

**Performance Data Reference
for Nortel AMPS/TDMA/CDMA/MTX17**

Note

Before using this information and the product it supports, read the information in [Notices](#) on page 5085.

This edition applies to version 8, release 8.0.6, modification 16.5 of IBM Prospect for Nortel AMPS/TDMA/CDMA/MTX17 and to all subsequent releases and modifications until otherwise indicated in new editions.

1 About This Documentation

The *Performance Data Reference* provides a reference of performance data and fields to use in IBM Prospect® software to create reports. This guide is customized to support IBM Prospect 8.0 (8.0.6) for Nortel AMPS/TDMA/CDMA/MTX17 (Release Point 16.5).

This guide was last updated on 12 October 2009.

Please see the current release notes on this product for a list of revision dates for all IBM Prospect publications.

Audience

This guide is intended for technicians and engineers who use the IBM Prospect software to manage and analyze the performance of a telecommunication network.

Required Skills and Knowledge

This guide is intended for users who have knowledge and skills in the following:

- Basics of Windows
- Features and functions of Microsoft Excel
- High school level mathematics
- Basic statistics
- The network from which IBM Prospect software receives data

Document Conventions

This document uses the typographical conventions shown in the following table:

Table 1: General document conventions

Format	Examples	Description
ALL UPPERCASE	<ul style="list-style-type: none"> • GPS • NULL • MYWEBSERVER 	Acronyms, device names, logical operators, registry keys, and some data structures.
<u>Underscore</u>	See Document Conventions	For links within a document or to the Internet. Note that TOC and index links are not underscored. Color of text is determined by browser settings.
Bold	<ul style="list-style-type: none"> • Note: The busy hour determiner is... 	Heading text for Notes, Tips, and Warnings.
SMALL CAPS	<ul style="list-style-type: none"> • The STORED SQL dialog box... • ...click VIEW... • In the main GUI window, select the FILE menu, point to NEW, and then select TRAFFIC TEMPLATE. 	Any text that appears on the GUI.
<i>Italic</i>	<ul style="list-style-type: none"> • A <i>busy hour</i> is... • A web server <i>must</i> be installed... • See the <i>User Guide</i> 	New terms, emphasis, and book titles.
Monospace	<ul style="list-style-type: none"> • <code>./wminstall</code> • <code>\$ cd /cdrom/cdrom0</code> • <code>/xml/dict</code> • <code>http://java.sun.com/products/</code> • <code>addmsc.sh</code> • <code>core.spec</code> • Type OK to continue. 	Code text, command line text, paths, scripts, and file names. Text written in the body of a paragraph that the user is expected to enter.
Monospace Bold	<pre>[root] # pkginfo grep -i perl system Perl5 On-Line Manual Pages system Perl 5.6.1 (POD Documenta- tion) system Perl 5.6.1</pre>	For contrast in a code example to show lines the user is expected to enter.
<Mono-space italics>	<code># cd <oracle_setup></code>	Used in code examples: command-line variables that you replace with a real name or value. These are always marked with arrow brackets.
[square brackets]	<code>log-archiver.sh [-i][-w][-t]</code>	Used in code examples: indicates options.

User Publications

IBM Prospect software provides the following user publications in HTML or Adobe Portable Document Format (PDF) formats.

Table 2: IBM Prospect User Documentation

Document	Description
<i>Administration Guide</i>	Helps an administrator configure and support IBM Prospect core server software to analyze network performance and perform other network or database management tasks.
<i>Administrator's Quick Reference Card</i>	Presents the principal tasks of a IBM Prospect core server administrator in an easy-to-use format.
<i>Expressions Technical Reference</i>	Provides detailed information about expressions used in special calculations for reports.
<i>Installation Guide</i>	Instructions for installing and configuring the IBM Prospect software.
<i>Open Interface API Guide</i>	Describes how the Open Interface tool enhances your access to information about database peg counts and scenarios.
<i>Performance Data Reference</i>	Provides detailed information including entity hierarchies, peg counts, primitive calculations, and forecast expressions specific to your organization.
<i>Release Notes</i>	Provides technology-specific and late-breaking information about a given IBM Prospect release and important details about installation and operation.
<i>Server Preparation Guide</i>	Provides instructions for installing and setting up Solaris and Oracle software before you install IBM Prospect software.
<i>Server Sizing Tool Guide</i>	Helps an administrator use the sizing tool to calculate the system space needed for the IBM Prospect software and database.
<i>User Guide</i>	Provides conceptual information and procedures for using IBM Prospect software for performance and trending analysis.

Viewing the Desktop Client Help Publications

To view the desktop client Help publications, select a guide from the HELP menu of the IBM Prospect graphical user interface or press F1 for context-sensitive Help. To update the Help files, click the HELP menu on the IBM Prospect Explorer, and select UPDATE ALL HELP FILES.

When Help files are updated, they are downloaded automatically from the IBM Prospect server to the IBM Prospect client. A message box notifies you when this download occurs.

Viewing the Publications in PDF

All of the user publications are available in Adobe Portable Document Format (PDF). To open a PDF, you need the Adobe Acrobat Reader. You can download Adobe Acrobat Reader free of charge from the Adobe Web site. For more details about the Acrobat Reader, see the Adobe Web site <http://www.adobe.com/>.

Viewing the Publications in IBM Information Center

All of the IBM Prospect publications, including Release Notes, are available online from the IBM Information Center website as follows:

http://publib.boulder.ibm.com/infocenter/tivihelp/v8r1/index.jsp?topic=/com.ibm.netcool_pm.doc/IBM_Prospect_060308.htm

2 Introduction

This reference contains detailed technical information about IBM Prospect®. The information included in this document includes the following:

- Entity descriptions and reporting hierarchy
- System-defined fields
- Reference of possible IBM Prospect Expressions in primitive calculations

This reference lists most fields that you can include in reports. The fields listed in this reference are system-defined fields and do not reflect the complete list of available fields. Additional fields, such as User-Defined Calculations (UDCs) or External fields, may also be available.

The following table describes the field types in this reference.

Table 3: Field Types

Field Type	Description
Data availability	Data availability fields are automatically created for each data file type that is loaded.
Peg count	A performance metric gathered from the wireless network.
Primitive calculation	A performance metric whose value is determined by a set calculation. Some primitive calculations use IBM Prospect expressions. For more information on IBM Prospect expressions, see the <i>Expressions Technical Reference</i> .
Roll-up field	Roll-up fields provide aggregated information about a field defined at a child entity level.

AccChan Peg Counts

The following is a list of peg counts for the AccChan entity.

AccChanID

Access Channel ID

Data Source

NBSS BTS MO

Source Field

AccChanID (Seq# 142[3])

Source Section

Advanced Sector MO

AccChanLowerBoundOfAvgOccupancy

The lower bound of the average occupancy for the access channel

Data Source

NBSS BTS MO

Source Field

AccChanLowerBoundOfAvgOccupancy (Seq# 142[6])

Source Section

Advanced Sector MO

AccChanPeakDuration

The number of seconds indicating how long the access channel was operating within the peak occupancy range

Data Source

NBSS BTS MO

Source Field

AccChanPeakDuration (Seq# 142[5])

Source Section

Advanced Sector MO

AccChanPeakOccupancy

The lower bound of the peak occupancy range for the access channel

Data Source

NBSS BTS MO

Source Field

AccChanPeakOccupancy (Seq# 142[4])

Source Section

Advanced Sector MO

AccChanRange0to4

The number of seconds that the access channel was operating within the occupancy range of 0% to 4%

Data Source

NBSS BTS MO

Source Field

AccChanRange0to4 (Seq# 142[8])

Source Section

Advanced Sector MO

AccChanRange10to14

The number of seconds that the access channel was operating within the occupancy range of 10% to 14%

Data Source

NBSS BTS MO

Source Field

AccChanRange10to14 (Seq# 142[10])

Source Section

Advanced Sector MO

AccChanRange15to19

The number of seconds that the access channel was operating within the occupancy range of 15% to 19%

Data Source

NBSS BTS MO

Source Field

AccChanRange15to19 (Seq# 142[11])

Source Section

Advanced Sector MO

AccChanRange20to24

The number of seconds that the access channel was operating within the occupancy range of 20% to 24%

Data Source

NBSS BTS MO

Source Field

AccChanRange20to24 (Seq# 142[12])

Source Section

Advanced Sector MO

AccChanRange25to29

The number of seconds that the access channel was operating within the occupancy range of 25% to 29%

Data Source

NBSS BTS MO

Source Field

AccChanRange25to29 (Seq# 142[13])

Source Section

Advanced Sector MO

AccChanRange30to34

The number of seconds that the access channel was operating within the occupancy range of 30% to 34%

Data Source

NBSS BTS MO

Source Field

AccChanRange30to34 (Seq# 142[14])

Source Section

Advanced Sector MO

AccChanRange35to39

The number of seconds that the access channel was operating within the occupancy range of 35% to 39%

Data Source

NBSS BTS MO

Source Field

AccChanRange35to39 (Seq# 142[15])

Source Section

Advanced Sector MO

AccChanRange40to44

The number of seconds that the access channel was operating within the occupancy range of 40% to 44%

Data Source

NBSS BTS MO

Source Field

AccChanRange40to44 (Seq# 142[16])

Source Section

Advanced Sector MO

AccChanRange45to49

The number of seconds that the access channel was operating within the occupancy range of 45% to 49%

Data Source

NBSS BTS MO

Source Field

AccChanRange45to49 (Seq# 142[17])

Source Section

Advanced Sector MO

AccChanRange50to54

The number of seconds that the access channel was operating within the occupancy range of 50% to 54%

Data Source

NBSS BTS MO

Source Field

AccChanRange50to54 (Seq# 142[18])

Source Section

Advanced Sector MO

AccChanRange55to59

The number of seconds that the access channel was operating within the occupancy range of 55% to 59%

Data Source

NBSS BTS MO

Source Field

AccChanRange55to59 (Seq# 142[19])

Source Section

Advanced Sector MO

AccChanRange5to9

The number of seconds that the access channel was operating within the occupancy range of 5% to 9%

Data Source

NBSS BTS MO

Source Field

AccChanRange5to9 (Seq# 142[9])

Source Section

Advanced Sector MO

AccChanRange60to64

The number of seconds that the access channel was operating within the occupancy range of 60% to 64%

Data Source

NBSS BTS MO

Source Field

AccChanRange60to64 (Seq# 142[20])

Source Section

Advanced Sector MO

AccChanRange65to69

The number of seconds that the access channel was operating within the occupancy range of 65% to 69%

Data Source

NBSS BTS MO

Source Field

AccChanRange65to69 (Seq# 142[21])

Source Section

Advanced Sector MO

AccChanRange70to74

The number of seconds that the access channel was operating within the occupancy range of 70% to 74%

Data Source

NBSS BTS MO

Source Field

AccChanRange70to74 (Seq# 142[22])

Source Section

Advanced Sector MO

AccChanRange75to79

The number of seconds that the access channel was operating within the occupancy range of 75% to 79%

Data Source

NBSS BTS MO

Source Field

AccChanRange75to79 (Seq# 142[23])

Source Section

Advanced Sector MO

AccChanRange80to84

The number of seconds that the access channel was operating within the occupancy range of 80% to 84%

Data Source

NBSS BTS MO

Source Field

AccChanRange80to84 (Seq# 142[24])

Source Section

Advanced Sector MO

AccChanRange85to89

The number of seconds that the access channel was operating within the occupancy range of 85% to 89%

Data Source

NBSS BTS MO

Source Field

AccChanRange85to89 (Seq# 142[25])

Source Section

Advanced Sector MO

AccChanRange90to94

The number of seconds that the access channel was operating within the occupancy range of 90% to 94%

Data Source

NBSS BTS MO

Source Field

AccChanRange90to94 (Seq# 142[26])

Source Section

Advanced Sector MO

AccChanRange95to99

The number of seconds that the access channel was operating within the occupancy range of 95% to 99%

Data Source

NBSS BTS MO

Source Field

AccChanRange95to99 (Seq# 142[27])

Source Section

Advanced Sector MO

AccChanRingID

Access Channel Ring ID

Data Source

NBSS BTS MO

Source Field

AccChanRingID (Seq# 142[2])

Source Section

Advanced Sector MO

AccChanTimeInOverload

The period of time (in seconds) that the access channel was in an overload condition

Data Source

NBSS BTS MO

Source Field

AccChanTimeInOverload (Seq# 157[3])

Source Section

Advanced Sector MO

AccChanUpperBoundOfAvgOccupancy

The upper bound of the average occupancy for the access channel

Data Source

NBSS BTS MO

Source Field

AccChanUpperBoundOfAvgOccupancy (Seq# 142[7])

Source Section

Advanced Sector MO

AUCRMReceived

Number of Authentication Challenge Response messages received.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[9])

Source Section

Advanced Sector MO

BadCRCMsgReceived

Number of messages received that fail the CRC check.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[12])

Source Section

Advanced Sector MO

DBMReceived

Number of Data Burst messages received.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[8])

Source Section

Advanced Sector MO

ESTRPMReceived

Number of Extended Status Response messages received.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[11])

Source Section

Advanced Sector MO

InvalidMsgReceived

Number of messages received that are not supported by the Nortel system or have parameters with values outside their allowed range as defined in the standards. These messages are discarded by the BTS.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[13])

Source Section

Advanced Sector MO

MSACKORDMReceived

Number of Mobile Station Acknowledgement Order messages received.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[6])

Source Section

Advanced Sector MO

ORMReceived

Number of Origination messages received.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[4])

Source Section

Advanced Sector MO

OtherORDMReceived

Number of Order messages (other than Mobile Station Acknowledgement Order messages) received.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[7])

Source Section

Advanced Sector MO

PRMReceived

Number of Page Response messages received.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[5])

Source Section

Advanced Sector MO

RGMReceived

Number of Registration messages received.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[3])

Source Section

Advanced Sector MO

STRPMReceived

Number of Status Response messages received.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[10])

Source Section

Advanced Sector MO

UnsupportedMsgReceived

Number of messages received that are not supported by the BTS due to configuration reasons. These messages are discarded by the BTS.

Data Source

NBSS BTS MO

Source Field

ACHMessagesReceived (Seq# 300[14])

Source Section

Advanced Sector MO

ACP_DSFP Primitive Calculations

The following is a list of primitive calculations for the ACP_DSFP entity.

CPU_Usage_30to40%_CSVS

The percentage of time that the CPU usage is greater than 30% and less than or equal to 40%.

Calculation

$$\text{CPU_UsageIndex_2_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_40to50%_CSVS

The percentage of time that the CPU usage is greater than 40% and less than or equal to 50%.

Calculation

$$\text{CPU_UsageIndex_3_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_50to60%_CSVS

The percentage of time that the CPU usage is greater than 50% and less than or equal to 60%.

Calculation

$$\text{CPU_UsageIndex_4_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_60to70%_CSVS

The percentage of time that the CPU usage is greater than 60% and less than or equal to 70%.

Calculation

$$\text{CPU_UsageIndex_5_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_70to80%_CSVS

The percentage of time that the CPU usage is greater than 70% and less than or equal to 80%.

Calculation

$$\text{CPU_UsageIndex_6_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_GT80%_CSVS

The percentage of time that the CPU usage is greater than 80%.

Calculation

$$\text{CPU_UsageIndex_7_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_LTE30%_CSVS

The percentage of time that the CPU usage is less than or equal to 30%.

Calculation

$$\text{CPU_UsageIndex_1_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_Overload%_CSVS

The percentage of time that the CPU usage has exceeded a pre-defined CPU threshold (the 'cpuOverloadThreshold' attribute).

Calculation

$$\text{CPU_UsageExceededThreshold_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_UsageIndex_Total_CSVS

The sum of the CPU Usage indices.

