

Strategic Business Planning for Financial Institutions

Risk Spectrum for Financial Services

So how to make sure the institution will survive?

- Full and complete picture of all activities and exposures of the institution
- Clear understanding of each of the risks:
 - What is their impact on the business?
 - How do they interact?
- Full understanding of the dynamics of the market:
 - Strong interdependencies (systemic risk) => nobody can stay on the sideline
 - What if “Business as usual”, but also
 - What if a Crisis occurs => be prepared for the worst: Stress Testing
- Business Planning and Forecasting: make sure you have the decision making tools
 - to find a winning business strategy
 - to optimally use your capital

So how do we address this?

Step 1: Get a complete picture of all activities/data within the institution

Step 2: Provide a complete view of the current situation

- Comprehensive summary view
- Full drill down functionalities

Step 3: look at historical evolution to identify trends

Step 4: Evaluate “Risk” versus “Return” over time

Step 5: Check the Risk/Return not only for “business as usual” but also in “crisis”

Step 6: Optimization Analysis: how can we increase risk/Return

Step 7: Forecast the result of strategic decisions

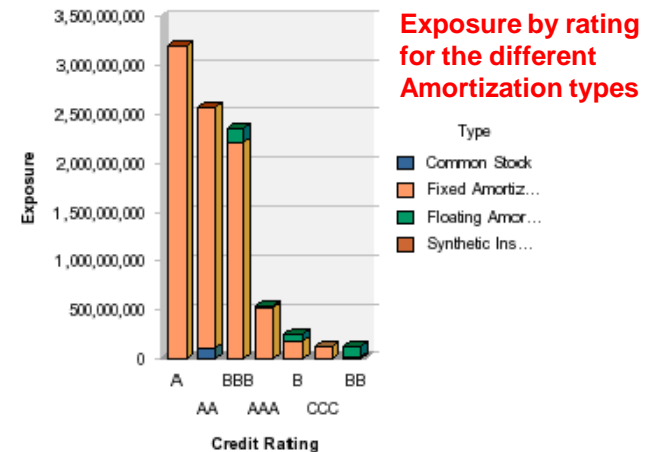

1. Comprehensive view of the current situation of the bank (CEO Dashboard)

“Historical data can show trends that put current results in perspective: mainly the Credit Component within the Economical Capital calculation has been increasing over the last months.”

2.A. Historical trends: Drilling down into Credit Risk (CEO Dashboard)

All Portfolio Hierarchy Level 1 | All Portfolio Hierarchy Level 2 | All Industry

B2 Credit Portfolio - Credit Quality

Trend analysis of the Credit Portfolio:

