[http://www.ificlient.com/index.php?page=misc\\_top\\_50\\_2014](http://www.ificlient.com/index.php?page=misc_top_50_2014).

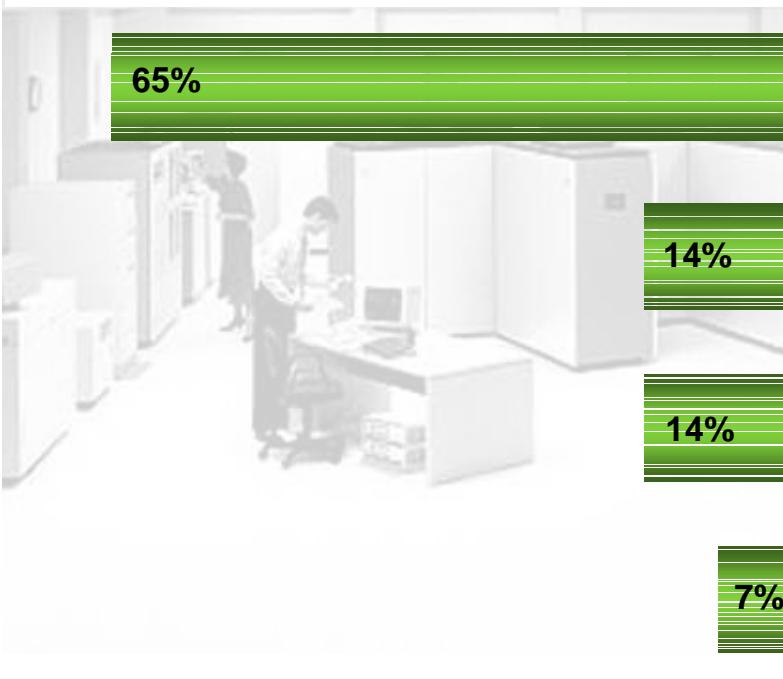

Колличество патентов IBM за 2014 больше патентов  
Accenture, Amazon, Google, HP, Intel и Oracle вместе взятых

# Система ценностей клиента

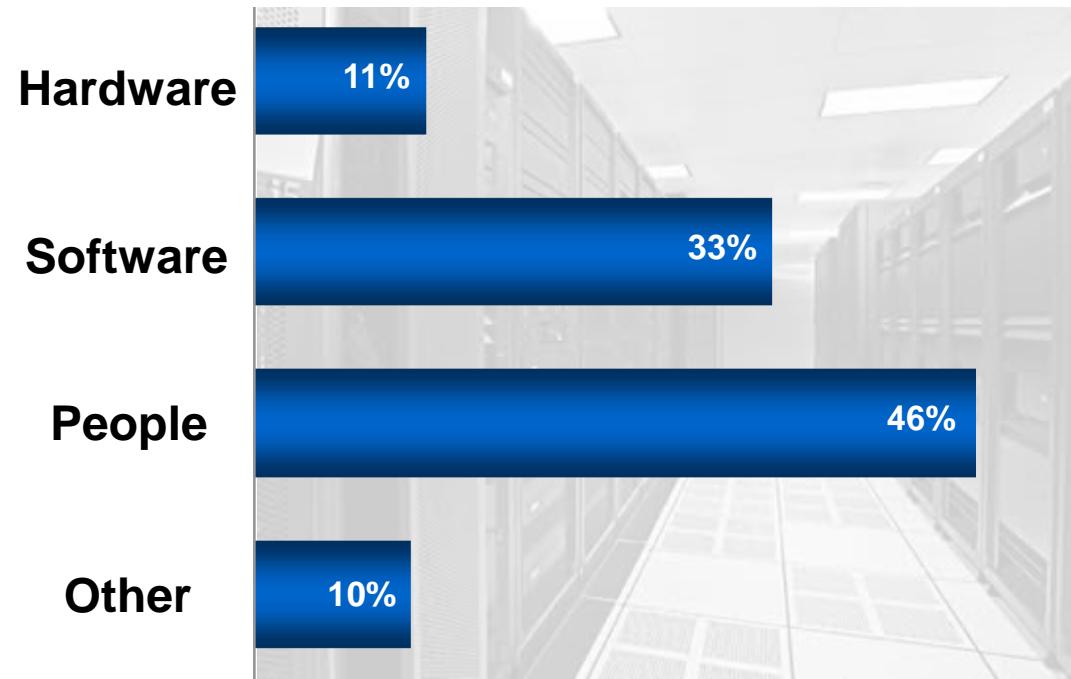

# Сегодняшние реалии отличаются от вчерашних

1996

2011

Структура затрат на работающую систему очень сильно изменилась. Использование прогрессивных технологий «железа» позволяет сократить расходы на ПО и обслуживающий персонал.

## Какие критерии применяются при выборе платформы для важных задач?

- Защита инвестиций – минимизация изменений в будущем(как «железа» так и программного обеспечения)
- RAS-Reliability(надежность), Availability(доступность) и Serviceability(сервисность)
- Производительность и «плотность» нагрузок
- Масштабируемость как для планируемого, так внепланового роста
- Безопасность
- И снижение стоимости владения

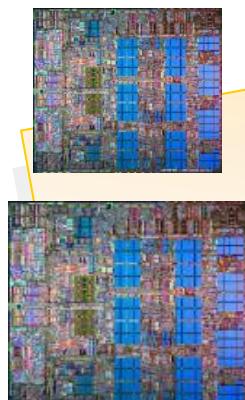

# Немного о процессорах

## IBM Power

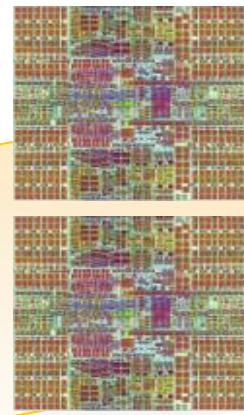

# Power: технологические планы развития

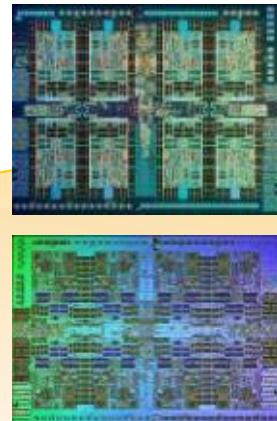

## POWER5/5+ 130/90 nm

- ✓ Dual Core
- ✓ Enhanced Scaling
- ✓ SMT
- ✓ Distributed Switch +
- ✓ Core Parallelism +
- ✓ FP Performance +
- ✓ Memory Bandwidth +
- ✓ Virtualization

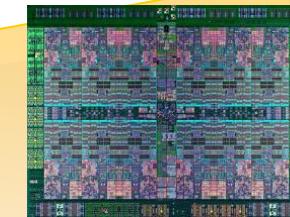

## POWER6/6+ 65/65 nm

- ✓ Dual Core
- ✓ High Frequencies
- ✓ Virtualization +
- ✓ Memory Subsystem +
- ✓ Altivec
- ✓ Instruction Retry
- ✓ Dynamic Energy Mgmt
- ✓ SMT +
- ✓ Protection Keys
- ✓ Eight Cores
- ✓ On-Chip eDRAM
- ✓ Power-Optimized Cores
- ✓ Memory Subsystem ++
- ✓ SMT++
- ✓ Reliability +
- ✓ VSM & VSX
- ✓ Protection Keys+

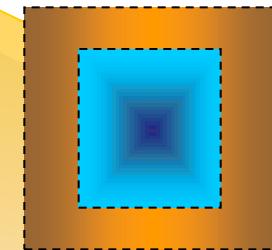

## POWER7/7+ 45/32 nm

## POWER8 22nm

- ✓ More Cores
- ✓ SMT+++
- ✓ Reliability ++
- ✓ FPGA Support
- ✓ Transactional Memory
- ✓ PCIe Acceleration
- ✓ 200+ systems in test

## POWER9

- ✓ Extreme Analytics Optimization
- ✓ Extreme Big Data Optimization
- ✓ On-chip accelerators