Calculation

```
vsum(CPU_UsageIndex_1_CSVS, CPU_UsageIndex_2_CSVS, CPU_UsageIndex_3_CSVS,  
CPU_UsageIndex_4_CSVS, CPU_UsageIndex_5_CSVS, CPU_UsageIndex_6_CSVS,  
CPU_UsageIndex_7_CSVS, 0)
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

""

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

ACP_DSFP Peg Counts

The following is a list of peg counts for the ACP_DSFP entity.

BearerUpdateAttempts

This OM is pegged when ACP receives Service Change Command from MTX.

Data Source

CSVS

Source Field

BearerUpdateAttempts (Seq# 1)

Source Section

Bearer Update (Group ID 82)

BearerUpdateInternalFailures

This OM is pegged when ACP encounters any internal failures, such as Service Connect IS95 message could not be created, or packed, or sent successfully.

Data Source

CSVs

Source Field

BearerUpdateInternalFailures (Seq# 4)

Source Section

Bearer Update (Group ID 82)

BearerUpdateSuccesses

This OM is pegged when ACP receives the bearer path update acknowledgement from the mobile which indicates the success of the bearer path update.

Data Source

CSVs

Source Field

BearerUpdateSuccesses (Seq# 2)

Source Section

Bearer Update (Group ID 82)

BearerUpdateTimeouts

This OM is pegged when ACP times out on the bearer path update acknowledgement from the mobile.

Data Source

CSVs

Source Field

BearerUpdateTimeouts (Seq# 3)

Source Section

Bearer Update (Group ID 82)

CPU_UsageExceededThreshold

The number of times the CPU Usage has exceeded a pre-defined CPU threshold for a certain monitoring timeperiod.

Data Source

CPDS

Source Field

CPU_UsageExceededThreshold (Seq# 8)

Source Section

CPU Usage (Group ID 19)

CPU_UsageExceededThreshold_CSVS

The number of times the CPU Usage has exceeded a pre-defined CPU threshold (the 'cpuOverloadThreshold' attribute) for a certain monitoring time-period.

Data Source

CSVS

Source Field

CPU_UsageExceededThreshold (Seq# 8)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_1

The number of times the CPU Usage in a monitoring period is less than 30%

Data Source

CPDS

Source Field

CPU_UsageIndex_1 (Seq# 1)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_1_CSVS

The number of times the CPU Usage in a monitoring period is less than or equal to 30%. The CPU Usage is examined every 4 seconds.

Data Source

CSVS

Source Field

CPU_UsageIndex_1 (Seq# 1)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_2

The number of times the CPU Usage in a monitoring period is greater than 30% and less than equal to 40%.

Data Source

CPDS

Source Field

CPU_UsageIndex_2 (Seq# 2)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_2_CSVS

The number of times the CPU Usage in a monitoring period is greater than 30% and less than or equal to 40%. The CPU Usage is examined every 4 seconds.

Data Source

CSVS

Source Field

CPU_UsageIndex_2 (Seq# 2)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_3

The number of times the CPU Usage in a monitoring period is greater than 40% and less than equal to 50%.

Data Source

CPDS

Source Field

CPU_UsageIndex_3 (Seq# 3)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_3_CSVS

The number of times the CPU Usage in a monitoring period is greater than 40% and less than or equal to 50%. The CPU Usage is examined every 4 seconds.

Data Source

CSVS

Source Field

CPU_UsageIndex_3 (Seq# 3)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_4

The number of times the CPU Usage in a monitoring period is greater than 50% and less than equal to 60%.

Data Source

CPDS

Source Field

CPU_UsageIndex_4 (Seq# 4)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_4_CSVS

The number of times the CPU Usage in a monitoring period is greater than 50% and less than or equal to 60%. The CPU Usage is examined every 4 seconds.

Data Source

CSVS

Source Field

CPU_UsageIndex_4 (Seq# 4)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_5

The number of times the CPU Usage in a monitoring period is greater than 60% and less than equal to 70%.

Data Source

CPDS

Source Field

CPU_UsageIndex_5 (Seq# 5)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_5_CSVS

The number of times the CPU Usage in a monitoring period is greater than 60% and less than or equal to 70%. The CPU Usage is examined every 4 seconds.

Data Source

CSVS

Source Field

CPU_UsageIndex_5 (Seq# 5)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_6

The number of times the CPU Usage in a monitoring period is greater than 70% and less than equal to 80%.

Data Source

CPDS

Source Field

CPU_UsageIndex_6 (Seq# 6)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_6_CSVS

The number of times the CPU Usage in a monitoring period is greater than 70% and less than or equal to 80%. The CPU Usage is examined every 4 seconds.

Data Source

CSVS

Source Field

CPU_UsageIndex_6 (Seq# 6)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_7

The number of times the CPU Usage in a monitoring period is greater than 80%

Data Source

CPDS

Source Field

CPU_UsageIndex_7 (Seq# 7)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_7_CSVS

The number of times the CPU Usage in a monitoring period is greater than 80%. The CPU Usage is examined every 4 seconds.

Data Source

CSVs

Source Field

CPU_UsageIndex_7 (Seq# 7)

Source Section

CPU Usage (Group ID 19)

ESL_CongestedSignalingConnectionFailure_CSVS

Number of congested ESL signaling connection failures.

Data Source

CSVs

Source Field

ESL_CongestedSignalingConnectionFailure (Seq# 12)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingConnFailure

Number of congested ESL signaling connection failures.

Data Source

CPDS

Source Field

ESL_CongestedSignalingConnectionFailure (Seq# 12)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingRelAckWaitTO

Number of times the socket timed out waiting for an Ack to a reliable congested ESL signaling message.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableAckWaitTimeout (Seq# 15)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableAckWaitTimeout_CSVS

Number of times the socket timed out waiting for an Ack to a reliable congested ESL signaling message.

Data Source

CSVS

Source Field

ESL_CongestedSignalingReliableAckWaitTimeout (Seq# 15)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableRxMsg

Number of reliable ESL congested signaling messages received.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableRxMsg (Seq# 11)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableRxMsg_CSVS

Number of reliable ESL congested signaling messages received.

Data Source

CSVS

Source Field

ESL_CongestedSignalingReliableRxMsg (Seq# 11)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableTxMsg

Number of reliable ESL congested signaling messages sent.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableTxMsg (Seq# 10)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableTxMsg_CSVS

Number of reliable ESL congested signaling messages sent.

Data Source

CSVS

Source Field

ESL_CongestedSignalingReliableTxMsg (Seq# 10)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingTxMsgFailure

Number of congested ESL signaling messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_CongestedSignalingTxMsgFailure (Seq# 14)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingTxMsgFailure_CSVS

Number of congested ESL signaling messages unsuccessfully sent.

Data Source

CSVS

Source Field

ESL_CongestedSignalingTxMsgFailure (Seq# 14)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingUnknDestMsg

Number of congested ESL signaling messages received without a socket registered for it.

Data Source

CPDS

Source Field

ESL_CongestedSignalingUnknownDestinationMsg (Seq# 13)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingUnknownDestinationMsg_CSVS

Number of congested ESL signaling messages received without a socket registered for it.

Data Source

CSVS

Source Field

ESL_CongestedSignalingUnknownDestinationMsg (Seq# 13)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_InvalidMsgRx

Number of invalid ESL messages received.

Data Source

CPDS

Source Field

ESL_InvalidMsgRx (Seq# 19)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_InvalidMsgRx_CSVS

Number of invalid ESL messages received.

Data Source

CSVS

Source Field

ESL_InvalidMsgRx (Seq# 19)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitRxMsg

Number of ESL Node Init messages received.

Data Source

CPDS

Source Field

ESL_NodeInitRxMsg (Seq# 17)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitRxMsg_CSVS

Number of ESL Node Init messages received.

Data Source

CSVS

Source Field

ESL_NodeInitRxMsg (Seq# 17)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsg

Number of ESL Node Init messages sent.

Data Source

CPDS

Source Field

ESL_NodeInitTxMsg (Seq# 16)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsg_CSVS

Number of ESL Node Init messages sent.

Data Source

CSVS

Source Field

ESL_NodeInitTxMsg (Seq# 16)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsgFailure

Number of ESL Node Init messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_NodeInitTxMsgFailure (Seq# 18)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsgFailure_CSVS

Number of ESL Node Init messages unsuccessfully sent.

Data Source

CSVS

Source Field

ESL_NodeInitTxMsgFailure (Seq# 18)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingConnectionFailure

Number of connection failures for ESL signaling messages.

Data Source

CPDS

Source Field

ESL_SignalingConnectionFailure (Seq# 5)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingConnectionFailure_CSVS

Number of connection failures for ESL signaling messages.

Data Source

CSVs

Source Field

ESL_SignalingConnectionFailure (Seq# 5)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableAckWaitTimeout

Number of times the socket timed out waiting for an Ack to a reliable ESL signaling message.

Data Source

CPDS

Source Field

ESL_SignalingReliableAckWaitTimeout (Seq# 9)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableAckWaitTimeout_CSVS

Number of times the socket timed out waiting for an Ack to a reliable ESL signaling message.

Data Source

CSVs

Source Field

ESL_SignalingReliableAckWaitTimeout (Seq# 9)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableRxMsg

Number of reliable ESL signaling messages received.

Data Source

CPDS

Source Field

ESL_SignalingReliableRxMsg (Seq# 2)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableRxMsg_CSVS

Number of reliable ESL signaling messages received.

Data Source

CSVS

Source Field

ESL_SignalingReliableRxMsg (Seq# 2)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsg

Number of reliable ESL signaling messages sent.

Data Source

CPDS

Source Field

ESL_SignalingReliableTxMsg (Seq# 1)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsg_CSVS

Number of reliable ESL signaling messages sent.

Data Source

CSVS

Source Field

ESL_SignalingReliableTxMsg (Seq# 1)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsgFailure

Number off ESL signaling messages successfully sent.

Data Source

CPDS

Source Field

ESL_SignalingReliableTxMsgFailure (Seq# 7)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsgFailure_CSVS

Number off ESL signaling messages unsuccessfully sent by reliable messaging

Data Source

CSVS

Source Field

ESL_SignalingReliableTxMsgFailure (Seq# 7)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnknownDestinationMsg

Number of ESL signaling messages received without a socket registered for it.

Data Source

CPDS

Source Field

ESL_SignalingUnknownDestinationMsg (Seq# 6)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnknownDestinationMsg_CSVS

Number of ESL signaling messages received without a socket registered for it.

Data Source

CSVS

Source Field

ESL_SignalingUnknownDestinationMsg (Seq# 6)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableRxMsg

Number of unreliable ESL signaling messages received.

Data Source

CPDS

Source Field

ESL_SignalingUnreliableRxMsg (Seq# 4)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableRxMsg_CSVS

Number of unreliable ESL signaling messages received.

Data Source

CSVS

Source Field

ESL_SignalingUnreliableRxMsg (Seq# 4)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableTxMsg

Number of unreliable ESL signaling messages sent.

Data Source

CPDS

Source Field

ESL_SignalingUnreliableTxMsg (Seq# 3)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableTxMsg_CSVS

Number of unreliable ESL signaling messages sent.

Data Source

CSVS

Source Field

ESL_SignalingUnreliableTxMsg (Seq# 3)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnReliableTxMsgFailure

Number off ESL signaling messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_SignalingUnReliableTxMsgFailure (Seq# 8)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableTxMsgFailure_CSVS

Number off ESL signaling messages unsuccessfully sent. By unreliable messaging.

Data Source

CSVS

Source Field

ESL_SignalingUnReliableTxMsgFailure (Seq# 8)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

EVRCB_FrameCountFwdMode_0

Forward mode 0 frames sent for all the EVRC-B calls.

Data Source

CSVs

Source Field

EVRCB_FrameCountFwdMode_0 (Seq# 1)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_FrameCountFwdMode_4

Forward mode 4 frames sent for all the EVRC-B calls.

Data Source

CSVs

Source Field

EVRCB_FrameCountFwdMode_4 (Seq# 5)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_FrameCountFwdMode_6

Forward mode 6 frames sent for all the EVRC-B calls.

Data Source

CSVs

FwdRLPQ_BurstRequestDepth_23 (Seq# 23)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_BurstRequestDepth_24

Number of times the RLPQ queue depth is 40,000<=x<50,000 bytes when a forward burst is requested.

Data Source

CPDS

Source Field

FwdRLPQ_BurstRequestDepth_24 (Seq# 24)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_BurstRequestDepth_25

Number of times the RLPQ queue depth is 50,000<=x bytes when a forward burst is requested.

Data Source

CPDS

Source Field

FwdRLPQ_BurstRequestDepth_25 (Seq# 25)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_SCH_BurstAvgDepth_16x

Provides the average queue depth in percentage over all 16X bursts measured in the forward direction.

Data Source

CPDS

Source Field

FwdRLPQ_SCH_BurstAvgDepth_16x (Seq# 29)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_SCH_BurstAvgDepth_2x

Provides the average queue depth in percentage over all 2X bursts measured in the forward direction.

Data Source

CPDS

Source Field

FwdRLPQ_SCH_BurstAvgDepth_2x (Seq# 26)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_SCH_BurstAvgDepth_4x

Provides the average queue depth in percentage over all 4X bursts measured in the forward direction.

Data Source

CPDS

Source Field

FwdRLPQ_SCH_BurstAvgDepth_4x (Seq# 27)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_SCH_BurstAvgDepth_8x

Provides the average queue depth in percentage over all 8X bursts measured in the forward direction.

Data Source

CPDS

Source Field

FwdRLPQ_SCH_BurstAvgDepth_8x (Seq# 28)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_SCH_BurstPeakDepth_16x

Provides the peak queue depth in percentage for any given 16X burst measured in the forward direction.

Data Source

CPDS

Source Field

FwdRLPQ_SCH_BurstPeakDepth_16x (Seq# 37)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_SCH_BurstPeakDepth_2x

Provides the peak queue depth in percentage for any given 2X burst measured in the forward direction.

Data Source

CPDS

Source Field

FwdRLPQ_SCH_BurstPeakDepth_2x (Seq# 34)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_SCH_BurstPeakDepth_4x

Provides the peak queue depth in percentage for any given 4X burst measured in the forward direction.

Data Source

CPDS

Source Field

FwdRLPQ_SCH_BurstPeakDepth_4x (Seq# 35)

Source Section

SDU Queue Occupancy (Group ID 71)

FwdRLPQ_SCH_BurstPeakDepth_8x

Provides the peak queue depth in percentage for any given 8X burst measured in the forward direction.

CPDS

Source Field

RevRLPQ_SCH_BurstAvgDepth_4x (Seq# 31)

Source Section

SDU Queue Occupancy (Group ID 71)

RevRLPQ_SCH_BurstAvgDepth_8x

Provides the average queue depth in percentage over all 8X bursts measured in the reverse direction.

Data Source

CPDS

Source Field

RevRLPQ_SCH_BurstAvgDepth_8x (Seq# 32)

Source Section

SDU Queue Occupancy (Group ID 71)

RevRLPQ_SCH_BurstPeakDepth_16x

Provides the peak queue depth in percentage for any given 16X burst measured in the reverse direction.

Data Source

CPDS

Source Field

RevRLPQ_SCH_BurstPeakDepth_16x (Seq# 41)

Source Section

SDU Queue Occupancy (Group ID 71)

RevRLPQ_SCH_BurstPeakDepth_2x

Provides the peak queue depth in percentage for any given 2X burst measured in the reverse direction.

Data Source

CPDS

Source Field

RevRLPQ_SCH_BurstPeakDepth_2x (Seq# 38)

Source Section

SDU Queue Occupancy (Group ID 71)

RevRLPQ_SCH_BurstPeakDepth_4x

Provides the peak queue depth in percentage for any given 4X burst measured in the reverse direction.

Data Source

CPDS

Source Field

RevRLPQ_SCH_BurstPeakDepth_4x (Seq# 39)

Source Section

SDU Queue Occupancy (Group ID 71)

RevRLPQ_SCH_BurstPeakDepth_8x

Provides the peak queue depth in percentage for any given 8X burst measured in the reverse direction.

Data Source

CPDS

Source Field

RevRLPQ_SCH_BurstPeakDepth_8x (Seq# 40)

Source Section

SDU Queue Occupancy (Group ID 71)

RLPSetupAttempts

Number of RLP setups attempted

Data Source

CPDS

Source Field

RLPSetupAttempts (Seq# 1)

Source Section

RLP Setup (Group ID 8)

RLPSetupFailures

Number of failed RLP setups

Data Source

CPDS

Source Field

RLPSetupFailures (Seq# 3)

Source Section

RLP Setup (Group ID 8)

RLPSetupSuccesses

Number of successful RLP setups

Data Source

CPDS

Source Field

RLPSetupSuccesses (Seq# 2)

Source Section

RLP Setup (Group ID 8)

SL_MaxLargeStreamBufferUsed

Maximum number of Large stream buffer used.

Data Source

CPDS

Source Field

SL_MaxLargeStreamBufferUsed (Seq# 4)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxLargeStreamBufferUsed_CSVS

Maximum number of Large stream buffer used.

Data Source

CSVS

Source Field

SL_MaxLargeStreamBufferUsed (Seq# 4)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxMediumStreamBufferUsed

Maximum number of Medium stream buffer used.

Data Source

CPDS

Source Field

SL_MaxMediumStreamBufferUsed (Seq# 5)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxMediumStreamBufferUsed_CSVS

Maximum number of Medium stream buffer used.

Data Source

CSVS

Source Field

SL_MaxMediumStreamBufferUsed (Seq# 5)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxSmallStreamBufferUsed

Maximum number of Small stream buffer used.

Data Source

CPDS

Source Field

SL_MaxSmallStreamBufferUsed (Seq# 6)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxSmallStreamBufferUsed_CSVS

Maximum number of Small stream buffer used.

Data Source

CSVS

Source Field

SL_MaxSmallStreamBufferUsed (Seq# 6)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLA_UnknownDestinationMsg

Number of STL-A messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLA_UnknownDestinationMsg (Seq# 1)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLA_UnknownDestinationMsg_CSVS

Number of STL-A messages received on this stack but without a socket registered for it.

Data Source

CSVS

Source Field

SL_STLA_UnknownDestinationMsg (Seq# 1)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLB_UnknownDestinationMsg

Number of STL-B messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLB_UnknownDestinationMsg (Seq# 2)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLB_UnknownDestinationMsg_CSVS

Number of STL-B messages received on this stack but without a socket registered for it.

Data Source

CSVS

Source Field

SL_STLB_UnknownDestinationMsg (Seq# 2)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLD_UnknownDestinationMsg

Number of STL-D messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLD_UnknownDestinationMsg (Seq# 3)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLD_UnknownDestinationMsg_CSVS

Number of STL-D messages received on this stack but without a socket registered for it.

Data Source

CSVS

Source Field

SL_STLD_UnknownDestinationMsg (Seq# 3)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocFailure

Number of Stream buffer unsuccessfully allocated.

Data Source

CPDS

Source Field

SL_StreamBufferAllocFailure (Seq# 8)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocFailure_CSVS

Number of Stream buffer unsuccessfully allocated.

Data Source

CSVS

Source Field

SL_StreamBufferAllocFailure (Seq# 8)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocSuccess

Number of Stream buffer successfully allocated.

Data Source

CPDS

Source Field

SL_StreamBufferAllocSuccess (Seq# 7)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocSuccess_CSVS

Number of Stream buffer successfully allocated.

Data Source

CSVS

Source Field

SL_StreamBufferAllocSuccess (Seq# 7)

Source Section

BCN Socket Layer (Group ID 15)

STLA_BestEffortReassemblyTimeout

Number of best effort messages dropped (missing frame(s))

Data Source

CPDS

Source Field

STLA_BestEffortReassemblyTimeout (Seq# 17)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortReassemblyTimeout_CSVS

Number of best effort messages dropped (missing frame(s))

Data Source

CSVS

Source Field

STLA_BestEffortReassemblyTimeout (Seq# 17)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortRxMsg

Number of Best Effort messages received.(thruput)

Data Source

CPDS

Source Field

STLA_BestEffortRxMsg (Seq# 4)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortRxMsg_CSVS

Number of Best Effort messages received. (thruput)

Data Source

CSVS

Source Field

STLA_BestEffortRxMsg (Seq# 4)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortTxMsg

Number of Best Effort messages sent.(thruput)

Data Source

CPDS

Source Field

STLA_BestEffortTxMsg (Seq# 3)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortTxMsg_CSVS

Number of Best Effort messages sent.(thruput)

Data Source

CSVS

Source Field

STLA_BestEffortTxMsg (Seq# 3)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailed

Obsolete in NBSS14. Number of connections that couldn't be set up or that were lost.

Data Source

CPDS

Source Field

STLA_ConnectionFailed (Seq# 22)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxFaults

Number of connections that could not be set up or that were lost due to the threshold of max faults being exceeded.

Data Source

CPDS

Source Field

STLA_ConnectionFailedDueToMaxFaults (Seq# 23)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxFaults_CSVS

Number of failures that occurred due to maximum number of faults (See BCNSpec for the definition of a failure).

Data Source

CSVS

Source Field

STLA_ConnectionFailedDueToMaxFaults (Seq# 23)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxTxAttempts

Number of connections that could not be set up or that were lost due to the threshold of max transmission attempts being exceeded.

Data Source

CPDS

Source Field

STLA_ConnectionFailedDueToMaxTxAttempts (Seq# 24)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxTxAttempts_CSVS

Number of failures that occurred due to maximum number of transmit attempts (See BCNSpec for the definition of a failure).

Data Source

CSVS

Source Field

STLA_ConnectionFailedDueToMaxTxAttempts (Seq# 24)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFault

Number of faults that occurred in the stack for all the connections.

Data Source

CPDS

Source Field

STLA_ConnectionFault (Seq# 21)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFault_CSVS

Number of faults that occurred in the stack for all the connections. (See BCNSpec for the definition of a fault).

Data Source

CSVS

Source Field

STLA_ConnectionFault (Seq# 21)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_FailedMsgCRC

Number of messages (reliable and best effort) dropped due to a bad CRC.

Data Source

CPDS

Source Field

STLA_FailedMsgCRC (Seq# 20)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_FailedMsgCRC_CSVS

Number of messages (reliable and best effort) dropped due to a bad CRC.

Data Source

CSVS

Source Field

STLA_FailedMsgCRC (Seq# 20)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenRxConnection

Maximum number of open connections to receive messages.

Data Source

CPDS

Source Field

STLA_MaxOpenRxConnection (Seq# 33)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenRxConnection_CSVS

Maximum number of open connections to receive messages.

Data Source

CSVS

Source Field

STLA_MaxOpenRxConnection (Seq# 33)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenTxConnection

Maximum number of open connections to transmit messages.

Data Source

CPDS

Source Field

STLA_MaxOpenTxConnection (Seq# 34)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenTxConnection_CSVS

Maximum number of open connections to transmit messages.

Data Source

CSVS

Source Field

STLA_MaxOpenTxConnection (Seq# 34)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxBuffer

Maximum number of buffers used to receive incoming frames.

Data Source

CPDS

Source Field

STLA_MaxRxBuffer (Seq# 14)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxBuffer_CSVS

Maximum number of buffers used to receive incoming frames.

Data Source

CSVS

Source Field

STLA_MaxRxBuffer (Seq# 14)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxQueue

Maximum number of queues to receive messages.

Data Source

CPDS

Source Field

STLA_MaxRxQueue (Seq# 31)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxQueue_CSVS

Maximum number of queues to receive messages.

Data Source

CSVS

Source Field

STLA_MaxRxQueue (Seq# 31)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxLargeBuffer

Maximum number of large buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxLargeBuffer (Seq# 11)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxLargeBuffer_CSVS

Maximum number of large buffers used to transmit all the messages.

Data Source

CSVS

Source Field

STLA_MaxTxLargeBuffer (Seq# 11)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxMediumBuffer

Maximum number of medium buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxMediumBuffer (Seq# 10)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxMediumBuffer_CSVS

Maximum number of medium buffers used to transmit all the messages.

Data Source

CSVS

Source Field

STLA_MaxTxMediumBuffer (Seq# 10)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxQueue

Maximum number of queues to transmit messages.

Data Source

CPDS

Source Field

STLA_MaxTxQueue (Seq# 32)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxQueue_CSVS

Maximum number of queues to transmit messages.

Data Source

CSVS

Source Field

STLA_MaxTxQueue (Seq# 32)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxSmallBuffer

Maximum number of small buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxSmallBuffer (Seq# 9)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxSmallBuffer_CSVS

Maximum number of small buffers used to transmit all the messages.

Data Source

CSVS

Source Field

STLA_MaxTxSmallBuffer (Seq# 9)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenRxConnection

Number of Receive connection opened.

Data Source

CPDS

Source Field

STLA_OpenRxConnection (Seq# 6)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenRxConnection_CSVS

Number of Receive connection opened.

Data Source

CSVS

Source Field

STLA_OpenRxConnection (Seq# 6)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenTxConnection

Number of Transmit connection opened.

Data Source

CPDS

Source Field

STLA_OpenTxConnection (Seq# 5)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenTxConnection_CSVS

Number of Transmit connection opened.

Data Source

CSVS

Source Field

STLA_OpenTxConnection (Seq# 5)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfRxFrameBuffer

Number of received frames rejected due to lack of buffers.

Data Source

CPDS

Source Field

STLA_OutOfRxFrameBuffer (Seq# 13)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfRxFrameBuffer_CSVS

Number of received frames rejected due to lack of buffers.

Data Source

CSVS

Source Field

STLA_OutOfRxFrameBuffer (Seq# 13)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfTxBuffer

Number of transmit failures due to lack of transmit message buffers.

Data Source

CPDS

Source Field

STLA_OutOfTxBuffer (Seq# 12)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfTxBuffer_CSVS

Number of transmit failures due to lack of transmit message buffers.

Data Source

CSVS

Source Field

STLA_OutOfTxBuffer (Seq# 12)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsg

Obsoleted in NBSS14. Number of messages, which were over the window size.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsg (Seq# 15)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToMaxWS

Number of messages which were over the window size due to size of message exceeding the window size.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToMaxWS (Seq# 26)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToMaxWS_CSVS

Number of messages over the window size where the size of the window is equal to the maximum size (128 messages).

Data Source

CSVS

Source Field

STLA_OutOfWindowMsgDueToMaxWS (Seq# 26)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToReducedWS

Number of messages which were over the window size due to a reduced window size setting.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToReducedWS (Seq# 25)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToReducedWS_CSVS

Number of messages over the window size where the size of the window is less than the maximum size (128 messages).

Data Source

CSVS

Source Field

STLA_OutOfWindowMsgDueToReducedWS (Seq# 25)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToZeroWS

Number of messages which were over the window size due to the window size being set to zero.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToZeroWS (Seq# 27)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToZeroWS_CSVS

Number of messages over the window size where the size of the window is 0.

Data Source

CSVS

Source Field

STLA_OutOfWindowMsgDueToZeroWS (Seq# 27)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ProtocolRevisionError

Number of messages with protocol revision errors.

Data Source

CPDS

Source Field

STLA_ProtocolRevisionError (Seq# 30)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ProtocolRevisionError_CSVS

Number of times Protocol Revision error occurred.

Data Source

CSVS

Source Field

STLA_ProtocolRevisionError (Seq# 30)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedRxConnection

Number of connection refused on receives because maximum reached.

Data Source

CPDS

Source Field

STLA_RefusedRxConnection (Seq# 7)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedRxConnection_CSVS

Number of connection refused on receives because maximum reached.

Data Source

CSVS

Source Field

STLA_RefusedRxConnection (Seq# 7)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedTxConnection

Number of connection refused on transmits because maximum reached.

Data Source

CPDS

Source Field

STLA_RefusedTxConnection (Seq# 8)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedTxConnection_CSVS

Number of connection refused on transmits because maximum reached.

Data Source

CSVS

Source Field

STLA_RefusedTxConnection (Seq# 8)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableAckWaitTimeout

Number of missing Ack when transmitting a reliable message.

Data Source

CPDS

Source Field

STLA_ReliableAckWaitTimeout (Seq# 19)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableAckWaitTimeout_CSVS

Number of missing Ack when transmitting a reliable message.

Data Source

CSVS

Source Field

STLA_ReliableAckWaitTimeout (Seq# 19)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableReassemblyTimeout

Number of reliable messages dropped (missing frame(s)).

Data Source

CPDS

Source Field

STLA_ReliableReassemblyTimeout (Seq# 16)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableReassemblyTimeout_CSVS

Number of reliable messages dropped (missing frame(s)).

Data Source

CSVS

Source Field

STLA_ReliableReassemblyTimeout (Seq# 16)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRetransmittedMsg

Number of reliable messages, which needed to be retransmitted.

Data Source

CPDS

Source Field

STLA_ReliableRetransmittedMsg (Seq# 18)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRetransmittedMsg_CSVS

Number of reliable messages, which needed to be retransmitted.

Data Source

CSVS

Source Field

STLA_ReliableRetransmittedMsg (Seq# 18)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRxMsg

Number of reliable messages received.(thruput)

Data Source

CPDS

Source Field

STLA_ReliableRxMsg (Seq# 2)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRxMsg_CSVS

Number of reliable messages received.(thruput)

Data Source

CSVS

Source Field

STLA_ReliableRxMsg (Seq# 2)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableTxMsg

Number of reliable messages sent.(thruput)

Data Source

CPDS

Source Field

STLA_ReliableTxMsg (Seq# 1)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableTxMsg_CSVS

Number of reliable messages sent.(thruput)

Data Source

CSVs

Source Field

STLA_ReliableTxMsg (Seq# 1)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowReduced

Number of messages with the window shut.

Data Source

CPDS

Source Field

STLA_TxWindowReduced (Seq# 28)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowReduced_CSVS

Number of times the window size is reduced.

Data Source

CSVs

Source Field

STLA_TxWindowReduced (Seq# 28)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowShut

Number of messages with a reduced window size.

Data Source

CPDS

Source Field

STLA_TxWindowShut (Seq# 29)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowShut_CSVS

Number of times the window size is set to zero.

Data Source

CSVS

Source Field

STLA_TxWindowShut (Seq# 29)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLD_BestEffortReassemblyTimeout

Number of best effort messages dropped (missing frame(s))

Data Source

CPDS

Source Field

STLD_BestEffortReassemblyTimeout (Seq# 11)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_BestEffortRxMsg

Number of Best Effort messages received.

Data Source

CPDS

Source Field

STLD_BestEffortRxMsg (Seq# 2)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_BestEffortTxMsg

Number of Best Effort messages sent.

Data Source

CPDS

Source Field

STLD_BestEffortTxMsg (Seq# 1)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxRxBuffer

Maximum number of buffers used to receive incoming frames.

Data Source

CPDS

Source Field

STLD_MaxRxBuffer (Seq# 10)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxRxQueue

Maximum number of queues to receive messages.

Data Source

CPDS

Source Field

STLD_MaxRxQueue (Seq# 12)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxBufferWithoutCopy

Maximum number of without copy buffers used to transmit all of the messages.

Data Source

CPDS

Source Field

STLD_MaxTxBufferWithoutCopy (Seq# 7)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxLargeBuffer

Maximum number of large buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxLargeBuffer (Seq# 5)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxMediumBuffer

Maximum number of medium buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxMediumBuffer (Seq# 4)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxQueue

Maximum number of queues to transmit messages.

Data Source

CPDS

Source Field

STLD_MaxTxQueue (Seq# 13)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxSmallBuffer

Maximum number of small buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxSmallBuffer (Seq# 3)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfRxFrameBuffer

Number of received frames rejected due to lack of buffers.

Data Source

CPDS

Source Field

STLD_OutOfRxFrameBuffer (Seq# 9)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfTxBuffer

Number of transmit failures due to lack of transmit message buffers.

Data Source

CPDS

Source Field

STLD_OutOfTxBuffer (Seq# 6)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfTxBufferWithoutCopy

Number of transmit failures due to lack of transmit message without copy buffers.

Data Source

CPDS

Source Field

STLD_OutOfTxBufferWithoutCopy (Seq# 8)

Source Section

BCN STLD Transport Layer (Group ID 17)

BcnIf Primitive Calculations

The following is a list of primitive calculations for the BcnIf entity.

NUMDAYS

of days in Report

Calculation

DAYSINREPORT ()

NUMHOURS

of hours in Summation Data

Calculation

TotalTxPacket

The number of packets transmitted from the BCN interface including discarded packets

Calculation

vsum(vsum(TxPackets,0), vsum(TxPacketDiscards,0),0)

BcnIf Peg Counts

The following is a list of peg counts for the BcnIf entity.

RxAvgLinkUtilization

The average receive link capacity utilization expressed as a percentage of the available bandwidth with sampling interval of 1 minute. Not available for SbsBcnIf.

Data Source

MDP

Source Field

RxAvgLinkUtilization

Source Section

Passport Statistics

RxAvgPacketRate

The average received packet rate in pkt/s.

Data Source

MDP

Source Field

RxAvgPacketRate

Source Section

Passport Statistics

RxAvgThroughput

The average throughput of the bits received during the collection interval based on the number of octets in the RxOctets. Only available for CiuBcnIf SbsBcnIf and BtsBcnIf.

Data Source

MDP

Source Field

RxAvgThroughput

Source Section

Passport Statistics

RxBroadcastPacketDiscard

The number of received broadcast packets that were discarded due to an invalid BCN address. Only available for CiuBcnIf SbsBcnIf and BtsBcnIf.

Data Source

MDP

Source Field

RxBroadcastPacketDiscard

Source Section

Passport Statistics

RxMinLinkUtilization

The lowest receive link capacity utilization expressed as a percentage of the available bandwidth with sampling interval of 1 minute. Not available for SbsBcnIf.

Data Source

MDP

Source Field

RxMinLinkUtilization

Source Section

Passport Statistics

RxOctets

The number of octets of the packets received by the BCN interface. Only available for CiuBcnIf, SbsBcnIf and BtsBcnIf.

Data Source

MDP

Source Field

RxOctets

Source Section

Passport Statistics

RxPacketDiscards

The number of packets that could not be received due to protocol errors or lack of resources.

Data Source

Beam Peg Counts

The following is a list of peg counts for the Beam entity.

ConfiguredFwdCallBlockingThreshold

Total amount of power available for new originations and terminations in bits squared.

Data Source

NBSS BTS MO

Source Field

ConfiguredFwdCallBlockingThreshold (Seq# 346)

Source Section

Advanced Sector MO

ConfiguredFwdDataCallBlockingThreshold

Total amount of power available for data originations, terminations and handoffs into the BTS.

Data Source

NBSS BTS MO

Source Field

ConfiguredFwdDataCallBlockingThreshold (Seq# 349)

Source Section

Advanced Sector MO

ConfiguredFwdHandoffBlockingThreshold

Total amount of power available for soft and hard handoff attempts into the BTS.

Data Source

NBSS BTS MO

Source Field

ConfiguredFwdHandoffBlockingThreshold (Seq# 347)

Source Section

Advanced Sector MO

ConfiguredFwdVoiceCallBlockingThreshold

Total amount of power available for voice originations, terminations and handoffs into the BTS.

Data Source

NBSS BTS MO

Source Field

ConfiguredFwdVoiceCallBlockingThreshold (Seq# 348)

Source Section

Advanced Sector MO

FCCCHLinkUtilAvg

This OM provides average of sum of digital gain squared for the FCCCH Channel. The average is calculated only the entire OM collection interval i.e. the DTX factor for the FCCCH channel is included.

Data Source

NBSS BTS MO

Source Field

FCCCHLinkUtilAvg (Seq# 289)

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_00_09

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 0%-9%. The occupancy range is relative to the maximum allowable transmit power.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_00_09 (Seq# 350[0])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_10_19

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 10%-19%. The occupancy range is relative to the maximum allowable transmit power.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_10_19 (Seq# 350[1])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_20_29

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 20%-29%. The occupancy range is relative to the maximum allowable transmit power.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_20_29 (Seq# 350[2])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_30_39

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 30%-39%. The occupancy range is relative to the maximum allowable transmit power.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_30_39 (Seq# 350[3])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_40_49

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 40%-49%. The occupancy range is relative to the maximum allowable transmit power.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_40_49 (Seq# 350[4])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_50_59

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 50%-59%. The occupancy range is relative to the maximum allowable transmit power.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_50_59 (Seq# 350[5])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_60_69

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 60%-69%. The occupancy range is relative to the maximum allowable transmit power.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_60_69 (Seq# 350[6])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_70_79

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 70%-79%. The occupancy range is relative to the maximum allowable transmit power.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_70_79 (Seq# 350[7])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_80_89

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 80%-89%. The occupancy range is relative to the maximum allowable transmit power.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_80_89 (Seq# 350[8])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHistogram_90_100

Time duration in seconds during which the forward transmit power was distributed within the occupancy range of 90%-100%. The occupancy range is relative to the maximum allowable transmit power. Please note that the last element in the histogram (90%-100%) will be pegged even when the transmit power goes beyond 100%.

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram_90_100 (Seq# 350[9])

Source Section

Advanced Sector MO

OCNSForwardLinkUtilTWAvg

Average of sum of digital gain squared for all OCNS channels.

Data Source

NBSS BTS MO

Source Field

OCNSForwardLinkUtilTWAvg (Seq# 338)

Source Section

Advanced Sector MO

OverheadForwardLinkUtilUWAvg

Average of sum of digital gain squared for all overhead channels.

Data Source

NBSS BTS MO

Source Field

OverheadForwardLinkUtilUWAvg (Seq# 337)

Source Section

Advanced Sector MO

PercentTimeAboveFwdCallBlockingThreshold

The percentage of the measuring interval time based on 2-second samples that forward link power exceeds the forward call blocking threshold.

Data Source

NBSS BTS MO

Source Field

PercentTimeAboveFwdCallBlockingThreshold (Seq# 342)

Source Section

Advanced Sector MO

PercentTimeAboveFwdDataCallBlockingThreshold

The percentage of time during the interval time that data calls would be blocked.

Data Source

NBSS BTS MO

Source Field

PercentTimeAboveFwdDataCallBlockingThreshold (Seq# 345)

Source Section

Advanced Sector MO

PercentTimeAboveFwdHandoffBlockingThreshold

The percentage of the measuring interval time based on 2-second samples that forward link power exceeds the forward handoff blocking threshold.

Data Source

NBSS BTS MO

Source Field

PercentTimeAboveFwdHandoffBlockingThreshold (Seq# 343)

Source Section

Advanced Sector MO

PercentTimeAboveFwdVoiceCallBlockingThreshold

The percentage of time during the interval time that voice and 2G circuit switched data calls would be blocked.

Data Source

NBSS BTS MO

Source Field

PercentTimeAboveFwdVoiceCallBlockingThreshold (Seq# 344)

Source Section

Advanced Sector MO

PrimaryFBCCHLinkUtilAvg

This OM provides average of sum of digital gain squared for the BCCH Channel. The average is calculated only the entire OM collection interval i.e. the DTX factor for the BCCH channel is included.

Data Source

NBSS BTS MO

BSC Roll-up Fields

The following is a list of roll-up fields for the BSC entity.

CAUDROPN

Pegs when a call is Drp due to a failure in the network

CAUDROPN3GD

3GD Pegs when a call is dropped due to a failure in the network.

CAUDROPN3GV

3GV Pegs when a call is dropped due to a failure in the Network.

CAUDROPR

Pegs when a call is Drp due to poor RF link

CAUDROPR3GD

3GD Pegs when a call is dropped due to poor RF link.

CAUDROPR3GV

3GV Pegs when a call is dropped due to poor RF link.

CAUERLFL

Pegs when a CDMA RF link cannot be established with the mobile for origination or termination

CAUERLFL3GD

3GD Pegs when a CDMA RF link cannot be established with the mobile for origination or termination.

CAUERLFL3GV

3GV Pegs when CDMA RF link cannot be established with the mobile for origination or termination.

CAUERSFL

Pegs when the call cannot be Comp due to a fail or shortage of radio link resources

CAUESWFL

Pegs when a software error occurs

CAUHATTS

CM Req the peripheral to prepare a cell for hard handoff

CAUHBLKS

CPN fails to allocate resources for a hard handoff on the target CPN

CAUHRLFL

Mobile fails to move from old channel to new target channel during a hard Ho

CAUHRLFL3GD

3GD Pegs when the mobile fails to move from the old channel to the new target channel during a hard handoff.

CAUHRLFL3GV

3GV Pegs when the mobile fails to move from the old Channel to the new target channel during a hard Handoff.

CAUHRLS

User hangs up while the mobile is handing off via hard handoff

CAUHSUCC

Target SBS detects that the mobile is on the new channel following hard handoff

CAUHSUCC3GD

3GD Pegs after the target SBS detects that the mobile is on the new channel following hard handoff.

CAUHSUCC3GV

3GV Pegs after the target SBS detects that the mobile is on the new channel following hard handoff.

CAUOATTS

Pegs when the CPN receives an Org msg from a mobile from the current sector

CAUOATTS3GD

3GD Pegs when the CPN receives an origination message from a mobile from the current sector.

CAUOATTS3GV

3GV Pegs when the CPN receives an origination Message from a mobile from the current sector.

CAUOBLKS

Pegs when an origination is blkd due to resource shortages or messaging timeouts

CAUOBLKS3GD

3GD Pegs when an origination is blocked due to resource shortages or messaging timeouts.

CAUOBLKS3GV

3GV Pegs when an origination is blocked due to Resource shortages or messaging timeouts.

CAUORLS

Pegs on a sector basis when the mobile releases or the CM CP sends a call release msg to CAU

CAUORODR

Pegs when CM CP sends a mobile reorder or mobile intercept msg

CAUOSUCC

Pegs when the SBS starts receiving data on the reverse Tch from the terminating mobile

CAUOSUCC3GD

3GD Pegs when the SBS starts receiving data on the reverse traffic channel from the terminating mobile.

CAUOSUCC3GV

3GV Pegs when the SBS starts receiving data on the Reverse traffic channel from the terminating mobile.

CAUPGRES

Pegs when the CPN receives a page response for the first page request from the current cell

CAUPGRES3GD

3GD Pegs when the CPN receives a page response for the first page request from the current cell.

CAUPGRES3GV

3GV Pegs when the CPN receives a page response for the first page request from the current cell.

CAUTBLKS

Pegs when a mobile-terminated call is blocked due to resource shortage

CAUTBLKS3GD

3GD Pegs when a mobile-terminated call is blocked due to resource shortage.

CAUTBLKS3GV

3GV Pegs when a mobile-terminated call is blocked due to resource shortage.

CAUTRLS

Pegs when a mobile-terminated call is released before the mobile arrives on the Tch

CAUTSUCC

Pegs after the SBS receives an answer from the terminating mobile

CAUTSUCC3GD

3GD Pegs after the SBS receives an answer from the terminating mobile.

CAUTSUCC3GV

3GV Pegs after the SBS receives an answer from the Terminating mobile.

CEFrameCntFCH

Frames sent on the forward link for every user on the fundamental channel/ number of softer handoff links

DataUsageErlangs3G

3G Data Only Usage in Erlangs

MCTDROPR

Pegs when a MCTA call Drp during conversation

MCTDROPR_F1

Pegs when a MCTA call Drp during conversation on Carrier 1

MCTDROPR_F2

Pegs when a MCTA call Drp during conversation on Carrier 2

MCTDROPR_F3

Pegs when a MCTA call Drp during conversation on Carrier 3

MCTDROPR_F4

Pegs when a MCTA call Drp during conversation on Carrier 4

MCTDROPR_F5

Pegs when a MCTA call Drp during conversation on Carrier 5

MCTDROPR3GD

3GD Pegs when a MCTA call Drp during conversation

MCTDROPR3GD_F1

3GD Pegs when a MCTA call Drp during conversation on Carrier 1

MCTDROPR3GD_F2

3GD Pegs when a MCTA call Drp during conversation on Carrier 2

MCTDROPR3GD_F3

3GD Pegs when a MCTA call Drp during conversation on Carrier 3

MCTDROPR3GD_F4

3GD Pegs when a MCTA call Drp during conversation on Carrier 4

MCTDROPR3GD_F5

3GD Pegs when a MCTA call Drp during conversation on Carrier 5

MCTDROPR3GV

3GV Pegs when a MCTA call Drp during conversation

MCTDROPR3GV_F1

3GV Pegs when a MCTA call Drp during conversation on Carrier 1

MCTDROPR3GV_F2

3GV Pegs when a MCTA call Drp during conversation on Carrier 2

MCTDROPR3GV_F3

3GV Pegs when a MCTA call Drp during conversation on Carrier 3

MCTDROPR3GV_F4

3GV Pegs when a MCTA call Drp during conversation on Carrier 4

MCTDROPR3GV_F5

3GV Pegs when a MCTA call Drp during conversation on Carrier 5

MCTOATTS

Pegs when an origination attempt continues on a frequency chosen by the MCTA

MCTOATTS_F1

Pegs when an origination attempt continues on a Carrier 1

MCTOATTS_F2

Pegs when an origination attempt continues on a Carrier 2

MCTOATTS_F3

Pegs when an origination attempt continues on a Carrier 3

MCTOATTS_F4

Pegs when an origination attempt continues on a Carrier 4

MCTOATTS_F5

Pegs when an origination attempt continues on a Carrier 5

MCTOATTS3GD

3GD Pegs when an origination attempt continues on a frequency chosen by the MCTA

MCTOATTS3GD_F1

3GD Pegs when an origination attempt continues on Carrier 1

MCTOATTS3GD_F2

3GD Pegs when an origination attempt continues on Carrier 2

MCTOATTS3GD_F3

3GD Pegs when an origination attempt continues on Carrier 3

MCTOATTS3GD_F4

3GD Pegs when an origination attempt continues on Carrier 4

MCTOATTS3GD_F5

3GD Pegs when an origination attempt continues on Carrier 5

MCTOATTS3GV

3GV Pegs when an origination attempt continues on a frequency chosen by the MCTA

MCTOATTS3GV_F1

3GV Pegs when an origination attempt continues on Carrier 1

MCTOATTS3GV_F2

3GV Pegs when an origination attempt continues on Carrier 2

MCTOATTS3GV_F3

3GV Pegs when an origination attempt continues on Carrier 3

MCTOATTS3GV_F4

3GV Pegs when an origination attempt continues on Carrier 4

MCTOATTS3GV_F5

3GV Pegs when an origination attempt continues on Carrier 5

MCTORIGS

Pegs when a mobile originates on an MCTA frequency

MCTOSUCC

Pegs when a resource is successfully Alloc on an MCTA frequency for origination

MCTOSUCC_F1

Pegs when a resource is successfully Alloc on an Carrier 1 for origination

MCTOSUCC_F2

Pegs when a resource is successfully Alloc on an Carrier 2 for origination

MCTOSUCC_F3

Pegs when a resource is successfully Alloc on an Carrier 3 for origination

MCTOSUCC_F4

Pegs when a resource is successfully Alloc on an Carrier 4 for origination

MCTOSUCC_F5

Pegs when a resource is successfully Alloc on an Carrier 5 for origination

MCTOSUCC3GD

3GD Pegs when a resource is successfully Alloc on an MCTA frequency for origination

MCTOSUCC3GD_F1

3GD Pegs when a resource is successfully Alloc on Carrier 1 for origination

MCTOSUCC3GD_F2

3GD Pegs when a resource is successfully Alloc on Carrier 2 for origination

MCTOSUCC3GD_F3

3GD Pegs when a resource is successfully Alloc on Carrier 3 for origination

MCTOSUCC3GD_F4

3GD Pegs when a resource is successfully Alloc on Carrier 4 for origination

MCTOSUCC3GD_F5

3GD Pegs when a resource is successfully Alloc on Carrier 5 for origination

MCTOSUCC3GV

3GV Pegs when a resource is successfully Alloc on an MCTA frequency for origination

MCTOSUCC3GV_F1

3GV Pegs when a resource is successfully Alloc on Carrier 1 for origination

MCTOSUCC3GV_F2

3GV Pegs when a resource is successfully Alloc on Carrier 2 for origination

MCTOSUCC3GV_F3

3GV Pegs when a resource is successfully Alloc on Carrier 3 for origination

MCTOSUCC3GV_F4

3GV Pegs when a resource is successfully Alloc on Carrier 4 for origination

MCTOSUCC3GV_F5

3GV Pegs when a resource is successfully Alloc on Carrier 5 for origination

MCTPGRES

Pegs when the MCTA sends a page response

MCTTATTS

Pegs when a termination attempt continues on a frequency chosen by the MCTA

MCTTATTS_F1

Pegs when a termination attempt continues on Carrier 1

MCTTATTS_F2

Pegs when a termination attempt continues on Carrier 2

MCTTATTS_F3

Pegs when a termination attempt continues on Carrier 3

MCTTATTS_F4

Pegs when a termination attempt continues on Carrier 4

MCTTATTS_F5

Pegs when a termination attempt continues on Carrier 5

MCTTATTS3GD

3GD Pegs when a termination attempt continues on a frequency chosen by the MCTA

MCTTATTS3GD_F1

3GD Pegs when a termination attempt continues on Carrier 1

MCTTATTS3GD_F2

3GD Pegs when a termination attempt continues on Carrier 2

MCTTATTS3GD_F3

3GD Pegs when a termination attempt continues on Carrier 3

MCTTATTS3GD_F4

3GD Pegs when a termination attempt continues on Carrier 4

MCTTATTS3GD_F5

3GD Pegs when a termination attempt continues on Carrier 5

MCTTATTS3GV

3GV Pegs when a termination attempt continues on a frequency chosen by the MCTA

MCTTATTS3GV_F1

3GV Pegs when a termination attempt continues on Carrier 1

MCTTATTS3GV_F2

3GV Pegs when a termination attempt continues on Carrier 2

MCTTATTS3GV_F3

3GV Pegs when a termination attempt continues on Carrier 3

MCTTATTS3GV_F4

3GV Pegs when a termination attempt continues on Carrier 4

MCTTATTS3GV_F5

3GV Pegs when a termination attempt continues on Carrier 5

MCTTSUCC

Pegs when resources are successfully Alloc on an MCTA frequency for termination

MCTTSUCC_F1

Pegs when resources are successfully Alloc on Carrier 1 for termination

MCTTSUCC_F2

Pegs when resources are successfully Alloc on Carrier 2 for termination

MCTTSUCC_F3

Pegs when resources are successfully Alloc on Carrier 3 for termination

MCTTSUCC_F4

Pegs when resources are successfully Alloc on Carrier 4 for termination

MCTTSUCC_F5

Pegs when resources are successfully Alloc on Carrier 5 for termination

MCTTSUCC3GD

3GD Pegs when resources are successfully Alloc on an MCTA frequency for termination

MCTTSUCC3GD_F1

3GD Pegs when resources are successfully Alloc on Carrier 1 for termination

MCTTSUCC3GD_F2

3GD Pegs when resources are successfully Alloc on Carrier 2 for termination

MCTTSUCC3GD_F3

3GD Pegs when resources are successfully Alloc on Carrier 3 for termination

MCTTSUCC3GD_F4

3GD Pegs when resources are successfully Alloc on Carrier 4 for termination

MCTTSUCC3GD_F5

3GD Pegs when resources are successfully Alloc on Carrier 5 for termination

MCTTSUCC3GV

3GV Pegs when resources are successfully Alloc on an MCTA frequency for termination

MCTTSUCC3GV_F1

3GV Pegs when resources are successfully Alloc on Carrier 1 for termination

MCTTSUCC3GV_F2

3GV Pegs when resources are successfully Alloc on Carrier 2 for termination

MCTTSUCC3GV_F3

3GV Pegs when resources are successfully Alloc on Carrier 3 for termination

MCTTSUCC3GV_F4

3GV Pegs when resources are successfully Alloc on Carrier 4 for termination

MCTTSUCC3GV_F5

3GV Pegs when resources are successfully Alloc on Carrier 5 for termination

BSC_MGW Peg Counts

The following is a list of peg counts for the BSC_MGW entity.

RTP_DTMF_Attempts

This OM is pegged for every DTMF attempt.

Data Source

NBSS BSC OMs

Source Field

RTP_DTMF_Attempts (Seq# 5)

Source Section

RTP Signaling (Group ID 79)

RTP_DTMF_Failures

This OM is pegged for every DTMF failure.

Data Source

NBSS BSC OMs

Source Field

RTP_DTMF_Failures (Seq# 7)

Source Section

RTP Signaling (Group ID 79)

RTP_DTMF_Successes

This OM is pegged for every DTMF success.

Data Source

NBSS BSC OMs

Source Field

RTP_DTMF_Successes (Seq# 6)

Source Section

RTP Signaling (Group ID 79)

RTP_DTMF_Timeouts

This OM is pegged after the maximum number of retries expires for a DTMF message.

Data Source

NBSS BSC OMs

Source Field

RTP_DTMF_Timeouts (Seq# 8)

Source Section

RTP Signaling (Group ID 79)

RTP_InvalidCodecPayloadLengthPackets

This OM is pegged for every RTP codec packet discarded because the payload length is either less than the minimum supported length or greater than the maximum supported length.

Data Source

NBSS BSC OMs

Source Field

RTP_InvalidCodecPayloadLengthPackets (Seq# 4)

Source Section

RTP Bearer (Group ID 81)

RTP_InvalidControlPayloadLengthPackets

This OM is pegged for every RTP control packet discarded because the payload length is either less than the minimum supported length or greater than the maximum supported length.

Data Source

NBSS BSC OMs

Source Field

RTP_InvalidControlPayloadLengthPackets (Seq# 5)

Source Section

RTP Bearer (Group ID 81)

RTP_JitterThresholdExceeded

This OM is pegged for every RTP packet for which the jitter value exceeded the hardcoded system engineered value of jitter.

Data Source

NBSS BSC OMs

Source Field

RTP_JitterThresholdExceeded (Seq# 1)

Source Section

RTP Network (Group ID 83)

RTP_LatencyThresholdExceeded

This OM is pegged for every RTP packet for which the latency value exceeded the hardcoded system engineered value of latency.

Data Source

NBSS BSC OMs

Source Field

RTP_LatencyThresholdExceeded (Seq# 2)

Source Section

RTP Network (Group ID 83)

RTP_LostPackets

This OM is pegged for every RTP packet missed at the RTP. Pegging is based on the RTP sequence number of the received RTP packet.

Data Source

NBSS BSC OMs

Source Field

RTP_LostPackets (Seq# 9)

Source Section

RTP Bearer (Group ID 81)

RTP_OutofOrderCodecPackets

This OM is pegged for every RTP codec packet discarded because it is received either as a duplicate or as a re-ordered packet.

Data Source

NBSS BSC OMs

Source Field

RTP_OutofOrderCodecPackets (Seq# 10)

Source Section

RTP Bearer (Group ID 81)

RTP_RateControlAttempts

This OM is pegged for every Rate Control attempt.

Data Source

NBSS BSC OMs

Source Field

RTP_RateControlAttempts (Seq# 1)

Source Section

RTP Signaling (Group ID 79)

RTP_RateControlFailures

This OM is pegged for every Rate Control failure.

Data Source

NBSS BSC OMs

Source Field

RTP_RateControlFailures (Seq# 3)

Source Section

RTP Signaling (Group ID 79)

RTP_RateControlSuccesses

This OM is pegged for every Rate Control success.

Data Source

NBSS BSC OMs

Source Field

RTP_RateControlSuccesses (Seq# 2)

Source Section

RTP Signaling (Group ID 79)

RTP_RateControlTimeouts

This OM is pegged after the maximum number of retries expires for a Rate Control message.

Data Source

NBSS BSC OMs

Source Field

RTP_RateControlTimeouts (Seq# 4)

Source Section

RTP Signaling (Group ID 79)

RTP_ReceivedCodecPackets

This OM is pegged for every RTP codec packet received, processed and sent to the upper layer by the RTP. This does not include packets that are discarded.

Data Source

NBSS BSC OMs

Source Field

RTP_ReceivedCodecPackets (Seq# 7)

Source Section

RTP Bearer (Group ID 81)

RTP_ReceivedControlPackets

This OM is pegged for every RTP control packet received and processed by the RTP. This does not include packets received out of order.

Data Source

NBSS BSC OMs

Source Field

RTP_ReceivedControlPackets (Seq# 8)

Source Section

RTP Bearer (Group ID 81)

RTP_SyncSrcChange

This OM is pegged for every RTP packet for which the received Synchronization Source identifier (SSRC) is different from the existing SSRC value. An SSRC change will represent either a restart of the existing source or a change of source.

Data Source

NBSS BSC OMs

Source Field

RTP_SyncSrcChange (Seq# 3)

Source Section

RTP Network (Group ID 83)

RTP_TimeAlignmentAttempts

This OM is pegged for every Time Alignment attempt.

Data Source

NBSS BSC OMs

Source Field

RTP_TimeAlignmentAttempts (Seq# 9)

Source Section

RTP Signaling (Group ID 79)

RTP_TimeAlignmentFailures

This OM is pegged every time a Time Alignment Response indicates that time alignment was not fully or partially possible.

Data Source

NBSS BSC OMs

Source Field

RTP_TimeAlignmentFailures (Seq# 11)

Source Section

RTP Signaling (Group ID 79)

RTP_TimeAlignmentPartialSuccesses

This OM is pegged every time the full time alignment amount requested in the Time Alignment Request could not be accommodated, but some time alignment was applied.

Data Source

NBSS BSC OMs

Source Field

RTP_TimeAlignmentPartialSuccesses (Seq# 12)

Source Section

RTP Signaling (Group ID 79)

RTP_TimeAlignmentSuccesses

This OM is pegged for every Time Alignment success.

Data Source

NBSS BSC OMs

Source Field

RTP_TimeAlignmentSuccesses (Seq# 10)

Source Section

RTP Signaling (Group ID 79)

RTP_TimeAlignmentTimeouts

This OM is pegged after the maximum number of retries expires for a Time Alignment message.

Data Source

NBSS BSC OMs

Source Field

RTP_TimeAlignmentTimeouts (Seq# 13)

Source Section

RTP Signaling (Group ID 79)

RTP_UnexpectedPayloadCodecPackets

This OM is pegged for every RTP packet discarded because the codec received is different than the coded expected.

Data Source

NBSS BSC OMs

Source Field

RTP_UnexpectedPayloadCodecPackets (Seq# 6)

Source Section

RTP Bearer (Group ID 81)

RTP_UnknownPayloadTypePackets

This OM is pegged for every RTP packet discarded because the payload type of the packet is not a supported RTP payload type.

Data Source

NBSS BSC OMs

Source Field

RTP_UnknownPayloadTypePackets (Seq# 2)

Source Section

RTP Bearer (Group ID 81)

RTP_UnsupportedProtocolPackets

This OM is pegged for every RTP packet discarded because the RTP packet has an invalid header field (for example, the RTP version is wrong).

Data Source

NBSS BSC OMs

Source Field

RTP_UnsupportedProtocolPackets (Seq# 3)

Source Section

RTP Bearer (Group ID 81)

RTP_ZeroLengthPackets

This OM is pegged for every RTP packet discarded because the length of the message is zero or the payload data pointer is null.

Data Source

NBSS BSC OMs

Source Field

RTP_ZeroLengthPackets (Seq# 1)

Source Section

RTP Bearer (Group ID 81)

BSC_PDSN Primitive Calculations

The following is a list of primitive calculations for the BSC_PDSN entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

of hours in Summation Data

Calculation

BSC_PDSN Peg Counts

The following is a list of peg counts for the BSC_PDSN entity.

NumberOfTunnelFailures

The number of times a L2TP tunnel was torn down due to failure of reliable packet transmission per L2TP tunnel

Data Source

NBSS BSC OMs

Source Field

NumberOfTunnelFailures (Seq# 4)

Source Section

RP Session L2TP (Group ID 14)

PCU_InitiatedSessReleaseOther

This OM is pegged when PCU releases packet session for reasons not described by other pegs.

Data Source

NBSS BSC OMs

Source Field

PCU_InitiatedSessionReleaseOther (Seq# 21)

Source Section

RP Session Signaling (Group ID 22)

PCU_InitiatedSessReleasePacketSessDrop

Pegged when PCU drops packet session due to PCU lock or PDSN deleted actions.

Data Source

NBSS BSC OMs

Source Field

PCU_InitiatedSessionReleasePacketSessionDrop (Seq# 17)

Source Section

RP Session Signaling (Group ID 22)

PCU_InitiatedSessReleasePDSN_Reject

Pegged when PDSN sends RRP with a failure code

Data Source

NBSS BSC OMs

Source Field

PCU_InitiatedSessionReleasePDSN_Reject (Seq# 20)

Source Section

RP Session Signaling (Group ID 22)

PCU_InitSessReleasePacketSessDisconnect

Pegged when the Packet Session on the PCU sends a disconnect request

Data Source

NBSS BSC OMs

Source Field

PCU_InitiatedSessionReleasePacketSessionDisconnect (Seq# 16)

Source Section

RP Session Signaling (Group ID 22)

ReliablePacketReceived

The number of messages the PCU received with reliable delivery acknowledgement requested per L2TP tunnel

Data Source

NBSS BSC OMs

Source Field

ReliablePacketReceived (Seq# 3)

Source Section

RP Session L2TP (Group ID 14)

ReliablePacketReTransmitted

The number of reliable packets that had to be retransmitted because no ACK was received

Data Source

NBSS BSC OMs

Source Field

ReliablePacketReTransmitted (Seq# 2)

Source Section

RP Session L2TP (Group ID 14)

ReliablePacketSentSuccess

The number of ACKs received as a result of reliable packets being sent

Data Source

NBSS BSC OMs

Source Field

ReliablePacketSentSuccess (Seq# 1)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupAttempts

RP_SessionSetupAttempts

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupAttempts (Seq# 13)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupRejectReasonAdminReason

RP_SessionSetupRejectReasonAdminReason

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupRejectReasonAdminReason (Seq# 17)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupRejectReasonGenErr

RP_SessionSetupRejectReasonGenErr

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupRejectReasonGenErr (Seq# 15)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupRejectReasonNoCarrier

RP_SessionSetupRejectReasonNoCarrier

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupRejectReasonNoCarrier (Seq# 16)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupRejectReasonNoPDSNRsp

RP_SessionSetupRejectReasonNoPDSNRsp

