for the NANPOS, 50-Key, 133-Key, and 4820 Point of Sale Keyboards all have two positions and report them as LOCK_KP_NORM and either LOCK_KP_SUPR or LOCK_KP_LOCK.

In OPOS, two-position keylocks can report the key positions as LOCK_KP_NORM and either LOCK_KP_SUPR or LOCK_KP_LOCK. In the OPOS Configuration Utility:

- Selecting the **IBM Raw Values** radio button during configuration will cause the manager position on the keyboard to return LOCK_KP_LOCK.
- Selecting the **Map to OPOS Values** radio button will cause the manager position to return LOCK_KP_SUPR.

Figure 16. Two-position keylock

Key position	Description	Key position value
1	Operator	LOCK_KP_NORM
2	Manager	LOCK_KP_SUPR LOCK_KP_LOCK (OPOS only)

Figure 17. 4820 Two-position keylock

Key position	Description	Key position value
Lock	Operator	LOCK_KP_NORM
Unlock	Manager	LOCK_KP_SUPR LOCK_KP_LOCK (OPOS only)

Position count

For some IBM keylocks, the number of keylock positions cannot be reliably determined by OPOS:

- RS-485 4685-K03 - 4 positions
- RS-485 4685-K02 Keyboard with MSR Encoder - 6 positions

For this reason, a mechanism is provided to define the mapping of the native keylock positions to OPOS values. During configuration of the keylock device, the number of positions and the mapping of the positions can be set. Use the three-six position keyboard keylock for keylocks with 3 to 6 positions. In the OPOS Configuration Utility, use the Keylock entry labeled "Three-Six Position Keyboard Keylock" or "Three-Six Position Keyboard Keylock - USB" for keylocks with 3 to 6

positions.

JavaPOS configuration

CharacterSetASCIIBehavior

The behavior of Character Set ASCII (998) is undefined for chars beyond 127 (0x7F). To make these chars behave as some other character set in the CharacterSetList, specify it using this property. To keep these chars working as previous JPOS releases, specify 998. The default if the property doesn't exist is 998.

```
"com.ibm.jpos.services.sdi.config.LineDisplay.CharacterSetASCIIBehavior" type="String" value="998"/
```

CursorState

```
<prop name="com.ibm.jpos.services.sdi.config.LineDisplay.CursorState" type="String" value="ON"/>
```

Initializes the EIA-232 LineDisplay VFD cursor state to On or Off. This is done only at initialization time. Valid values are ON or OFF.

lineDisplayId

```
<prop name="com.ibm.posj.bus.rs232.lineDisplayId" type="String" value="APA"/>
```

For EIA-232 displays, this property is used to distinguish between All-Points Addressable (APA) and Vacuum Fluorescent Displays (VFD). Valid values are APA, VFD or LED

NumberOfRows

```
<prop name="com.ibm.jpos.services.sdi.config.LineDisplay.NumberOfRows" type="String" value="2"/>
```

Initializes the EIA-232 APA line display to a selected number of rows. Valid values are 2, 4, or 5.

JavaPOS DirectIO calls

The following DirectIO commands are supported for the LineDisplay. The syntax is as follows:

```
Syntax directIO (command: int32, inout data: int32, inout obj: object) :  
void {raises-exception}
```

To access line display constants, import: `com.ibm.jpos.services.DirectIO`.

DirectIO.SELECT_PLUVFDIAPA_DISPLAY_TEXT_MODE

Set display text mode. This command applies to RS485 and USB displays.

Table 87. Parameters for `DirectIO.SELECT_PLUVFDIAPA_DISPLAY_TEXT_MODE`

Parameter	Value
int command	<code>DirectIO.SELECT_PLUVFDIAPA_DISPLAY_TEXT_MODE</code>
int Data [0]	0 = display text in normal mode, 1 = display text rotated 180 degrees
Object	Always null

Remarks

This typically applies to PLU keyboard display units. The display panel can be used as either a PLU operator display or a PLU consumer display. When used as a consumer display, the screen image must be rotated 180 degrees.

Errors A `UposException` may be thrown when this method is invoked. Some possible values of the exception `ErrorCode` properties are:

Table 88. `ErrorCode` property for `SELECT_PLUVFDIAPA_DISPLAY_TEXT_MODE`

Value	Possible causes
<code>E_ILLEGAL</code>	<ul style="list-style-type: none"> cmd name/value is not known or is not valid. Some of the parameter values are not correct.

DirectIO.SELECT_APA_VFD_CURSOR_TYPE

Set display cursor type. This command applies to EIA-232 displays.

Table 89. Parameters for `DirectIO.SELECT_APA_VFD_CURSOR_TYPE`

Parameter	Value
int command	<code>DirectIO.SELECT_APA_VFD_CURSOR_TYPE</code>
int Data [0]	4 = <code>DISP_CT_UNDERLINE</code> , 1 = <code>DISP_CT_NONE</code>
Object	Always null

Remarks

This is the cursor type for the current window. Changing the `ScreenMode` property also changes the way the `CursorType` is displayed. `DISP_CT_UNDERLINE` can be set only if the current `ScreenMode` property or current number of rows by columns is 4x24 or 5x20. `DISP_CT_NONE` can be set only if current `ScreenMode` property or current number of rows by columns is 2x20.

Errors A `UposException` may be thrown when this method is invoked. Some possible values of the exception `ErrorCode` properties are:

Table 90. *ErrorCode* property for *SELECT_APA_VFD_CURSOR_TYPE*

Value	Possible causes
E_ILLEGAL	<ul style="list-style-type: none"> cmd name / value is not known or is not valid. Some of the parameter values are not correct.

See also:

com.ibm.jpos.services.DirectIO for proprietary constants.

DirectIO.SELECT_APA_NUMBER_OF_ROWS

Set number of display rows. This command applies to EIA-232 APA (all points addressable) character graphics displays.

This command can also be used with ScreenMode property.

Table 91. *Parameters for DirectIO.SELECT_APA_NUMBER_OF_ROWS*

Parameter	Value
int command	DirectIO.SELECT_APA_NUMBER_OF_ROWS
int Data [0]	2 = 2 rows by 20 columns, 4 = 4 rows by 20 columns, 5 = 5 rows by 20 columns
Object	Always null

Remarks

This sets the screen mode value of the device. Changing the ScreenMode property also changes the way the DeviceColumns, DeviceRows, GlyphHeight, GlyphWidth, Rows, and Columns properties to the new screen size. Changing the current screen mode can be done only if the current language permits it.

Errors A UpoException may be thrown when this method is invoked. Some possible values of the exception ErrorCode properties are:

Table 92. *ErrorCode* property for *DirectIO.SELECT_APA_NUMBER_OF_ROWS*

Value	Possible causes
E_ILLEGAL	<ul style="list-style-type: none"> cmd name/value is not known or is not valid. Some of the parameter values are not correct.

DirectIO.SELECT_ROTATE_TEXT_180

Set display test mode. This command applies to USB APA Vacuum Fluorescent Display (VFD).

Table 93. *Parameters for the DirectIO.SELECT_ROTATE_TEXT_180*

Parameter	Value
int command	DirectIO.SELECT_ROTATE_TEXT_180
int Data [0]	0 = display text in normal mode, 1 = display text mode 180 degrees rotated
Object	Always null

Errors A UpoException may be thrown when this method is invoked. Some

possible values of the exception ErrorCode properties are:

Table 94. ErrorCode property for DirectIO.SELECT_ROTATE_TEXT_180

Value	Possible causes
E_ILLEGAL	<ul style="list-style-type: none"> cmd name /value is not known or is not valid. Some of the parameter values are not correct.

Additional JavaPOS information

Descriptors

Most models of IBM vacuum fluorescent and character graphics displays have the ability to display descriptors. The following displays have 20 descriptors:

- USB 2x20 VFD External LineDisplay
- USB 2x20 VFD Integrated LineDisplay
- RS-485 2x20 VFD External LineDisplay
- All descriptors are on 1 row, below the bottom line of text.

The following displays have 24 descriptors:

- USB Character/Graphic APA LineDisplay
- RS-485 APA LineDisplay
- There are 2 rows of descriptors, 12 above the top row of text and 12 below the bottom row of text.

In prior versions of JavaPOS, the descriptors were numbered incrementally from 1, with position 1 being the top leftmost position. In JavaPOS 1.9.6, the descriptors have been renumbered to be consistent with OPOS. The descriptors are still numbered incrementally from 1, but the starting position is now the lowest rightmost position.

Capability definitions

DISP_CCT_NONE

Cursor is not displayable.

DISP_CCT_UNDERLINE

Cursor is displayable as an underline. Cursor can be turned on and off.

DISP_CCT_UNDERLINE+DISP_CCT_FIXED

Cursor is displayable as an underline. Cursor is always displayed.

Property definitions

DISP_CT_NONE

Cursor is not displayed.

DISP_CT_UNDERLINE

Cursor is displayed as an underline.

Note: Another value received in the device will cause a JPOS_E_ILLEGAL at setCursorType()

Character sets supported by line display devices for JPOS

Table 95 shows the country character sets supported by the line displays in JPOS. The US/European character set contains at least the upper case characters from many of the previous code pages (excluding Cyrillic). These are duplicated in the code pages for those countries.

Table 95. Character sets supported by line display devices in JPOS

Character set	LineDisplay device							
	APA (EIA-232)	VFD Integrated and Distributed EIA-232	VFD 1-Sided (USB)	LCD and 50-Key LineDisplay	APA (USB)	VFD 1-Sided and 2-Sided (RS-485)	APA (RS-485)	LED (RS-232)
101 (Mini-Alphanumeric)								✓

Notes:

1. Only available if EC Level >= 16 (0x10)
2. Only available if corresponding font is in device ROM
3. Only available if corresponding font was downloaded

OPOS configuration

Note: These settings cannot be modified with the Configuration tool.

Table 96. Service Object settings for RS-485/USB line display

Keyword	Type	Description	OPOS Gateway Support
DefineCharacter	Key	Key values for user-defined characters.	Yes
DefineCharacter\<X>	String	Hexadecimal value of user-defined character to be downloaded. Eight bytes of data for character definition. Each data byte is represented by 2 ASCII characters (IE, the value 0x69969960 is the string 0609090609090600). For more information on the character format, refer to <i>IBM Point of Sale Subsystem Programming Reference and User's Guide</i> (SC30-3560).	Yes

Table 97. Service object settings for EIA-232 line display

Keyword	Type	Description	OPOS Gateway Support
Type	String	Line display type. Valid values are: LINE Single-byte display APA Double-byte display	Yes
Mode	String	Screen display mode. Valid values are 2x20 (default), 4x20, and 5x20.	Yes

Additional OPOS information

USB APA font download

To download fonts to the USB Character/Graphics Display, you will need the following:

- The display font download program, AIPFNVFD.EXE, which comes with the IBM Point of Sale Subsystem for Windows.
- Font files for the USB Character/Graphics Display, which can be found in the IBM Point of Sale Subsystem for Windows BIN directory

Font File Name	Font File Description
jpn16.bin	Japan, Mincho style
korm16.bin	Korea, Mincho style
sbcs0001.bin	SBCS fonts, updated version
Prcmz16.bin	PRC Simplified Chinese
Rocbg16b.bin	Taiwan Traditional Chinese

Downloading Fonts to the Display

Font files for the USB Character/Graphics Display must be downloaded manually using the AIPFNVFD.EXE program

```
AIPFNVFD -Sslot -Pport {-Ndevice-number} -Fx:\dir\font-file {-Q}
```

-Sslot The slot number (in decimal) of the display for which the download is intended.

-Pport The port number (in decimal) of the display for which the download is intended.

-Ndevice-number

An indication of the device number of the display for which the download is intended. Valid values are:

- A : device number 2A (default)
- B : device number 2B
- C : device number 2C
- D : device number 2D

-Fx:\dir\font-file

Fully qualified path name for the font file to be downloaded to the display.

-Q Quiet mode. No progress information is displayed

Character sets supported by line display devices for OPOS

Table 98 shows the country character sets supported by the line displays in OPOS. The US/European character set contains at least the upper case characters from many of the previous code pages (excluding Cyrillic). These are duplicated in the code pages for those countries.

Table 98. Character sets supported by line display devices in OPOS

Magnetic Ink Character Recognition data

The format of the data read from the Magnetic Ink Character Recognition (MICR) looks like:

Transit Symbol	Transit Field 9-digit fixed	Transit Symbol	On-Us Field 19-character max	Amount Symbol	Amount Field 10-digit	Amount Symbol
----------------	--------------------------------	----------------	---------------------------------	---------------	--------------------------	---------------

Where:

Transit Field

9-digit number bracketed between the two Transit symbols. Bank Number is digits 5 through 8 of the Transit field.

On-Us Field

According to the X9.13 standard, section 8.4.1, the On-Us field "usually contains the account number and *may* also contain a serial number and/or a transaction code." In addition, section 8.4.2 also states that "*no recommendation is made* as to how the On-Us field is to be structured." This fact allows the individual financial institution the widest possible latitude in designing the field to suit its own internal system requirement. However, in no case shall the On-Us field contain more than 19 characters.

Amount Field

10-digit number bracketed between the two Amount symbols.

Auxiliary On-Us field

If it exists, it is to the left of the Routing Number (Transit field). It is also stated that "when a serial number or other data is printed in this field, it must be preceded by, and followed by, an On-Us symbol". The field length is variable up to 9 characters.

Only On-Us and Auxiliary On-Us fields need interpretation rules.

JavaPOS configuration

`com.ibm.jpos.sdi.config.MICR.MinMicrSignalLevel`

```
<prop name="com.ibm.jpos.sdi.config.MICR.MinMicrSignalLevel" type="String" value="50"/>
```

Defines a minimum signal level accepted for a successful MICR read. If a MICR reads below the minimum signal level an error event will be fired.

Valid values are 0 to 100. Default is 50.

com.ibm.jpos.sdi.config.MICR.stripAccountDashes

```
prop name="com.ibm.jpos.sdi.config.MICR.stripAccountDashes" type="String" value="false"/
```

Determines whether to remove any dashes from the account number. When true, a value of "1234-56-7" would become "1234567".

Valid values are TRUE or FALSE.

com.ibm.jpos.sdi.config.MICR.stripTransitDashes

```
<prop name="com.ibm.jpos.sdi.config.MICR.stripTransitDashes" type="String" value="false"/>
```

Determines whether to remove any dashes from the transit number. When true, a value of "3579-12-" would become "357912".

Valid values are TRUE or FALSE.

com.ibm.jpos.sdi.config.MICR.switchTransitDashToSpace

```
<prop name="com.ibm.jpos.sdi.config.MICR.switchTransitDashToSpace" type="String" value="false"/>
```

Determines whether to change any dashes in the transit number to spaces. When true, a value of "12-4-66-7" would become "12 4 66 7".

Valid values are TRUE or FALSE.

Additional JavaPOS information

MICR exception tables

An exception table contains Transit Field/On-Us Field interpretation rule pairs. This enables you to manually code the On-Us field interpretation rule based on the Transit Field because each bank is likely to have a different Transit Field. For this purpose, three formats for Exception Table are supported. The first format (format 1) is an XML description of how the data is to be extracted from the check, and should be written in a separate file. Formats two (2) and three (3) can be put directly into the MICR JposEntry.

Format 1 (supported since JavaPOS 1.7.5)

This is an XML representation of the On-Us and Auxiliary On-Us fields stored in an independent file. This file is identified in a property in the JposEntry for the MICR device:

```
<prop name="com.ibm.jpos.sdi.config.MICR.exceptionTableFile"
      Type="String"
      Value="<file-path-goes-here>"/>
```

If this property is omitted JavaPOS will search the classpath for a file named `ibmmicrexception.xml`.

This file can also contain entries for legacy formats (PositionSkip and Symbol formats). An entry for legacy format must be a child of 'MICRExceptionTable' and is just like the prop elements described for formats 2 and 3.

For example:

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE JposEntries PUBLIC "-//IBMJavaPOS//DTD//EN"
    "/com/ibm/jpos/res/ibmmicrexception.dtd">

<MICRExceptionTable FormatToUse="XML">
  <ExceptionEntry TransitField="123456789" CheckType="Business">
    <OnUsFieldParsingRule>
      <SkipCharacterLength value="1" />
      <AccountNumberLength value="5" />
      <SkipCharacterLength value="1" />
      <SerialNumberLength value="5" />
    </OnUsFieldParsingRule>
    <AuxOnUsFieldParsingRule>
      <SerialNumberLength value="5" />
    </AuxOnUsFieldParsingRule>
  </ExceptionEntry>
  <prop name="com.ibm.jpos.sdi.config.MICR.exceptionTable0"
    type="String"
    value="P123456789AAAAAAAAAXSSSSSSS"/>
  <prop name="com.ibm.jpos.sdi.config.MICR.exceptionTable1"
    type="String"
    value="B778899001D154R"/>
</MICRExceptionTable>
```

A sample file called `ibmmicrexception.xml.Sample` is included with the installation. This can be useful as a starting point for configuring your own exception tables. The location for `ibmmicrexception.xml.Sample` is:

- For Windows: `C:\POS\IBMJPOS\Docs`
- For Linux: `/opt/ibm/javapos/docs`

The following considerations must be applied:

- There can be as many `ExceptionEntry` and `prop` elements as needed. `ExceptionEntry` elements must come before any `prop` element.
- Values for transit number (`TransitField` in `ExceptionEntry` and characters 2-10 in the case of `prop` elements) must be unique.
- Valid values for the attribute `FormatToUse` are `XML` and `Legacy`. The default is `XML`. This indicates which format is to be read first. Since any repeated value for transit number is dropped, this switches priority from one format to the other.
- Formats 2 and 3 (legacy formats) are read in order of the property names, first the ones in the new `ibmmicrexception.xml` and then the ones in the `JposEntry`. All listed entries must have consecutive names inside each file, and counts should start at 0.
- Order of elements within `OnUsFieldParsingRule` is strict. The order shown above is the expected order. `OnUsFieldParsingRule` is required.
- `SerialNumberLength` and `AccountNumberLength` can be in either order, and `SkipCharacterLength` can be at the beginning or between `SerialNumberLength` and `AccountNumberLength`.
- Exactly one occurrence of `AccountNumberLength` is required.
- `SerialNumberLength` and `SkipCharacterLength` are optional.
- All *value* attributes are required. `TransitField` attribute from `ExceptionEntry` element is also required.
- `CheckType` attribute from `ExceptionEntry` is optional. If specified, it must be either *Personal* or *Business*. The default is *Personal*.
- The serial number may appear in the Auxiliary On-Us field; `AuxOnUsFieldParsingRule` holds a `SerialNumberLength` element if this is the case. `AuxOnUsFieldParsingRule` is optional.

- SerialNumberLength should appear in one field only. If it appears in both, the one from AuxOnUsFieldParsingRule is ignored.

Format 2 (supported since JavaPOS 1.7.2)

The On-Us field interpretation rule is as follows:

- A** account number character (can be a dash)
- S** serial number character (can be a dash)
- X** ignored (no parsing)

A typical MICR exception table looks like this:

```
<prop name="com.ibm.jpos.sdi.config.MICR.exceptionTable0"
  type="String" value="P123456789AAAAAAAAAXSSSSSSS"/>
<prop name="com.ibm.jpos.sdi.config.MICR.exceptionTable1"
  type="String" value="B123456709AAAAAAXXSSSSSSS"/>
```

where the value attribute is parsed as shown in Table 105.

Table 105. MICR exception table fields for format 2

Characters	Content
1	Check type: B = Business check P = Personal check
2 to 10	Transit field.
11 to end	On-Us Field. The A,X,S field is not required to be 19 characters long. You can choose the number of A, X, or S characters to encode the rule. This rule is applicable to the first valid digit immediately after the Transit Field. The On-Us symbol can be part of the On-Us Field, and the parser is expected to handle this condition.

Format 3 (supported since JavaPOS 1.5.1)

Exception configuration properties are provided for MICR processing to handle MICR data that do not conform to some of the standard formats. Default exception tables are set up for each MICR entry in the file JPOS.xml.

Use the following format:

```
<prop name="exceptionTable0" type="string" value= "B778899001D154R"/>
```

where each byte represents the following:

P/B (byte 1)

Type of check: either *Business* or *Personal*. This option is not used for parsing but instead is used to set the check type property, which is usually set to UNKNOWN.

TRANSIT (byte 2-10)

A 9-digit bank transit number that is key for determining if the exception table entry is applied to the MICR data.

SPC (byte 11)

SPC options:

- If SPC is set to *D*, all spaces are removed from the primary On-Us field for processing
- If SPC is not set to *D*, the On-Us field remains unchanged.

Field (byte 12)

Not used. The driver always use the first field in the primary On-Us field.

SKIP (byte 13)

The account starts in this index and includes the remaining characters to the right in the primary On-Us field. (The index count starts at 0.)

SIZE (byte 14)

Not used because the driver identifies the serial number.

ACC (byte 15)

Not used.

The following table shows sample output for Format 3:

Table 106. Format 3 Exception Table (sample data)

Raw Data	t123456780t 0123456789o 0671	
Primary On-Us	0123456789o 0671	
Field #1	0123456789	
Exception Table entry	Account	Serial
P123456780D111R	123456789	0671
P123456780D165R	6789	0671
P123456780D295R	9	0671
P123456780D422R	23456789	0671

OPOS configuration

Table 107. Service object settings for MICR

Keyword	Type	Description	OPOS Gateway Support
ExceptionFile	String	Fully-qualified filename of MICR exception file, which contains exception processing information. The default value is: C:\POS\BIN\PARSE.DAT	Yes
MinMicrSignalLevel	String	Minimum signal string (0-100) for successful MICR read. The default value is 50 (full string).	Yes
SlipRegTimeout	String	Time (in milliseconds) to wait for check to be registered. Note: This setting cannot be modified with the Configuration tool.	No
SlipRegMinDelay	String	Time (in milliseconds) to delay before sending document register command. Note: This setting cannot be modified with the Configuration tool.	No

Additional OPOS information

MICR exception file

Exception configuration properties for MICR processing enable you to handle MICR data that do not conform to some of the standard formats. Default exception tables are set up for each MICR entry in the file <INSTALL_DIR>\bin\parse.dat.

Use the following format to create exception table entries:

```
#P/B TRANSIT SPC FIELD SKIP SZ ACC
P 123456789 D 1 5 5 R
```

Each parameter must be separated for any number of spaces, and each byte represents the following:

P/B (byte 1)

The type of check: either "Business" or "Personal." This option is not used for parsing but instead is used to set the check type property, which is usually set to "UNKNOWN."

TRANSIT (byte 2-10)

9-digit bank transit number, which is used as the key to determine if the exception table entry is applied to the MICR data.

SPC (byte 11)

If SPC is set to *D*, all spaces are removed from the primary On-Us field for processing; otherwise, the On-Us field remains unchanged.

Field (byte 12)

Indicates which subfield in the primary On-Us field is used to get the account number and the serial number.

SKIP (byte 13)

The account starts in this index and includes the remaining characters to the right in the primary On-Us field. (The index count starts at 0.)

SIZE (byte 14)

The length of the serial number.

ACC (byte 15)

The alignment of the account number in the subfield:

- If it is "L," then the account number aligns on the left of the subfield.
- If it is "R," then the account number aligns on the right of the subfield.

The following table shows sample output:

Table 108. Exception configuration properties for MICR processing: Example 1

Raw Data	t123456780t 0123456789o 0671	
Primary On-Us	0123456789o 0671	
Field #1	0123456789	
Field #2	0671	
Exception Table entry	Account	Serial
P123456780D 1 1 1 R	9	8
P123456780D 1 6 5 R	456789	0123
P123456780D 2 1 5 R	1	067
P123456780D 4 1 5 R	1	067
P123456780D 2 2 2 L		06
P123456780D 1 1 1 L	01234567	8
P123456780D 1 3 5 L	01	23456

The following image illustrates how the information is parsed to retrieve the Account and Serial numbers for the table entry "P123456780D 1 6 5 R":

Figure 19. Data parsing: Example 1

Parsing Rule		P	1	2	3	4	5	6	7	8	9	D	1	6	5	R	
Index	10	0	1	2	3	4	5	6	7	8	9						
Field #1		0	1	2	3	4	5	6	7	8	9						

Field #1 points to the '1' in the Parsing Rule row.

SKIP=6 (Account) points to the '6' in the Parsing Rule row.

Serial 5 character long points to the '5' in the Parsing Rule row.

Account is on the right points to the 'R' in the Parsing Rule row.

Legend:

- Account Number (light gray background)
- Serial Number (dark gray background)

The following image illustrates how the information is parsed to retrieve the Account and Serial numbers for the table entry "P123456780D 1 3 5 L":

Figure 20. Data parsing: Example 2

Parsing Rule		P	1	2	3	4	5	6	7	8	9	D	1	3	5	L	
Index	10	0	1	2	3	4	5	6	7	8	9						
Field #1		0	1	2	3	4	5	6	7	8	9						

Field #1 points to the '1' in the Parsing Rule row.

SKIP=3 (Account) points to the '3' in the Parsing Rule row.

Serial 5 character long points to the '5' in the Parsing Rule row.

Account is on the left points to the 'L' in the Parsing Rule row.

Legend:

- Account Number (light gray background)
- Serial Number (dark gray background)
- Skipped character (white background)

Additional JavaPOS information

This section describes how to load the correct motion sensor driver in Linux for your hardware.

Add the following lines in /opt/ibm/javapos/etc/machine.conf:

```
<keyword> <number of entries>
<machine type><model number>
```

"<keyword>" represents the device for which a driver is needed and "<number of entries>" indicates the number of "<machine type><model number>" pairs that follow. If the system on which JavaPOS is running matches one of the specified "<machine type><model number>" pairs, the device driver for that "<machine type><model number>" will be loaded.

For the motion sensor, machine.conf might have the following entries:

```
Motion 2
4838132
4838135
```

Updated: August 26, 2008

In this case the <number of entries> value is **2**.

JavaPOS configuration

enableOnlineWatcher

•

```
<prop name="com.ibm.posj.bus.rs232.enableOnlineWatcher" type="Boolean" value="true"/>
```

Monitors the device for being online or offline and performs appropriate actions. To configure the poll time for events, modify the `com.ibm.posj.bus.rs232.onLineWatcherPollTime.MSR` property in the `posj.properties` file.

Values accepted

- TRUE - Default value
- FALSE

Device Support

- EIA-232 : 12, 13

msrID

```
<prop name="com.ibm.posj.bus.rs232.msrId" type="String" value="ISO"/>
```

Determines whether the EIA-32 MSR hardware is a 3-track ISO unit or a double-sided JUCC unit. Valid values are ISO or JUCC. Default is ISO.

Values accepted

- ISO- Default value
- JUCC

Device Support

- EIA-232 : 6, 7, 8, 9, 10, 11, 12, 13

JavaPOS DirectIO calls

The following DirectIO commands are supported for the MSR. The syntax is as follows:

Syntax `directIO (command: int32, inout data: int32, inout obj: object) : void {raises-exception, use after open-claim-enable}`

DirectIO.MSR_WRITE_DATA_CMD

See Table 121 on page 129 for a reference of the parameters to call `DirectIO.MSR_WRITE_DATA_CMD`.

Table 121. Parameters for `DirectIO.MSR_WRITE_DATA_CMD`

Parameter	Value
int command	<code>DirectIO.MSR_WRITE_DATA_CMD</code>
int Data [0]	Write wait timeout value in milliseconds. The wait timeout can be set to <code>JposConst.JPOS_FOREVER</code> and the command has no timeout to return. The maximum wait timeout is 25,000 milliseconds (25 seconds).
Object	String representation of the data to be written. The maximum length for the object is 69 characters. The first 69 characters will be written to the magnetic stripe and additional characters will be ignored.

This command is used to write data to the Magnetic Stripe. Data can only be written to track JIS II.

A card with a JIS II track must be swiped through the MSR during the `directIO` call with `MSR_WRITE_DATA_CMD` so data can be stored. Otherwise an exception is thrown.

Device Support

- 24, 25

A `UpoException` may be thrown when this method is invoked. Some possible values of the exception's `ErrorCode` property are:

Table 122. `UpoException` error code property

Value	Possible causes
<code>E_ILLEGAL</code>	One of the following errors has occurred: <ul style="list-style-type: none"> • The device is not write enabled. • Some of the parameter values are not correct. • Command sent to not capable write MSR
<code>E_TIMEOUT</code>	Timeout expired and card was not swiped.

Additional JavaPOS information

SureOne MSR

SureOne firmware discards any invalid MSR reading and sends only valid track data. Track errors are not reported.

If track 2 is empty and track 3 contains data, the track 3 data is displayed as track 2 and no data appears in track 3.

OPOS configuration

Table 123. Service object settings for EIA-232 MSR

Keyword	Type	Description	OPOS Gateway Support
MsrType	String	Type of MSR reader attached. Valid values are: ISO Standard three-track reader JUCC JIS-I and II reader	Yes

Additional OPOS information

SureOne/SurePOS 100 MSR limitations

The MSR on the SureOne is part of the Keyboard. The raw data is in ASCII format. When a credit card is swiped with the MSR DataEventEnabled set to *false*, the incoming data is treated as keyboard data. The only way to get MSR data events is to set DataEventEnabled to *true*. In order to queue MSR data, both DataEventEnabled and FreezeEvents must be set to *true*.

CANPOS keyboard

The CANPOS keyboard firmware version must be at least 1.2.3 for the CANPOS automatic download utility to work. The firmware can be automatically updated to newer versions in UPOS. The update, if required, typically takes three to five minutes, depending on operating system.

The keyboard function keys can also be updated automatically, but you must create your own keyboard configuration file. To create a configuration file, a separate utility is available from the IBM Retail Store Solution support Web site. To download and use this utility, perform the following steps:

1. Go to www.ibm.com/solutions/retail/store/support.
2. Click **Other Systems and Devices**.
3. Click **Firmware and Utilities for CANPOS**. All utilities are packaged in a single zip file for supporting different operating systems. Based on your preferred system, you can download the appropriate utility.

4. Unzip the package and choose the appropriate utility to generate the configuration file.
5. Rename or save your file as aipcnpos.pcf and place it in folder \pos\bin for Windows systems, and /usr/share/pos for Linux systems.
6. Reboot your POS system and the configuration file is loaded automatically.

To confirm the success of the firmware and configuration download, you can check aipanpos.log under \pos\log in Windows, or /var/log in Linux POS systems.

Installing USB System attached keyboard on Windows XP

The proper device driver is automatically installed for the USB System keyboard on Windows XP, if you select **IBM Alphanumeric Point of Sale Keyboard** and indicate that it is attached to a USB port during installation. After reboot, a Windows message is displayed, indicating that you are installing the POS USB Keyboard. Click **Continue Anyway** to install IBM's driver after seeing this message.

Note: If you are installing the keyboard for the first time, the system must be rebooted again before the new driver can be used.

JavaPOS configuration

Click

```
<prop name="com.ibm.jpos.sdi.config POSKeyboard.Click" type="Byte" value="0x00"/>
```

JavaPOS provides a user-configurable mechanism to modify the loudness of the keyboard click. This is accomplished by specifying the following in the keyboard's JposEntry

Valid values for the Click property are listed below. The default is 0x00.

0x00 (off)
0x01 (soft)
0x02 (loud)

Device Support:

- 1, 2, 3, 4, 5, 6, 7, 11, 13, 19, 20, 21, 22, 23, 24
- USB Only: 10, 12, 18, 21

*USB not supported when configured as system keyboard

FatFingerTimeout

```
<prop name="com.ibm.jpos.sdi.config POSKeyboard.FatFingerTimeout" type="Byte" value="0x03"/>
```

A fat-finger situation occurs when an operator attempts to press a single key, but misses the center of the key, and presses both the intended key and an adjacent key. The time interval between subsequent key strokes is measured by the keyboard's processor. If the two keys were pressed within a certain interval, a fat-finger situation is assumed, and a status indicating this occurrence accompanies the scan codes to the terminal.

Device Support:

- 1 (RS-485, USB)*, 3, 4, 5, 6, 7 (RS-485, USB), 11 (RS-485, USB)*, 13, 19, 20, 24
- USB Only: 10, 12, 18, 21, 22*, 23*

*USB not supported when configured as system keyboard

Valid values are 0 through 4. The default is 3.

- 0 = 0 milliseconds (fat-finger detection disabled)
- 1 = 10 milliseconds
- 2 = 20 milliseconds
- 3 = 30 milliseconds
- 4 = 40 milliseconds

ExtendedKeyMapping

```
<prop name="com.ibm.jpos.sdi.config.POSKeyboard.ExtendedKeyMapping" type="Boolean" value="true"/>
```

The extended scan code property is used to differentiate between two keys having the same hardware scan code. A typical extended scan code is represented by two scan codes, for example: X'e0' X'23'.

When the ExtendedKeyMapping property is true, the first scan code of the extended key is replaced by X'01'; the second scan code is not altered. For example, the extended key X'e0' X'23' is returned to the application as X'123'.

When the ExtendedKeyMapping property is false, the extended keys are not supported. Only a single scan code is returned to the application (X'0023').

Valid values are TRUE and FALSE. The default is TRUE.

Device Support:

- PS2 : 1, 2, 8, 9, 11, 14, 22, 23
- USB when configured as system keyboard : 1, 11, 22, 23

KbdScanning

```
<prop name="com.ibm.jpos.sdi.config.POSKeyboard.KbdScanning" type="Boolean" value="true"/>
```

This property controls whether to enable or disable keyboard scanning. When scanning is enabled the keyboard generates make and break scan codes for each key press.

Device Support:

- 1, 2, 3, 4, 5, 6, 7, 9, 10, 11, 12, 13, 15, 18, 19, 20, 21, 22, 23, 24

Valid values are TRUE and FALSE. The default is TRUE.

KeyTranslationFile

```
<prop name="KeyTranslationFile" type="String" value="\keys.dat"/>
```

The KeyTranslationFile property contains the full path name of the file containing key translation information. A sample file called **keys.dat** is included with the installation.

The location of the sample file will depend on your operating system.

Linux - /opt/ibm/javapos/docs

Windows - C:\POS\IBMJPOS\Docs

Typematic

```
<prop name="com.ibm.jpos.sdi.config POSKeyboard.Typematic" type="Boolean" value="true"/>
```

This property controls the typematic function of the keyboard.

Most of the keys on all keyboards are optionally typematic keys. You can enable or disable the typematic function for the entire keyboard with this option.

If the typematic function is disabled, and a key is pressed, then the make key code is generated only once, no matter how long that key is held down. If the key is released the break code is sent.

If the typematic function is enabled and you press a key, the make key code is generated. If the key remains pressed for a period longer than the amount of time defined by typematic delay in the jpos.xml, another make key code is generated. As long as the key remains pressed, make key codes are generated at the rate defined by typematic rate until the key is released, at which time the break code is sent.

Valid values are TRUE and FALSE. The default is TRUE.

Device Support

- 1*, 2, 3, 4, 5, 6, 7, 11*, 13, 19, 20, 21
- USB Only: 10, 12, 18, 21, 22*, 23*, 24

* USB on Linux not supported when configured as system keyboard.

TypematicDelay

```
<prop name="com.ibm.jpos.sdi.config POSKeyboard.TypematicDelay" type="Byte" value="0x01"/>
```

Device Support:

- 1 (RS-485, USB)*, 3, 4, 5, 6, 7 (RS-485, USB), 11 (RS-485, USB)*, 13, 19, 20, 22*, 23*
- USB Only: 10, 12, 18, 21

*USB not supported when configured as system keyboard

The typematic delay determines how long the key must be pressed before the typematic function is enabled.

Valid values for the TypematicDelay property are listed below. The default is 0x01.

0x00 = Delay 250 milliseconds
 0x01 = Delay 500 milliseconds
 0x02 = Delay 750 milliseconds
 0x03 = Delay 1000 milliseconds

TypematicRate

The typematic rate determines how many make codes are generated per second (+/-20%).