2004

2007

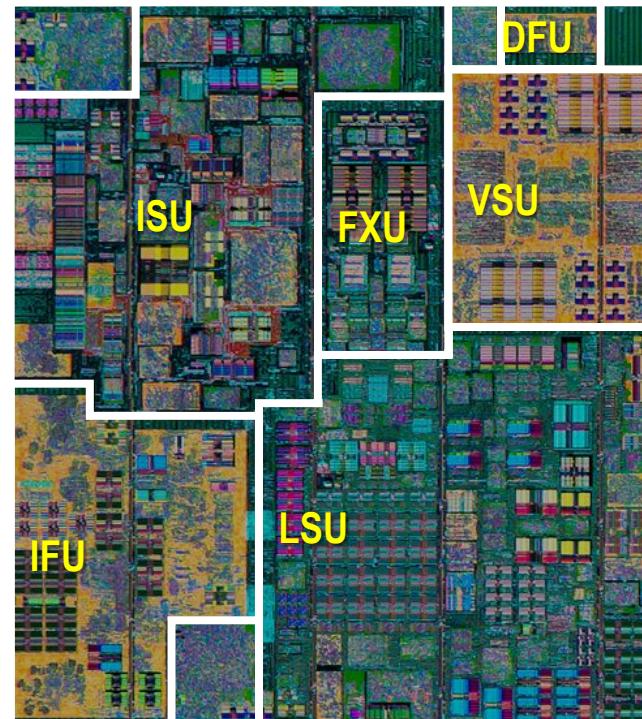

2010

2014

## Execution Improvement vs. POWER7

- SMT4 → SMT8
- 8 dispatch
- 10 issue
- 16 execution pipes:
  - 2 FXU, 2 LSU, 2 LU, 4 FPU, 2 VMX, 1 Crypto, 1 DFU, 1 CR, 1 BR
- Larger Issue queues (4 x 16-entry)
- Larger global completion, Load/Store reorder
- Improved branch prediction
- Improved unaligned storage access

## Larger Caching Structures vs. POWER7

- 2x L1 data cache (64 KB)
- 2x outstanding data cache misses
- 4x translation Cache

## Wider Load/Store

- 32B → 64B L2 to L1 data bus
- 2x data cache to execution dataflow

## Enhanced Prefetch

- Instruction speculation awareness
- Data prefetch depth awareness
- Adaptive bandwidth awareness
- Topology awareness

**Core Performance vs . POWER7**  
~1.6x Thread  
~2x Max SMT

## Cores

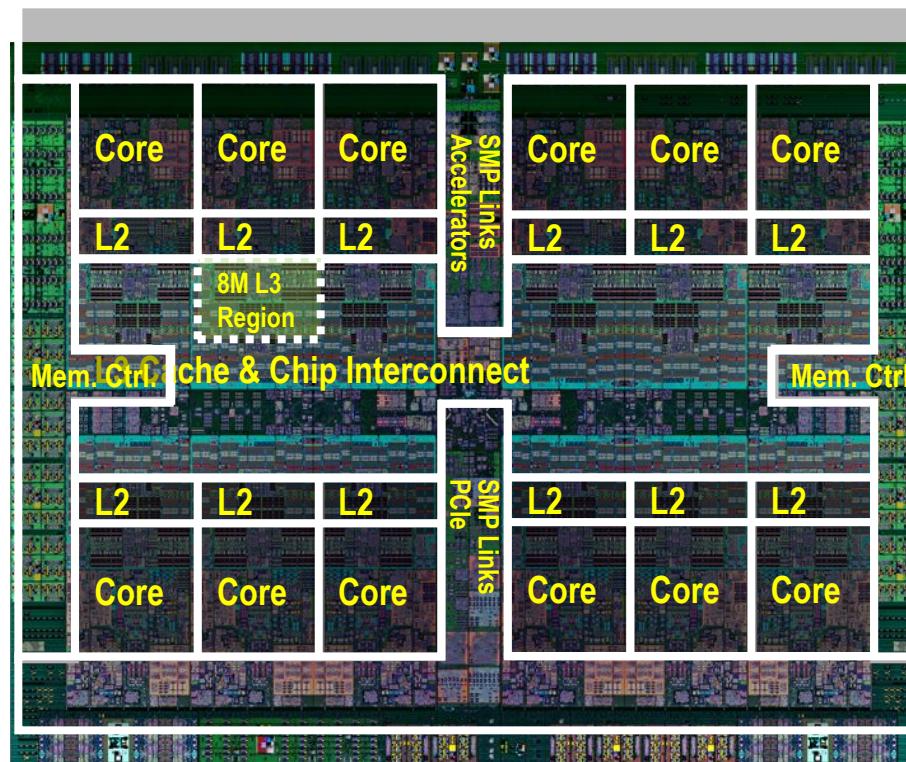

- 12 cores (SMT8)
- 8 dispatch, 10 issue, 16 exec pipe
- 2X internal data flows/queues
- Enhanced prefetching
- 64K data cache, 32K instruction cache

## Accelerators

- Crypto & memory expansion
- Transactional Memory
- VMM assist
- Data Move / VM Mobility

## Technology

22nm SOI, eDRAM, 15 ML 650mm<sup>2</sup>

## Energy Management

- On-chip Power Management Micro-controller
- Integrated Per-core VRM
- Critical Path Monitors

## Larger Caches

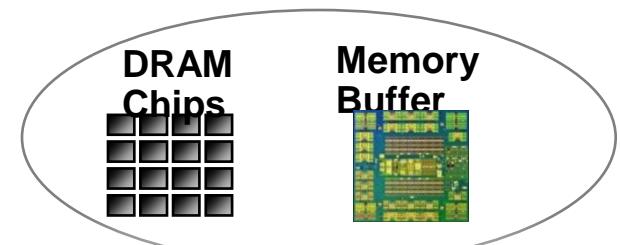

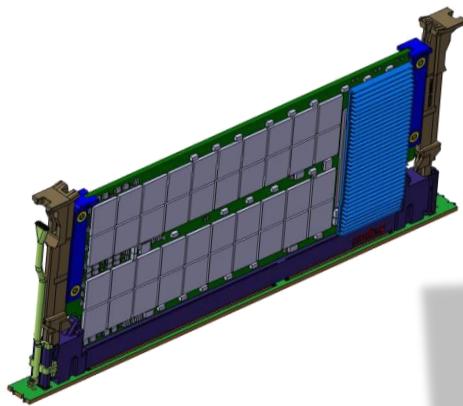

- 512 KB SRAM L2 / core
- 96 MB eDRAM shared L3
- Up to 128 MB eDRAM L4 (off-chip)

## Memory

- Up to 230 GB/s sustained bandwidth

## Bus Interfaces

- Durable open memory attach interface
- Integrated PCIe Gen3
- SMP Interconnect
- CAPI (Coherent Accelerator Processor Interface)

## Intelligence Moved into Memory

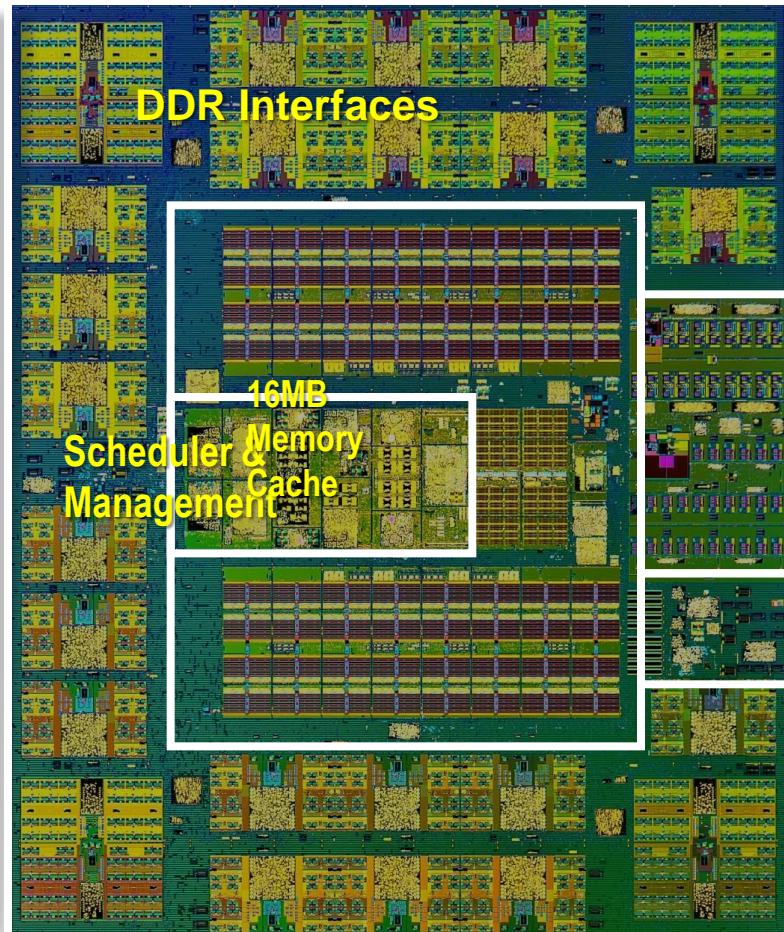

- Scheduling logic, caching structures
- Energy Mgmt, RAS decision point
  - Formerly on Processor
  - Moved to Memory Buffer