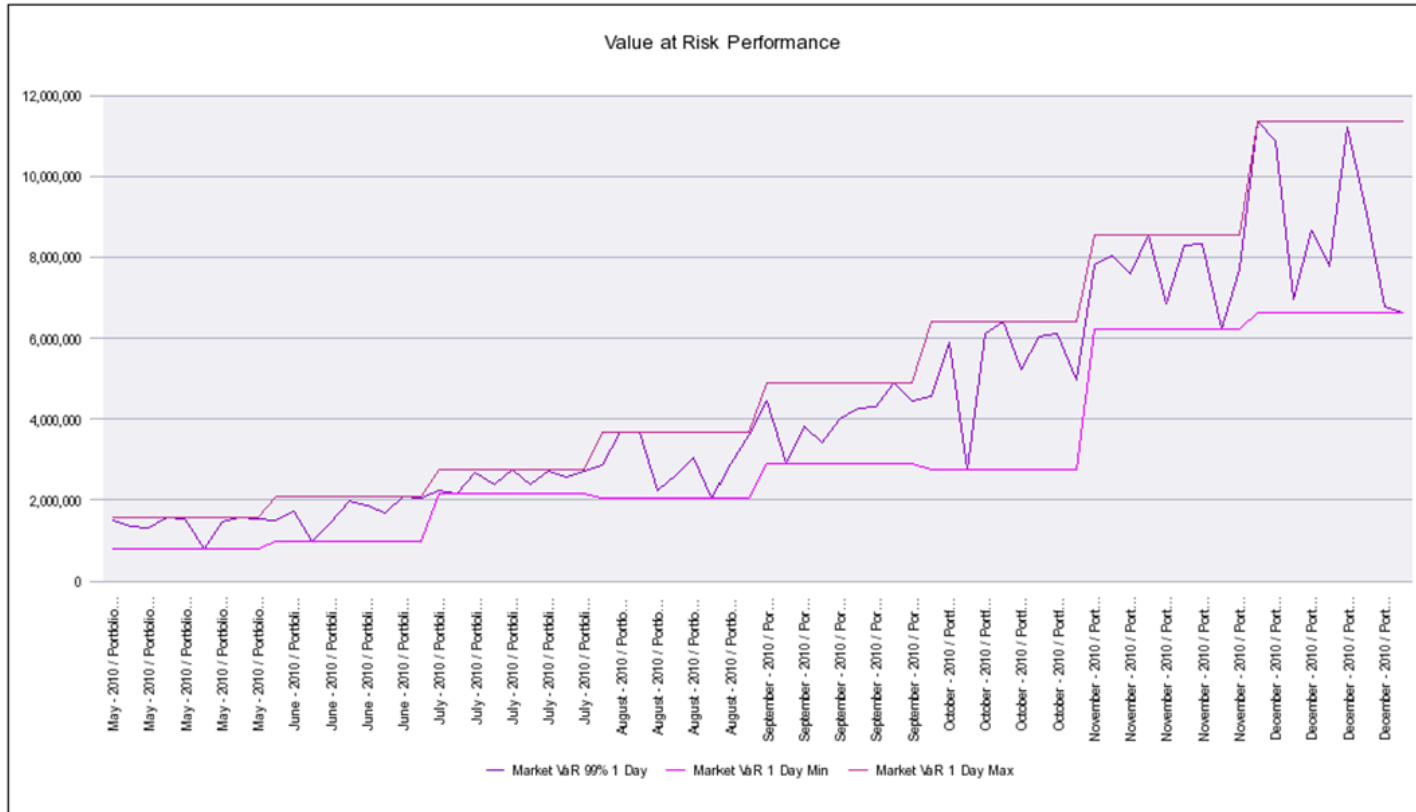

“The portfolio has been moving towards higher quality counterparties, and this in relative as well as absolute terms.”

2.B. Historical trends: Drilling down into Market Risk (CEO Dashboard)

All Portfolio Hierarchy Level 1 | All Portfolio Hierarchy Level 2 | All Region

C2 Market VaR

Trend analysis of the Market Risk:

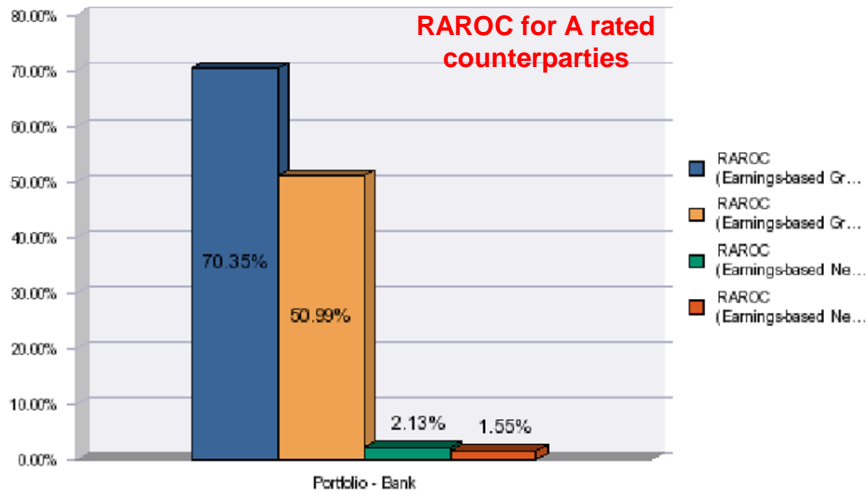

“Clear increase of VaR values, as well as volatility of the VaR figures (spread min. versus max.):

- More volatile market.
- More position taking / shifting of positions.”

3.A. Drill down into the Risk/Return (CEO Dashboard)

RAROC

RAROC

Eco Cap by Industry

Distribution of full economic capital by sector

Risk/Return Analysis based on RAROC:

“Capital consumption is clearly concentrated in 2 industries: energy and Consumer Discretionary.”