```
<prop name="com.ibm.jpos.sdi.config POSKeyboard.TypeomaticRate" type="Byte" value="0x14"/>
```

Device Support:

- 1 (RS-485, USB)*, 3, 4, 5, 6, 7 (RS-485, USB), 11 (RS-485, USB)*, 13, 19, 20, 22*, 23*
- USB Only: 10, 12, 18, 21,

*USB not supported when configured as system keyboard

Valid values for the TypematicRate property are listed below. The default is 0x14.

0x00 = Rate 2.0
 0x01 = Rate 2.1
 0x02 = Rate 2.3
 0x03 = Rate 2.5
 0x09 = Rate 4.3
 0x0a = Rate 4.6
 0x0b = Rate 5.0
 0x0c = Rate 5.5
 0x0d = Rate 6.0
 0x0e = Rate 6.7
 0x0f = Rate 7.5
 0x10 = Rate 8.0
 0x11 = Rate 8.6
 0x12 = Rate 9.2
 0x13 = Rate 10.0
 0x14 = Rate 10.9
 0x15 = Rate 12.0
 0x16 = Rate 13.3
 0x17 = Rate 15.0
 0x18 = Rate 16.0
 0x19 = Rate 17.1
 0x1a = Rate 18.5
 0x1b = Rate 20.0
 0x1c = Rate 21.8
 0x1d = Rate 24.0
 0x1e = Rate 26.7
 0x1f = Rate 30.0

JavaPOS DirectIO calls

Syntax `directIO (command: int32, inout data: int32, inout obj: object): void { raises-exception, use after open-claim-enable }`

DirectIO.GET_KBD_LIGHT_STATUS_CMD

This command returns the indicators status in data[0].

Table 129. *DirectIO.GET_KBD_LIGHT_STATUS_CMD*

Parameter	Description
command	DirectIO.GET_KBD_LIGHT_STATUS_CMD
data	An int array with at least one element

Table 129. *DirectIO.GET_KBD_LIGHT_STATUS_CMD (continued)*

Parameter	Description
object	Any value. A null value is accepted

Returns the indicators status on data[0] reference parameter. The bit values in the int parameter (data[0]) are:

- '1' = LED is to be turned on
- '0' = LED is to be turned off

Table 130. *DirectIO.GET_KBD_LIGHT_STATUS_CMD bit representation*

Parameter	Bit representation of the data element	
7–31 bits	Reserved - must	= 0
6	SCROLL-LOCK	= DirectIO.KBD_SCROLL_LOCK_LIGHT
5	CAPS-LOCK	= DirectIO.KBD_CAPS_LOCK_LIGHT
4	NUM-LOCK	= DirectIO.KBD_NUM_LOCK_LIGHT
3	"no label" or READY	= DirectIO.KBD_NO_LABEL_LIGHT
2	MSG PEND or SYS MSG	= DirectIO.KBD_MESSAGE_PENDING_LIGHT
1	OFFLINE	= DirectIO.KBD_OFFLINE_LIGHT
0	WAIT	= DirectIO.KBD_WAIT_LIGHT

DirectIO.TURN_KBD_LIGHT_ON_CMD

This command illuminates the indicator specified on the data[0] parameter.

Table 131. *DirectIO.TURN_KBD_LIGHT_ON_CMD bit representation*

Parameter	Description
command	DirectIO.TURN_KBD_LIGHT_ON_CMD
data[0]	Data can be set to any of the following options: DirectIO.KBD_WAIT_LIGHT DirectIO.KBD_OFFLINE_LIGHT DirectIO.KBD_MESSAGE_PENDING_LIGHT DirectIO.KBD_NO_LABEL_LIGHT DirectIO.KBD_NUM_LOCK_LIGHT DirectIO.KBD_CAPS_LOCK_LIGHT DirectIO.KBD_SCROLL_LOCK_LIGHT
object	Any value. A null value is accepted.

E_ILLEGAL

The following error has occurred:

Some of the parameter values are not correct.

DirectIO.TURN_KBD_LIGHT_OFF_CMD

This command turns off the indicator specified on the data[0] parameter.

Table 132. DirectIO.TURN_KBD_LIGHT_OFF_CMD

Parameter	Description
command	DirectIO.TURN_KBD_LIGHT_OFF_CMD
data[0]	Data can be set to any of the following options: DirectIO.KBD_WAIT_LIGHT DirectIO.KBD_OFFLINE_LIGHT DirectIO.KBD_MESSAGE_PENDING_LIGHT DirectIO.KBD_NO_LABEL_LIGHT DirectIO.KBD_NUM_LOCK_LIGHT DirectIO.KBD_CAPS_LOCK_LIGHT DirectIO.KBD_SCROLL_LOCK_LIGHT
object	Any value. A null value is accepted.

A UpoException might be thrown when this method is invoked. Some possible values of the exception ErrorCode property are:

E_ILLEGAL

The following error has occurred:

Some of the parameter values are not correct.

See also com.ibm.jpos.services.DirectIO for proprietary constants.

Additional JavaPOS information

Keyboard definition file

The keyboard definition file is used in conjunction with the KeyTranslationFile property. The file allows the user to map physical keys into virtual key codes. It also allows the user to configure double keys.

Virtual key codes

Each line of the table consists of an integer virtual keyboard code followed by white space (any combination of spaces and tabs) followed by the input sequence consisting of any number of actual keyboard codes. Individual codes in the input sequence are separated by white spaces.

For example, the line for up-arrow might be coded like this:

```
301 01 26 30
```

This coding indicates that when the sequence of values 01, 26, 30 comes in, recognize it as virtual keyboard code 301. (The characters corresponding to 01, 26, and 30 are **Esc**, **[**, and **A**.)

It is also possible to generate several virtual scan codes at once. This is achieved by grouping all the virtual scan codes to be generated within square brackets. The

following example shows an entry indicating the drivers to generate two virtual scan codes: 302, followed by 303 when the value 141 is scanned.

```
[302 303] 141
```

The actual keyboard codes needed to generate multiple virtual scan codes can be a sequence, as in the first example:

```
[312 320 322] 141 29
```

In this case the virtual scan code sequence 312-320-322 is generated when the scan code sequence is complete. This means that the single 141 code does not trigger any scan code.

The character-encoding rules are:

1. Any single character, except space, tab, and # stands for itself. The example sequence can be coded as:

```
301 01 [ A 2
```

2. A sequence of two or more digits is interpreted as an integer value, as in the example. If an integer starts with a zero, it is interpreted as an octal number.

The example above can be coded as:

```
301 01 032 036
```

If an integer starts with a 0x, it is interpreted as a hex number.

3. An integer (decimal, hex, or octal) can have a leading plus sign.

This is essential for coding decimal integers less than ten, because a single digit alone is interpreted as an ASCII character under Rule 1. A # character could be coded as +4 but not as a 4 only.

4. A # starts a comment. It and the rest of the line are skipped.

If a line consists of nothing but a comment, or is empty, it is skipped.

5. The characters space, tab, and # cannot be coded literally. They can be coded as integers 57, 15, and +4 (Windows scan codes).

6. Input characters that are their own virtual keyboard codes (such as carriage return, A, Z, =, ...) do not need to be coded in the table. When the Java Keyboards Mapping function is reading characters and is about to begin a new sequence, a character that does not match any sequence is returned as is.

7. When the finite-state machine is in the middle of some candidate sequences, a non matching character signals the end of sequence. All previous characters from beginning of sequence to the non matching character are returned as is.

The finite-state machine then resets to accept a new sequence. For example, assume that 99 is the scan code for a, and 100 is the scan code for b. The entries in the keys.dat file are:

```
400 99 b
```

If you press the **a** key, and then press the **b** key, two data events are generated:

- Press the **a** key (scan code 99). The a key does not return scan codes until scan code completes the sequence.
- Press the **b** key. The b key does return 2 data events: scancode 99 (for a) and scancode 100 (for b); the rule is not reached.

—

8. Virtual keycode value range from 0000 to 0xFFFF and keyboard code value range from 00 to 0xFF. If any of the values exceed its range, the line is skipped.

When making the keyboard definition table, only scan codes may be used for the system-attached keyboard. Characters cannot stand for themselves, as stated in Rule 1.

Double key support

The double key definition format is as follows:

```
0xFF <expected scan code> <scan code for 1st key> <scan code for 2nd key>
<filter time in ms>
```

The <filter time in ms> is optional.

Its default value is zero, and the recommended filter time is 60 milliseconds

For example:

```
0xFF 0x1C 0x71 0x1C 50
0xFF 0x7E 0x7E 0x5F 0x32
```

where:

```
0x1C is the scan code for key switch 109
0x71 is the scan code for key switch 108
0x7E is the scan code for key switch 106
0x5F is the scan code for key switch 107
```

Whenever keys 108 and 109 are pressed within 50 milliseconds of each other, the scan code returned to the application is 0x1C.

Whenever keys 106 and 107 are pressed within 50 milliseconds of each other, the scan code returned to the application is 0x7E.

The filter time specified for both double key definitions in the example above is 50 milliseconds

USB System attached keyboard on Linux

When there is a USB System keyboard, you can not have a PS/2 keyboard plugged into the system. It might cause the USB Keyboard to malfunction.

OPOS configuration

Table 133. Settings for POS keyboard

Keyword	Type	Description	OPOS Gateway Support
Numlock	String	Initial state of Num Lock light. Valid values are: ON Illuminated (other value) Dark (default) Note: This setting cannot be modified with the Configuration tool.	No
NumlockOn	String	Initial state of Num Lock light. Overrides the Numlock setting. Valid values are: True Illuminated (other value) Dark (default)	Yes

Table 133. Settings for POS keyboard (continued)

Keyword	Type	Description	OPOS Gateway Support
NumlockEnabled	String	Whether the Num Lock key is enabled. Valid values are: True Enabled (other value) Disabled (default)	Yes
ScrolllockOn	String	Initial state of Scroll Lock light. Valid values are: True Illuminated (other value) Dark (default)	Yes
ScrolllockEnabled	String	Whether the Scroll Lock key is enabled. Valid values are: True Enabled (other value) Disabled (default)	Yes

Note: The settings above apply to the physical keyboard. Since one physical keyboard can contain multiple logical devices (MSR, keylock, Line display, POS keyboard), these settings are not stored with the normal service object settings, but are stored in a different location in the registry (HKLM\SOFTWARE\OLEforRetail\ServiceInfo).

Table 134. Service Object settings for POS keyboard

Keyword	Type	Description	OPOS Gateway Support
MapPosKeys	String	Filename of Key Map file. The default value is C:\POS\BIN\KBDKMAP.DAT.	Yes
MapKeyboardToOS	String	Whether key events from RS-485 keyboard are converted to Windows key events. Valid values are: True Enable conversion (other value) Disable conversion Note: This setting cannot be modified with the Configuration tool.	No
OnlineTimeout	String	Time (in milliseconds) to wait for device to come online. Note: This setting cannot be modified with the Configuration tool.	No

Additional OPOS information

Configuring the Alphanumeric Point of Sale keyboard

If you chose to install your IBM Alphanumeric Point-of-Sale (ANPOS) or Compact Alphanumeric Point-of-Sale (CANPOS) keyboard as the system keyboard, you should use the ANPOS utility program to:

1. Define double keys. These key switches can be doubled: 77, 78, 82, 87, 88, 90, 94, 95, 99, 100, 105 to 109, 112 to 123, 125 to 128.

2. Override the keyboard default values for the following settings:
 - Numeric keypad zero (key 94, 99)
 - Key click
 - POS LEDs initial setting

The ANPOS utility runs automatically at boot time. It uses the sample resource file, `aipsys.res`.

- On Windows, `aipsys.res` is located in the default install directory, `C:\POS`.
- On Linux systems, `aipsys.res` is located in the `/etc` directory.

Notes:

1. In the `aipsys.res` file, the keyboard resource names must be qualified with the application name, **aipanpos**, and the device name, **system**. For example:

```
aipanpos.system.keyboardClick: SOFT
aipanpos.system.doubleKey01: 77,82
aipanpos.system.doubleKey02: 90,95
```

See “Modifying device behavior (USB, RS-485 and PS/2 devices)” on page 51 for more information on using the resource file.

2. The ANPOS utility records any errors in the file, `aipanpos.log`.
 - On Windows systems, `aipanpos.log` is created in the default log directory, `C:\POS\LOG`.
 - On Linux systems, `aipanpos.log` is created in the `/var/log` directory.
3. For a USB system keyboard, the ANPOS utility is used only for:
 - Double key definition
 - LED setting (initial)
 - Key click setting

The POS LEDs and the key click setting are not supported for the USB System Keyboard.

4. Changes to the `aipsys.res` file will not take effect until the system is rebooted.

SureOne/SurePOS 100 keyboard

The keyboard on the SureOne is a standard PS/2 keyboard. IBM OPOS does not implement the UPOS POS keyboard specification for this keyboard.

Mapping POS keys

To configure the keyboard, perform the following steps:

1. Select a POS keyboard entry and click **Configure**. The keyboard configuration dialog is displayed (see Figure 21 on page 144).

POS Keyboard Device Properties

Device Type: POS Keyboard

Description: System Attached Keyboard

Device Name:

Slot (hex):

Port (hex):

Device (hex):

☐ Map Pos Keys

Num Lock/Scroll Lock Settings

- ☐ Num Lock Light Initially On
- ☐ Num Lock Key Enabled
- ☐ Scroll Lock Light Initially On
- ☐ Scroll Lock Key Enabled
- ☐ Typematic On

OK Cancel Edit Map File

Figure 21. Keyboard properties dialog

Note: There is a single entry for System Attached Keyboard. This entry can be used for both PS/2 and USB system keyboards. For a PS/2 system keyboard, the Slot value must be 0; for a USB system keyboard, the Slot value must be 8.

2. To configure POS keyboard mapping, select **Map Pos Keys** and click the **Edit Map File** button.

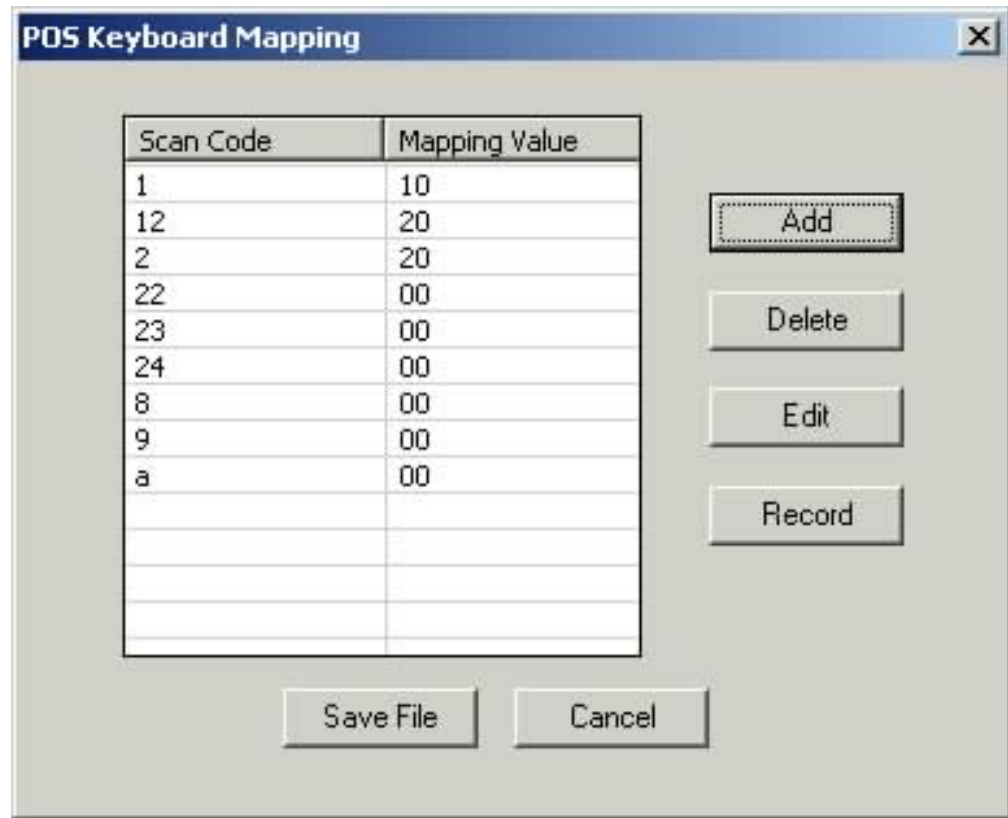

Figure 22. Sample POS keyboard mapping dialog

3. Select or clear the **Num Lock** and **Scroll Lock** to specify the initial settings you want for those keys.
4. To configure POS keyboard mapping, select **Map Pos Keys** and click the **Edit Map File** button. A filename field is displayed.
5. Enter the name of the POS keyboard mapping file. If the file exists, it is read and the values are displayed in the POS Keyboard Mapping window (see Figure 22).
6. Edit the mapping data.
 - To create an entry, click the **Add** button. A new entry is inserted at the top of the list. Enter the scan code and mapping value, then click **Save**.

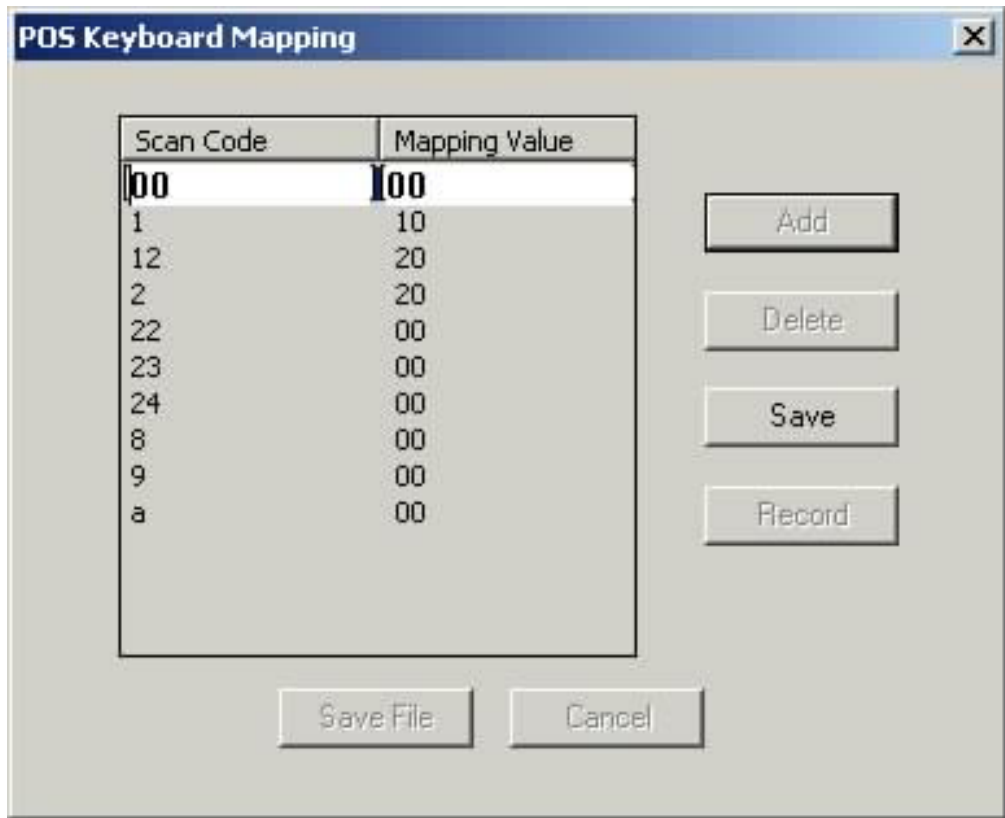

Figure 23. Example of adding a keyboard mapping entry

Note: Non-unique entries are allowed. If multiple entries with the same name exist, only the first entry is used.

- To modify an existing entry, select it and click the **Edit** button. Edit the values and click **Save**.

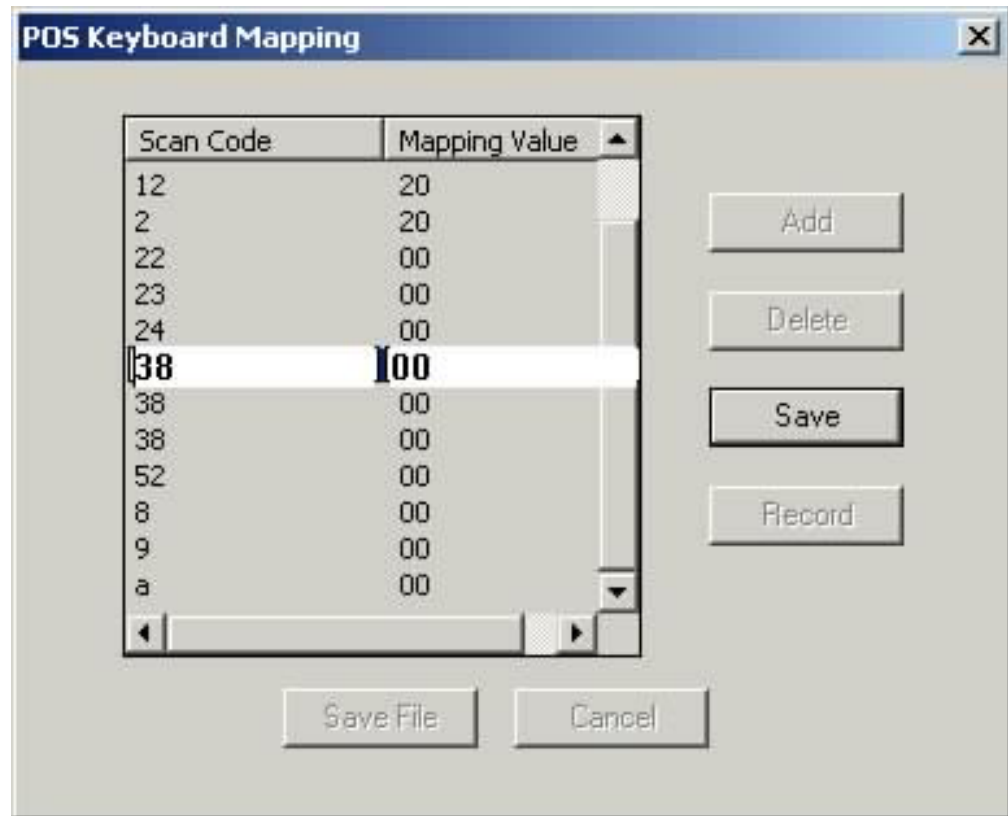

Figure 24. Editing a keyboard mapping entry

- To remove an entry, select it and click **Delete**.
 - To record the scan code of a key, click **Record** and press the key you want to record. An entry is inserted in the list with the scan code of the key you pressed. The dialog continues recording keys until you click the **Stop** button. Use the **Edit** menu to assign mapping values to the new entries.
7. When you have finished editing the keyboard mapping information, click **Save File**. The keyboard mapping file is saved.

Chapter 16. POS printer

Supported devices

Table 135. POS printer supported devices

Device	Connectivity	Comments
1. 4610 printer family	EIA-232	Includes SST (TM6/TF6/TM7/TF7), TI1, TI2, TI3, TI4, TI5, TI8, TI9, 2CR, 2NR, models
2. 4610 printer family	RS-485	Includes SST (TM6/TF6/TM7/TF7), TI1, TI2, TI3, TI4, TI5, TI8, TI9, 2CR, 2NR, models
3. 4610 printer family	USB	Includes SST (TM6/TF6/TM7/TF7), TI1, TI2, TI3, TI4, TI5, TI8, TI9, 2CR, 2NR, models
4. Model 3/4 printer family	RS-485	Includes 4, 4R, 4A
5. Model 3/4 printer family	USB	Printer Protocol Converter is used, include 4, 4R, 4A
6. 4689 printer family (impact)	RS-485	Includes 001, 002
7. 4689 printer family (thermal)	RS-485	Includes 301, 3G1, 3M1 (OPOS only)
8. 4689 printer family (thermal)	RS-485, USB	TD5
9. 4674 built-in printer	RS-485	TD5 integrated
10. SureOne printer (single-head impact)	EIA-232	OPOS only
11. SureOne and SurePOS 100 printer (thermal)	EIA-232	
12. SureOne printer (double-head impact)	EIA-232	OPOS only
13. SureOne printer (A04/A05 impact) and SurePOS 100 printer (impact)	EIA-232

In the following table, the specific models and stations to which escape sequences can be sent are listed in parentheses () after the type identifier. If none are specified, assume that all models and stations can accept the escape sequence. An application can also determine if an escape sequence can be sent to a particular printer station by calling the `validateData` method.

Table 142. POS printer escape sequences

Operation	Escape sequence	JavaPOS and OPOS Gateway	OPOS
Alternate color	ESC IrC	1, 2, 3 (TI3-5, Tx6-9) EC > 0x33 with Configured setting and correct paper (receipt)	1, 2, 3 (TI3-5, Tx6-9) EC > 0x33 with Configured setting and correct paper
Alternate color (Custom)	ESC I#rC	1, 2, 3 (TI3-5, Tx6-9) EC > 0x33 with Configured setting and correct paper (receipt)	1, 2, 3 (TI3-5, Tx6-9) EC > 0x33 with Configured setting and correct paper

JavaPOS configuration

AddLineFeed

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.AddLineFeed" type="Boolean" value="True"/>
```

This property determines whether to add a line feed to the end of any text sent in a `printNormal`, `printImmediate`, or `printTwoNormal` command when it does not contain a complete line.

A complete line is defined as:

- A line finishing with the line feed character, for example:
"Complete Line\n"
- A line finishing with an escape sequence that produces a line feed, for example:
"Complete Line ESC|101F"
- A line that completely fills the characters per line for the station in use, for example when `RecLineChars=20` and the print text is:
"Line of 20 chars7890"

Valid values are TRUE or FALSE. Default is TRUE.

Default8LPI

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.Default8LPI" type="String" value="False"/>
```

This property selects the font and the spacing needed to allows the user to print 8 lines per inch in the paper.

Valid values are TRUE and FALSE. Default is FALSE.

DefaultLargeFont

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.DefaultLargeFont" type="String" value="False"/>
```

This property selects the font with the largest size available on the printer, typically 12x24 dots on the receipt station and 7x9 dots on slip station.

Valid values are TRUE and FALSE. Default is FALSE.

DocAdvance

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.DocAdvance" type="String" value="50"/>
```

This property selects the number of motor steps to advance the paper on a Document Insert, from the top Document sensor to the first print position.

Valid values are 1 to 255. The default is 50.

Device support: 4610 TI-3/4/5/8/9.

DoubleHighAndDoubleWidelsQuad

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.DoubleHighAndDoubleWideIsQuad" type="String" value="OFF"/>
```

This property enables the conversion of the double wide (1bl2C) and double high (1bl3C) escape sequences to work as double wide and high (1bl4C).

Only supported on 4610 Tx5/Tx7 using a DBCS character set.

Valid values are ON and OFF. Default is OFF.

PDF417AspectHeight

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.PDF417AspectHeight" type="String" value="1"/>
```

This property selects the value for the aspect ratio height of the PDF417 barcode.

Valid values are 1 to 9. Default is 1.

PDF417AspectWidth

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.PDF417AspectWidth" type="String" value="2"/>
```

This property selects the value for the aspect ratio width of the PDF417 barcode.

Valid values are 1 to 9. Default is 2.

PDF417ECCLevel

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.PDF417ECCLevel" type="String" value="15"/>
```

A security level is appended to the printed barcode. This property enables scanners to read the bar code even if it has been torn, written on, or otherwise damaged.

You can select a level from 0 to 8 to apply error correction. At level 0, a damaged PDF417 cannot be read, but the damage can be detected. At levels 1 through 8, a PDF417 symbol can still be read, even when damaged. As the error correction level increases, more damage can occur to the symbol and still be read. For values of 9 to 400, the ECC level is assume as a percentage of the code words in the barcode.

Valid values are 0 to 400. Default is 15.

PDF417Truncation

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.PDF417Truncation" type="String" value="OFF"/>
```

This property enables the truncation of the PDF417 barcode. The truncated PDF generates a single width bar symbol to replace the right row indicator and stop pattern. When truncation is enabled, decode performance is slightly degraded in order to allow more data to fit in the image width.

Valid values are ON or OFF. Default is OFF.

ProportionalFontFixedWidth

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.ProportionalFontFixedWidth" type="String" value="20"/>
```

This property aligns proportional font characters on a fixed width. The value is expressed in printer dots. When this property is used, the proportional characters are treated as fixed characters.

Valid values are 8 to 32. Default is 20.

TranslateCharacter

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.TranslateCharacter.<AsciiHexCharNumber>" type="String" value="<NewHexCharacter>"/>
```

This property replaces the value of the *<AsciiHexCharNumber>* parameter with the value of the *<NewHexCharacter>* parameter. In the text that prints, all the characters that match the *AsciiHexCharNumber* are replaced by the new character.

Values accepted:

- *<AsciiHexCharNumber>*: 0x00 to 0xFF in Hexadecimal representation. This value represents the character number in the ASCII table to be replaced.
- *<NewHexCharacter>*: The character to be used in place of the ASCII Character.

Examples:

- Replace the character 29 0x1D (also known as group separator) with the character G 0x47:

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.TranslateCharacter.0x1D" type="String" value="0x47"/>
```

- Replace the character K 0x4B with the character N 0x4E;

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.TranslateCharacter.0x4B" type="String" value="0x4E"/>
```

SureOneVersion

```
<prop name="SureOneVersion" type="String" value="Standard"/>
```

SureOneVersion defines the character set to be used by the service implementation of the SureOne printer thermal station. No default value is set, so you must indicate a selection.