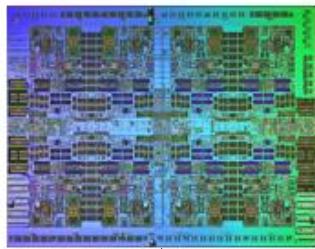

## Processor Interface

- 9.6 GB/s high speed interface
- More robust RAS
- “On-the-fly” lane isolation/repair
- Extensible for innovation build-out

## Performance Value

- End-to-end fastpath and data retry (latency)
- Cache → latency/bandwidth, partial updates
- Cache → write scheduling, prefetch, energy
- 22nm SOI for optimal performance / energy
- 15 metal levels (latency, bandwidth)

**POWER7**GX  
BusI/O  
BridgePCIe  
Gen2PCI  
Devices**Native PCIe Gen 3 Support**

- Direct processor integration
- Replaces proprietary GX/Bridge
- Low latency
- Gen3 x16 bandwidth (32 GB/s)

**Transport Layer for CAPI Protocol**

- Coherently Attach Devices connect to processor via PCIe
- Protocol encapsulated in PCIe

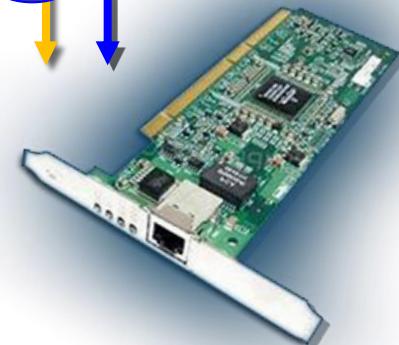

**POWER8**PCIe  
Gen3

x16

x8

x16

x8

PCI  
Devices

## Virtual Addressing

- Accelerator can work with same memory addresses that the processors use
- Pointers de-referenced same as the host application
- Removes OS & device driver overhead

## Hardware Managed Cache Coherence

- Enables the accelerator to participate in “Locks” as a normal thread
- Lowers Latency over IO communication model

## Customizable Hardware Application Accelerator

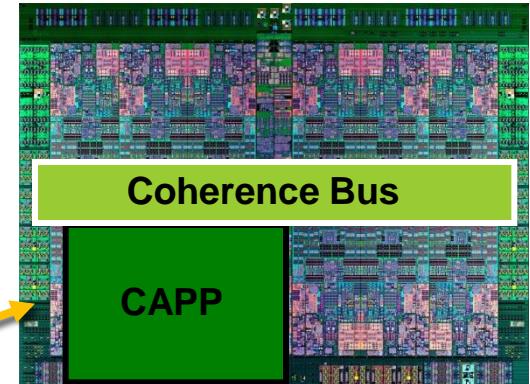

- Specific system SW, middleware, or user application
- Written to durable interface provided by PSL

### PCIe Gen 3

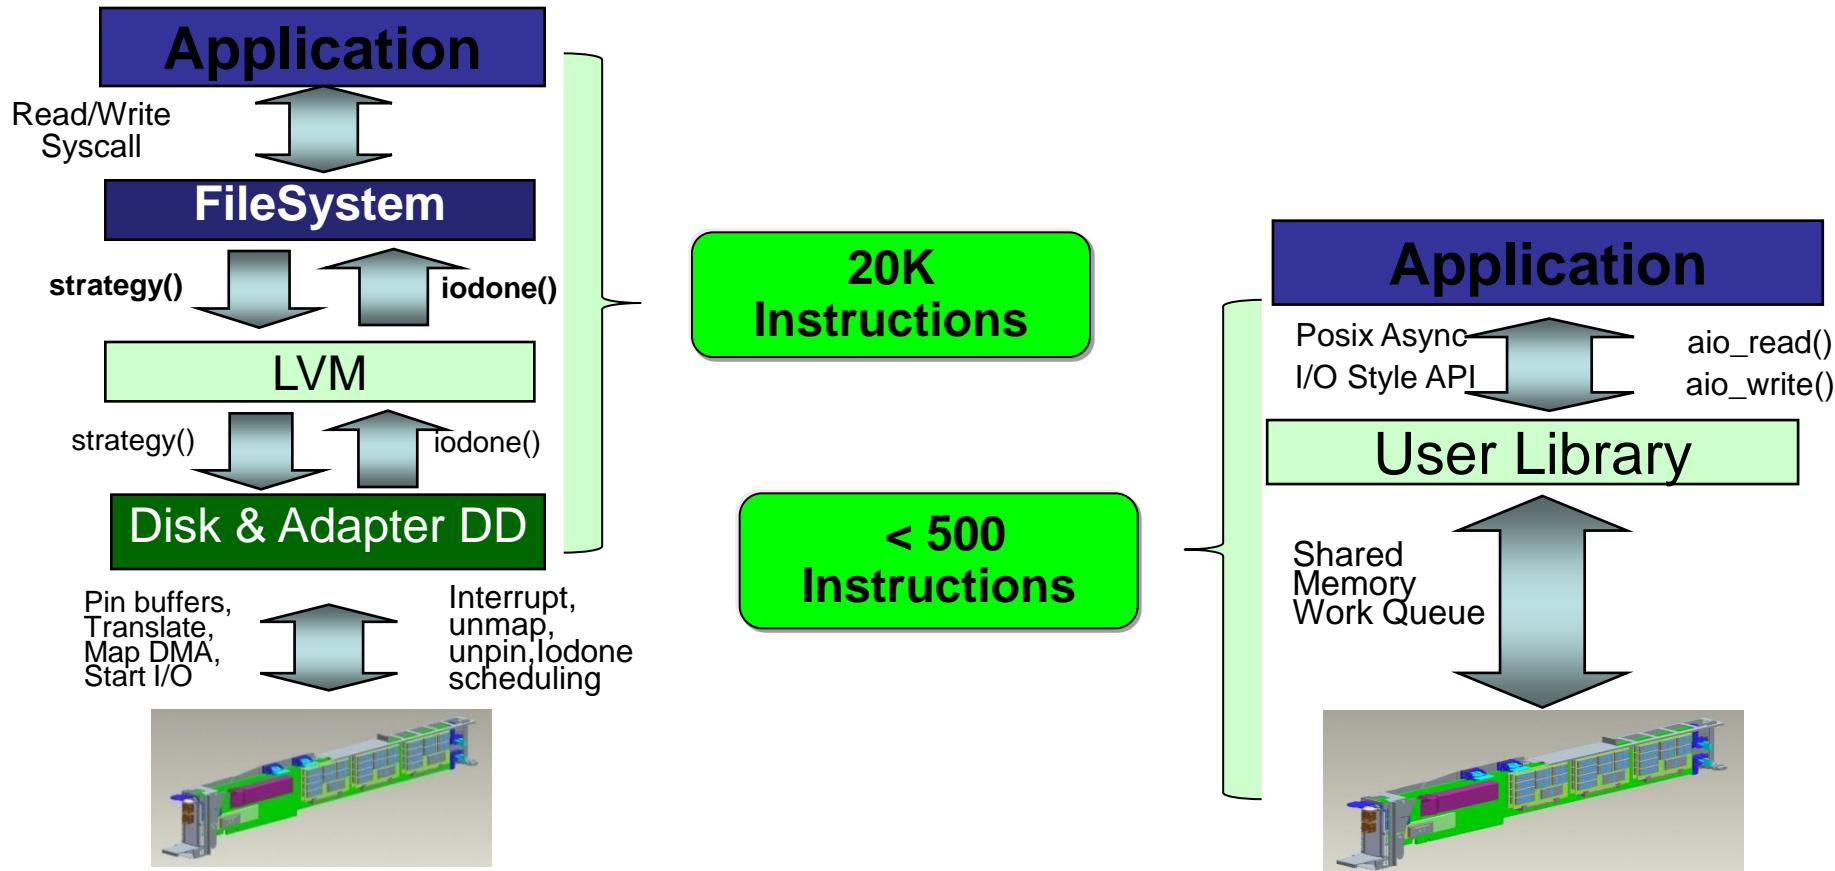

*Transport for encapsulated messages*

## Processor Service Layer (PSL)

- Present robust, durable interfaces to applications
- Offload complexity / content from CAPP

