**WebSphere.** software

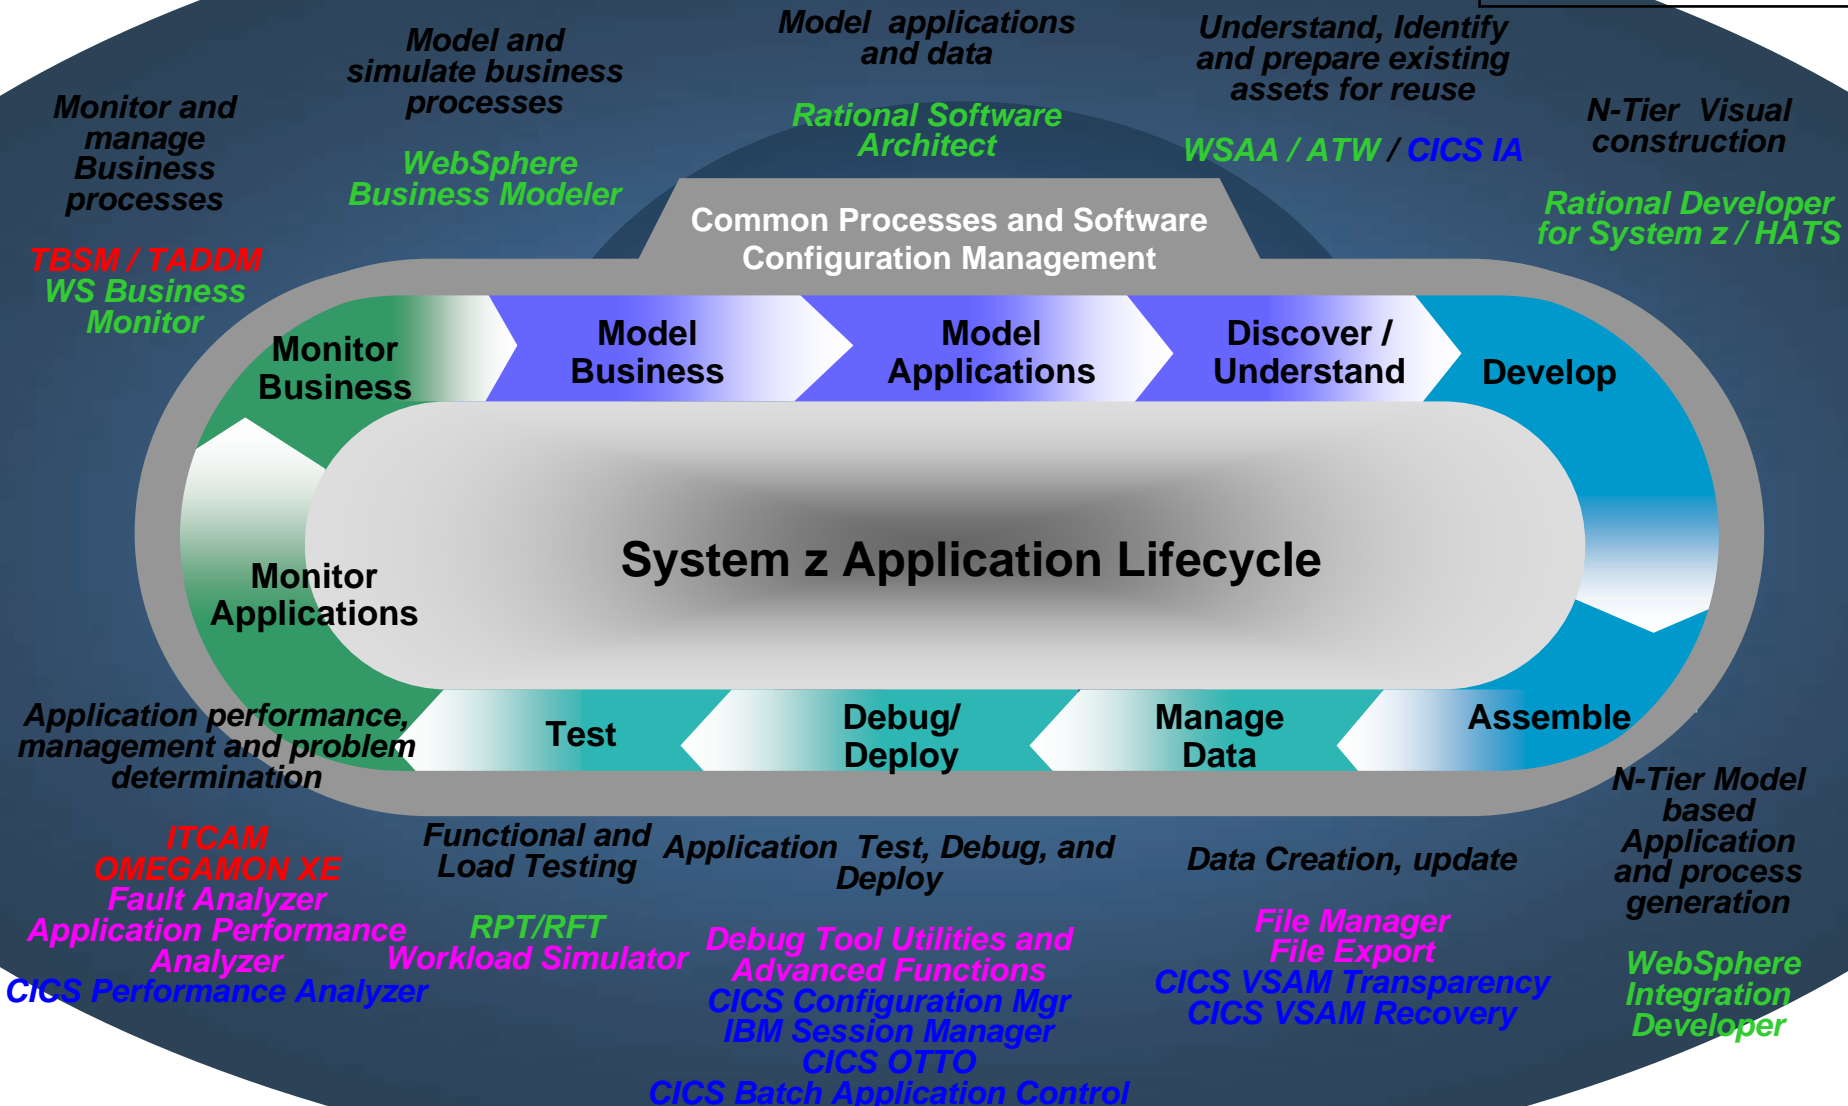

**Rational.** software

# Agenda

- **Overview of the Application Development Tools**
- **Overview of Problem Determination Tools**
  - Fault Analyzer V8 – What's New
  - File Manager V8 – What's New
  - Debug Tool UAF V8 – What's New
  - Application Performance Analyzer V8 – What's New
- **Summary of Tools**
- **Polling Questions**
- **Question & Answer session**

# System z Application Lifecycle

**CICS Tools**  
**PD Tools**  
**Tivoli Tools**  
**Other System z Tools**

# System z IBM Application Development

**Application Reuse / Data Migration**

- CICS Business Event Publisher for MQ
- CICS VSAM Transparency

**Application / Performance Management**

- Application Performance Analyzer
- CICS Performance Analyzer

**Operational Efficiency**

- CICS OTTO
- IBM Session Manager
- CICS Batch Application Control

**Resource Recovery**

- CICS VSAM Recovery
- CICS VSAM Copy

**COBOL Modernization**

- Debug Tool Utilities Adv Functions
- Migration Utility
- IBM Rational COBOL Generation Extension for zSeries
- IBM Rational COBOL Runtime for zSeries

**Software Configuration Management**

- SCLM Advanced Edition
- Rational ClearCase
- Rational ClearQuest

**Test, Deploy, Manage Data Environment**

- Fault Analyzer
- File Manager
- File Export
- Debug Tool Utilities Adv Functions
- Rational Developer for System z
- ISPF Productivity Tool
- Application Time Facility