To determine which character set is currently installed in the printer, perform an offline test as follows:

1. Turn off the system.
2. Press and hold the paper feed button.
3. Turn on the system and wait for a beep.
4. Release the paper feed button.

Possible values for this property are shown in the following table.

Table 143. SureOne Version property values

Possible Value	Character set
"Standard"	character set 998 (equal to character set 437)
"ChineseTrad"	character set 950
"ChineseSimp"	character set 1381
"Korean"	character set 1361
"Japanese"	character set 932

JavaPOS DirectIO calls

There are several DirectIO commands for downloading fonts to the PosPrinter. The general syntax for DirectIO commands is:

Syntax directIO (command: *int32*, inout data: *int32*, inout obj: *object*): void { raises-exception }

The device must be claimed and enabled before invoking the directIO() method.

To access POS printer constants, import: `com.ibm.jpos.services.DirectIO`.

com.ibm.jpos.services.sdiibmprinter.DirectIOFontInfo Object

The DirectIOFontInfo object is used as input or output to the DirectIO functions for downloading fonts to IBM 4610 and 4689 printers. The DirectIOFontInfo object has the structure shown in Table 144 on page 167.

Table 144. DirectIOFontInfo object structure

Field Name	Type	Description
station	int	Print station identifier: <ul style="list-style-type: none"> • POSPrinterConst.PTR_S_RECEIPT • POSPrinterConst.PTR_S_SLIP
codepage	int	Font number. This can have a value of 1 – 6.
filename	string	Font file name. This must be a fully qualified path.

Specific usage of the DirectIOFontInfo object will be documented for each DirectIO function

DirectIO.GET_FONT_INFO_ID

Get Font information. Font information will be returned in the `com.ibm.jpos.services.sdiibmprinter.DirectIOFontInfo` object.

Table 145. DirectIO.GET_FONT_INFO_ID

Parameter	Description
command	<code>com.ibm.jpos.services.DirectIO.GET_FONT_INFO_ID</code>
data int[1]	<code>com.ibm.jpos.services.DirectIO.GET_FONT_INFO</code>
object	<code>com.ibm.jpos.services.sdiibmprinter.PrintGetDirectIOFontInfo</code>

Example:

```
int[] data = new int[] { DirectIO.GET_FONT_INFO };
DirectIOFontInfo directIOFontInfo =
    new DirectIOFontInfo();
printer.directIO(DirectIO.GET_FONT_INFO_ID,
    data,
    directIOFontInfo);
```

DirectIO.DOWNLOAD_PROP_FONT_ID

Download a proportional font to the IBM 4610 printer.

Table 146. DirectIO.DOWNLOAD_PROP_FONT_ID

Parameter	Description
command	<code>com.ibm.jpos.services.DirectIO.DOWNLOAD_PROP_FONT_ID</code>
data	Not used
object	<code>com.ibm.jpos.services.sdiibmprinter. DirectIOFontInfo.</code>

Remarks

Proportional fonts are supported only for the Receipt station. Valid values for the codepage field of `DirectIOFontInfo` are:

- 1: User-defined (UD) Code Page 1
- 3: UD Code Page 3

Notes:

1. Proportional font characters should have width and height between 8 and 32 inclusive.

- When using proportional fonts, there is not a way to accurately wrap lines since each character may have a different width. You should manage the Line width using the RecLineChars property

Example:

```
int[] data = new int[5];
DirectIOFontInfo directIOFontInfo = new DirectIOFontInfo( int station,
    int codepage, String fileName );
printer.directIO(DirectIO.DOWNLOAD_PROP_FONT_ID, data,
    directIOFontInfo);
```

After a successful font download, use the characterSet property to retrieve and set the desired code pages for font printing. Table 147 shows the usage of the user-defined character sets.

Table 147. User-defined (UD) character sets

Character set	Font attribute	CR station	DI station
101	Fixed	UD Code Page 1	UD CodePage 1
	Proportional	UD Code Page 1	N/A
102	Fixed	UD Code Page 2	N/A
	Proportional	N/A	N/A
103	Fixed	UD Code Page 3	UD CodePage 2
	Proportional	UD Code Page 3	N/A
104	Fixed	UD Code Page 4	N/A
	Proportional	N/A	N/A

Errors A UposException might be thrown when this method is invoked. Some possible values of the exception ErrorCode property are:

Table 148. UposException error codes

Value	Meaning
E_ILLEGAL	One of the following errors has occurred: <ul style="list-style-type: none"> This printer does not support proportional fonts downloading. This printer station does not allow proportional fonts. Incorrect font number. Incorrect font file type. Character size not valid.
E_EXIST	Memory sector already has a font, erase the memory sector before downloading a font.
E_NOEXIST	Font file was not found.

DirectIO.DOWNLOAD_NON_PROP_FONT_ID

Download non-proportional fonts to the IBM 4610 and 4689 printers.

Table 149. *DirectIO.DOWNLOAD_NON_PROP_FONT_ID*

Parameter	Description
command	com.ibm.jpos.services.DirectIO.DOWNLOAD_NON_PROP_FONT_ID
data	Not used
object	com.ibm.jpos.services.sdiibmprinter. DirectIOFontInfo

Remarks for IBM 4689 POS Printer

- The *station* field of DirectIOFontInfo is ignored; the downloaded font applies to both the receipt and journal station.
- The *codepage* field of DirectIOFontInfo is ignored.
- For the IBM 4689 POSPrinter, non-proportional font characters for receipt/journal stations must be either width 8 and height 12 or width 12 and height 24.

Remarks for IBM 4610 POS Printer

- Valid values for the station field of DirectIOFontInfo are:
 - PTR_S_RECEIPT: Customer Receipt (CR) station
 - PTR_S_SLIP: slip (Document Insert or DI) station
- Valid values for the codepage field of DirectIOFontInfo are:
 - 1 – 4: one of the four codepages for the customer receipt (CR) station
 - 5 – 6: one of the two codepages for slip (DI) station
- Non-proportional font characters for the receipt station must have a width between 8 and 16 inclusive and a height between 16 and 32 inclusive; those for the slip station should have a width and height between 7 and 16 inclusive.

Example:

```
int[] data = new int[5];
DirectIOFontInfo directIOFontInfo = new DirectIOFontInfo( int station, int codepage, String fileName );
printer.directIO(DirectIO.DOWNLOAD_NON_PROP_FONT_ID, data, directIOFontInfo);
```

After a successful font download, use the `characterSet` property to retrieve and set the desired code pages for font printing. Table 147 on page 168 shows the usage of the different user-defined character sets.

Errors A `UposException` might be thrown when this method is invoked. Some possible values of the exception `ErrorCode` property are listed in Table 150:

Table 150. *UposException* error codes

Value	Meaning
E_ILLEGAL	One of the following errors has occurred: <ul style="list-style-type: none"> • This printer does not support non-proportional fonts downloading. • This printer station does not allow non-proportional fonts. • Incorrect font number. • Incorrect font file type. • Character size not valid.

Table 150. *UposException* error codes (continued)

Value	Meaning
E_EXIST	Memory sector already has a font, erase the memory sector before downloading a font.
E_NOEXIST	Font file was not found.

DirectIO.DOWNLOAD_DBCS_FONT_ID

Download double-byte character sets (DBCS) and fonts to a double-byte printer.

Table 151. *DirectIO.DOWNLOAD_DBCS_FONT_ID*

Parameter	Description
command	com.ibm.jpos.services.DirectIO.DOWNLOAD_DBCS_FONT_ID
data	Not used
object	com.ibm.jpos.services.sdiibmprinter.DBCSFontInfo. Class that holds the filename of the DBCS font to download.

Example:

```
int[] data = new int[5];
DBCSFontInfo dbcsFontInfo = new DBCSFontInfo( String fileName );
printer.directIO(DirectIO.DOWNLOAD_DBCS_FONT_ID, data, dbcsFontInfo);
```

Errors A *UposException* might be thrown when this method is invoked. Some possible values of the exception *ErrorCode* property are listed in Table 152:

Table 152. *UposException* error codes

Value	Meaning
E_ILLEGAL	One of the following errors has occurred: <ul style="list-style-type: none"> • This printer does not support DBCS font downloads. • This printer station does not allow DBCS fonts. • Font file type is incorrect.
E_NOEXIST	Font file was not found.
E_FAILURE	Error reading from font file.

Additional JavaPOS information

The device service formats the entire print line internally. This includes left, center, and right alignments. It also inserts line breaks as necessary for long lines. This implementation approach does not allow a single print line to be built up from multiple `printNormal()` invocations.

The `*LineHeight` properties are not modifiable.

It is not possible to mix bold and normal printing on the Slip station of the 4610 printer. The line prints either all normal or all bold, depending on which escape sequence is used first.

4610 printer firmware update

The IBM JavaPOS driver has the ability to automatically update the printer firmware if the printer is attached to the terminal when the terminal boots. It does not have this ability if the printer is attached to the terminal after the terminal has booted and the operating system has loaded.

In addition, printer firmware can be update manually at any time.

Updated printer firmware update files can be downloaded from the IBM website at: <http://www.ibm.com/solutions/retail/store/support/>

1. Go to: www.ibm.com/solutions/retail/store/support
 - a. Under Peripherals, click **IBM SureMark Printer**.
 - b. Under Downloads, select the appropriate link for your printer model.
 - c. From the Search Results displayed, select **IBM 4610 SureMark Printer, Microcode Files for Firmware Update**.
 - d. Download the zip file for OP0S/JavaPOS. This zip files contains multiple firmware files; choose the correct one for your printer type.
2. Place the firmware file for your printer type into the correct folder.

Table 153.

Operating system	Location
Windows	\POS\IBM\IBMJPOS\FLASH\RS485
Linux	/opt/ibm/javapos/flash/rs485

3. Make sure the printer is attached and restart.

Each model of 4610 printer has a different firmware file associated with it.

Table 154. IBM 4610 printer firmware update

Printer Model	Firmware update filename
TI1, TI2	aip46mc.hex
TI3, TI4, TG3, TG4, TF6, TM7	aip46mch.hex
TI5, TM7, TF7	aip46mcd.hex
TI8	aip46ti8.hex
TI9	aip46ti8.hex
2CR, 2NR	aip46v4.hex

If the firmware file you select does not match the type of printer you have attached, the program will not update the printer.

Automatic update

When a terminal starts, JavaPOS will check the firmware version, and update if necessary, all devices (including printers) that are defined in the JPOS.XML file.

On Windows, the firmware update process is controlled by a batch file, \pos\ibmjpos\lib\flash.bat. The batch file is executed automatically at startup by an entry in the registry, HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Run.

Since the batch file controls the updating of firmware in all devices, not just printers, it is recommended that if you do not want the driver to automatically update the printer firmware then you should delete the firmware update files from the \pos\ibmjpos\flash\rs485 folder.

On Linux, the firmware update process is controlled by a shell script, /etc/init.d/flashdev.

Since the batch controls the updating of firmware in all devices, not just printers, it is recommended that if you do not want the driver to automatically update the printer firmware then you should delete the firmware update files from the /opt/ibm/javapos/flash/rs485 folder.

Manual update

Use this command line utility to manually update the firmware on an IBM 4610 printer. The syntax for the utility is:

```
java com.ibm.jpos.util.flash.AipFlash46s [param] [RS485_flash_filename]
```

where:

param:

-e: Update the printer microcode

RS485_flash_filename: The fully qualified path for the firmware file.

For example:

```
java com.ibm.jpos.util.flash.AipFlash46s -e /opt/ibm/javapos/flash/aipmch46.hex
```

4610 printer font download

A command utility is also provided to download fonts to the printer. The syntax for the utility is:

```
java com.ibm.jpos.util.font.AipFnt46s [param] [filename] [codepage]
```

where:

param:

- -f: fixed font file
- -p: proportional font file
- -d: dbcs font file (valid only for double-byte printers)

filename: The fully qualified pathname of the font file.

codepage:

- 1: CR (receipt) station Code Page 1
- 2: CR (receipt) station Code Page 2
- 3: CR (receipt) station Code Page 3
- 4: CR (receipt) station Code Page 4
- 5: DI (slip) station Code Page 1
- 6: DI (slip) station Code Page 2
- 0: DBCS font download

For example:

```
java com.ibm.jpos.util.font.AipFnt46s -p /opt/ibm/javapos/fonts/FontFile.fTH 3
```

Using POSPrinter's MICR device

When using a printer with an integrated MICR, it is possible for a multi-threaded application to attempt to talk to both devices at the same time. Unpredictable results can occur. Such applications should provide a locking mechanism to ensure that only one thread at a time talks to these devices.

Handling invalid characters

The first 31 ASCII characters are non-printable. The POSPrinter handles these as strings and prints the hexadecimal value of the character in the string. Table 155 shows the values that the POSPrinter prints for these values.

Table 155. Handling invalid characters

Hex Value	Character	Also known as	JavaPOS print
0x00	NUL	Null	00
0x01	SOH	Start of Heading	01
0x02	STX	Start of Text	02
0x03	ETX	End of Text	03
0x04	EOT	End of Transmission	04
0x05	ENQ	Enquiry	05
0x06	ACK	Acknowledge	06
0x07	BEL	Bell	07
0x08	BS	Backspace	08
0x09	Tab	Horizontal Tab	*
0x0A	LF	NL line feed, New Line	*
0x0B	VT	Vertical Tab	0B
0x0C	FF	NP form feed, New Page	0C
0x0D	CR	Carriage Return	*
0x0E	SO	Shift Out	0E
0x0F	SI	Shift In	0F
0x10	DLE	Data Link Escape	10
0x11	DC1	Device Control 1	11
0x12	DC2	Device Control 2	12
0x13	DC3	Device Control 3	13
0x14	DC4	Device Control 4	14
0x15	NAK	Negative Acknowledge	15
0x16	SYN	Synchronous Idle	16
0x17	ETB	End of Transmission Block	17
0x18	CAN	Cancel	18
0x19	EM	End of Medium	19
0x1A	SUB	Substitute	1A
0x1B	ESC	Escape	*

Table 155. Handling invalid characters (continued)

Hex Value	Character	Also known as	JavaPOS print
0x1C	FS	File Separator	1C
0x1D	GS	Group Separator	1D
0x1E	RS	Record Separator	1E
0x1F	US	Unit Separator	1F

* These values are processed by the POSPrinter.

Escape sequence handling

- The Fire Stamp escape sequence is supported on the 4610 printers. JavaPOS uses the bitmap downloaded as bitmap #1 for the stamp.
- Handling of invalid, unrecognized, or illegal value escape sequences is performed as follows:
 - Sequences that do not start with `esc|` are passed to the printer unmodified. In this case, `validateData()` returns `JPOS_E_FAILURE`.
 - Sequences that start with `esc|` but are not valid JavaPOS sequences are passed through unmodified. In this case `validateData()` returns `JPOS_E_FAILURE`.
 - Sequences that specify a function not supported by the printer are ignored. Note that they are *not* passed to the printer. The `validateData()` would return `JPOS_E_FAILURE`.
 - Sequences that include a number that is considered invalid (such as less than 0, or in the case where the number represents a percentage, greater than 100), the device service chooses a number to use. This is an interpretation of the `validateData` method in the case when `JPOS_E_ILLEGAL` is returned. The specification states that the service can select valid alternatives. In this case `validateData()` would return `JPOS_E_ILLEGAL`.

Line wrapping on the slip station using `rotatePrint method(PTR_RP_LEFT90)`

The hardware cannot determine the width of the slip station paper when print is rotated 90 degrees left; it is not possible to perform automatic wrapping in this case. Applications should not assume the printer service provides automatic wrapping before reaching the edge of the paper while in this mode. Set the `SlpLineChars` value property to a value that causes the print lines to wrap correctly for your document length.

Where printing is rotated 90 degrees on the slip station, only the following escape sequences are supported:

- Top and bottom log
- Double wide
- Left, center, and right alignment

Note: The 4610 hardware is not able to print characters from a font with a size of 16 x 16 dots on the slip station (document station) while in rotate mode.

Bitmap printing

To use `setBitmap` and `printBitmap` in a non-graphics environment on Linux, the following parameter must be passed to java:

```
java -Djava.awt.headless=true
```

- The methods `printBitmap` and `setBitmap` support JPEG and GIF file formats. Uncompressed Windows bitmaps (.BMP) up to 8 bits per pixel are also supported.
- If the bitmap width exceeds the `RecLineWidth` or `SlpLineWidth`, an exception is thrown with `ErrorCodeExtended = EPTR_TOOBIG`.

Table 156. Bitmap printing

Type of printer	Station	Method	Property	Max height	Size
4610 TI 3/4/5	receipt	<code>printBitmap()</code>	<code>RecLineWidth</code>	None	None
4610 TI 3/4/5	receipt	<code>setBitmap()</code>	<code>RecLineWidth</code>	2040	w*h/8<8K
4610 TI 3/4/5	slip	<code>printBitmap()</code>	<code>SlpLineWidth</code>	None	None
4610 TI 3/4/5	slip	<code>setBitmap()</code>	<code>SlpLineWidth</code>	40	w*h/8<8K

Note: `printBitmap()` has no height maximum because the bitmap is divided into horizontal slices. The height is physically limited on the slip station to the length of the paper.

Bitmap quality

UPOS standard has defined the `RecLetterQuality` and `SlpLetterQuality` properties to control the bitmap and text quality. Prior to IBM UnifiedPOS release 1.9.2, IBM drivers supported High Quality bitmap printing only.

For IBM UnifiedPOS 1.9.2 and later the driver follows the UPOS specification. When the `LetterQuality` property is false the bitmap will be printed in low quality/high speed mode, and when it is true, the bitmap will be printed in high quality mode.

If you want to force bitmaps to always print in high quality mode, you must add the following property in the POSPrinter's `JposEntry`:

```
<prop name="com.ibm.jpos.sdi.config.POSPrinter.BitmapLetterQuality" type="Boolean" value="true"/>
```

Values accepted:

True Use high quality mode always.

False (default)

Use UPOS `RecLetterQuality`/`SlpLetterQuality` setting to control the bitmap quality.

Device support:

4610 TI-3/4/5/8/9 TM/F 6/7

Supported since:

UPOS 1.9.5

Color support

Two-color printing is supported on the 4610 Models TI3, TI4, TI5, TI6, TI8, and TI9 printers that have a microcode EC level of 33 or greater. To enable color printing the JavaPOS configuration entry for the printer must be modified to have the following property:

```
<prop name="colorMode" type="Integer" value="2"/>
```

Any value other than 2 defaults to single color. Color mode should be configured only if color printing is used, because enabling the feature slows down the printer, whether or not color printing is performed.

Check flipping support

While the drivers still support the DirectIO.FLIP_CHECK_ID, the preferred method to flip the check is to use the POSPrinter method:

```
changePrintSide( )
```

PageMode support

JavaPOS supports IBM PageMode on Receipt Station only. When in PageMode, use of transactionPrint and rotatePrint are prohibited and will cause an exception to be thrown. When horizontalPosition or verticalPosition is set in PageMode, if the value set is not supported by the printer, the UPOS driver adjusts the value to the closest supported value.

PageMode properties (default)

- AfterOpen (no station):
 - PageModeArea = ""
 - PageModePrintArea = ""
 - PageModeHorizontalPosition = 0
 - PageModeVertical Position = 0
 - PageModePrintDirection = 0
 - PageModeStation = 0
- After setting a valid station:
 - PageModeArea = "576,800" ("576,1250" for Tx8/Tx9)
 - PageModePrintArea = "0,0,0,0"
 - PageModePrintDirection = PTR_PD_LEFT_TO_RIGHT
- After entering PageMode:
 - PageModePrintArea = "0,0,576,800" ("0,0,576,1250" for Tx8/Tx9).
- Setting the PrintDirection: Property may change PageModeHorizontalPosition and PageModeVerticalPostion.
- If the Vertical or Horizontal Position property values are not supported, then they will be set to the closest supported value. If the values are outside of the area described by PageModePrintArea, the driver sets these values to the size of the area described by PageModePrintArea.

Note: The vertical and horizontal position properties must be set before sending any print command. If you set the vertical position near the top edge, then text, bitmaps, and barcodes do not display because they are beyond the PageMode area. Set the vertical position to be greater than the vertical dimension of the image to print.

Several examples below illustrate the use of PageMode printing.

Example: Not specifying the PageMode Vertical Position/PageMode Horizontal Position results in partial image printing.

Code:

```
printer.setPageModeStation(POSPrinterConst.PTR_S_RECEIPT);
printer.setPageModeArea("0,0,576,1250");
printer.pageModePrint(jpos.POSPrinterConst.PTR_PM_PAGE_MODE);
printer.printBitmap(POSPrinterConst.PTR_S_RECEIPT,"logo.bmp";
    POSPrinterConst.PTR_BM_ASIS;
    POSPrinterConst.PTR_PM_CENTER);
printer.pageModePrint(jpos.POSPrinterConst.PTR_PM_NORMAL);
```

Figure 25. Partial image, no position setting

In the next example the printing is correct, with position properties set.

Example:

This example illustrates how to print a bitmap and a barcode correctly.

Code:

```
printer.setPageModeStation(POSPrinterConst.PTR_S_RECEIPT);
printer.setPageModePrintArea("0,0,576,400");
printer.pageModePrint(POSPrinterConst.PTR_PM_PAGE_MODE);
printer.setPageModeHorizontalPosition(0);
printer.setPageModeVerticalPosition(150);
printer.printBitmap( POSPrinterConst.PTR_S_RECEIPT,"logo.bmp",
    POSPrinterConst.PTR_BM_CENTER;
    POSPrinterConst.PTR_BM_ASIS);
printer.setPageModeHorizontalPosition(0);
printer.setPageModeVerticalPosition(300);
printer.printBarCode( POSPrinterConst.PTR_S_RECEIPT,"01234567",
    108,
    POSPrinterConst.PTR_BCS_CODE39,
    100, 200,
    POSPrinterConst.PTR_BC_CENTER;
    POSPrinterConst.PTR_BM_CENTER);
printer.pageModePrint(jpos.POSPrinterConst.PTR_BC_TEXT_BELOW;
```

Figure 26. Setting position properties for printing

Example: This is another example to illustrate how to print a bitmap.

Code:

```
printer.setPageModeStation(POSPrinterConst.PTR_S_RECEIPT);
printer.setPageModePrintArea("0,0,576,400");
printer.pageModePrint(POSPrinterConst.PTR_PM_PAGE_MODE);
printer.setPageModeHorizontalPosition(0);
printer.setPageModeVerticalPosition(150);
printer.printBitmap( POSPrinterConst.PTR_S_RECEIPT,"logo.bmp",
    POSPrinterConst.PTR_BM_CENTER;
    POSPrinterConst.PTR_BM_ASIS);
printer.pageModePrint(jposPOSPrinterConst.PTR_PM_NORMAL);
```

Figure 27. Setting image position for printing

Example: This example illustrates printing two lines of code in PageMode.

Code:

```
printer.setPageModeStation(POSPrinterConst.PTR_S_RECEIPT);
printer.setPageModePrintArea("0,0,576,400");
printer.pageModePrint(POSPrinterConst.PTR_PM_PAGE_MODE);
printer.printNormalText(POSPrinterConst.PTR_S_RECEIPT,"Text");
printer.printNormalText(POSPrinterConst.PTR_S_RECEIPT,"TextSecondLine");
printer.pageModePrint(POSPrinterConst.PTR_PM_NORMAL);
```

Printing text: Begin in the next line.

Figure 28. Printing text

When an image follows printed text, the image appears larger than when the image is printed alone, because the image begins in the next line of the text.

Code:

```
printer.setPageModeStation(POSPrinterConst.PTR_S_RECEIPT);
printer.setPageModePrintArea("0,0,576,400");
printer.pageModePrint(POSPrinterConst.PTR_PM_PAGE_MODE);
printer.printNormal( POSPrinterConst.PTR_S_RECEIPT,"TestingPrintText\n");
printer.printBitmap( POSPrinterConst.PTR_S_RECEIPT,"logo.bmp";
    POSPrinterConst.PTR_BM_CENTER;
    POSPrinterConst.PTR_BM_ASIS)
printer.pageModePrint(POSPrinterConst.PTR_PM_NORMAL);
```

Figure 29. Image follows text

Example:

When you print an image or barcode, the following text, image, or barcode prints next to the first.

Code:

```
printer.setPageModeStation(POSPrinterConst.PTR_S_RECEIPT);
printer.setPageModePrintArea("0,0,576,1250");
printer.pageModePrint(jpos.POSPrinterConst.PTR_PM_PAGE_MODE);
printer.printBarcode( POSPrinterConst.PTR_S_RECEIPT,"01234567", 108, 100,
    200, -1, -13);
printer.printBitmap( POSPrinterConst.PTR_S_RECEIPT,"logo.bmp",
    POSPrinterConst.PTR_BM_CENTER;
    POSPrinterConst.PTR_BM_ASIS);
printer.pageModePrint(POSPrinterConst.PTR_PM_NORMAL);
```

Figure 30. Second image beside first image

SetPrintArea: If an empty string buffer is sent as a parameter to PageModePrintArea, and a get is performed, the current PrintArea is returned. If non-numeric values are used, or the wrong number of values are entered, an exception is thrown. The driver adjusts values to the printer supported values as shown below:

```
if x < 0 then x = 0
if y < 0 then y = 0
if x > MaxWidth - MinWidth then
    x = MaxWidth - MinWidth
if y > MaxHeight - MinHeight
    then y = MaxHeight - MinHeight
if width < MinWidth then width = MinWidth
if height < MinHeight then height = MinHeight
if (width + x) > MaxWidth then width = MaxWidth - x
if (height + y) > MaxHeight then height = MaxHeight - y
```

The values for MinHeight, MaxHeight, MinWidth, and MaxWidth are as follows:

- MinHeight: 6
- MaxHeight: 800 (1250 for TI8/9)
- MinWidthPosition: 15
- MaxWidthPosition: 576

Examples:

- "0,-1,570,600" is adjusted to: "0,0, 570,600"
- "-1,0,800,5000" is adjusted to: "0,0,576,800"
for TI8/9, 0,0,576,1250
- "-1,6,200,8000" is adjusted to: "0,6,200,794"
for TI8/9, 0,6,200,1244
- "" gets the current value of PageModePrintArea

Function of the ErrorEvent with response of ER_CLEAR

When the application responds to an ErrorEvent with ER_CLEAR, it clears all outputs that have not been completed. For example:

1. open/ claim/ enable/ async=true
2. printNormal1
3. ErrorEvent on printNormal2
4. printNormal3
5. printNormal4
6. Respond ErrorEvent with ER_CLEAR
7. printNormal5

All the printNormal events up to, and including printNormal4, are cleared in step 6.

Concurrent MICR/full-image scan

The 4610 Model TI9 performs a concurrent MICR/full-image scan; however, when using a Model TI8 you must do separate passes.

Rec/SlpLineChars behavior

If the parameter for setRec/SlpLineChars method is negative, the method will throw a JPOS_E_ILLEGAL exception, if value is $0 \leq x \leq 10$ the Rec/SlpLineChars property will be set to 10.

OPOS configuration

Unsupported settings

The following settings are *unsupported and untested* options used to modify Service Object behavior only in very limited cases. Use them only when directed to do so by IBM Support.

Note: These settings cannot be modified with the Configuration tool.

Table 157. Service Object settings for RS-485/USB devices (POS printer), unsupported

Keyword	Type	Description	OPOS Gateway Support
AsyncBufferDelay	String	Number of milliseconds Async Thread will wait for Asynchronous request to be added to the queue before processing begins. The default value is 100.	No
AsyncBlockChase	String	Whether the printer driver waits for confirmation that the Asynchronous Block of data has been printed before continuing with print commands. Valid values are: ON Wait (default) OFF Do not wait	No
AsyncCarriageReturn	String	Whether a carriage return character is added after each print command in Async Mode. Valid values are: ON Add carriage return OFF Do not add carriage return (default)	No

Table 157. Service Object settings for RS-485/USB devices (POS printer), unsupported (continued)

Keyword	Type	Description	OPOS Gateway Support
SyncPrintWithoutWait	String	Whether the printer driver waits for confirmation that the synchronous data has been printed before continuing with print commands. Valid values are: False Wait (default) True Do not wait	No
ChineseDBCS	String	4610 only. Enables the use of bitmap printing to support DBCS characters. The character map is downloaded to the subsystem and converted to bitmap at print time. (No longer supported due to the availability of models TI5 and Tx7.) Valid values are: ON Enabled OFF Disabled (default)	No
StripDBLineFeeds	String	Whether carriage-return and line-feed characters are stripped out when in Chinese Double-Byte mode. Valid only when the ChineseDBCS setting is ON. Valid values are: ON Strip CR and LF OFF Do not strip (default)	No
OnlineTimeout	String	Time in milliseconds to wait for device to come online. Only applies to RS485/USB printers.	No
BarcodeScaleHeightCodabar	String	Value to scale height of Codabar barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleHeightCode128	String	Value to scale height of Code128 barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleHeightITF	String	Value to scale height of ITF barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleHeightJAN13	String	Value to scale height of JAN-13 barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleHeightJAN8	String	Value to scale height of JAN-8 barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleHeightUPCA	String	Value to scale height of UPC-A barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleHeightUPCE	String	Value to scale height of UPC-E barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleWidthCodabar	String	Value to scale width of Codabar barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleWidthCode128	String	Value to scale width of Code128 barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleWidthCode39	String	Value to scale width of Code39 barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleWidthITF	String	Value to scale width of ITF barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleWidthJAN13	String	Value to scale width of JAN-13 barcodes. Only applies to RS485/USB printers.	No

Table 157. Service Object settings for RS-485/USB devices (POS printer), unsupported (continued)

Keyword	Type	Description	OPOS Gateway Support
BarcodeScaleWidthJAN8	String	Value to scale width of JAN-8 barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleWidthUPCA	String	Value to scale width of UPC-A barcodes. Only applies to RS485/USB printers.	No
BarcodeScaleWidthUPCE	String	Value to scale width of UPC-E barcodes. Only applies to RS485/USB printers.	No
Default40CPL	String	Set the receipt to default to 40 characters per line. Does so by setting InterCharSpacingReceipt12Cpi to 2 dots. Valid values are TRUE and FALSE. Default is FALSE. Only applies to RS485/USB printers.	No
DocAdvance	String	Sets the number of motor steps from the top Document sensor to the first print position. Valid values are 1 to 256. Default is 50. Only applies to RS485/USB printers.	Yes
InterCharSpacingDocument12Cpi	String	Sets the number of printer dots between characters when the Slip station is set to 12 characters per inch. Only applies to RS485/USB printers.	No
InterCharSpacingDocument15Cpi	String	Sets the number of printer dots between characters when the Slip station is set to 15 characters per inch. Only applies to RS485/USB printers.	No
InterCharSpacingDocument17Cpi	String	Sets the number of printer dots between characters when the Slip station is set to 17 characters per inch. Only applies to RS485/USB printers.	No
InterCharSpacingDocument20Cpi	String	Sets the number of printer dots between characters when the Slip station is set to 20 characters per inch. Only applies to RS485/USB printers.	No
InterCharSpacingReceipt12Cpi	String	Sets the number of printer dots between characters when the Receipt station is set to 12 characters per inch. Only applies to RS485/USB printers.	No
InterCharSpacingReceipt15Cpi	String	Sets the number of printer dots between characters when the Receipt station is set to 15 characters per inch. Only applies to RS485/USB printers.	No
InterCharSpacingReceipt17Cpi	String	Sets the number of printer dots between characters when the Receipt station is set to 17 characters per inch. Only applies to RS485/USB printers.	No
InterCharSpacingReceipt20Cpi	String	Sets the number of printer dots between characters when the Receipt station is set to 20 characters per inch. Only applies to RS485/USB printers.	No
LegacyDIMode	String	In prior releases, the OPOS_SUE_PTR_PAPEROK was fired once the document was registered, not merely detected by the front sensor. This setting allows customers to maintain this behavior. Valid values are TRUE and FALSE. Default is FALSE. TRUE means the OPOS_SUE_PTR_PAPEROK event is fired when the paper is detected at the front sensor. FALSE means the OPOS_SUE_PTR_PAPEROK event is fired when the paper is registered. Only applies to RS485/USB printers.	No

Table 157. Service Object settings for RS-485/USB devices (POS printer), unsupported (continued)

Keyword	Type	Description	OPOS Gateway Support
LegacyRS232Mode	String	In prior releases, the OPOS_SUE_PTR_NEAREND was fired when the document was detected only by the Ready and Front Sensor. This behavior was specific to the RS232 printer. Valid values are TRUE and FALSE. Default is FALSE. TRUE means the OPOS_SUE_PTR_NEAREND event is fired when the document is positioned in the front. FALSE means that OPOS_SUE_PTR_NEAREND event is not fired when the document is positioned in the front. Only applies to RS485/USB printers.	No
RecLineSpacing	String	Sets the default RecLineSpacing. Default is 34 (dots). Only applies to RS485/USB printers.	No
TransactionHold	String	Determines whether to hold/release the buffer internal to the printer during a TransactionPrint to the receipt. Valid values are TRUE and FALSE. Default is FALSE. Only applies to RS485/USB printers.	No
BitmapResolution	String	Indicates bitmap resolution on SurePOS 100/SureOne thermal printers. Valid values are 0 (low) and 9 (high) only. Default is 9.	No

Supported settings

Note: Not all of these settings can be modified with the Configuration tool.