POWER8

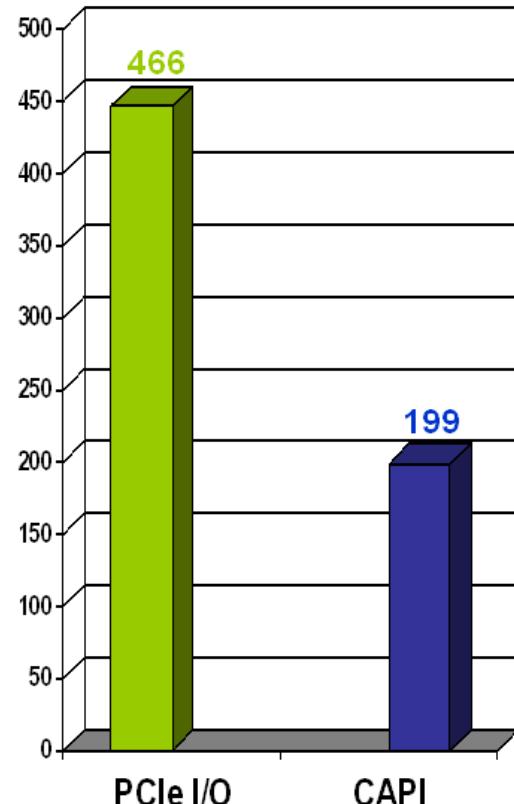

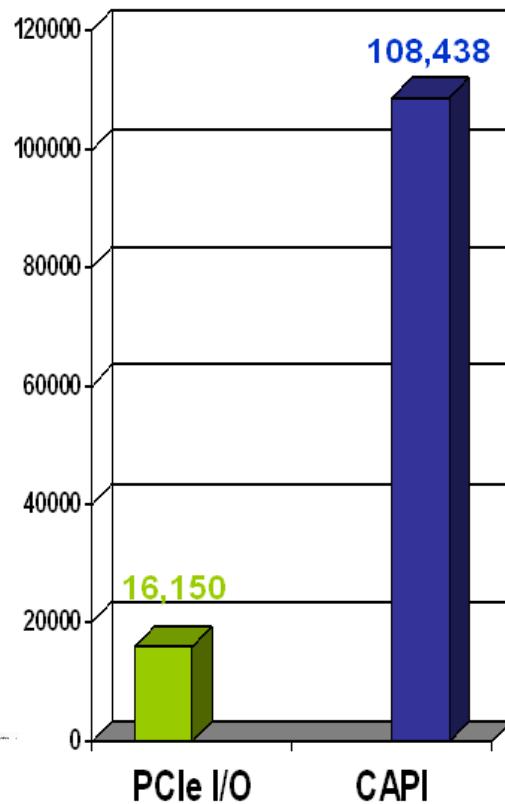

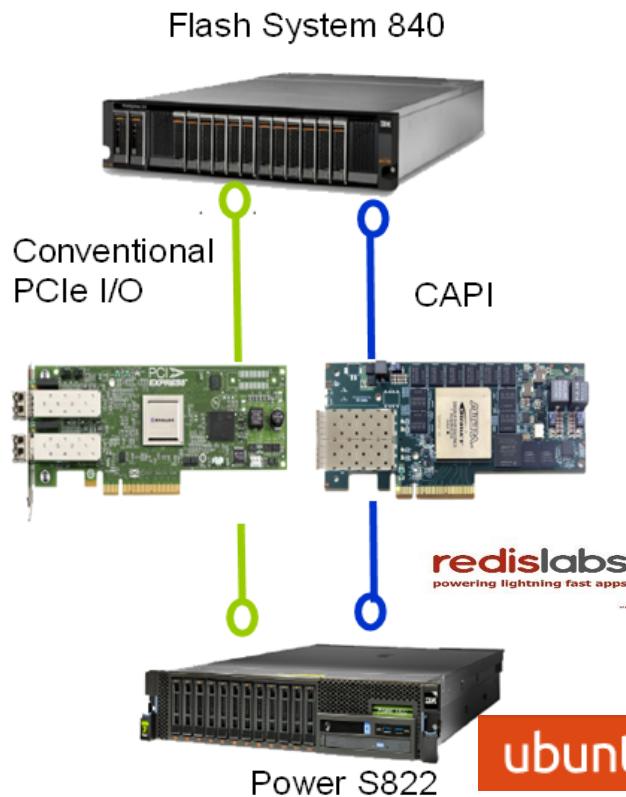

- Attach flash memory to POWER8 via CAPI coherent Attach
- Issues Read/Write Commands from applications to eliminate 97% of instruction path length
  - CAPI Flash controller Operates in User Space
- Saves 10 Cores per 1M IOPs

## IBM Data Engine for NoSQL

Identical hardware with 2 different paths to data

RAS

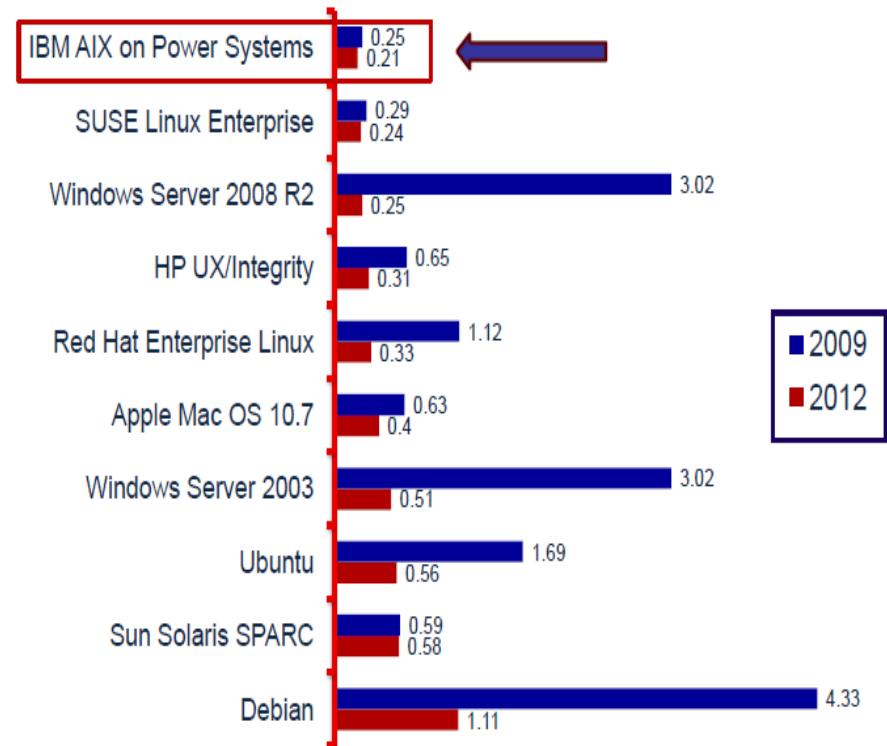

## Высокая доступность - ключевое требование

Решения IBM Power  
обеспечивают  
доступность  
**99.997+%**

- Almost five 9's availability, the gold standard
- 67% of corporations now require a minimum of 99.99% uptime or better for mission critical hardware, operating systems and main line of business (LOB) applications
- AIX on Power consistently has the least amount of downtime in ITIC studies for several years
- Industry leading availability for all workloads, including SAP

Corporate Enterprise Downtime 2009 vs. 2012 (Hours per Year)

