

Why Do Distributed Servers Have Low Utilization?

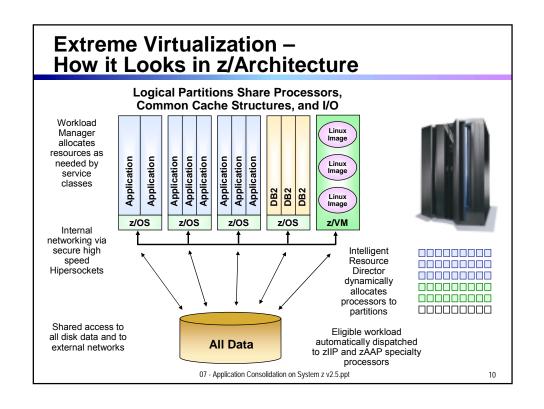

- 1. Often dedicated to a single application
- 2. Separate production, development, test, and site failover servers
- 3. Provision for peak workload and expected growth
- 4. Organizational ownership limits usage
- 5. Hub-and-spoke style deployments
- 6. Workload grows slower than Moore's Law

07 - Application Consolidation on System z v2.5.ppt

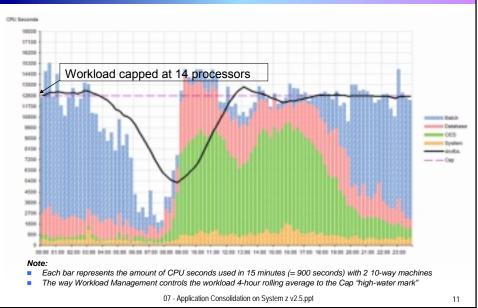

Internal IBM Consolidation Project – Distributed Cost Per Server Calculations **Annual Operations Cost Per Server** (Averaged over 3917 Distributed Servers) Power \$731 \$34,447 Floor Space \$987 Wow! Annual Server Maintenance \$777 Annual connectivity Maintenance \$213 Annual Disk Maintenance \$203 Annual Software support \$10,153 Annual Enterprise Network \$1,024 \$20,359 Annual Sysadmin \$34,447 **Total Annual Costs** The largest cost component was labor for administration 7.8 servers per headcount @ \$159,800/yr/headcount 07 - Application Consolidation on System z v2.5.ppt

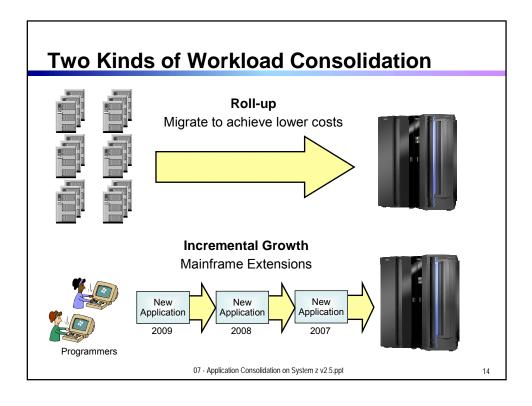

Economics of Consolidation

- Consolidating workload means running multiple workloads on the mainframe at the same time
- Consolidation achieves greater utilization of assets which minimizes cost per unit of work
- Same principal was applied by Henry Ford at the dawn of the industry era
 - ▶ It still applies today
- Workload consolidation on a mainframe squeezes out cost to achieve maximum efficiency
 - And return on investment

"Specialty Engines" Make Consolidation Even More Attractive

- Special assist processors for System z
 - ► For Java workloads (zAAP)
 - ► For selected DB2 workloads (zIIP)
 - ▶ For Linux workloads (IFL)
- Attractive pricing
 - ► Hardware is \$125K per processor one time charge
 - \$125K for a 580 MIP processor
 - ~ 9% of the normal price
 - No charge for IBM software running on zAAP/zIIP
 - ▶ IBM software running on IFL pays 100 PVU's (same as Intel dual core)
 - ▶ Free upgrade to next generation!
- Requirements
 - ▶ Max number of zAAP =< number of general purpose processors
 - ▶ Max number of zIIP =< number of general purpose processors
 - No limit on the number of IFL's