Table 158. Service Object settings for EIA-232 attached SureMark devices (POS printer), supported

Keyword	Type	Description	OPOS Gateway Support
BitmapSpeedQuality	String	Speeds up bitmap downloading. Valid values are: False (default) True	No

Table 158. Service Object settings for EIA-232 attached SureMark devices (POS printer), supported (continued)

Keyword	Type	Description	OPOS Gateway Support
PDF417ECCLevel	String	<p>This property adds on the barcode a printed security level to enable scanners to read the bar code even if it has been torn, written on, or damaged in other ways. Error correction is specified by selecting a level from 0 to 8. At level 0, a damaged PDF417 cannot be read, but the damage can be detected. At levels 1 through 8, a PDF417 symbol can still be read, even when damaged. As the error correction level increases, more damage can occur to the symbol and still be read. For values of 9 to 400, the ECC level is assumed as a percentage of the code words in the barcode.</p> <p>Valid values: 0 to 400 in decimal representation.</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. This setting cannot be modified with the Configuration tool. 2. If no property is found, the default value is used: 15. 3. If the property is present but the value is not a number, the default value is used. 4. If the property is present but it has a value not in the range of values, it is matched to the closest parameter. 	Yes
PDF417AspectHeight	String	<p>This property selects the value for the aspect ratio height of the PDF417 barcode.</p> <p>Valid values: 1 to 9 in decimal representation.</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. This setting cannot be modified with the Configuration tool. 2. If no property is found, the default value is used: 1. 3. If the property is present but the value is not a number, the default value is used. 4. If the property is present but it has a value not in the range of values, it is matched to the closest parameter. 	Yes
PDF417AspectWidth	String	<p>This property selects the value for the aspect ratio width of the PDF417 barcode.</p> <p>Valid values: 1 to 9 in decimal representation.</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. This setting cannot be modified with the Configuration tool. 2. If no property is found, the default value is used: 2. 3. If the property is present but the value is not a number, the default value is used. 4. If the property is present but it has a value not in the range of values, it is matched to the closest parameter. 	Yes

Table 158. Service Object settings for EIA-232 attached SureMark devices (POS printer), supported (continued)

Keyword	Type	Description	OPOS Gateway Support
PDF417Truncation	String	<p>This property enables the truncation of the PDF417 barcode. Truncated PDF generates a symbol with the right row indicator and stop pattern replaced by a single width bar. There is a slight degradation in decode performance if truncation is enabled, which allows more data to fit in the image width. Valid values:</p> <p>ON (Enables truncation)</p> <p>Other value (Disables truncation, default)</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. This setting cannot be modified with the Configuration tool. 2. If no property is found, the default value is used. 	Yes
TranslateCharacter	Key	<p>Key values for translating one character to another. This is a key folder in the Registry in which entries that can replace the characters are stored. See TranslateCharacter\<X> for details about the entries that can be added inside this key.</p> <p>Note: This setting cannot be modified with the configuration tool.</p>	Yes
TranslateCharacter\<X>	String	<p>The one-byte hexadecimal value of the character to translate. For example, when you translate char "E" (0x45) to char "e" (0x65), the entry name is 45 and the entry value is 65. Write <i>only</i> the number in the entry.</p> <p>Note: This setting cannot be modified with the Configuration tool.</p>	Yes
CapRec2Color	String	<p>When color thermal paper is loaded in the SureMark printer, the valid values are:</p> <p>N Color paper not loaded (default)</p> <p>Y Color paper loaded</p>	Yes
ProportionalFontFixedWidth	String	<p>This property aligns proportional font characters on a fixed width. The value is expressed in printer dots. If this property is used the proportional characters are treated as fixed characters.</p> <p>Valid values: 8 to 32 in decimal representation.</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. This setting cannot be modified with the Configuration tool. 2. If no property is found, the default value is used: 20. 3. If the property is present, but the value is not a number, the default value is used. 4. If the property is present but it has a value not in the range of values, it is matched to the closest parameter. 	Yes

Table 158. Service Object settings for EIA-232 attached SureMark devices (POS printer), supported (continued)

Keyword	Type	Description	OPOS Gateway Support
PrinterModel	String	4689 only. Specifies the model of 4689 printer in use. Valid values are: <ul style="list-style-type: none"> • 4689-TD5 • 4689-3M1 • 4689-3G1 • 4689-TD5(integrated into 4674) • 4689-TG1(integrated into 4674) 	No
PersistentBitmaps	String	Enables storage of downloaded bitmap in the registry. Valid values are: <p>False Disabled (default). Service Object must download the bitmap each time the driver is opened.</p> <p>True Enabled. Downloaded bitmap is stored in the registry.</p> <p>Note: This setting cannot be modified with the Configuration tool.</p>	No
ErrorOnCoverOpen	String	Fired Error Event when cover is opened. Valid values are: <p>False Do not fire event (default)</p> <p>True Fire event</p> <p>Note: This setting cannot be modified with the Configuration tool.</p>	No
LegacyRS-232Mode	String	Processes same as prior to release 1.7.1. Valid values are: <p>OFF Default</p> <p>ON</p> <p>Note: This setting cannot be modified with the Configuration tool.</p>	No
LegacyDIMode	String	Processes DI same as prior to release 1.7.1. Valid values are: <p>OFF Default</p> <p>ON</p> <p>Note: This setting cannot be modified with the Configuration tool.</p>	No
OnlineTimeout	String	Time (in milliseconds) to wait for device to come online. Note: This setting cannot be modified with the Configuration tool.	No
OEMEmulation	String	Emulate OEM printer. Valid values are: <p>False (default)</p> <p>True</p>	No

Table 158. Service Object settings for EIA-232 attached SureMark devices (POS printer), supported (continued)

Keyword	Type	Description	OPOS Gateway Support
DefaultLargeFont	String	<p>This property selects the font with the largest size available on the printer, typically: 12 dots x 24 dots on Receipt and 7 half dots x 9 dots on SLIP. The selection is made when the device is OPENed.</p> <p>Valid values are:</p> <p>True</p> <p>False (default)</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. If no property is found, the default value is used: False. 2. If the property is present but it has an invalid value, then the default value is used. 	Yes
Default8LPI	String	<p>This property selects the spacing needed to allow the user to print 8 lines per inch on the paper.</p> <p>Valid values are:</p> <p>True</p> <p>False (default)</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. If no property is found, the default value is used. 2. If the property is present but it has an invalid value, then the default value is used. 	Yes
DocAdvance	String	<p>This property selects the number of motor steps to advance the paper on a Document Insert, from the top Document sensor to the first print position. Valid values: 1 to 255 in decimal representation.</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. This setting cannot be modified with the Configuration tool. 2. If no property is found, the default value is used: 50 (0x32). 3. If the property is present but the value is not a number, the default value is used. 4. If the property is present but it has a value not in the range of values, it is matched to the closest parameter. 5. Applies only to EIA-232 4610 printer. 	Yes

Table 159. Service object settings for SureOne devices (POS printer)

Keyword	Type	Description	OPOS Gateway Support
ThermalPrinter	String	Whether printer is impact or thermal. Valid values are: 0 Impact (default) 1 Thermal Note: Applies only to SureOne/SurePOS 100.	No
NarrowPaper	String	Whether paper is normal or narrow width. Valid values are: 0 Normal (default) 1 Narrow Note: Applies only to SureOne/SurePOS 100.	No
BitmapResolution	String	Bitmap resolution (for thermal printers only). Valid values are: 0 Low resolution (default) 9 High resolution Note: Applies only to SureOne/SurePOS 100.	No
PrinterModel	String	Specifies the model of printer in use. Valid values are: 0 Single-head impact (default) 1 Double-head impact 2 Thermal 3 A04/A05 impact Note: Applies only to SureOne/SurePOS 100.	No

OPOS DirectIO calls

Flash memory

All OPOS access to the Flash memory in the SureMark printer is through DirectIO() methods. The following DirectIO commands are added to the SureMark OPOS Service Object for the RS-485, USB and EIA-232 interfaces.

Table 160. DirectIO commands

Command	Long*	BSTR*	Comment
FLASH_MEMORY	N/A	String	<p>Write a record to flash memory. The format of the data to be written is r1.r2.r3.r4.n1.n2.data, where r1,r2, r3 and r4 are 32-bit numbers, in little-endian format, indicating the record number and n1 and n2 are 16-bit numbers, in little-endian format, indicating the number of data bytes to be written.</p> <p>When AsyncMode is set to true, the data is queued to the printer. Any error associated with this write causes a DirectIoEvent. If the write is successful, an OutputCompleteEvent is fired.</p> <p>If the record number is beyond the maximum records supported, pData is set to DIRECTIO_FLASH_ERROR_REASON_OUT_OF_RANGE (0x2F).</p> <p>If the record number is beyond the record length or is longer than the set record length or the maximum supported, pData is set to DIRECTIO_FLASH_ERROR_REASON_TOO_LONG (0x2D).</p> <p>When AsyncMode is false, this command waits until the memory is written to the printer (or an error condition occurs) before returning control to the application. If there is an error, ResultCodeExtended is set with either of the two values, or with the POSSWIN internal error.</p>

Table 160. DirectIO commands (continued)

Command	Long*	BSTR*	Comment
READ_FLASH_MEMORY (0x11)	N/A	String	<p>Read the flash memory record number. The format of the data to be written is r1.r2.r3.r4.n1.n2.data, where r1, r2, r3 and r4 are 32-bit numbers, in little-endian format, indicating the record number.</p> <p>When AsyncMode is set to true, the data is returned to the application by a DirectIOEvent with the EventNumber set to DIRECTIO_FLASH_DATA (0xFD). Any error associated with this read causes a DirectIOEvent with the EventNumber set to DIRECTIO_FLASH_ERROR (0xFE).</p> <p>If the record number is beyond the maximum records supported, pData is set to DIRECTIO_FLASH_ERROR_REASON_OUT_OF_RANGE (0x2F).</p> <p>If there is not response to the request within 5 seconds, pData is set to DIRECTIO_FLASH_ERROR_REASON_CMD_TIMEOUT (0x2E).</p> <p>If the record number is beyond the record length or is longer than the set record length or the maximum supported, pData is set to DIRECTIO_FLASH_ERROR_REASON_TOO_LONG (0x2D).</p> <p>When AsyncMode is false, this command waits until the memory is read from the printer (or an error condition) before returning the data to the application. The record is returned in the pString field of the DirectIO call. If there is an error, ResultCodeExtended is set with any one of these three values, or with the POSSWIN internal error.</p>
QUERY_FLASH_SIZE (0x12)	Data	N/A	<p>Returns the size of memory.</p> <p>The value is returned in the pData field of the DirectIO call.</p>
QUERY_MAXIMUM_RECORDS (0x13)	Data	N/A	<p>Returns the maximum number of records. This number is calculated by dividing the maximum printer memory by the application requested memory size.</p> <p>The value is returned in the pData field of the DirectIO call.</p>
SET_RECORD_LENGTH (0x14)	Data	N/A	<p>Specifies the number of bytes for each record written to the flash memory. The flash memory should be erased after changing the record size. The OPOS drivers do not automatically erase the memory.</p>
ERASE_FLASH_MEMORY (0x15)	N/A	N/A	<p>Erases all data stored in the flash memory on the 4610 printer.</p>
GET_RECORD_LENGTH (0x16)	Data	N/A	<p>Retrieves the number of bytes for each record written to the flash memory.</p> <p>The value is zero if it has not yet been set after an erase.</p>

Check scanning support

DirectIO commands are available to support check scanning on the SureMark™ T18/9 POS Printers. Table 161 lists the check scanning supported commands for DirectIO.

Table 161. Check scanning supported commands for DirectIO

Command	LONG *	BSTR *	Comments
CS_MICR_READ_WITH_SCAN (201)	Data	N/A	This command is used to configure the printer to perform a MICR read in the same pass with a check scan. Set Data to CS_ENABLE_READ(1) to enable read with scan, CS_DISABLE_READ(0) to disable. To request the current value set Data to GET_VALUE(-1), which will return the current value in Data. The default is 0 (disabled). A return code of OPOS_E_ILLEGAL is returned if the value is not valid. A return code of OPOS_E_FAILURE is returned if the SureMark Printer not equipped with a document scanner.
CS_COMPRESSION_FORMAT (202)	data	N/A	<p>This command is used to set the compression format when an image is stored or retrieved. Format of an image once stored does not change. To request the current value, set Data to GET_VALUE(-1); the current value will be returned in Data. The default is CS_CF_TIFF_COMP(0). A return code of OPOS_E_ILLEGAL is returned if the value is not valid. A return code of OPOS_E_FAILURE is returned if the SureMark Printer is not equipped with a document scanner. The possible values for Data are:</p> <p>CS_CF_TIFF_COMP(0) TIFF-CCIT-Group 4 compression</p> <p>CS_CF_JPEG(1) JPEG compression</p> <p>CS_CF_BMP(2) BMP (uncompressed)</p> <p>CS_CF_NONE (3) No compression (gray scale)</p> <p>CS_CF_TIFF(4) TIFF file, no compression (gray scale)</p>
CS_SCAN_DOCUMENT (203)	N/A	String	This command is used to start the scan of the document present in the document insert station. A return code of OPOS_E_FAILURE is returned if the SureMark Printer is not equipped with document scanner or if scan is not successful. String parameter contains the width and length of the scanned document separated by a comma if the scan is successful.

Table 161. Check scanning supported commands for DirectIO (continued)

Command	LONG *	BSTR *	Comments
CS_STORE_DOCUMENT (204)	Data	String	<p>This command is used to store all or part of the last document scanned. The document image will be stored in the format specified by compression format. The value in Data sets the area or areas to store. Upon return, Data will contain the first index of the storage area in the printer and String will contain the tag data string and the area dimensions to store. A return code of OPOS_E_FAILURE is returned if the SureMark Printer is not equipped with document scanner or if store is not successful. Possible Data values:</p> <p>CS_STORE_ENTIRE(0) store entire image</p> <p>CS_STORE_PERSONAL(1) store personal check template</p> <p>CS_STORE_BUSINESS(2) store business check template</p> <p>CS_STORE_UD(3) store using user defined values</p> <p>For String, see "Storage string remarks" for additional information.</p>
CS_RETRIEVE_BY_INDEX (205)	Data	String	<p>This command retrieves the image stored at the location specified in Data and stores the image in String. If Data is zero, then the last scanned image is retrieved. The String data format is set based on BinaryConversion. All data starts with a header. A return code of OPOS_E_FAILURE is returned if the SureMark Printer is not equipped with a document scanner, or if the retrieve is not successful.</p>
CS_RETRIEVE_BY_TAGNAME (206)	N/A	String	<p>This command retrieves the image stored with the tagData value specified in String and stores it in String. The String data format is set based on OPOS-specific property. A return code of OPOS_E_ILLEGAL is returned if the string is empty. A return code of OPOS_E_FAILURE is returned if the SureMark Printer is not equipped with document scanner or if the retrieve is not successful. Image is marked as read after retrieval.</p>
CS_ERASE_STORAGE (207)	N/A	N/A	<p>This command erases all stored images from the printer storage. A return code of OPOS_E_FAILURE is returned if the SureMark Printer is not equipped with document scanner or if erase store is not successful.</p>

Storage string remarks

The String parameter for the CS_STORE_DOCUMENT command contains the area or areas to be stored from the last scanned image, in the format:

x0,y0,dx0,dy0,x1,y1,dx1,dy1,x2,y2,dx2,dy2,x3,y3,dx3,dy3,tagdata

where:

x0, y0 2 bytes each, top-left corner of area to be stored

dx0, dy0

2 bytes each, offset in the x and y direction respectively, to be stored

x1, x2, x3, y1, y2, y3, dx1, dx2, dx3, dy1, dy2, dy3

2 bytes each, corresponding offset in the x and y direction to define size of sub-block to store

tagdata

ASCII string null-terminated character, maximum 100 characters

String is interpreted based on the OPOS-specific property. All offsets are based upon the UPOS MapMode. If MapMode is set to PTR_MM_DOTS, 0.01 inches is used.

When storing an image, you can elect to store the entire image within the defined area, or just selected blocks within the defined area. Saving selected blocks reduces storage use, but keeps related data together. When storing multiple blocks of data, each block gets a unique storage location. A byte in the header message indicates that the block is part of a group. The first half-byte indicates which block of the group it is, the second half-byte indicates the number of blocks in the group. If the byte returned is X'14', then the block is the first of a group of four. All blocks contain header information, but only the first block in a group contains tag data. The storage method defines how the image should be stored.

CS_STORE_ENTIRE(0): All data defined within x0, y0, dx0, dy0 is stored; x1, x2, x3, y1, y2, y3, dx1, dx2, dx3, and dy1, dy2, dy3 should not be included.

CS_STORE_PERSONAL(1): A predefined template, based on a personal check is used to store the image. The area defined is the entire personal check, however only the name/address and the MICR blocks are saved; x0, x1, x2, x3, y0, y1, y2, y3, dx0, dx1, dx2, dx3, and dy0, dy1, dy2, dy3 should not be included.

CS_STORE_BUSINESS(2): A predefined template, based on a business check is used to store the image. The area defined is the entire business check, however only the name/address, and MICR blocks are saved; x0, x1, x2, x3, y0, y1, y2, y3, dx0, dx1, dx2, dx3, and dy0, dy1, dy2, dy3 should not be included.

CS_STORE_UD(3): This method allows the user to define sub-blocks of data to store. All command data (x0, x1, x2, x3, y0, y1, y2, y3, dx0, dx1, dx2, dx3, and dy0, dy1, dy2, dy3) must be sent. If fewer than four blocks of data are to be saved, the value of -1 must be sent for unused parameters.

The top-left corner of the scanned document is used as the point of reference (see Figure 31 on page 195). The xn command parameters are horizontal offsets from the left side of the scanned document. The yn parameters are vertical offsets from the top of the scanned document. The dxn and dyn parameters define the width and height, respectively, of the defined area or block.

Figure 31. Scanned image organization

Retrieve storage header

Each image retrieved starts with header information in the following format:

- Status: 1 byte
 - Bit 7, Image read; 1 = image has been read, 0 = image has not been read
 - Bits 6 - 0; Reserved
- Compression: 1 byte
 - Bits 7 - 3; Reserved
 - Bits 2 - 0; Algorithm used to compress image. See Compression Format.
- Size1: 4 bytes
 - Number of bytes in image, not including tag data.
- Size2: 4 bytes (x1, y1)
 - Width of image (x1) (in hundredths of inch increments), 2 bytes
 - Height of image (y1) (in hundredths of inch increments), 2 bytes
- Block position: 1 byte
 - Lower four bits indicate the number of blocks that were saved for the image.
 - Upper four bits represent the current block number.
- Future: 1 byte
 - Reserved
- Tag data:
 - ASCII data supplied by the application, terminated by a null string.

Page Mode printing

DirectIO commands are available to support Page Mode printing on the SureMark TI3, TI4, TI8, and TI9 POS Printer. The following table shows the Page Mode supported commands for DirectIO.

Table 162. Page Mode supported commands for DirectIO

Command	LONG *	BSTR *	Comments
PM_CLEAR_PRINT_AREA (101)	N/A	N/A	Clears the print area defined in the current PrintArea.
PM_PAGE_MODE_PRINT (102)	Data	N/A	<p>Data can be one of the following values:</p> <p>PM_PM_PAGEMODE (1) Enters Page Mode</p> <p>PM_PM_PRINTSAVE (2) Prints the current page and stays in page mode.</p> <p>PM_PM_NORMAL (3) Prints the current page and exits page mode.</p> <p>PM_PM_CANCEL (4) Clears the page area and exits page mode.</p> <p>When the page is printed, the area printed is always from the top of the page area to the end of the print area specified. The top cannot be cropped by using the print area.</p>
PM_HORIZONTAL_POSITION (103) PM_VERTICAL_POSITION (104)	N/A	N/A	<p>Sets or returns the position for the horizontal/vertical print for the currently selected PageModeStation. If the value sent in position 0 is GETVALUE(-1) the current position is returned. Anything other than GETVALUE attempts to set the position; the value that is set is returned in position 0. Horizontal and vertical position is set based on the print direction. Horizontal position is parallel to the print direction. Vertical position is perpendicular to the print direction.</p>
PM_PAGE_AREA (105)	N/A	String	Returns the Page area of the printer in the object for the currently selected PageModeStation. The format is "x,y", where x is the width (horizontal) and y is the length (vertical).
PM_PAGE_MODE_STATION (106)	Data	N/A	Sets or returns the current PageMode station using position 0 of the data int array. If the value sent in position 0 is GETVALUE(-1) the current station is returned. Anything other than GETVALUE attempts to set the station; the value that is set is returned in position 0.

Table 162. Page Mode supported commands for DirectIO (continued)

Command	LONG *	BSTR *	Comments
PM_PRINT_AREA (107)	N/A	String	Sets or returns the desired Print Area. If an empty StringBuffer is sent then a "get only" is emulated. Anything else attempts a set for the currently selected PageModeStation. The format is: x,y,dx,dy where: <ul style="list-style-type: none"> • x is the horizontal start position. • y is the vertical start position. • dx is the horizontal offset. • dy is the vertical offset.
PM_PRINT_DIRECTION (108)	value	N/A	Valid values for the currently selected PageModeStation are: GETVALUE (-1) - get only PM_PD_LEFTTORIGHT (1) PM_PD_BOTTOMTOTOP (2) PM_PD_RIGHTTOLEFT (3) PM_PD_TOPTOBOTTOM (4)

You must use the Page Mode commands PM_HORIZONTAL_POSITION and PM_VERTICAL_POSITION to align Bar Codes. The printBarCode method alignment parameters are ignored for bar codes printed in Page Mode.

DirectIO commands are also used to set/get properties and capabilities. All commands are indirectly get commands, for example if the HORIZONTALPOSITION is set to a value that is not supported, the data parameter is set to a value that is supported and the hardware is set to that value.

OPOS extended result codes

Table 163. Extended result codes

ExtendedResultCode	Name	Description
501	IBM_EPTR_IMAGE_SCAN_FAILED	Image failed to be scanned by the printer.
502	IBM_EPTR_IMAGE_RETRIEVE_FAILED	An error occurred while reading check image data from printer
503	IBM_EPTR_HOME_ERROR	The DI station print head is not in the home position. If opening/closing the DI station cover does not resolve the issue, call IBM and place a hardware service call.
504	IBM_EPTR_PAPER_LOAD_ERROR	A required document was not in the slip station when data was to be printed.
505	IBM_EPTR_PAPER_ERROR	A paper feed error occurred .
506	IBM_EPTR_UNRECOVERABLE_ERROR	Possible at startup if a firmware update corrupted the printer and the printer is running out of the boot sector. Should not happen on TI8/9 which does not update the firmware until after all the update data has been received.

Table 163. Extended result codes (continued)

ExtendedResultCode	Name	Description
507	IBM_EPTR_COMMAND_REJECT	The printer has rejected a command sent to it. The only time this is likely to occur is if the printer reset in the middle of sending logo data to the printer. When the printer is recovered and the first command is a continue data command containing the rest of the logo data, it will reject the data because it has not been setup to accept the starting logo data.
508	IBM_EPTR_COMMUNICATION_ERROR	Low-level RS-485 communication protocol error.
509	IBM_EPTR_NOT_RESPONDING	An error occurred communicating with the printer.
510	IBM_EPTR_RESCAN_REQUIRED	An error occurred scanning the document, and it must be scanned again. Should only occur on T19 printers, and only if the firmware level is less than ec69.
511	IBM_EPTR_PRINTER_RESET	The printer has reset itself. This is normally caused by the OS re-enumerating the USB bus and causing the printer to power cycle.
512	M_EPTR_NO_IMAGE_AVAILABLE	Check image failed to be read using RetrieveByIndex or RetrieveByTagName DirectIO commands.

Additional OPOS information

4610 printer firmware update

The IBM OPOS driver has the ability to automatically update the printer firmware if the printer is attached to the terminal when the terminal boots. It does not have this ability if the printer is attached to the terminal after the terminal has booted and the operating system has loaded.

In addition, printer firmware can be update manually at any time.

Updated printer firmware update files can be downloaded from the IBM website at: <http://www.ibm.com/solutions/retail/store/support/>

1. Go to: www.ibm.com/solutions/retail/store/support
 - a. Under Peripherals, click **IBM SureMark Printer**.
 - b. Under Downloads, select the appropriate link for your printer model.
 - c. From the Search Results displayed, select **IBM 4610 SureMark Printer, Microcode Files for Firmware Update**.
 - d. Download the zip file for OP0S/JavaPOS. This zip file contains multiple firmware files; choose the correct one from the following for your printer type.
2. Place the firmware file for your printer type into the \pos\firmware folder.
3. Make sure the printer is attached and restart.

Each model of 4610 printer has a different firmware file associated with it.

Table 164. IBM 4610 printer firmware update

Printer Model	Firmware update filename
TI1, TI2	aip46mc.hex
TI3, TI4, TG3, TG4, TF6, TM7	aip46mch.hex
TI5, TM7, TF7	aip46mcd.hex
TI8	aip46ti8.hex
TI9	aip46ti8.hex
2CR, 2NR	aip46v4.hex

If the firmware file you select does not match the type of printer you have attached, the program will not update the printer.

Manual update (EIA-232)

Printer firmware in an EIA-232 attached 4610 printer can be updated manually by using `\pos\bin\s232firmwareupdater.exe`.

This is a GUI application that allows you to select a previously-configured printer to update, and which firmware file to use.

Manual update (RS485/USB)

Printer firmware in RS485 and USB attached 4610 printers can be updated manually by using `\pos\bin\aipfld46.exe`.

This is a Windows command-line program that must be run from a Windows shell prompt. Use the following syntax to run the AIPFLD46 program:

```
aipfld46 -Sslot -Pport -Ffirmwarefilename [-O]
```

Table 165. Parameter setting for AIPFLD46

Parameter	Description
-S slot	The slot number of the 4610 for which the firmware download is intended. RS485 is slot number 1, USB is slot number 8.
-P port	The port number of the 4610 for which the firmware download is intended. The port number for RS485 and USB is 17.
-F firmwarefilename	The name of the file containing the firmware data for the printer. A fully qualified path name must be specified when this program is run manually.
-O	By default you can only upgrade firmware in a printer; you can force the application to downgrade printer firmware by using this option.

A log file named `aipfld46.log` is created in the `\pos\log` folder when the firmware download program is executed.

There is no progress indicator on screen, but you can determine the update progress by looking at the log file.

Automatic update (EIA-232)

Because EIA-232 printers can not be automatically detected by the driver, the firmware update program will try to apply all of the printer firmware files to all of the currently configured EIA-232 4610 printers.

The automatic firmware update process is started by a Windows service, "IBM OPOS RS232 Firmware Update".

If you do not want the firmware update process to run when the terminal boots, you may either disable the service or delete the firmware update files from the \pos\firmware folder

Automatic update (RS485/USB)

The automatic firmware update process for RS485 and USB printers is exactly the same as the manual process, except that the aipfld46 program is run automatically by the driver if it detects that the firmware in the update file is newer than the firmware in the printer.

If you do not want the firmware update process to run when the terminal boots, you should delete the firmware update files from the \pos\firmware folder.

4610 printer font conversion

Convert the downloaded files using the 4689CNVT.EXE program.

4689CNVT configuration-file

configuration-file

One of the configuration files contained in CONVERT.EXE

Notes:

1. The font files must be in the same directory as the conversion program.
2. The output font file will have the same name as the supplied configuration file, but will have a file extension of .FON.

4610 printer font download

To download fonts to the IBM SureMark Point of Sale Printer Model TI5, TM7, and TF7, you will need the following:

- The 4610 SureMark Point of Sale Printer font download program, AIPFNT46.EXE, which comes with the IBM Point of Sale Subsystem for Windows.
- Font files for the IBM 4610 SureMark Point of Sale Printer Model TI5 and the IBM 4610 SureMark Point of Sale Printer Model TI5 font conversion program, 4610CNVT.EXE, which can be downloaded from the IBM Retail Store Solutions Support site: www.pc.ibm.com/store
 1. Select **Support** under Retail Store Solutions
 2. Select **IBM SureMark Printer** under SurePOS Peripherals.
 3. Select **DBCS Models** under Downloads. From this page, you can download fonts for Japanese (Gothic and Micho styles plus user-defined fonts), Korean, and Chinese (Simplified and Traditional).
 4. Select **Driver Font Utility Package** to download the font conversion program and font configuration files.

This package contains the following:

File Name	File Description
4610CNVT.EXE	Font conversion program
chnm1381.cfg	Chinese Simplified (PRC) font - Code Page 1381
chnm950b.cfg	Traditional Chinese (BIG-5) with Bold SBCS impact (Taiwan) fonts - Code Page 950
jpngs932.cfg	Japanese Gothic Style font - Code Page 932
jpnms932.cfg	Japanese Mincho Style font - Code Page 932
korms949.cfg	Korean font - Code Page 949

Converting Printer Font Files

Convert the downloaded files using the 4610CNVT.EXE program.

4610CNVT configuration-file

configuration-file

One of the configuration files contained in CONVERT.EXE.

Notes:

1. The font files must be in the same directory as the conversion program.
2. The output font file will have the same name as the supplied configuration file, but will have a file extension of .FON .

Downloading fonts to the printer

Font files for the IBM 4610 SureMark Point of Sale Printer Model TI5 must be downloaded manually using the AIPFNT46.EXE program:

AIPFNT46 -Sslot -Pport -Fx:\dir\font-file {-Q}

-Sslot The slot number (in decimal) of the printer for which the download is intended

-Pport The port number (in decimal) of the printer for which the download is intended.

-Fx:\dir\font-file

Fully qualified path name for the font file to be downloaded to the printer.

-Q : Quiet mode. No progress information is displayed.

4689 printer font download

To download fonts to the IBM 4689 SurePOS Receipt Journal Printer, you will need the following:

- The 4689 Printer font download program, AIPFNTRJ.EXE, which comes with the IBM Point of Sale Subsystem for Windows.
- The 4689 Printer font conversion program, 4689CNVT.EXE, and IBM 4689 Printer font files, which can be downloaded from the IBM Retail Store Solutions Support site: www.pc.ibm.com/store:
 1. Select **Support** under Retail Store Solutions.
 2. Select **Other Systems and Adapters** under SurePOS Peripherals.
 3. Select **4689** under IBM POS Printers.
 4. Select **Font Support Files** to download the font files.

The download contains the following:

File Name	File Description
4689JPNM.EXE	Japan, Mincho style font (diskette image)
4689JPNG.EXE	Korea, Mincho style font (diskette image)
4689JPNU.EXE	Japan, user-defined fonts (diskette image)
CONVERT.EXE	Contains: <ul style="list-style-type: none"> • 4689CNVT.EXE : conversion program • jpngs932.cfg: Japan, gothic style + user-defined fonts font configuration file • jpnms932.cfg: Japan, mincho style + user-defined fonts font configuration file • readme.txt: the directions given here
readme.txt	The information presented in this section.

Converting Printer Font Files

Convert the downloaded files using the 4689CNVT.EXE program.

4689CNVT configuration-file

configuration-file

One of the configuration files contained in CONVERT.EXE

Notes:

1. The font files must be in the same directory as the conversion program.
2. The output font file will have the same name as the supplied configuration file, but will have a file extension of .FON.

Downloading Fonts to the Printer

Font files for the IBM 4689 SurePOS Receipt Journal Printer must be downloaded manually using the AIPFNTRJ.EXE program:

AIPFNTRJ -Sslot -Pport -Fx:\dir\font-file {-Q}

-Sslot :

The slot number (in decimal) of the printer for which the download is intended.

-Pport :

The port number (in decimal) of the printer for which the download is intended.

-Fx:\dir\font-file :

Fully qualified path name for the font file to be downloaded to the printer.

-Q : Quiet mode. No progress information is displayed.