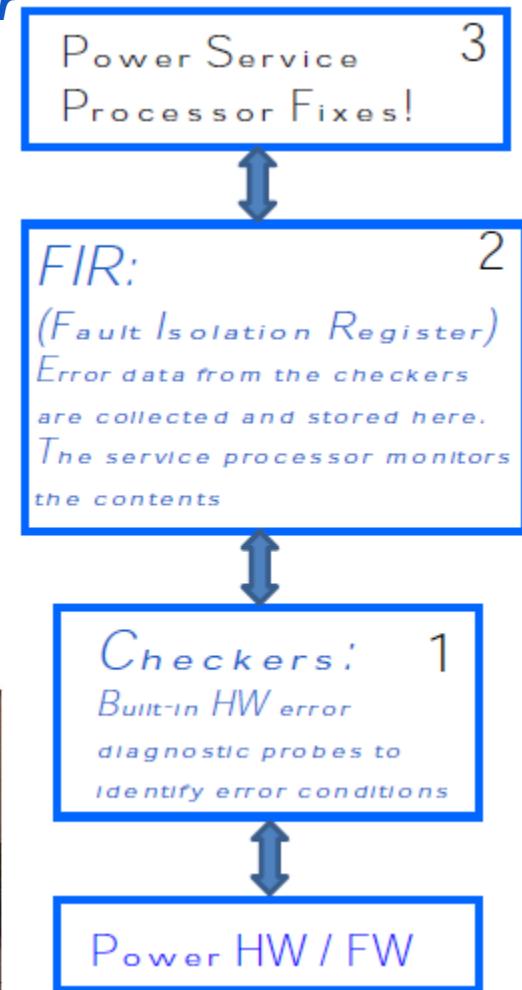

Source: ITIC 2013 Global Server Hardware, Server OS Reliability Survey, ITIC, (All rights reserved); January 2013.

# Тестовые компоненты и регистры изоляции ошибок составляют First Failure Data Capture

## RAS не только на уровне процессора

- Разработка, тестирование и интеграция всего комплекса для достижения наивысших характеристик RAS
- Для того, чтобы RAS x86 приблизить к RAS Power нужно, как минимум использовать дорогостоящее кластерное ПО (например, Oracle RAC)

### Power Stack - Integrated RAS

### Intel Processor RAS

Безопасность  
никто не хочет быть  
целью атаки

**TARGET.**<sup>®</sup>

## Безопасность ограничена «слабым звеном»

## Безопасность системы виртуализации критична для баз данных

0

### SINIT Buffer Overflow Vulnerability

Intel ID: INTEL-SA-00030  
Product family: Intel® Trusted Execution Technology  
Impact of vulnerability: Elevation of Privilege  
Severity rating: Important  
Original release: Dec 05, 2011  
Last revised: Dec 06, 2011

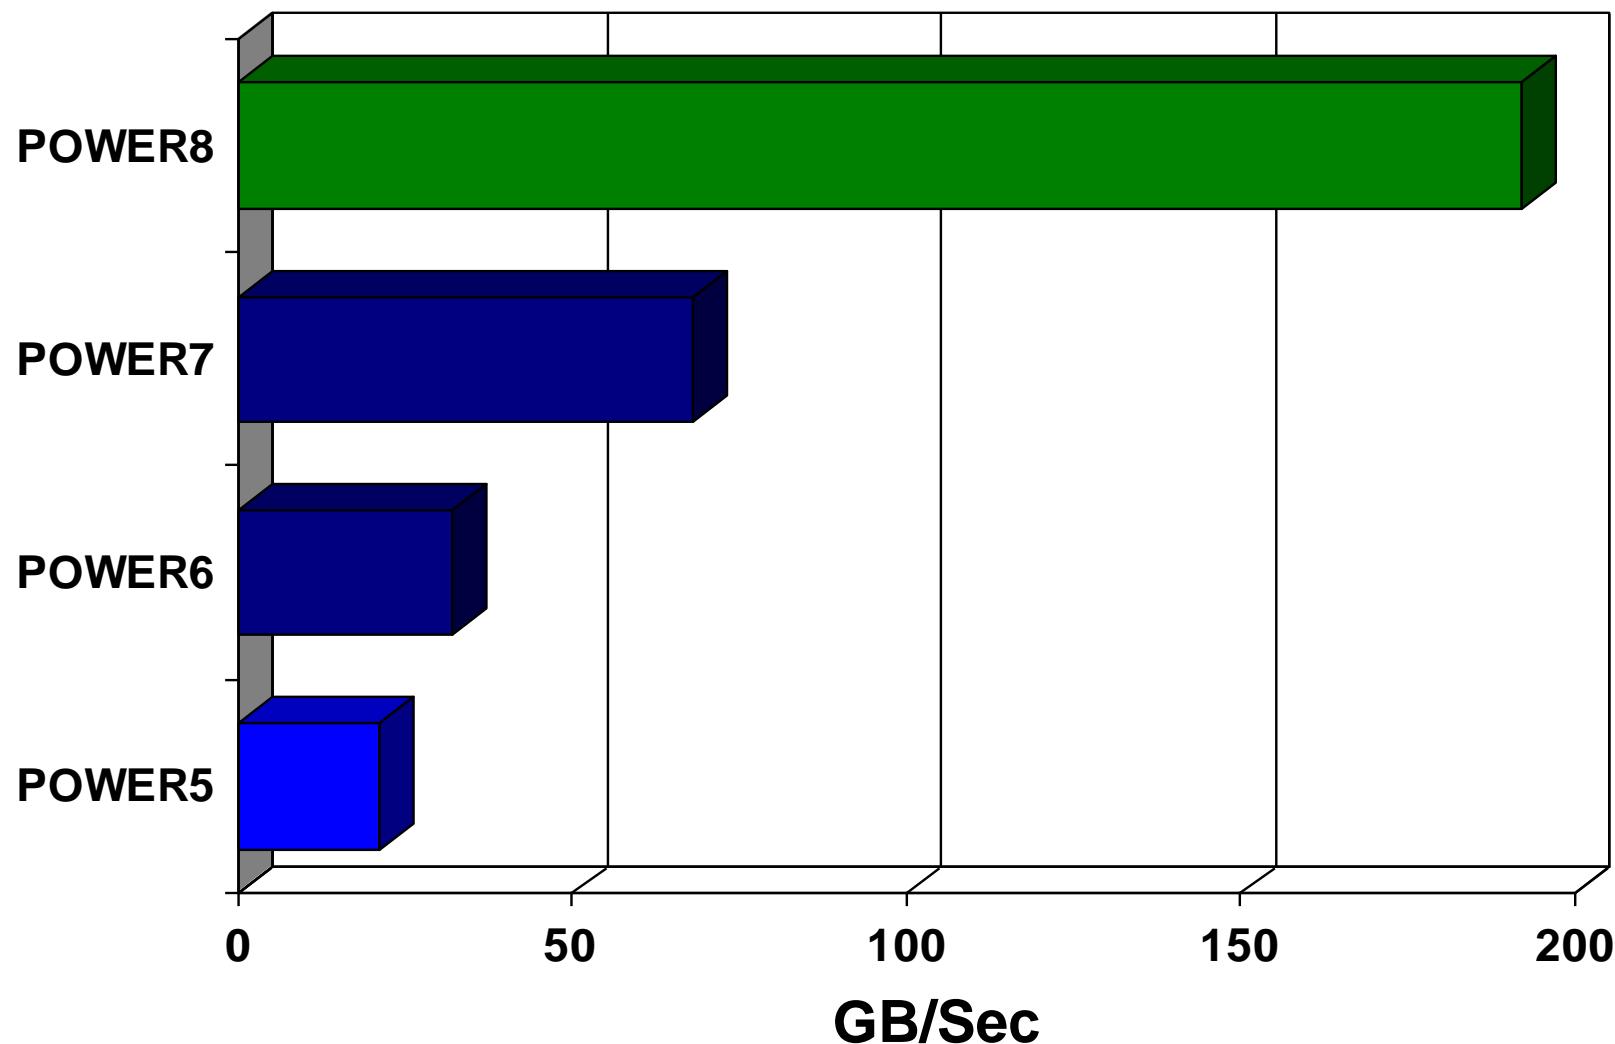

**Summary:**  
Intel® Trusted Execution Technology SINIT Authenticated Code Modules (ACMs) are susceptible to a buffer overflow issue. Intel is providing updated SINIT ACMs to mitigate this issue and microcode updates to revoke vulnerable SINIT ACMs.