**CICS V2V**

- CICS Interdependency Analyzer
- CICS Configuration Analyzer
- CICS Performance Analyzer

**Testing**

- Workload Simulator
- Rational Performance Tester z/OS
- Rational Functional Tester Terminal Based Apps

*Core COBOL, PL/I, Assembler, C++, DB2, IMS, CICS, MQ, WAS/z Applications*

# Why Switch to IBM Now?

- **Price & Flexible Licensing= *Savings***
- **Single product vs. cost options (DB2, IMS, CICS, MVS, Assembler, COBOL, PL/I, etc)**
- **Function rich compared to ISVs**
  - Compliments WebSphere, MQ, Delivery with 64-bit z/Arch
  - Performance ready for heavy workloads especially CICS / DB2
  - Tools integrate with other PD tools and expanding to other IBM zTools, ie: RDz (aka WDz) / APA and Omegamon CICS
- **Immediately tolerates new platforms DB2 V9, IMS V10, CICS TS V3.2 z/OS, MQ, etc**
- **Within 90 days or less typically Exploits new platforms**
- **Continued expansion of investment in tools:**
  - Lab, sales, technical support, trainers
- **SMPE install, No passwords / authorization keys**
- **Fortune 500 references**
- **Training options to fit each customer**
  - Lecture, lab based hands on live, webcast, self-based CD
- **IBM = Reliability = Stability**
- **Partnership/Responsibility**
- **Software Strategies independent software analyst ranks IBM #1 in PDT Space**

# IBM Problem Determination Tools

- **Fault Analyzer for z/OS**
  - Helps you rapidly pinpoint cause of failed application (abends)
- **File Manager for z/OS**
  - Data management tool supporting key file structures like VSAM, DB2, CICS, and IMS
- **Debug Tool Utilities & Advanced Functions for z/OS**
  - Source code debugging to improve development productivity
- **Application Performance Analyzer**
  - Monitor performance at the application level
- **Workload Simulator for z/OS and OS/390**
  - Regression and Load testing of interactive z/OS applications
- **File Export for z/OS**
  - Export and import related sets of DB2, IMS, VSAM and sequential data

# PD Tools

Performance

# IBM Fault Analyzer V8

# Fault Analyzer - Helps you rapidly pinpoint why and where an enterprise application failed - and offers suggestions on how to resolve

# Fault Analyzer Highlights

- **Analysis at application level**
- **Information gathered at time of abend**
- **Translates low-level dump information into application-level information**
- **Expands abend code and message descriptions**
- **No recompile of applications**
- **No JCL changes**
- **No performance overhead**
- **Integrated 64-bit DB2 support**
- **Modes Of Operation**
  - Real-time analysis
  - Batch dump re-analysis
  - Interactive dump re-analysis
- **Interfaces**
  - ISPF
  - RDz
  - CICS
  - Web browser
- **Interface to File Manager**

# Fault Analyzer V8.1 Key Enhancements

- **INTEGRATION WITH IBM RATIONAL DEVELOPER FOR SYSTEM Z**
  
- **CICS SUPPORT ENHANCEMENTS**
  - CICS Transaction Server V3.2 support, including channels and containers in 64-bit storage
  
  - CICS containers with XML data that are formatted for ease of reviewing the XML information
  
- **JAVA ENHANCEMENTS**
  - Use of Java-supplied Diagnostic Tooling Framework for Java (DTFJ) interface to improve Java information displayed and debugging integration.