Model 4 printer font download

When the IBM JavaPOS system recognizes a Model 4A printer that it has not used before, it will automatically download to the printer one of the character sets described below:

File	Description
M4A00850.FON	The single-byte characters are the same as those in the Model 4 printer. The characters in this font file are used for the following code pages: <ul style="list-style-type: none"> • 437

- 850
- 852
- 857
- 860
- 861
- 862
- 863
- 864
- 865

M4A00932.FON

The double-byte characters for Japan. This character set is a subset of the characters in code page 932. For the supported characters, see the *IBM JavaPOS system: Installation, Keyboards, and Code Pages* publication.

M4A00949.FON

The double-byte characters for Korea. This character set is a subset of the characters in code page 949. For the supported characters, see the *IBM JavaPOS system: Installation, Keyboards, and Code Pages* publication.

Manually Downloading Characters

If at a later time, you want to use another character set, or if you want to define your own characters and download them to the Model 4A printer, you can do so manually. The program to download a new character set to the Model 4A printer is AIPM4ALD.EXE. This program is in the \BIN directory where the IBM JavaPOS system is installed.

Use the following syntax to run the AIPM4ALD program:

```
AIPM4ALD -Sslot -Pport -Fx:\dir\font-file [ -Q ]
```

The parameters for the AIPM4ALD program are:

Parameter	Description
-S <i>slot</i>	The slot number (in decimal) of the IBM Model 4A printer to which the new character set is to be downloaded.
-P <i>port</i>	The port number (in decimal) of the IBM Model 4A printer to which the new character set is to be downloaded.
-F <i>x:\dir\font-file</i>	The name of the file containing the characters to be downloaded to the IBM Model 4A printer. A fully-qualified path name must be specified when this program is run manually.
-Q	Quiet Mode. Do not display progress information
-V	Verify Characters. Verify each character by printing it on the CR station after all the characters have been downloaded.

Font File Format

There are three types of records that are allowed in a Model 4A font file. These are:

- Comment Record
- Keyword Record

- Character Definition Record

A *comment record* can be either a blank line, or a line with an exclamation point (!) as the first non-blank character.

A *keyword record* is a line with one of the keywords defined below followed by one or more blank characters and ending with a value for the keyword.

A *character definition record* is a line of hexadecimal ASCII characters. Each pair of characters defines one byte of the character definition. The first two pairs of characters identify the character being defined and the remaining characters define the character.

Keywords: To define characters to the IBM JavaPOS system for use with the Model 4A printer, the following keywords and their corresponding values must be defined in the font file along with the definition of each character. If any of these keywords are omitted, unpredictable results can occur when your application is using the printer.

Keyword	Description
CODEPAGE	The code page this font file defines.
HEIGHT	Defines the double-byte character height. The valid values are 9 or 16.
MODE	Defines this code page to be a single-byte, or a double-byte code page. A value of 0 (zero) indicates this is a single-byte code page and a value of 1 (one) indicates this is a double-byte code page.
SPACE	The number of dot columns to be added to each double-byte character. The valid values are 0 (zero) through 16.
WIDTH	Defines the double-byte character width. The valid values are 10 through 16.

Character Definition Record: Each *character definition record* defines one character for the Model 4A printer. Each character on the line must be a hexadecimal ASCII character. Each pair of characters defines one byte of the character definition. The first two pairs of characters identify the character being defined and the remaining characters define the character.

Character Identifier: The first two pairs of characters that identify the character being defined must be between 0x0000 and 0x00FF, or between 0x8000 and 0xFFFF. The characters in the range 0x0000 through 0x00FF define the single-byte characters and there must be 44 hexadecimal ASCII characters (22 bytes). The characters in the range 0x8000 through 0xFFFF define the double-byte characters and the number of hexadecimal ASCII characters depends upon the width of the character being defined. The number of characters in the line can be calculated by multiplying the character width, as defined by the WIDTH keyword, by 4 and adding 4. The additional four characters are for the character identifier.

Note: If you define double-byte characters in your font file, you must define the character 0x8000 to be all zeros. This is because the IBM JavaPOS system uses that character for padding double-byte character print lines when positioning the print head over characters already printed.

Character Definition: Each dot column on the Model 4A printer has nine print wires for single-byte characters and between nine to sixteen print wires for double-byte characters.

The definition of each character follows the character identifier on each line. Each pair of hexadecimal ASCII values defines one byte of the character. For the Model 4A printer, each pair of bytes (four characters) defines which print wires are turned on for each dot column to be printed. Within each pair, the first two hexadecimal ASCII characters (first byte) defines which of the lower eight print wires will be turned on and the second two hexadecimal ASCII characters (second byte) defines which of the upper eight print wires will be turned on. Within each byte, the least significant bit represents the top print wire.

For single-byte characters, the least significant bit of the first byte in the pair of dot column bytes represents print wire number nine. For single-byte characters, this is the only bit used in the first byte. For double-byte characters, the number of significant bits is determined by the LENGTH keyword. If the LENGTH keyword is set to 9, the double-byte character definition is the same as the single-byte character. If the LENGTH keyword is set to 16, then all eight bits of the first byte is used to define the print wires 9 through 16.

Character Definition Restrictions: The following should be considered when defining characters for the Model 4A printer:

- When defining characters, the same print wire should not be turned on in consecutive dot columns.
- For single-byte characters, the spacing between characters is included in the character definition.
- For double-byte characters, the spacing between characters can be either included in the character definition, or defined by the SPACE keyword.

Barcode printing

The width parameter of the printBarcode method is not a definite value. Since the ratio of the width of thick and thin lines must be fixed, the width parameter is used to calculate a percentage of the total line width of the station, such as RecLineWidth. The printer hardware accepts values of 2 - 4. Therefore, if width is less than 34% of XxxLineWidth, then 2 is used, 34% to 66% sends a 3 and greater than 66% sends a 4.

The height parameter for the Receipt Station accepts 1 - 255 dot rows. On the slip station, it height parameter is converted to head passes. The acceptable number of head passes is 3 to 5, or 27 to 45 dots in map mode, when SlpLineSpacing equals 9 dots.

Rotated printing

On the slip, only the alignment settings are ignored. Bold and Double High attributes are ignored by the hardware.

DBCS support

Downloading of fonts to SureMark printers that support DBCS is described in *Point of Sale Subsystem: Programming Reference and User's Guide, Appendix F*.

Color printing

In order to use color printing capability, the firmware level must be 33 or greater, supported color thermal paper must be used, and the CapRec2Color option must be set at configuration time.

User-defined fonts

The SureMark printers support up to four user-defined character sets. For EIA-232 printers, the user-defined character sets are identified as character sets 102 through 105; for RS-485 and USB printers, the user-defined character sets are identified as 101 through 104. These character set identifiers appear in the CharacterSetList property.

Note: For EIA-232 printers, character set 101 is the printer's generic code page. For RS-485 and USB, the printer's generic code page is not supported.

To define a single proportional font, two of the printer's user-defined character sets are required. For EIA-232, a user-defined proportional font can be either character set 102 or 104; for RS-485 and USB, a user-defined proportional font can be either character set 101 or 103.

Only two user-defined fonts are supported on the impact station. When using a printer that has an impact station:

1. The odd-numbered user-defined character sets on the receipt station map to user-defined character set 1 on the slip station; even numbered character sets on the receipt station map to slip user-defined character set 2.
2. If the application uses user-defined character sets with a printer that has both receipt and slip stations, then both receipt and slip character sets should be downloaded to the printer.

Proportional font support

The printer drivers default to fixed width. In order to switch between fixed and proportional fonts, the Font Typeface is used. To illustrate this difference, the FontTypefaceList displays values "Fixed, Proportional" only when the CharacterSet has been set to a Proportional User Defined Font (101 or 103 for RS-485/USB, or 102 and 104 for EIA-232). This is only valid for User Defined Proportional Fonts. The resident fonts are fixed width.

The OPOS Specification assumes that all characters are fixed width. Proportional font printing is supported, providing the following:

1. If a proportional font is active and the current font typeface is set to proportional, all properties such as RecLineChars, RecLineHeight and RecLineSpacing are set to zero and RecCharList is set to a null string. The downloaded font determines the properties of the printed line.

Based on this assumption, we do not wrap lines in proportional mode when the number of characters on a line is greater than RecLineChars. Instead, it is up to the application developer to send a line feed when the print line is complete or the printer feeds when it has reached the end of the line.

2. Text alignment is based on the fact that a fixed number of characters fit on a line. This is not possible with proportional fonts. Therefore, when the printer is in proportional mode, instead of formatting the line within the SO, we pass on the Alignment Escape Sequences within the printer to let the printer format the alignment. This allows the printer to center text or split left and right aligned text at the hardware.

Finally, if the font typeface is set to Fixed when a proportional font is used, the printer prints the characters a fixed distance apart, and all of the Line properties are valid. The actual fixed width is set in the registry entry for the printer, using the keyword "ProportionalFontFixedWidth". The range of values the printer supports is 8 to 32. If this value is not specified, the control uses a width of half of the height and then adjust it for a best fit within the valid range.

Tone device sharing

Certain models for SureMark printers are equipped with tone devices. While the OPOS model states that tone indicators are shareable devices, this device cannot be shared from separate applications. Trying to enable this device from two applications will cause the enable to fail for the second application. If using the tone indicator from two applications, it is recommended that each application claim the device before using it.

Code 128 A/B/C support

The Code 128 Bar Code Symbology has three code sets and also includes some special characters that indicate a change in code set, a function, or a shift from Code Set A to B, or vice versa. Table 166 lists the characters for each code set.

Table 166. Code 128 character sets

Code set	Character set
Code A	X'00'-X'5F', FNC1, FNC2, FNC3, FNC4, SHIFT, CODE B, CODE C
Code B	X'20'-X'7f', FNC1, FNC2, FNC3, FNC4, SHIFT, CODE A, CODE C
Code C	X'00'-X'63' for decimal values 00-99, FNC1, CODE A, CODE B

Characters are mapped from ASCII to the corresponding value for the selected code set. In Code Sets A and B, this is a one-to-one mapping. In Code Set C, each two digits is converted to a single value. A sentinel character, the left curly bracket ({) followed by a particular character, is used to indicate a special character. A starting code set is required at the start of the data. The symbology value to use is 123.

Table 167 lists the character pairs for encoding the special characters:

Table 167. Code 128 special character encoding

Special character	Character pair for encoding
SHIFT	{S
CODE A	{A
CODE B	{B
CODE C	{C
FNC1	{1
FNC2	{2
FNC3	{3
FNC4	{4
{	{{

SureOne/SurePOS 100 DBCS printer limitations

For a DBCS printer, the printer code page is assumed to be the same as the locale of Windows.

Improving printer performance

When AsyncMode is *false*, IBM's OPOS Printer drivers verify that each print line is printed on the paper in synchronous mode, not just that it has been sent to the printer. This approach provides the application with an accurate completion status, but as a result, the drivers appear to be slower than the rated printer throughput. To improve printer driver throughput, do the following:

- Set AsyncMode to *true* so that groups of printer lines are sent out to the printer as they are received by the driver.
- Use Transaction Mode.
- Group lines in single print command.
- Format a full line.

Chapter 17. Scanner (bar code reader)

Supported devices

Table 168. Scanner supported devices

Device	Connectivity
1. IBM 1520 Compatible Hand-held Scanner	RS-485
2. IBM 4687 Compatible Scanner	RS-485
	USB (using Protocol Converter)
3. IBM 4696 Compatible Scanner	RS-485
	USB (using Protocol Converter)
4. IBM 4697 Compatible Scanner	RS-485

JavaPOS configuration

This section contains device-specific notes for the EIA-232, RS-485 and USB scanners. Scanner configuration is done through the jpos.xml file. An example of a typical configuration property is:

```
<prop name="setEnabledCODE39" type="Boolean" value="true"/>
```

Notes:

1. Each scanner's hardware capabilities determine which symbologies it can decode. Enabling a symbology property does not guarantee that the attached scanner can decode that symbology. See the Web site of the scanner vendor for more information about the supported symbologies and hardware capabilities.
2. When RS-485 scanners are attached to the system using a USB protocol converter, the supported symbologies are unchanged.
3. To read supplemental data on a 4685 scanner, at least one of the labels must be disabled. For example, setXXX label property to false in JposEntry for this scanner. The only way to enable all supported labels is to set the scanner to "test mode". In test mode, the 4685 reads all the supported labels, except for supplementals. To read supplementals, at least one label must be disabled.
4. If the device JposEntry in the jpos.xml does not contain a specific property, that property will be initialized to the default value specified in this document. Otherwise the value specified for that property in the JposEntry will be used.

Table 173 lists the supported symbologies for IBM scanners.

enableLaserOnOffSwitch

Property Type: boolean

Default: false

Models Supported: USB OEM

This property controls whether the laser power switch on the scanner unit is enabled or disabled. When a scanner is on, its motor is running and its laser is active. When a scanner is off, its motor is not running and its laser is inactive. When the laser power switch is enabled, it can be used to turn the scanner off. When the laser power switch is disabled, it cannot be used to turn the scanner off. The laser power switch can always be used to turn the scanner on.

enableProgrammingViaBarcodes

```
<prop name="enableProgrammingViaBarcodes" type="Boolean" value="false" />
```

This property controls whether or not the scanner can be programmed using the manufacturer-supplied programming bar codes.

Supported on: 4696, 4697, 4698, AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner.

enableSwitchControlledVolumeAdjust

Property Type: boolean

Default: false

Models Supported: 4696,4697,4698 and USB OEM

This property enables and disables switch-controlled beep volume adjustment.

setBarCodes1

Property Type: byte

Default: 00

Models Supported: 1520, 4500, 4501, 4685, 4696, 4697, 4698, USB OEM

This property is one of several properties which determine what combination of bar code types a scanner recognizes. When configured in a specific mode, a scanner recognizes and returns all bar code types that are associated with that mode. Table 175 lists the values that can be given for the setBarCodes1 property for both RS-485 and USB-attached scanners.

Table 175. setBarCodes1 values

Resource Value	Bar Code Types
0 - GROUP_NONE	None
1 - GROUP_UPC_EAN_ITF	UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13, Interleaved 2 of 5 (ITF)
2 - GROUP_UPCAED	UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13UPC-D1, UPC-D2, UPC-D3, UPC-D4, UPC-D5
3 - GROUP_UPC_EAN_CODE128	UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13, Code128
4 - GROUP_UPC_EAN_CODE93	UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13, Code93
5 - GROUP_UPC_EAN_CODE39	UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13, Code39
6 - GROUP_UPC_EAN_CODABAR	UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13, Codabar
7 - GROUP_UPC_EAN_2_5_CODABAR	UPC-A, UPC-E, EAN/JAN-8, EAN/JAN-13UPC-A, UPC-A+2/+5, UPC-E, UPC-E+2/+5, EAN/JAN-8, EAN/JAN-8+2/+5, EAN/JAN-13, EAN/JAN-13+2/+5,Codabar (See Note.)

Note: Different scanners handle supplementals (+2, +5) differently. When supplementals are enabled, some scanners will only read UPC-A, UPC-E, EAN/JAN-8 and EAN/JAN-13 barcodes with a supplemental; other scanners will read UPC-A, UPC-E, EAN/JAN-8 and EAN/JAN-13 barcodes with and without a supplement.

setBarCodes2

Property Type: byte

Default: 0

Scanner models supported: 1520, 4685, 4697, 4698, USB OEM

This property is one of several properties which determine what combination of bar code types a scanner recognizes. When configured in a specific mode, a scanner recognizes and returns all bar code types that are associated with that mode.

The values for the setBarCodes2 property are the same as those for setBarCodes1 property.

setBarCodes3

Property Type: byte

Default: 0

Models Supported: 1520, 4698, USB OEM

This property is one of several properties which determine what combination of bar code types a scanner recognizes. When configured in a specific mode, a scanner recognizes and returns all bar code types that are associated with that mode.

The values for the setBarCodes3 property are the same as those for setBarCodes1 property.

setBarCodes4

Property Type: byte

Default: 0

Models Supported: 1520, 4698, USB OEM

This property is one of several properties which determine what combination of bar code types a scanner recognizes. When configured in a specific mode, a scanner recognizes and returns all bar code types that are associated with that mode.

The values for the setBarCodes4 property are the same as those for setBarCodes1 property.

setBeeperDuration

Property Type: byte

Default: 0

Models Supported: USB OEM , 4696, 4697, 4698, AnyPlace Kiosk Line Scanner

This property specifies the duration of the tone that the beeper makes upon a successful read. This property can have the following values:

- 0** SHORT: Use the shortest time value for the beeper duration.
- 1** MEDLONG: Use a medium time value for the beeper duration.

- 2 LONG: Use a longtime value for the beeper duration.
- 3 LONGEST: Use the longest time value for the beeper duration.

setBeeperFrequency

Property Type: byte

Default: 0

Models Supported: 4696, 4697, USB OEM, AnyPlace Kiosk Line Scanner, AnyPlace Kiosk Omni Scanner

This property specifies the frequency of the tone that the beeper makes upon a successful read.

- 0 Lowest: The beep of the scanner has a very low frequency.
- 1 Low: The beep of the scanner has a low frequency.
- 2 High: The beep of the scanner has a high frequency.
- 3 Highest: The beep of the scanner has a very high frequency.

setBeeperVolume

Property Type: byte

Default: 0

Models Supported: 4696, 4697, 4698, USB OEM

This property specifies the volume of the tone that beeper makes. This property can have the following values:

- 0 Lowest: The volume of the beep is set at its lowest level.
- 1 Low: The volume of the beep is set at a low level.
- 2 Medium: The volume of the beep is set at a medium level.
- 3 High: The volume of the beep is set at a high level.

setCheckModulo

Property Type: boolean

Default: false

Models Supported: 4500, 4501, 4685

This property controls whether or not the scanner checks the modulo byte of a bar code to ensure that it is correct before returning the bar code to an application.

setCode128ScansPerRead

Property Type: byte

Default: 1

Models Supported: 4698

This property controls the minimum number of scans performed for Code 128 labels. This is the number of scans for a single pass of an item over the scanner window.

The value of this property has a range from 0 (zero) to 4. Any value outside of this range is not valid. A value of 0 (zero) indicates that the default value should be used.

setCode39ScansPerRead

Property Type: byte

Default: 1

Models Supported: 4698

This property controls the minimum number of scans performed for Code 39 labels. This is the number of scans for a single pass of an item over the scanner window.

The value of this property has a range from 0 (zero) to 4. Any value outside of this range is not valid. A value of 0 (zero) indicates that the default value should be used.

setDecodeAlgorithm

Property Type: byte

Default: 0

Models Supported: 4696, 4697, 4698

This property controls the use of decode algorithms. These decode algorithms use a complex set of tests to assemble bar code data from damaged or truncated labels. These techniques also give faster read performance on good bar codes. This property can have the following values:

- 0** Label assembly
- 1** marginless

Note: Label assembly can be selected only if Label assembly was enabled during factory configuration, if Label assembly was not enabled during factory configuration, the selection shall be considered valid but the parameter shall be forced to marginless.

setDoubleReadTimeOut

Property Type: byte

Default: 0

Models Supported: 4696, 4697, 4698, USB OEM

This property controls the length of the double-read timeout. Most scanners decode and recognize a bar code label several times as the bar code is passed through the scanning region. To prevent a scanner from returning data from the same bar code

several times, scanners are programmed with a double-read timeout. The double-read timeout is the length of time that the scanner waits before returning the same bar code data twice.

This property can have the following values for 4696, 4697 and 4698:

- 0** Use 500 ms for the double-read timeout
- 70** Use 700 ms for the double-read timeout
- 90** Use 900 ms for the double-read timeout

This property can have the following values for USB:

- X'00'** Use the shortest time value for the double-read timeout
- X'20'** Use a moderate time value for the double-read timeout
- X'40'** Use the longest time value for the double-read timeout

setDTouchMode

Property Type: boolean

Default: false

Models Supported: 4500, 4501, 4685

This property controls the state of the double-touch mode of the scanner. Double-touch mode allows scanners such as the hand-held bar code reader to read bar codes that are larger than the reading head. In double-touch mode, when the read head of the scanner is placed over the first half of the label, the scanner emits a repetitive beeping noise (if the beeper is enabled) to indicate that the data was read. When the read head is placed over the second half of the label, the data is sent to the system unit. Putting a scanner in double-touch mode does not prevent it from reading a bar code in a single touch. Only bar codes such as UPC-A, EAN-13, and UPC-D3 can be read using double-touch mode. For UPC-D3 bar codes, double-touch mode is automatically enabled by the scanner and cannot be switched off.

setEAN13ScansPerRead

Property Type: byte

Default: 1

Models Supported: 4696, 4697, 4698

This property controls the minimum number of scans performed for EAN-13 labels. This is the number of scans for a single pass of an item over the scanner window. The value of this resource has a range from zero to four. Any value outside this range is not valid. A value of zero indicates that the number of scans per read is not specified by the application. In this case, the default value is used.

This property can have the following values:

- 1** One scan
- 2** Two scans
- 3** Three scans

4 Four scans

setEAN8ScansPerRead

Property Type: byte

Default: 2

Models Supported: 4696, 4697, 4698

This property controls the minimum number of scans performed for EAN-8 labels.

This resource can have the following values:

- 1 One scan
- 2 Two scans
- 3 Three scans
- 4 Four scans

setEnabled_2_DigitSupplementals

Property Type: boolean

Default: false

Models Supported: 4685, 4698, USB OEM, AnyPlace Kiosk Line scanner

This property controls whether the scanner recognizes 2-digit supplementals for UPC, UPE, EAN/JAN8, and EAN/JAN13. When enabled, supplementals are optional for all these symbologies.

setEnabled_5_DigitSupplementals

Property Type: boolean

Default: false

Models Supported: , 4685, 4698, USB OEM, AnyPlace Kiosk Line scanner

This property controls whether the scanner recognizes 5-digit supplementals for UPC-A, UPC-E, EAN/JAN8, and EAN/JAN13. When enabled, supplementals are optional for all these symbologies.

setEnabledCodabar

Property Type: boolean

Default: false

Models Supported: 4501, 4685, 4697, USB OEM, AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni Scanner

Enable or disable the CodaBar barcodes.

setEnabledCode128

Property Type: boolean

Default: false

Models Supported: 4501, 4685, 4697, 4698, USB OEM, AnyPlace Kiosk Line Scanner, AnyPlace Kiosk Omni Scanner

Enable or disable the Code128 barcodes.

setEnabledCode128Supplementals

Property Type: boolean

Default: false

Models Supported: USB OEM

Enable or disable supplementals for code128 barcodes.

setEnabledCODE39

Property Type: boolean

Default: false

Models Supported: 1520, 4500, 4501, 4685, 4697, 4698, USB OEM, AnyPlace Kiosk Line Scanner, AnyPlace Kiosk Omni Scanner

Enable or disable the Code39 barcodes.

setEnabledCode39CheckDigit

Property Type: boolean

Default: false

Models Supported: USB OEM

Enable or disable if check digits should be transmitted for code39 barcodes.

setEnabledCode93

Property Type: boolean

Default: false

Models Supported: 4501, 4685, 4697, USB OEM

Enable or disable the Code93 barcodes.

setEnabledEAN_JAN_TwoLabelDecoding

Property Type: boolean

Default: false

Models Supported: 4697, 4698, USB OEM

Enable or disable the EAN/JAN Two-label decoding.

setEnabledGoodReadBeep

Property Type: boolean

Default: false

Models Supported: All

Enable or disable GoodReadBeep.

setEnabledInterleaved2of5

Property Type: boolean

Default: false

Models Supported: 1520, 4500, 4501, 4685, 4697, 4698, USB OEM, AnyPlace Kiosk Line Scanner, AnyPlace Kiosk Omni Scanner

Enable or disable the Interleaved 2-of-5 (ITF) barcodes.

setEnabledITFCheckDigit

Property Type: boolean

Default: false

Models Supported: USB OEM

Enable or disable if check digits should be transmitted for Interleaved 2-of-5 (ITF) barcodes.

setEnabledPDF417

Property Type: boolean

Default: false

Models Supported: AnyPlace Kiosk Omni Scanner

Enable or disable decoding of PDF417 barcodes.

setEnabledRSS14

Property Type: boolean

Default: false

Models Supported: AnyPlace Kiosk Line Scanner, AnyPlace Kiosk Omni Scanner

Enables or disables the Reduced Space Symbology RSS14 barcodes.

setEnabledRSS_Expanded

Property Type: boolean

Default: false

Models Supported: AnyPlace Kiosk Line Scanner, AnyPlace Kiosk Omni Scanner

Enables or disables the RSS Expanded barcodes.

setEnabledStandard2of5

Property Type: boolean

Default: false

Models Supported: AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner

Enable or disable the Standard 2-of-5 (STF) barcodes.

setEnabledUCC_EAN128

Property Type: boolean

Default: false

Models Supported: USB OEM, AnyPlace Kiosk Line Scanner, AnyPlace Kiosk Omni Scanner

Enable or disable the UCC/EAN128 barcodes.

setEnabledUPC_A_CheckDigit

Property Type: boolean

Default: false

Models Supported: USB OEM, AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner

Enable or disable if check digits should be transmitted for UPC-A barcodes.

setEnabledUPC_A_To_EAN13Expansion

Property Type: boolean

Default: false

Models Supported: 4696, 4697, 4698, USB OEM, AnyPlace Kiosk Line scanner

This property controls the report format for UPC-A labels. UPC-A and EAN-13 are part of the same numbering system. It is possible to have the scanner report all of these codes in a uniform format. UPC-A is a 12-digit subset of EAN-13. The scanner can add a leading 0 (zero) to the UPC-A number, yielding its EAN equivalent.

setEnabledUPC_E_CheckDigit

Property Type: boolean

Default: false

Models Supported: USB OEM, AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner

Enable or disable if check digits are transmitted for UPC-E barcodes.

setEnabledUPC_E_To_EAN13Expansion

Property Type: boolean

Default: false

Models Supported: 4696, 4697, 4698, USB OEM

This property controls the report format for UPC-E labels. UPC-E and EAN-13 are part of the same numbering system. It is possible to have the scanner report all of these codes in a uniform format. UPC-E is a short form of a UPC-A number, UPC-A is a 12-digit subset of EAN-13. The scanner can add a leading 0 (zero) to the UPC-E number, yielding its EAN equivalent.

setEnabledUPC_E_To_UPC_AExpansion

Property Type: boolean

Default: false

Models Supported: 4698, USB OEM, AnyPlace Kiosk Omni Scanner

This controls the report format for UPC-E labels. UPC-A, UPC-E, and EAN-13 are all part of the same numbering system. It is possible to have the scanner report all of these codes in a uniform format. The scanner can expand UPC-E data to its UPC-A format.

setEnabledUPCAE_EANJAN813

Property Type: boolean

Default: false

Models Supported: All

Enable or disable the UPC-A, UPC-E, EAN/JAN 8 and EAN/JAN 13 barcodes.

setEnabledUPCD1D5

Property Type: boolean

Default: false

Models Supported: 4501, 4696, 4697, 4698, USB OEM

Enable or disable the UPC D1 to UPC D5 barcodes.

setEnabledVerificationUPC_A_EAN13_fiveDigit

Property Type: boolean

Default: false

Models Supported: 4696, 4697, 4698, USB OEM

This controls whether the scanner verifies the 5 digit price check character. UPC and EAN specifications allow for a price check character to be included in the digits encoded on in-store random weight items. This property is mutually exclusive with UPC-A, EAN-13 four Digit Verification.

setEnabledVerificationUPC_A_EAN13_fourDigit

Property Type: boolean

Default: false

Models Supported: 4696, 4697, 4698, USB OEM

This property controls whether the scanner verifies the 4 digit price check character. UPC and EAN specifications allow for a price check character to be included in the digits encoded on in-store random weight items. This property is mutually exclusive with UPC-A, EAN-13 five Digit Verification.

setITFLength1

Property Type: byte

Default: 0

Models Supported: 1520, 4697, 4698, USB OEM. AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner

For the scanners that support Interleaved 2-of-5 bar codes, this property can be used to specify one valid length for Interleaved 2-of-5 bar codes. This value indicates the exact length of the Interleaved 2-of-5 bar codes that the scanner reads. If an Interleaved 2-of-5 bar code is not of the correct length, then the bar code is not read by the scanner. The value of the setITFLength1 property must be an even number from 4 to 32. (For the IBM 1520-A02, the value must be an even number from 4 to 30.) This value specifies the exact length of the bar code.

If the scanner is not configured to read Interleaved 2-of-5 bar codes, the value of this property is ignored. This property is provided because scanners are prone to errors when reading Interleaved 2-of-5 labels. Because these labels are of variable length, it is possible for a scanner to read only part of a label, but process it as though it had read the complete label. If an application is only expecting Interleaved 2-of-5 labels of a certain length, this property ensures that the scanner does not read any partial labels.

setITFLength2

Property Type: byte

Default: 0

Models Supported: 1520, 4697, 4698, USB OEM, AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner

For scanners that support Interleaved 2-of-5 bar codes, this property can be used to indicate a second valid length for Interleaved 2-of-5 bar codes. When reading Interleaved 2-of-5 bar codes, these scanners can read only bar codes of one or two specific lengths. The setITFLength1 and setITFLength2 properties are used to specify the Interleaved 2-of-5 lengths to be recognized and read by these scanners.

The value of the `setITFLength2` property must be an even number from 4 to 32. This value specifies the exact length of the bar code. A value of 0 (zero) indicates that only Interleaved 2-of-5 bar codes of the length specified in the `ITFLength1` resource are read by the scanner. If the scanner is not configured to read Interleaved 2-of-5 bar codes, the value of this property is ignored.

setITFLengths

Property Type: boolean

Default: false

Models Supported: USB OEM, AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner

Valid values:

true ITF lengths represent a range.

false ITF lengths are discrete.

Note: For the AnyPlace Kiosk Line scanner, *true* indicates that ITF lengths specifies a minimum value only (`ITFLength1`).

setITFLengthSpecifiedTwo

Property Type: boolean

Default: false

Models Supported: 4697, 4698, USB OEM

This property specifies if two ITF lengths are specified.

setITFScansPerRead

Property Type: byte

Default: 1

Models Supported: 4698

This property controls the minimum number of scans performed for Interleaved 2-of-5 labels. This is the number of scans for a single pass of an item over the scanner window.

The value of this property has a range from 0 (zero) to 4. Any value outside of this range is not valid. A value of 0 (zero) indicates that the default value should be used.

setLaserTimeOut

Property Type: byte

Default: 0

Models Supported: 4696, 4697, 4698, USB OEM

This property specifies the length of the period of inactivity that causes a laser scanner to turn off its laser. This property can have the following values for 4696, 4697 and 4698:

- 0** The laser turns off after 15 minutes of inactivity
- 5** The laser turns off after 5 minutes of inactivity
- 10** The laser turns off after 10 minutes of inactivity
- 15** The laser turns off after 15 minutes of inactivity

This property can have the following values for USB OEM:

- X'00'** The laser always stays on
- X'08'** The laser turns off after 5 minutes of inactivity
- X'10'** The laser turns off after 10 minutes of inactivity
- X'18'** The laser turns off after 15 minutes of inactivity

Note: For motor-driven laser scanners, the motor is always on if the laser is on.

setLED_GoodRead_Duration

Property Type: byte

Default: 0

Models Supported: USB OEM

This property specifies the LED good read duration This property can have the following values:

- X'00'** Use a short time value for LED good read duration
- X'01'** Use a medium time value for LED good read duration
- X'02'** Use a long time value for LED good read duration
- X'03'** Use the longest time value for LED good read duration

setMotorTimeOut

Property Type: byte

Default: 0

Models Supported: 4696, 4697, 4698, USB OEM

This property specifies the length of the period of inactivity that causes a motorized laser scanner to turn off its motor. This property can have the following values for 4696, 4697 and 4698:

- 0** The motor turns off after 60 minutes of inactivity
- 5** The motor turns off after 5 minutes of inactivity
- 10** The motor turns off after 10 minutes of inactivity
- 15** The motor turns off after 15 minutes of inactivity
- 30** The motor turns off after 30 minutes of inactivity
- 60** The motor turns off after 60 minutes of inactivity

This property can have the following values for USB OEM:

- X'00'** The motor is always on
- X'01'** The motor turns off after 5 minutes of inactivity
- X'02'** The motor turns off after 10 minutes of inactivity
- X'03'** The motor turns off after 15 minutes of inactivity
- X'04'** The motor turns off after 30 minutes of inactivity
- X'05'** The motor turns off after 60 minutes of inactivity

setSecurityLevelForInStore

Property Type: byte

Default: 0

Models Supported: USB OEM

This property specify the security/integrity level for In-Store labels. This property can have the following values:

- X'00'** Use a low security/integrity level.
- X'01'** Use a medium security/integrity level.
- X'02'** Use a high security/integrity level.
- X'03'** Use the highest security/integrity level.

setSTFLength1

Property Type: byte

Default: 0

Models Supported: AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner

This property allows you to set the first Standard 2 of 5 length to be accepted if STFLengths = false (discrete) or the minimum length to be accepted if STFLengths = true (range)

setSTFLength2

Property Type: byte

Default: 0

Models Supported: Line scanner, Omni scanner

This property allows you to set the second Standard 2 of 5 length to be accepted if STFLengths = false (discrete) If STFLengths = true (range) STFLength2 is the maximum value to be accepted for the Omni scanner. For the Line scanner, this value is meaningless.

setSTFLengths

Property Type: boolean

Default: false

Models Supported: AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner

Valid values:

- true (range)
 - For Line scanners, STF Length1 represent a minimum length to be accepted. STF Length2 is ignored.
 - For Omni scanners, STF Length1/2 represent a minimum/maximum length to be accepted.
- false (discrete) STF Length1 and Length2 are the only lengths to be accepted

Note: To accept any length STF, this property must be set to *true* and STFLength1 to 0.

setStoreScansPerRead

Property Type: byte

Default: 1

Models Supported: 4696, 4697, 4698

This property controls the minimum number of scans performed for in-store labels. This is the number of scans for a single pass of an item over the scanner window.