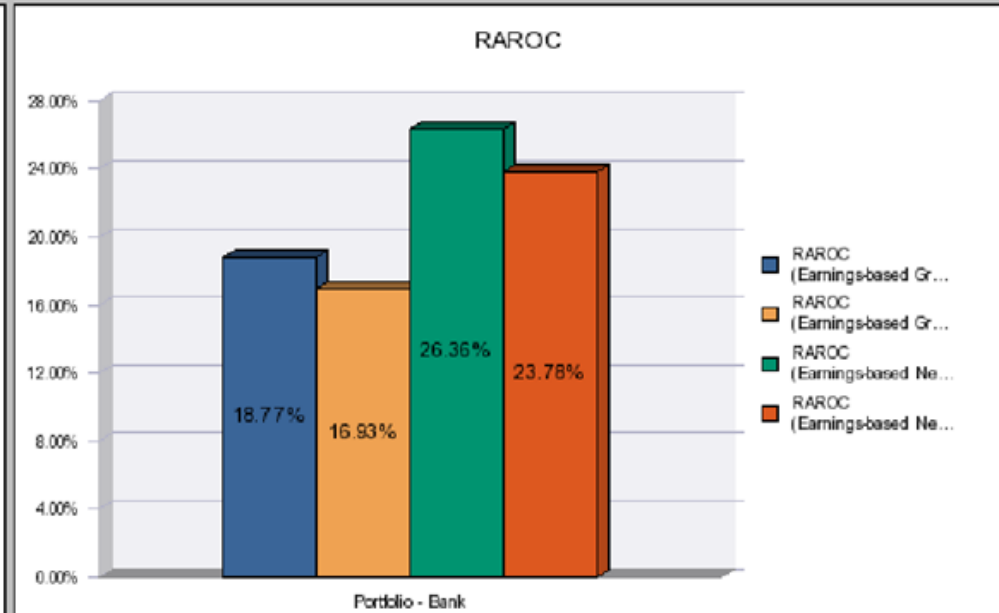

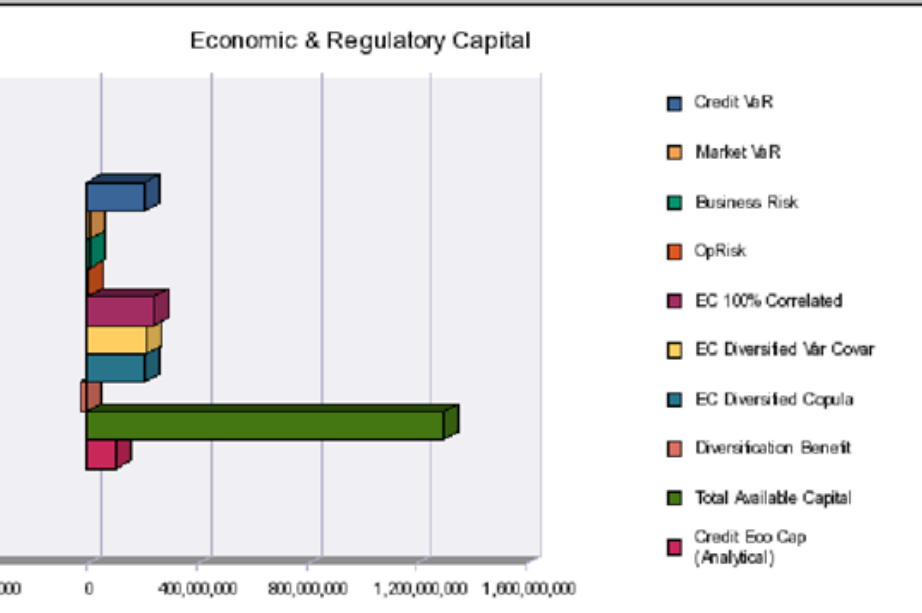

“While on gross basis all counterparties seem profitable, on net basis (after costs: green and orange bars) only the high quality counterparties are profitable.”

3.B. Drill down into the Risk/Return (CEO Dashboard)

Risk/Return analysis for the Energy sector.

Analysis context: Portfolio Hierarchy Level 1 (All values) | Portfolio Hierarchy Level 2 (All values) | Region (All values) | **ENERGY** | Credit Rating (All values) | Capital Unstressed (All values) | Inflation Unstressed (All values) | Correlation Unstressed (All values)