# Fault Analyzer V8.1 Key Enhancements

## ■ USABILITY ENHANCEMENTS

- History file authorization management gives you greater control over fault entry create/access/delete rules.
- A call interface from the SDSF job display provides rapid invocation of interactive abend analysis from the joblog

## ■ REPORT ENHANCEMENTS

- Enhancements to PL/I data structure formatting

## ■ SUPPORT FOR IBM SOFTWARE

- DB2 V9
- IMS V10
- CICS Transaction Server V3.2

# Fault Analyzer and Rational Developer for System z Integration

**Artifacts View**

**Multi-tabbed Report View**

The screenshot displays the 'FA Perspective' in IBM Rational Developer for System z. The interface is divided into several panes:

- Navigator:** Shows a tree view of 'FA Artefacts' and 'Views'. The 'Views' section is expanded, showing various user-defined views like '(ADRIAN) Adrian's cludge of Fault E', '(APC) Sample view of APC history fi', '(DB2) SAMPLE VIEW OF DB2 HISTO', '(FA) FA Sample View', '(JOHNS) View of CICS and IMS Hist', '(KENICHI) Kenichi's history files', '(SSTEST) n/a', and '(SW) SWILKEN.HIST\*'. A red arrow points from the 'Artifacts View' label to this pane.
- Main Editor:** Displays a multi-tabbed report for 'F00285.far'. The active tab is 'Fault Summary', which contains a 'Fault Summary' section with the text: 'Module MYCOB1, program MYCOB1, source line # 17: Abend SOCB (Decimal-Divide Exception)'. Below this is a 'Synopsis' section with the text: 'I B M FAULT ANALYZER SYNOPSIS' and 'A system abend OCB occurred in module MYCOB1 program MYCOB1 at offset X'420'. A program-interruption code 000B (Decimal-Divide Exception) is associated with this abend and indicates that: The divisor was zero in a signed decimal division.' A red arrow points from the 'Multi-tabbed Report View' label to this pane.
- Properties View:** Located at the bottom, it shows details for the selected artifact. The 'System Name' is 'PTHFAE1' and the 'Fault History File or View' is 'KENICHI.A7.HISTORY'. Below this is a table of fault records.
- Outline View:** Located at the bottom left, it shows a hierarchical list of report sections: 'Main Report', 'Event Summary', 'Abend Job Information', 'System Wide Information', and 'Misc Information'. A red arrow points from the 'Outline View' label to this pane.
- Detailed View:** A red arrow points from the 'Detailed View' label to the 'Fault History File or View' field in the Properties view.

# IBM File Manager V8

# File Manager - Manage a variety of enterprise data file structures

Native  
Data  
Manipulation

**File and Data Management**  
Create, Edit, View,  
Extract, Copy, Print,  
Compare

Application  
Mapped  
Data  
Manipulation

**Common User  
Interface In All  
Environments**

**No File size limit for  
Edit mode**

# File Manager Highlights

- Find and change data within specific fields
- Identify fields that contain invalid values
- Use selection criteria and/or sampling to limit the number/type of records in Browse/Edit
- Edit entire files regardless of size
- Copy or print selected records and fields
- Test data generation based on record layouts
- Compare data between datasets using field level mapping

# File Manager V8.1 Key Enhancements

- **INTEGRATION WITH IBM RATIONAL DEVELOPER FOR SYSTEM Z**
  
- **SUPPORT FOR IBM SOFTWARE**
  - File Manager CICS is enhanced to support extended addressability Entry Sequenced Data Sets (ESDSs), a new capability in CICS V3.2.
  
  - File Manager DB2 is enhanced to support the new features in DB2 V9
    - New data types: BINARY, VARBINARY, DECFLOAT, and BIGINT.
    - The enhanced DB2 V9 SQL syntax, in File Manager DB2 Advanced SQL Prototyping,
    - New and changed DB2 V9 catalog tables
  
- **NEW FUNCTIONS**
  - File Manager scrambling support to provide a "scrambling" algorithm for field level scrambling.
  
  - The File Manager Base editor is enhanced to provide CREATE, REPLACE, APPEND, and SAVEAS commands.

# File Manager V8.1 Key Enhancements

## ■ NEW FUNCTIONS (cont.)

- The File Manager editor and viewer CHANGE command is enhanced to allow File Manager to change the record length if the data set contains variable length records.
- File Manager Template processing allows record identification criteria and selection criteria to be specified for individual array elements or for all array elements on the "by field" panels.
- The File Manager Compare utility is extended to compare load modules and load libraries.
- The File Manager DB2 editor related edit (REDIT) command is extended in File Manager DB2 to support non-error situations.