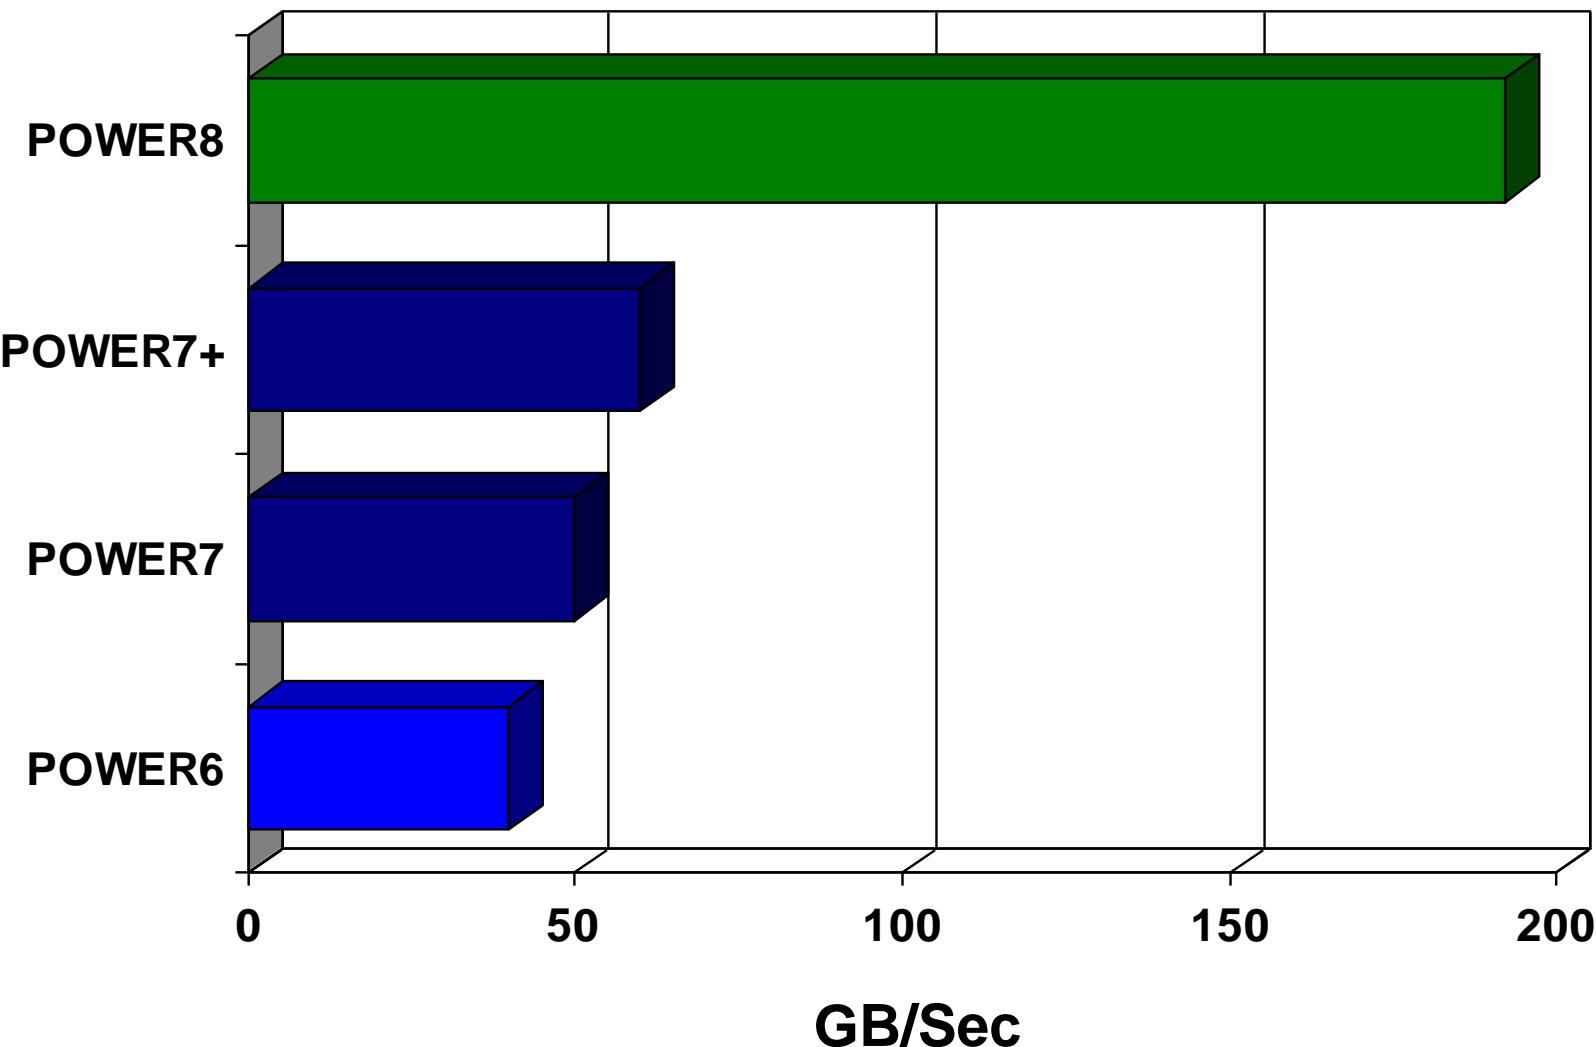

**Description:**  
When Intel® Trusted Execution Technology measured launch is invoked using affected SINIT Authenticated Code Modules (ACMs), the platform is susceptible to an OS-level exploit, which can bypass Intel®TXT compromising certain SINIT ACM functionality, including launch control policy and additionally lead to compromise of System Management Mode (SMM). To mitigate this issue, Intel is releasing updated SINIT ACMs. Additionally, microcode-based revocation of vulnerable SINIT ACMs is being made available for all affected processors.

<sup>1</sup> Based on generational comparisons of SW that utilizes per core pricing and 50% more cores in per system (Power: 8c POWER7 to 12c POWER8; x86: 8c E5-2690 to 12c E5-2697 v2)

<sup>2</sup> Performance is based on published x86 data and published/projected POWER7+ & POWER8. Workloads are ERP, Integer, Floating Point, Java

