IBM Lotus Domino Security Assessment

Highlights:

This service offering provides 7-day security assessment of your current IBM Domino environment. IBM will evaluate the customer's current Domino environment in order to enable customers to identify and rectify security-related problem areas and provides advice on how to improve day-to-day operations

The Domino Security Assessment offering is for a customer who:

- is experiencing security problems in their IBM Domino environment

- wants to understand the impact of their security requirements and the current state of their infrastructure.

Challenges

- Is your Domino infrastructure secure?
- Is the access control for your Lotus Notes Applications set accordingly to the industry's best practices?
- Having performance or reliability issues with your Lotus Notes applications due to security-related issues?
- Feeling lack of experience dealing with security issues?
- Facing challenges in modernizing your legacy IT infrastructure?
- Is your user acceptance low?

Benefits

- Review your Domino environment and make recommendations for operational and performance improvements using IBM best practices. Solutions can then be implemented and business performance can be improved.
- Helps to identify security-related issues in your Domino environment.
- Recommended solutions to resolve the identified security related issues in your Domino environment.
- Transfer knowledge from the Domino Architect to you. Establish skills requirements to empower you to take control and maintain your environment.

Deliverables

This service is a 7-day assessment, over 2 weeks that helps to assess the security of customer's Domino environment.

The deliverable report covers the following:

- Assessment of the current Domino environment which will contain deliverables of Domino Architecture Review Document.
- Root cause and problem analysis, where applicable which will contain deliverables of Domino Security Audit Document.
- Deliver a 1 day workshop to the customer to impart knowledge on IBM best practices for key Domino administration tasks, common Domino security-related problems and preventive measures, benefits of Lotus Domino 8 and Lotus Domino roadmap.

• IBM Lotus Domino Design Workshop.

IBM Software Lab Services

IBM Software Lab Services provides you with a set of comprehensive services for designing, building, testing, deploying and maintaining IBM Software solutions. Our end-to-end portfolio of capabilities can be customized to meet the needs of every stage of your software deployment – from assessment to pilot to full implementation. Based on your specific needs, you can apply our expertise to a specific area, or develop a more comprehensive program by integrating elements from the three pillars of IBM Software Lab Services:

IBM Software Consulting Services – IBM provides architecture, design, implementation planning, rapid integration and deployment, project management, product installation, customization and mentoring services for your business solutions.

IBM Software Education – For corporate and education institutions – IBM provides enablement in IBM technology for corporate IT and end users. IBM recognizes the importance of getting trained and knowledgeable resources to continue maintaining the systems to effectively support the organization. In addition, IBM provides an educational program, Software Career Training (SCT) for institutes of higher learning.

IBM Software Accelerated Value Program – IBM provides a wide array of services aimed at maximizing your software investment anywhere along the lifecycle of your software infrastructure. We help you accelerate your returns on investment, lower the total cost of ownership, and provide proactive guidance on infrastructure management and operations.