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupRejectReasonNoPDSNRsp (Seq# 22)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupRejectReasonNoPermRsrcs

RP_SessionSetupRejectReasonNoPermRsrcs

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupRejectReasonNoPermRsrcs (Seq# 19)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupRejectReasonNoTempRsrcs

RP_SessionSetupRejectReasonNoTempRsrcs

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupRejectReasonNoTempRsrcs (Seq# 18)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupRejectReasonOther

RP_SessionSetupRejectReasonOther

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupRejectReasonOther (Seq# 21)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupRejectReasonSysOverload

RP_SessionSetupRejectReasonSysOverload

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupRejectReasonSysOverload (Seq# 20)

Source Section

RP Session L2TP (Group ID 14)

RP_SessionSetupSuccesses

RP_SessionSetupSuccesses

Data Source

NBSS BSC OMs

Source Field

RP_SessionSetupSuccesses (Seq# 14)

Source Section

RP Session L2TP (Group ID 14)

RPTotalOutofSequencePacketsReceived

Pegged for all out of sequence GRE packet received in the forward direction sent over RP link.

Data Source

NBSS BSC OMs

Source Field

RPTotalOutofSequencePacketsReceived (Seq# 1)

Source Section

RP Session Data (Group ID 23)

RPTotalUnreliableBytesReceived

Provides the cumulative number of bytes each R-P session in the PCU received by PDSN

Data Source

NBSS BSC OMs

Source Field

RPTotalUnreliableBytesReceived (Seq# 3)

Source Section

RP Session Data (Group ID 23)

RPTotalUnreliableBytesTransmitted

Provides the cumulative number of bytes each R-P session in the PCU transmitted to PDSN

Data Source

NBSS BSC OMs

Source Field

RPTotalUnreliableBytesTransmitted (Seq# 2)

Source Section

RP Session Data (Group ID 23)

TotalRegistrationReplyDiscardReasonAuthFail

This OM is pegged against a PDSN every time a registration reply message from the PDSN is discarded by the PCU because the authentication check failed.

Data Source

NBSS BSC OMs

Source Field

TotalRegistrationReplyDiscardReasonAuthFail (Seq# 30)

Source Section

RP Session Signaling (Group ID 22)

TotalRegistrationUpdateDiscardReasonAuthFail

This OM is pegged against a PDSN every time a registration update message from the PDSN is discarded by the PCU because the authentication check failed.

Data Source

NBSS BSC OMs

Source Field

TotalRegistrationUpdateDiscardReasonAuthFail (Seq# 31)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestMsgSent

Pegged every time a registration request message is sent to PDSN after session setup or handoff is complete

Data Source

NBSS BSC OMs

Source Field

TotalRegistrationRequestMsgSent (Seq# 22)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectIdMismatch

Pegged every time a registration request message is rejected by PDSN for reason ID Mismatch

Data Source

NBSS BSC OMs

Source Field

TotalRegistrationRequestRejectReasonIdMismatch (Seq# 25)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectMobileAuthFailure

Pegged every time a registration request message is rejected by PDSN for reason Mobile Authentication Failure

Data Source

NBSS BSC OMs

Source Field

TotalRegistrationRequestRejectReasonMobileAuthFailure (Seq# 27)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectNoResources

Pegged every time a registration request message is rejected by PDSN for reason insufficient resources

Data Source

NBSS BSC OMs

Source Field

TotalRegistrationRequestRejectReasonInsufficientResources (Seq# 26)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectOther

Pegged when PCU releases packet session for reasons not specified in other Oms

Data Source

NBSS BSC OMs

Source Field

TotalRegistrationRequestRejectReasonOther (Seq# 24)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectPDSN_NotResponding

Pegged every time PDSN does not send response to a registration request message after session setup or handoff is complete

Data Source

NBSS BSC OMs

Source Field

TotalRegistrationRequestRejectReasonPDSN_NotResponding (Seq# 28)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRetries

Pegged every time a registration request message is resent to PDSN

Data Source

NBSS BSC OMs

Source Field

TotalRegistrationRequestRetries (Seq# 23)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffAttempts

Pegged for session Handoff attempt, both dormant and active

Data Source

NBSS BSC OMs

Source Field

TotalRP_SessionHandoffAttempts (Seq# 8)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffFailPDSN_NotRespond

Session Handoff Rejection due to PDSN not responding

Data Source

NBSS BSC OMs

Source Field

TotalRP_SessionHandoffFailuresReasonPDSN_NotResponding (Seq# 14)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffRejectAuthFailure

Session Handoff Rejection due to mobile authentication failure

Data Source

NBSS BSC OMs

Source Field

TotalRP_SessionHandoffRejectReasonMobileAuthFailure (Seq# 13)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffRejectIdMismatch

Session Handoff Rejection due to ID Mismatch

Data Source

NBSS BSC OMs

Source Field

TotalRP_SessionHandoffRejectReasonIdMismatch (Seq# 11)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffRejectNoResources

Session Handoff Rejection due to insufficient resources

Data Source

NBSS BSC OMs

Source Field

TotalRP_SessionHandoffRejectReasonInsufficientResources (Seq# 12)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffRejectOther

PDSN Session Handoff Rejection not specified in other Handoff Rejection Oms

Data Source

NBSS BSC OMs

Source Field

TotalRP_SessionHandoffRejectReasonOther (Seq# 10)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffSuccesses

Pegged for successful session Handoff, both dormant and active

Data Source

NBSS BSC OMs

Source Field

TotalRP_SessionHandoffSuccesses (Seq# 9)

Source Section

RP Session Signaling (Group ID 22)

TotalSignallingMsgReceived

Pegged for each signaling message received from a PDSN. Unroutable messages are not included.

Data Source

NBSS BSC OMs

Source Field

TotalSignallingMsgReceived (Seq# 29)

Source Section

RP Session Signaling (Group ID 22)

TotalUnreliableBytesReceived

The cumulative number of bytes each session in the PCU received from PCU_PDSN per L2TP tunnel

Data Source

NBSS BSC OMs

Source Field

TotalUnreliableBytesReceived (Seq# 6)

Source Section

RP Session L2TP (Group ID 14)

TotalUnreliableBytesTransmitted

The cumulative number of bytes each session in the PCU transmitted to PCU_PDSN per L2TP tunnel

Data Source

NBSS BSC OMs

Source Field

TotalUnreliableBytesTransmitted (Seq# 5)

Source Section

RP Session L2TP (Group ID 14)

TotlInitRP_SessSetupAttempts

Should only be pegged when a session setup is attempted for the first time

Data Source

NBSS BSC OMs

Source Field

TotalInitialRP_SessionSetupAttempts (Seq# 1)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupFailPDSN_NotRespond

Setup Failure due to PDSN not responding

Data Source

NBSS BSC OMs

Source Field

TotalInitialRP_SessionSetupFailuresReasonPDSN_NotResponding (Seq# 7)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupRejectAuthFail

PDSN Setup Rejection due to Mobile Authentication Failure

Data Source

NBSS BSC OMs

Source Field

TotalInitialRP_SessionSetupRejectReasonMobileAuthFailure (Seq# 6)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupRejectIdMismatch

PDSN Setup Rejection due to ID Mismatch

Data Source

NBSS BSC OMs

Source Field

TotalInitialRP_SessionSetupRejectReasonIdMismatch (Seq# 4)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupRejectInsuffResources

PDSN Setup Rejection due to insufficient Resources

Data Source

NBSS BSC OMs

Source Field

TotalInitialRP_SessionSetupRejectReasonInsufficientResources (Seq# 5)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupRejectOther

Pegged for Setup Rejections not specified in other rejection Oms

Data Source

NBSS BSC OMs

Source Field

TotalInitialRP_SessionSetupRejectReasonOther (Seq# 3)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupSuccesses

Should only be pegged when a session is successfully setup

Data Source

NBSS BSC OMs

Source Field

TotalInitialRP_SessionSetupSuccesses (Seq# 2)

Source Section

RP Session Signaling (Group ID 22)

TunnelSetupFailuresReasonBadProtocolVersion

The numberr of L2TP tunnel setup failures due to unsupported protocol version per PDSN IP address.

Data Source

NBSS BSC OMs

Source Field

TunnelSetupFailuresReasonBadProtocolVersion (Seq# 10)

Source Section

RP Session L2TP (Group ID 14)

TunnelSetupFailuresReasonRequesterShutdown

The number of L2TP tunnel setup failures due to requestor being shutdown per PDSN IP address.

Data Source

NBSS BSC OMs

Source Field

TunnelSetupFailuresReasonRequesterShutdown (Seq# 11)

Source Section

RP Session L2TP (Group ID 14)

TunnelSetupFailuresReasonReserved

The number of L2TP tunnel setup failures with a reserved result code per PDSN IP address.

Data Source

NBSS BSC OMs

Source Field

TunnelSetupFailuresReasonReserved (Seq# 8)

Source Section

RP Session L2TP (Group ID 14)

TunnelSetupFailuresReasonSystemOverload

The number of L2TP tunnel setup failures due to overload conditions on the PDSN per PDSN IP address.

Data Source

NBSS BSC OMs

Source Field

TunnelSetupFailuresReasonSystemOverload (Seq# 12)

Source Section

RP Session L2TP (Group ID 14)

TunnelSetupFailuresReasonUnexpected

The number of L2TP tunnel setup failures with an unexpected result code per PDSN IP address.

Data Source

NBSS BSC OMs

Source Field

TunnelSetupFailuresReasonUnexpected (Seq# 7)

Source Section

RP Session L2TP (Group ID 14)

TunnelSetupFailuresReasonVendorError

The number of L2TP tunnel setup failures classified as general errors indicating vendor-specific error per PDSN IP address.

Data Source

NBSS BSC OMs

Source Field

TunnelSetupFailuresReasonVendorError (Seq# 9)

Source Section

RP Session L2TP (Group ID 14)

CAC_DSFP Primitive Calculations

The following is a list of primitive calculations for the CAC_DSFP entity.

CPU_Usage_30to40%_CSVS

The percentage of time that the CPU usage is greater than 30% and less than or equal to 40%.

Calculation

$$\text{CPU_UsageIndex_2_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_40to50%_CSVS

The percentage of time that the CPU usage is greater than 40% and less than or equal to 50%.

Calculation

$$\text{CPU_UsageIndex_3_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_50to60%_CSVS

The percentage of time that the CPU usage is greater than 50% and less than or equal to 60%.

Calculation

$$\text{CPU_UsageIndex_4_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_60to70%_CSVS

The percentage of time that the CPU usage is greater than 60% and less than or equal to 70%.

Calculation

$$\text{CPU_UsageIndex_5_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_70to80%_CSVS

The percentage of time that the CPU usage is greater than 70% and less than or equal to 80%.

Calculation

$$\text{CPU_UsageIndex_6_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_GT80%_CSVS

The percentage of time that the CPU usage is greater than 80%.

Calculation

$$\text{CPU_UsageIndex_7_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$$

CPU_Usage_LTE30%_CSVS

The percentage of time that the CPU usage is less than or equal to 30%.

Calculation

$\text{CPU_UsageIndex_1_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$

CPU_Usage_Overload%_CSVS

The percentage of time that the CPU usage has exceeded a pre-defined CPU threshold (the 'cpuOverloadThreshold' attribute).

Calculation

$\text{CPU_UsageExceededThreshold_CSVS} * 100.0 / \text{CPU_UsageIndex_Total_CSVS}$

CPU_UsageIndex_Total_CSVS

The sum of the CPU Usage indices.

Calculation

$\text{vsum}(\text{CPU_UsageIndex_1_CSVS}, \text{CPU_UsageIndex_2_CSVS}, \text{CPU_UsageIndex_3_CSVS},$
 $\text{CPU_UsageIndex_4_CSVS}, \text{CPU_UsageIndex_5_CSVS}, \text{CPU_UsageIndex_6_CSVS},$
 $\text{CPU_UsageIndex_7_CSVS}, 0)$

CPU Usage (Group ID 19)

ESL_CongestedSignalingConnectionFailure_CSVS

Number of congested ESL signaling connection failures.

Data Source

CSVS

Source Field

ESL_CongestedSignalingConnectionFailure (Seq# 12)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingConnFailure

Number of congested ESL signaling connection failures.

Data Source

CPDS

Source Field

ESL_CongestedSignalingConnectionFailure (Seq# 12)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingRelAckWaitTO

Number of times the socket timed out waiting for an Ack to a reliable congested ESL signaling message.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableAckWaitTimeout (Seq# 15)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableAckWaitTimeout_CSVS

Number of times the socket timed out waiting for an Ack to a reliable congested ESL signaling message.

Data Source

CSVS

Source Field

ESL_CongestedSignalingReliableAckWaitTimeout (Seq# 15)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableRxMsg

Number of reliable ESL congested signaling messages received.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableRxMsg (Seq# 11)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableRxMsg_CSVS

Number of reliable ESL congested signaling messages received.

Data Source

CSVS

Source Field

ESL_CongestedSignalingReliableRxMsg (Seq# 11)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableTxMsg

Number of reliable ESL congested signaling messages sent.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableTxMsg (Seq# 10)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableTxMsg_CSVS

Number of reliable ESL congested signaling messages sent.

Data Source

CSVS

Source Field

ESL_CongestedSignalingReliableTxMsg (Seq# 10)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingTxMsgFailure

Number of congested ESL signaling messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_CongestedSignalingTxMsgFailure (Seq# 14)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingTxMsgFailure_CSVS

Number of congested ESL signaling messages unsuccessfully sent.

Data Source

CSVS

Source Field

ESL_CongestedSignalingTxMsgFailure (Seq# 14)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingUnknDestMsg

Number of congested ESL signaling messages received without a socket registered for it.

Data Source

CPDS

Source Field

ESL_CongestedSignalingUnknownDestinationMsg (Seq# 13)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingUnknownDestinationMsg_CSVS

Number of congested ESL signaling messages received without a socket registered for it.

Data Source

CSVS

Source Field

ESL_CongestedSignalingUnknownDestinationMsg (Seq# 13)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_InvalidMsgRx

Number of invalid ESL messages received.

Data Source

CPDS

Source Field

ESL_InvalidMsgRx (Seq# 19)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_InvalidMsgRx_CSVS

Number of invalid ESL messages received.

Data Source

CSVS

Source Field

ESL_InvalidMsgRx (Seq# 19)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitRxMsg

Number of ESL Node Init messages received.

Data Source

CPDS

Source Field

ESL_NodeInitRxMsg (Seq# 17)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitRxMsg_CSVS

Number of ESL Node Init messages received.

Data Source

CSVS

Source Field

ESL_NodeInitRxMsg (Seq# 17)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsg

Number of ESL Node Init messages sent.

Data Source

CPDS

Source Field

ESL_NodeInitTxMsg (Seq# 16)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsg_CSVS

Number of ESL Node Init messages sent.

Data Source

CSVS

Source Field

ESL_NodeInitTxMsg (Seq# 16)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsgFailure

Number of ESL Node Init messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_NodeInitTxMsgFailure (Seq# 18)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsgFailure_CSVS

Number of ESL Node Init messages unsuccessfully sent.

Data Source

CSVS

Source Field

ESL_NodeInitTxMsgFailure (Seq# 18)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingConnectionFailure

Number of connection failures for ESL signaling messages.

Data Source

CPDS

Source Field

ESL_SignalingConnectionFailure (Seq# 5)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingConnectionFailure_CSVS

Number of connection failures for ESL signaling messages.

Data Source

CSVs

Source Field

ESL_SignalingConnectionFailure (Seq# 5)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableAckWaitTimeout

Number of times the socket timed out waiting for an Ack to a reliable ESL signaling message.

Data Source

CPDS

Source Field

ESL_SignalingReliableAckWaitTimeout (Seq# 9)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableAckWaitTimeout_CSVS

Number of times the socket timed out waiting for an Ack to a reliable ESL signaling message.

Data Source

CSVs

Source Field

ESL_SignalingReliableAckWaitTimeout (Seq# 9)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableRxMsg

Number of reliable ESL signaling messages received.

Data Source

CPDS

Source Field

ESL_SignalingReliableRxMsg (Seq# 2)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableRxMsg_CSVS

Number of reliable ESL signaling messages received.

Data Source

CSVS

Source Field

ESL_SignalingReliableRxMsg (Seq# 2)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsg

Number of reliable ESL signaling messages sent.

Data Source

CPDS

Source Field

ESL_SignalingReliableTxMsg (Seq# 1)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsg_CSVS

Number of reliable ESL signaling messages sent.

Data Source

CSVS

Source Field

ESL_SignalingReliableTxMsg (Seq# 1)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsgFailure

Number off ESL signaling messages successfully sent.

Data Source

CPDS

Source Field

ESL_SignalingReliableTxMsgFailure (Seq# 7)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsgFailure_CSVS

Number off ESL signaling messages unsuccessfully sent by reliable messaging

Data Source

CSVS

Source Field

ESL_SignalingReliableTxMsgFailure (Seq# 7)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnknownDestinationMsg

Number of ESL signaling messages received without a socket registered for it.

Data Source

CPDS

Source Field

ESL_SignalingUnknownDestinationMsg (Seq# 6)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnknownDestinationMsg_CSVS

Number of ESL signaling messages received without a socket registered for it.

Data Source

CSVS

Source Field

ESL_SignalingUnknownDestinationMsg (Seq# 6)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableRxMsg

Number of unreliable ESL signaling messages received.

Data Source

CPDS

Source Field

ESL_SignalingUnreliableRxMsg (Seq# 4)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableRxMsg_CSVS

Number of unreliable ESL signaling messages received.

Data Source

CSVS

Source Field

ESL_SignalingUnreliableRxMsg (Seq# 4)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableTxMsg

Number of unreliable ESL signaling messages sent.

Data Source

CPDS

Source Field

ESL_SignalingUnreliableTxMsg (Seq# 3)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableTxMsg_CSVS

Number of unreliable ESL signaling messages sent.

Data Source

CSVS

Source Field

ESL_SignalingUnreliableTxMsg (Seq# 3)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnReliableTxMsgFailure

Number off ESL signaling messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_SignalingUnReliableTxMsgFailure (Seq# 8)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableTxMsgFailure_CSVS

Number off ESL signaling messages unsuccessfully sent. By unreliable messaging.

Data Source

CSVS

Source Field

ESL_SignalingUnReliableTxMsgFailure (Seq# 8)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

EVRCB_FrameCountFwdMode_0

Forward mode 0 frames sent for all the EVRC-B calls.

Data Source

CSVs

Source Field

EVRCB_FrameCountFwdMode_0 (Seq# 1)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_FrameCountFwdMode_4

Forward mode 4 frames sent for all the EVRC-B calls.

Data Source

CSVs

Source Field

EVRCB_FrameCountFwdMode_4 (Seq# 5)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_FrameCountFwdMode_6

Forward mode 6 frames sent for all the EVRC-B calls.

Data Source

CSVs

Source Field

EVRCB_FrameCountFwdMode_6 (Seq# 7)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_FrameCountRevMode_0

Reverse mode 0 frames received for all the EVRC-B calls.

Data Source

CSVs

Source Field

EVRCB_FrameCountRevMode_0 (Seq# 9)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_FrameCountRevMode_4

Reverse mode 4 frames received for all the EVRC-B calls.

Data Source

CSVs

Source Field

EVRCB_FrameCountRevMode_4 (Seq# 13)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_FrameCountRevMode_6

Reverse mode 6 frames received for all the EVRC-B calls.

Data Source

CSVs

Source Field

EVRCB_FrameCountRevMode_6 (Seq# 15)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_SelectionCountFwdMode_0

Number of times Mode 0 is selected in the forward direction, during call setup based on the BTS loading report and the mode selection threshold table.

Data Source

CSVs

Source Field

EVRCB_SelectionCountFwdMode_0 (Seq# 17)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_SelectionCountFwdMode_4

Number of times Mode 4 is selected in the forward direction, during call setup based on the BTS loading report and the mode selection threshold table.

Data Source

CSVs

Source Field

EVRCB_SelectionCountFwdMode_4 (Seq# 21)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_SelectionCountFwdMode_6

Number of times Mode 6 is selected in the forward direction, during call setup based on the BTS loading report and the mode selection threshold table.

Data Source

CSVs

Source Field

EVRCB_SelectionCountFwdMode_6 (Seq# 23)

Source Section

EVRC-B Distribution (Group ID 78)

EVRCB_SelectionCountRevMode_0

Number of times Mode 0 is selected in the reverse direction, during call setup based on the BTS loading report and the mode selection threshold table.

LL_CongestedSignaling_FrameRx

Number of Signaling frames received (for STL-B).

Data Source

CPDS

Source Field

LL_CongestedSignaling_FrameRx (Seq# 5)

Source Section

BCN Link Layer (Group ID 18)

LL_CongestedSignaling_FrameTx

Number of Signaling frames sent (for STL-B).

Data Source

CPDS

Source Field

LL_CongestedSignaling_FrameTx (Seq# 4)

Source Section

BCN Link Layer (Group ID 18)

LL_CongestedSignalingFrameRx_CSVS

Number of Signaling frames received (for STL-B).

Data Source

CSVS

Source Field

LL_CongestedSignalingFrameRx (Seq# 5)

Source Section

BCN Link Layer (Group ID 18)

LL_CongestedSignalingFrameTx_CSVS

Number of Signaling frames sent (for STL-B).

Data Source

CSVS

Source Field

LL_CongestedSignalingFrameTx (Seq# 4)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameRx

Number of Data frames received (for STL-D).

Data Source

CPDS

Source Field

LL_DataFrameRx (Seq# 11)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameRx_CSVS

Number of Data frames received (for STL-D).

Data Source

CSVS

Source Field

LL_DataFrameRx (Seq# 11)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameTx

Number of Data frames sent (for STL-D).

Data Source

CPDS

Source Field

LL_DataFrameTx (Seq# 10)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameTx_CSVS

Number of Data frames sent (for STL-D).

Data Source

CSVS

Source Field

LL_DataFrameTx (Seq# 10)

Source Section

BCN Link Layer (Group ID 18)

LL_InvalidFrameType

Number of frames with an invalid type tag7.

Data Source

CPDS

Source Field

LL_InvalidFrameType (Seq# 1)

Source Section

BCN Link Layer (Group ID 18)

LL_InvalidFrameType_CSVS

Number of frames with an invalid type tag7.

Data Source

CSVS

Source Field

LL_InvalidFrameType (Seq# 1)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameRx

Number of Node Init frames received.

Data Source

CPDS

Source Field

LL_NodeInitFrameRx (Seq# 3)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameRx_CSVS

Number of Node Init frames received.

Data Source

CSVS

Source Field

LL_NodeInitFrameRx (Seq# 3)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameTx

Number of Node Init frames sent.

Data Source

CPDS

Source Field

LL_NodeInitFrameTx (Seq# 2)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameTx_CSVS

Number of Node Init frames sent.

Data Source

CSVS

Source Field

LL_NodeInitFrameTx (Seq# 2)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameRx

Number of Signaling frames received (for STL-A).

Data Source

CPDS

Source Field

LL_SignalingFrameRx (Seq# 7)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameRx_CSVS

Number of Signaling frames received (for STL-A).

Data Source

CSVS

Source Field

LL_SignalingFrameRx (Seq# 7)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameTx

Number of Signaling frames sent (for STL-A).

Data Source

CPDS

Source Field

LL_SignalingFrameTx (Seq# 6)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameTx_CSVS

Number of Signaling frames sent (for STL-A).

Data Source

CSVS

Source Field

LL_SignalingFrameTx (Seq# 6)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameRx

Number of Traffic frames received.

Data Source

CPDS

Source Field

LL_TrafficFrameRx (Seq# 9)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameRx_CSVS

Number of Traffic frames received.

Data Source

CSVS

Source Field

LL_TrafficFrameRx (Seq# 9)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameTx

Number of Traffic frames sent.

Data Source

CPDS

Source Field

LL_TrafficFrameTx (Seq# 8)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameTx_CSVS

Number of Traffic frames sent.

Data Source

CSVS

Source Field

LL_TrafficFrameTx (Seq# 8)

Source Section

BCN Link Layer (Group ID 18)

SL_MaxLargeStreamBufferUsed

Maximum number of Large stream buffer used.

Data Source

CPDS

Source Field

SL_MaxLargeStreamBufferUsed (Seq# 4)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxLargeStreamBufferUsed_CSVS

Maximum number of Large stream buffer used.

Data Source

CSVS

Source Field

SL_MaxLargeStreamBufferUsed (Seq# 4)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxMediumStreamBufferUsed

Maximum number of Medium stream buffer used.

Data Source

CPDS

Source Field

SL_MaxMediumStreamBufferUsed (Seq# 5)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxMediumStreamBufferUsed_CSVS

Maximum number of Medium stream buffer used.

Data Source

CSVS

Source Field

SL_MaxMediumStreamBufferUsed (Seq# 5)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxSmallStreamBufferUsed

Maximum number of Small stream buffer used.

Data Source

CPDS

Source Field

SL_MaxSmallStreamBufferUsed (Seq# 6)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxSmallStreamBufferUsed_CSVS

Maximum number of Small stream buffer used.

Data Source

CSVS

Source Field

SL_MaxSmallStreamBufferUsed (Seq# 6)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLA_UnknownDestinationMsg

Number of STL-A messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLA_UnknownDestinationMsg (Seq# 1)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLA_UnknownDestinationMsg_CSVS

Number of STL-A messages received on this stack but without a socket registered for it.

Data Source

CSVs

Source Field

SL_STLA_UnknownDestinationMsg (Seq# 1)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLB_UnknownDestinationMsg

Number of STL-B messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLB_UnknownDestinationMsg (Seq# 2)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLB_UnknownDestinationMsg_CSVS

Number of STL-B messages received on this stack but without a socket registered for it.

Data Source

CSVs

Source Field

SL_STLB_UnknownDestinationMsg (Seq# 2)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLD_UnknownDestinationMsg

Number of STL-D messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLD_UnknownDestinationMsg (Seq# 3)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLD_UnknownDestinationMsg_CSVS

Number of STL-D messages received on this stack but without a socket registered for it.

Data Source

CSVS

Source Field

SL_STLD_UnknownDestinationMsg (Seq# 3)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocFailure

Number of Stream buffer unsuccessfully allocated.

Data Source

CPDS

Source Field

SL_StreamBufferAllocFailure (Seq# 8)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocFailure_CSVS

Number of Stream buffer unsuccessfully allocated.

Data Source

CSVS

Source Field

SL_StreamBufferAllocFailure (Seq# 8)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocSuccess

Number of Stream buffer successfully allocated.

Data Source

CPDS

Source Field

SL_StreamBufferAllocSuccess (Seq# 7)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocSuccess_CSVS

Number of Stream buffer successfully allocated.

Data Source

CSVS

Source Field

SL_StreamBufferAllocSuccess (Seq# 7)

Source Section

BCN Socket Layer (Group ID 15)

STLA_BestEffortReassemblyTimeout

Number of best effort messages dropped (missing frame(s))

Data Source

CPDS

Source Field

STLA_BestEffortReassemblyTimeout (Seq# 17)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortReassemblyTimeout_CSVS

Number of best effort messages dropped (missing frame(s))

Data Source

CSVS

Source Field

STLA_BestEffortReassemblyTimeout (Seq# 17)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortRxMsg

Number of Best Effort messages received.(thruput)

Data Source

CPDS

Source Field

STLA_BestEffortRxMsg (Seq# 4)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortRxMsg_CSVS

Number of Best Effort messages received. (thruput)

Data Source

CSVS

Source Field

STLA_BestEffortRxMsg (Seq# 4)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortTxMsg

Number of Best Effort messages sent.(thruput)

Data Source

CPDS

Source Field

STLA_BestEffortTxMsg (Seq# 3)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortTxMsg_CSVS

Number of Best Effort messages sent.(thruput)

Data Source

CSVS

Source Field

STLA_BestEffortTxMsg (Seq# 3)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailed

Obsoleted in NBSS14. Number of connections that couldn't be set up or that were lost.

Data Source

CPDS

Source Field

STLA_ConnectionFailed (Seq# 22)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxFaults

Number of connections that could not be set up or that were lost due to the threshold of max faults being exceeded.

Data Source

CPDS

Source Field

STLA_ConnectionFailedDueToMaxFaults (Seq# 23)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxFaults_CSVS

Number of failures that occurred due to maximum number of faults (See BCNSpec for the definition of a failure).

Data Source

CSVS

Source Field

STLA_ConnectionFailedDueToMaxFaults (Seq# 23)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxTxAttempts

Number of connections that could not be set up or that were lost due to the threshold of max transmission attempts being exceeded.

Data Source

CPDS

Source Field

STLA_ConnectionFailedDueToMaxTxAttempts (Seq# 24)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxTxAttempts_CSVS

Number of failures that occurred due to maximum number of transmit attempts (See BCNSpec for the definition of a failure).

Data Source

CSVs

Source Field

STLA_ConnectionFailedDueToMaxTxAttempts (Seq# 24)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFault

Number of faults that occurred in the stack for all the connections.

Data Source

CPDS

Source Field

STLA_ConnectionFault (Seq# 21)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFault_CSVS

Number of faults that occurred in the stack for all the connections. (See BCNSpec for the definition of a fault).

Data Source

CSVs

Source Field

STLA_ConnectionFault (Seq# 21)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_FailedMsgCRC

Number of messages (reliable and best effort) dropped due to a bad CRC.

Data Source

CPDS

Source Field

STLA_FailedMsgCRC (Seq# 20)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_FailedMsgCRC_CSVS

Number of messages (reliable and best effort) dropped due to a bad CRC.

Data Source

CSVS

Source Field

STLA_FailedMsgCRC (Seq# 20)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenRxConnection

Maximum number of open connections to receive messages.

Data Source

CPDS

Source Field

STLA_MaxOpenRxConnection (Seq# 33)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenRxConnection_CSVS

Maximum number of open connections to receive messages.

Data Source

CSVS

Source Field

STLA_MaxOpenRxConnection (Seq# 33)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenTxConnection

Maximum number of open connections to transmit messages.

Data Source

CPDS

Source Field

STLA_MaxOpenTxConnection (Seq# 34)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenTxConnection_CSVS

Maximum number of open connections to transmit messages.

Data Source

CSVS

Source Field

STLA_MaxOpenTxConnection (Seq# 34)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxBuffer

Maximum number of buffers used to receive incoming frames.

Data Source

CPDS

Source Field

STLA_MaxRxBuffer (Seq# 14)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxBuffer_CSVS

Maximum number of buffers used to receive incoming frames.

Data Source

CSVS

Source Field

STLA_MaxRxBuffer (Seq# 14)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxQueue

Maximum number of queues to receive messages.

Data Source

CPDS

Source Field

STLA_MaxRxQueue (Seq# 31)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxQueue_CSVS

Maximum number of queues to receive messages.

Data Source

CSVS

Source Field

STLA_MaxRxQueue (Seq# 31)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxLargeBuffer

Maximum number of large buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxLargeBuffer (Seq# 11)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxLargeBuffer_CSVS

Maximum number of large buffers used to transmit all the messages.

Data Source

CSVS

Source Field

STLA_MaxTxLargeBuffer (Seq# 11)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxMediumBuffer

Maximum number of medium buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxMediumBuffer (Seq# 10)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxMediumBuffer_CSVS

Maximum number of medium buffers used to transmit all the messages.

Data Source

CSVS

Source Field

STLA_MaxTxMediumBuffer (Seq# 10)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxQueue

Maximum number of queues to transmit messages.

Data Source

CPDS

Source Field

STLA_MaxTxQueue (Seq# 32)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxQueue_CSVS

Maximum number of queues to transmit messages.

Data Source

CSVS

Source Field

STLA_MaxTxQueue (Seq# 32)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxSmallBuffer

Maximum number of small buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxSmallBuffer (Seq# 9)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxSmallBuffer_CSVS

Maximum number of small buffers used to transmit all the messages.

Data Source

CSVS

Source Field

STLA_MaxTxSmallBuffer (Seq# 9)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenRxConnection

Number of Receive connection opened.

Data Source

CPDS

Source Field

STLA_OpenRxConnection (Seq# 6)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenRxConnection_CSVS

Number of Receive connection opened.

Data Source

CSVS

Source Field

STLA_OpenRxConnection (Seq# 6)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenTxConnection

Number of Transmit connection opened.

Data Source

CPDS

Source Field

STLA_OpenTxConnection (Seq# 5)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenTxConnection_CSVS

Number of Transmit connection opened.

Data Source

CSVS

Source Field

STLA_OpenTxConnection (Seq# 5)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfRxFrameBuffer

Number of received frames rejected due to lack of buffers.

Data Source

CPDS

Source Field

STLA_OutOfRxFrameBuffer (Seq# 13)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfRxFrameBuffer_CSVS

Number of received frames rejected due to lack of buffers.

Data Source

CSVS

Source Field

STLA_OutOfRxFrameBuffer (Seq# 13)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfTxBuffer

Number of transmit failures due to lack of transmit message buffers.

Data Source

CPDS

Source Field

STLA_OutOfTxBuffer (Seq# 12)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfTxBuffer_CSVS

Number of transmit failures due to lack of transmit message buffers.

Data Source

CSVS

Source Field

STLA_OutOfTxBuffer (Seq# 12)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsg

Obsoleted in NBSS14. Number of messages, which were over the window size.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsg (Seq# 15)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToMaxWS

Number of messages which were over the window size due to size of message exceeding the window size.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToMaxWS (Seq# 26)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToMaxWS_CSVS

Number of messages over the window size where the size of the window is equal to the maximum size (128 messages).

Data Source

CSVS

Source Field

STLA_OutOfWindowMsgDueToMaxWS (Seq# 26)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToReducedWS

Number of messages which were over the window size due to a reduced window size setting.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToReducedWS (Seq# 25)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToReducedWS_CSVS

Number of messages over the window size where the size of the window is less than the maximum size (128 messages).

Data Source

CSVS

Source Field

STLA_OutOfWindowMsgDueToReducedWS (Seq# 25)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToZeroWS

Number of messages which were over the window size due to the window size being set to zero.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToZeroWS (Seq# 27)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToZeroWS_CSVS

Number of messages over the window size where the size of the window is 0.

Data Source

CSVs

Source Field

STLA_OutOfWindowMsgDueToZeroWS (Seq# 27)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ProtocolRevisionError

Number of messages with protocol revision errors.

Data Source

CPDS

Source Field

STLA_ProtocolRevisionError (Seq# 30)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ProtocolRevisionError_CSVS

Number of times Protocol Revision error occurred.

Data Source

CSVs

Source Field

STLA_ProtocolRevisionError (Seq# 30)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedRxConnection

Number of connection refused on receives because maximum reached.

Data Source

CPDS

Source Field

STLA_RefusedRxConnection (Seq# 7)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedRxConnection_CSVS

Number of connection refused on receives because maximum reached.

Data Source

CSVS

Source Field

STLA_RefusedRxConnection (Seq# 7)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedTxConnection

Number of connection refused on transmits because maximum reached.

Data Source

CPDS

Source Field

STLA_RefusedTxConnection (Seq# 8)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedTxConnection_CSVS

Number of connection refused on transmits because maximum reached.

Data Source

CSVS

Source Field

STLA_RefusedTxConnection (Seq# 8)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableAckWaitTimeout

Number of missing Ack when transmitting a reliable message.

Data Source

CPDS

Source Field

STLA_ReliableAckWaitTimeout (Seq# 19)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableAckWaitTimeout_CSVS

Number of missing Ack when transmitting a reliable message.

Data Source

CSVS

Source Field

STLA_ReliableAckWaitTimeout (Seq# 19)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableReassemblyTimeout

Number of reliable messages dropped (missing frame(s)).

Data Source

CPDS

Source Field

STLA_ReliableReassemblyTimeout (Seq# 16)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableReassemblyTimeout_CSVS

Number of reliable messages dropped (missing frame(s)).

Data Source

CSVS

Source Field

STLA_ReliableReassemblyTimeout (Seq# 16)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRetransmittedMsg

Number of reliable messages, which needed to be retransmitted.

Data Source

CPDS

Source Field

STLA_ReliableRetransmittedMsg (Seq# 18)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRetransmittedMsg_CSVS

Number of reliable messages, which needed to be retransmitted.

Data Source

CSVS

Source Field

STLA_ReliableRetransmittedMsg (Seq# 18)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRxMsg

Number of reliable messages received.(thruput)

Data Source

CPDS

Source Field

STLA_ReliableRxMsg (Seq# 2)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRxMsg_CSVS

Number of reliable messages received.(thruput)

Data Source

CSVS

Source Field

STLA_ReliableRxMsg (Seq# 2)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableTxMsg

Number of reliable messages sent.(thruput)

Data Source

CPDS

Source Field

STLA_ReliableTxMsg (Seq# 1)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableTxMsg_CSVS

Number of reliable messages sent.(thruput)

Data Source

CSVS

Source Field

STLA_ReliableTxMsg (Seq# 1)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowReduced

Number of messages with the window shut.

Data Source

CPDS

Source Field

STLA_TxWindowReduced (Seq# 28)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowReduced_CSVS

Number of times the window size is reduced.

Data Source

CSVS

Source Field

STLA_TxWindowReduced (Seq# 28)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowShut

Number of messages with a reduced window size.

Data Source

CPDS

Source Field

STLA_TxWindowShut (Seq# 29)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowShut_CSVS

Number of times the window size is set to zero.

Data Source

CSVS

Source Field

STLA_TxWindowShut (Seq# 29)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLD_BestEffortReassemblyTimeout

Number of best effort messages dropped (missing frame(s))

Data Source

CPDS

Source Field

STLD_BestEffortReassemblyTimeout (Seq# 11)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_BestEffortRxMsg

Number of Best Effort messages received.

Data Source

CPDS

Source Field

STLD_BestEffortRxMsg (Seq# 2)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_BestEffortTxMsg

Number of Best Effort messages sent.

Data Source

CPDS

Source Field

STLD_BestEffortTxMsg (Seq# 1)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxRxBuffer

Maximum number of buffers used to receive incoming frames.

Data Source

CPDS

Source Field

STLD_MaxRxBuffer (Seq# 10)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxBufferWithoutCopy

Maximum number of without copy buffers used to transmit all of the messages.

Data Source

CPDS

Source Field

STLD_MaxTxBufferWithoutCopy (Seq# 7)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxLargeBuffer

Maximum number of large buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxLargeBuffer (Seq# 5)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxMediumBuffer

Maximum number of medium buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxMediumBuffer (Seq# 4)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxSmallBuffer

Maximum number of small buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxSmallBuffer (Seq# 3)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfRxFrameBuffer

Number of received frames rejected due to lack of buffers.

Data Source

CPDS

Source Field

STLD_OutOfRxFrameBuffer (Seq# 9)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfTxBuffer

Number of transmit failures due to lack of transmit message buffers.

Data Source

CPDS

Source Field

STLD_OutOfTxBuffer (Seq# 6)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfTxBufferWithoutCopy

Number of transmit failures due to lack of transmit message without copy buffers.

Data Source

CPDS

Source Field

STLD_OutOfTxBufferWithoutCopy (Seq# 8)

Source Section

BCN STLD Transport Layer (Group ID 17)

CAC_PCUIFP Peg Counts

The following is a list of peg counts for the CAC_PCUIFP entity.

CPU_UsageExceededThreshold

The number of times the CPU Usage has exceeded a pre-defined CPU threshold for a certain monitoring timeperiod.

Data Source

CPDS

Source Field

CPU_UsageExceededThreshold (Seq# 8)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_1

The number of times the CPU Usage in a monitoring period is less than 30%

Data Source

CPDS

Source Field

CPU_UsageIndex_1 (Seq# 1)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_2

The number of times the CPU Usage in a monitoring period is greater than 30% and less than equal to 40%.

Data Source

CPDS

Source Field

CPU_UsageIndex_2 (Seq# 2)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_3

The number of times the CPU Usage in a monitoring period is greater than 40% and less than equal to 50%.

Data Source

CPDS

Source Field

CPU_UsageIndex_3 (Seq# 3)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_4

The number of times the CPU Usage in a monitoring period is greater than 50% and less than equal to 60%.

Data Source

CPDS

Source Field

CPU_UsageIndex_4 (Seq# 4)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_5

The number of times the CPU Usage in a monitoring period is greater than 60% and less than equal to 70%.

Data Source

CPDS

Source Field

CPU_UsageIndex_5 (Seq# 5)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_6

The number of times the CPU Usage in a monitoring period is greater than 70% and less than equal to 80%.

Data Source

CPDS

Source Field

CPU_UsageIndex_6 (Seq# 6)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_7

The number of times the CPU Usage in a monitoring period is greater than 80%

Data Source

CPDS

Source Field

CPU_UsageIndex_7 (Seq# 7)

Source Section

CPU Usage (Group ID 19)

DormantHandoffRequests

Number of dormant handoffs

Data Source

CPDS

Source Field

DormantHandoffRequests (Seq# 2)

Source Section

PCU Manager (Group ID 24)

DormantToActiveHandoffs

Number of dormant to active transitions for which different PCU had to be assigned

Data Source

CPDS

Source Field

DormantToActiveHandoffs (Seq# 1)

Source Section

PCU Manager (Group ID 24)

ESL_CongestedSignalingConnFailure

Number of congested ESL signaling connection failures.

Data Source

CPDS

Source Field

ESL_CongestedSignalingConnectionFailure (Seq# 12)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingRelAckWaitTO

Number of times the socket timed out waiting for an Ack to a reliable congested ESL signaling message.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableAckWaitTimeout (Seq# 15)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableRxMsg

Number of reliable ESL congested signaling messages received.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableRxMsg (Seq# 11)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableTxMsg

Number of reliable ESL congested signaling messages sent.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableTxMsg (Seq# 10)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingTxMsgFailure

Number of congested ESL signaling messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_CongestedSignalingTxMsgFailure (Seq# 14)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingUnknDestMsg

Number of congested ESL signaling messages received without a socket registered for it.

Data Source

CPDS

Source Field

ESL_CongestedSignalingUnknownDestinationMsg (Seq# 13)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_InvalidMsgRx

Number of invalid ESL messages received.

Data Source

CPDS

Source Field

ESL_InvalidMsgRx (Seq# 19)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitRxMsg

Number of ESL Node Init messages received.

Data Source

CPDS

Source Field

ESL_NodeInitRxMsg (Seq# 17)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsg

Number of ESL Node Init messages sent.

Data Source

CPDS

Source Field

ESL_NodeInitTxMsg (Seq# 16)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsgFailure

Number of ESL Node Init messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_NodeInitTxMsgFailure (Seq# 18)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingConnectionFailure

Number of connection failures for ESL signaling messages.

Data Source

CPDS

Source Field

ESL_SignalingConnectionFailure (Seq# 5)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableAckWaitTimeout

Number of times the socket timed out waiting for an Ack to a reliable ESL signaling message.

Data Source

CPDS

Source Field

ESL_SignalingReliableAckWaitTimeout (Seq# 9)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableRxMsg

Number of reliable ESL signaling messages received.

Data Source

CPDS

Source Field

ESL_SignalingReliableRxMsg (Seq# 2)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsg

Number of reliable ESL signaling messages sent.

Data Source

CPDS

Source Field

ESL_SignalingReliableTxMsg (Seq# 1)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsgFailure

Number off ESL signaling messages successfully sent.

Data Source

CPDS

Source Field

ESL_SignalingReliableTxMsgFailure (Seq# 7)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnknownDestinationMsg

Number of ESL signaling messages received without a socket registered for it.

Data Source

CPDS

Source Field

ESL_SignalingUnknownDestinationMsg (Seq# 6)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableRxMsg

Number of unreliable ESL signaling messages received.

Data Source

CPDS

Source Field

ESL_SignalingUnreliableRxMsg (Seq# 4)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableTxMsg

Number of unreliable ESL signaling messages sent.

Data Source

CPDS

Source Field

ESL_SignalingUnreliableTxMsg (Seq# 3)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnReliableTxMsgFailure

Number off ESL signaling messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_SignalingUnReliableTxMsgFailure (Seq# 8)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

IMSI_TableFull

Number of PCU allocation failures due to the IMSI table being full

Data Source

CPDS

Source Field

IMSI_TableFull (Seq# 6)

Source Section

PCU Manager (Group ID 24)

LL_CongestedSignaling_FrameRx

Number of Signaling frames received (for STL-B).

Data Source

CPDS

Source Field

LL_CongestedSignaling_FrameRx (Seq# 5)

Source Section

BCN Link Layer (Group ID 18)

LL_CongestedSignaling_FrameTx

Number of Signaling frames sent (for STL-B).

Data Source

CPDS

Source Field

LL_CongestedSignaling_FrameTx (Seq# 4)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameRx

Number of Data frames received (for STL-D).

Data Source

CPDS

Source Field

LL_DataFrameRx (Seq# 11)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameTx

Number of Data frames sent (for STL-D).

Data Source

CPDS

Source Field

LL_DataFrameTx (Seq# 10)

Source Section

BCN Link Layer (Group ID 18)

LL_InvalidFrameType

Number of frames with an invalid type tag7.

Data Source

CPDS

Source Field

LL_InvalidFrameType (Seq# 1)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameRx

Number of Node Init frames received.

Data Source

CPDS

Source Field

LL_NodeInitFrameRx (Seq# 3)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameTx

Number of Node Init frames sent.

Data Source

CPDS

Source Field

LL_NodeInitFrameTx (Seq# 2)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameRx

Number of Signaling frames received (for STL-A).

Data Source

CPDS

Source Field

LL_SignalingFrameRx (Seq# 7)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameTx

Number of Signaling frames sent (for STL-A).

Data Source

CPDS

Source Field

LL_SignalingFrameTx (Seq# 6)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameRx

Number of Traffic frames received.

Data Source

CPDS

Source Field

LL_TrafficFrameRx (Seq# 9)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameTx

Number of Traffic frames sent.

Data Source

CPDS

Source Field

LL_TrafficFrameTx (Seq# 8)

Source Section

BCN Link Layer (Group ID 18)

PCU_AllocFailures

Number of PCU allocation failures

Data Source

CPDS

Source Field

PCU_AllocFailures (Seq# 4)

Source Section

PCU Manager (Group ID 24)

PCU_AllocRequests

Total PCU allocation requests

Data Source

CPDS

Source Field

PCU_AllocRequests (Seq# 3)

Source Section

PCU Manager (Group ID 24)

PCU_AllocSuccessful

Number of PCU allocation requests fulfilled successfully

Data Source

CPDS

Source Field

PCU_AllocSuccessful (Seq# 5)

Source Section

PCU Manager (Group ID 24)

PCUM_TotalRSDB_Dropped

Pegs when a R-SDM is not sent by the PCU-M to the PCU (PCUFP).

Data Source

CPDS

Source Field

PCUM_TotalRSDB_Dropped (Seq# 9)

Source Section

PCU Manager (Group ID 24)

PCUM_TotalRSDB_Forwarded

Pegs when a R-SDB is sent by the PCU-M to the PCU (PCUFP).

Data Source

CPDS

Source Field

PCUM_TotalRSDB_Forwarded (Seq# 8)

Source Section

PCU Manager (Group ID 24)

PCUM_TotalRSDB_Received

Pegs when a R-SDB is received at the PCU-M from the CAU or ESEL or ACP.

Data Source

CPDS

Source Field

PCUM_TotalRSDB_Received (Seq# 7)

Source Section

PCU Manager (Group ID 24)

SL_MaxLargeStreamBufferUsed

Maximum number of Large stream buffer used.

Data Source

CPDS

Source Field

SL_MaxLargeStreamBufferUsed (Seq# 4)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxMediumStreamBufferUsed

Maximum number of Medium stream buffer used.

Data Source

CPDS

Source Field

SL_MaxMediumStreamBufferUsed (Seq# 5)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxSmallStreamBufferUsed

Maximum number of Small stream buffer used.

Data Source

CPDS

Source Field

SL_MaxSmallStreamBufferUsed (Seq# 6)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLA_UnknownDestinationMsg

Number of STL-A messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLA_UnknownDestinationMsg (Seq# 1)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLB_UnknownDestinationMsg

Number of STL-B messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLB_UnknownDestinationMsg (Seq# 2)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLD_UnknownDestinationMsg

Number of STL-D messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLD_UnknownDestinationMsg (Seq# 3)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocFailure

Number of Stream buffer unsuccessfully allocated.

Data Source

CPDS

Source Field

SL_StreamBufferAllocFailure (Seq# 8)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocSuccess

Number of Stream buffer successfully allocated.

Data Source

CPDS

Source Field

SL_StreamBufferAllocSuccess (Seq# 7)

Source Section

BCN Socket Layer (Group ID 15)

STLA_BestEffortReassemblyTimeout

Number of best effort messages dropped (missing frame(s))

Data Source

CPDS

Source Field

STLA_BestEffortReassemblyTimeout (Seq# 17)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortRxMsg

Number of Best Effort messages received.(thruput)

Data Source

CPDS

Source Field

STLA_BestEffortRxMsg (Seq# 4)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortTxMsg

Number of Best Effort messages sent.(thruput)

Data Source

CPDS

Source Field

STLA_BestEffortTxMsg (Seq# 3)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailed

Obsoleted in NBSS14. Number of connections that couldn't be set up or that were lost.

Data Source

CPDS

Source Field

STLA_ConnectionFailed (Seq# 22)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxFaults

Number of connections that could not be set up or that were lost due to the threshold of max faults being exceeded.

Data Source

CPDS

Source Field

STLA_ConnectionFailedDueToMaxFaults (Seq# 23)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxTxAttempts

Number of connections that could not be set up or that were lost due to the threshold of max transmission attempts being exceeded.

Data Source

CPDS

Source Field

STLA_ConnectionFailedDueToMaxTxAttempts (Seq# 24)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFault

Number of faults that occurred in the stack for all the connections.

Data Source

CPDS

Source Field

STLA_ConnectionFault (Seq# 21)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_FailedMsgCRC

Number of messages (reliable and best effort) dropped due to a bad CRC.

Data Source

CPDS

Source Field

STLA_FailedMsgCRC (Seq# 20)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenRxConnection

Maximum number of open connections to receive messages.

Data Source

CPDS

Source Field

STLA_MaxOpenRxConnection (Seq# 33)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenTxConnection

Maximum number of open connections to transmit messages.

Data Source

CPDS

Source Field

STLA_MaxOpenTxConnection (Seq# 34)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxBuffer

Maximum number of buffers used to receive incoming frames.

Data Source

CPDS

Source Field

STLA_MaxRxBuffer (Seq# 14)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxQueue

Maximum number of queues to receive messages.

Data Source

CPDS

Source Field

STLA_MaxRxQueue (Seq# 31)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxLargeBuffer

Maximum number of large buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxLargeBuffer (Seq# 11)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxMediumBuffer

Maximum number of medium buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxMediumBuffer (Seq# 10)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxQueue

Maximum number of queues to transmit messages.

Data Source

CPDS

Source Field

STLA_MaxTxQueue (Seq# 32)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxSmallBuffer

Maximum number of small buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxSmallBuffer (Seq# 9)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenRxConnection

Number of Receive connection opened.

Data Source

CPDS

Source Field

STLA_OpenRxConnection (Seq# 6)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenTxConnection

Number of Transmit connection opened.

Data Source

CPDS

Source Field

STLA_OpenTxConnection (Seq# 5)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfRxFrameBuffer

Number of received frames rejected due to lack of buffers.

Data Source

CPDS

Source Field

STLA_OutOfRxFrameBuffer (Seq# 13)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfTxBuffer

Number of transmit failures due to lack of transmit message buffers.

Data Source

CPDS

Source Field

STLA_OutOfTxBuffer (Seq# 12)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsg

Obsoleted in NBSS14. Number of messages, which were over the window size.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsg (Seq# 15)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToMaxWS

Number of messages which were over the window size due to size of message exceeding the window size.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToMaxWS (Seq# 26)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToReducedWS

Number of messages which were over the window size due to a reduced window size setting.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToReducedWS (Seq# 25)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToZeroWS

Number of messages which were over the window size due to the window size being set to zero.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToZeroWS (Seq# 27)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ProtocolRevisionError

Number of messages with protocol revision errors.

Data Source

CPDS

Source Field

STLA_ProtocolRevisionError (Seq# 30)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedRxConnection

Number of connection refused on receives because maximum reached.

Data Source

CPDS

Source Field

STLA_RefusedRxConnection (Seq# 7)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedTxConnection

Number of connection refused on transmits because maximum reached.

Data Source

CPDS

Source Field

STLA_RefusedTxConnection (Seq# 8)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableAckWaitTimeout

Number of missing Ack when transmitting a reliable message.

Data Source

CPDS

Source Field

STLA_ReliableAckWaitTimeout (Seq# 19)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableReassemblyTimeout

Number of reliable messages dropped (missing frame(s)).

Data Source

CPDS

Source Field

STLA_ReliableReassemblyTimeout (Seq# 16)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRetransmittedMsg

Number of reliable messages, which needed to be retransmitted.

Data Source

CPDS

Source Field

STLA_ReliableRetransmittedMsg (Seq# 18)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRxMsg

Number of reliable messages received.(thruput)

Data Source

CPDS

Source Field

STLA_ReliableRxMsg (Seq# 2)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableTxMsg

Number of reliable messages sent.(thruput)

Data Source

CPDS

Source Field

STLA_ReliableTxMsg (Seq# 1)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowReduced

Number of messages with the window shut.

Data Source

CPDS

Source Field

STLA_TxWindowReduced (Seq# 28)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowShut

Number of messages with a reduced window size.

Data Source

CPDS

Source Field

STLA_TxWindowShut (Seq# 29)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLD_BestEffortReassemblyTimeout

Number of best effort messages dropped (missing frame(s))

Data Source

CPDS

Source Field

STLD_BestEffortReassemblyTimeout (Seq# 11)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_BestEffortRxMsg

Number of Best Effort messages received.

Data Source

CPDS

Source Field

STLD_BestEffortRxMsg (Seq# 2)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_BestEffortTxMsg

Number of Best Effort messages sent.

Data Source

CPDS

Source Field

STLD_BestEffortTxMsg (Seq# 1)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxRxBuffer

Maximum number of buffers used to receive incoming frames.

Data Source

CPDS

Source Field

STLD_MaxRxBuffer (Seq# 10)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxBufferWithoutCopy

Maximum number of without copy buffers used to transmit all of the messages.

Data Source

CPDS

Source Field

STLD_MaxTxBufferWithoutCopy (Seq# 7)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxLargeBuffer

Maximum number of large buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxLargeBuffer (Seq# 5)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxMediumBuffer

Maximum number of medium buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxMediumBuffer (Seq# 4)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxSmallBuffer

Maximum number of small buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxSmallBuffer (Seq# 3)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfRxFrameBuffer

Number of received frames rejected due to lack of buffers.

Data Source

CPDS

Source Field

STLD_OutOfRxFrameBuffer (Seq# 9)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfTxBuffer

Number of transmit failures due to lack of transmit message buffers.

Data Source

CPDS

Source Field

STLD_OutOfTxBuffer (Seq# 6)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfTxBufferWithoutCopy

Number of transmit failures due to lack of transmit message without copy buffers.

Data Source

CPDS

Source Field

STLD_OutOfTxBufferWithoutCopy (Seq# 8)

Source Section

BCN STLD Transport Layer (Group ID 17)

CallType Peg Counts

The following is a list of peg counts for the CallType entity.

ABANDON

This register counts the number of all abandoned voice calls.

Data Source

SDM

Source Field

ABANDON + 65536 * ABANDONX

Source Section

MTXUSCR

ABNORML

This register counts the number of all abnormal voice calls, whose value of field COMPCD in CDR is 3, 4, 5, 6 or 12.

Data Source

SDM

Source Field

ABNORML + 65536 * ABNORMLX

Source Section

MTXUSCR

ANCLCNT

This register counts all answered calls, which have generated CDRs. It is used to calculate the NPI (Network Performance Indicator) of Mean Hold Time of all answered calls.

Data Source

SDM

Source Field

ANCLCNT + 65536 * ANCLCNTX

Source Section

MTXUSCR

ANCLDUR

This register counts the total duration of all answer calls, which have generated CDRs. It is used to calculate the NPI (Network Performance Indicator) of Mean Hold Time of all answered calls.

Data Source

SDM

Source Field

ANCLDUR + 65536 * ANCLDURX

Source Section

MTXUSCR

ANSWER

This register counts all of the answered voice calls, which have generated CDRs.

Data Source

SDM

Source Field

ANSWER + 65536 * ANSWERX

Source Section

MTXUSCR

CALLFWD

This register counts the number of all voice calls with call forward

Data Source

SDM

Source Field

CALLFWD + 65536 * CALLFWDX

Source Section

MTXUSCR

FAIL

This register counts the number of mobile/landline origination failure calls, which fail before generating CDRs, including Mobile origination call fails before it arrives at the traffic channel and Landline origination call fails when error occurs during handling the IAM message.

Data Source

SDM

Source Field

FAIL + 65536 * FAILX

Source Section

MTXUSCR

TOTCDR

This register counts the number of all of voice calls, which have generated CDRs.

Data Source

SDM

Source Field

TOTCDR + 65536 * TOTCDRX

Source Section

MTXUSCR

TREAT

This register counts of the number of voice calls with treatment, whose value of field TRMTCD in CDR is none of the following: NTRS, CDAS, CDDS, RFCS, BUSY, ANTO, MBIA

Data Source

SDM

Source Field

TREAT + 65536 * TREATX

Source Section

MTXUSCR

VTREAT

This register counts of the number of voice calls with valid treatments, whose value of field TRMTCD in CDR is one of the following: NTRS, CDAS, CDDS, RFCS, BUSY, ANTO, MBIA

Data Source

SDM

Source Field

VTREAT + 65536 * VTREATX

Calculation

DAYSINREPORT ()

NUMHOURS

of hours in Summation Data

Calculation

RxBroadcastPacketDiscard11pMSW

The total number of received broadcast packets that were discarded due to an invalid BCN address for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),RxBroadcastPacketDiscard))
```