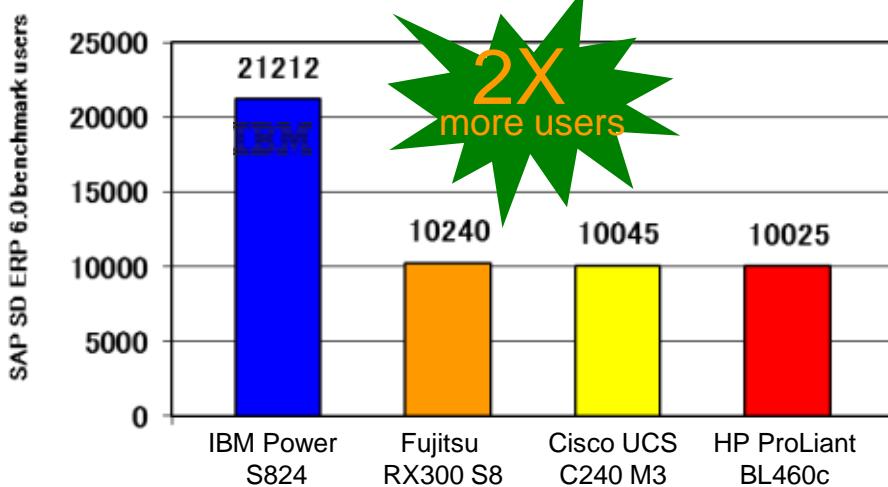

# SAP Sales & Distribution 2-Tier ERP 6 Benchmarks

IBM Power System S824 using DB2 10.5 vs. Competition

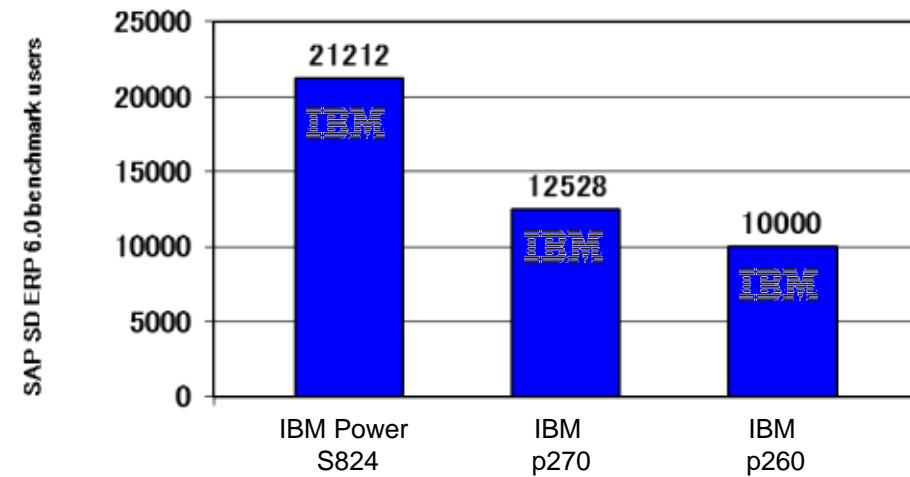

Более чем в 2 раза лучшая производительность на 24 ядрах по сравнению с лучшими показателями Intel

Примерно в 2 раза лучше чем предидущее поколение IBM Power

IBM Power System S824 Performance(1)

IBM Power System S824 Performance(2)  
(per core)

(1.0) IBM Power System S824 on the two-tier SAP SD standard application benchmark running SAP enhancement package 5 for the SAP ERP 6.0 application; 4 processors / 24 cores / 192 threads, POWER8; 3.52GHz, 512 GB memory, 21,212 SD benchmark users, running AIX® 7.1 and DB2® 10.5, dialog response: 0.98 seconds, line items/hour: 2,317,330, dialog steps/hour: 6,952,000 SAPS: 115,870 database response time (dialog/update): 0.011 sec / 0.019sec, CPU utilization: 99%, Certification #: 2014016 Results valid as of 3/24/14. Source: <http://www.sap.com/benchmark>.

(1.1) Fujitsu RX300 S8 on the two-tier SAP SD standard application benchmark running SAP enhancement package 5 for the SAP ERP 6.0 application; 2 processors / 24 cores / 48 threads. Intel Xeon E5-2697 processor 2.70 GHz, 256 GB memory, 10,240 SD benchmark users, running Windows Server 2012 SE and SQL Server 2012, Certification #: 2013024

