## **Service Oriented Finance**

Our customers demand greater choice, and personal security and control in their banking relationships.

We need a next generation banking system!

Marketing

#### **Next Generation Solutions for Banks and Others** What are the key business requirements? **Trends Vision** Specialization... Customer-insight and time-to-market Banks will offer specialized Non-bank banks and industry specialists (online banks, products financing, securities trading, insurance, etc) will both compel and enable traditional banks to specialize Regulation Heightened requirements around privacy, security and Regulatory burdens intensify risk will require banks to take an enterprise-wide approach **Technology** Technology improves to enable Advances in service-oriented architecture, global breakaway value connectivity, computing power, and data analysis will lead to unprecedented function Source: The paradox of Banking 2015, by IBM Business Consulting Services 01 - Think z - Introduction v2.1.ppt

### **Examples of Specialization Requirements**

- Differentiate product offerings for different customer sets
- Customer insight to determine optimal marketing segments
- Extend sales reach via business partners
- 24x7 online access by customers
- Launch specialized products faster

01 - Think z - Introduction v2.1.ppt

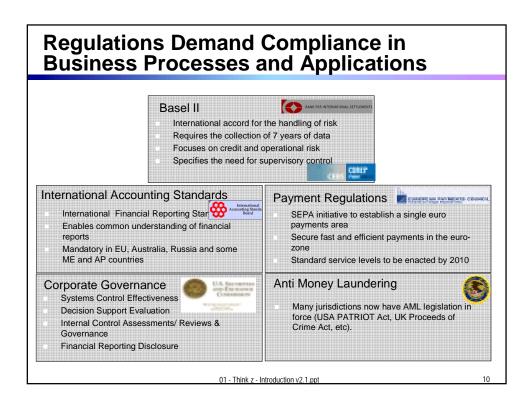

8

### **How Businesses Will Deliver Specialization**

- Customers will demand greater choice, personal security and control in all relationships
- Businesses will source products and services from a large number of specialized service providers – both independents and others providing white label products
- Rapid Innovation in products, processes, relationships and business models – will be the primary path to sustainable growth

# Rapid Innovation is a Competitive Advantage

- In March 1991, MCI introduced "Friends and Family," a new approach to long-distance telephone service.
  - Under this plan, subscribers could set up discounted "calling circles" as long as both parties were MCI subscribers.
- "Friends and Family" immediately changed the dynamic of the market, and took many customers from AT&T.
- AT&T's billing system was not able to deliver new products in a short time frame.
- Four years later, AT&T responded with a new billing system to compete with MCI's 'Friends and Family' (which had already won 5 % of market share)

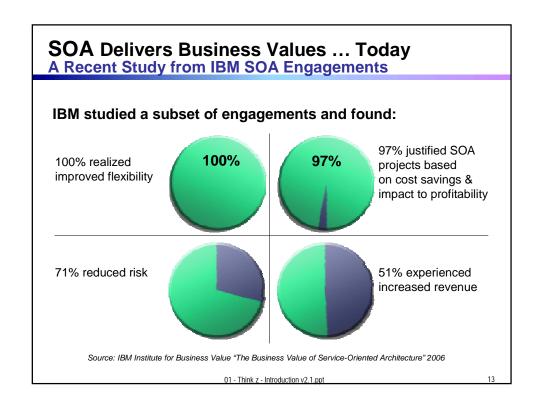

Flexible business systems are needed to remain competitive!