## ■ SUPPORT FOR IBM SOFTWARE

- DB2 V9
- IMS V10
- CICS Transaction Server V3.2

# File Manager and Rational Developer for System z Integration

*Edit data in table mode (mapped to template/copybook)*

*View files associated with MVS system*

The screenshot displays the IBM Rational Developer for System z interface. The main window shows a table view of data for 'FMI.VSAM.FMIVS4'. Below the table is a 'Single Mode' view showing the same data in a key-value format. To the right, a 'Remote Systems' tree view shows a connection to 'z/OS' with a 'File Manager' view of MVS files.

**Table View Data:**

SSN-1	F	SSN-2	F.	SSN-3	SSN-3-C...	SSN-3-CODE2	STUDENT...

SSN-3	6084
SSN-3-CODE1	60
SSN-3-CODE2	84

**Remote Systems Tree View:**

- z/OS Projects
  - My MVS Connection
    - JES
      - MVS Files
        - My Data Sets (BTWEED.)
          - File Manager
            - FMI.C
            - FMI.C.JCL
            - FMI.COBOLE
            - FMI.COBOLE.JCL
            - FMI.COPY
            - FMI.FMN.V8R1M0.SF
            - FMI.FMN.V8R1M0.SF
            - FMI.FMN.V8R1M0.SF
            - FMI.FMV8.DEVTEST.
            - FMI.FMV8.FMI.CNTL
            - FMI.FMV8.SHIPPED.L
            - FMI.FMV8TP.BASE.L
            - FMI.FMV8TP.DEVTE

# IBM Debug Tool Utilities and Advanced Functions V8

# Debug Tool UAF – Provides debugging of enterprise applications

# Debug Tool Utilities and Advanced Functions Highlights

- **Common User Interface Across Systems And Subsystems**
- **Consistent Across Languages**
  - COBOL (all versions), C/C++, PL/I, Assembler
- **Environments Supported**
  - CICS, TSO, JES/Batch, IMS Including IMS/TM, DB2 Including Stored Procedures, Unix System Services (USS), MQSeries
- **Order Debug Tool Utilities and Advanced Functions PID**
  - 5655-S16

- **Debug Tool Utilities and Advanced Functions Features:**

- Interactive “Playback” support
- Object level “disassembly” interactive debug support
- Automonitor support for COBOL, PL/I, and Assembler programs
- An interface to the Fault Analyzer tool
- Code coverage tool for unit and regression testing
- Support for OS/VS COBOL source programs
- Load module analysis reporting
- Uses the GUI debug interface built into products such as:
  - *Rational Developer for System z (RDz)*
  - *Websphere Dev. Debugger for System z (WDDz)*

- **Information Available At**

[www.ibm.com/software/awdtools/deployment](http://www.ibm.com/software/awdtools/deployment)

# Debug Tool V8.1 Key Enhancements

## ■ CICS-RELATED ENHANCEMENTS

- Ability to detect storage violations under CICS
- A new CHKSTGV command helps CICS programmers diagnose storage violations.
- New DTST transaction provides a CICS memory editor and browser
- Ability to display CICS channel and containers
- New commands are added (DESCRIBE CHANNEL and LIST CONTAINER) so you can display CICS channels and containers, including containers which hold Web Services state information. You can display the information even if it is not being referenced by the application program being debugging.

# Debug Tool V8.1 Key Enhancements

## ■ AUTOMONITOR ENHANCEMENTS

- Debug Tool will display values in character format regardless of whether or not the string contains unprintable characters.
- You can use HEX and DEF prefix commands in the AUTOMONITOR section of the Monitor window.
- Assembler AUTOMONITOR output displays the user register names, when possible

## ■ 64-BIT REGISTER SUPPORT FOR ASSEMBLER APPLICATIONS

## ■ SUPPORT FOR IBM SOFTWARE

- DB2 V9
- IMS V10
- CICS Transaction Server V3.2

# Displaying contents of a container (CICS)

# RD/z Variable Window Auto Monitor ( Default )

*Program being debugged*

*Variables display*

The screenshot shows the IBM Rational Developer for System z interface during a debug session. The title bar reads "Debug - ADTOOLS.MNA.CSTAPPL.SYSDEBUG(TOMDRV00) - IBM Rational Developer for System z".