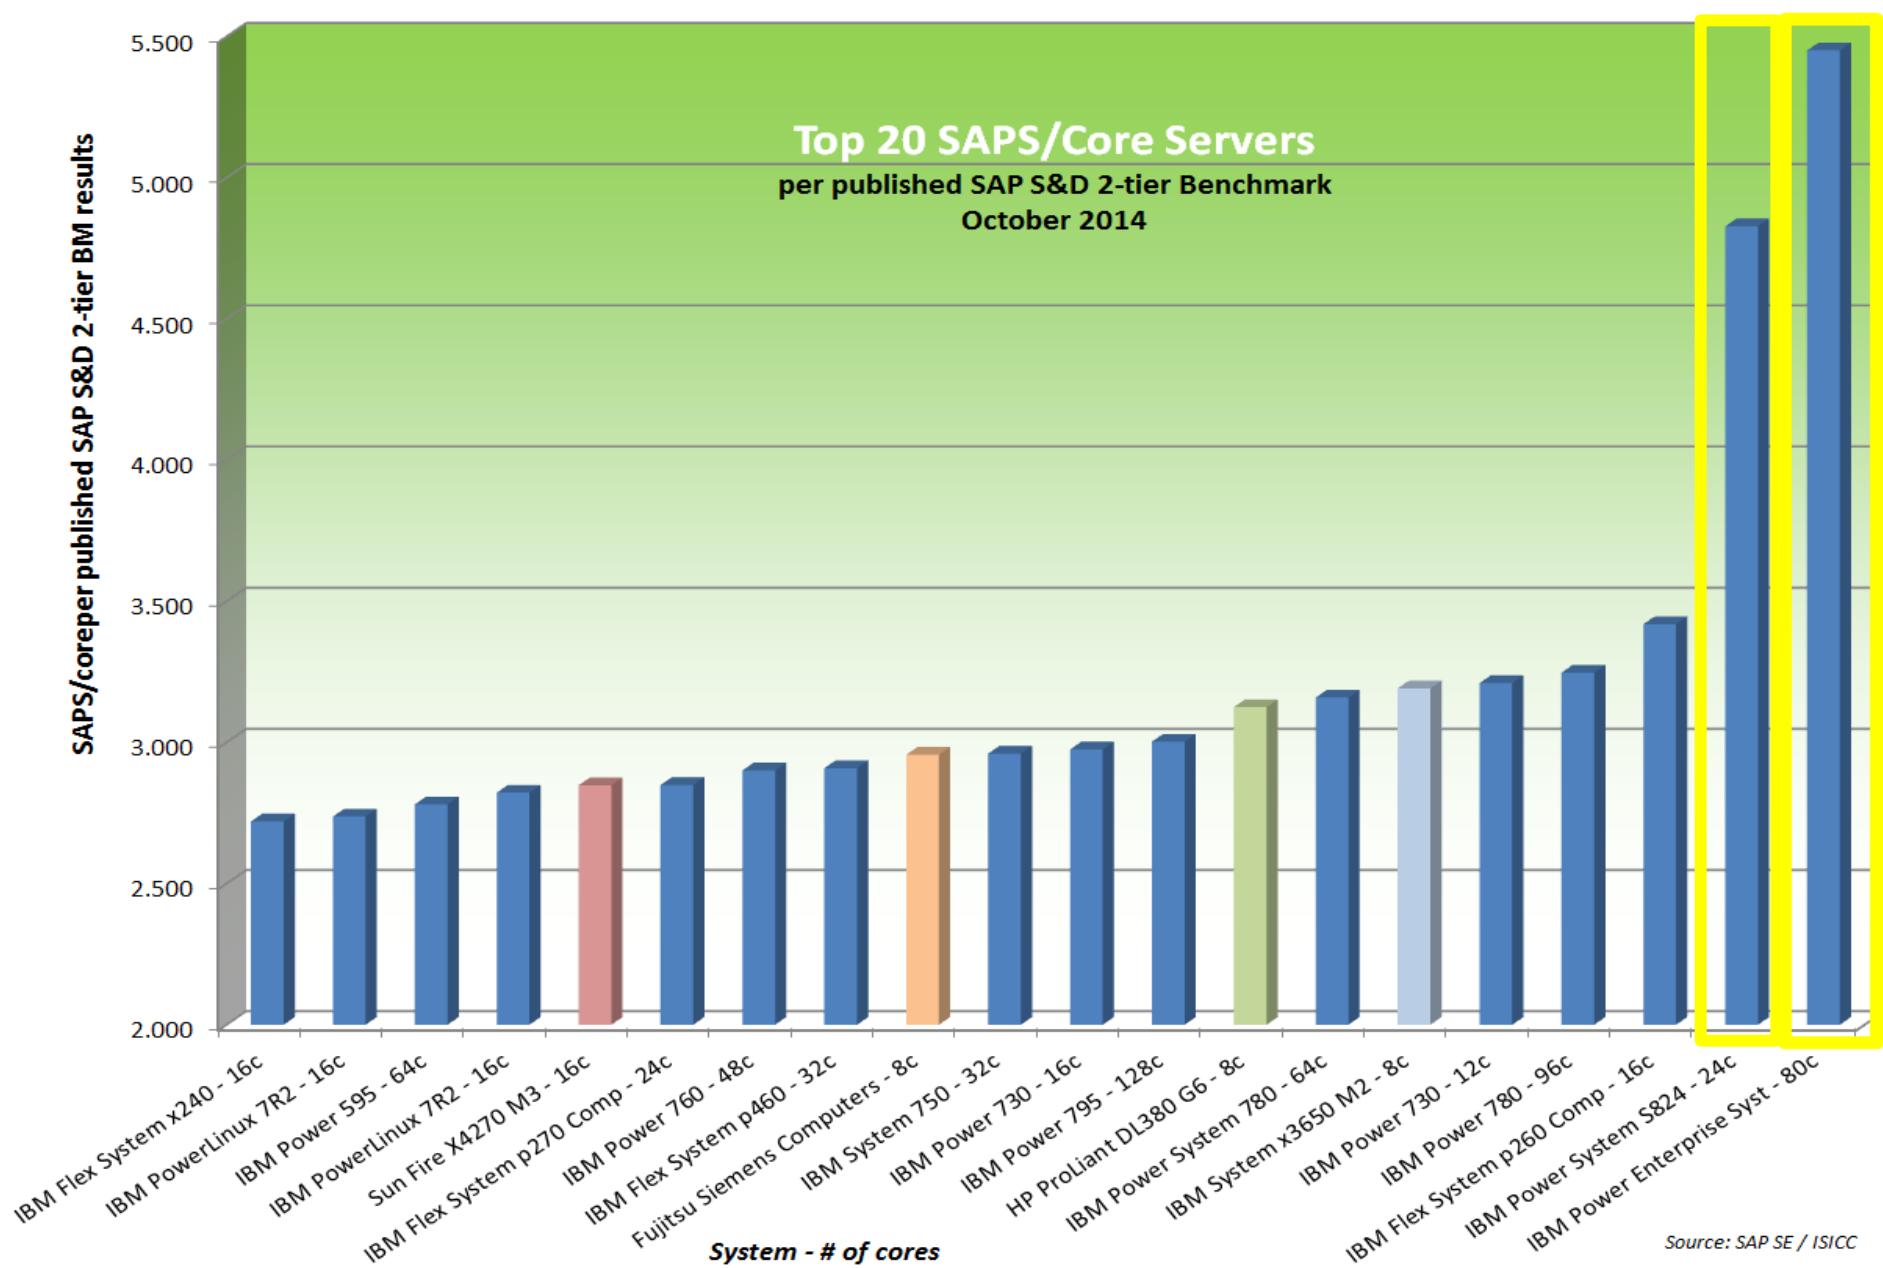

(1.2) Cisco UCS C240 M3 on the two-tier SAP SD standard application benchmark running SAP enhancement package 5 for the SAP ERP 6.0 application; 2 processors / 24 cores / 48 threads. Intel Xeon E5-2697 processor 2.70 GHz, 256 GB memory, 10,045 SD benchmark users, running Windows Server 2012 DE and SQL Server 2012, Certification #: 2013038

(1.3) HP ProLiant BL460c Gen8 on the two-tier SAP SD standard application benchmark running SAP enhancement package 5 for the SAP ERP 6.0 application; 2 processors / 24 cores / 48 threads. Intel Xeon E5-2697 processor 2.70 GHz, 256 GB memory, 10,025 SD benchmark users, running Windows Server 2012 DE and SQL Server 2012, Certification #: 2013025

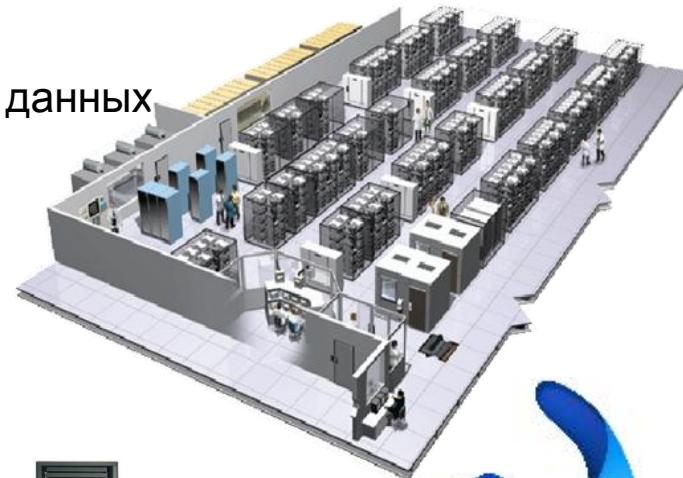

(2.1) IBM Flex System p270 Compute Node on the two-tier SAP SD standard application benchmark running SAP enhancement package 5 for the SAP ERP 6.0 application; 4 processors / 24 cores / 96 threads, POWER7+; 3.4GHz, 256 GB memory, 12,528 SD benchmark users, running AIX® 7.1 and DB2® 10.5 Certification #: 3012019. Source: <http://www.sap.com/benchmark>.

(1.1) IBM Flex System p260 on the two-tier SAP SD standard application benchmark running SAP enhancement package 5 for the SAP ERP 6.0 application; 2 processors / 16 cores / 64 threads, POWER7+; 4.1GHz, 256 GB memory, 10,000 SD benchmark users, running AIX® 7.1 and DB2® 10, Certification #: 2012035

© 2014 International Business Machines Corporation

- Рост расходов и сложности (например, большее количество физических серверов, расширение сети)
- Чрезмерное энергопотребление и проблемы, связанные с перегревом
- Рост расходов на хранилища данных и синхронизацию данных
- Линейное увеличение расходов на труд
- Линейное увеличению расходов на программное обеспечение на процессор
- Частые простои

## Выход:

**использование меньшего количества  
более производительных POWER  
серверов в центрах обработки данных**

**Industry  
Best Practice****Industry Leading**

## Еще больше ядер

### 12 ядер в кристалле

- 1.5x больше, чем в Power7/7+
- лучшая производительность на ядро

### Что в результате?

Почувствуйте производительность задач вертикального и горизонтального масштабирования

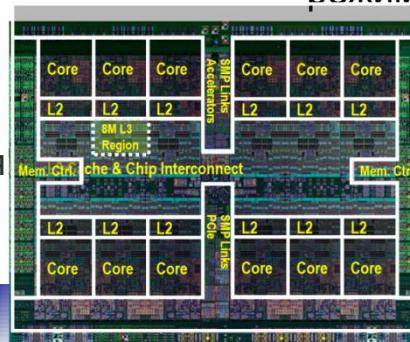

**Industry Leading**

## Еще больше потоков

SMT8 – 8 динамических потоков на ядро.  
Динамически изменяемые режимы SMT1, 2, 4, 8 для каждой VM. Смешивание  
режимов в LPAR

### Что в результате?

Лучшие режимы для каждой конкретной задачи.

## Еще больше кэш-памяти

### 96МБ кэша

- 3X больше на кристалл, чем Power7
- плюс 128МБ off-chip cache – NEW!!

### Что в результате?

Лучшая производительность для задач, требовательных к скорости памяти!

**Industry Leading**

## Лучшая пропускная способность

В 3.5 раза быстрее работа с памятью,  
в 2.8 раза быстрее I/O.

### Что в результате?

Работа больших данных и аналитики работают значительно эффективнее.

**Industry  
Innovation****Innovation  
Extended**

## CAPI

Технология Open interface позволяет устройствам работать со скоростью памяти.

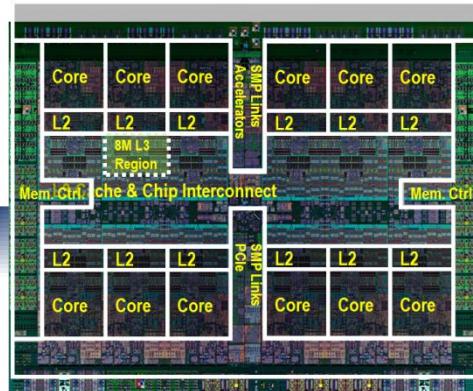

### *Что в результате?*

Новые возможности интеграции интеллектуальных устройств.

**Innovation  
On Power**

## Встроенный PCIe

Контроллер PCIe Gen3, встроенный в кристалл.

### *Что в результате?*

Приложения, требовательные к вводу выводу, будут работать значительно быстрее и с меньшими задержками

## Transactional Memory

Технология класса Mainframe. Значительное ускорение записи и исключение конкуренции работы с памятью.

### *Что в результате?*

Возможности «мэйнфреймов» для ускорения OLTP задач теперь доступны на Power.

**Innovation  
On Power**

## PowerKVM

Встроенная поддержка KVM - open-source решение для виртуализации для Linux систем.

### *Что в результате?*

Единый стандартизованный подход для построения облачных систем с единым центром управления.