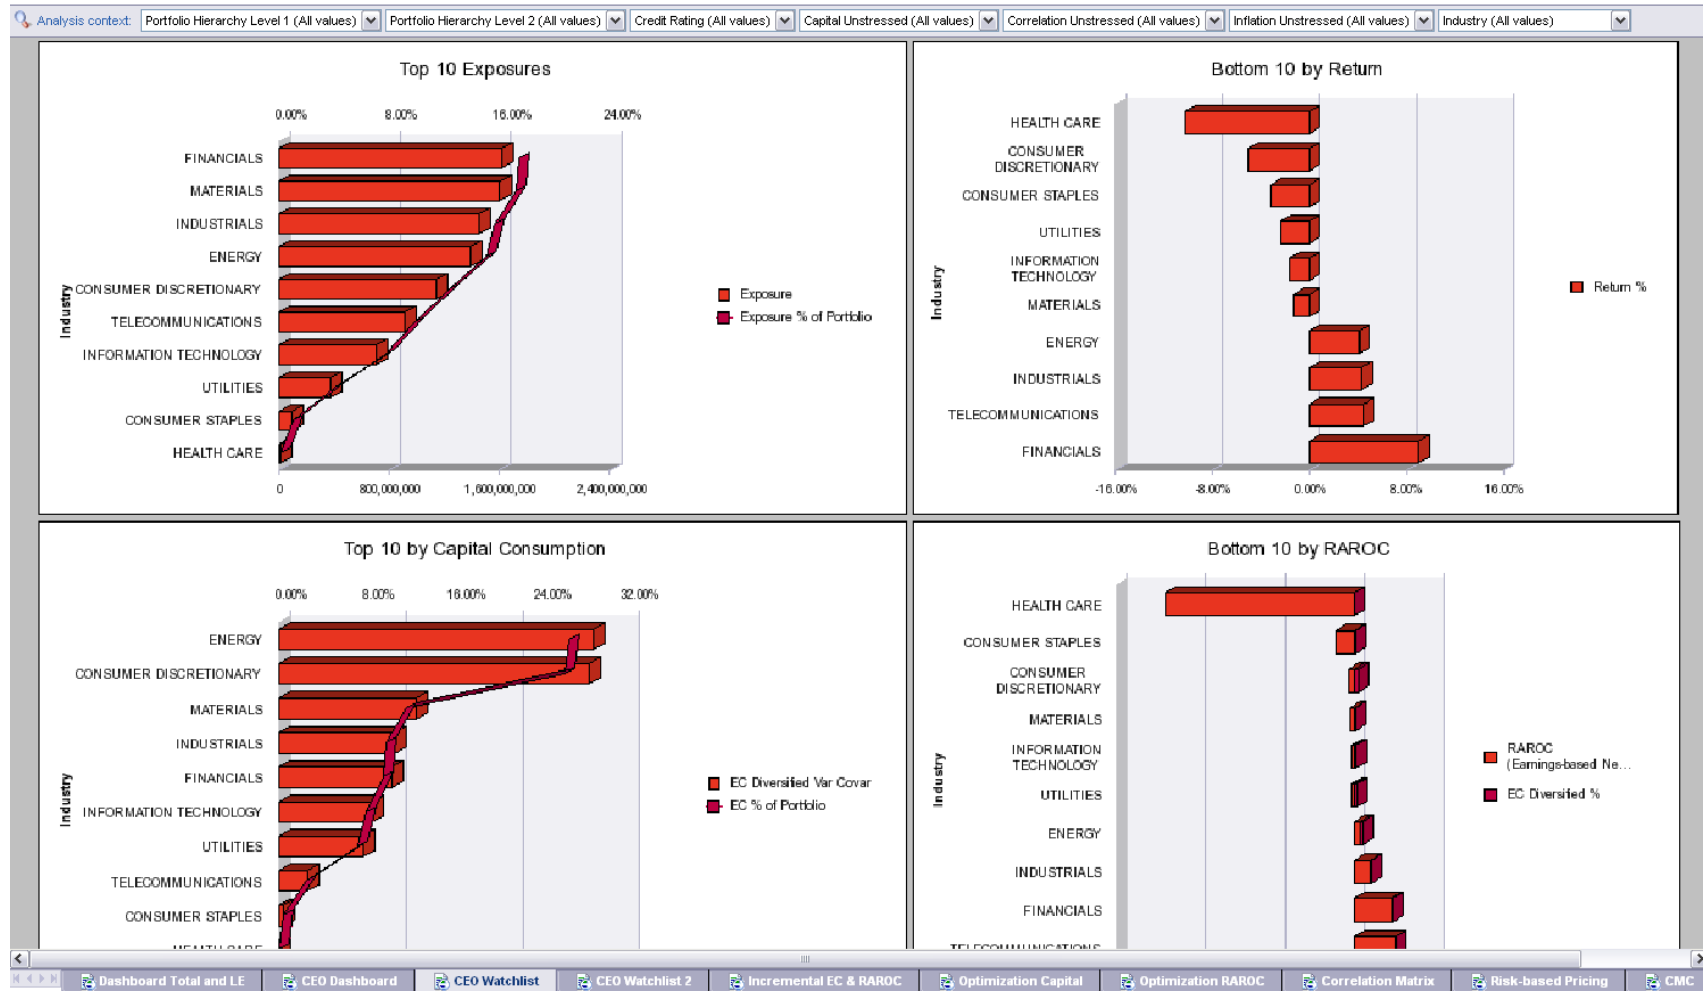

“Yet when drilling down into the energy sector, we can see that it is profitable in terms of RAROC.”