07 - Application Consolidation on System z v2.5.ppt

Example Workloads That Can be Consolidated on a Mainframe

What	Where	Specialty Processor	How
Growth of Existing Mainframe Workload	z/OS		Capacity on demand
New CICS or IMS Applications	z/OS		Develop
Data Warehouse	z/OS	zIIP	Deploy
SAP Database Server	z/OS	zIIP	Deploy
WebSphere Application Server	z/OS	zAAP	Deploy
WebSphere Portal Server	z/OS	zAAP	Deploy
WebSphere Process Server	z/OS	zAAP	Deploy
Domino	z/OS		Deploy

07 - Application Consolidation on System z v2.5.ppt

16

More Example Workloads That Can be Consolidated on a Mainframe

What	Where	Specialty Processor	How
Linux Applications	Linux on z/VM	IFL	Recompile
Linux Middleware - IBM Brands (DB2, WebSphere, Lotus, Rational, Tivoli) - Oracle Database - etc.	Linux on z/VM	IFL	Rehost
Linux Packaged Applications - SAP - Oracle - etc.	Linux on z/VM	IFL	Rehost
.NET Applications	WebSphere Linux on z/VM	IFL	Mainsoft

07 - Application Consolidation on System z v2.5.ppt

Linux on z/VM

We've seen some examples of incremental growth on z/OS

- WebSphere Process Server
- Data Warehouse
- SAP Data Server

Now let's look at some examples of roll-up consolidation on Linux on $\ensuremath{\text{z/VM}}$

IBM

19

Cash Flow and Break Even Point Analysis

Mainframe One Time Charge

Server Acquisition	\$ 188,734,794
Connectivity Acquisition	\$ 5,003,547
Disk Acquisition	\$ 12,889,378
Software Licenses	\$ 53,733,428
Migration Cost	\$ 66,000,000
Total OTC (Cost of migration)	\$ 326,361,147

- IBM expects substantial savings by consolidating 3,917 distributed servers to 28 mainframes, each with 54 IFL's
 - ▶ 86% savings in system admin cost
 - 85% savings in floor space
 - 81% savings in power
 - ▶ 57% savings in network
 - ▶ 41% savings in software support
 - 19% savings in disk storage maintenance

Distributed Annual Cost

Power	\$ 2,861,501
Space	\$ 3,865,900
Annual Server Mt	\$ 2,434,382
Annual Connectivity Mt	\$ 668,594
Annual Disk Storage Mt	\$ 634,554
Annual SW Support	\$ 39,770,310
Annual Sys Admin	\$ 79,747,500
Annual Ent. Network	\$ 4,011,008
Total Annual Costs	\$ 133,993,749

Mainframe Annual Cost

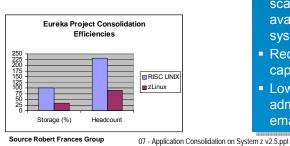

Power	\$ 550,964
Space	\$ 575,162
Annual Server Mt	\$ 14,140,224
Annual Connectivity Mt	\$ 200,142
Annual Disk Storage Mt	\$ 515,575
Annual Sw Support	\$ 23,561,473
Annual Sys Admin	\$ 10,822,500
Annual Ent. Network	\$ 1,804,954
Total Annual Costs	\$ 52,170,993

Operational cost savings = \$81,822,757 per year, break even in 4 years 07 - Application Consolidation on System z v2.5.ppt

Telemar Roll-up Consolidation Project

Largest provider of fixed-line telecommunications services in South America.

Consolidated 16 geographically dispersed servers on a centralized System z9 EC server running SuSE Linux

Benefits:

- Open-standards-based solution
- Maximized manageability, scalability, security and availability of its key business systems.
- Reduced need for server capacity by one-third
- Lowered operating and administration for maintaining email server applications.