- Servers Panel:** Shows the connection to TOMDRV00 [Remote Compiled Application] on OS/390(R) at 9.30.128.24:2118. The thread is 1 (Runnable) and the process is 317784488.
- Variables Panel:** Shows a table with columns "Name" and "Value". The message "no local variables are available for the selection" is displayed.
- Source display Panel:** Shows the source code for "JOB03265.out". The current line is 1, which contains a line of asterisks. The code below reads:

```
1 *****  
2 * Mergers and Acquisitions scenar  
3 *  
4 * eServers zSeries AIM tools Solution  
5 * IMS conversion test program
```
- Console Panel:** Shows the process ID 317784488 and program name TOMDRV00.

*Source display*

# Integration of File Manager, Fault Analyzer and Debug Tool UAF with **Rational Developer for System z**

# Sample of PD Tools in RDz

*Editing data with File Manager*

The screenshot displays the IBM WebSphere Developer for System z interface with several tool windows open:

- File Manager:** Shows a table of data for 'JPHILDN.ADLAB.SAMFILE'. A red arrow points to the 'NAME' column.
- Fault Analyzer (UAF):** Displays an event summary for 'F01585.far'. A red arrow points to the 'Event Summary' section.
- Debug Tool UAF:** Shows a code editor with assembly-like instructions. A red arrow points to the 'EVALUATE TRAN-ACTION' line.
- Remote Error List:** A table at the bottom showing system error details.

# IBM Application Performance Analyzer V8

# Application Performance Analyzer – Provides application performance analysis tooling for app developers

# Application Performance Analyzer Highlights

## ■ Types of Observation Sessions

- Real-Time
- Scheduled
- Via batch submission

## ■ Non-intrusive performance analyzer for applications and systems programmers to

- Improve response time in online applications
- Improve batch turn around time
- Identify excessive I/O activity
- Identify excessive CPU usage
- Test the effects of increasing workload
- Isolate performance problems in new and existing applications

# Application Performance Analyzer Highlights

- **Summary/Profile reports with drill down into detailed levels via an ISPF interface or PDF hardcopy**
- **CPU, Load Module, and CSECT analysis of all modules in the address space**
- **Source statement (COBOL or PL/I) or instruction utilization in each CSECT**
- **Supports Fault Analyzer / Debug Tool Sidefiles**
- **Wait time analysis by category, task/module, or attribution**
- **DASD I/O analysis by device, DDNAME, dataset and dataset attributes, EXCP's, VSAM with buffer pool, I/O wait, over time**
- **SYSPLEX coupling facility reports**

# APA V8.1 Key Enhancements

## ■ JAVA ENHANCEMENTS

- Java Just-In-Time (JIT) compiler support for Java 1.4.2
- Mapping to Java source to facilitate identification of performance bottlenecks

## ■ PERFORMANCE COMPARISON

- Comparison performance between two samples, for benchmarking before and after performance analysis