4.A. Spot the main business concerns (CEO Watch-List)

CEO watch-list report

“The risk and return profile are clearly different for the different industries. Health Care is the worst performer and therefore the exposure has been strongly reduced. Energy and Consumer Discretionary need special attention: they are taking a large part of the Capital Consumption while their return is not excelling.”

4.B. Integrated Stress Testing – Risk Appetite and Profitability

“And what happens in case of an escalation of the European Debt Crisis? What if 3 countries default? Our Credit VaR would increase with 72% leading to an increase in Regulatory and Economic Capital of about 50%. All this will lead to a breach of the Liquidity Ratio (below 100%) and a Tier 1 Minimum capital Ratio barely above 6%.

“Algo Strategic Business Planning” not only identifies a winning strategy but will also provide insight into the portfolio changes that will lead to an optimal use of economic capital.

The RAROC Optimization Matrix will show the projected effect on overall RAROC of “swapping” out of some portfolios (shown in red for intuitive clarity), and into those shown in green.

In this case the CRO might find that divesting from the consumer discretionary sector with healthcare and some energy and utilities portfolios, and expanding more into some industrials and financials portfolios, would improve profitability.

5. Forecasting and Planning

Granular view of portfolio growth scenarios

“Let’s now use the results of the optimization analysis to evaluate certain business strategies. Starting from the following rules for the lending policy in the next 3 years:

- we grow exposures in two to three years’ time in line with the optimization results (see above) and
- we maintain the current full economic capital levels
- while we continually improving return and RAROC.

“What growth rates can we expect in the different sectors?”