The value of this property has a range from 0 (zero) to 4. Any value outside of this range is not valid. A value of 0 (zero) indicates that the number of scans per read is not specified by the application.

setSupplementals

Property Type: boolean

Default: false

Models Supported: 4698, AnyPlace Kiosk Omni scanner

This property controls whether the scanner recognizes 2-digit supplementals and 5 digit supplementals for UPCA, UPCE, EAN/JAN8, AND EAN/JAN13. When enabled, supplementals are optional for all these symbologies.

setSupplementalsSecurityLevel

Property Type: byte

Default: 10

Models Supported: AnyPlace Kiosk Line scanner, AnyPlace Kiosk Omni scanner

This property specify the security level for UPC-A, UPC-E, EAN/JAN-8, and EAN/JAN-13 supplementals. Making this value higher reduces the chance of "short readings" but increases the difficulty of reading low-quality barcodes. This property can have values in the range 0 - 100.

setUPCAScansPerRead

Property Type: byte

Default: 1

Models Supported: 4696, 4697, 4698

This property controls the minimum number of scans performed for UPC-A labels. This is the number of scans for a single pass of an item over the scanner window. The value of this property has a range from 0 (zero) to 4. Any value outside of this range is not valid. A value of 0 (zero) indicates that the number of scans per read is not specified by the application.

setUPCDScansPerRead

Property Type: byte

Default: 1

Models Supported: 4696, 4697, 4698

This property controls the minimum number of scans performed for UPC-D labels. This is the number of scans for a single pass of an item over the scanner window.

The value of this property has a range from 0 (zero) to 4. Any value outside of this range is not valid. A value of 0 (zero) indicates that the number of scans per read is not specified by the application.

setUPCEScansPerRead

Property Type: byte

Default: 2

Models Supported: 4696, 4697, 4698

This property controls the minimum number of scans performed for UPC-E labels. This is the number of scans for a single pass of an item over the scanner window.

The value of this property has a range from 0 (zero) to 4. Any value outside of this range is not valid. A value of 0 (zero) indicates that the number of scans per read is not specified by the application. This property can have the following values:

- 1 One scan
- 2 Two scans
- 3 Three scans
- 4 Four scans

Additional JavaPOS information

IBM 4697 Point of Sale Scanner Configuration

The IBM 4697 Point of Sale Scanner Model 1 follows the following rules in the symbology configuration:

1. No more than 2 of the supported symbology options may be included in the JPOS.XML entry for the scanner.
2. Only one of these two symbology options is allowed to be an industrial symbology. Choosing more than one industrial symbology option is considered invalid.
3. One of the non-industrial symbology must be included.

Non-industrial symbologies are considered to be:

- UPC-A/E, EAN/JAN-8/13
- UPC-A/E, EAN/JAN-8/13, UPC-D1..D5

Industrial symbologies are considered to be:

- ITF (Interleaved 2 of 5)
- CODABAR
- CODE 39
- CODE 93
- CODE 128

Example 1 - To enable one symbology with UPC-A/E, EAN/JAN-8/13, UPC-D1..D5 add following properties to the JposEntry:

```
<prop name="setEnabledUPCAE_EANJAN813" type="Boolean" value="true"/>
<prop name="setEnabledUPCD1D5" type="Boolean" value="true"/>
```

Example 2 - To enable two symbologies with UPC-A/E, EAN/JAN-8-13 and ITF add following properties to the JposEntry:

```
<prop name="setEnabledUPCAE_EANJAN813" type="Boolean" value="true"/>
<prop name="setEnabledInterleaved2of5" type="Boolean" value="true"/>
<prop name="setITFLength1" type="Byte" value="12"/>
```

USB OEM Scanner and scale configuration

The IBM JavaPOS supports new USB scanner and scale devices that comply with IBM or USB OEM Point-of-Sale Device interface specifications. Support for these devices required modification to configuration files. These configuration files currently include entries for known USB OEM Scanner devices. for a new device, the configuration files must be modified to include the VendorID and ProductID of that device.

For the Windows environment, two configuration files must be modified: javaxusb.inf and posj.properties.

For Linux, only posj.properties must be changed to include the VendorID and ProductID values.

Update javaxusb.inf (Windows only)

The javaxusb.inf file must be updated to include an entry for the new USB OEM Scanner device.

1. Obtain VendorID and ProductID for your device using a USB utility, such as UsbView.
2. Edit the javaxusb.inf file, located in the default location C:\POS\IBMJPOS\Lib\.
3. In the OEM Scanner section, copy the last entry and paste it to the end of that section.
4. Modify the USB\VID_XXXX&PID_YYYY part of the line by substituting the VendorID for XXXX, and the ProductID for YYYY.

To configure the new device:

1. Go to a command prompt.
2. Change directory to: C:\POS\IBMJPOS\Lib
3. Enter: **jxusbset.exe -IBMSETUP C:\POS\IBMJPOS\Lib\javaxusb.inf**

An example entry:

New entry at the end of OEM Scanner section for VID = 0x1234,
PID = 0x5678

"Add a description for the scanner"=

JAVAXUSB_COMPOSITE, USB\VID_1234&PID_5678

Update posj.properties configuration file

For both Windows and Linux environments, the posj.properties file must be updated to include VendorID and ProductID for the USB OEM scanner.

1. Obtain VendorID and ProductID for your device using a USB utility, such as UsbView.
2. Edit the posj.properties file, located at:
 - for Windows: C:\pos\ibmjpos\config
 - for IRES: /opt/ibm/javapos/etc
3. In the OEM Scanner section, copy the last entry and paste it to the end of that section.
4. Modify the VendorID and the ProductID to match your device.
5. Increment the numeric digit of the entry.

For example, if your new scanner has Vendor ID 0x1234 and Product ID 0x5678, and the last entry was com.ibm.posj.bus.hid.javaxusb.factory.knownPosDevice.72, then add the following entry:

```
com.ibm.posj.bus.hid.javaxusb.factory.knownPosDevice.73 = 0x1234,0x5678
```

Known scanner issues

This section describes known issues found with specific models.

PSC 384 Magellan - USB

SetEnableCodabar and SetEnableCode93 configuration parameters must not be enabled. The scanner does not work correctly if these are enabled.

IBM 4698

- RS-485 through USB protocol converter
- SetEnableCodabar, SetEnableCode93, and SetEnableUCC_EAN128 configuration parameters must not be enabled. The scanner does not work correctly if these are enabled.
- Configuration must be correct for the scanner type attached, even though it looks like a USB scanner.

OPOS configuration

Scanner programming

RS-485 and USB scanner configuration can be modified programmatically using the resource file, AIPSYS.RES, as mentioned earlier in "Modifying device behavior (USB, RS-485 and PS/2 devices)" on page 51. This allows the scanner

configuration to be changed without having to physically reprogram every scanner by hand using the manufacturer's programming barcodes.

The resource file will probably not support every possible configuration option that a particular scanner supports. The resource file support is based on older IBM scanner hardware specifications and most scanner manufacturers have added features beyond those specifications. You may still have to use the manufacturer's programming barcodes to enable/disable some options for your scanners.

There are many configuration options or resources that you can set in the resource file for the scanner. They are all documented in Chapter 21 "Resource Sets" of *Point of Sale Subsystem: Programming Reference and User's Guide* (SC30-3560). The resources that are typically set for a scanner are:

- *barCodes1
- *barCodes2
- *barCodes3
- *barCodes4
- *itfLength1
- *itfLength2
- *itfLengthType

The barCodesX resources determine what types of barcodes the scanner will read. The itfLengthXXX resources apply specifically to Interleaved 2 of 5 (ITF) barcodes and determine what subset of ITF barcodes the scanner will read.

Scanners are identified by the driver as being one of two types, hand-held or flatbed (table top). Each of these types is further divided into different subtypes based upon which IBM scanner interface is being emulated. For each IBM scanner interface, only certain resources can be used and for each resource, only certain values can be specified.

For example, an RS485 scanner configured for port 17B will report itself to the terminal (and have different configuration options) than the same physical scanner configured for port 5B.

If the resource file does not contain any scanner configuration information, the driver still sends a default configuration command to the scanner. See Table 176 and Table 177 on page 234 for the default configuration for each scanner subtype.

Table 176. Handheld scanners

Subtype	Description	Subset of valid resources	Default configuration
1	IBM Hand Held Bar Code Reader model 1 (HHBCR1)	*barCode1	UPC-A, UPC-E, EAN-8, EAN-13, JAN-8, JAN-13
2	IBM Hand Held Bar Code Reader model 2 (HHBCR2)	*barCode1	UPC-A, UPC-E, EAN-8, EAN-13, JAN-8, JAN-13
3	IBM Model 1520	*barCode1 *barCode2 *barCode3 *barCode4 *itfLength1	UPC-A, UPC-E, UPC-D, UPC-8, UPC-13

Table 176. Handheld scanners (continued)

Subtype	Description	Subset of valid resources	Default configuration
4	USB scanner	*barCode1 *barCode2 *barCode3 *barCode4 *itfLength1 *itfLength2 *itfLengthType	UPC-A, UPC-E, UPC-D, EAN-8, EAN-13, JAN-8, JAN-13

Table 177. Flatbed scanners

Subtype	Description	Subset of valid resources	Default configuration
1	IBM 4687 model 1 & 2	Cannot be programmed via the resource file	UPC-A, UPC-E, UPC-D, EAN-8, EAN-13, JAN-8, JAN-13
2	IBM 4687 model 1 & 2	*barCode1 *barCode2 *itfLength1 *itfLength2	UPC-A, UPC-E, UPC-D, EAN-8, EAN-13, JAN-8, JAN-13
3	IBM 4686 model 3 & 4	*barCode1 *barCode2 *itfLength1 *itfLength2	UPC-A, UPC-E, UPC-D, EAN-8, EAN-13, JAN-8, JAN-13
4	IBM 4696	*barCode1	UPC-A, UPC-E, UPC-D, EAN-8, EAN-13, JAN-8, JAN-13
5	IBM 4697	*barCode1 *barCode2 *itfLength1 *itfLength2	UPC-A, UPC-E, UPC-D, EAN-8, EAN-13, JAN-8, JAN-13
6	IBM 4698	*barCode1 *barCode2 *itfLength1 *itfLength2	UPC-A, UPC-E, UPC-D, EAN-8, EAN-13, JAN-8, JAN-13
7	USB scanner	*barCode1 *barCode2 *barCode3 *barCode4 *itfLength1 *itfLength2 *itfLengthType	UPC-A, UPC-E, UPC-D, EAN-8, EAN-13, JAN-8, JAN-13

Following are several scanner configuration examples:

1. One IBM 1520-compatible hand-held scanner is attached and it must be able to read Code 39 and UPC barcodes. The resource file should contain the following:

```
*barCodes1: LGROUP_UPC_EAN
*barCodes2: LGROUP_CODE_39
```
2. One IBM USB OEM POS Device Interface-compliant scanner is attached and it needs to be able to read Code 39, Code 128, UPC, EAN and ITF barcodes (4 to 32 digits (inclusive) in length). The resource file should contain the following:

```
*barCodes1: LGROUP_UPC_EAN_D1_TO_D5
*barCodes2: LGROUP_CODE_39
*barCodes3: LGROUP_INT_2_OF_5
*itfLength1: 4
*itfLength2: 32
*itfLengthType: 1
```

3. One IBM USB OEM POS Device Interface-compliant scanner is attached and it needs to be able to read Code 39, Code 128, UPC, EAN and ITF barcodes (20 and 24 digits in length only). The resource file should contain the following:

```
*barCodes1: LGROUP_UPC_EAN_D1_TO_D5
*barCodes2: LGROUP_CODE_39
*barCodes3: LGROUP_INT_2_OF_5
*itfLength1: 20
*itfLength2: 24
*itfLengthType: 0
```

4. One IBM HHBCR2-compatible hand-held scanner is attached and it needs to be able to read ITF barcodes. The resource file should contain the following:

```
*barCodes1: LGROUP_INT_2_OF_5
```

5. One IBM HHBCR2-compatible hand-held scanner is attached and it needs to be able to read UPC, EAN and ITF barcodes. The resource file should contain the following:

```
*barCodes1: LGROUP_UPC_EAN_ITF
```

6. One IBM HHBCR2-compatible hand-held scanner is attached and it needs to be able to read Code 128, UPC, EAN and ITF barcodes. The resource file should contain the following:

```
*barCodes1: 0
```

Note: For IBM HHBCR2-compatible scanners, 0 (zero) specifies that the scanner should be placed in **test** mode which allows it to read all barcode types that it supports.

7. One RS485 IBM HHBCR2-compatible hand-held scanner (OPOS name, **HH485**) and one IBM USB OEM POS Device Interface-compliant flatbed scanner (OPOS name, **FBUSB**) are attached; both scanners must be able to read Code 39, Code 128, UPC, and EAN barcodes. The resource file should contain the following:

```
*HH485.barCodes1: 0
```

```
*FBUSB.barCodes1: LGROUP_UPC_EAN
*FBUSB.barCodes1: LGROUP_CODE_39_CODE_128
```

8. One IBM 1520-compatible hand-held scanner is attached and it needs to be able to read Code 39 and 20-digit ITF barcodes. The resource file should contain the following:

```
*barCodes1: LGROUP_UPC_EAN
*barCodes2: LGROUP_INT_2_OF_5
*itfLength1: 20
```

Additional OPOS information

Scanner detection

The IBM OPOS driver will control all RS-485 scanners, and can optionally control USB scanners.

RS-485 scanners are detected automatically by the driver, and do not need any special programming in order to be detected. The only programming that might be required is to alter the model of legacy IBM scanner that the physical scanner is

emulating, since altering the model of scanner will change what configuration options you can use to program the scanner through the driver.

USB scanners will be detected automatically if the scanner has been programmed as an IBM-compatible device. If it has not been programmed as such, you must use the scanner vendors own scanner driver.

Some scanner vendors have implemented their driver with the scanner programmed as an IBM-compatible device. In this situation both the vendors own driver and the IBM driver will send programming commands to the device, since both drivers recognize the scanner as a device that they should control.

To work around this problem refer to “Ignoring non-IBM USB devices” on page 52.

Chapter 18. Scale

Supported devices

Table 178. Scale supported devices

Device	Connectivity	Comments
1. IBM 4687 Compatible Scanner/scale	RS-485, USB	
2. IBM 4696 Compatible Scanner/scale	RS-485, USB	
3. IBM 4698 Compatible Scanner/scale	RS-485, USB	
4. OEM Scale	USB	Must conform to <i>IBM USB OEM Point-of-Sale Device Interface Specification V1.0</i> or later.

JavaPOS configuration

Configuration options depend on the hardware capabilities. Table 184 details the configuration options supported by the scale models.

Table 184. Scale configuration options

Configuration option	IBM 4687	IBM 4698	USB OEM
centerOfZero		✓	✓
displayRequired		✓	✓
enforceZeroReturn		✓	✓
fiveDigitWeight			✓
operationMode		✓	✓
vibrationSensitivity		✓	✓
weighMode		✓	✓

CenterOfZero

```
<prop name="com.ibm.jpos.sdi.config.Scale.centerOfZero" type="Boolean" value="false"/>
```

Indicate center-of-zero with an LED.

Valid values are TRUE and FALSE. Default is FALSE.

DisplayRequired

```
<prop name="com.ibm.jpos.sdi.config.Scale.displayRequired" type="Boolean" value="false"/>
```

This property specifies whether a remote scale display is required. It is your responsibility to ensure that a system operating without a remote display meets the applicable weights and measures regulations.

If the value of this resource is false, but there is a remote display attached to the scale device, the display might not be used.

If the value of this resource is true but there is no remote display attached to the scale device, the scale might be unusable.

Valid values are TRUE and FALSE. Default is FALSE.

EnforceZeroReturn

```
<prop name="com.ibm.jpos.sdi.config.Scale.enforceZeroReturn" type="Boolean" value="false"/>
```

This property specifies whether zero protection is required. With zero protection enabled, the scale does not answer weight requests if a negative weight value is indicated on the display prior to placing the item for weighing on the scale, or an item is left on the scale for four minutes.

If either of these conditions exists and the value of this property is true, no weight data can be transmitted to the host until the scale returns to a zero weight (either by resetting the scale or removing the item).

Valid values are TRUE and FALSE. Default is FALSE

FiveDigitWeight (USB OEM only)

```
<prop name="com.ibm.jpos.sdi.config.Scale.fiveDigitWeight" type="Boolean" value="true"/>
```

This property specifies whether to return 5 digits (units of thousandths of pounds) or 4 digits (units of hundredths of pounds) for a non-metric weight.

Valid values are TRUE and FALSE. Default is TRUE.

OperationMode

```
<prop name="com.ibm.jpos.sdi.config.Scale.operationMode" type="String" value="US"/>
```

This property specifies the regulations that the point-of-sale system must conform to. The weight and measures requirements in various countries differ, and require minor operational differences.

Valid values are US and UK. Default is US.

US The scale conforms to regulations specified by the United States NIST Handbook 44 and the Canadian Department of Consumer and Corporate Affairs, Weights and Measurements Act, Specifications SGM-1.

UK The scale conforms to regulations specified by the Non-automatic Weighing Instruments (EEC Requirements) Regulations 1992 (based on OIML R 76-1).

VibrationSensitivity

```
<prop name="com.ibm.jpos.sdi.config.Scale.vibrationSensitivity" type="String" value="0"/>
```

This property controls the scale's sensitivity to vibration. External vibrations can affect the stability of the scale. There is a programmable vibration filter that allows you to reduce the scale's sensitivity to vibration. Reducing the scale's sensitivity to

vibration increases the scale settling time slightly, so the higher vibration filter settings should be selected only when testing reveals a stability problem in the checkstand.

Valid values are 0 (normal sensitivity) to 3 (Ultra low sensitivity). Default is 0.

Default Value: 0

WeighMode

```
<prop name="com.ibm.jpos.sdi.config.Scale.weighMode" type="String" value="0"/>
```

This property determines whether the weight is returned in pounds (Avoirdupois or English system) or in kilograms (Metric system).

Valid values are 0 and 1. Default is 0.

0 Weight is given in pounds. For USB OEM compliant scales the fiveDigitWeight property specifies the number of digits to return for an English weight (pounds). For 4698/4696 scales, four digits represent the weight of the item in hundredths.

1 Weight is given in kilograms. All scales return five digits which represent the weight of the item in thousandths of kilograms.

Additional JavaPOS information

Known scale issues

This section describes known issues with specific models.

PSC 384 Magellan - USB

This model does not support the fiveDigitWeight configuration property. This property must be set to *false*; otherwise the Scale configuration fails. For more information, see “FiveDigitWeight (USB OEM only)” on page 240.

OPOS configuration

Table 185. Service Object settings for scale

Keyword	Type	Description	OPOS Gateway Support
weightMode	String	Unit of weight used by the scale. Valid values are: 0 U.S. pound (default) 1 Kilogram	No
RemoteDisplayAttached	String	Whether a Pole Display is attached. Valid values are: True Display attached (other value) No display (default)	No
ZeroScale	String	Whether zeroing the scale is supported. Valid values are: 0 Not supported (default) 1 Supported	No

Table 185. Service Object settings for scale (continued)

Keyword	Type	Description	OPOS Gateway Support
NCRCompatible	String	<p>Determines how zero weight is handled. Valid values are:</p> <p>False Working according to UnifiedPOS specification</p> <p>True When stable weight of zero, return OPOS_SUCCESS</p>	No

Chapter 20. POS keyboard layouts and scan codes

This chapter contains keyboard layouts and scan codes for IBM Point-of-Sale keyboards.

Note: The numeric keypad is shaded in all illustrations.

Understanding scan codes

When a key is pressed on any keyboard (sometimes referred to as, a KEY_DOWN event), the keyboard device driver receives a code that is called a *make scan code*. There is a different code for each key. When a key is released (on some keyboards) sometimes referred to as a KEY_UP event, the keyboard device driver receives a code that is called a *break scan code*. These codes are translated into ASCII character codes by the operating system.

The following scancode tables do not contain values for the OPOS driver, because the OPOS driver only sends a data event to the application if each individual key has been mapped in the configuration program. If a key has been mapped by the user the value that will be sent to the application will be the user-defined mapped value, not the hardware scancode.

For keys that generate different scan codes based on a modifier key (IE, S1 and S2) the scan code shown in the table below does not include the make scan code or break scan code for the modifier key, only the scan code for that key.

Checkout Keyboards Layout (50-key and Modular 67 Key)

This section contains illustrations of the layouts for the following keyboards:

- Retail Point of Sale Keyboard (50-key)
- Retail Point of Sale Keyboard with card reader (50-key)
- Retail Point of Sale Keyboard with card reader and display (50-key)
- Point of Sale Keyboard VI
- Modular 67 Key Keyboard

50-Key Modifiable Layout Keyboard

Figure 32 shows the key-switch numbers. The numeric keypad (key switches 18 to 29) is shown in the shaded area of the illustration.

Figure 32. Layout for 50-Key Modifiable Keyboard

50-Key Modifiable Layout Keyboard and Operator Display

Figure 33 shows the key-switch numbers. The numeric keypad (key switches 18 to 29) is shown in the shaded area of the illustration.

Figure 33. Layout for 50-Key Modifiable Keyboard and Operator Display

Retail Point of Sale Keyboard Layout

Figure 34 on page 253 shows the key-switch numbers for the Retail Point of Sale Keyboard, both with and without the card reader. The numeric keypad (key switches 18 to 29) are shown in the shaded area of the illustration.

Figure 34. Layout for Retail Point of Sale Keyboard

Retail Point of Sale Keyboard with Card Reader and Display

Figure 35 shows the key-switch numbers for the Retail Point of Sale Keyboard with Card Reader and Display. The numeric keypad (key switches 18 to 29) is shown in the shaded area of the illustration.

Figure 35. Layout for Retail Point of Sale Keyboard with Card Reader and Display

Point of Sale Keyboard VI Layout

Figure 36 shows the key-switch numbers for the Point of Sale Keyboard VI. The numeric keypad (key switches 18 to 29) is shown in the shaded area of the illustration.

Figure 36. Layout for Point of Sale Keyboard VI

Modular 67 Key Keyboard Layout

Figure 37 on page 254 shows the key-switch numbers for the Modular 67 Key Keyboard. The numeric keypad (key switches 18 to 29) is shown in the shaded area of the illustration.

Checkout keyboards RS-485/USB scan code set

Table 194 shows the key scan codes

- 50-Key Modifiable Layout Keyboard
- 50-Key Modifiable Layout Keyboard and Operator Display
- Retail Point of Sale Keyboard (50-Key)
- Retail Point of Sale Keyboard with card reader (50-key)
- Retail Point of Sale Keyboard with card reader and display (50-key)
- Point of Sale Keyboard VI
- Modular 67 Key Keyboard

The hardware scan code set for the 50-Key Modifiable Layout Keyboard, and the 50-Key Modifiable Layout Keyboard and Operator Display is different from the hardware scan code set for the retail point-of-sale keyboards. In order to allow the application to work with either keyboard more easily, the hardware scan code set for the 50-Key Modifiable Layout Keyboard and the 50-Key Modifiable Layout Keyboard and Operator Display is translated to the scan code set for the retail point-of-sale keyboards.

Note: The 50-Key Modifiable Layout Keyboard and 50-Key Modifiable Layout Keyboard and Operator Display only generate make scan codes when a key is pressed. In order for your application to work with either the old or the new keyboards, it must use the make scan codes from the checkout style keyboards and discard any break scan codes it receives.

	+ Ctrl Case Pressed			
31	X'f0' X'50' X'00' X'50'		X'00'	Key press only
32	X'f0' X'50' X'01' X'50'		X'01'	Key press only

Note: 67–Key

These keys are present only on the Modular 67 Key Keyboard.

Table 195 on page 259 explains the scan codes received for the S1 and S2 function keys on the retail point-of-sale keyboards.

The S1 and S2 function keys send a series of scan codes on the retail point-of-sale keyboards. These function keys generate a break scan code for the Ctrl key (scan code of 0x50 with PosKC_KEYUP flag set), a make scan code for the S1 or S2 key and then a make scan code for the Ctrl key (scan code of 0x50 with PosKC_KEYUP flag reset). The S1 and S2 function keys can only be accessed by pressing the Ctrl key. With the Ctrl key pressed, key 31 represents the S1 function and key 32 represents the S2 function.

No break scan codes are sent for the 0x00 or 0x01 scan codes.

Table 195. RS-485/USB scan codes for the Retail Point of Sale Keyboards

Table 196. Modifiable layout keyboard RS-485/USB scan code set (continued)

Key switch number	Hardware make code	Hardware break code	JavaPOS - POSKeyData	Comments
135 (S1)	X'f0' X'20' X'00' X'20'		X'00'	Key press only

Table 197 explains the scan codes received for the S1 and S2 function keys on the Modifiable Layout Keyboard with Card Reader.

The S1 and S2 function keys send a series of scan codes on the Modifiable Layout Keyboard with Card Reader. These function keys generate a break scan code for the Ctrl key (scan code of 0x20 with PosKC_KEYUP flag set), a make scan code for the S1 or S2 key, and then a make scan code for the Ctrl key (scan code of 0x20 with the PosKC_KEYUP flag reset). The S1 and S2 function keys can only be accessed by pressing the **Ctrl** key. With the **Ctrl** key pressed, key 135 represents the S1 function, and key 124 represents the S2 function.

No break scan codes are sent for the 0x00 or 0x01 scan codes.

Table 197. RS-485 Scan Codes – Modifiable Layout Keyboard with Card Reader

Key switch number	Key type	Ctrl + scan code
124	S2	X'01'
135	S1	X'00'

Retail Alphanumeric Point of Sale keyboard with card reader (RS-485 or USB attached) and Modular Alphanumeric Point of Sale Keyboard and Modular Compact Alphanumeric Point of Sale Keyboard (USB attached)

This section contains illustrations of the layouts for the following keyboards:

- PC Point of Sale Keyboard with Card Reader (ANKPOS)
- Retail Alphanumeric POSKeyboard with Card Reader (NANPOS)
- Modular Alphanumeric POS Keyboard
- Modular Compact Alphanumeric POS Keyboard

PC Point of Sale keyboard with card reader (ANKPOS)

Figure 39 shows the layout and assigned key-switch numbers for the PC Point of Sale Keyboard. The numeric keypad location is shown in the shaded area of the illustration.

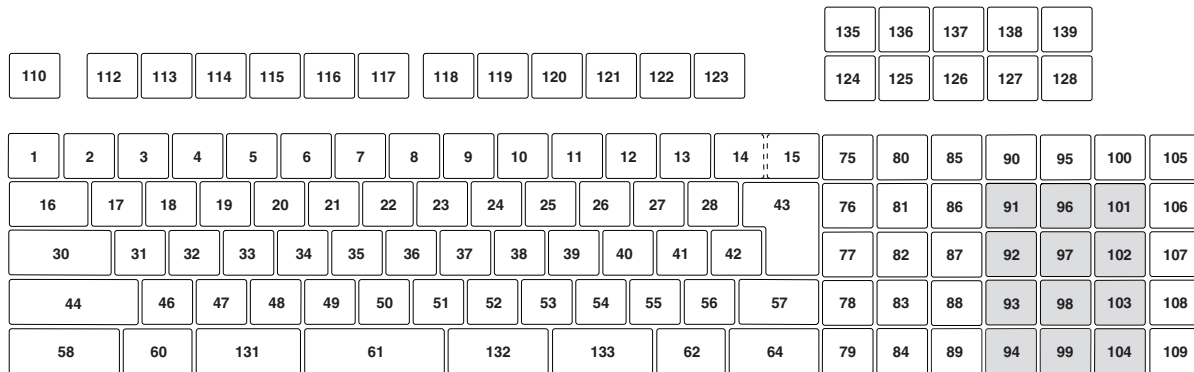

Figure 39. PC Point of Sale keyboard layout

Retail Alphanumeric Point of Sale Keyboard with card reader (NANPOS)

Figure 40 shows the layout and assigned key-switch numbers for the Retail Alphanumeric Point of Sale Keyboard with card reader.

Figure 40. Layout and Assigned Switch Numbers

Notes:

1. The two possible locations for the numeric keypad are shown in the shaded area of the illustration. The default location for the numeric keypad is the rightmost shaded area.
2. Key 45 appears as a single key only on non-U.S. keyboards. On U.S. keyboards, key 44 also covers key 45 (key 44, 45 is a double key).
3. Keys 94 and 99 can have a single, horizontal double-wide key covering both keys, or they can be split into two individual keys.
4. This keyboard is similar to the 101-enhanced keyboard and the 102-enhanced keyboard. The following keys are on the Retail Alphanumeric Point of Sale Keyboard with Card Reader, but not on the 101-enhanced keyboard or the 102-enhanced keyboard. These keys are referred to as the *point-of-sale-unique* keys.

77	106

Notes:**ANKPOS**

PC Point of Sale Keyboard unique keys. These keys are present only on the PC Point of Sale (ANKPOS keyboard).

World Trade key

This key is present on all non-U.S. versions of the NANPOS keyboard, but not on the ANKPOS keyboard.

Table 199 explains the scan codes received for the S1 and S2 function keys on the Retail Alphanumeric Point of Sale Keyboard with Card Reader.

The S1 and S2 function keys send a series of scan codes on the Retail Alphanumeric Point of Sale Keyboard with Card Reader. These function keys generate a break scan code for the Ctrl key pressed (scan code 0x50 or 0x40 with PosKC_KEYUP flag set), a make scan code for the S1 or S2 key and then a make scan code for the Ctrl key pressed (scan code of 0x50 or 0x40 with PosKC_KEYUP flag reset). The S1 and S2 function keys can only be accessed by pressing the Ctrl key. With the Ctrl key pressed, key 135 represents the S1 function, and key 124 represents the S2 function.

No break scan codes are sent for the 0x00 or 0x01 scan codes.

Table 199. Point of Sale Scan Codes for Retail Alphanumeric Point of Sale Keyboard with Card Reader

Key switch number	Key type	Ctrl + scan code
124	S2	X'01'
135	S1	X'00'

For the PC Point of Sale Keyboard, Table 200 shows the scan codes sent by the S1 and S2 function keys, depending upon the Keylock Positions.

Retail Alphanumeric Point of Sale keyboard with card reader (PS/2 or USB system attached)

This section contains illustrations of the layouts for the following keyboards:

- Retail Alphanumeric POSKeyboard with card reader (ANKPOS)
- Retail Alphanumeric POSKeyboard with card reader (NANPOS)
- Compact Alphanumeric POSKeyboard (CANPOS)
- Modular Alphanumeric POS Keyboard
- Modular Compact Alphanumeric POS Keyboard

Retail Alphanumeric Point of Sale with card reader or PC Point of Sale keyboard (ANKPOS) layout keyboard

Figure 43 shows the layout and assigned key-switch numbers for the PC Point of Sale keyboard. The numeric keypad location is shown in the shaded area of the illustration.

Figure 43. PC Point of Sale keyboard layout

Retail Alphanumeric Point of Sale with card reader (NANPOS) layout keyboard

Figure 44 shows the layout and assigned key-switch numbers for the Retail Alphanumeric Point of Sale Keyboard with Card Reader.