## ■ USABILITY ENHANCEMENTS

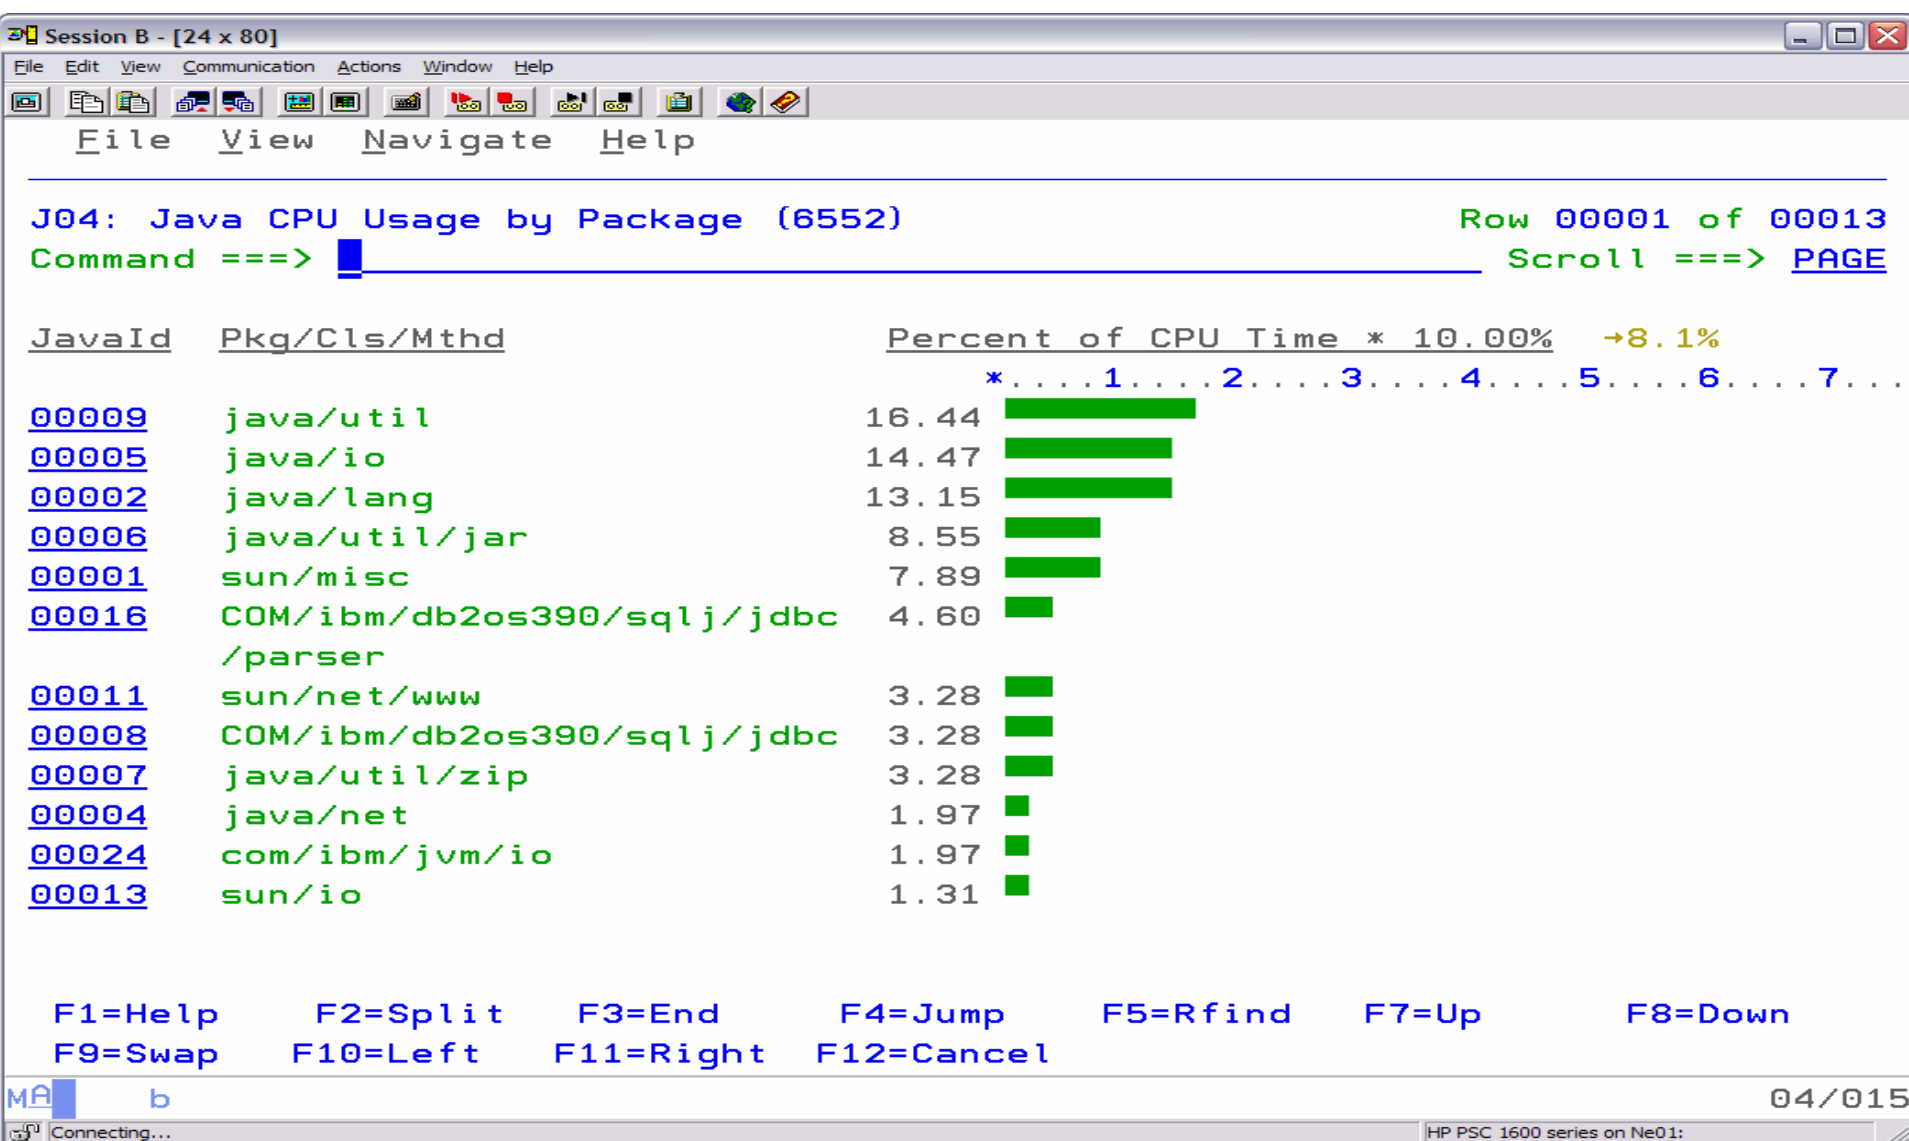

- Recommendation support for DB2

## ■ SUPPORT FOR IBM SOFTWARE

- DB2 V9
- IMS V10
- CICS Transaction Server V3.2

## z/OS Problem Determination Tools

z/OS® Problem Determination Tools have powerful functions and features. Organizations that choose to use them improve the health of their application portfolios.

Select a product

### Products

- Application Performance Analyzer for z/OS**  
 A non-intrusive application performance analyzer that aids developers in the design, development and maintenance cycles. Its key function is to measure and report how resources are used by applications running in virtually any z/OS address space.
- Debug Tool for z/OS**  
 A program testing and analysis aid that helps you examine, monitor, and control the execution of programs written in C/C++, COBOL, or PL/I on OS/390, MVS™, VM, or VSE™, and compiled Java™ with the remote debugger.

### Solutions

- Safari of IBM PD Tools: A Live Exploration**  
 Join us in this complimentary seminar for hands-on labs that will build your understanding of IBM problem determination tool capabilities, so you can develop applications more efficiently.
- IBM zSeries Application Development Tools information center**  
 This information center provides fast, online centralized access to Problem Determination Tools product information.
- IBM COBOL family**  
 IBM COBOL provides a complete offering of compatible, cross-platform, cross-product capabilities.

# SUMMARY

- **IBM's Problem Determination Tools Version 8 will be made Generally Available on September 28, 2007.**
- **Technically excelling**
  - Continuing to address customer technical requests
  - Exploiting current IBM subsystems
  - Integration between PD Tools as well as other tools
  - Facilitates SOA exploitation
- **Financially attractive and packaged with support for subsystems and languages within the same tool**