RxBroadcastPacketDiscards24pBCNW

The total number of received broadcast packets that were discarded due to an invalid BCN address for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),RxBroadcastPacketDiscard))
```

RxOctets11pMSW

The total number of octets of the packets received by the BCN interface for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),RxOctets))
```

RxOctets24pBCNW

The total number of octets of the packets received by the BCN interface for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),RxOctets))
```

RxPacketDiscards11pMSW

The total number of packets that could not be received due to protocol errors or lack of resources for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),RxPacketDiscards))
```

RxPacketDiscards24pBCNW

The total number of packets that could not be received due to protocol errors or lack of resources for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW", FunctionalProc.BcnIf, (tokenize(Functional-  
Proc.LocalKey, ":", 0))), RxPacketDiscards))
```

RxPacketDiscards4pOC3

The total number of packets that could not be received due to protocol errors or lack of resources for 4pOC3.

Calculation

```
vsum(sum(bridgelist("4POC3", FunctionalProc.BcnIf, (tokenize(Functional-  
Proc.LocalKey, ":", 0))), RxPacketDiscards))
```

RxPackets11pMSW

The total number of packets received from the BCN interface for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW", FunctionalProc.BcnIf, (tokenize(Functional-  
Proc.LocalKey, ":", 0))), RxPackets))
```

RxPackets24pBCNW

The total number of packets received from the BCN interface for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW", FunctionalProc.BcnIf, (tokenize(Functional-  
Proc.LocalKey, ":", 0))), RxPackets))
```

RxPackets4pOC3

The total number of packets received from the BCN interface for 4pOC3.

Calculation

```
vsum(sum(bridgelist("4POC3", FunctionalProc.BcnIf, (tokenize(Functional-  
Proc.LocalKey, ":", 0))), RxPackets))
```

TotalTxPacket11pMSW

The total number of packets transmitted from the BCN interface including discarded packets for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPackets + TxPacketDiscards))
```

TotalTxPacket24pBCNW

The total number of packets transmitted from the BCN interface including discarded packets for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPackets + TxPacketDiscards))
```

TotalTxPacket4pOC3

The total number of packets transmitted from the BCN interface including discarded packets for 4pOC3.

Calculation

```
vsum(sum(bridgelist("4POC3",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPackets + TxPacketDiscards))
```

TxOctets11pMSW

The total number of octets transmitted from the BCN interface for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxOctets))
```

TxOctets24pBCNW

The total number of octets transmitted from the BCN interface for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxOctets))
```

TxPacketDiscardPriority1_11pMSW

The total number of priority 1 packets that could not be transmitted due to queue congestion and HEC errors for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPacketDiscardPriority1))
```

TxPacketDiscardPriority1_24pBCNW

The total number of priority 1 packets that could not be transmitted due to queue congestion and HEC errors for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPacketDiscardPriority1))
```

TxPacketDiscardPriority1_4pOC3

The total number of priority 1 packets that could not be transmitted due to queue congestion and HEC errors for 4pOC3.

Calculation

```
vsum(sum(bridgelist("4POC3",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPacketDiscardPriority1))
```

TxPacketDiscardPriority2_11pMSW

The total number of priority 2 packets that could not be transmitted due to queue congestion and HEC errors for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPacketDiscardPriority2))
```

TxPacketDiscardPriority2_24pBCNW

The total number of priority 2 packets that could not be transmitted due to queue congestion and HEC errors for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPacketDiscardPriority2))
```

TxPacketDiscardPriority2_4pOC3

The total number of priority 2 packets that could not be transmitted due to queue congestion and HEC errors for 4pOC3.

Calculation

```
vsum(sum(bridgelist("4POC3",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPacketDiscardPriority2))
```

TxPacketDiscards11pMSW

The total number of packets that could not be transmitted due to protocol errors or lack of resources for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPacketDiscards))
```

TxPacketDiscards24pBCNW

The total number of packets that could not be transmitted due to protocol errors or lack of resources for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPacketDiscards))
```

TxPacketDiscards4pOC3

The total number of packets that could not be transmitted due to protocol errors or lack of resources for 4pOC3.

Calculation

```
vsum(sum(bridgelist("4POC3",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPacketDiscards))
```

TxPackets11pMSW

The total number of packets transmitted from the BCN interface for 11pMSW.

Calculation

```
vsum(sum(bridgelist("11PMSW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPackets))
```

TxPackets24pBCNW

The total number of packets transmitted from the BCN interface for 24pBCNW.

Calculation

```
vsum(sum(bridgelist("24PBCNW",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPackets))
```

TxPackets4pOC3

The total number of packets transmitted from the BCN interface for 4pOC3.

Calculation

```
vsum(sum(bridgelist("4POC3",FunctionalProc.BcnIf,(tokenize(Functional-Proc.LocalKey,":",0))),TxPackets))
```

Soft Handoff Overhead Percentage

Calculation

$(100.0 * (CE_USER - 1) / (CE_USER))$

Cell_Carrier Peg Counts

The following is a list of peg counts for the Cell_Carrier entity.

Fch2GMaximumForwardPhysicalResourcesUsed

A high water mark for the number of XCEM resources being used for 2G calls on the forward fundamental channel at any time during the reporting period.

Data Source

NBSS BTS MO

Source Field

Fch2GMaximumForwardPhysicalResourcesUsed (Seq# 75)

Source Section

Advanced Frequency Assignment (FA) MO

Fch2GMaximumReversePhysicalResourcesUsed

A high water mark for the number of XCEM resources being used for 2G calls on the reverse fundamental channel at any time during the reporting period.

Data Source

NBSS BTS MO

Source Field

Fch2GMaximumReversePhysicalResourcesUsed (Seq# 80)

Source Section

Advanced Frequency Assignment (FA) MO

Fch3GMaximumForwardPhysicalResourcesUsed

A high water mark for the number of XCEM resources being used for 3G calls on the forward fundamental channel at any time during the reporting period.

Data Source

NBSS BTS MO

Source Field

Fch3GMaximumForwardPhysicalResourcesUsed (Seq# 76)

```

pNoRsrc_fq

MCTA frequency resource allocation failure percentage by carrier due to lack of physical resources

Calculation

```
(100.0 * NoRsrc_fq / vsum(aggr(Sector_Carrier,MCTORIGS),  
aggr(Sector_Carrier,MCTPGRES), CAUHATTS,0))
```

pNoRsrc_fq3GD

3G Data MCTA frequency resource allocation failure percentage by carrier due to lack of physical resources

Calculation

```
(100.0 * NoRsrc_fq3GD / vsum(aggr(Sector_Carrier,MCTORIGS3GD),  
aggr(Sector_Carrier,MCTPGRES3GD), CAUHATTS3GD,0))
```

pNoRsrc_fq3GV

3G Voice MCTA frequency resource allocation failure percentage by carrier due to lack of physical resources

Calculation

```
(100.0 * NoRsrc_fq3GV / vsum(aggr(Sector_Carrier,MCTORIGS3GV),  
aggr(Sector_Carrier,MCTPGRES3GV), CAUHATTS3GV,0))
```

pNoRsrc3GD

3G Data MCTA frequency resource allocation failure percentage due to lack of physical resources

Calculation

```
(100.0 * vsum(MCTALLFU3GD, aggr(Sector_Carrier,MCTARQFN3GD),  
aggr(Sector_Carrier,MCTAREQN3GD),0) /  
vsum(aggr(Sector_Carrier,MCTORIGS3GD), aggr(Sector_Carrier,MCTPGRES3GD),  
CAUHATTS3GD,0))
```

pNoRsrc3GV

3G Voice MCTA frequency resource allocation failure percentage due to lack of physical resources

Calculation

```
(100.0 * vsum(MCTALLFU3GV, aggr(Sector_Carrier,MCTARQFN3GV),  
aggr(Sector_Carrier,MCTAREQN3GV),0) /  
vsum(aggr(Sector_Carrier,MCTORIGS3GV), aggr(Sector_Carrier,MCTPGRES3GV),  
CAUHATTS3GV,0))
```

pNtwk

Percentage of calls dropped to non-RF reasons

Calculation

```
(100.0 * CAUDROPN /vsum(sum(Sector_Carrier,MCTOSUCC),  
sum(Sector_Carrier,MCTTSUCC), sum(Sector_Carrier,MCTHSUCC),0))
```

pNtwk3GD

Percentage of 3G Data calls dropped to non-RF reasons

Calculation

```
(100.0 * CAUDROPN3GD / vsum(sum(Sector_Carrier,MCTOSUCC3GD),  
sum(Sector_Carrier,MCTTSUCC3GD), sum(Sector_Carrier,MCTHSUCC3GD),0))
```

pNtwk3GV

Percentage of 3G Voice calls dropped to non-RF reasons

Calculation

```
(100.0 * CAUDROPN3GV /vsum(sum(Sector_Carrier,MCTOSUCC3GV),  
sum(Sector_Carrier,MCTTSUCC3GV), sum(Sector_Carrier,MCTHSUCC3GV),0))
```

pRF

Percentage of calls dropped due to RF-related call failure reasons

Calculation

```
(100.0 * CAUDROPR / vsum(sum(Sector_Carrier,MCTOSUCC),  
sum(Sector_Carrier,MCTTSUCC), sum(Sector_Carrier,MCTHSUCC),0))
```

pRF3GD

Percentage of 3G Data calls dropped due to RF-related call failure reasons

Calculation

$$(100.0 * \text{CAUDROPR3GD} / \text{vsum}(\text{sum}(\text{Sector_Carrier}, \text{MCTOSUCC3GD}), \text{sum}(\text{Sector_Carrier}, \text{MCTTSUCC3GD}), \text{sum}(\text{Sector_Carrier}, \text{MCTHSUCC3GD}), 0))$$

pRF3GV

Percentage of 3G Voice calls dropped due to RF-related call failure reasons

Calculation

$$(100.0 * \text{CAUDROPR3GV} / \text{vsum}(\text{sum}(\text{Sector_Carrier}, \text{MCTOSUCC3GV}), \text{sum}(\text{Sector_Carrier}, \text{MCTTSUCC3GV}), \text{sum}(\text{Sector_Carrier}, \text{MCTHSUCC3GV}), 0))$$

pScreenCalls

Percentage of call setups interrupted due to unauthenticated mobile or mobile initiated release or land-side release

Calculation

$$(100.0 * \text{ScreenCalls} / \text{vsum}(\text{CAUOATTS}, \text{CAUPGRES}, \text{CAUHATTS}, 0))$$

pScreenCalls3GD

Percentage of 3G Data call setups interrupted due to unauthenticated mobile or mobile initiated release or land-side release

Calculation

$$(100.0 * \text{ScreenCalls3GD} / \text{vsum}(\text{CAUOATTS3GD}, \text{CAUPGRES3GD}, \text{CAUHATTS3GD}, 0))$$

pScreenCalls3GV

Percentage of 3G Voice call setups interrupted due to unauthenticated mobile or mobile initiated release or land-side release

Calculation

$$(100.0 * \text{ScreenCalls3GV} / \text{vsum}(\text{CAUOATTS3GV}, \text{CAUPGRES3GV}, \text{CAUHATTS3GV}, 0))$$

pSysReqDtoA_HandoffDrops

Percent calls dropped during system requested Digital to Analog handoffs

Calculation

$$(100.0 * (\text{DAHOATTS} - \text{DAHOCOMP}) / \text{DAHOATTS})$$

pTimeOut

MCTA frequency resource allocation failure percentage due to time-outs

Calculation

```
(100.0 * TimeOut / vsum(aggr(Sector_Carrier,MCTORIGS),  
aggr(Sector_Carrier,MCTPGRES), CAUHATTS,0))
```

pTimeOut_fq

MCTA frequency resource allocation failure percentage by carrier due to time-outs

Calculation

```
(100.0 * TimeOut_fq / vsum(aggr(Sector_Carrier,MCTORIGS),  
aggr(Sector_Carrier,MCTPGRES), CAUHATTS,0))
```

pTimeOut_fq3GD

3G Data MCTA frequency resource allocation failure percentage by carrier due to time-outs

Calculation

```
(100.0 * TimeOut_fq3GD / vsum(aggr(Sector_Carrier,MCTORIGS3GD),  
aggr(Sector_Carrier,MCTPGRES3GD), CAUHATTS3GD,0))
```

pTimeOut_fq3GV

3G Voice MCTA frequency resource allocation failure percentage by carrier due to time-outs

Calculation

```
(100.0 * TimeOut_fq3GV / vsum(aggr(Sector_Carrier,MCTORIGS3GV),  
aggr(Sector_Carrier,MCTPGRES3GV), CAUHATTS3GV,0))
```

pTimeOut3GD

3G Data MCTA frequency resource allocation failure percentage due to time-outs

Calculation

```
(100.0 * TimeOut3GD / vsum(aggr(Sector_Carrier,MCTORIGS3GD),  
aggr(Sector_Carrier,MCTPGRES3GD), CAUHATTS3GD,0))
```

pTimeOut3GV

3G Voice MCTA frequency resource allocation failure percentage due to time-outs

Calculation

```
(100.0 * TimeOut3GV / vsum(aggr(Sector_Carrier,MCTORIGS3GV),  
aggr(Sector_Carrier,MCTPGRES3GV), CAUHATTS3GV,0))
```

pTotalBlocks

Total call setup failure percentage due to resource shortage on originations and terminations and hard handoffs

Calculation

$(100.0 * \text{TotalBlocks} / \text{vsum}(\text{CAUOATTS}, \text{CAUPGRES}, \text{CAUHATTS}, 0))$

pTotalBlocks3GD

Total 3G Data call setup failure percentage due to resource shortage on originations and terminations and hard handoffs

Calculation

$(100.0 * \text{TotalBlocks3GD} / \text{vsum}(\text{CAUOATTS3GD}, \text{CAUPGRES3GD}, \text{CAUHATTS3GD}, 0))$

pTotalBlocks3GV

Total 3G Voice call setup failure percentage due to resource shortage on originations and terminations and hard handoffs

Calculation

$(100.0 * \text{TotalBlocks3GV} / \text{vsum}(\text{CAUOATTS3GV}, \text{CAUPGRES3GV}, \text{CAUHATTS3GV}, 0))$

ScreenCalls

Call setup interrupted due to unauthenticated mobile or mobile initiated release or land-side release

Calculation

$(\text{vsum}(\text{CAUORLS}, \text{CAUTRLS}, \text{CAUHRLS}, \text{CAUORODR}, 0))$

ScreenCalls3GD

3G Data Call setup interrupted due to unauthenticated mobile or mobile initiated release or land-side release

Calculation

$(\text{vsum}(\text{CAUORLS3GD}, \text{CAUTRLS3GD}, \text{CAUHRLS3GD}, \text{CAUORODR3GD}, 0))$

ScreenCalls3GV

3G Voice Call setup interrupted due to unauthenticated mobile or mobile initiated release or land-side release

Calculation

$(\text{vsum}(\text{CAUORLS3GV}, \text{CAUTRLS3GV}, \text{CAUHRLS3GV}, \text{CAUORODR3GV}, 0))$

SLNTRT2G

Silent Retry 2G

Calculation

`vsum(SLNTRT2G_MTX12, SLNTRT2G_MTX13, 0)`

SLNTRT3D

Silent Retry 3G Data

Calculation

`vsum(SLNTRT3D_MTX12, SLNTRT3D_MTX13, 0)`

SLNTRT3V

Silent Retry 3G Voice

Calculation

`vsum(SLNTRT3V_MTX12, SLNTRT3V_MTX13, 0)`

SLNTRTAF

Alternate peg name for SILNTRT2

Calculation

`vsum(SILNTRT2, SLNTRTAF_MTX13, 0)`

SRTDBO2G

Double Origination 2G

Calculation

`vsum(SRTDBO2G_MTX12, SRTDBO2G_MTX13, 0)`

SRTDBO3D

Double Origination 3G Data

Calculation

`vsum(SRTDBO3D_MTX12, SRTDBO3D_MTX13, 0)`

SRTDBO3V

Double Origination 3G Voice

Calculation

`vsum(SRTDBO3V_MTX12, SRTDBO3V_MTX13, 0)`

SRTDBORG

Alternate peg name for SILENTRT

Calculation

`vsum(SILENTRT, SRTDBORG_MTX13, 0)`

SysReqDtoA_HandoffDrops

Calls dropped during system requested Digital to Analog handoffs

Calculation

`(DAHOATTS - DAHOCOMP)`

TimeOut

MCTA frequency resource allocation failures due to time-outs

Calculation

`(vsum(MCTAREQF, MCTAHRQF, 0) - vsum(MCTALLFU, aggr(Sector_Carrier, MCTARQFN), 0))`

TimeOut_fq

MCTA frequency resource allocation failures by carrier due to time-outs

Calculation

`(aggr(Sector_Carrier, MCTAREQT))`

TimeOut_fq3GD

3G Data MCTA frequency resource allocation failures by carrier due to time-outs

Calculation

`(aggr(Sector_Carrier, MCTAREQT3GD))`

TimeOut_fq3GV

3G Voice MCTA frequency resource allocation failures by carrier due to time-outs

Calculation

`(aggr(Sector_Carrier, MCTAREQT3GV))`

TimeOut3GD

3G Data MCTA frequency resource allocation failures due to time-outs

Calculation

$(\text{vsum}(\text{MCTAREQF3GD}, \text{MCTAHRQF3GD}, 0) - \text{vsum}(\text{MCTALLFU3GD}, \text{aggr}(\text{Sector_Carrier}, \text{MCTARQFN3GD}), 0))$

TimeOut3GV

3G Voice MCTA frequency resource allocation failures due to time-outs

Calculation

$(\text{vsum}(\text{MCTAREQF3GV}, \text{MCTAHRQF3GV}, 0) - \text{vsum}(\text{MCTALLFU3GV}, \text{aggr}(\text{Sector_Carrier}, \text{MCTARQFN3GV}), 0))$

TotalBlocks

Total call setup failures due to resource shortage on originations and terminations and hard handoffs

Calculation

$(\text{vsum}(\text{CAUOBLKS}, \text{CAUTBLKS}, \text{CAUHBLKS}, 0))$

TotalBlocks3GD

Total 3G Data call setup failures due to resource shortage on originations and terminations and hard handoffs

Calculation

$(\text{vsum}(\text{CAUOBLKS3GD}, \text{CAUTBLKS3GD}, \text{CAUHBLKS3GD}, 0))$

TotalBlocks3GV

Total 3G Voice call setup failures due to resource shortage on originations and terminations and hard handoffs

Calculation

$(\text{vsum}(\text{CAUOBLKS3GV}, \text{CAUTBLKS3GV}, \text{CAUHBLKS3GV}, 0))$

Cell_Sector Peg Counts

The following is a list of peg counts for the Cell_Sector entity.