Figure 44. Layout and assigned switch numbers

Notes:

1. The two possible locations for the numeric keypad are shown in the shaded area of the illustration. The default location for the numeric keypad is the right-most shaded area.
2. Key 45 appears as a single key only on non-U.S. keyboards. On U.S. keyboards, key 44 also covers key 45 (key 44, 45 is a double key).
3. Keys 94 and 99 can have a single, horizontal double-wide key covering both keys, or they can be split into two individual keys.
4. This keyboard is similar to the 101-enhanced keyboard and the 102-enhanced keyboard. The following keys are on the Retail Alphanumeric Point of Sale Keyboard with Card Reader, but not on the 101-enhanced keyboard or the 102-enhanced keyboard. These keys are referred to as the *point-of-sale-unique keys*.

77	106
78	107
82	108
87	124
88	125
90	126
95	127
99	128
100	135
105	

See Table 202 on page 281 for the scan codes associated with these keys.

Modular Alphanumeric Point of Sale Keyboard

Figure 45 shows the layout and assigned key-switch numbers for the Modular Alphanumeric Point of Sale Keyboard.

Figure 45. Layout and Assigned Switch Numbers for Modular ANPOS Keyboard

See Table 202 on page 281 for the scan codes associated with these keys.

Compact Alphanumeric Point of Sale (CANPOS) layout keyboard

Figure 46 shows the layout and assigned key-switch numbers for the Compact Alphanumeric Point of Sale keyboard with card reader.

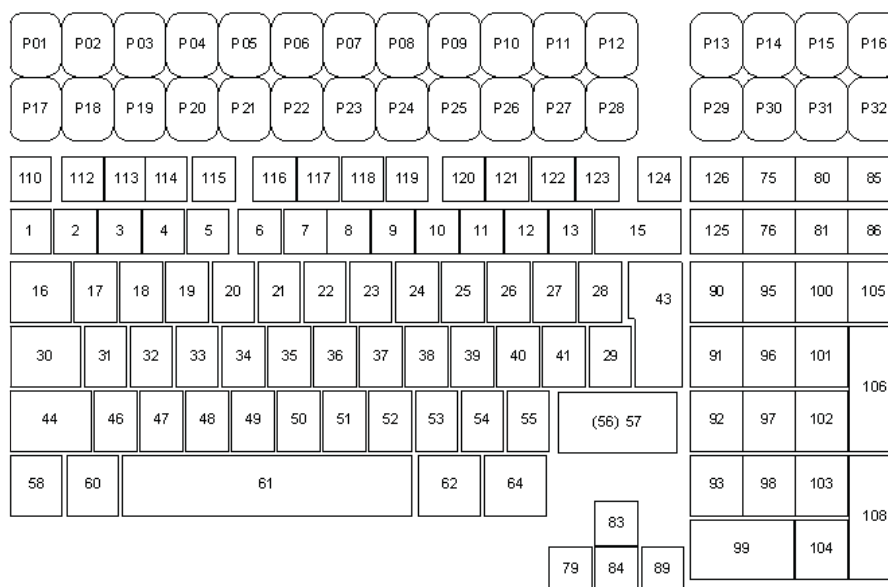

Figure 46. Layout and assigned switch numbers for CANPOS keyboard

Note: See Table 203 on page 288 for scan codes related to this keyboard.

Modular Compact Alphanumeric Point of Sale Keyboard Layout

Figure 47 on page 280 shows the layout and assigned key-switch numbers for the Modular Compact Alphanumeric Point of Sale Keyboard.

Figure 47. Modular CANPOS Keyboard Layout and Assigned Switch Numbers

Note: See Table 203 on page 288 for scan codes related to this keyboard.

PS/2 or USB (System Attached) scan code set for the Retail Alphanumeric Point of Sale Keyboard (NANPOS), Modular Alphanumeric Point of Sale Keyboard and the PC Point of Sale Keyboard (ANKPOS)

Table 202 relates the keyboard key-switch number to the scan codes received when the keyboard is attached to the system keyboard port.

Notes:**ANKPOS**

PC Point of Sale Keyboard unique keys. These keys are present only on the PC Point of Sale (ANKPOS keyboard).

World Trade key

This key is present on all non-U.S. versions of the NANPOS keyboard, but not on the ANKPOS keyboard.

Double keys

Key switch numbers 94 and 99 are defined as double keys.

PS/2 scan code set for the Compact Alphanumeric Point of Sale Keyboard (CANPOS) and PS/2 / USB (System Attached) Modular Compact Alphanumeric Point of Sale Keyboard

Table 203 relates the keyboard key-switch number to the scan codes received when the keyboard is attached to the system keyboard port.

Table 203. PS/2 or USB scan codes for CANPOS keyboard

Note: Linux: When connected as USB System, the Modular CANPOS Keyboard will return the following JavaPOS POS key data for the following keys:

Key 95 - X'53'
 Key 100 - X'65'
 Key 104 - X'78'''
 Key 105 - X'7a'''
 Key 106 - X'7e'

Point of Sale Keyboard V

Figure 48 shows the Keyboard V layout.

Figure 48. Point of Sale Keyboard V layout

Notes:

1. The single asterisk (*) in the top-left portion of the keyboard indicates the S1 key.
2. The double asterisk (**) in the top-left portion of the keyboard indicates the S2 key.
3. The triple asterisk (***) indicates that a 1×5 dummy cap covers those key switches.
4. The two possible locations for the numeric keypad are shown in the shaded area of the illustration. The default location for the numeric keypad is the right-most shaded area.

Keyboard V scan codes

Figure 49 shows the key scan codes for the Keyboard-V.

4C (00)	4F	4E	4D	49	48	47	4B	4A	(46)	45	(44)	43	(42)	41	40	50
3C (01)	3F	3E	3D	39	38	37	3B	(3A)	(36)	35	34	33	(32)	(31)	30	51

Figure 49. Keyboard-V scan code set

Notes:

1. '()' indicates that these scan codes can be generated when the layout is changed.
2. '{ }' indicates these scan codes will be generated only when the keylock is in the **system** position.
3. Each double key produces only one scan code (the key scan code without parentheses in the illustration), unlike the single-byte character set (SBCS) keyboards.
4. Return only make scan codes.

PLU Keyboard and Display III

Figure 50 shows the PLU Keyboard and Display-III layout and scan codes.

The two possible locations for the numeric keypad are shaded in Figure 50. The default location for the numeric keypad is the right-most shaded area.

SureOne model 4614/4615 and SurePOS 100 model 4613 keyboard (built-in)

SureOne supports only the 101-key layout.

SurePOS 100 supports 101-, 102-, and 103-key layouts.

Notes:

1. When the keyboard is configured to be in POS mode, the application program must use standard PC Keyboard interfaces to intercept the keystrokes (scan codes) and perform the appropriate translation and detection.
2. JavaPOS does not support POS mode.

Figure 65 shows the layout of the key-switch numbers for the SureOne/SurePOS 100 keyboards.

Figure 65. SureOne/SurePOS 100 keyboard (built-in) keyboard layout

SureOne model 4614/4615 and SurePOS 100 model 4613 keyboard (built-in) scan codes

Figure 66 provides the key switch numbers for the SureOne/SurePOS 100 101-key keyboard.

Key Switch Number

Chapter 21. Character sets for terminal printers and displays

This chapter contains the character sets and the ASCII codes for each character for the following devices:

- Alphanumeric Display
- Operator Display
- Shopper Display
- Character/Graphics Display
- PLU Keyboard/Display-III
- 40-Character Vacuum Fluorescent Display II
- Two-Sided Vacuum Fluorescent Display II
- 40-Character Liquid Crystal Display
- 2x20 Character VFD Customer Display
- 1x11 LED Display
- IBM Model 3 Printer
- IBM Model 3F Fiscal Printer
- IBM Model 3R Printer
- IBM Model 4 Printer
- IBM Model 4A Printer
- IBM Model 4R Printer
- IBM 4610 SureMark Point of Sale Printer Models TI1, TI2, TI3, TI4, TI5, TI8, TI9, TG3, TG4, TG8, TG9, TF6, TF7, TM6, TM7
- IBM 4610 Fiscal Printer Models Kxx and Gxx
- IBM 4689 Point of Sale Printer Models 001, 002, 301, 3G1, 3M1, TD5

The following code pages are supported:

- 101 OEM 7-Segment Alphanumeric font
- 437 U.S. English
- 808 Cyrillic
- 819 ISO-8859-1 / 1252
- 850 OEM Latin-1
- 852 OEM Latin-2
- 855 OEM Cyrillic
- 857 OEM Turkish
- 858 OEM Latin-1 + Euro
- 860 OEM Portuguese
- 861 OEM Icelandic
- 862 OEM Israel
- 863 OEM French Canadian
- 864 OEM Arabic
- 865 OEM Nordic
- 866 OEM Russian
- 869 OEM Green
- 897 Single-byte Japanese Katakana (also used in CP 932)
- 926 Double-byte Korean Hangul
- 932 Japanese Shift-JIS (see 2 on page 330)
- 936 Simplified Chinese
- 949 Korean (see 2 on page 330)
- 950 Traditional Chinese Big5 (see 3 on page 330)
- 951 (Special symbols Alphanumeric/Numerics/Jamo/Hiragana/Hanja)
- 1116 IBM Estonia
- 1117 IBM Latvia
- 1118 IBM Lithuania
- 1119 IBM Russia/Lithuania
- 1250 MS Windows - Central Europe

- 1251 MS Windows - Cyrillic
- 1252 MS Windows - Latin 1 / ISO 8859-1 / 819
- 1253 MS Windows - Greek
- 1254 MS Windows - Turkish / ISO 8859-4
- 1257 MS Windows - Baltic
- 1361 Korean - Hohan
- 1381 Simplified Chinese GB2312 (see 3)

Notes:

1. See “Character sets supported by line display devices for JPOS” on page 107 for the list of line displays and their supported code pages.
2. Code pages 932 and 949 are mixed, single-byte/double-byte code pages.
 - Code page 932 contains the following:
 - Single-byte character code page 897
 - Double-byte character code page 301
 - Code page 949 contains the following:
 - Single-byte character code page 1088
 - Double-byte character code page 951
3. Code pages 950 and 1381 are supported, but are too large to document in this book.

Appendix A. JavaPOS support for UnifiedPOS device statistics properties

Common properties

Table 207. Description of common properties

Common Properties	Description	Value
UnifiedPOSVersion	Version of the UnifiedPOS specification supported	UPOS Version (for example: 1.9.1)
DeviceCategory	Device category (for example: POSPrinter)	[Corresponding category]
ManufacturerName	Device manufacturer's name	IBM
ModelName	Device model name	See the section for the specific device.
SerialNumber	Device serial number	[Serial_Number]
ManufactureDate	Device manufacture date	See the section for the specific device.
FirmwareRevision	Device firmware revision	[Firmware_Version]
Interface	Device hardware interface (for example: USB)	RS232/RS485/USB/Proprietary
InstallationDate	Device installation date	Not supported
HoursPoweredCount	Number of hours powered On	Not supported
CommunicationErrorCount	Number of communication errors	Not supported

Notes:

1. Interface property used the *Proprietary* value for PS/2 and Embedded devices.
2. SerialNumber property for USB devices may not match the device label, except for the 4610 POSPrinter.
3. The ManufactureDate format for the [Printer/MICR/CheckScanner/CashDrawer] is *WWYY*, where *WW* is a two-digit representation for the week of the year the printer was manufactured, and *YY* is the last two digits of the year it was manufactured.
4. EIA232 hardware interface use RS232 as a value.

Support for the following properties applies to all devices:

- CapStatisticsReporting: Yes
- CapUpdateStatistics: No

Cash drawer

Table 208. Cash drawer

Note: 730/750 USB devices use BCD level for Firmware Revision.

Check scanner

Check Scanner is only available on IBM 4610 PosPrinter models T18 and T19.

Table 211. Check scanner

Device	Bus	Model name value
POSPrinter 4610-T18/T19	USB / EIA232 / RS485	4610

Table 212. Check scanner common properties

Common Properties	Description	POSPrinter 4610 -T18/T19 - EIA232/RS485/USB Supported:
UnifiedPOSVersion	Version of UnifiedPOS specification supported	Y
DeviceCategory	Device Category	Y
ManufacturerName	Device manufacturer's name	Y
ModelName	Device model name	Y
SerialNumber	Device serial number	Y
ManufactureDate (WWYY format)	Device manufacture date	Y
MechanicalRevision	Device hardware revision	N
FirmwareRevision	Device firmware revision	Y
Interface	Device hardware interface	Y
InstallationDate	Device installation date	N
HoursPoweredOn	Number of hours powered On	N
CommunicationErrorCount	Number of communication errors	N

Table 213. Check scanner manufacturer properties

Manufacturer properties	Unit of measure	Description	POSPrinter 4610 -T18/T19 - EIA232/RS485/USB supported:
IBM_CheckScannedCount	"" - empty	Number of checks scanned	Y

Table 213. Check scanner manufacturer properties (continued)

Manufacturer properties	Unit of measure	Description	POSPrinter 4610 -T18/T19 - EIA232/RS485/USB supported:
IBM_ChecksFailedQualityCount	"" - empty	Number of scanned checks failed to meet internal image quality test	Y
IBM_CheckScannerBrightnessQuality	"" - empty	Check Scanner Brightness Quality	Y
IBM_CheckScannerContrastQuality	"" - empty	Check Scanner Contrast Quality	Y
IBM_CheckScannerFocusQuality	"" - empty	Check Scanner Focus Quality	Y

Notes:

1. CheckScanner microcode level used for firmware revision
2. ManufacturerDate is only available for new POSPrinters (after December, 2005). Older ones are not supported.
3. The CheckScanner should be cleaned or recalibrated if the following values are not met:
 - IBM_CheckScannerBrightnessQuality: 90 decimal
 - IBM_CheckScannerContrastQuality: 90 decimal
 - IBM_CheckScannerFocusQuality: 77 decimal
4. For 4689 USB and RS485 models, PaperCutCount increments its value by 10 after 10 cuts, not one by one.

Fiscal printer

Table 214. Fiscal printer

Device	Bus	Model name value
4610-KCx	EIA232	KCX*

Specific properties	Description	4610 Printer USB/EIA232/ RS485 supported	4674/4689 RS485	4689 USB	SureONE Thermal
BarCodePrintedCount	Number of barcodes printed	Y	N	N	N
FormInsertionCount	Number of forms inserted into the document/slip station	Y	N	N	N
HomeErrorCount	Number of home errors	Y	N	N	N
JournalCharacterPrintedCount	Number of journal characters printed	N	N	N	N
JournalLinePrintedCount	Number of journal lines printed	N	N	Y	N
MaximumTempReachedCount	Number of times maximum temperature reached	Y	N	N	N
NVRAMWriteCount	Number or times NVRAM is written to	Y	N	N	N
PaperCutCount	Number of paper cuts	Y	Y	Y	N
FailedPaperCutCount	Number of failed paper cuts	Y (See note 6.)	N	N	N
PrinterFaultCount	Number of printer faults	N	N	N	N
PrintSideChangeCount	Number of print side changes (or check flips) performed	Y (See note 5.)	N	N	N
FailedPrintSideChangeCount	Number of print side change (of check flip) failures	Y (See note 5.)	N	N	N
ReceiptCharacterPrinted Count	Number of receipt characters printed	Y	N	N	N
ReceiptCoverOpenCount	Number of times receipt cover was opened	Y	N	N	N
ReceiptLineFeedCount	Number of receipt line feeds performed	Y	N	N	N
ReceiptLinePrintedCount	Number of receipt lines printed	N	Y	Y	N
SlipCharacterPrintedCount	Number of document/slip characters printed	Y	N	N	N
SlipCoverOpenCount	Number of times the document/slip station cover opened	Y	N	N	N
SlipLineFeedCount	Number of document/slip line feeds performed	Y	N	N	N
SlipLinePrintedCount	Number of document/slip lines printed	N	N	N	N
StampFiredCount	Number of stamps fired	N	N	N	N

Notes:

1. POSPrinter microcode level used for firmware revision.

2. ManufacturerDate is only available for newer POSPrinters (after December 2005). Older ones are not supported.
3. For 4689 USB and RS485 models, PaperCutCount increments by 10 after 10 cuts.
4. In some cases a tag <Value/> may be retrieved, indicating that the requested statistic is not supported for the printer firmware, or it has never been initialized.
5. Only valid on 4610-TI4/8/9 models.
6. Only valid on Tx6/Tx7/2xR models.

Table 244. POS printer manufacturer properties

Manufacturer Properties		RS232/RS485/ USB
Name	Description	Supported
IBM_ReceiptPaperRemaining	Number of mm of paper left in the printer	Yes, see note ¹
IBM_UnexpectedSlipCoverOpenCount	Number of times the Slip cover was opened without an error condition.	Yes, see note ¹
IBM_SlipFeedErrorCount	Number of Slip Feed errors	Yes, see note ¹
IBM_ReceiptPaperJamCount	Number of Receipt Paper Jams	Yes, see note ¹
IBM_FlashWriteFailedCount		Yes, see note ¹
IBM_UnexpectedRecCoverOpenCount	Number of failed flash writes	Yes, see note ¹
IBM_ImpactHeadFailedCount	Number of times the Receipt cover was opened without an error condition.	Yes, see note ¹
IBM_ThermalPrintHeadElementFailure	Number of Impact head failed coils Number of the Thermal Head element that is failing (Can be more than 1).	Yes, see note ¹

¹Only valid on 4610-2xR models

NANPOS Tone Indicator as System Keyboard	PS2/USB	NANPOS
4820 Tone Indicator (SurePoint)	PS2/RS485/USB	4820
50-key Tone Indicator - SBCS	RS485/USB	50-key
ANKPOS - DBCS	RS485/USB	ANKPOS
ANKPOS - DBCS as System Keyboard	PS2/USB	ANKPOS
133-key or Matrix - SBCS	RS485/USB	133-key
PLU Keyboard III with Display	RS485/USB	PLU

Table 251. Tone indicator (continued)

Device	Bus	Model name value
Keyboard 4685 K02 Ultra VII - 4 pos Keylock	RS485/USB	4685
Keyboard 4685 K02 Ultra VII - MSR/E 4 pos	USB	4685
Keyboard 4685 K02 Ultra VII - MSR/E 6 pos	USB	4685
Keyboard V	RS485/USB	Kbd V
SurePOS 4674 Tone Indicator	RS485	4674/4685-K03
50-key POSKeyboard JUCC MSR - DBCS	USB	50-key
4610 Tx6/Tx7 Printer ToneIndicator	EIA232/RS485/USB	4610-Tx6/Tx7
Keyboard 4685 K03	USB	4685-K03
Keyboard 4685 K03	RS485	4674/4685-K03
Modular ANPOS Keyboard	PS/2, USB	Modular ANPOS
Modular CANPOS Keyboard	PS/2, USB	Modular CANPOS
Modular 67 Key Keyboard	PS/2, USB	Modular 67 Key

Table 252. Tone indicator common properties

Common properties	Description	4610 Tx6/Tx7 Printer tone indicator	USB supported	PS2 supported	RS485 supported
UnifiedPOSVersion	Version of the UnifiedPOS specification supported	Y	Y	Y	Y
DeviceCategory	Device category	Y	Y	Y	Y
ManufacturerName	Device manufacturer's name	Y	Y	Y	Y
ModelName	Device model name	Y	Y	Y	Y
SerialNumber	Device serial number	Y	Y	N	N
ManufactureDate	Device manufacture date. In WWYY format.	Y ¹	N	N	N
MechanicalRevision	Device hardware revision	N	N	N	N
FirmwareRevision	Device firmware revision	Y	Y	N	N
Interface	Device hardware interface	Y	Y	Y	Y
InstallationDate	Device installation date	N	N	N	N
HoursPoweredCount	Number of hours powered On	Y ¹	N	N	N
CommunicationErrorCount	Number of communication errors	N	N	N	N

¹ Supported by USB Modular ANPOS, 67 Key, Modular CANPOS

Table 253. Tone Indicator manufacturer properties table

Manufacturer properties	Description	4610 Tx6/Tx7 Printer ToneIndicator	USB	PS2	Embedded
IBM_PowerCycleCount	Number of power on/off cycles	N	Y ¹	N	N
IBM_UnexpectedResetsCount	Number of unexpected resets	N	Y ¹	N	N

¹ Supported by USB Modular ANPOS, Modular CANPOS and Modular 67 Key Keyboards.

Table 254. Tone indicator specific properties

Specific properties	Description	4610 Tx6/Tx7 Printer tone indicator	USB supported	PS2 supported	RS485 supported
ToneSoundedCount	Number of tones played	N	N	N	N

Note: USB devices use BCD level for firmware revision.

Appendix B. UnifiedPOS support tool

To start the application from a command prompt, type:

```
java com.ibm.jpos.tools.sdist.SupportToolApp
```

In Windows, you can click the **UnifiedPOS Support Tool** icon under **Start > Programs > IBM JavaPOS**.

At startup, after the splash screen, the first dialog appears as shown:

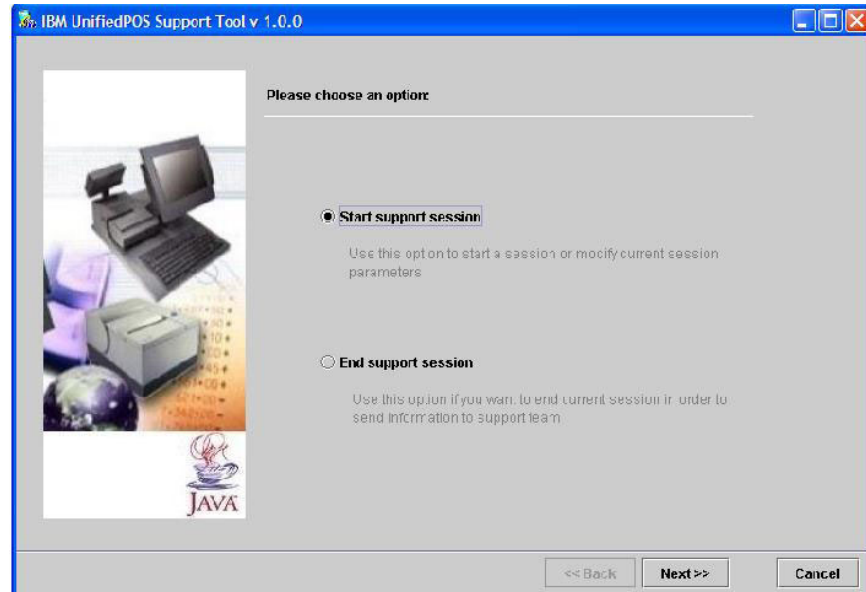

Figure 87. UnifiedPOS Support Tool GUI

Start support session is used to start a new session or to edit current session settings. *End support session* is used to finalize the current support session, automatically disable traces and generate the session files that are sent to the support team.

When you choose *Start support session*, the following window is presented:

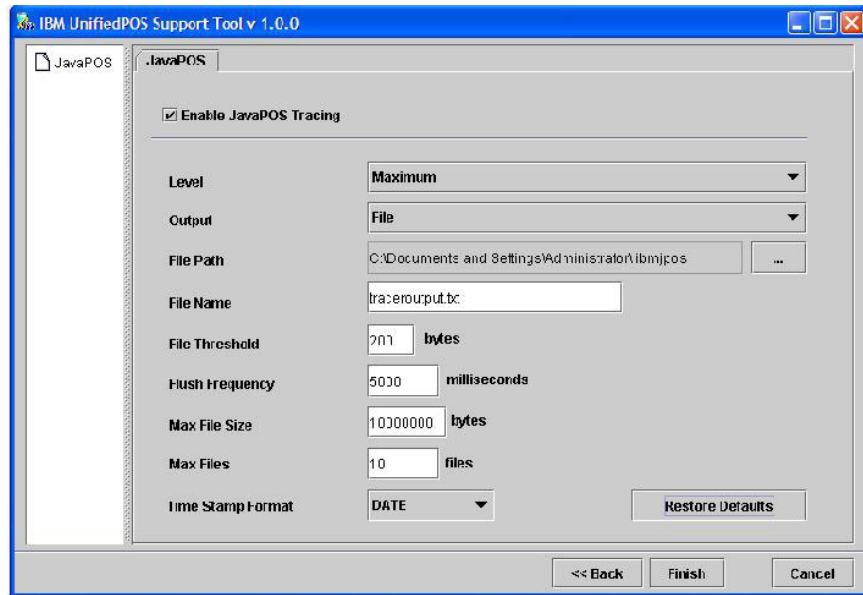

Figure 88. Session options

By default, *Enable JavaPOS Tracing* is checked to enable tracing. If you want disable tracing, uncheck this field. *Restore Defaults* loads all the default factory values in one step. Click **Finish** to save your changes. The *End Support Session* option generates the session files and displays a success/fail message, and the location of the generated file.

Figure 89. End session

When you press the <...> (explore button) the following dialog is presented, and only directories can be selected:

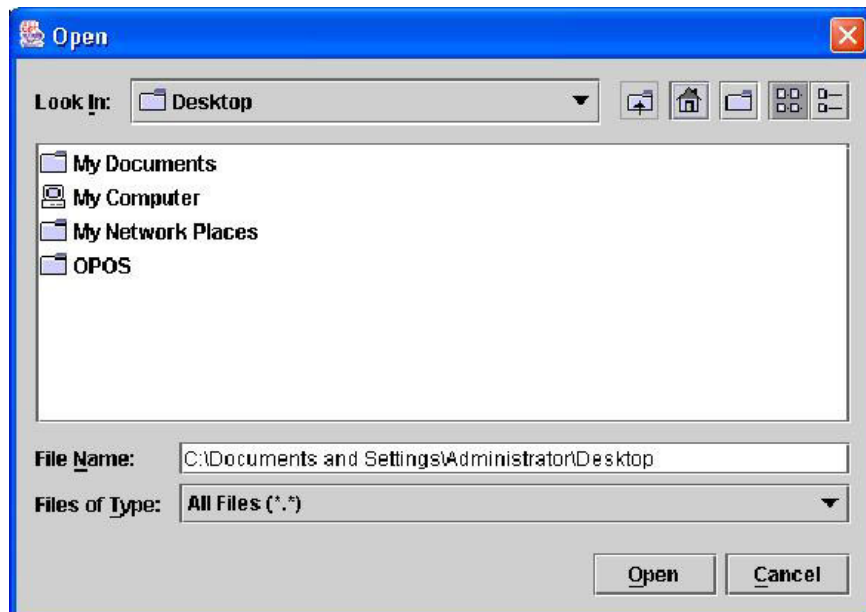

Figure 90. Environment variables file name

After clicking **Finish**, a file named: sendYYYYMMDDHHMMSS.zip is generated.

Where:

- *YYYYMMDD* = year, month and day when the file was generated.
- *HHMMSS* = hour, minute and second when the file was generated. This zip file contains all the information relative to environment variables, jpos.xml, libraries, and tracer output.

Appendix C. IBM Java Web Start configuration to access the POS control center

Install JavaPOS SDK

Create a KeyStore

To create a store key:

1. Change to webstart directory

For Windows: **cd c:\POS\IBMJPOS\webstart**

Note: There is assumed the product is installed in the default directory. Linux:
cd /opt/ibm/javapos/webstart

For Linux: **cd /opt/ibm/javapos/webstart**

Note: This and following steps is assumed they are executed with root user.

2. For Windows:

Execute keytool.exe -genkey -keystore jposKeyStore -alias jposAlias

For Linux:

Execute keytool -genkey -keystore jposKeyStore -alias jposAlias

Expected input:

Enter keystore password: "keyStorePassword"

What is your first and last name?

[Unknown]: "userName"

What is the name of your organizational unit?

[Unknown]: "yourOrganizationalUnit"

What is the name of your organization?

[Unknown]: "yourOrganization"

What is the name of your City or Locality?

[Unknown]: "yourCity"

What is the name of your State or Province?

[Unknown]: "yourState"

What is the two-letter country code for this unit?

[Unknown]: "us"

Is CN=userName, OU=yourOrganizationUnit, O=yourOrganization,
L=yourCity, ST=yourState, C=us correct?

type "yes" or "no") [no]: yes

Enter key password

for <jposAlias>: RETURN if same as keystore password):"aliasPassword"

Create a self-signed certificate

To create a create a self-signed certificate:

1. Execute this command, **keytool.exe -list -v -keystore jposKeyStore .**
2. Enter keystore password: keyStorePassword

Expected input:

```

Keystore type: jks
Keystore provider: IBMJCE

Your keystore contains 1 entry

Alias name: jposAlias
Creation date: Apr 9, 2008
Entry type: keyEntry
Certificate chain length: 1
Certificate[1]:
Owner: CN=userName, OU=yourOrganizationUnit,
O=yourOrganization, L=yourCity, ST=yourState, C=us
Issuer: CN=userName, OU= yourOrganizationUnit,
O= yourOrganization, L= yourCity, ST= yourState, C=us
Serial number: 47fcfb8e
Valid from: 4/9/08 2:23 PM until: 7/8/08 2:23 PM
Certificate fingerprints:
  MD5:  BB:A4:36:45:C4:0D:FD:A0:0D:66:12:4F:D0:B3:D8:EE
  SHA1:  BE:D4:D4:7A:50:A6:A3:8B:F9:D6:38:2E:0E:BD:15:D1:9B:83:B7:24

```

Create jpos.xml

Create jpos.xml and save in the following directory:

For Windows: **cd c:\POS\IBMJPOS\config**

For Linux: **cd /opt/ibm/javapos/etc**

Create the resource JAR

To create the resource JAR:

1. Change directory
 - Windows: **cd c:\POS\IBMJPOS\config**
 - Linux: **cd /opt/ibm/javapos/etc**
2. Execute the appropriate command:
 - Windows: **jar -cvf c:\POS\IBMJPOS\webstart\ibmjpos_resources.jar *.***
 - Linux: **jar -cvf /opt/ibm/javapos/webstart/ibmjpos_resources.jar *.***
3. Change directory (only for Linux)
 - Windows**
 - No action is necessary
 - Linux** **cd /opt/javax-usb/etc**
4. Execute the appropriate command (Only for Linux)
 - Windows**
 - No action is necessary
 - Linux** **jar -uf /opt/ibm/javapos/webstart/ibmjpos_resources.jar**

Sign the all JARs file with the test certificate

To sign the all JARs file with the test certificate

1. Copy all the jars located in:
 - Windows: C:\POS\IBMJPOS\lib to C:\POS\IBMJPOS\webstart directory.
 - Linux: /opt/ibm/javapos/lib and /opt/javax-usb/lib to /opt/ibm/javapos/webstart directory.

Note: It is necessary to copy all the jar files for the JavaPOS device drivers to the webstart directory. Otherwise, once the existing jar files are signed, a java application that is not launched through the webstart interface will not be able to use the JavaPOS device drivers.

2. Sign all jars located at webstart directory.

For example, to sign the jtux.jar use the following command: **jarsigner.exe -keystore jposKeyStore -storepass "keyStorePassword" -keypass "aliasPassword" jtux.jar jposAlias**

Run JNLP file

To run the JNLP file

1. Move to:

Windows: `cd c:\POS\IBMJPoS\webstart`

Linux: `cd /opt/ibm/javapos/webstart`

2. Run.

For Windows or Linux: **Javaws ibmJavaPOS.jnlp.**

Note: When UnifiedPOS was installed without "System Management Support", edit ibmJavaPOS.jnlp and comment out the following line: `<!jar href="jpos_sysmgmt.jar" download="eagerly" />`

Notices

This information was developed for products and services offered in the U.S.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering the subject matter in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

Glossary

This glossary includes terms and definitions from:

- *American National Standard Dictionary for Information Systems*, ANSI X3.172-1990, copyright 1990 by the American National Standards Institute (ANSI). Copies may be purchased from the American National Standards Institute, 11 West 42nd Street, New York, New York 10036. Definitions are identified by the symbol (A) after the definition.
- The *Information Technology Vocabulary*, developed by Subcommittee 1, Joint Technical Committee 1, of the International Organization for Standardization and the International Electrotechnical Commission (ISO/IEC JTC1/SC1). Definitions of published parts of this vocabulary are identified by the symbol (I) after the definition; definitions taken from draft international standards, committee drafts, and working papers being developed by ISO/IEC JTC1/SC1 are identified by the symbol (T) after the definition, indicating that final agreement has not yet been reached among the participating National Bodies of SC1.

A

active. Able to communicate on the network. A token-ring network adapter is active if it is able to transmit and receive on the network. Operational. Pertaining to a node, or device that is connected or is available for connection to another node or device. Currently transmitting or receiving.

adapter. In the point-of-sale terminal, a circuit card that, with its associated software, enables the terminal to use a function or feature. In a LAN, within a communicating device, a circuit card that, with its associated software and/or microcode, enables the device to communicate over the network.

address. In data communication, the IEEE-assigned unique code, or the unique locally administered code assigned to each device, or workstation connected to a network. A character, group of characters, or a value that identifies a register, a particular part of storage, a data source, or a data link. The value is represented by one or more characters. To refer to a device, or an item of data by its address. The location in the storage of a computer where data is stored.

address space. The complete range of addresses that is available to a programmer.

all points addressable (APA). In computer graphics, pertaining to the ability to address and display or not display each picture element (pel) on a display surface.

alphanumeric. Pertaining to a character set containing letters, digits, and other characters, such as punctuation marks.