Case Study: Québec Government Runs Oracle at IFL Prices

- Consolidated 200 Oracle databases on to 135 Linux virtual machines on a z9-EC with 3 IFL's
 - ▶ Reduced TCO (SW, HW, labor) by 30%
 - Reduced cost of Oracle licenses by 90%
 - Used RACF for consistent security
 - Each administrator can manage 100 Linux images
 - Easy migration
 - One migration per day
 - Create new Linux server in 10 min (vs 1 week 3 months)
 - Clone Oracle DB instance in 30-45 min (vs 10 14 hours)
 - ▶ Inherited benefits of z platform workload management, availability, disaster recovery, I/O bandwidth
 - Expect to migrate at least 100 more Oracle databases per year

07 - Application Consolidation on System z v2.5.ppt

DEMO: Fast Linux Provisioning

- Let's show mainframe Linux provisioning live!
 - ▶ Laptop based demo system
 - Using a single Intel processor, 3GB memory
 - ▶ Emulated mainframe is running z/VM to virtualize
 - ▶ We will create and start 10 virtual mainframes
 - 3 will run Linux plus the Apache webserver
- Using an emulated mainframe on an Intel laptop, we can demonstrate better virtualization on Intel than VMWare can!!
 - ▶ VMWare limited to 8 virtual servers per real processor
 - > z/VM demo showed 10 on top of our emulated mainframe

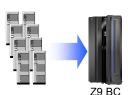

07 - Application Consolidation on System z v2.5.ppt

27

Get On Board! PAR Hypervisor Hypervisor 07 - Application Consolidation on System z v2.5.ppt 30

Case Study: Nexxar - Financial Services

80 x86 Servers

1 IFL

z/VM supports Nexxar's strategy of acquiring firms by providing secure workload isolation for each "private label" relationship

- Operating costs reduced by 30% per year
- Capacity on demand can handle activity spikes
- System z9 cryptography provided assurance required by Nexxar's customers
- Started with one IFL, will add more as needed
- Staff support reduced by 75% due to z9 BC
- Used DB2 on z/OS as data server

A brand new mainframe customer!

07 - Application Consolidation on System z v2.5.ppt

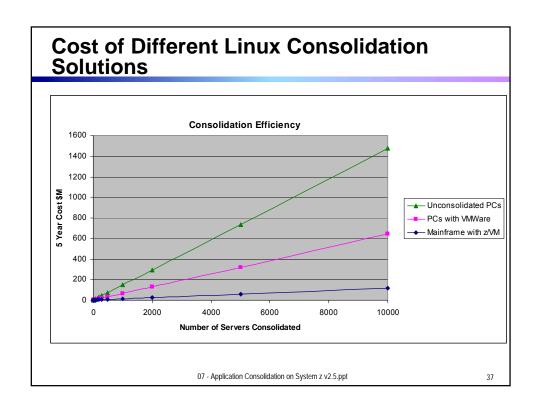

31

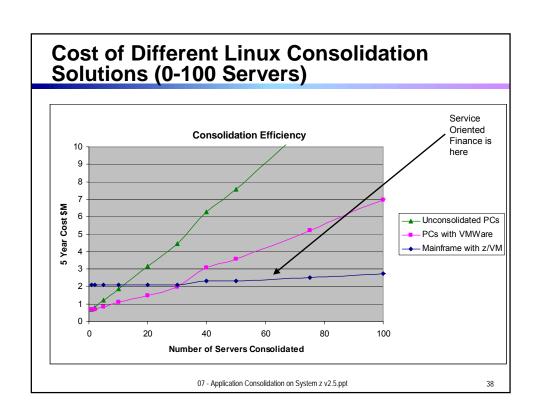

NEXXAB

VMWare ESX3 with Intel Has Limitations

- Maximum of 8 virtual servers per real processor
 - ▶ Although a normal production ratio is 2-3 servers
- Maximum of 16 GB memory for each virtual server
- Maximum of 32 real processors, 64 GB real memory
- Maximum of 128 virtual servers per machine
- Less efficient use of memory
 - Recommend keeping more real memory than total working set + VMWare overhead allowance
 - Dedicated disk space per-virtual server required for swap
- Can only create up to a 4-way SMP virtual server
 - ▶ And doing that requires additional charged software

07 - Application Consolidation on System z v2.5.ppt

Service Oriented Finance Did a Roll-up Consolidation of Linux Servers I saved a lot of money by consolidating our Linux servers onto System z! Service Oriented Finance CIO 07 - Application Consolidation on System z v2.5.ppt 40