ABOVETH

Pegs when a Loc channel Rcvr response msg is Rcvd from the serving subcell

Data Source

MTX OM, SDM

Source Field

ABOVETH

Source Section

OMMTXHO

ADHOFF

Pegs when an analog-to-digital Ho has been Comp against the target subcell

Data Source

MTX OM, SDM

Source Field

ADHOFF

Source Section

OMMTXHO

AHRLPFL

Pegs RLP failures for packet data calls during active handoff.

Data Source

MTX OM, SDM

Source Field

AHRLPFL

Source Section

MTXPDSCT

ARGPTOAA

This partition-based register counts the Num of ACCH registrations for mobiles

Data Source

MTX OM, SDM

Source Field

ARGPTOAA

Source Section

OMMTX2

AUTHSMSF

Authentication on SMS Originations Failures

Data Source

MTX OM, SDM

Source Field

AUTHSMSF

Source Section

OMMTX3

AUTHSMSO

Authentication on SMS Originations attempts

Data Source

MTX OM, SDM

Source Field

AUTHSMSO

Source Section

OMMTX3

AUTHSMSS

Authentication on SMS Originations Successes

Data Source

MTX OM, SDM

Source Field

AUTHSMSS

Source Section

OMMTX3

BAMEDLOT

Counts the number of BAM Error Drop Loss of Traffic Failures

Data Source

MTX OM, SDM

Source Field

BAMEDLOT

Source Section

BAMCPSCT

BAMERLFL

Counts the number of BAM Error Radio Link Failure

Data Source

MTX OM, SDM

Source Field

BAMERLFL

Source Section

BAMCPSCT

BAMOATTS

Counts the number of BAM Origination Attempts

Data Source

MTX OM, SDM

Source Field

BAMOATTS

Source Section

BAMCPSCT

BAMOSUCC

Counts the number of BAM Origination Success

Data Source

MTX OM, SDM

Source Field

BAMOSUCC

Source Section

BAMCPSCT

BAMPGRES

Counts the number of BAM Page Response

Data Source

MTX OM, SDM

Source Field

BAMPGRES

Source Section

BAMCPSCT

BAMTSUCC

Counts the number of BAM Termination Success

Data Source

MTX OM, SDM

Source Field

BAMTSUCC

Source Section

BAMCPSCT

BAMWPSRT

Counts the number of BAM Wireless Priority Service ReTry attempts

Data Source

MTX OM, SDM

Source Field

BAMWPSRT

Source Section

BAMCPSCT

BORANCPG

Pegs on the border system for the anchor cell used to determine the zone to page

Data Source

MTX OM, SDM

Source Field

BORANCPG

Source Section

OMMTX3

BORPGRES

Pegs on the border system when a page response is received from this sector

Data Source

MTX OM, SDM

Source Field

BORPGRES

Source Section

OMMTX3

BORPGRQ1

Border cell 1st page requests

Data Source

MTX OM, SDM

Source Field

BORPGRQ1

Source Section

OMMTXHO

CAUAHATT

Records when all Access Ho criteria have been satisfied

Data Source

MTX OM, SDM

Source Field

CAUAHATT

Source Section

CAUARSCT

CAUAHFL

Records when criteria for the CAUAHATT are met and CAU doesn't receive a msg from BSC

Data Source

MTX OM, SDM

Source Field

CAUAHFL

Source Section

CAUARSCT

CAUAHRLS

CAU Access Handoff ReLeaSe.

Data Source

MTX OM, SDM

Source Field

CAUAHRLS

Source Section

CAUARSCT

CAUAHSUC

Records CAU msg from the BSC indicating that the mobile has moved to a Tch

Data Source

MTX OM, SDM

Source Field

CAUAHSUC

Source Section

CAUARSCT

CAUCHATT

Pegged for the Orgn sector when all Ch Ass into Soft Ho criteria have been satisfied

Data Source

MTX OM, SDM

Source Field

CAUCHATT

Source Section

CAUARSCT

CAUCHFL

Records when the CAU does not receive a msg from the BSC to indicate that the mobile has moved to a Tch

Data Source

MTX OM, SDM

Source Field

CAUCHFL

Source Section

CAUARSCT

CAUCHRLS

CAU CHannel assignment into soft handoff ReLeaSe.

Data Source

MTX OM, SDM

Source Field

CAUCHRLS

Source Section

REGCOMPS_MTXom30

Pegs when the switch successfully processes a Reg msg from the serving subcell

Data Source

MTX OM

Source Field

REGCOMPS_MTXom30

Source Section

OMMTX_MTXom30

RESPOVFL

Pegs when an LCR response msg is Rcvd by the serving subcell after seven response msgs have been sent

Data Source

MTX OM, SDM

Source Field

RESPOVFL

Source Section

OMMTXHO2

RGRSSILO

Switch receives a Reg msg and the adj CCH RSSI value is less than the min threshold value

Data Source

MTX OM, SDM

Source Field

RGRSSILO

Source Section

OMMTX2

SACELPRS

Counts the Num of ACCH audit order confirms Rcvd on the cell to which the 1st Pg is sent

Data Source

MTX OM, SDM

Source Field

SACELPRS

Source Section

MTXSMS

SADDLVY

Counts the Num of ACCH data delivery msg sent that responded to the page attempt

Data Source

MTX OM, SDM

Source Field

SADDLVY

Source Section

MTXSMS

SADDRS

Counts the Num of ACCH data delivery Resp Rcvd on this partition

Data Source

MTX OM, SDM

Source Field

SADDRS

Source Section

MTXSMS

SAFRSPG

Counts the Num of SMS ACCH initial audit order attempt sent to this partition

Data Source

MTX OM, SDM

Source Field

SAFRSPG

Source Section

MTXSMS

SAFRSPGR

Counts the Num of SMS ACCH audit order confirmation messages

Data Source

MTX OM, SDM

Source Field

SAFRSPGR

Source Section

MTXSMS

SAOZPRS

Counts the Num of ACCH SMS page Resp that came from outside the partition

Data Source

MTX OM, SDM

Source Field

SAOZPRS

Source Section

MTXSMS

SAPGRT

Counts the SMS CM ACCH audit order retries sent to this partition

Data Source

MTX OM, SDM

Source Field

SAPGRT

Source Section

MTXSMS

SAPGRTR

Counts the Num of ACCH SMS audit order confirms Rcvd on the partition

Data Source

MTX OM, SDM

Source Field

SAPGRTR

Source Section

MTXSMS

SAZNPRS

Counts the Num ACCH page Resp that come from the partition that was sent the page

Data Source

MTX OM, SDM

Source Field

SAZNPRS

Source Section

MTXSMS

SCTBTSBK

Pegs anytime a BTS reports the resource setup reason as either no T1E1 backhaul resources are available or no BCN link resources are available or no ACN Node IDs are available

Data Source

MTX OM, SDM

Source Field

SCTBTSBK

Source Section

CAUCPSCT

SCTBTSBK3GD

3GD Pegs anytime a BTS reports the resource setup reason as either no T1E1 backhaul resources are available or no BCN link resources are available or no ACN Node IDs are available

Data Source

MTX OM, SDM

Source Field

SCTBTSBK

Source Section

CAUSCT3D

SCTBTSBK3GV

3GV Pegs anytime a BTS reports the resource setup reason as either no T1E1 backhaul resources are available or no BCN link resources are available or no ACN Node IDs are available

Data Source

MTX OM, SDM

Source Field

SCTBTSBK

Source Section

CAUSCT3V

SDCELPRS

Counts the Num of DCCH SPACH confirmation messages Rcvd on the cell

Data Source

MTX OM, SDM

Source Field

SDCELPRS

Source Section

MTXSMS

SDDDLVY

Counts the Num of DCCH R-data msg sent to the partition that responded to the page attempt

Data Source

MTX OM, SDM

Source Field

SDDDLVY

Source Section

MTXSMS

SDDDRS

Counts the Num of DCCH R-data confirmation messages Rcvd on this partition

Data Source

MTX OM, SDM

Source Field

SDDDRS

Source Section

MTXSMS

SDFRSPG

Counts the Num of SMS DCCH initial SPACH notification message attempt sent

Data Source

MTX OM, SDM

Source Field

SDFRSPG

Source Section

MTXSMS

SDFRSPGR

Counts Num of SMS DCCH SPACH confirmation msg the partition receives

Data Source

MTX OM, SDM

Source Field

SDFRSPGR

Source Section

MTXSMS

SDPCULKF

Obsolete in MTX14. 3G mobile initiated Short Data burst PCU LookUp Failure

Data Source

MTX OM, SDM

Source Field

SDPCULKF

Source Section

CAUDAT3G

SDPCULKR

Obsolete in MTX14. 3G Mobile Initiated Short Data burst PCU LookUp Request

Data Source

MTX OM, SDM

Source Field

SDPCULKR

Source Section

CAUDAT3G

SDPGRT

Counts Num of SMS CM DCCH SPACH notification msg retries sent to this partition

Data Source

MTX OM, SDM

Source Field

SDPGRT

Source Section

MTXSMS

SDPGRTR

Counts Num of DCCH SMS SPACH confirmation msg Rcvd on the partition

Data Source

MTX OM, SDM

Source Field

SDPGRTR

Source Section

MTXSMS

SDVMPRS

Counts the Num DCCH SPACH confirmation messages that come from the VMLA

Data Source

MTX OM, SDM

Source Field

SDVMPRS

Source Section

MTXSMS

SILENTRT

An origination attempt is received while a previous origination had been received from the same mobile within a time interval defined by the Office Parameter

Data Source

MTX OM, SDM

Source Field

SILENTRT + 65536 * SILNTRT2

Source Section

OMMTX3

SILNTRT2

An origination attempt is received while a previous origination had been received from the same mobile within a time interval defined by the Office Parameter

Data Source

MTX OM, SDM

Source Field

SILNTRT2

Source Section

OMMTX3

SLTPGRES

Pegs when a mobile station in slotted mode responds to a page within DMACONF

Data Source

MTX OM, SDM

Source Field

SLTPGRES

Source Section

CAUCPSCT

SLTPGRES_MTXom30

Pegs when a mobile station in slotted mode responds to a page within DMACONF

Data Source

MTX OM

Source Field

SLTPGRES_MTXom30

Source Section

CAUCPSCT_MTXom30

SLTPGRES3GD

3GD Pegs when a mobile station in slotted mode responds to a page within CDMACONF.CAUPGTO seconds.

Data Source

MTX OM, SDM

Source Field

SLTPGRES

Source Section

CAUSCT3D

SLTPGRES3GD_MTXom30

3GD Pegs when a mobile station in slotted mode responds to a page within CDMACONF.CAUPGTO seconds.

Data Source

MTX OM

Source Field

SLTPGRES3GD_MTXom30

Source Section

CAUSCT3D_MTXom30

SLTPGRES3GV

3GV Pegs when mobile station in slotted mode Responds to page within CDMACONF.CAUPGTO Secs.

Data Source

MTX OM, SDM

Source Field

SLTPGRES

Source Section

CAUSCT3V

SLTPGRES3GV_MTXom30

3GV Pegs when mobile station in slotted mode Responds to page within
CDMACONF.CAUPGTO Secs.

Data Source

MTX OM

Source Field

SLTPGRES3GV_MTXom30

Source Section

CAUSCT3V_MTXom30

SLTPGRRS

Pegs when a mobile station in slotted mode responds to the repage within seconds

Data Source

MTX OM, SDM

Source Field

SLTPGRRS

Source Section

CAUCPSCT

SLTPGRRS_MTXom30

Pegs when a mobile station in slotted mode responds to the repage within seconds

Data Source

MTX OM

Source Field

SLTPGRRS_MTXom30

Source Section

CAUCPSCT_MTXom30

SMOATBTC

CAU receives a SMS data burst msg from a mobile (in a call) over the busy Tch

Data Source

MTX OM, SDM

Source Field

SMOATBTC

Source Section

CAUDATSC

SMOATITC

CAU receives a SMS data burst msg from an idle mobile over the Tch

Data Source

MTX OM, SDM

Source Field

SMOATITC

Source Section

CAUDATSC

SMOATTAC

Pegs when the CAU receives a SMS data burst msg from an idle mobile over the access

Data Source

MTX OM, SDM

Source Field

SMOATTAC

Source Section

CAUDATSC

SMOCSFTC

Pegs when call setup over the idle Tch in order for the mobile to send a long SMS msg

Data Source

MTX OM, SDM

Source Field

SMOCSFTC

Source Section

CAUDATSC

SMOCSRAC

CAU receives a Org msg with service option 6 from an idle mobile over the access channel

Data Source

MTX OM, SDM

Source Field

SMOCSRAC

Source Section

CAUDATSC

SMOCSSTC

Mobile is successfully ordered to an idle Tch for purpose of sending a long SMS msg

Data Source

MTX OM, SDM

Source Field

SMOCSSTC

Source Section

CAUDATSC

SMOFABTC

CAU sends an unsuccessful SMS data burst ack msg to a mobile over the busy Tch

Data Source

MTX OM, SDM

Source Field

SMOFABTC

Source Section

CAUDATSC

SMOFAIAC

CAU sends an unsuccessful SMS data burst ack msg to an idle mobile over the access

Data Source

MTX OM, SDM

Source Field

SMOFAIAC

Source Section

CAUDATSC

SMOFAITC

CAU sends an unsuccessful SMS data burst ack msg to an idle mobile over the Tch

CAUDATSC

SMSDVCAT

Pegs when an attempt is made to deliver a short msg to a mobile active in a call

Data Source

MTX OM, SDM

Source Field

SMSDVCAT

Source Section

CAUDATSC

SMSDVCFL

SMSDVCFL

Data Source

MTX OM, SDM

Source Field

SMSDVCFL

Source Section

CAUDATSC

SMSDVCSC

Pegs when a short msg is successfully delivered to a mobile active in a call

Data Source

MTX OM, SDM

Source Field

SMSDVCSC

Source Section

CAUDATSC

SMSNOVLR

Number of SMS origination attempts with No VLR or HLRCONFIRM field in the VLR set to N.

Data Source

MTX OM, SDM

Source Field

SMSNOVLR

Source Section

OMMTX3

SMSORATS

Attempt is made to move from the Pg channel to Tch for delivering a short msg

Data Source

MTX OM, SDM

Source Field

SMSORATS

Source Section

CAUDATSC

SMSORCFL

Number of times SMS origination fails due to resource allocation failures.

Data Source

MTX OM, SDM

Source Field

SMSORCFL

Source Section

CAUDATSC

SMSORSUC

Mobile is successfully moved from the Pg Ch to Tch during an attempt to dlvr a short msg

Data Source

MTX OM, SDM

Source Field

SMSORSUC

Source Section

CAUDATSC

SMSPGRES

Mobile responds to a page within the Num of seconds defined by the office parameter

Data Source

MTX OM, SDM

Source Field

SMSPGRES

Source Section

CAUDATSC

SMSPRRES

SMS Page Retry Response

Data Source

MTX OM, SDM

Source Field

SMSPRRES

Source Section

CAUDATSC

SMSPRRO

Pegs for an SMS call when a paging channel Redirection is sent out to the mobile to move to a carrier on the alternate band and re-send an origination message.

Data Source

MTX OM

Source Field

SMSPRRO

Source Section

CAUDATSC

SMSPRRT

Pegs for an SMS call when a paging channel Redirection is sent out to the mobile to move to a carrier on the alternate band and re-send a page response.

Data Source

MTX OM

Source Field

SMSPRRT

Source Section

CAUDATSC

SMSPRSO

Pegs for an SMS call when the mobile re-send an origination message after it was redirected to the alternate band

Data Source

MTX OM

Source Field

SMSPRSO

Source Section

CAUDATSC

SMSPRST

Pegs for an SMS call when the mobile re-send a page response after it was redirected to the alternate band.

Data Source

MTX OM

Source Field

SMSPRST

Source Section

CAUDATSC

SMSRDTCA

When CAU receives origination message with service option 14, this service option is redirected to service option 6. This register is pegged when traffic channel assignment is attempted using service option 6 after this redirection.

Data Source

SDM

Source Field

SMSRDTCA

Source Section

CAUDATS2

SMSRDTCF

When CAU receives origination message with service option 14, this service option is redirected to service option 6. This register is pegged when traffic channel assignment attempt using service option 6 after this redirection fails.

Data Source

SDM

Source Field

SMSRDTCF

Source Section

CAUDATS2

SMSRDTCS

When CAU receives origination message with service option 14, this service option is redirected to service option 6. This register is pegged when traffic channel assignment attempt using service option 6 after this redirection is successful.

Data Source

SDM

Source Field

SMSRDTCS

Source Section

CAUDATS2

SMSSO14R

Pegs when origination message is received with service option 14.

Data Source

SDM

Source Field

SMSSO14R

Source Section

CAUDATS2

SMSTATPG

SMSTATPG

Data Source

MTX OM, SDM

Source Field

SMSTATPG

Source Section

CAUDATSC

SMSTATTC

Pegs when an attempt is made to deliver an SMS to an idle mobile over traffic channel.

Data Source

MTX OM, SDM

Source Field

SMSTATTC

Source Section

CAUDATS2

SMSTFLPG

Pegs when the delivery of a short msg to a mobile over the Pg channel fails

Data Source

MTX OM, SDM

Source Field

SMSTFLPG

Source Section

CAUDATSC

SMSTFLTC

Pegs when the delivery of a short msg to an idle mobile over the Tch fails

Short msg is successfully delivered to a mobile over the Pg channel

Data Source

MTX OM, SDM

Source Field

SMSTSCPG

Source Section

CAUDATSC

SMSTSTC

Pegs when a short msg is successfully delivered to an idle mobile over the Tch

Data Source

MTX OM, SDM

Source Field

SMSTSTC

Source Section

CAUDATSC

SMSTSEFL

Pegs when a short msg cannot be delivered to an idle mobile over the Tch

Data Source

MTX OM, SDM

Source Field

SMSTSEFL

Source Section

CAUDATSC

SMSTSOFL

Short msg cannot be delivered to an idle mobile due to the Fail or shortage of service option

Data Source

MTX OM, SDM

Source Field

SMSTSOFL

Source Section

CAUDATSC

SMTEMATS

Pegs when an attempt is made to deliver a short message to a mobile active in an EMS session.

Data Source

MTX OM, SDM

Source Field

SMTEMATS

Source Section

CAUDATSC

SMTEMSFL

Pegs upon the failure to deliver a short message to a mobile active in an EMS session.

Data Source

MTX OM, SDM

Source Field

SMTEMSFL

Source Section

CAUDATSC

SMTEMSUC

Pegs when a short message has been successfully delivered to mobile active in an EMS session.

Data Source

MTX OM, SDM

Source Field

SMTEMSUC

Source Section

CAUDATSC

STIMEOUT

Pegs when the switch receives a SAT failure msg or a DVCC failure msg from the serving subcell during call setup

Data Source

MTX OM, SDM

Source Field

STIMEOUT

Source Section

OMMTX

STIMEOUT_MTXom30

Pegs when the switch receives a SAT failure msg or a DVCC failure msg from the serving subcell during call setup

Data Source

MTX OM

Source Field

TERMMWT

Tone info of a MWT msg is sent to the peripheral stating the termination of a call

Data Source

MTX OM, SDM

Source Field

TERMMWT

Source Section

OMMTX2

TIMBSREG

Pegs when the mobile Reg type is timer-based Reg

Data Source

MTX OM, SDM

Source Field

TIMBSREG

Source Section

OMMTX3

UXPGATCC

Unexpected page response msg occurs on the serving subcell

Data Source

MTX OM, SDM

Source Field

UXPGATCC

Source Section

OMMTX2

UZPOAL

This register pegs when packet data call is allowed to be set up after user zone screening for origination message from Limited Mobility mobile.

Data Source

SDM

Source Field

UZPOAL

Source Section

UZLMOM

UZPOAT

This register pegs when the MSC receives a packet data call origination message from a Limited Mobility mobile.

Data Source

SDM

Source Field

UZPOAT

Source Section

UZLMOM

UZPODN

This register pegs when packet data call is NOT allowed to be set up after user zone screening for origination message from Limited Mobility mobile.

Data Source

Cell_Sector Roll-up Fields

The following is a list of roll-up fields for the Cell_Sector entity.

MCTDROPR

Pegs when a MCTA call Drp during conversation

MCTDROPR3GD

3GD Pegs when a MCTA call Drp during conversation

MCTDROPR3GV

3GV Pegs when a MCTA call Drp during conversation

MCTOATTS

Pegs when an origination attempt continues on a frequency chosen by the MCTA

MCTOATTS3GD

3GD Pegs when an origination attempt continues on a frequency chosen by the MCTA

MCTOATTS3GV

3GV Pegs when an origination attempt continues on a frequency chosen by the MCTA

MCTOSUCC

Pegs when a resource is successfully Alloc on an MCTA frequency for origination

MCTOSUCC3GD

3GD Pegs when a resource is successfully Alloc on an MCTA frequency for origination

MCTOSUCC3GV

3GV Pegs when a resource is successfully Alloc on an MCTA frequency for origination

MCTTATTS

Pegs when a termination attempt continues on a frequency chosen by the MCTA

MCTTATTS3GD

3GD Pegs when a termination attempt continues on a frequency chosen by the MCTA

MCTTATTS3GV

3GV Pegs when a termination attempt continues on a frequency chosen by the MCTA

MCTTSUCC

Pegs when resources are successfully Alloc on an MCTA frequency for termination

MCTTSUCC3GD

3GD Pegs when resources are successfully Alloc on an MCTA frequency for termination

MCTTSUCC3GV

3GV Pegs when resources are successfully Alloc on an MCTA frequency for termination

PrimaryFrameCntFCH_RC1

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC1 Voice only

PrimaryFrameCntFCH_RC2

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC2 Voice only

PrimaryFrameCntFCH_RC3

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC3 Voice only

PrimaryFrameCntFCH_RC3D

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC3 Data

PrimaryFrameCntFCH_RC3V

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC3 Voice

PrimaryFrameCntFCH_RC4

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC4 Voice only

PrimaryFrameCntFCH_RC4D

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC4 Data

PrimaryFrameCntFCH_RC4V

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC4 Voice

PrimaryFrameCntFCH_RC5

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC5 Voice only

PrimaryFrameCntFCH_RC5D

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC5 Data

PrimaryFrameCntFCH_RC5V

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC5 Voice

CNFP Primitive Calculations

The following is a list of primitive calculations for the CNFP entity.

bscCct_ResourceUtilization_00to01%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 0% and less than 1%.

Calculation

$$\frac{\text{bscCct_ResourceUtilizationIndex_1} * 100.0}{\text{bscCct_ResourceUtilizationIndex_Total}}$$

bscCct_ResourceUtilization_01to05%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 1% and less than 5%.

Calculation

```
bscCct_ResourceUtilizationIndex_2 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_05to10%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 5% and less than 10%.

Calculation

```
bscCct_ResourceUtilizationIndex_3 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_100%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was equal to 100%.

Calculation

```
bscCct_ResourceUtilizationIndex_30 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_10to15%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 10% and less than 15%.

Calculation

```
bscCct_ResourceUtilizationIndex_4 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_15to20%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 15% and less than 20%.

Calculation

```
bscCct_ResourceUtilizationIndex_5 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_20to25%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 20% and less than 25%.

Calculation

```
bscCct_ResourceUtilizationIndex_6 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_25to30%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 25% and less than 30%.

Calculation

```
bscCct_ResourceUtilizationIndex_7 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_30to35%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 30% and less than 35%.

Calculation

```
bscCct_ResourceUtilizationIndex_8 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_35to40%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 35% and less than 40%.

Calculation

```
bscCct_ResourceUtilizationIndex_9 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_40to45%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 40% and less than 45%.

Calculation

```
bscCct_ResourceUtilizationIndex_10 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_45to50%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 45% and less than 50%.

Calculation

```
bscCct_ResourceUtilizationIndex_11 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_50to55%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 50% and less than 55%.

Calculation

```
bscCct_ResourceUtilizationIndex_12 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_55to60%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 55% and less than 60%.

Calculation

```
bscCct_ResourceUtilizationIndex_13 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_60to65%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 60% and less than 65%.

Calculation

```
bscCct_ResourceUtilizationIndex_14 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_65to70%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 65% and less than 70%.

Calculation

```
bscCct_ResourceUtilizationIndex_15 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_70to75%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 70% and less than 75%.

Calculation

```
bscCct_ResourceUtilizationIndex_16 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_75to80%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 75% and less than 80%.

Calculation

```
bscCct_ResourceUtilizationIndex_17 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_80to85%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 80% and less than 85%.

Calculation

```
bscCct_ResourceUtilizationIndex_18 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_85to90%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 85% and less than 90%.

Calculation

```
bscCct_ResourceUtilizationIndex_19 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_90to91%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 90% and less than 91%.

Calculation

```
bscCct_ResourceUtilizationIndex_20 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_91to92%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 91% and less than 92%.

Calculation

```
bscCct_ResourceUtilizationIndex_21 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_92to93%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 92% and less than 93%.

Calculation

```
bscCct_ResourceUtilizationIndex_22 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_93to94%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 93% and less than 94%.

Calculation

```
bscCct_ResourceUtilizationIndex_23 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_94to95%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 94% and less than 95%.

Calculation

```
bscCct_ResourceUtilizationIndex_24 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_95to96%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 95% and less than 96%.

Calculation

```
bscCct_ResourceUtilizationIndex_25 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_96to97%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 96% and less than 97%.

Calculation

```
bscCct_ResourceUtilizationIndex_26 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_97to98%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 97% and less than 98%.

Calculation

```
bscCct_ResourceUtilizationIndex_27 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_98to99%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 98% and less than 99%.

Calculation

```
bscCct_ResourceUtilizationIndex_28 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilization_99to100%

For resource type "bscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 99% and less than 100%.

Calculation

```
bscCct_ResourceUtilizationIndex_29 * 100.0 /  
bscCct_ResourceUtilizationIndex_Total
```

bscCct_ResourceUtilizationIndex_Total

For resource type "bscCct", this is the sum of the Resource Utilization Indices.

Calculation

```
vsum (bscCct_ResourceUtilizationIndex_1,  
bscCct_ResourceUtilizationIndex_2, bscCct_ResourceUtilizationIndex_3,  
bscCct_ResourceUtilizationIndex_4, bscCct_ResourceUtilizationIndex_5,  
bscCct_ResourceUtilizationIndex_6, bscCct_ResourceUtilizationIndex_7,  
bscCct_ResourceUtilizationIndex_8, bscCct_ResourceUtilizationIndex_9,  
bscCct_ResourceUtilizationIndex_10, bscCct_ResourceUtilizationIndex_11,  
bscCct_ResourceUtilizationIndex_12, bscCct_ResourceUtilizationIndex_13,  
bscCct_ResourceUtilizationIndex_14, bscCct_ResourceUtilizationIndex_15,  
bscCct_ResourceUtilizationIndex_16, bscCct_ResourceUtilizationIndex_17,  
bscCct_ResourceUtilizationIndex_18, bscCct_ResourceUtilizationIndex_19,  
bscCct_ResourceUtilizationIndex_20, bscCct_ResourceUtilizationIndex_21,  
bscCct_ResourceUtilizationIndex_22, bscCct_ResourceUtilizationIndex_23,  
bscCct_ResourceUtilizationIndex_24, bscCct_ResourceUtilizationIndex_25,  
bscCct_ResourceUtilizationIndex_26, bscCct_ResourceUtilizationIndex_27,  
bscCct_ResourceUtilizationIndex_28, bscCct_ResourceUtilizationIndex_29,  
bscCct_ResourceUtilizationIndex_30, 0)
```

bscPkt_ResourceUtilization_00to01%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 0% and less than 1%.

Calculation

```
bscPkt_ResourceUtilizationIndex_1 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_01to05%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 1% and less than 5%.

Calculation

```
bscPkt_ResourceUtilizationIndex_2 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_05to10%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 5% and less than 10%.

Calculation

```
bscPkt_ResourceUtilizationIndex_3 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_100%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was equal to 100%.

Calculation

```
bscPkt_ResourceUtilizationIndex_30 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_10to15%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 10% and less than 15%.

Calculation

```
bscPkt_ResourceUtilizationIndex_4 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_15to20%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 15% and less than 20%.

Calculation

```
bscPkt_ResourceUtilizationIndex_5 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_20to25%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 20% and less than 25%.

Calculation

```
bscPkt_ResourceUtilizationIndex_6 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_25to30%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 25% and less than 30%.

Calculation

```
bscPkt_ResourceUtilizationIndex_7 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_30to35%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 30% and less than 35%.

Calculation

```
bscPkt_ResourceUtilizationIndex_8 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_35to40%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 35% and less than 40%.

Calculation

```
bscPkt_ResourceUtilizationIndex_9 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_40to45%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 40% and less than 45%.

Calculation

```
bscPkt_ResourceUtilizationIndex_10 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_45to50%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 45% and less than 50%.

Calculation

```
bscPkt_ResourceUtilizationIndex_11 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_50to55%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 50% and less than 55%.

Calculation

```
bscPkt_ResourceUtilizationIndex_12 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_55to60%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 55% and less than 60%.

Calculation

```
bscPkt_ResourceUtilizationIndex_13 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_60to65%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 60% and less than 65%.

Calculation

```
bscPkt_ResourceUtilizationIndex_14 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_65to70%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 65% and less than 70%.

Calculation

```
bscPkt_ResourceUtilizationIndex_15 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_70to75%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 70% and less than 75%.

Calculation

```
bscPkt_ResourceUtilizationIndex_16 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_75to80%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 75% and less than 80%.

Calculation

```
bscPkt_ResourceUtilizationIndex_17 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_80to85%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 80% and less than 85%.

Calculation

```
bscPkt_ResourceUtilizationIndex_18 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_85to90%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 85% and less than 90%.

Calculation

```
bscPkt_ResourceUtilizationIndex_19 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_90to91%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 90% and less than 91%.

Calculation

```
bscPkt_ResourceUtilizationIndex_20 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_91to92%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 91% and less than 92%.

Calculation

```
bscPkt_ResourceUtilizationIndex_21 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_92to93%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 92% and less than 93%.

Calculation

```
bscPkt_ResourceUtilizationIndex_22 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_93to94%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 93% and less than 94%.

Calculation

```
bscPkt_ResourceUtilizationIndex_23 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_94to95%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 94% and less than 95%.

Calculation

```
bscPkt_ResourceUtilizationIndex_24 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_95to96%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 95% and less than 96%.

Calculation

```
bscPkt_ResourceUtilizationIndex_25 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_96to97%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 96% and less than 97%.

Calculation

```
bscPkt_ResourceUtilizationIndex_26 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_97to98%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 97% and less than 98%.

Calculation

```
bscPkt_ResourceUtilizationIndex_27 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_98to99%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 98% and less than 99%.

Calculation

```
bscPkt_ResourceUtilizationIndex_28 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilization_99to100%

For resource type "bscPkt", this the percentage of the time that the computed resource utilization was greater than or equal to 99% and less than 100%.

Calculation

```
bscPkt_ResourceUtilizationIndex_29 * 100.0 /  
bscPkt_ResourceUtilizationIndex_Total
```

bscPkt_ResourceUtilizationIndex_Total

For resource type "bscPkt", this is the sum of the Resource Utilization Indices.

Calculation

```
vsum (bscPkt_ResourceUtilizationIndex_1,  
bscPkt_ResourceUtilizationIndex_2, bscPkt_ResourceUtilizationIndex_3,  
bscPkt_ResourceUtilizationIndex_4, bscPkt_ResourceUtilizationIndex_5,

bscPkt_ResourceUtilizationIndex_8, bscPkt_ResourceUtilizationIndex_9,  
bscPkt_ResourceUtilizationIndex_10, bscPkt_ResourceUtilizationIndex_11,  
bscPkt_ResourceUtilizationIndex_12, bscPkt_ResourceUtilizationIndex_13,  
bscPkt_ResourceUtilizationIndex_14, bscPkt_ResourceUtilizationIndex_15,  
bscPkt_ResourceUtilizationIndex_16, bscPkt_ResourceUtilizationIndex_17,  
bscPkt_ResourceUtilizationIndex_18, bscPkt_ResourceUtilizationIndex_19,  
bscPkt_ResourceUtilizationIndex_20, bscPkt_ResourceUtilizationIndex_21,  
bscPkt_ResourceUtilizationIndex_22, bscPkt_ResourceUtilizationIndex_23,  
bscPkt_ResourceUtilizationIndex_24, bscPkt_ResourceUtilizationIndex_25,  
bscPkt_ResourceUtilizationIndex_26, bscPkt_ResourceUtilizationIndex_27,  
bscPkt_ResourceUtilizationIndex_28, bscPkt_ResourceUtilizationIndex_29,  
bscPkt_ResourceUtilizationIndex_30, 0)
```

cic_ResourceUtilization_00to01%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 0% and less than 1%.

Calculation

```
cic_ResourceUtilizationIndex_1 * 100.0 / cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_01to05%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 1% and less than 5%.

Calculation

```
cic_ResourceUtilizationIndex_2 * 100.0 / cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_05to10%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 5% and less than 10%.

Calculation

```
cic_ResourceUtilizationIndex_3 * 100.0 / cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_100%

For resource type "cic", this the percentage of the time that the computed resource utilization was equal to 100%.

Calculation

```
cic_ResourceUtilizationIndex_30 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_10to15%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 10% and less than 15%.

Calculation

```
cic_ResourceUtilizationIndex_4 * 100.0 / cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_15to20%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 15% and less than 20%.

Calculation

```
cic_ResourceUtilizationIndex_5 * 100.0 / cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_20to25%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 20% and less than 25%.

Calculation

```
cic_ResourceUtilizationIndex_6 * 100.0 / cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_25to30%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 25% and less than 30%.

Calculation

```
cic_ResourceUtilizationIndex_7 * 100.0 / cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_30to35%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 30% and less than 35%.

Calculation

```
cic_ResourceUtilizationIndex_8 * 100.0 / cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_35to40%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 35% and less than 40%.

Calculation

```
cic_ResourceUtilizationIndex_9 * 100.0 / cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_40to45%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 40% and less than 45%.

Calculation

```
cic_ResourceUtilizationIndex_10 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_45to50%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 45% and less than 50%.

Calculation

```
cic_ResourceUtilizationIndex_11 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_50to55%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 50% and less than 55%.

Calculation

```
cic_ResourceUtilizationIndex_12 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_55to60%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 55% and less than 60%.

Calculation

```
cic_ResourceUtilizationIndex_13 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_60to65%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 60% and less than 65%.

Calculation

```
cic_ResourceUtilizationIndex_14 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_65to70%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 65% and less than 70%.

Calculation

```
cic_ResourceUtilizationIndex_15 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_70to75%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 70% and less than 75%.

Calculation

```
cic_ResourceUtilizationIndex_16 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_75to80%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 75% and less than 80%.

Calculation

```
cic_ResourceUtilizationIndex_17 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_80to85%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 80% and less than 85%.

Calculation

```
cic_ResourceUtilizationIndex_18 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_85to90%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 85% and less than 90%.

Calculation

```
cic_ResourceUtilizationIndex_19 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_90to91%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 90% and less than 91%.

Calculation

```
cic_ResourceUtilizationIndex_20 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_91to92%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 91% and less than 92%.

Calculation

```
cic_ResourceUtilizationIndex_21 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_92to93%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 92% and less than 93%.

Calculation

```
cic_ResourceUtilizationIndex_22 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_93to94%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 93% and less than 94%.

Calculation

```
cic_ResourceUtilizationIndex_23 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_94to95%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 94% and less than 95%.

Calculation

```
cic_ResourceUtilizationIndex_24 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_95to96%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 95% and less than 96%.

Calculation

```
cic_ResourceUtilizationIndex_25 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_96to97%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 96% and less than 97%.

Calculation

```
cic_ResourceUtilizationIndex_26 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_97to98%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 97% and less than 98%.

Calculation

```
cic_ResourceUtilizationIndex_27 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_98to99%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 98% and less than 99%.

Calculation

```
cic_ResourceUtilizationIndex_28 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilization_99to100%

For resource type "cic", this the percentage of the time that the computed resource utilization was greater than or equal to 99% and less than 100%.

Calculation

```
cic_ResourceUtilizationIndex_29 * 100.0 /  
cic_ResourceUtilizationIndex_Total
```

cic_ResourceUtilizationIndex_Total

For resource type "cic", this is the sum of the Resource Utilization Indices.

Calculation

```
vsum (cic_ResourceUtilizationIndex_1, cic_ResourceUtilizationIndex_2,  
cic_ResourceUtilizationIndex_3, cic_ResourceUtilizationIndex_4,  
cic_ResourceUtilizationIndex_5, cic_ResourceUtilizationIndex_6,  
cic_ResourceUtilizationIndex_7, cic_ResourceUtilizationIndex_8,  
cic_ResourceUtilizationIndex_9, cic_ResourceUtilizationIndex_10,
```

cic_ResourceUtilizationIndex_11, cic_ResourceUtilizationIndex_12,
cic_ResourceUtilizationIndex_13, cic_ResourceUtilizationIndex_14,

cic_ResourceUtilizationIndex_25, cic_ResourceUtilizationIndex_26,
cic_ResourceUtilizationIndex_27, cic_ResourceUtilizationIndex_28,
cic_ResourceUtilizationIndex_29, cic_ResourceUtilizationIndex_30, 0)

ebscCct_ResourceUtilization_00to01%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 0% and less than 1%.