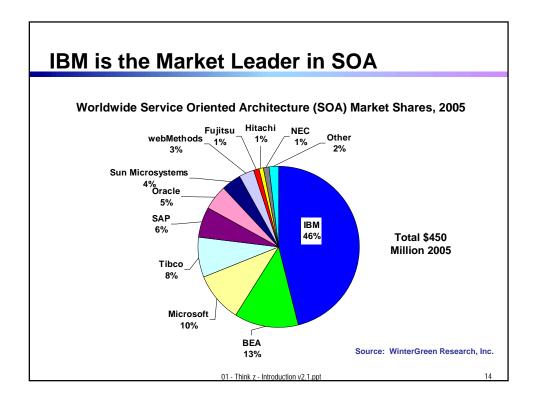

01 - Think z - Introduction v2.1.ppt

# **Technology Requirements for Next Generation Solutions**

- Service Oriented Architecture (SOA) is key to providing flexibility and rapid innovation
- Availability and reliability to conduct online business continuously
- Performance and scalability to allow quick and cost effective response to growth
- Security and auditability for regulatory compliance
- Competitive Total Cost of Ownership

01 - Think z - Introduction v2.1.ppt

# The Role of the Mainframe in Next Generation Solutions

- Most core business systems already run on the mainframe at the heart of the business
  - Represent huge investments
  - Key to ongoing business operations
- The modern mainframe will play a central role in SOA next generation solutions
- The mainframe delivers superior qualities of continuous operations, rapid scale up, and security
- The mainframe achieves the lowest TCO for next generation solutions

01 - Think z - Introduction v2.1.ppt

### **Shifting Trends Favor the Mainframe Again**

- Continuous availability is even more important in the web world
- Security and compliance are top of mind
- Server sprawl has driven up the cost of labor
- TCO pressure is driving customers to consolidate workloads on virtualized platforms
- Network economics favor consolidation once again
- Cost of power is increasing
- Growing use of Linux
- The mainframe is at the center of SOA
- IBM has delivered dramatic mainframe price reductions

It's time to take a fresh look at the mainframe!

01 - Think z - Introduction v2.1.ppt

16

### **2006 Major Mainframe Milestones**

4Q Largest Hardware Revenue Quarter Since 4Q98

Top 25 Banks in the World

Record High for Market Share: 37.1%

Record Year for Specialty Engines

10 Million MIPS Installed

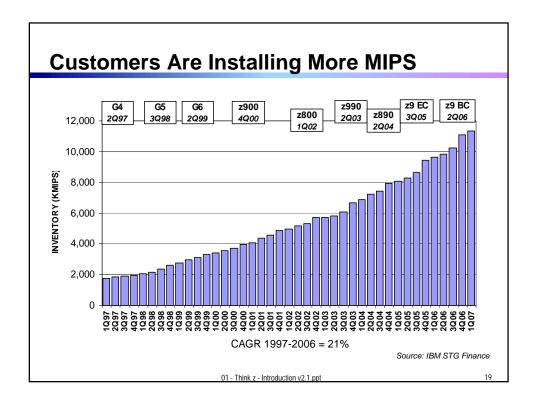

\$1 Billion in Revenue from System Integrators

First Online Game Client: Hoplon Infotainment

### System z Today

- DB2 for System z is in 25 of the top 25 worldwide banks
- IMS and CICS systems execute over 80 billion transactions a day
  - ▶ 490 of IBM's top 500 customers use CICS
  - ▶ Over 95% of Fortune 1000 companies use IMS
- System z increased market share 14 points while Sun and Fujitsu fell over past 5 years
- 60% of System z revenue is driven by new workloads (Java, Linux, Database, SOA)

01 - Think z - Introduction v2.1.ppt

#### Mainframe or Distributed - or Both

- Distributed Computing does not replace Mainframe Computing
- Side-effects of improper application of Distributed Computing
  - ▶ Proliferation of Servers
  - Spiraling Labor Costs
  - ▶ Difficult Security Environment
  - ▶ Data and process synchronization challenges
- These side-effects are causing a re-evaluation of the distributed computing model

01 - Think z - Introduction v2.1.ppt

22

### When to Use a Mainframe

- Use a mainframe
  - ➤ To consolidate core business workload into a structured, cost contained environment
- Use a distributed system
  - ➤ To run individual applications, which are new, or subject to change in a less controlled environment

01 - Think z - Introduction v2.1.ppt