Alphanumeric point-of-sale keyboard (NANPOS keyboard). This keyboard consists of a section of alphanumeric keys, a programmable set of point-of-sale keys, a numeric keypad, and system function keys.

American National Standard Code for Information Interchange (ASCII). The standard code, using a coded character set consisting of 7-bit coded characters (8 bits including parity check), used for information interchange among data processing systems, data communication systems, and associated equipment. The ASCII set consists of control characters and graphics characters.

American National Standards Institute (ANSI). An organization for the purpose of establishing voluntary industry standards.

NANPOS keyboard. Alphanumeric Point of Sale Keyboard.

ANSI. American National Standards Institute.

APA. all points addressable.

API. Application program interface.

application program. A program written for or by a user that applies to the user's own work. A program written for or by a user that applies to a particular application. A program used to connect and communicate with stations in a network, enabling users to perform application-oriented activities.

application program interface (API). The formally defined programming language interface that is between an IBM system control program or a licensed program and the user of the program.

array. An arrangement of elements in one or more dimensions.

ASCII. American National Standard Code for Information Interchange.

asynchronous. Pertaining to two or more processes that do not depend upon the occurrence of specific events such as timing signals. Without regular time relationship; unexpected or unpredictable with respect to the execution of program instructions.

attach. To connect a device physically. To make a device a part of a network logically. Compare with *connect*.

attaching device. Any device that is physically connected to a network and can communicate over the network.

B

backup. Pertaining to a system, device, file, or facility that can be used in the event of a malfunction or the loss of data.

backup copy. A copy, usually of a program or of a library member, that is kept in case the original or the working copy is unintentionally altered or destroyed.

bar code. A code representing characters by sets of parallel bars of varying thickness and separation that are read optically by transverse scanning.

BCD. Binary-coded decimal notation.

binary. Pertaining to a system of numbers to the base two; the binary digits are 0 and 1. Pertaining to a selection, choice, or condition that has two possible different values or states.

binary-coded decimal notation (BCD). A binary-coded notation in which each of the decimal digits is represented by a binary numeral. For example, in binary-coded decimal notation that uses the weights 8, 4, 2, 1, the number “twenty three” is represented by 0010 0011. In the pure binary numeration system, its representation is 10111.

bit. Either of the binary digits: a 0 or 1.

bit map. A coded representation in which each bit or group of bits represents or corresponds to an item; for example, a configuration of bits in main storage in which each bit indicates whether a peripheral device or a storage block is available or in which each group of bits corresponds to one pixel of a display image.

bits per second (bps). The rate at which bits are transmitted per second.

block size. The minimum size that frames are grouped into for retransmission. The number of data elements (such as bits, bytes, characters, or records) that are recorded or transmitted as a unit.

break scan code. The hardware scan code received by the keyboard device driver when a key on the keyboard is physically pressed.

bps. Bits per second.

Bps. Bytes per second.

buffer. A portion of storage used to hold input or output data temporarily. A routine or storage used to compensate for a difference in data rate or time of occurrence of events, when transferring data from one device to another.

byte. A string that consists of a number of bits, treated as a unit, and representing a character. A binary character operated upon as a unit and usually shorter than a computer word. A string that consists of a particular number of bits, usually 8, that is treated as a unit, and that represents a character. A group of 8 adjacent binary digits that represent one extended binary-coded decimal interchange code (EBCDIC). See *n-bit byte*.

C

C. A high-level programming language designed to optimize run time, size, and efficiency.

call. The action of bringing a function or subprogram into effect, usually by specifying the entry conditions and jumping to an entry point.

card reader. See *magnetic stripe reader, (MSR)*.

cash drawer. A drawer at a point-of-sale terminal that can be programmed to open automatically. See *till*.

channel. A functional unit, controlled by a host computer, that handles the transfer of data between processor storage and local peripheral equipment. A path along which signals can be sent. The portion of a storage medium that is accessible to a given reading or writing station.

clear. To delete data from a screen or from memory.

code page. A particular assignment of hexadecimal identifiers to graphic characters.

code point. A 1-byte code representing one of 256 potential characters.

command. A request for performance of an operation or execution of a program. A character string from a source external to a system that represents a request for system action.

compile. To translate all or part of a program expressed in a high-level language into a computer program expressed in an intermediate language, an assembly language, or a machine language. To prepare a machine language program from a computer program written in another programming language by making use of the overall logic structure of the program, or generating more than one computer instruction for each symbolic statement, or both, as well as performing the function of an assembler. To translate a source program into an executable program (an object program). To

translate a program written in a high-level programming language into a machine language program.

compiler. A program that decodes instructions written as pseudo codes and produces a machine language program to be executed at a later time. Contrast with *interpretive routine*.

component. Any part of a network other than an attaching device, such as an IBM 8228 Multistation Access Unit. Hardware or software that is part of a functional unit.

configuration. The group of devices, options, and programs that make up a data processing system or network as defined by the nature, number, and chief characteristics of its functional units. More specifically, the term refers to a hardware configuration or a software configuration. See also *system configuration*.

configuration file. The collective set of definitions that describes a configuration.

connect. In a LAN, to physically join a cable from a station to an access unit or network connection point. Contrast with *attach*.

constant. String or numeric value that does not change throughout program execution.

control character. A character whose occurrence in a particular context initiates, modifies, or stops a control operation. A control character may be recorded for use in a subsequent action, and it may have a graphic representation in some circumstances.

CRC. Cyclic redundancy check.

customize. To tailor a program or store system through option selection.

cyclic redundancy check (CRC). Synonym for *frame check sequence (FCS)*.

D

data. A representation of facts, concepts, or instructions in a formalized manner suitable for communication, interpretation, or processing by human or automatic means. Any representations such as characters or analog quantities to which meaning is or might be assigned.

data communication. Transfer of information between functional units by means of data transmission according to a protocol. The transmission, reception, and validation of data.

data file. A collection of related data records organized in a specific manner; for example, a payroll file (one record for each employee, showing such information as rate of pay and deductions) or an inventory file (one

record for each inventory item, showing such information as cost, selling price, and number in stock.) See also *data set, file*.

data set. Logically related records treated as a single unit. See also *file*.

data terminal equipment (DTE). That part of a data station that serves as a data source, data receiver, or both. Equipment that sends or receives data, or both.

data transmission. The conveying of data from one place for reception elsewhere by means of telecommunications.

data type. The mathematical properties and internal representation of data and functions.

DBCS. Double-byte character set.

DCE. Data circuit-terminating equipment.

default. Pertaining to an attribute, value, or option that is assumed when none is explicitly specified.

default value. The value the system supplies when the user does not specify a value.

device. A mechanical, electrical, or electronic contrivance with a specific purpose. An input/output unit such as a terminal, display, or printer. See also *attaching device*.

device connection. The connection between an application and a hardware device created by the IBM JavaPOS system when the application opens a device.

device descriptor. An identifier that represents a device to the IBM JavaPOS system application programming interface. This identifier is created by the IBM JavaPOS system when the application opens a device.

device driver. The code needed to attach and use a device on a computer or a network.

digital. Pertaining to data in the form of digits. Contrast with *analog*. Pertaining to data consisting of numerical values or discrete units.

direct file. A file in which records are assigned specific record positions. No matter what order the records are put in a direct file, they always occupy the assigned position. A direct file is the same as a random file except that a direct file contains no delimiting characters, such as quotes enclosing string fields.

directory. A table of identifiers and references that correspond to items of data. An index that a control program uses to locate one or more blocks of data that are stored in separate areas of a data set in direct access storage.

disabled. Pertaining to a state of a processing unit that prevents the occurrence of certain types of interruptions. Pertaining to the state in which a transmission control unit or audio response unit cannot accept incoming calls on a line.

disk. A round, flat plate coated with a magnetic substance that is used to store computer data. See also *integrated disk*, *fixed disk*.

Disk Operating System (DOS). An operating system for computer systems that use disks and diskettes for auxiliary storage of programs and data.

display. A visual presentation of data. A device that presents visual information to the point-of-sale terminal operator and to the customer, or to the display station operator.

distributed. Physically separate but connected by cables.

DLL. See *dynamic link library*.

DOS. Disk Operating System.

double-byte character set (DBCS). A set of characters in which each character is represented by 2 bytes. Languages such as Japanese, Chinese, and Korean, which contain more symbols than can be represented by 256 code points, require double-byte character sets. Because each character requires 2 bytes, the typing, display, and printing of DBCS characters requires hardware and programs that support DBCS. Contrast with single-byte character set.

DRAM. Dynamic RAM. See *RAM*.

driver. Software component that controls a device.

DTE. Data terminal equipment.

dump. To write at a particular instant the contents of storage, or part of storage, onto another data medium for the purpose of safeguarding or debugging the data. Data that has been dumped.

duplex. In data communication, pertaining to a simultaneous two-way independent transmission in both directions. Synonymous with *full-duplex*. contrast with *half-duplex*.

DVD-ROM. Digital-video-disk read-only memory.

dynamic link library (DLL). In the Windows operating systems, the delayed connection of a library to a routine until load time or run time.

E

EAN. European article number.

EIA. Electronics Industries Association.

EIA-232. In data communications, a specification of the Electronic Industries Association (EIA) that defines the interface between data terminal equipment (DTE) and data circuit-terminating equipment (DCE) using serial binary data interchange. Formerly known as RS-232.

enabled. On a LAN, pertaining to an adapter or device that is active, operational, and able to receive frames from the network. Pertaining to a state of a processing unit that allows the occurrence of certain types of interruptions. Pertaining to the state in which a transmission control unit or an audio response unit can accept incoming calls on a line.

end-of-file. An internal label, immediately following the last record of a file, signaling the end of that file.

error message. A message that is issued because an error has been detected.

escape character. Code extension character used, in some cases, with one or more succeeding characters to indicate by some convention that the coded representation following the character or the group of characters are to be interpreted according to a different code or different character set.

European article number (EAN). A number that is assigned to and encoded on an article of merchandise for scanning in some countries.

event. Processing unit containing price changes and item file updates. All records in an event share common characteristics such as type of change and event due date. An occurrence of significance to a task; for example, the completion of an asynchronous operation, such as an I/O operation.

exception. An abnormal condition such as an I/O error encountered in processing a data set or a file. See also *overflow exception* and *underflow exception*.

exit. To execute an instruction or statement within a portion of a program in order to terminate the execution of that portion. **Note:** Such portions of programs include loops, routines, subroutines, and modules.

expansion board. In an IBM Personal Computer, a panel containing microchips that a user can install in an expansion slot to add memory or special features. Synonymous with *expansion card*, *extender card*.

expansion card. Synonym for *expansion board*.

extender card. Synonym for *expansion board*.

F

fat-finger. When two keys are pressed faster than the value specified using the `PosNfatFingerTimeout` resource. This could occur under any of the following conditions: 1) Two keys on the keyboard were pressed

at the same time. 2) The operator is keying faster than 25 keys per second. 3) A double key is not defined to the keyboard device handler.

field. On a data medium or a storage medium, a specified area used for a particular category of data; for example, a group of character positions used to enter or display wage rates on a panel.

FIFO. First-in–first-out.

file. A named set of records stored or processed as a unit. For example, an invoice form a record and the complete set of such records form a file. See also *data file* and *data set*.

file name. A name assigned or declared for a file. The name used by a program to identify a file.

first-in–first-out (FIFO). A queuing technique in which the next item to be retrieved is the item that has been in the queue for the longest time.

fixed disk (drive). In a personal computer system unit, a disk storage device that reads and writes on rigid magnetic disks. It is faster and has a larger storage capacity than a diskette and is permanently installed.

flag. A character or indicator that signals the occurrence of some condition, such as the setting of a switch, or the end of a word.

flash memory. A data-storage device that is programmable, erasable, and does not require continuous power. The chief benefit of flash memory over other programmable and erasable data storage devices is that it can be reprogrammed without being removed from the circuit board.

frame. The unit of transmission in some LANs, including the IBM Token-Ring Network and the IBM PC Network. It includes delimiters, control characters, information, and checking characters. On a token-ring network, a frame is created from a token when the token has data appended to it. On a token-bus network (IBM PC Network), all frames including the token frame contain a preamble, start delimiter, control address, optional data and checking characters, end delimiter, and are followed by a minimum silence period. A housing for machine elements. In synchronous data link control (SDLC), the vehicle for every command, every response, and all information that is transmitted using SDLC procedures. Each frame begins and ends with a flag.

frequency. The rate of signal oscillation, expressed in hertz (cycles per second).

full-duplex. Synonym for *duplex*.

function. A specific purpose of an entity, or its characteristic action. A subroutine that returns the value

of a single variable. In data communications, a machine action such as a carriage return or line feed.

G

GCGID. See *Graphic Character Global Identifier*.

global. Pertaining to that which is defined in one subdivision of a computer program and used in at least one other subdivision of that computer program.

Graphic Character Set Global Identifier (GCGID). A 4- to 8-character identifier assigned to a registered graphic character in an IBM registry.

group. A set of related records that have the same value for a particular field in all records. A collection of users who can share access authorities for protected resources. A list of names that are known together by a single name.

H

half-duplex. In data communication, pertaining to transmission in only one direction at a time. Contrast with *duplex*.

hardware. Physical equipment as opposed to programs, procedures, rules, and associated documentation.

hertz (Hz). A unit of frequency equal to one cycle per second. **Note:** In the United States, line frequency is 60Hz or a change in voltage polarity 120 times per second; in Europe, line frequency is 50Hz or a change in voltage polarity 100 times per second.

hexadecimal notation. Notation for the base-16 number system using the symbols 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E, and F to represent values from 0 to 15 (decimal).

hot key. The key combination used to change from one session to another on a workstation.

hot plug. To connect a USB I/O device to the universal serial bus without powering the host system down.

hot unplug. To disconnect a USB I/O device from the universal serial bus without powering the host system down.

Hz. See *hertz*.

I

IBM Disk Operating System (DOS). A disk operating system based on MS-DOS.¹

identifier. String of characters used to name elements of a program, such as variable names, reserved words, and user-defined function names.

inactive. Not operational. Pertaining to a node or device not connected or not available for connection to another node or device. In the IBM Token-Ring Network, pertaining to a station that is only repeating frames or tokens, or both.

information (I) frame. A frame in I format used for numbered information transfer. See also *supervisory frame*, *unnumbered frame*.

initialize. In a LAN, to prepare the adapter (and adapter support code, if used) for use by an application program.

initial program load (IPL). The initialization procedure that causes an operating system to begin operation.

input device. Synonym for *input unit*.

input/output device. See *I/O device*.

input/output (I/O). Pertaining to a device whose parts can perform an input process and an output process at the same time. Pertaining to a functional unit or channel involved in an input process, output process, or both, concurrently or not, and to the data involved in such a process.

input unit. A device in a data processing system that is used to enter data into the system. Synonymous with *input device*.

instance. An occurrence of a particular device or object. For example, two instances of the PosDisplay class name can be Shopper1 and Shopper2, where these instances refer to the same physical display.

integrated. Arranged together as one unit.

integrated disk. An integral part of the processor that is used for magnetically storing files, application programs, and diagnostics. Synonymous with *disk*.

interaction. A basic unit used to record system activity, consisting of the acceptance of a line of terminal input, processing of the line, and a response, if any.

interface. A shared boundary between two functional units, defined by functional characteristics, common physical interconnection characteristics, signal

characteristics, and other characteristics as appropriate. A shared boundary. An interface may be a hardware component to link two devices or a portion of storage or registers accessed by two or more computer programs. Hardware, software, or both, that links systems, programs, or devices.

interleave. To insert segments of one program into another program so that the two programs can, in effect, be executed at the same time.

International Organization for Standardization (ISO). An organization of national standards bodies from various countries established to promote development of standards to facilitate international exchange of goods and services, and develop cooperation in intellectual, scientific, technological, and economic activity.

interpretive routine. A routine that decodes instructions written as pseudocodes and immediately executes the instructions. Contrast with *compile*.

I/O. Input/output.

I/O device. Equipment for entering and receiving data from the system.

IPL. Initial program load.

IRES. IBM Retail Environment for SuSE Linux.

ISO. International Organization for Standardization.

item. One member of a group. In a store, one unit of a commodity, such as one box, one bag, or one can. Usually an item is the smallest unit of a commodity to be sold.

J

JIS. Japanese Industrial Standard

JUCC. Japanese Unified Cash Card

K

keyboard. A group of numeric keys, alphabetic keys, special character keys, or function keys used for entering information into the terminal and into the system.

kHz. Kilohertz. See also *hertz*.

kilohertz (kHz). A thousand hertz. See also *hertz*.

L

LED. Light-emitting diode.

lift-off. When a pointing device is removed from a touch-sensitive surface.

1. MS-DOS is a trademark of the Microsoft Corporation.

light-emitting diode (LED). A semiconductor chip that gives off visible or infrared light when activated.

line. On a terminal, one or more characters entered before a return to the first printing or display position.

link . The combination of physical media, protocols, and programming that connects devices on a network. In computer programming, the part of a program, in some cases a single instruction or an address, that passes control and parameters between separate portions of the computer program. To interconnect items of data or portions of one or more computer programs.

listing. A printout, usually prepared by a language translator, that lists the source code.

load. In computer programming, to enter data into memory or working registers.

lock. To disable a device, such as a scanner or MSR, so that it cannot receive input. See also *unlock*.

logging. The chronological recording of events occurring in a system or a subsystem for accounting or data collection purposes.

logical connection. In a network, devices that can communicate or work with one another because they share the same protocol. See also *physical connection*.

logon (n). The procedure for starting up a point-of-sale terminal or store controller for normal sales operations by sequentially entering the correct security number and transaction number. Synonymous with *sign-on*.

log on (v). To initiate a session. In SNA products, to initiate a session between an application program and a logical unit (LU). Synonymous with *sign-on*.

loop. A set of instructions that may be executed repeatedly while a certain condition prevails. See also *store loop*. A closed unidirectional signal path connecting input/output devices to a network.

M

macro. An instruction that causes the execution of a predefined sequence of instructions in the same source language.

magnetic stripe. The magnetic material (similar to recording tape) on merchandise tickets, credit cards, and employee badges. Information is recorded on the stripe for later "reading" by the magnetic stripe reader (MSR) or magnetic wand reader attached to the point-of-sale terminal.

magnetic stripe reader (MSR). A device that reads coded information from a magnetic stripe on a card, such as a credit card, as it passes through a slot in the reader.

make scan code. The hardware scan code received by the keyboard device driver when a key on the keyboard is physically pressed.

Mb. Megabit.

MB. Megabyte.

megabit (Mb). A unit of measure for throughput. 1 megabit = 1,048,576 bits.

megabyte (MB). A unit of measure for data. 1 megabyte = 1,048,576 bytes.

memory. Program-addressable storage from which instructions and other data can be loaded directly into registers for subsequent execution or processing.

message. An arbitrary amount of information whose beginning and end are defined or implied. A group of characters and control bit sequences transferred as an entity. In telecommunication, a combination of characters and symbols transmitted from one point to another. A logical partition of the user device's data stream to and from the adapter. See also *error message*, *operator message*.

microcode. One or more microinstructions. A code, representing the instructions of an instruction set, that is implemented in a part of storage that is not program-addressable. To design, write, and also test one or more microinstructions.

microprocessor. An integrated circuit that accepts coded instructions for execution. The instructions may be entered, integrated, or stored internally.

migration. Installation of a new version of a release of a program to replace an earlier version or release.

modem (Modulator/DEModulator). A device that converts digital data from a computer to an analog signal that can be transmitted in a telecommunication line, and converts the analog signal received to data for the computer.

modulo check. A function designed to detect most common input errors by performing a calculation on values entered into a system by an operator or scanning device.

monitor. A functional unit that observes and records selected activities for analysis within a data processing system. Possible uses are to show significant departures from the norm, or to determine levels of utilization of particular functional units. Software or hardware that observes, supervises, controls, or verifies operations of a system.

MSR. Magnetic stripe reader.

N

name. An alphanumeric term that identifies a data set, statement, program, or cataloged procedure.

n-bit byte. A string that consists of n bits.

network. A configuration of data processing devices and software connected for information interchange. An arrangement of nodes and connecting branches. Connections are made between data stations.

noise. A disturbance that affects a signal and that can distort the information carried by the signal. Random variations of one or more characteristics of any entity, such as voltage, current, or data. Loosely, any disturbance tending to interfere with normal operation of a device or system.

nonvolatile random access memory (NVRAM). Random access memory that retains its contents after electrical power is shut off.

NVRAM. nonvolatile random access memory.

O

offline. Operation of a functional unit without the control of a computer or control unit.

online. Operation of a functional unit that is under the continual control of a computer or control unit. The term also describes a user's access to a computer using a terminal.

open. To make an adapter ready for use. A break in an electrical circuit. To make a file ready for use.

operating system. Software that controls the execution of programs. An operating system provides services such as resource allocation, scheduling, input/output control, and data management.

operation. A defined action, namely, the act of obtaining a result from one or more operands in accordance with a rule that completely specifies the result for any permissible combination of operands. A program step undertaken or executed by a computer. An action performed on one or more data items, such as adding, multiplying, comparing, or moving.

operator. A symbol that represents the action being performed in a mathematical operation. A person who operates a machine.

operator message. A message from the operating system or a program telling the operator to perform a specific function or informing the operator of a specific condition within the system, such as an error condition.

option. A specification in a statement, a selection from a menu, or a setting of a switch, that may be used to

influence the execution of a program. A hardware or software function that may be selected or enabled as part of a configuration process. A piece of hardware (such as a network adapter) that can be installed in a device to modify or enhance device function.

output device. A device in a data processing system by which data can be received from the system. Synonymous with *output unit*.

output unit. Synonym for *output device*.

overflow exception. A condition caused by the result of an arithmetic operation having a magnitude that exceeds the largest possible number. See also *underflow exception*.

P

parameter. A name in a procedure that is used to refer to an argument passed to that procedure. A variable that is given a constant value for a specified application and that may denote the application. An item in a menu or for which the user specifies a value or for which the system provides a value when the menu is interpreted. Data passed between programs or procedures.

parity bit. A binary digit appended to a group of binary digits to make the sum of all the digits (including the appended binary digit) either always odd (odd parity) or always even (even parity).

parity (even). A condition when the sum of all of the digits in an array of binary digits is even.

parity (odd). A condition when the sum of all of the digits in an array of binary digits is odd.

personal computer (PC). A desk-top, free-standing, or portable microcomputer that usually consists of a system unit, a display, a keyboard, one or more diskette drives, internal fixed-disk storage, and an optional printer. PCs are designed primarily to give independent computing power to a single user and are inexpensively priced for purchase by individuals or small businesses. Examples include the various models of the IBM Personal Computers, and the IBM Personal System/2 computer.

physical connection. The ability of two connectors to mate and make electrical contact. In a network, devices that are physically connected can communicate only if they share the same protocol. See also *logical connection*.

PLD. Power line disturbance.

PLU. Price Look Up.

plug. A connector for attaching wires from a device to a cable, such as a store loop. A plug is inserted into a receptacle or plug. To insert a connector into a receptacle or socket.

pointer. An identifier that indicates the location of an item of data in memory. A data element that indicates the location of another data element. A physical or symbolic identifier of a unique target.

point-of-sale terminal. A unit that provides point-of-sale transaction, data collection, credit authorization, price look-up, and other inquiry and data entry functions.

polling. Interrogation of devices for purposes such as to avoid contention, to determine operational status, or to determine readiness to send or receive data. In data communication, the process of inviting data stations to transmit, one at a time. The polling process usually involves the sequential interrogation of several data stations.

polling characters (address). A set of characters specific to a terminal and the polling operation; response to these characters indicates to the computer whether the terminal has a message to enter.

port. An access point for data entry or exit. A connector on a device to which cables for other devices such as display stations and printers are attached. Synonymous with *socket*.

post. To affix to a usual place. To provide items such as return code at the end of a command or function. To define an appendage routine. To note the occurrence of an event.

POST. Power-On Self Test.

power line disturbance (PLD). Interruption or reduction of electrical power.

Power-On Self Test (POST). A series of diagnostic tests that are run automatically each time the computer's power is switched on.

problem determination. The process of determining the source of a problem as being a program component, a machine failure, a change in the environment, a common-carrier link, a user-supplied device, or a user error.

procedure. A set of related control statements that cause one or more programs to be performed. In a programming language, a block, with or without formal parameters, whose execution is invoked by means of a procedure call. A set of instructions that gives a service representative a step-by-step procedure for tracing a symptom to the cause of failure.

process. An instance of an executing application and the resources it is using.

processor. In a computer, a functional unit that interprets and executes instructions.

prompt. A character or word displayed by the operating system to indicate that it is ready to accept input.

Q

queue. A line or list formed by items in a system waiting for service; for example, tasks to be performed or messages to be transmitted in a message routing system.

R

RAM. Random access memory.

random access. An access mode in which specific logical records are obtained from or placed into a mass storage file in a nonsequential manner.

random access memory (RAM). A computer's or adapter's volatile storage area into which data may be entered and retrieved in a nonsequential manner.

read. To acquire or to interpret data from a storage device, from a data medium, or from another source.

read-only memory (ROM). A computer's or adapter's storage area whose contents cannot be modified by the user except under special circumstances.

receive. To obtain and store information transmitted from a device.

record. A collection of related items of data, treated as a unit; for example, in stock control, each invoice could constitute one record. A complete set of such records form a file.

register. A storage area in a computer's memory where specific data is stored. Registers are used in the actual manipulation of data values during the execution of a program. A storage device having a specified storage capacity such as bit, byte, or computer word, and usually intended for a special purpose. In the IBM Store System, a term that refers to the point-of-sale terminal.

remove. To take an attaching device off a network. To stop an adapter from participating in data passing on a network.

resource. An element that affects the way devices behave.

resource set. The set of resources associated with a device.

response. The information the network control program sends to the access method, usually in answer to a request received from the access method. (Some responses, however, result from conditions occurring

within the network control program, such as accumulation of error statistics.)

retry. In data communication, sending the current block of data a prescribed number of times or until it is entered correctly and accepted.

return code. A value (usually hexadecimal) provided by an adapter or a program to indicate the result of an action, command, or operation. A code used to influence the execution of succeeding instructions. A value established by the programmer to be used to influence subsequent program action. This value can be printed as output or loaded in a register.

ROM. Read-only memory.

routine. Part of a program, or a sequence of instructions called by a program, that may have some general or frequent use.

S

satellite. A computer that is under the control of another computer and performs subsidiary operations. An offline auxiliary computer.

SBCS. Single-byte character set.

scan. To pass an item over or through the scanner so that the encoded information is read. See also *wanding*.

scan codes. When a key is pressed on any keyboard, the keyboard device driver receives a code that is called a *make scan code*. Each key has a different code. When a key is released on some keyboards, the keyboard device driver receives a code that is called a *break scan code*. These codes are translated into ASCII character codes using the code page that the application is using.

scanner. A device that examines the bar code on merchandise tickets, credit cards, and employee badges and generates analog or digital signals corresponding to the bar code.

scroll. To move all or part of the display image vertically or horizontally to display data that cannot be observed within a single display image. See also *page (2)*.

segment. See *cable segment*, *LAN segment*, *ring segment*.

sequential file. A disk file in which records are read from or placed into the file according to the order they are processed.

session. A connection between two application programs that allows them to communicate. In SNA, a logical connection between two network addressable units that can be activated, tailored to provide various protocols, and deactivated as requested. The data

transport connection resulting from a call or link between two devices. The period of time during which a user of a node can communicate with an interactive system, usually the elapsed time between log on and log off. In network architecture, an association of facilities necessary for establishing, maintaining, and releasing connections for communication between stations.

signal. A time-dependent value attached to a physical phenomenon for conveying data. A variation of a physical quantity, used to convey data.

sign-on. A procedure to be followed at a terminal or workstation to establish a link to a computer. To begin a session at a workstation.

single-byte character set (SBCS). A character set in which each character is represented by a one-byte code. Contrast with *double-byte character set*.

SLRS. SUSE LINUX Retail Solution.

socket. Synonym for *port (2)*.

state transition. The act of moving from one conversation state to another.

station. A point-of-sale terminal that consists of a processing unit, a keyboard, and a display. It can also have input/output devices, such as a printer, a magnetic stripe reader or cash drawers. A communication device attached to a network. The term used most often in LANs is an *attaching device* or *workstation*. An input or output point of a system that uses telecommunication facilities; for example, one or more systems, computers, terminals, devices, and associated programs at a particular location that can send or receive data over a telecommunication line. See also *attaching device*, *workstation*.

subdirectory. Any level of file directory lower than the root directory within a hierarchical file system.

subroutine. Section of code that performs a specific task and is logically separate from the rest of the program.

subsystem. A secondary or subordinate system, or programming support, usually capable of operating independently of or asynchronously with a controlling system.

summary journal. A record of the terminal operational activity that is printed at the terminal.

switch. On an adapter, a mechanism used to select a value for, enable, or disable a configurable option or feature.

system. In data processing, a collection of people, machines, and methods organized to accomplish a set of specific functions. See also *data processing system* and *operating system*.

system configuration. A process that specifies the devices and programs that form a particular data processing system.

system unit. A part of a computer that contains the processing unit, and may contain devices such as disk and diskette drives. In an IBM Personal Computer, the unit that contains the processor circuitry, read-only memory (ROM), random access memory (RAM), and the I/O channel. It may have one or more disk or diskette drives. In an IBM 4683/4684 terminal, the part of the terminal that contains the processing unit, ROM, RAM, disk and diskette drives, and the I/O channel.

T

terminal. In data communication, a device, usually equipped with a keyboard and a display, capable of sending and receiving information over a communication channel.

thread. A unit of execution within a process. It uses the resources of the process.

throughput. A measure of the amount of work performed by a computer system over a given period of time, for example, number of jobs per day. A measure of the amount of information transmitted over a network in a given period of time. For example, a network's data transfer rate is usually measured in bits per second.

till. A tray in the cash drawer of the point-of-sale terminal, used to keep the different denominations of bills and coins separated and easily accessible.

touch-down. When contact is made with a touch-sensitive surface.

trace. A record of the execution of a computer program. It exhibits the sequences in which the instructions were executed. A record of the frames and bytes transmitted on a network.

transaction. The process of recording item sales, processing refunds, recording coupons, handling voids, verifying checks before tendering, and arriving at the amount to be paid by or to a customer. The receiving of payment for merchandise or service is also included in a transaction. In an SNA network, an exchange between two programs that usually involves a specific set of initial input data that causes the execution of a specific task or job. Examples of transactions include the entry of a customer's deposit that results in the updating of the customer's balance, and the transfer of a message to one or more destination points.

transition. See *state transition*.

transmission. The sending of data from one place for reception elsewhere.

transmit. To send information from one place for reception elsewhere.

typematic. A keyboard button that will continue to enter characters or repeat its function as long as the button is held down.

U

underflow exception. A condition caused by the result of an arithmetic operation having a magnitude less than the smallest possible nonzero number. See also *overflow exception*.

unlock. To enable a device, such as a scanner or MSR, so that it can read data. See also *lock*.

universal product code (UPC). An encoded number that can be assigned to and printed on or attached to an article of merchandise for scanning.

Universal Serial Bus (USB). A serial interface standard for telephony and multimedia connections to personal computers.

Universal Serial Bus (USB), powered. A powered-USB connector provides additional power from the host system. A powered-USB receptacle consists of two connectors stacked vertically inside the common housing. The upper connector contains four contacts that are used for powering the attached device.

UDC. User defined character.

UPC. Universal product code.

user. Category of identification defined for file access protection. A person using a program or system.

user defined character (UDC). User defined character.

user interface. Hardware, software, or both that allows a user to interact with and perform operations on a system, program, or device.

V

variable. A named entity that is used to refer to data and to which values can be assigned. Its attributes remain constant, but it can refer to different values at different times. In computer programming, a character or group of characters that refers to a value and, in the execution of a computer program, corresponds to an address. A quantity that can assume any of a given set of values.

version. A separate IBM-licensed program, based on an existing IBM-licensed program, that usually has significant new code or new function.

W

wanding. Passing the tip of the wand reader over information encoded on a merchandise ticket, credit card, or employee badge.

workstation. An I/O device that allows either transmission of data or the reception of data (or both) from a host system, as needed to perform a job: for example, a display station or printer. A configuration of I/O equipment at which an operator works. A terminal or microcomputer, usually one connected to a mainframe or network, at which a user can perform tasks.