Calculation

```
ebscCct_ResourceUtilizationIndex_1 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_01to05%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 1% and less than 5%.

Calculation

```
ebscCct_ResourceUtilizationIndex_2 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_05to10%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 5% and less than 10%.

Calculation

```
ebscCct_ResourceUtilizationIndex_3 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_100%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was equal to 100%.

Calculation

```
ebscCct_ResourceUtilizationIndex_30 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_10to15%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 10% and less than 15%.

Calculation

```
ebscCct_ResourceUtilizationIndex_4 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_15to20%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 15% and less than 20%.

Calculation

```
ebscCct_ResourceUtilizationIndex_5 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_20to25%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 20% and less than 25%.

Calculation

```
ebscCct_ResourceUtilizationIndex_6 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_25to30%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 25% and less than 30%.

Calculation

```
ebscCct_ResourceUtilizationIndex_7 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_30to35%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 30% and less than 35%.

Calculation

```
ebscCct_ResourceUtilizationIndex_8 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_35to40%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 35% and less than 40%.

Calculation

```
ebscCct_ResourceUtilizationIndex_9 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_40to45%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 40% and less than 45%.

Calculation

```
ebscCct_ResourceUtilizationIndex_10 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_45to50%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 45% and less than 50%.

Calculation

```
ebscCct_ResourceUtilizationIndex_11 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_50to55%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 50% and less than 55%.

Calculation

```
ebscCct_ResourceUtilizationIndex_12 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_55to60%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 55% and less than 60%.

Calculation

```
ebscCct_ResourceUtilizationIndex_13 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_60to65%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 60% and less than 65%.

Calculation

```
ebscCct_ResourceUtilizationIndex_14 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_65to70%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 65% and less than 70%.

Calculation

```
ebscCct_ResourceUtilizationIndex_15 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_70to75%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 70% and less than 75%.

Calculation

```
ebscCct_ResourceUtilizationIndex_16 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_75to80%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 75% and less than 80%.

Calculation

```
ebscCct_ResourceUtilizationIndex_17 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_80to85%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 80% and less than 85%.

Calculation

```
ebscCct_ResourceUtilizationIndex_18 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_85to90%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 85% and less than 90%.

Calculation

```
ebscCct_ResourceUtilizationIndex_19 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_90to91%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 90% and less than 91%.

Calculation

```
ebscCct_ResourceUtilizationIndex_20 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_91to92%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 91% and less than 92%.

Calculation

```
ebscCct_ResourceUtilizationIndex_21 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_92to93%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 92% and less than 93%.

Calculation

```
ebscCct_ResourceUtilizationIndex_22 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_93to94%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 93% and less than 94%.

Calculation

```
ebscCct_ResourceUtilizationIndex_23 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_94to95%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 94% and less than 95%.

Calculation

```
ebscCct_ResourceUtilizationIndex_24 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_95to96%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 95% and less than 96%.

Calculation

```
ebscCct_ResourceUtilizationIndex_25 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_96to97%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 96% and less than 97%.

Calculation

```
ebscCct_ResourceUtilizationIndex_26 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_97to98%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 97% and less than 98%.

Calculation

```
ebscCct_ResourceUtilizationIndex_27 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_98to99%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 98% and less than 99%.

Calculation

```
ebscCct_ResourceUtilizationIndex_28 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilization_99to100%

For resource type "ebscCct", this the percentage of the time that the computed resource utilization was greater than or equal to 99% and less than 100%.

Calculation

```
ebscCct_ResourceUtilizationIndex_29 * 100.0 /  
ebscCct_ResourceUtilizationIndex_Total
```

ebscCct_ResourceUtilizationIndex_Total

For resource type "ebscCct", this is the sum of the Resource Utilization Indices.

Calculation

```
vsum (ebscCct_ResourceUtilizationIndex_1,  
ebscCct_ResourceUtilizationIndex_2, ebscCct_ResourceUtilizationIndex_3,  
ebscCct_ResourceUtilizationIndex_4, ebscCct_ResourceUtilizationIndex_5,

ebscSduPacketDataAndOther_ResourceUtilizationIndex_30, 0)
```

ebscSduVoiceAndOther_ResourceUtilization_00to01%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 0% and less than 1%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_1 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_01to05%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 1% and less than 5%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_2 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_05to10%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 5% and less than 10%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_3 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_100%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was equal to 100%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_30 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_10to15%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 10% and less than 15%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_4 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_15to20%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 15% and less than 20%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_5 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_20to25%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 20% and less than 25%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_6 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_25to30%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 25% and less than 30%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_7 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_30to35%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 30% and less than 35%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_8 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_35to40%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 35% and less than 40%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_9 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_40to45%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 40% and less than 45%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_10 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_45to50%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 45% and less than 50%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_11 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_50to55%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 50% and less than 55%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_12 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_55to60%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 55% and less than 60%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_13 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_60to65%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 60% and less than 65%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_14 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_65to70%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 65% and less than 70%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_15 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_70to75%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 70% and less than 75%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_16 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_75to80%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 75% and less than 80%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_17 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_80to85%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 80% and less than 85%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_18 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_85to90%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 85% and less than 90%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_19 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_90to91%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 90% and less than 91%.

Calculation

`ebscSduVoiceAndOther_ResourceUtilizationIndex_20 * 100.0 /
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total`

ebscSduVoiceAndOther_ResourceUtilization_91to92%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 91% and less than 92%.

Calculation

`ebscSduVoiceAndOther_ResourceUtilizationIndex_21 * 100.0 /
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total`

ebscSduVoiceAndOther_ResourceUtilization_92to93%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 92% and less than 93%.

Calculation

`ebscSduVoiceAndOther_ResourceUtilizationIndex_22 * 100.0 /
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total`

ebscSduVoiceAndOther_ResourceUtilization_93to94%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 93% and less than 94%.

Calculation

`ebscSduVoiceAndOther_ResourceUtilizationIndex_23 * 100.0 /
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total`

ebscSduVoiceAndOther_ResourceUtilization_94to95%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 94% and less than 95%.

Calculation

`ebscSduVoiceAndOther_ResourceUtilizationIndex_24 * 100.0 /
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total`

ebscSduVoiceAndOther_ResourceUtilization_95to96%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 95% and less than 96%.

Calculation

`ebscSduVoiceAndOther_ResourceUtilizationIndex_25 * 100.0 /
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total`

ebscSduVoiceAndOther_ResourceUtilization_96to97%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 96% and less than 97%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_26 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_97to98%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 97% and less than 98%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_27 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_98to99%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 98% and less than 99%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_28 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilization_99to100%

For resource type "ebscSduVoiceAndOther", this the percentage of the time that the computed resource utilization was greater than or equal to 99% and less than 100%.

Calculation

```
ebscSduVoiceAndOther_ResourceUtilizationIndex_29 * 100.0 /  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total
```

ebscSduVoiceAndOther_ResourceUtilizationIndex_Total

For resource type "ebscSduVoiceAndOther", this is the sum of the Resource Utilization Indices.

Calculation

```
vsum (ebscSduVoiceAndOther_ResourceUtilizationIndex_1,  
ebscSduVoiceAndOther_ResourceUtilizationIndex_2,

ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_35to40%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 35% and less than 40%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_9 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_40to45%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 40% and less than 45%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_10 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_45to50%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 45% and less than 50%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_11 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_50to55%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 50% and less than 55%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_12 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_55to60%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 55% and less than 60%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_13 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_60to65%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 60% and less than 65%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_14 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_65to70%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 65% and less than 70%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_15 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_70to75%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 70% and less than 75%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_16 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_75to80%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 75% and less than 80%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_17 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_80to85%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 80% and less than 85%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_18 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_85to90%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 85% and less than 90%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_19 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_90to91%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 90% and less than 91%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_20 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_91to92%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 91% and less than 92%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_21 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_92to93%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 92% and less than 93%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_22 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_93to94%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 93% and less than 94%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_23 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_94to95%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 94% and less than 95%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_24 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_95to96%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 95% and less than 96%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_25 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_96to97%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 96% and less than 97%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_26 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_97to98%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 97% and less than 98%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_27 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_98to99%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 98% and less than 99%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_28 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilization_99to100%

For resource type "ebscTrfo", this the percentage of the time that the computed resource utilization was greater than or equal to 99% and less than 100%.

Calculation

```
ebscTrfo_ResourceUtilizationIndex_29 * 100.0 /  
ebscTrfo_ResourceUtilizationIndex_Total
```

ebscTrfo_ResourceUtilizationIndex_Total

For resource type "ebscTrfo", this is the sum of the Resource Utilization Indices.

Calculation

```
vsum (ebscTrfo_ResourceUtilizationIndex_1,  
ebscTrfo_ResourceUtilizationIndex_2, ebscTrfo_ResourceUtilizationIndex_3,  
ebscTrfo_ResourceUtilizationIndex_4, ebscTrfo_ResourceUtilizationIndex_5,

MaxAvailableConfiguredCapacity_Total
```

ResourceUtilization_80to85%

This PCALC provides the percentage of the time (weighted by Max Available Configured Capacity for each resource type) that the computed resource utilization was greater than or equal to 80% and less than 85%.

Calculation

```
vsum (ebscCct_MaxAvailableConfiguredCapacity *
ebscCct_ResourceUtilization_80to85%, cic_MaxAvailableConfiguredCapacity *
cic_ResourceUtilization_80to85%,
ebscSduVoiceAndOther_MaxAvailableConfiguredCapacity *
ebscSduVoiceAndOther_ResourceUtilization_80to85%,
ebscSduPacketDataAndOther_MaxAvailableConfiguredCapacity *
ebscSduPacketDataAndOther_ResourceUtilization_80to85%,
bscCct_MaxAvailableConfiguredCapacity *
bscCct_ResourceUtilization_80to85%, ebscPkt_MaxAvailableConfiguredCapacity

bscPkt_MaxAvailableConfiguredCapacity *  
bscPkt_ResourceUtilization_96to97%, 0) /  
MaxAvailableConfiguredCapacity_Total
```

ResourceUtilization_97to98%

This PCALC provides the percentage of the time (weighted by Max Available Configured Capacity for each resource type) that the computed resource utilization was greater than or equal to 97% and less than 98%.

Calculation

```
vsum (ebscCct_MaxAvailableConfiguredCapacity *
ebscCct_ResourceUtilization_97to98%, cic_MaxAvailableConfiguredCapacity *
cic_ResourceUtilization_97to98%,
ebscSduVoiceAndOther_MaxAvailableConfiguredCapacity *
ebscSduVoiceAndOther_ResourceUtilization_97to98%,
ebscSduPacketDataAndOther_MaxAvailableConfiguredCapacity *
ebscSduPacketDataAndOther_ResourceUtilization_97to98%,
bscCct_MaxAvailableConfiguredCapacity *
bscCct_ResourceUtilization_97to98%, ebscPkt_MaxAvailableConfiguredCapacity
* ebscPkt_ResourceUtilization_97to98%,
ebscTrfo_MaxAvailableConfiguredCapacity *
ebscTrfo_ResourceUtilization_97to98%,
bscPkt_MaxAvailableConfiguredCapacity *
bscPkt_ResourceUtilization_97to98%, 0) /
MaxAvailableConfiguredCapacity_Total
```

ResourceUtilization_98to99%

This PCALC provides the percentage of the time (weighted by Max Available Configured Capacity for each resource type) that the computed resource utilization was greater than or equal to 98% and less than 99%.

Calculation

```
vsum (ebscCct_MaxAvailableConfiguredCapacity *
ebscCct_ResourceUtilization_98to99%, cic_MaxAvailableConfiguredCapacity *
cic_ResourceUtilization_98to99%,
ebscSduVoiceAndOther_MaxAvailableConfiguredCapacity *
ebscSduVoiceAndOther_ResourceUtilization_98to99%,
ebscSduPacketDataAndOther_MaxAvailableConfiguredCapacity *
ebscSduPacketDataAndOther_ResourceUtilization_98to99%,
bscCct_MaxAvailableConfiguredCapacity *
bscCct_ResourceUtilization_98to99%, ebscPkt_MaxAvailableConfiguredCapacity
* ebscPkt_ResourceUtilization_98to99%,
ebscTrfo_MaxAvailableConfiguredCapacity *
ebscTrfo_ResourceUtilization_98to99%,
bscPkt_MaxAvailableConfiguredCapacity *
bscPkt_ResourceUtilization_98to99%, 0) /
MaxAvailableConfiguredCapacity_Total
```

ResourceUtilization_99to100%

This PCALC provides the percentage of the time (weighted by Max Available Configured Capacity for each resource type) that the computed resource utilization was greater than or equal to 99% and less than 100%.

Calculation

```
vsum (ebscCct_MaxAvailableConfiguredCapacity *  
ebscCct_ResourceUtilization_99to100%, cic_MaxAvailableConfiguredCapacity *  
cic_ResourceUtilization_99to100%,  
ebscSduVoiceAndOther_MaxAvailableConfiguredCapacity *  
ebscSduVoiceAndOther_ResourceUtilization_99to100%,  
ebscSduPacketDataAndOther_MaxAvailableConfiguredCapacity *  
ebscSduPacketDataAndOther_ResourceUtilization_99to100%,  
bscCct_MaxAvailableConfiguredCapacity *  
bscCct_ResourceUtilization_99to100%,  
ebscPkt_MaxAvailableConfiguredCapacity *  
ebscPkt_ResourceUtilization_99to100%,  
ebscTrfo_MaxAvailableConfiguredCapacity *  
ebscTrfo_ResourceUtilization_99to100%,  
bscPkt_MaxAvailableConfiguredCapacity *  
bscPkt_ResourceUtilization_99to100%, 0) /  
MaxAvailableConfiguredCapacity_Total
```

ResourceUtilizationIndex_Total

For all resource types, this the sum of all the resource utilization indices.

Calculation

```
vsum (ebscCct_ResourceUtilizationIndex_Total,  
cic_ResourceUtilizationIndex_Total,  
ebscSduVoiceAndOther_ResourceUtilizationIndex_Total,  
ebscSduPacketDataAndOther_ResourceUtilizationIndex_Total,  
bscCct_ResourceUtilizationIndex_Total,  
ebscPkt_ResourceUtilizationIndex_Total,  
ebscTrfo_ResourceUtilizationIndex_Total,  
bscPkt_ResourceUtilizationIndex_Total, 0)
```

CNFP Peg Counts

The following is a list of peg counts for the CNFP entity.

bscCct_MaxAvailableConfiguredCapacity

For resource type "bscCct", this OM indicates the maximum number of resources which were available for carrying traffic in the collection interval. This value is sampled every 1second.

Data Source

CNFP

Source Field

MaxAvailableConfiguredCapacity (Seq# 1) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_1

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 0% and less than 1%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_1 (Seq# 2) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_10

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 40% and less than 45%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_10 (Seq# 11) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_11

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 45% and less than 50%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_11 (Seq# 12) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_12

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 50% and less than 55%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_12 (Seq# 13) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_13

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 55% and less than 60%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_13 (Seq# 14) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_14

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 60% and less than 65%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_14 (Seq# 15) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_15

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 65% and less than 70%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_15 (Seq# 16) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_16

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 70% and less than 75%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_16 (Seq# 17) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_17

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 75% and less than 80%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_17 (Seq# 18) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_18

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 80% and less than 85%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_18 (Seq# 19) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_19

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 85% and less than 90%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_19 (Seq# 20) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_2

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 1% and less than 5%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_2 (Seq# 3) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_20

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 90% and less than 91%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_20 (Seq# 21) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_21

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 91% and less than 92%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_21 (Seq# 22) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_22

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 92% and less than 93%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_22 (Seq# 23) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_23

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 93% and less than 94%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_23 (Seq# 24) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_24

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 94% and less than 95%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_24 (Seq# 25) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_25

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 95% and less than 96%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_25 (Seq# 26) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_26

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 96% and less than 97%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_26 (Seq# 27) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_27

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 97% and less than 98%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_27 (Seq# 28) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_28

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 98% and less than 99%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_28 (Seq# 29) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_29

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 99% and less than 100%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_29 (Seq# 30) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_3

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 5% and less than 10%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_3 (Seq# 4) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_30

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was equal to 100%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_30 (Seq# 31) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_4

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 10% and less than 15%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_4 (Seq# 5) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_5

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 15% and less than 20%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_5 (Seq# 6) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_6

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 20% and less than 25%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_6 (Seq# 7) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_7

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 25% and less than 30%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_7 (Seq# 8) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_8

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 30% and less than 35%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_8 (Seq# 9) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscCct_ResourceUtilizationIndex_9

For resource type "bscCct", this OM counts the number of times that the computed resource utilization was greater than or equal to 35% and less than 40%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_9 (Seq# 10) for bscCct (Resource Type 5)

Source Section

Resource Utilization (Group ID 59)

bscPkt_MaxAvailableConfiguredCapacity

For resource type "bscPkt", this OM indicates the maximum number of resources which were available for carrying traffic in the collection interval. This value is sampled every 1second.

Data Source

CNFP

Source Field

MaxAvailableConfiguredCapacity (Seq# 1) for bscPkt (Resource Type 8)

Source Section

Resource Utilization (Group ID 59)

bscPkt_ResourceUtilizationIndex_1

For resource type "bscPkt", this OM counts the number of times that the computed resource utilization was greater than or equal to 0% and less than 1%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_1 (Seq# 2) for bscPkt (Resource Type 8)

Source Section

Resource Utilization (Group ID 59)

bscPkt_ResourceUtilizationIndex_10

For resource type "bscPkt", this OM counts the number of times that the computed resource utilization was greater than or equal to 40% and less than 45%. Resource utilization is computed every 1second.

Data Source

CNFP

Source Field

ResourceUtilizationIndex_10 (Seq# 11) for bscPkt (Resource Type 8)

Source Section

Resource Utilization (Group ID 59)

bscPkt_ResourceUtilizationIndex_11

For resource type "bscPkt", this OM counts the number of times that the computed resource utilization was greater than or equal to 45% and less than 50%. Resource utilization is computed every 1second.

Calculation

```
vsum(AckIndSent_0_4,AckIndSent_5_9,AckIndSent_10_14,AckIndSent_15_19,AckIndSent_20_24,AckIndSent_25_29,0)
```

AckIndUndeliverable

Number of acknowledgement indications which could not be delivered by the message delivery system.

Calculation

```
vsum(AckIndUndeliverable_0_4,AckIndUndeliverable_5_9,AckIndUndeliverable_10_14,AckIndUndeliverable_15_19,AckIndUndeliverable_20_24,AckIndUndeliverable_25_29,0)
```

AuthenticationChallengeRspSent

Number of authentication challenge response messages handed to the message delivery system.

Calculation

```
vsum(AuthenticationChallengeRspSent_0_4,AuthenticationChallengeRspSent_5_9,AuthenticationChallengeRspSent_10_14,AuthenticationChallengeRspSent_15_19,AuthenticationChallengeRspSent_20_24,AuthenticationChallengeRspSent_25_29,0)
```

AuthenticationChallengeRspUndeliverable

Number of authentication challenge response messages which could not be delivered by the message delivery system.

Calculation

```
vsum(AuthenticationChallengeRspUndeliverable_0_4,AuthenticationChallengeRspUndeliverable_5_9,AuthenticationChallengeRspUndeliverable_10_14,AuthenticationChallengeRspUndeliverable_15_19,AuthenticationChallengeRspUndeliverable_20_24,AuthenticationChallengeRspUndeliverable_25_29,0)
```

AuthenticationCmdDropped

Number of authentication command messages received which were dropped.

Calculation

```
vsum(AuthenticationCmdDropped_0_4,AuthenticationCmdDropped_5_9,AuthenticationCmdDropped_10_14,AuthenticationCmdDropped_15_19,AuthenticationCmdDropped_20_24,AuthenticationCmdDropped_25_29,0)
```

AuthenticationCmdRcvd

Number of authentication command messages received.

Calculation

```
vsum(AuthenticationCmdRcvd_0_4,AuthenticationCmdRcvd_5_9,AuthenticationCmdRcvd_10_14,AuthenticationCmdRcvd_15_19,AuthenticationCmdRcvd_20_24,AuthenticationCmdRcvd_25_29,0)
```

BroadcastMsgsDropped

Number of messages received at the BTS which were dropped before the message could be enqueued for processing.

Calculation

```
vsum(BroadcastMsgsDropped_0_4,BroadcastMsgsDropped_5_9,BroadcastMsgsDropped_10_14,BroadcastMsgsDropped_15_19,BroadcastMsgsDropped_20_24,BroadcastMsgsDropped_25_29,0)
```

CapacityRequestResultsSentSCH

Number of SCH capacity request result messages prepared and handed to the messaging system for delivery.

Calculation

```
vsum(CapacityRequestResultsSentSCH_0_4, CapacityRequestResultsSentSCH_5_9, CapacityRequestResultsSentSCH_10_14, CapacityRequestResultsSentSCH_15_19, CapacityRequestResultsSentSCH_20_24, CapacityRequestResultsSentSCH_25_29, 0)
```

CapacityRequestResultsUndeliverableSCH

Number of capacity request result messages which could not be delivered by the messaging system.

Calculation

```
vsum(CapacityRequestResultsUndeliverableSCH_0_4, CapacityRequestResultsUndeliverableSCH_5_9, CapacityRequestResultsUndeliverableSCH_10_14, CapacityRequestResultsUndeliverableSCH_15_19, CapacityRequestResultsUndeliverableSCH_20_24, CapacityRequestResultsUndeliverableSCH_25_29, 0)
```

CapacityRequestsRcvdSCH

Number of SCH capacity requests received.

Calculation

```
vsum(CapacityRequestsRcvdSCH_0_4, CapacityRequestsRcvdSCH_5_9, CapacityRequestsRcvdSCH_10_14, CapacityRequestsRcvdSCH_15_19, CapacityRequestsRcvdSCH_20_24, CapacityRequestsRcvdSCH_25_29, 0)
```

CarrierSelectionCapacityRequestRcvd

Number of carrier selection capacity request messages received.

Calculation

```
vsum(CarrierSelectionCapacityRequestRcvd_0_4, CarrierSelectionCapacityRequestRcvd_5_9, CarrierSelectionCapacityRequestRcvd_10_14, CarrierSelectionCapacityRequestRcvd_15_19, CarrierSelectionCapacityRequestRcvd_20_24, CarrierSelectionCapacityRequestRcvd_25_29, 0)
```

CarrierSelectionCapacityRspSent

Number of carrier selection capacity response messages composed and handed to the messaging system for delivery.

Calculation

```
vsum(CarrierSelectionCapacityRspSent_0_4, CarrierSelectionCapacityRspSent_5_9, CarrierSelectionCapacityRspSent_10_14, CarrierSelectionCapacityRspSent_15_19, CarrierSelectionCapacityRspSent_20_24, CarrierSelectionCapacityRspSent_25_29, 0)
```

CarrierSelectionCapacityRspUndeliverable

Number of carrier selection capacity response messages composed which could not be delivered by the messaging system.

Calculation

```
vsum(CarrierSelectionCapacityRspUndeliverable_0_4,CarrierSelectionCapacityRspUndeliverable_5_9,CarrierSelectionCapacityRspUndeliverable_10_14,CarrierSelectionCapacityRspUndeliverable_15_19,CarrierSelectionCapacityRspUndeliverable_20_24,CarrierSelectionCapacityRspUndeliverable_25_29,0)
```

ChannelAssignmentMsgDropped

Number of channel assignment messages received which were dropped.

Calculation

```
vsum(ChannelAssignmentMsgDropped_0_4,ChannelAssignmentMsgDropped_5_9,ChannelAssignmentMsgDropped_10_14,ChannelAssignmentMsgDropped_15_19,ChannelAssignmentMsgDropped_20_24,ChannelAssignmentMsgDropped_25_29,0)
```

ChannelAssignmentMsgRcvd

Number of channel assignment messages received.

Calculation

```
vsum(ChannelAssignmentMsgRcvd_0_4,ChannelAssignmentMsgRcvd_5_9,ChannelAssignmentMsgRcvd_10_14,ChannelAssignmentMsgRcvd_15_19,ChannelAssignmentMsgRcvd_20_24,ChannelAssignmentMsgRcvd_25_29,0)
```

ChannelReleaseIndicationsSentSCH

Number of SCH channel release indication messages prepared and handed to the messaging system for delivery.

Calculation

```
vsum(ChannelReleaseIndicationsSentSCH_0_4,ChannelReleaseIndicationsSentSCH_5_9,ChannelReleaseIndicationsSentSCH_10_14,ChannelReleaseIndicationsSentSCH_15_19,ChannelReleaseIndicationsSentSCH_20_24,ChannelReleaseIndicationsSentSCH_25_29,0)
```

ChannelReleaseIndicationsUndeliverableSCH

Number of SCH channel release indication messages prepared which could not be delivered by the messaging system.

Calculation

```
vsum(ChannelReleaseIndicationsUndeliverableSCH_0_4,ChannelReleaseIndicationsUndeliverableSCH_5_9,ChannelReleaseIndicationsUndeliverableSCH_10_14,ChannelReleaseIndicationsUndeliverableSCH_15_19,ChannelReleaseIndicationsUndeliverableSCH_20_24,ChannelReleaseIndicationsUndeliverableSCH_25_29,0)
```

ExtendedChannelAssignmentMsgDropped

Number of extended channel assignment messages received which were dropped.

Calculation

```
vsum(ExtendedChannelAssignmentMsgDropped_0_4,ExtendedChannelAssignmentMsgDropped_5_9,ExtendedChannelAssignmentMsgDropped_10_14,ExtendedChannelAssignmentMsgDropped_15_19,ExtendedChannelAssignmentMsgDropped_20_24,ExtendedChannelAssignmentMsgDropped_25_29,0)
```

ExtendedChannelAssignmentMsgRcvd

Number of extended channel assignment messages received.

Calculation

```
vsum(ExtendedChannelAssignmentMsgRcvd_0_4,ExtendedChannelAssignmentMsgRcvd_5_9,ExtendedChannelAssignmentMsgRcvd_10_14,ExtendedChannelAssignmentMsgRcvd_15_19,ExtendedChannelAssignmentMsgRcvd_20_24,ExtendedChannelAssignmentMsgRcvd_25_29,0)
```

ExtendedStatusResponseSent

Number of extended status response messages handed to the message delivery system.

Calculation

```
vsum(ExtendedStatusResponseSent_0_4,ExtendedStatusResponseSent_5_9,ExtendedStatusResponseSent_10_14,ExtendedStatusResponseSent_15_19,ExtendedStatusResponseSent_20_24,ExtendedStatusResponseSent_25_29,0)
```

ExtendedStatusResponseUndeliverable

Number of extended status response messages which could not be delivered by the message delivery system.

Calculation

```
vsum(ExtendedStatusResponseUndeliverable_0_4,ExtendedStatusResponseUndeliverable_5_9,ExtendedStatusResponseUndeliverable_10_14,ExtendedStatusResponseUndeliverable_15_19,ExtendedStatusResponseUndeliverable_20_24,ExtendedStatusResponseUndeliverable_25_29,0)
```

FeatureNotificationCmdRcvd

Number of feature notification command messages received.

Calculation

```
vsum(FeatureNotificationCmdRcvd_0_4,FeatureNotificationCmdRcvd_5_9,FeatureNotificationCmdRcvd_10_14,FeatureNotificationCmdRcvd_15_19,FeatureNotificationCmdRcvd_20_24,FeatureNotificationCmdRcvd_25_29,0)
```

FeatureNotificationCommandDropped

Number of feature notification command messages received which were dropped.

Calculation

```
vsum (FeatureNotificationCommandDropped_0_4, FeatureNotificationCommandDropped_5_9, FeatureNotificationCommandDropped_10_14, FeatureNotificationCommandDropped_15_19, FeatureNotificationCommandDropped_20_24, FeatureNotificationCommandDropped_25_29, 0)
```

GeneralPageMsgDropped

Number of general page messages received which were dropped.

Calculation

```
vsum (GeneralPageMsgDropped_0_4, GeneralPageMsgDropped_5_9, GeneralPageMsgDropped_10_14, GeneralPageMsgDropped_15_19, GeneralPageMsgDropped_20_24, GeneralPageMsgDropped_25_29, 0)
```

GeneralPageMsgRcvd

Number of general page messages received.

Calculation

```
vsum (GeneralPageMsgRcvd_0_4, GeneralPageMsgRcvd_5_9, GeneralPageMsgRcvd_10_14, GeneralPageMsgRcvd_15_19, GeneralPageMsgRcvd_20_24, GeneralPageMsgRcvd_25_29, 0)
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

""

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT ()
```

NUMHOURS

of hours in Summation Data

Calculation

OrderCommandDropped

Number of order command messages received which were dropped.

Calculation

```
vsum(OrderCommandDropped_0_4,OrderCommandDropped_5_9,OrderCommandDropped_10_14,OrderCommandDropped_15_19,OrderCommandDropped_20_24,OrderCommandDropped_25_29,0)
```

OrderCommandRcvd

Number of order command messages received.

Calculation

```
vsum(OrderCommandRcvd_0_4,OrderCommandRcvd_5_9,OrderCommandRcvd_10_14,OrderCommandRcvd_15_19,OrderCommandRcvd_20_24,OrderCommandRcvd_25_29,0)
```

OrderIndicationSent

Number of order indication messages handed to the message delivery system.

Calculation

```
vsum(OrderIndicationSent_0_4,OrderIndicationSent_5_9,OrderIndicationSent_10_14,OrderIndicationSent_15_19,OrderIndicationSent_20_24,OrderIndicationSent_25_29,0)
```

OrderIndicationUndeliverable

Number of order indication messages which could not be delivered by the message delivery system.

Calculation

```
vsum(OrderIndicationUndeliverable_0_4,OrderIndicationUndeliverable_5_9,OrderIndicationUndeliverable_10_14,OrderIndicationUndeliverable_15_19,OrderIndicationUndeliverable_20_24,OrderIndicationUndeliverable_25_29,0)
```

OriginationIndicationSent

Number of origination indication messages handed to the message delivery system.

Calculation

```
vsum(OriginationIndicationSent_0_4,OriginationIndicationSent_5_9,OriginationIndicationSent_10_14,OriginationIndicationSent_15_19,OriginationIndicationSent_20_24,OriginationIndicationSent_25_29,0)
```

OriginationIndicationUndeliverable

Number of origination indication messages which could not be delivered by the message delivery system

Calculation

```
vsum(OriginationIndicationUndeliverable_0_4,OriginationIndicationUndeliverable_5_9,OriginationIndicationUndeliverable_10_14,OriginationIndicationUndeliverable_15_19,OriginationIndicationUndeliverable_20_24,OriginationIndicationUndeliverable_25_29,0)
```

```
eliverable_15_19,OriginationIndicationUndeliverable_20_24,OriginationIndicationUndeliverable_25_29,0)
```

OutOfBandClassGeneralPagesDropped

Number of general page msgs dropped because the band class parameter in the message does not match the BTS band class.

Calculation

```
vsum(OutOfBandClassGeneralPagesDropped_0_4,OutOfBandClassGeneralPagesDropped_5_9,OutOfBandClassGeneralPagesDropped_10_14,OutOfBandClassGeneralPagesDropped_15_19,OutOfBandClassGeneralPagesDropped_20_24,OutOfBandClassGeneralPagesDropped_25_29,0)
```

OutOfZonePages

Number of broadcast messages received but discarded because they are addressed to zones that this BTS is not included in.

Calculation

```
vsum(OutOfZonePages_0_4,OutOfZonePages_5_9,OutOfZonePages_10_14,OutOfZonePages_15_19,OutOfZonePages_20_24,OutOfZonePages_25_29,0)
```

PageResponseSent

Number of page response messages handed to the message delivery system.

Calculation

```
vsum(PageResponseSent_0_4,PageResponseSent_5_9,PageResponseSent_10_14,PageResponseSent_15_19,PageResponseSent_20_24,PageResponseSent_25_29,0)
```

PageResponseUndeliverable

Number of page response messages which could not be delivered by the message delivery system.

Calculation

```
vsum(PageResponseUndeliverable_0_4,PageResponseUndeliverable_5_9,PageResponseUndeliverable_10_14,PageResponseUndeliverable_15_19,PageResponseUndeliverable_20_24,PageResponseUndeliverable_25_29,0)
```

RegistrationIndicationSent

Number of registration indication messages handed to the message delivery system.

Calculation

```
vsum(RegistrationIndicationSent_0_4,RegistrationIndicationSent_5_9,RegistrationIndicationSent_10_14,RegistrationIndicationSent_15_19,RegistrationIndicationSent_20_24,RegistrationIndicationSent_25_29,0)
```

RegistrationIndicationUndeliverable

Number of registration indication messages which could not be delivered by the message delivery system.

Calculation

```
vsum(RegistrationIndicationUndeliverable_0_4,RegistrationIndicationUndeliverable_5_9,RegistrationIndicationUndeliverable_10_14,RegistrationIndicationUndeliverable_15_19,RegistrationIndicationUndeliverable_20_24,RegistrationIndicationUndeliverable_25_29,0)
```

ResourceMgmtMsgsDropped

Number of resource management messages received at the BTS which were dropped before the message could be enqueued for processing.

Calculation

```
vsum(ResourceMgmtMsgsDropped_0_4,ResourceMgmtMsgsDropped_5_9,ResourceMgmtMsgsDropped_10_14,ResourceMgmtMsgsDropped_15_19,ResourceMgmtMsgsDropped_20_24,ResourceMgmtMsgsDropped_25_29,0)
```

ResourceReleaseRequestRcvdFCH

Number of FCH resource release requests received.

Calculation

```
vsum(ResourceReleaseRequestRcvdFCH_0_4,ResourceReleaseRequestRcvdFCH_5_9,ResourceReleaseRequestRcvdFCH_10_14,ResourceReleaseRequestRcvdFCH_15_19,ResourceReleaseRequestRcvdFCH_20_24,ResourceReleaseRequestRcvdFCH_25_29,0)
```

ResourceReleaseRequestRcvdSCH

Number of SCH resource release requests received.

Calculation

```
vsum(ResourceReleaseRequestRcvdSCH_0_4,ResourceReleaseRequestRcvdSCH_5_9,ResourceReleaseRequestRcvdSCH_10_14,ResourceReleaseRequestRcvdSCH_15_19,ResourceReleaseRequestRcvdSCH_20_24,ResourceReleaseRequestRcvdSCH_25_29,0)
```

ResourceReleaseRequestRspFailedFCH

Number of FCH resource release requests received which failed.

Calculation

```
vsum(ResourceReleaseRequestRspFailedFCH_0_4,ResourceReleaseRequestRspFailedFCH_5_9,ResourceReleaseRequestRspFailedFCH_10_14,ResourceReleaseRequestRspFailedFCH_15_19,ResourceReleaseRequestRspFailedFCH_20_24,ResourceReleaseRequestRspFailedFCH_25_29,0)
```

ResourceReleaseRequestRspFailedSCH

Number of SCH resource release requests received which failed.

Calculation

```
vsum(ResourceReleaseRequestRspFailedSCH_0_4, ResourceReleaseRequestRspFailedSCH_5_9, ResourceReleaseRequestRspFailedSCH_10_14, ResourceReleaseRequestRspFailedSCH_15_19, ResourceReleaseRequestRspFailedSCH_20_24, ResourceReleaseRequestRspFailedSCH_25_29, 0)
```

ResourceReleaseRequestRspSuccessFCH

Number of FCH resource release requests received which were successfully processed.

Calculation

```
vsum(ResourceReleaseRequestRspSuccessFCH_0_4, ResourceReleaseRequestRspSuccessFCH_5_9, ResourceReleaseRequestRspSuccessFCH_10_14, ResourceReleaseRequestRspSuccessFCH_15_19, ResourceReleaseRequestRspSuccessFCH_20_24, ResourceReleaseRequestRspSuccessFCH_25_29, 0)
```

ResourceReleaseRequestRspSuccessSCH

Number of SCH resource release requests received which were successfully processed.

Calculation

```
vsum(ResourceReleaseRequestRspSuccessSCH_0_4, ResourceReleaseRequestRspSuccessSCH_5_9, ResourceReleaseRequestRspSuccessSCH_10_14, ResourceReleaseRequestRspSuccessSCH_15_19, ResourceReleaseRequestRspSuccessSCH_20_24, ResourceReleaseRequestRspSuccessSCH_25_29, 0)
```

ResourceReleaseRequestRspUndeliverableFCH

Number of FCH resource release responses which could not be delivered by the messaging system.

Calculation

```
vsum(ResourceReleaseRequestRspUndeliverableFCH_0_4, ResourceReleaseRequestRspUndeliverableFCH_5_9, ResourceReleaseRequestRspUndeliverableFCH_10_14, ResourceReleaseRequestRspUndeliverableFCH_15_19, ResourceReleaseRequestRspUndeliverableFCH_20_24, ResourceReleaseRequestRspUndeliverableFCH_25_29, 0)
```

ResourceReleaseRequestRspUndeliverableSCH

Number of SCH resource release responses which were undeliverable by the messaging system.

Calculation

```
vsum(ResourceReleaseRequestRspUndeliverableSCH_0_4, ResourceReleaseRequestRspUndeliverableSCH_5_9, ResourceReleaseRequestRspUndeliverableSCH_10_14, ResourceReleaseRequestRspUndeliverableSCH_15_19, ResourceReleaseRequestRspUndeliverableSCH_20_24, ResourceReleaseRequestRspUndeliverableSCH_25_29, 0)
```

ResourceRequestRcvdFCH

Number of FCH resource requests received.

Calculation

```
vsum(ResourceRequestRcvdFCH_0_4, ResourceRequestRcvdFCH_5_9, ResourceRequestRcvdFCH_10_14, ResourceRequestRcvdFCH_15_19, ResourceRequestRcvdFCH_20_24, ResourceRequestRcvdFCH_25_29, 0)
```

ResourceRequestRcvdSCH

Number of SCH resource requests received.