Forecasting, Planning, Risk-based Limits and Impact Assessment

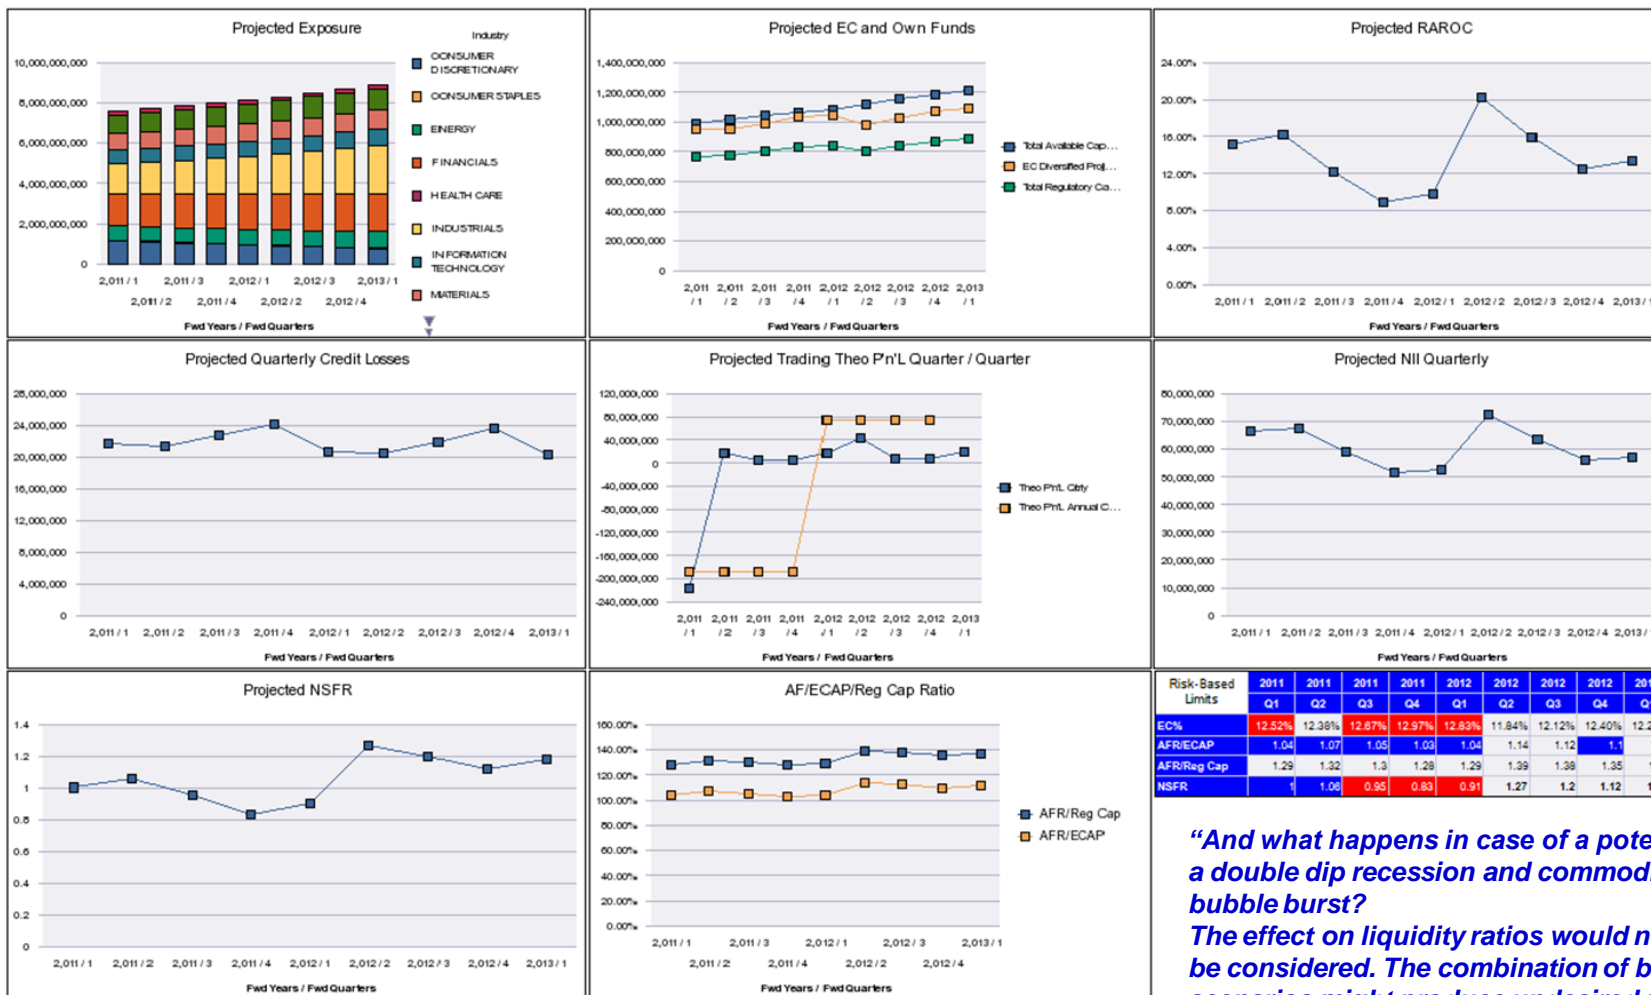

Projected impact of portfolio changes, based on the same business strategies.

“based on our business strategy Economic Capital stays steady while Capital Adequacy improves year after year: RAROC grows from 20 to 80% in 3 years and revenue grows healthily. Concentration grows in terms of exposures, but when default rates and correlations are considered there is no significant increase, and diversification actually improves through the re-balancing of the portfolio.”

Stress Testing

Projected impacts under Stress scenarios

“And what happens in case of a potential for a double dip recession and commodity bubble burst? The effect on liquidity ratios would now also be considered. The combination of both scenarios might produce undesired results, such as the concentration in commodity-related trading and lending activities hitting profitability, capital adequacy, liquidity and breaking risk-based limits on full economic capital.”

So how to make sure the institution will survive?

- Full and complete picture of all activities and exposures of the institution
- Clear understanding of each of the risks:
 - What is their impact on the business?
 - How do they interact?
- Full understanding of the dynamics of the market:
 - Strong interdependencies (systemic risk) => nobody can stay on the sideline
 - What if “Business as usual”, but also
 - What if a Crisis occurs => be prepared for the worst: Stress Testing
- Business Planning and Forecasting: make sure you have the decision making tools
 - to find a winning business strategy
 - to optimally use your capital

The Question?

Algo Strategic Business Planning enables banks to:

- A. Monitor risk-set limits at multiple levels across the organization
- B. Perform risk/return analysis at for your trading book.
- C. Forecast capital adequacy requirements and profitability for your bank-wide strategic decisions