Calculation

```
vsum(ResourceRequestRcvdSCH_0_4, ResourceRequestRcvdSCH_5_9, ResourceRequestRcvdSCH_10_14, ResourceRequestRcvdSCH_15_19, ResourceRequestRcvdSCH_20_24, ResourceRequestRcvdSCH_25_29, 0)
```

ResourceRequestRspBlockedFCH

Number of FCH resource requests which could not be processed due to lack of resources.

Calculation

```
vsum(ResourceRequestRspBlockedFCH_0_4, ResourceRequestRspBlockedFCH_5_9, ResourceRequestRspBlockedFCH_10_14, ResourceRequestRspBlockedFCH_15_19, ResourceRequestRspBlockedFCH_20_24, ResourceRequestRspBlockedFCH_25_29, 0)
```

ResourceRequestRspBlockedSCH

Number of SCH resource requests which could not be processed because of lack of resources.

Calculation

```
vsum(ResourceRequestRspBlockedSCH_0_4, ResourceRequestRspBlockedSCH_5_9, ResourceRequestRspBlockedSCH_10_14, ResourceRequestRspBlockedSCH_15_19, ResourceRequestRspBlockedSCH_20_24, ResourceRequestRspBlockedSCH_25_29, 0)
```

ResourceRequestRspFailedFCH

Number of FCH resource requests received which failed.

Calculation

```
vsum(ResourceRequestRspFailedFCH_0_4, ResourceRequestRspFailedFCH_5_9, ResourceRequestRspFailedFCH_10_14, ResourceRequestRspFailedFCH_15_19, ResourceRequestRspFailedFCH_20_24, ResourceRequestRspFailedFCH_25_29, 0)
```

ResourceRequestRspFailedSCH

Number of SCH resource requests received which failed.

Calculation

```
vsum(ResourceRequestRspFailedSCH_0_4, ResourceRequestRspFailedSCH_5_9, ResourceRequestRspFailedSCH_10_14, ResourceRequestRspFailedSCH_15_19, ResourceRequestRspFailedSCH_20_24, ResourceRequestRspFailedSCH_25_29, 0)
```

ResourceRequestRspSuccessFCH

Number of FCH resource requests received which were successfully processed.

Calculation

```
vsum(ResourceRequestRspSuccessFCH_0_4, ResourceRequestRspSuccessFCH_5_9, ResourceRequestRspSuccessFCH_10_14, ResourceRequestRspSuccessFCH_15_19, ResourceRequestRspSuccessFCH_20_24, ResourceRequestRspSuccessFCH_25_29, 0)
```

ResourceRequestRspSuccessSCH

Number of SCH resource requests received which were successfully processed

Calculation

```
vsum(ResourceRequestRspSuccessSCH_0_4, ResourceRequestRspSuccessSCH_5_9, ResourceRequestRspSuccessSCH_10_14, ResourceRequestRspSuccessSCH_15_19, ResourceRequestRspSuccessSCH_20_24, ResourceRequestRspSuccessSCH_25_29, 0)
```

ResourceRequestRspUndeliverableFCH

Number of FCH resource request responses which could not be delivered by the messaging system.

Calculation

```
vsum(ResourceRequestRspUndeliverableFCH_0_4, ResourceRequestRspUndeliverableFCH_5_9, ResourceRequestRspUndeliverableFCH_10_14, ResourceRequestRspUndeliverableFCH_15_19, ResourceRequestRspUndeliverableFCH_20_24, ResourceRequestRspUndeliverableFCH_25_29, 0)
```

ResourceRequestRspUndeliverableSCH

Number of SCH resource request responses prepared which were undeliverable by the messaging system.

Calculation

```
vsum(ResourceRequestRspUndeliverableSCH_0_4, ResourceRequestRspUndeliverableSCH_5_9, ResourceRequestRspUndeliverableSCH_10_14, ResourceRequestRspUndeliverableSCH_15_19, ResourceRequestRspUndeliverableSCH_20_24, ResourceRequestRspUndeliverableSCH_25_29, 0)
```

SMSDBurstCmdDropped

Number of data burst command messages received which were dropped.

Calculation

```
vsum(SMSDBurstCmdDropped_0_4, SMSDBurstCmdDropped_5_9, SMSDBurstCmdDropped_10_14, SMSDBurstCmdDropped_15_19, SMSDBurstCmdDropped_20_24, SMSDBurstCmdDropped_25_29, 0)
```

SMSDBurstCmdRcvd

Number of data burst command messages received.

Calculation

```
vsum(SMSDBurstCmdRcvd_0_4, SMSDBurstCmdRcvd_5_9, SMSDBurstCmdRcvd_10_14, SMSDBurstCmdRcvd_15_19, SMSDBurstCmdRcvd_20_24, SMSDBurstCmdRcvd_25_29, 0)
```

SMSDBurstIndicationSent

Number of data burst indication messages handed to the message delivery system.

Calculation

```
vsum(SMSDBurstIndicationSent_0_4, SMSDBurstIndicationSent_5_9, SMSDBurstIndicationSent_10_14, SMSDBurstIndicationSent_15_19, SMSDBurstIndicationSent_20_24, SMSDBurstIndicationSent_25_29, 0)
```

SMSDBurstIndicationUndeliverable

Number of data burst indication messages which could not be delivered by the message delivery system.

Calculation

```
vsum(SMSDBurstIndicationUndeliverable_0_4, SMSDBurstIndicationUndeliverable_5_9, SMSDBurstIndicationUndeliverable_10_14, SMSDBurstIndicationUndeliverable_15_19, SMSDBurstIndicationUndeliverable_20_24, SMSDBurstIndicationUndeliverable_25_29, 0)
```

StatusRequestMsgDropped

Number of status request messages received which were dropped.

Calculation

```
vsum(StatusRequestMsgDropped_0_4, StatusRequestMsgDropped_5_9, StatusRequestMsgDropped_10_14, StatusRequestMsgDropped_15_19, StatusRequestMsgDropped_20_24, StatusRequestMsgDropped_25_29, 0)
```

StatusRequestMsgRcvd

Number of status request messages received.

Calculation

```
vsum(StatusRequestMsgRcvd_0_4, StatusRequestMsgRcvd_5_9, StatusRequestMsgRcvd_10_14, StatusRequestMsgRcvd_15_19, StatusRequestMsgRcvd_20_24, StatusRequestMsgRcvd_25_29, 0)
```

StatusResponseSent

Number of status response messages handed to the message delivery system.

Calculation

```
vsum(StatusResponseSent_0_4,StatusResponseSent_5_9,StatusResponseSent_10_14,StatusResponseSent_15_19,StatusResponseSent_20_24,StatusResponseSent_25_29,0)
```

StatusResponseUndeliverable

Number of status response messages which could not be delivered by the message delivery system.

Calculation

```
vsum(StatusResponseUndeliverable_0_4,StatusResponseUndeliverable_5_9,StatusResponseUndeliverable_10_14,StatusResponseUndeliverable_15_19,StatusResponseUndeliverable_20_24,StatusResponseUndeliverable_25_29,0)
```

UnicastMsgsDropped

Number of command messages received at the BTS which were dropped before the message could be enqueued for processing.

Calculation

```
vsum(UnicastMsgsDropped_0_4,UnicastMsgsDropped_5_9,UnicastMsgsDropped_10_14,UnicastMsgsDropped_15_19,UnicastMsgsDropped_20_24,UnicastMsgsDropped_25_29,0)
```

DCG Peg Counts

The following is a list of peg counts for the DCG entity.

AckIndSent_0_4

Number of acknowledgement indications messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndSent (Seq# 114[0])

Source Section

BTSCallProcessing MO

AckIndSent_10_14

Number of acknowledgement indications messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndSent (Seq# 114[2])

Source Section

BTSCallProcessing MO

AckIndSent_15_19

Number of acknowledgement indications messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndSent (Seq# 114[3])

Source Section

BTSCallProcessing MO

AckIndSent_20_24

Number of acknowledgement indications messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndSent (Seq# 114[4])

Source Section

BTSCallProcessing MO

AckIndSent_25_29

Number of acknowledgement indications messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndSent (Seq# 114[5])

Source Section

BTSCallProcessing MO

AckIndSent_5_9

Number of acknowledgement indications messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndSent (Seq# 114[1])

Source Section

BTSCallProcessing MO

AckIndUndeliverable_0_4

Number of acknowledgement indications which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndUndeliverable (Seq# 115[0])

Source Section

BTSCallProcessing MO

AckIndUndeliverable_10_14

Number of acknowledgement indications which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndUndeliverable (Seq# 115[2])

Source Section

BTSCallProcessing MO

AckIndUndeliverable_15_19

Number of acknowledgement indications which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndUndeliverable (Seq# 115[3])

Source Section

BTSCallProcessing MO

AckIndUndeliverable_20_24

Number of acknowledgement indications which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndUndeliverable (Seq# 115[4])

Source Section

BTSCallProcessing MO

AckIndUndeliverable_25_29

Number of acknowledgement indications which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndUndeliverable (Seq# 115[5])

Source Section

BTSCallProcessing MO

AckIndUndeliverable_5_9

Number of acknowledgement indications which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

AckIndUndeliverable (Seq# 115[1])

Source Section

BTSCallProcessing MO

AuthenticationChallengeRspSent_0_4

Number of authentication challenge response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

AuthenticationChallengeRspSent (Seq# 126[0])

Source Section

BTSCallProcessing MO

AuthenticationChallengeRspSent_10_14

Number of authentication challenge response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

AuthenticationChallengeRspSent (Seq# 126[2])

Source Section

BTSCallProcessing MO

AuthenticationChallengeRspSent_15_19

Number of authentication challenge response messages handed to the message delivery system.

Source Section

BTSCallProcessing MO

AutoRecoveryFailCount

Number of times the BTS has completed auto recovery successfully since the last time the OM has been consolidated and sent up to the EMS with EMS communications established. Pegs when a fatal error or non supported condition occurs during the auto recovery process resulting in the BTS resetting and reporting Auto Recovery failure. Examples include data corruption and MO creation failures.

Data Source

NBSS BTS MO

Source Field

AutoRecoveryFailCount (Seq# 86)

Source Section

DCG MO

AutoRecoveryPassCount

Number of times the BTS has auto recovered unsuccessfully since the last time the OM has been consolidated and sent up to the EMS with EMS communications established.

Data Source

NBSS BTS MO

Source Field

AutoRecoveryPassCount (Seq# 85)

Source Section

DCG MO

BroadcastMsgsDropped_0_4

Number of messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

BroadcastMsgsDropped (Seq# 113[0])

Source Section

BTSCallProcessing MO

BroadcastMsgsDropped_10_14

Number of messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

BroadcastMsgsDropped (Seq# 113[2])

Source Section

BTSCallProcessing MO

BroadcastMsgsDropped_15_19

Number of messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

BroadcastMsgsDropped (Seq# 113[3])

Source Section

BTSCallProcessing MO

BroadcastMsgsDropped_20_24

Number of messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

BroadcastMsgsDropped (Seq# 113[4])

Source Section

BTSCallProcessing MO

BroadcastMsgsDropped_25_29

Number of messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

BroadcastMsgsDropped (Seq# 113[5])

Source Section

BTSCallProcessing MO

BroadcastMsgsDropped_5_9

Number of messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

BroadcastMsgsDropped (Seq# 113[1])

Source Section

BTSCallProcessing MO

BTSAutonomousResetCount

Number of times the BTS has autonomously reset since the last time the OM has been consolidated and sent up to the EMS with EMS communications established. Pegs whenever a non-operator initiated reset occurs (i.e. power failure, hardware exceptions, software traps, etc).

Data Source

NBSS BTS MO

Source Field

BTSAutonomousResetCount (Seq# 84)

Source Section

DCG MO

BtscCpuUsage0to9percent

Number of extended channel assignment messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

ExtendedChannelAssignmentMsgDropped (Seq# 99[1])

Source Section

BTSCallProcessing MO

ExtendedChannelAssignmentMsgRcvd_0_4

Number of extended channel assignment messages received.

Data Source

NBSS BTS MO

Source Field

ExtendedChannelAssignmentMsgRcvd (Seq# 98[0])

Source Section

BTSCallProcessing MO

ExtendedChannelAssignmentMsgRcvd_10_14

Number of extended channel assignment messages received.

Data Source

NBSS BTS MO

Source Field

ExtendedChannelAssignmentMsgRcvd (Seq# 98[2])

Source Section

BTSCallProcessing MO

ExtendedChannelAssignmentMsgRcvd_15_19

Number of extended channel assignment messages received.

Data Source

NBSS BTS MO

Source Field

ExtendedChannelAssignmentMsgRcvd (Seq# 98[3])

Source Section

BTSCallProcessing MO

ExtendedChannelAssignmentMsgRcvd_20_24

Number of extended channel assignment messages received.

Data Source

NBSS BTS MO

Source Field

ExtendedChannelAssignmentMsgRcvd (Seq# 98[4])

Source Section

BTSCallProcessing MO

ExtendedChannelAssignmentMsgRcvd_25_29

Number of extended channel assignment messages received.

Data Source

NBSS BTS MO

Source Field

ExtendedChannelAssignmentMsgRcvd (Seq# 98[5])

Source Section

BTSCallProcessing MO

ExtendedChannelAssignmentMsgRcvd_5_9

Number of extended channel assignment messages received.

Data Source

NBSS BTS MO

Source Field

ExtendedChannelAssignmentMsgRcvd (Seq# 98[1])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseSent_0_4

Number of extended status response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseSent (Seq# 130[0])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseSent_10_14

Number of extended status response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseSent (Seq# 130[2])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseSent_15_19

Number of extended status response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseSent (Seq# 130[3])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseSent_20_24

Number of extended status response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseSent (Seq# 130[4])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseSent_25_29

Number of extended status response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseSent (Seq# 130[5])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseSent_5_9

Number of extended status response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseSent (Seq# 130[1])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseUndeliverable_0_4

Number of extended status response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseUndeliverable (Seq# 131[0])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseUndeliverable_10_14

Number of extended status response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseUndeliverable (Seq# 131[2])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseUndeliverable_15_19

Number of extended status response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseUndeliverable (Seq# 131[3])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseUndeliverable_20_24

Number of extended status response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseUndeliverable (Seq# 131[4])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseUndeliverable_25_29

Number of extended status response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseUndeliverable (Seq# 131[5])

Source Section

BTSCallProcessing MO

ExtendedStatusResponseUndeliverable_5_9

Number of extended status response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

ExtendedStatusResponseUndeliverable (Seq# 131[1])

Source Section

BTSCallProcessing MO

FeatureNotificationCmdRcvd_0_4

Number of feature notification command messages received.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCmdRcvd (Seq# 102[0])

Source Section

BTSCallProcessing MO

FeatureNotificationCmdRcvd_10_14

Number of feature notification command messages received.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCmdRcvd (Seq# 102[2])

Source Section

BTSCallProcessing MO

FeatureNotificationCmdRcvd_15_19

Number of feature notification command messages received.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCmdRcvd (Seq# 102[3])

Source Section

BTSCallProcessing MO

FeatureNotificationCmdRcvd_20_24

Number of feature notification command messages received.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCmdRcvd (Seq# 102[4])

Source Section

BTSCallProcessing MO

FeatureNotificationCmdRcvd_25_29

Number of feature notification command messages received.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCmdRcvd (Seq# 102[5])

Source Section

BTSCallProcessing MO

FeatureNotificationCmdRcvd_5_9

Number of feature notification command messages received.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCmdRcvd (Seq# 102[1])

Source Section

BTSCallProcessing MO

FeatureNotificationCommandDropped_0_4

Number of feature notification command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCommandDropped (Seq# 103[0])

Source Section

BTSCallProcessing MO

FeatureNotificationCommandDropped_10_14

Number of feature notification command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCommandDropped (Seq# 103[2])

Source Section

BTSCallProcessing MO

FeatureNotificationCommandDropped_15_19

Number of feature notification command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCommandDropped (Seq# 103[3])

Source Section

BTSCallProcessing MO

FeatureNotificationCommandDropped_20_24

Number of feature notification command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCommandDropped (Seq# 103[4])

Source Section

BTSCallProcessing MO

FeatureNotificationCommandDropped_25_29

Number of feature notification command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCommandDropped (Seq# 103[5])

Source Section

BTSCallProcessing MO

FeatureNotificationCommandDropped_5_9

Number of feature notification command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

FeatureNotificationCommandDropped (Seq# 103[1])

Source Section

BTSCallProcessing MO

GeneralPageMsgDropped_0_4

Number of general page messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgDropped (Seq# 95[0])

Source Section

BTSCallProcessing MO

GeneralPageMsgDropped_10_14

Number of general page messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgDropped (Seq# 95[2])

Source Section

BTSCallProcessing MO

GeneralPageMsgDropped_15_19

Number of general page messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgDropped (Seq# 95[3])

Source Section

BTSCallProcessing MO

GeneralPageMsgDropped_20_24

Number of general page messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgDropped (Seq# 95[4])

Source Section

BTSCallProcessing MO

GeneralPageMsgDropped_25_29

Number of general page messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgDropped (Seq# 95[5])

Source Section

BTSCallProcessing MO

GeneralPageMsgDropped_5_9

Number of general page messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgDropped (Seq# 95[1])

Source Section

BTSCallProcessing MO

GeneralPageMsgRcvd_0_4

Number of general page messages received.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgRcvd (Seq# 94[0])

Source Section

BTSCallProcessing MO

GeneralPageMsgRcvd_10_14

Number of general page messages received.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgRcvd (Seq# 94[2])

Source Section

BTSCallProcessing MO

GeneralPageMsgRcvd_15_19

Number of general page messages received.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgRcvd (Seq# 94[3])

Source Section

BTSCallProcessing MO

GeneralPageMsgRcvd_20_24

Number of general page messages received.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgRcvd (Seq# 94[4])

Source Section

BTSCallProcessing MO

GeneralPageMsgRcvd_25_29

Number of general page messages received.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgRcvd (Seq# 94[5])

Source Section

BTSCallProcessing MO

GeneralPageMsgRcvd_5_9

Number of general page messages received.

Data Source

NBSS BTS MO

Source Field

GeneralPageMsgRcvd (Seq# 94[1])

Source Section

BTSCallProcessing MO

InitializationDuration_Init

Length of time (in seconds) that the BTS is in the initializing state.

Data Source

NBSS BTS MO

Source Field

InitializationDuration (Seq# 74[1])

Source Section

DCG MO

InitializationDuration_WaitToBeInit

Length of time (in seconds) that the BTS is in the waiting to be initialized state.

Data Source

NBSS BTS MO

Source Field

InitializationDuration (Seq# 74[0])

Source Section

DCG MO

InitializationDurationOdometer_Init

Cumulative length of time (in seconds) that the BTS is in the initializing state, starting from the later one of either when both BSSM and BTS are upgraded to 14.0 or when the CM module is replaced.

Data Source

NBSS BTS MO

Source Field

InitializationDurationOdometer (Seq# 77[1])

Source Section

DCG MO

InitializationDurationOdometer_WaitToBeInit

Cumulative length of time (in seconds) that the BTS is in the waiting to be initialized state, starting from the later one of either when both BSSM and BTS are upgraded to 14.0 or when the CM module is replaced.

Data Source

NBSS BTS MO

Source Field

InitializationDurationOdometer (Seq# 77[0])

Source Section

DCG MO

MessageStormDuration

This OM counts the total Paging Channel discard duration (in seconds) associated with events pegged by the existing PCH Message Storm OM.

Data Source

NBSS BTS MO

Source Field

MessageStormDuration (Seq# 46)

Source Section

CBCM MO

OrderCommandDropped_0_4

Number of order command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

OrderCommandDropped (Seq# 101[0])

Source Section

BTSCallProcessing MO

OrderCommandDropped_10_14

Number of order command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

OrderCommandDropped (Seq# 101[2])

Source Section

BTSCallProcessing MO

OrderCommandDropped_15_19

Number of order command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

OrderCommandDropped (Seq# 101[3])

Source Section

BTSCallProcessing MO

OrderCommandDropped_20_24

Number of order command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

OrderCommandDropped (Seq# 101[4])

Source Section

BTSCallProcessing MO

OrderCommandDropped_25_29

Number of order command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

OrderCommandDropped (Seq# 101[5])

Source Section

BTSCallProcessing MO

OrderCommandDropped_5_9

Number of order command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

OrderCommandDropped (Seq# 101[1])

Source Section

BTSCallProcessing MO

OrderCommandRcvd_0_4

Number of order command messages received.

Data Source

NBSS BTS MO

Source Field

OrderCommandRcvd (Seq# 100[0])

Source Section

BTSCallProcessing MO

OrderCommandRcvd_10_14

Number of order command messages received.

Data Source

NBSS BTS MO

Source Field

OrderCommandRcvd (Seq# 100[2])

Source Section

BTSCallProcessing MO

OrderCommandRcvd_15_19

Number of order command messages received.

Data Source

NBSS BTS MO

Source Field

OrderCommandRcvd (Seq# 100[3])

Source Section

BTSCallProcessing MO

OrderCommandRcvd_20_24

Number of order command messages received.

Data Source

NBSS BTS MO

Source Field

OrderCommandRcvd (Seq# 100[4])

Source Section

BTSCallProcessing MO

OrderCommandRcvd_25_29

Number of order command messages received.

Data Source

NBSS BTS MO

Source Field

OrderCommandRcvd (Seq# 100[5])

Source Section

BTSCallProcessing MO

OrderCommandRcvd_5_9

Number of order command messages received.

Data Source

NBSS BTS MO

Source Field

OrderCommandRcvd (Seq# 100[1])

Source Section

BTSCallProcessing MO

OrderIndicationSent_0_4

Number of order indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationSent (Seq# 120[0])

Source Section

BTSCallProcessing MO

OrderIndicationSent_10_14

Number of order indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationSent (Seq# 120[2])

Source Section

BTSCallProcessing MO

OrderIndicationSent_15_19

Number of order indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationSent (Seq# 120[3])

Source Section

BTSCallProcessing MO

OrderIndicationSent_20_24

Number of order indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationSent (Seq# 120[4])

Source Section

BTSCallProcessing MO

OrderIndicationSent_25_29

Number of order indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationSent (Seq# 120[5])

Source Section

BTSCallProcessing MO

OrderIndicationSent_5_9

Number of order indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationSent (Seq# 120[1])

Source Section

BTSCallProcessing MO

OrderIndicationUndeliverable_0_4

Number of order indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationUndeliverable (Seq# 121[0])

Source Section

BTSCallProcessing MO

OrderIndicationUndeliverable_10_14

Number of order indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationUndeliverable (Seq# 121[2])

Source Section

BTSCallProcessing MO

OrderIndicationUndeliverable_15_19

Number of order indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationUndeliverable (Seq# 121[3])

Source Section

BTSCallProcessing MO

OrderIndicationUndeliverable_20_24

Number of order indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationUndeliverable (Seq# 121[4])

Source Section

BTSCallProcessing MO

OrderIndicationUndeliverable_25_29

Number of order indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationUndeliverable (Seq# 121[5])

Source Section

BTSCallProcessing MO

OrderIndicationUndeliverable_5_9

Number of order indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

OrderIndicationUndeliverable (Seq# 121[1])

Source Section

BTSCallProcessing MO

OriginationIndicationSent_0_4

Number of origination indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OriginationIndicationSent (Seq# 118[0])

Source Section

BTSCallProcessing MO

OriginationIndicationSent_10_14

Number of origination indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OriginationIndicationSent (Seq# 118[2])

Source Section

BTSCallProcessing MO

OriginationIndicationSent_15_19

Number of origination indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OriginationIndicationSent (Seq# 118[3])

Source Section

BTSCallProcessing MO

OriginationIndicationSent_20_24

Number of origination indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OriginationIndicationSent (Seq# 118[4])

Source Section

BTSCallProcessing MO

OriginationIndicationSent_25_29

Number of origination indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OriginationIndicationSent (Seq# 118[5])

Source Section

BTSCallProcessing MO

OriginationIndicationSent_5_9

Number of origination indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

OriginationIndicationSent (Seq# 118[1])

Source Section

BTSCallProcessing MO

OriginationIndicationUndeliverable_0_4

Number of origination indication messages which could not be delivered by the message delivery system

Data Source

NBSS BTS MO

Source Field

OriginationIndicationUndeliverable (Seq# 119[0])

Source Section

BTSCallProcessing MO

OriginationIndicationUndeliverable_10_14

Number of origination indication messages which could not be delivered by the message delivery system

Data Source

NBSS BTS MO

Source Field

OriginationIndicationUndeliverable (Seq# 119[2])

Source Section

BTSCallProcessing MO

OriginationIndicationUndeliverable_15_19

Number of origination indication messages which could not be delivered by the message delivery system

Data Source

NBSS BTS MO

Source Field

OriginationIndicationUndeliverable (Seq# 119[3])

Source Section

BTSCallProcessing MO

OriginationIndicationUndeliverable_20_24

Number of origination indication messages which could not be delivered by the message delivery system

Data Source

NBSS BTS MO

Source Field

OriginationIndicationUndeliverable (Seq# 119[4])

Source Section

BTSCallProcessing MO

OriginationIndicationUndeliverable_25_29

Number of origination indication messages which could not be delivered by the message delivery system

Data Source

NBSS BTS MO

Source Field

OriginationIndicationUndeliverable (Seq# 119[5])

Source Section

BTSCallProcessing MO

OriginationIndicationUndeliverable_5_9

Number of origination indication messages which could not be delivered by the message delivery system

Data Source

NBSS BTS MO

Source Field

OriginationIndicationUndeliverable (Seq# 119[1])

Source Section

BTSCallProcessing MO

OutOfBandClassGeneralPagesDropped_0_4

Number of general page msgs dropped because the band class parameter in the message does not match the BTS band class.

Data Source

NBSS BTS MO

Source Field

OutOfBandClassGeneralPagesDropped (Seq# 111[0])

Source Section

BTSCallProcessing MO

OutOfBandClassGeneralPagesDropped_10_14

Number of general page msgs dropped because the band class parameter in the message does not match the BTS band class.

Data Source

NBSS BTS MO

Source Field

OutOfBandClassGeneralPagesDropped (Seq# 111[2])

Source Section

BTSCallProcessing MO

OutOfBandClassGeneralPagesDropped_15_19

Number of general page msgs dropped because the band class parameter in the message does not match the BTS band class.

Data Source

NBSS BTS MO

Source Field

OutOfBandClassGeneralPagesDropped (Seq# 111[3])

Source Section

BTSCallProcessing MO

OutOfBandClassGeneralPagesDropped_20_24

Number of general page msgs dropped because the band class parameter in the message does not match the BTS band class.

Data Source

NBSS BTS MO

Source Field

OutOfBandClassGeneralPagesDropped (Seq# 111[4])

Source Section

BTSCallProcessing MO

OutOfBandClassGeneralPagesDropped_25_29

Number of general page msgs dropped because the band class parameter in the message does not match the BTS band class.

Data Source

NBSS BTS MO

Source Field

OutOfBandClassGeneralPagesDropped (Seq# 111[5])

Source Section

BTSCallProcessing MO

OutOfBandClassGeneralPagesDropped_5_9

Number of general page msgs dropped because the band class parameter in the message does not match the BTS band class.

Data Source

NBSS BTS MO

Source Field

OutOfBandClassGeneralPagesDropped (Seq# 111[1])

Source Section

BTSCallProcessing MO

OutOfZonePages_0_4

Number of broadcast messages received but discarded because they are addressed to zones that this BTS is not included in.

Data Source

NBSS BTS MO

Source Field

OutOfZonePages (Seq# 110[0])

Source Section

BTSCallProcessing MO

OutOfZonePages_10_14

Number of broadcast messages received but discarded because they are addressed to zones that this BTS is not included in.

Data Source

NBSS BTS MO

Source Field

OutOfZonePages (Seq# 110[2])

Source Section

BTSCallProcessing MO

OutOfZonePages_15_19

Number of broadcast messages received but discarded because they are addressed to zones that this BTS is not included in.

Data Source

NBSS BTS MO

Source Field

OutOfZonePages (Seq# 110[3])

Source Section

BTSCallProcessing MO

OutOfZonePages_20_24

Number of broadcast messages received but discarded because they are addressed to zones that this BTS is not included in.

Data Source

NBSS BTS MO

Source Field

OutOfZonePages (Seq# 110[4])

Source Section

BTSCallProcessing MO

OutOfZonePages_25_29

Number of broadcast messages received but discarded because they are addressed to zones that this BTS is not included in.

Data Source

NBSS BTS MO

Source Field

OutOfZonePages (Seq# 110[5])

Source Section

BTSCallProcessing MO

OutOfZonePages_5_9

Number of broadcast messages received but discarded because they are addressed to zones that this BTS is not included in.

Data Source

NBSS BTS MO

Source Field

OutOfZonePages (Seq# 110[1])

Source Section

BTSCallProcessing MO

PageResponseSent_0_4

Number of page response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseSent (Seq# 116[0])

Source Section

BTSCallProcessing MO

PageResponseSent_10_14

Number of page response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseSent (Seq# 116[2])

Source Section

BTSCallProcessing MO

PageResponseSent_15_19

Number of page response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseSent (Seq# 116[3])

Source Section

BTSCallProcessing MO

PageResponseSent_20_24

Number of page response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseSent (Seq# 116[4])

Source Section

BTSCallProcessing MO

PageResponseSent_25_29

Number of page response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseSent (Seq# 116[5])

Source Section

BTSCallProcessing MO

PageResponseSent_5_9

Number of page response messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseSent (Seq# 116[1])

Source Section

BTSCallProcessing MO

PageResponseUndeliverable_0_4

Number of page response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseUndeliverable (Seq# 117[0])

Source Section

BTSCallProcessing MO

PageResponseUndeliverable_10_14

Number of page response messages which could not be delivered by the message delivery system.

NBSS BTS MO

Source Field

PageResponseUndeliverable (Seq# 117[2])

Source Section

BTSCallProcessing MO

PageResponseUndeliverable_15_19

Number of page response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseUndeliverable (Seq# 117[3])

Source Section

BTSCallProcessing MO

PageResponseUndeliverable_20_24

Number of page response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseUndeliverable (Seq# 117[4])

Source Section

BTSCallProcessing MO

PageResponseUndeliverable_25_29

Number of page response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseUndeliverable (Seq# 117[5])

Source Section

BTSCallProcessing MO

PageResponseUndeliverable_5_9

Number of page response messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

PageResponseUndeliverable (Seq# 117[1])

Source Section

BTSCallProcessing MO

PagingChannelMessageCount

Number of paging channel messages sent to the BTS by the PAM in the CAU. This includes pages, repages, SMS, etc.

Data Source

NBSS BTS MO

Source Field

PagingChannelMessageCount (Seq# 52)

Source Section

BTSCallProcessing MO

PagingChannelMessagesDropped

Number of paging channel messages dropped by the BTSC due to BTSC CPU overload.

Data Source

NBSS BTS MO

Source Field

PagingChannelMessagesDropped (Seq# 53)

Source Section

BTSCallProcessing MO

RegistrationIndicationSent_0_4

Number of registration indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

RegistrationIndicationSent (Seq# 122[0])

Source Section

BTSCallProcessing MO

RegistrationIndicationSent_10_14

Number of registration indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

RegistrationIndicationSent (Seq# 122[2])

Source Section

BTSCallProcessing MO

RegistrationIndicationSent_15_19

Number of registration indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

RegistrationIndicationSent (Seq# 122[3])

Source Section

BTSCallProcessing MO

RegistrationIndicationSent_20_24

Number of registration indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

RegistrationIndicationSent (Seq# 122[4])

Source Section

BTSCallProcessing MO

RegistrationIndicationSent_25_29

Number of registration indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

RegistrationIndicationUndeliverable (Seq# 123[3])

Source Section

BTSCallProcessing MO

RegistrationIndicationUndeliverable_20_24

Number of registration indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

RegistrationIndicationUndeliverable (Seq# 123[4])

Source Section

BTSCallProcessing MO

RegistrationIndicationUndeliverable_25_29

Number of registration indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

RegistrationIndicationUndeliverable (Seq# 123[5])

Source Section

BTSCallProcessing MO

RegistrationIndicationUndeliverable_5_9

Number of registration indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

RegistrationIndicationUndeliverable (Seq# 123[1])

Source Section

BTSCallProcessing MO

ResourceMgmtMsgsDropped_0_4

Number of resource management messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

ResourceMgmtMsgsDropped (Seq# 93[0])

Source Section

BTSCallProcessing MO

ResourceMgmtMsgsDropped_10_14

Number of resource management messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

ResourceMgmtMsgsDropped (Seq# 93[2])

Source Section

BTSCallProcessing MO

ResourceMgmtMsgsDropped_15_19

Number of resource management messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

ResourceMgmtMsgsDropped (Seq# 93[3])

Source Section

BTSCallProcessing MO

ResourceMgmtMsgsDropped_20_24

Number of resource management messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

ResourceMgmtMsgsDropped (Seq# 93[4])

Source Section

BTSCallProcessing MO

ResourceMgmtMsgsDropped_25_29

Number of resource management messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

ResourceMgmtMsgsDropped (Seq# 93[5])

Source Section

BTSCallProcessing MO

ResourceMgmtMsgsDropped_5_9

Number of resource management messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

ResourceMgmtMsgsDropped (Seq# 93[1])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdFCH_0_4

Number of FCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdFCH (Seq# 71[0])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdFCH_10_14

Number of FCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdFCH (Seq# 71[2])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdFCH_15_19

Number of FCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdFCH (Seq# 71[3])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdFCH_20_24

Number of FCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdFCH (Seq# 71[4])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdFCH_25_29

Number of FCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdFCH (Seq# 71[5])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdFCH_5_9

Number of FCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdFCH (Seq# 71[1])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdSCH_0_4

Number of SCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdSCH (Seq# 81[0])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdSCH_10_14

Number of SCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdSCH (Seq# 81[2])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdSCH_15_19

Number of SCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdSCH (Seq# 81[3])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdSCH_20_24

Number of SCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdSCH (Seq# 81[4])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdSCH_25_29

Number of SCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdSCH (Seq# 81[5])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRcvdSCH_5_9

Number of SCH resource release requests received.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRcvdSCH (Seq# 81[1])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedFCH_0_4

Number of FCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedFCH (Seq# 73[0])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedFCH_10_14

Number of FCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedFCH (Seq# 73[2])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedFCH_15_19

Number of FCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedFCH (Seq# 73[3])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedFCH_20_24

Number of FCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedFCH (Seq# 73[4])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedFCH_25_29

Number of FCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedFCH (Seq# 73[5])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedFCH_5_9

Number of FCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedFCH (Seq# 73[1])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedSCH_0_4

Number of SCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedSCH (Seq# 83[0])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedSCH_10_14

Number of SCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedSCH (Seq# 83[2])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedSCH_15_19

Number of SCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedSCH (Seq# 83[3])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedSCH_20_24

Number of SCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedSCH (Seq# 83[4])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedSCH_25_29

Number of SCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedSCH (Seq# 83[5])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspFailedSCH_5_9

Number of SCH resource release requests received which failed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspFailedSCH (Seq# 83[1])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessFCH_0_4

Number of FCH resource release requests received which were successfully processed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspSuccessFCH (Seq# 72[0])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessFCH_10_14

Number of FCH resource release requests received which were successfully processed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspSuccessFCH (Seq# 72[2])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessFCH_15_19

Number of FCH resource release requests received which were successfully processed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspSuccessFCH (Seq# 72[3])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessFCH_20_24

Number of FCH resource release requests received which were successfully processed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspSuccessFCH (Seq# 72[4])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessFCH_25_29

Number of FCH resource release requests received which were successfully processed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspSuccessFCH (Seq# 72[5])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessFCH_5_9

Number of FCH resource release requests received which were successfully processed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspSuccessFCH (Seq# 72[1])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessSCH_0_4

Number of SCH resource release requests received which were successfully processed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspSuccessSCH (Seq# 82[0])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessSCH_10_14

Number of SCH resource release requests received which were successfully processed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspSuccessSCH (Seq# 82[2])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessSCH_15_19

Number of SCH resource release requests received which were successfully processed.

Data Source

NBSS BTS MO

Source Field

ResourceReleaseRequestRspSuccessSCH (Seq# 82[3])

Source Section

BTSCallProcessing MO

ResourceReleaseRequestRspSuccessSCH_20_24

ResourceRequestRspUndeliverableSCH_25_29

Number of SCH resource request responses prepared which were undeliverable by the messaging system.

Data Source

NBSS BTS MO

Source Field

ResourceRequestRspUndeliverableSCH (Seq# 80[5])

Source Section

BTSCallProcessing MO

ResourceRequestRspUndeliverableSCH_5_9

Number of SCH resource request responses prepared which were undeliverable by the messaging system.

Data Source

NBSS BTS MO

Source Field

ResourceRequestRspUndeliverableSCH (Seq# 80[1])

Source Section

BTSCallProcessing MO

SMSBMsgRecvDrop_Dropped

Counts the number of Broadcast SMS messages dropped in CM card due to page throttling.

Data Source

NBSS BTS MO

Source Field

SMSBMsgsReceivedDropped (Seq# 170[1])

Source Section

BTSCallProcessing MO

SMSBMsgRecvDrop_Filtered

Counts the number of Broadcast SMS messages filtered due to un-supported service, mismatched Broadcast zone.

Data Source

NBSS BTS MO

Source Field

SMSBMsgsReceivedDropped (Seq# 170[2])

Source Section

BTSCallProcessing MO

SMSBMsgRecvDrop_HighPriorityFiltered

Counts the number of high-priority Broadcast SMS messages dropped due to unsupported service, mismatched Broadcast address.

Data Source

NBSS BTS MO

Source Field

SMSBMsgsReceivedDropped (Seq# 170[8])

Source Section

BTSCallProcessing MO

SMSBMsgRecvDrop_HighPriorityRecv

Counts the number of high-priority Broadcast SMS messages received.

Data Source

NBSS BTS MO

Source Field

SMSBMsgsReceivedDropped (Seq# 170[7])

Source Section

BTSCallProcessing MO

SMSBMsgRecvDrop_OtherLevelFiltered

Counts the number of high-priority Broadcast SMS messages in other level except for presidential level dropped due to un-supported service, mismatched Broadcast address.

Data Source

NBSS BTS MO

Source Field

SMSBMsgsReceivedDropped (Seq# 170[6])

Source Section

BTSCallProcessing MO

SMSBMsgRecvDrop_OtherLevelRecv

Counts the number of high-priority Broadcast SMS messages in other level except for presidential level received.

Data Source

NBSS BTS MO

Source Field

SMSBMsgsReceivedDropped (Seq# 170[5])

Source Section

BTSCallProcessing MO

SMSBMsgRecvDrop_PresidLevelFiltered

Counts the number of high-priority Broadcast SMS messages in presidential level filtered due to un-supported service, mismatched Broadcast address.

Data Source

NBSS BTS MO

Source Field

SMSBMsgsReceivedDropped (Seq# 170[4])

Source Section

BTSCallProcessing MO

SMSBMsgRecvDrop_PresidLevelRecv

Counts the number of high-priority Broadcast SMS messages in presidential level received.

Data Source

NBSS BTS MO

Source Field

SMSBMsgsReceivedDropped (Seq# 170[3])

Source Section

BTSCallProcessing MO

SMSBMsgRecvDrop_Received

Counts the number of Broadcast SMS messages received in CM card.

Data Source

NBSS BTS MO

Source Field

SMSBMsgsReceivedDropped (Seq# 170[0])

Source Section

BTSCallProcessing MO

SMSDBurstCmdDropped_0_4

Number of data burst command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdDropped (Seq# 105[0])

Source Section

BTSCallProcessing MO

SMSDBurstCmdDropped_10_14

Number of data burst command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdDropped (Seq# 105[2])

Source Section

BTSCallProcessing MO

SMSDBurstCmdDropped_15_19

Number of data burst command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdDropped (Seq# 105[3])

Source Section

BTSCallProcessing MO

SMSDBurstCmdDropped_20_24

Number of data burst command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdDropped (Seq# 105[4])

Source Section

BTSCallProcessing MO

SMSDBurstCmdDropped_25_29

Number of data burst command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdDropped (Seq# 105[5])

Source Section

BTSCallProcessing MO

SMSDBurstCmdDropped_5_9

Number of data burst command messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdDropped (Seq# 105[1])

Source Section

BTSCallProcessing MO

SMSDBurstCmdRcvd_0_4

Number of data burst command messages received.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdRcvd (Seq# 104[0])

Source Section

BTSCallProcessing MO

SMSDBurstCmdRcvd_10_14

Number of data burst command messages received.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdRcvd (Seq# 104[2])

Source Section

BTSCallProcessing MO

SMSDBurstCmdRcvd_15_19

Number of data burst command messages received.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdRcvd (Seq# 104[3])

Source Section

BTSCallProcessing MO

SMSDBurstCmdRcvd_20_24

Number of data burst command messages received.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdRcvd (Seq# 104[4])

Source Section

BTSCallProcessing MO

SMSDBurstCmdRcvd_25_29

Number of data burst command messages received.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdRcvd (Seq# 104[5])

Source Section

BTSCallProcessing MO

SMSDBurstCmdRcvd_5_9

Number of data burst command messages received.

Data Source

NBSS BTS MO

Source Field

SMSDBurstCmdRcvd (Seq# 104[1])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationSent_0_4

Number of data burst indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationSent (Seq# 124[0])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationSent_10_14

Number of data burst indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationSent (Seq# 124[2])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationSent_15_19

Number of data burst indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationSent (Seq# 124[3])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationSent_20_24

Number of data burst indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationSent (Seq# 124[4])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationSent_25_29

Number of data burst indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationSent (Seq# 124[5])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationSent_5_9

Number of data burst indication messages handed to the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationSent (Seq# 124[1])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationUndeliverable_0_4

Number of data burst indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationUndeliverable (Seq# 125[0])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationUndeliverable_10_14

Number of data burst indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationUndeliverable (Seq# 125[2])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationUndeliverable_15_19

Number of data burst indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationUndeliverable (Seq# 125[3])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationUndeliverable_20_24

Number of data burst indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationUndeliverable (Seq# 125[4])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationUndeliverable_25_29

Number of data burst indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationUndeliverable (Seq# 125[5])

Source Section

BTSCallProcessing MO

SMSDBurstIndicationUndeliverable_5_9

Number of data burst indication messages which could not be delivered by the message delivery system.

Data Source

NBSS BTS MO

Source Field

SMSDBurstIndicationUndeliverable (Seq# 125[1])

Source Section

BTSCallProcessing MO

StatusRequestMsgDropped_0_4

Number of status request messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

StatusRequestMsgDropped (Seq# 109[0])

Source Section

BTSCallProcessing MO

StatusRequestMsgDropped_10_14

Number of status request messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

StatusRequestMsgDropped (Seq# 109[2])

Source Section

BTSCallProcessing MO

StatusRequestMsgDropped_15_19

Number of status request messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

StatusRequestMsgDropped (Seq# 109[3])

Source Section

BTSCallProcessing MO

StatusRequestMsgDropped_20_24

Number of status request messages received which were dropped.

Data Source

NBSS BTS MO

Source Field

StatusRequestMsgDropped (Seq# 109[4])

Source Section

BTSCallProcessing MO

StatusRequestMsgDropped_25_29

Number of status request messages received which were dropped.

Source Field

StatusResponseUndeliverable (Seq# 129[1])

Source Section

BTSCallProcessing MO

TotalOutageFrequency_NPS_BH

Number of times the BTS changed from Providing Service (PS) state to Not Providing Service state attributed to backhaul issues (NPS-BH).

Data Source

NBSS BTS MO

Source Field

TotalOutageFrequency (Seq# 73[2])

Source Section

DCG MO

TotalOutageFrequency_NPS_BTS

Number of times the BTS changed from Providing Service (PS) state to Not Providing Service state attributed to BTS subsystem components issues (NPS-BTS).

Data Source

NBSS BTS MO

Source Field

TotalOutageFrequency (Seq# 73[1])

Source Section

DCG MO

TotalOutageFrequency_NPS_MNT

Number of times the BTS changed from Providing Service (PS) state to Not Providing Service state attributed to maintenance operations (NPS-MNT).

Data Source

NBSS BTS MO

Source Field

TotalOutageFrequency (Seq# 73[0])

Source Section

DCG MO

TotalOutageFrequencyOdometer_NPS_BH

Cumulative number of times the BTS changed from Providing Service (PS) state to Not Providing Service state attributed to backhaul issues (NPS-BH), starting from the later one of either when both BSSM and BTS are upgraded to 14.0 or when the CM module is replaced.

Data Source

NBSS BTS MO

Source Field

TotalOutageFrequencyOdometer (Seq# 76[2])

Source Section

DCG MO

TotalOutageFrequencyOdometer_NPS_BTS

Cumulative number of times the BTS changed from Providing Service (PS) state to Not Providing Service state attributed to BTS subsystem components issues (NPS-BTS), starting

from the later one of either when both BSSM and BTS are upgraded to 14.0 or when the CM module is replaced.

Data Source

NBSS BTS MO

Source Field

TotalOutageFrequencyOdometer (Seq# 76[1])

Source Section

DCG MO

TotalOutageFrequencyOdometer_NPS_MNT

Cumulative number of times the BTS changed from Providing Service (PS) state to Not Providing Service state attributed to maintenance operations (NPS-MNT), starting from the later one of either when both BSSM and BTS are upgraded to 14.0 or when the CM module is replaced.

Data Source

NBSS BTS MO

Source Field

TotalOutageFrequencyOdometer (Seq# 76[0])

Source Section

DCG MO

TotalServiceDuration_NPS_BH

Length of time (in seconds) that the BTS is Not Providing Service attributed to backhaul issues (NPS-BH).

Data Source

NBSS BTS MO

Source Field

TotalServiceDuration (Seq# 81[3])

Source Section

DCG MO

TotalServiceDuration_NPS_BTS

Length of time (in seconds) that the BTS is Not Providing Service attributed to BTS subsystem components issues (NPS-BTS).

Data Source

NBSS BTS MO

Source Field

TotalServiceDuration (Seq# 81[2])

Source Section

DCG MO

TotalServiceDuration_NPS_MNT

Length of time (in seconds) that the BTS is Not Providing Service attributed to maintenance operations (NPS-MNT).

Data Source

NBSS BTS MO

Source Field

TotalServiceDuration (Seq# 81[1])

Source Section

DCG MO

TotalServiceDuration_PS

Length of time (in seconds) that the BTS is Providing Service (PS).

Data Source

NBSS BTS MO

Source Field

TotalServiceDuration (Seq# 81[0])

Source Section

DCG MO

TotalServiceDurationOdometer_NPS_BH

Cumulative length of time (in seconds) that the BTS is Not Providing Service attributed to backhaul issues (NPS-BH), starting from the later one of either when both BSSM and BTS are upgraded to 14.0 or when the CM module is replaced.

Data Source

NBSS BTS MO

Source Field

TotalServiceDurationOdometer (Seq# 82[3])

Source Section

DCG MO

TotalServiceDurationOdometer_NPS_BTS

Cumulative length of time (in seconds) that the BTS is Not Providing Service attributed to BTS subsystem components issues (NPS-BTS), starting from the later one of either when both BSSM and BTS are upgraded to 14.0 or when the CM module is replaced.

Data Source

NBSS BTS MO

Source Field

TotalServiceDurationOdometer (Seq# 82[2])

Source Section

DCG MO

TotalServiceDurationOdometer_NPS_MNT

Cumulative length of time (in seconds) that the BTS is Not Providing Service attributed to maintenance operations (NPS-MNT), starting from the later one of either when both BSSM and BTS are upgraded to 14.0 or when the CM module is replaced.

Data Source

NBSS BTS MO

Source Field

TotalServiceDurationOdometer (Seq# 82[1])

Source Section

DCG MO

TotalServiceDurationOdometer_PS

Cumulative length of time (in seconds) that the BTS is Providing Service (PS), starting from the later one of either when both BSSM and BTS are upgraded to 14.0 or when the CM module is replaced.

Data Source

NBSS BTS MO

Source Field

TotalServiceDurationOdometer (Seq# 82[0])

Source Section

DCG MO

UnicastMsgsDropped_0_4

Number of command messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

UnicastMsgsDropped (Seq# 112[0])

Source Section

BTSCallProcessing MO

UnicastMsgsDropped_10_14

Number of command messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

UnicastMsgsDropped (Seq# 112[2])

Source Section

BTSCallProcessing MO

UnicastMsgsDropped_15_19

Number of command messages received at the BTS which were dropped before the message could be enqueued for processing.

Data Source

NBSS BTS MO

Source Field

UnicastMsgsDropped (Seq# 112[3])

Source Section

BTSCallProcessing MO

UnicastMsgsDropped_20_24

Number of command messages received at the BTS which were dropped before the message could be enqueued for processing.

DO_AAAServer Peg Counts

The following is a list of peg counts for the DO_AAAServer entity.

a12AcceptsReceivedFromServer

Number of A12 Access Accepts received from the AN-AAA server

Data Source

DO-EMS

Source Field

a12AcceptsReceivedFromServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12AccessChallengesReceivedFromServer

Number of A12 Access Challenges received from the AN-AAA server

Data Source

DO-EMS

Source Field

a12AccessChallengesReceivedFromServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12BadAuthenticatorReceivedFromServer

Number of A12 messages with bad authenticators received from the AN-AAA server

Data Source

DO-EMS

Source Field

a12BadAuthenticatorReceivedFromServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12MalformedResponseReceivedFromServer

Number of malformed A12 messages received from the AN-AAA server

Data Source

DO-EMS

Source Field

a12MalformedResponseReceivedFromServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12RejectsReceivedFromServer

Number of A12 Access Rejects received from the AN-AAA server

Data Source

DO-EMS

Source Field

a12RejectsReceivedFromServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12RequestsSentToServer

Number of A12-Access Requests sent to the AN-AAA server. It does not count retransmissions.

Data Source

DO-EMS

Source Field

a12RequestsSentToServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12RetransmitSentToServer

Number of A12-Access Request retransmissions sent to the AN-AAA server

Data Source

DO-EMS

Source Field

a12RetransmitSentToServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12TimeoutEventsForServer

Number of A12-Access Requests timeouts that occurred for requests sent to the AN-AAA server

Data Source

DO-EMS

Source Field

a12TimeoutEventsForServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12TxPathFailDueToNoPacketIdAvailableForServer

Total number of A12 failures due to the DO-RNC having exhausted the packet IDs to be assigned to this AAA Server.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToNoPacketIdAvailableForServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12TxPathFailDueToTransmitErrorForServer

Total number of A12 failures due to transmit failures for the DO-RNC / RNSM. The failure may be due to socket failures, route failures, etc.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToTransmitErrorForServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12UnknownOtherFailureReceivedFromServer

Total number of A12 messages from AN-AAA(s) that were dropped, by the DO-RNC / RNSM, due to other reasons.

Data Source

DO-EMS

Source Field

a12UnknownOtherFailureReceivedFromServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12UnknownPacketReceivedFromServer

Total number of A12 messages with unknown packets (with no matching outstanding packet Ids) received from the AN-AAA server

Data Source

DO-EMS

Source Field

a12UnknownPacketReceivedFromServer

Source Section

TermAuthPerfByAAAServer (RncTermAuthMIB)

a12UnknownTypeReceivedFromServer

Total number of A12 messages with unknown packet types (not one of the supported A12 packet types) received from the AN-AAA server

Data Source

DO-EMS

Source Field

a12UnknownTypeReceivedFromServer

Source Section

DO_PDSN Peg Counts

The following is a list of peg counts for the DO_PDSN entity.

a10ReconnectAttemptsPdsn

Number of automatic A10 reconnect attempts made to this PDSN.

Data Source

DO-EMS

Source Field

a10ReconnectAttemptsPdsn

Source Section

A10ReconnectPerfByPDSN (RncPcfMIB)

a10ReconnectFailuresPdsn

Number of automatic A10 reconnect attempts made to this PDSN that failed.

Data Source

DO-EMS

Source Field

a10ReconnectFailuresPdsn

Source Section

A10ReconnectPerfByPDSN (RncPcfMIB)

a10ReconnectSuccessPdsn

Number of automatic A10 reconnect attempts made to this PDSN that were successful. This happens when an A11-Registration Reply message containing the reason code "0" is received from the PDSN.

Data Source

DO-EMS

Source Field

a10ReconnectSuccessPdsn

Source Section

A10ReconnectPerfByPDSN (RncPcfMIB)

a10RegReqForRegistrationFinalTimeoutsPdsn

Number of times an A11-Registration Request message (intended for A10 connection re-registration) did not receive an A10-Registration Reply message from a PDSN despite pre-configured number of re-transmissions.

Data Source

DO-EMS

Source Field

a10RegReqForRegistrationFinalTimeoutsPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

a10RegReqForRegistrationInitialPdsn

Number of initial A10-Registration Request messages sent to a PDSN for A10 connection tear down.

Data Source

DO-EMS

Source Field

a10RegReqForRegistrationInitialPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

A10SetupAttemptsPdsn

Number of attempts to setup A10

Data Source

DO-EMS

Source Field

A10SetupAttemptsPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

A10SetupFailureAdminProhibitPdsn

Number of times PDSN denied A10 setup with the reason 'Administratively Prohibited'

Data Source

DO-EMS

Source Field

A10SetupFailureAdminProhibitPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

A10SetupFailureFailedAuthPdsn

Number of times PDSN denied A10 setup with the reason 'Authentication Failed'

Data Source

DO-EMS

Source Field

A10SetupFailureFailedAuthPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

A10SetupFailureIdMismatchPdsn

Number of times PDSN denied A10 setup with the reason 'Identification Mismatch'

Data Source

DO-EMS

Source Field

A10SetupFailureIdMismatchPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

A10SetupFailureInsuffResourcesPdsn

Number of times PDSN denied A10 setup with the reason 'Insufficeint Resources'

Data Source

DO-EMS

Source Field

A10SetupFailureInsuffResourcesPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

A10SetupFailureMalformedReqPdsn

Number of times PDSN denied A10 setup with the reason 'Poorly Formed Request'

Data Source

DO-EMS

Source Field

A10SetupFailureMalformedReqPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

a10SetupFailureNoCIDAvailablePdsn

Number of times a PDSN refused to allow establishment of an A10 connection on this PCF with a reason "No CID Available" (A11 error code: 0x8C).

Data Source

DO-EMS

Source Field

a10SetupFailureNoCIDAvailablePdsn

Source Section

A10A11PerfByPDSN (RncPcfMIB)

A10SetupFailureNoReasonPdsn

Number of times PDSN denied A10 setup attempts for no reason

Data Source

DO-EMS

Source Field

A10SetupFailureNoReasonPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

a10SetupFailureRegReplyAuthCheckFailPdsn

Number of times PCF failed to validate the authentication field in A11Registration Reply received from the PDSN in response to an A11-Registration Request sent for A10 connection establishment.

Data Source

DO-EMS

Source Field

a10SetupFailureRegReplyAuthCheckFailPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

a10SetupFailureRegReplyIdCheckFailPdsn

Number of times PCF failed to validate the ID in A11-Registration Reply received from the PDSN in response to an A11-Registration Request sent for A10 connection establishment.

Data Source

DO-EMS

Source Field

a10SetupFailureRegReplyIdCheckFailPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

a10SetupFailureReverseTunnelTbitNotSetPdsn

Number of times the PDSN refused to allow establishment of an A10 connection on this PCF with a reason "Reverse Tunnel Selected But T-bit Not Set" (A11 error code: 0x8D).

Data Source

DO-EMS

Source Field

a10SetupFailureReverseTunnelTbitNotSetPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

a10SetupFailureReverseTunnelUnavailablePdsn

Number of times the PDSN refused to allow establishment of an A10 connection on this PCF with a reason "Reverse Tunnel Unavailable" (A11 error code: 0x8A).

Data Source

DO-EMS

Source Field

a10SetupFailureReverseTunnelUnavailablePdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

a10SetupFailureServiceOptionNotSupportedPdsn

Number of times a PDSN refused to allow establishment of an A10 connection on this PCF with a reason "Service Option Not Supported" (A11 error code: 0x8B).

Data Source

DO-EMS

Source Field

a10SetupFailureServiceOptionNotSupportedPdsn

Source Section

A10A11PerfByPDSN (RncPcfMIB)

a10SetupFailureUnknownErrorCodePdsn

Number of times the PDSN refused to allow establishment of an A10 connection on this PCF with an unknown error code.

Data Source

DO-EMS

Source Field

a10SetupFailureUnknownErrorCodePdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

A10SetupFailureUnknownPdsnPdsn

Number of times PDSN denied A10 setup with the reason 'Unknown PDSN Address'

Data Source

DO-EMS

Source Field

A10SetupFailureUnknownPdsnPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

A10SetupFailureUnsupVendorIdPdsn

Number of times PDSN denied A10 setup with the reason 'Unsupported Vendor ID'

Data Source

DO-EMS

Source Field

A10SetupFailureUnsupVendIdPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

a10SetupRegReplyReceivedPdsn

Number of A11-Registration Reply messages received at PCF in response to A11-Registration Request sent to the PDSN for A10 connection establishment.

Data Source

DO-EMS

Source Field

a10SetupRegReplyReceivedPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

A10SetupSuccessesPdsn

Number of A10 setup attempts that succeeded. Note: field source has only one 'c'.

Data Source

DO-EMS

Source Field

a10SetupSuccessesPdsn

Source Section

A10A11PerfByPDSN (RncPcfPerformanceMIB)

a11RegUpdateAccountingErrorPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains PDSN code "Accounting Error".

Data Source

DO-EMS

Source Field

a11RegUpdateAccountingErrorPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateAuthCheckFailPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message failed authentication.

Data Source

DO-EMS

Source Field

a11RegUpdateAuthCheckFailPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateForUnknownPSIPdsn

This counter is incremented when an A11-Registration Update message is received and the PSI specified in the A11-Registration Update message does not have a corresponding A10 connection.

Data Source

DO-EMS

Source Field

a11RegUpdateForUnknownPSIPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateIDCheckFailPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message failed ID validation.

Data Source

DO-EMS

Source Field

a11RegUpdateIDCheckFailPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateInterPCFHandoffPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains PDSN code "Inter PCF Handoff".

Data Source

DO-EMS

Source Field

a11RegUpdateInterPCFHandoffPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateInterPDSNHandoffPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains PDSN code "Inter PDSN Handoff".

Data Source

DO-EMS

Source Field

a11RegUpdateInterPDSNHandoffPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdatePdsnErrorPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains PDSN code "PDSN Error".

Data Source

DO-EMS

Source Field

a11RegUpdatePdsnErrorPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdatePDSNOAMPInterventionPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains PDSN code "PDSN OAMP Handoff".

Data Source

DO-EMS

Source Field

a11RegUpdatePDSNOAMPInterventionPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdatePppTimeoutPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains PDSN code "PPP Timeout".

Data Source

DO-EMS

Source Field

a11RegUpdatePppTimeoutPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateReceivedPdsn

This counter is incremented when an A11-Registration Update message is received from a recognized PDSN.

Data Source

DO-EMS

Source Field

a11RegUpdateReceivedPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateRegistrationTimeoutPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains PDSN code "Registration Timeout".

Data Source

DO-EMS

Source Field

a11RegUpdateRegistrationTimeoutPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateUnknownCauseCodePdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains a PDSN code but it is not understood by the DO-RNC.

Data Source

DO-EMS

Source Field

a11RegUpdateUnknownCauseCodePdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateUnspecifiedReasonPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains PDSN code "Unspecified Reason".

Data Source

DO-EMS

Source Field

a11RegUpdateUnspecifiedReasonPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateUserFailedAuthenticationPdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message contains PDSN code "User Failed Authentication".

Data Source

DO-EMS

Source Field

a11RegUpdateUserFailedAuthenticationPdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11RegUpdateWithoutReasonCodePdsn

This counter is incremented when an A11-Registration Update message is received and the received A11-Registration Update message does NOT contain any PDSN code.

Data Source

DO-EMS

Source Field

a11RegUpdateWithoutReasonCodePdsn

Source Section

A10A11RegUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateAcceptedPdsn

This counter is incremented when DO-RNC fully processes an A11-Session Update message request and sends an A11-Session Update Acknowledge message with reason code "0" (Accepted).

Data Source

DO-EMS

Source Field

a11SessionUpdateAcceptedPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateDeniedAuthCheckFailPdsn

This counter is incremented when RNC fully parses an A11-Session Update message request but fails to authenticate the message.

Data Source

DO-EMS

Source Field

a11SessionUpdateDeniedAuthCheckFailPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateDeniedHandoffInProgressPdsn

This counter is incremented when RNC processes an A11-Session Update message request and sends an A11-Session Update Acknowledge with reason code "Denied Handoff In Progress".

Data Source

DO-EMS

Source Field

a11SessionUpdateDeniedHandoffInProgressPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateDeniedIDCheckFailPdsn

This counter is incremented when DO-RNC fully parses an A11-Session Update message request but the ID field in the A11-Session Update message does not fall within +/-256 seconds of DO-RNC's time (this is called ID check failure).

Data Source

DO-EMS

Source Field

a11SessionUpdateDeniedIDCheckFailPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateDeniedInsufficientResourcesPdsn

There are no known scenarios in which RNC 4.0 increments this. This is a future place holder.

Data Source

DO-EMS

Source Field

a11SessionUpdateDeniedInsufficientResourcesPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateDeniedPoorlyFormedPdsn

There are no known scenarios in which RNC 4.0 increments this. This is a future place holder.

Data Source

DO-EMS

Source Field

a11SessionUpdateDeniedPoorlyFormedPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateDeniedQoSProfileIdNotSupportedPdsn

This counter is incremented when RNC processes an A11-Session Update message request and sends an A11-Session Update Acknowledge with reason code "Denied QoS Profile Id not Supported".

Data Source

DO-EMS

Source Field

a11SessionUpdateDeniedQoSProfileIdNotSupportedPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateDeniedReasonUnspecifiedPdsn

This counter is incremented when RNC receives an A11-Session Update message from the PDSN but fails to process it due to internal errors such as memory allocation failures.

Data Source

DO-EMS

Source Field

a11SessionUpdateDeniedReasonUnspecifiedPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateDeniedSessionParamsNotUpdatedPdsn

There are no known scenarios in which RNC 4.0 increments this. This is a future place holder.

Data Source

DO-EMS

Source Field

a11SessionUpdateDeniedSessionParamsNotUpdatedPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateExtendedAPIPdsn

There are no known scenarios in which RNC 4.0 increments this. This is a future place holder.

Data Source

DO-EMS

Source Field

a11SessionUpdateExtendedAPIPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateForUnknownPSIPdsn

This counter is incremented when DO-RNC processes an A11-Session Update message request but fails to pass it through the state machine as there is no A10 connection for that specific PSI.

Data Source

DO-EMS

Source Field

a11SessionUpdateForUnknownPSIPdsn

Source Section

A10A11SessionUpdatePerfByPDSN (RncPcfMIB)

a11SessionUpdateReceivedPdsn

This counter is incremented when DO-RNC receives an A11-Session Update message and fully parses it without any failures or missing mandatory elements. This counter is incremented "before" authentication of the message.

Data Source

DO-EMS

Source Field

a11SessionUpdateReceivedPdsn

DO_RNC Primitive Calculations

The following is a list of primitive calculations for the DO_RNC entity.

AbnormalSessionCloses

Number of Abnormal Session Closes

Calculation

```
vsum(NumSessionsTerminatedToReceivingUatiReq, NumSessionsTerminatedToSessionConfigFailure, NumSessionsTerminatedToLocalClose, NumSessionsTerminatedToInstantClose, 0)
```

AccessFailureRate

RF-related failure rate excluding the resource blocks and other non-RF related failures

Calculation

```
100.0 * NumConnSetupsFailedTccTimeout / vsum(NumConnectionRequestsFromAt, NumFastConnectsAttempted, -1 * NumConnReqsWhileSettingUp, -1 * NumConnReqsWhileTearingDown, -1 * NumConnReqsWhileOpen, 0)
```

AverageConnectionDuration

The average connection duration time in Seconds for all connections that were open

Calculation

```
AverageConnectionDuration_Raw / 10.0
```

AverageSessionDuration

The average Session duration times in Seconds for all Sessions that were open

Calculation

AverageSessionDuration_Raw / 10.0

ConnectionDrops

Number of abnormal connection closes due to loss of RF link or other error conditions

Calculation

vsum(NumConnectionCloseRtcLost, NumConnectionCloseNoFtc, NumConnectionCloseSsm, NumConnectionCloseDormancyTimeout, 0)

ConnectionSetupAttempts

Valid and invalid ConnectionRequest messages

Calculation

vsum(NumConnectionRequestsFromAt, NumFastConnectsAttempted, 0)

ConnectionSetupErrors

Number of Connection Setup Errors

Calculation

vsum(NumConnSetupsFailedRuTimeout, NumConnSetupsFailedTccTimeout, NumConnSetupsFailedSWError, NumConnSetupsAborted, 0)

ConnectionSetupSuccessRate

Connection Setup Success Rate

Calculation

100.0 * NumConnectionsOpened / vsum(NumConnectionRequestsFromAt, NumFastConnectsAttempted, -1 * NumConnReqsWhileSettingUp, -1 * NumConnReqsWhileTearingDown, -1 * NumConnReqsWhileOpen, 0)

ConnectionUsage

NumConnectionsCurrentlyOpen*15.0/100.0

Calculation

(NumConnectionsCurrentlyOpen * 15.0 / 100.0)

EvdoSessionSetupSuccessRate

EV-DO Session Setup Success Rate

Calculation

100.0 * NumSessionSetupSuccessful / vsum(NumSessionSetupAttempts, -1 * NumSessionsTerminatedToReceivingUatiReq)

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

""

InvalidConnectionSetupRequests

Number of Invalid Connection Setup Requests

Calculation

```
vsum(NumConnReqsWhileSettingUp, NumConnReqsWhileTearingDown , NumConnReqsWhileOpen, 0)
```

MaxConnectionDuration

The maximum amount of time in Seconds that a connection was open

Calculation

```
MaxConnectionDuration_Raw / 10.0
```

MaxSessionDuration

The maximum amount of time in Seconds that a Session was open

Calculation

```
MaxSessionDuration_Raw / 10.0
```

MinConnectionDuration

The least amount of time in Seconds that a connection was open

Calculation

```
MinConnectionDuration_Raw / 10.0
```

MinSessionDuration

The least amount of time in Seconds that a Session was open

Calculation

```
MinSessionDuration_Raw / 10.0
```

NormalSessionCloses

Number of normal Session Closes

Calculation

vsum(NumSessionsTerminatedToKeepAliveTimeout, NumSessionsTerminatedToAt-
Close, 0)

NUMDAYS

of days in Report

Calculation

DAYSINREPORT()

NUMHOURS

of hours in Summation Data

Calculation

PageSuccessRate

Page Success Rate

Calculation

100.0 * NumConnectionRequestsInResponseToPage / NumPageMessagesToAt

ResetAttempts

Total RLP Reset Attempts

Calculation

vsum(ForwardRlpResets, ReverseRlpResets, 0)

RevSHOAllocationFailures

Reverse Link unsuccessful soft handoffs due to allocation failures

Calculation

vsum(NumRevLinkSHOFailedByRn, NumRevLinkSHOFailedByRncResources, NumRev-
LinkSHOFailRncTimeout, 0)

RevSHOBlockings

Reverse Link unsuccessful soft handoffs due to blocking

Calculation

vsum(NumRevLinkSHOBlockedByRn, NumRevLinkSHOBlockedByRncResources)

RevSHOUnsuccessfulResourcesAllocation

Total Reverse Link unsuccessful soft handoffs due to blocking or allocation failures

Calculation

```
vsum(NumRevLinkSHOBlockedByRn, NumRevLinkSHOBlockedByRncResources, NumRev-  
LinkSHOFailedByRn, NumRevLinkSHOFailedByRncResources, NumRevLinkSHOFail-  
RncTimeout, 0)
```

SuccessfulReverseLinkSHORate

Successful Reverse Link Soft Handoff Rate where a handoff is considered to be successful if all the requested pilots are added or removed

Calculation

```
100.0 * NumRevLinkSHOSuccess / NumRevLinkSHOAttempts
```

TotalANInitiatedConnectionCloses

Total Access Network initiated connection closes

Calculation

```
vsum(NumConnectionCloseToAtNormal, NumConnectionCloseToAtError, 0)
```

TotalATInitiatedConnectionCloses

Total Access Terminal initiated connection closes

Calculation

```
vsum(NumConnectionCloseFromAtNormal, NumConnectionCloseFromAtError, Num-  
ConnectionCloseFromAtReserved, 0)
```

TotalByteCount

Total RLP frame byte count

Calculation

```
vsum(ForwardRlpBytes, ReverseRlpBytes, 0)
```

TotalConnectionCloses

Total Connection Closes

Calculation

```
vsum(NumConnectionCloseFromAtNormal, NumConnectionCloseFromAtError, Num-  
ConnectionCloseFromAtReserved, NumConnectionCloseToAtNormal, NumConnec-  
tionCloseToAtError)
```

UnsuccessfulResourcesAllocation

Number of Unsuccessful Resource Allocations

Calculation

```
vsum (NumConnectionSetupsBlockedByRn, NumConnectionSetupsBlockedByRncRe-  
sources, NumConnectionSetupsFailedByRn, NumConnectionSetupsFailedByRncRe-  
sources, NumConnSetupsFailedRncTimeout, 0)
```

ValidEvdoSessionSetupAttempts

Valid EV-DO Session Setup Attempts

Calculation

```
vsum (NumSessionSetupAttempts, -1 * NumSessionsTerminatedToReceivingUat-  
iReq, 0)
```

DO_RNC Peg Counts

The following is a list of peg counts for the DO_RNC entity.

a10RegReqForRegistrationFinalTimeouts

Number of times an A11-Registration Request message (intended for A10 connection re-registration) did not receive an A10-Registration Reply message from a PDSN despite pre-configured number of re-transmissions.

Data Source

DO-EMS

Source Field

a10RegReqForRegistrationFinalTimeouts

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

a10RegReqForRegistrationInitial

Number of initial A10-Registration Request messages sent to a PDSN for A10 connection tear down.

Data Source

DO-EMS

Source Field

a10RegReqForRegistrationInitial

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

A10SetupAttempts

Number of attempts to setup A10

Data Source

DO-EMS

Source Field

A10SetupAttempts

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

A10SetupFailureAdminProhibit

Number of times PDSN denied A10 setup with the reason 'Administratively Prohibited'

Data Source

DO-EMS

Source Field

A10SetupFailureAdminProhibit

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

A10SetupFailureFailedAuth

Number of times PDSN denied A10 setup with the reason 'Authentication Failed'

Data Source

DO-EMS

Source Field

A10SetupFailureFailedAuth

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

A10SetupFailureIdMismatch

Number of times PDSN denied A10 setup with the reason 'Identification Mismatch'

Data Source

DO-EMS

Source Field

A10SetupFailureIdMismatch

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

A10SetupFailureInsuffResources

Number of times PDSN denied A10 setup with the reason 'Insufficeint Resources'

Data Source

DO-EMS

Source Field

A10SetupFailureInsuffResources

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

A10SetupFailureMalformedReq

Number of times PDSN denied A10 setup with the reason 'Poorly Formed Request'

Data Source

DO-EMS

Source Field

A10SetupFailureMalformedReq

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

a10SetupFailureNoCIDAvailable

Number of times a PDSN refused to allow establishment of an A10 connection on this PCF with a reason "No CID Available" (A11 error code: 0x8C).

Data Source

DO-EMS

Source Field

a10SetupFailureNoCIDAvailable

Source Section

A10A11PerfByRNC (RncPcfMIB)

A10SetupFailureNoReason

Number of times PDSN denied A10 setup attempts for no reason

Data Source

DO-EMS

Source Field

A10SetupFailureNoReason

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

a10SetupFailureRegReplyAuthCheckFail

Number of times PCF failed to validate the authentication field in A11Registration Reply received from a PDSN in response to an A11-Registration Request sent for A10 connection establishment.

Data Source

DO-EMS

Source Field

a10SetupFailureRegReplyAuthCheckFail

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

a10SetupFailureRegReplyIdCheckFail

Number of times PCF failed to validate the ID in A11-Registration Reply received from a PDSN in response to an A11-Registration Request sent for A10 connection establishment.

Data Source

DO-EMS

Source Field

a10SetupFailureRegReplyIdCheckFail

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

a10SetupFailureReverseTunnelTbitNotSet

Number of times a PDSN refused to allow establishment of an A10 connection on this PCF with a reason "Reverse Tunnel Selected But T-bit Not Set" (A11 error code: 0x8D).

Data Source

DO-EMS

Source Field

a10SetupFailureReverseTunnelTbitNotSet

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

a10SetupFailureReverseTunnelUnavailable

Number of times a PDSN refused to allow establishment of an A10 connection on this PCF with a reason "Reverse Tunnel Unavailable" (A11 error code: 0x8A).

Data Source

DO-EMS

Source Field

a10SetupFailureReverseTunnelUnavailable

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

a10SetupFailureServiceOptionNotSupported

Number of times a PDSN refused to allow establishment of an A10 connection on this PCF with a reason "Service Option Not Supported" (A11 error code: 0x8B).

Data Source

DO-EMS

Source Field

a10SetupFailureServiceOptionNotSupported

Source Section

A10A11PerfByRNC (RncPcfMIB)

a10SetupFailureUnknownErrorCode

Number of times a PDSN refused to allow establishment of an A10 connection on this PCF with an unknown error code.

Data Source

DO-EMS

Source Field

a10SetupFailureUnknownErrorCode

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

A10SetupFailureUnknownPdsn

Number of times PDSN denied A10 setup with the reason 'Unknown PDSN Address'

Data Source

DO-EMS

Source Field

A10SetupFailureUnknownPdsn

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

A10SetupFailureUnsupVendorId

Number of times PDSN denied A10 setup with the reason 'Unsupported Vendor ID'

Data Source

DO-EMS

Source Field

A10SetupFailureUnsupVendId

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

a10SetupRegReplyReceived

Number of A11-Registration Reply messages received at PCF in response to A11-Registration Request sent to a PDSN for A10 connection establishment.

Data Source

DO-EMS

Source Field

a10SetupRegReplyReceived

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

A10SetupSuccesses

Number of A10 setup attempts that succeeded

Data Source

DO-EMS

Source Field

A10SetupSuccesses

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

a12AcceptsReceivedFromAaaServersTotal

Number of A12 Access Accepts received from any AN-AAA server used by the DO-RNC.

Data Source

DO-EMS

Source Field

a12AcceptsReceivedFromAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12AccessChallengesReceivedFromAaaServersTotal

Number of A12 Access Challenges received from any AN-AAA server used by the DO-RNC.

Data Source

DO-EMS

Source Field

a12AccessChallengesReceivedFromAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12BadAuthenticatorReceivedFromAaaServersTotal

Number of A12 messages with bad authenticators received from any ANAAA server used by the DO-RNC.

Data Source

DO-EMS

Source Field

a12BadAuthenticatorReceivedFromAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12MalformedResponseReceivedFromAaaServersTotal

Number of malformed A12 messages received from any AN-AAA server used by the DO-RNC.

Data Source

DO-EMS

Source Field

a12MalformedResponseReceivedFromAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12RejectsReceivedFromAaaServersTotal

Number of A12 Access Rejects received by the DO-RNC.

Data Source

DO-EMS

Source Field

a12RejectsReceivedFromAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12RequestSentToAaaServersTotal

Number of A12-Access Requests sent by the DO-RNC. It does not count retransmissions.

Data Source

DO-EMS

Source Field

a12RequestSentToAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12RetransmitsSentToAaaServersTotal

Number of A12-Access Request retransmissions sent by the DO-RNC.

Data Source

DO-EMS

Source Field

a12RetransmitsSentToAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12TimeoutsEventsTotal

Number of A12-Access Requests timeouts that occurred for requests sent to any AN-AAA server used by the DO-RNC.

Data Source

DO-EMS

Source Field

a12TimeoutsEventsTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12TxPathFailDueToAnPppTotal

Total number of A12 failures due to AnPpp connection failures for the DORNC / RNSM.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToAnPppTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12TxPathFailDueToInternalErrorsTotal

Total number of A12 failures due to various internal errors in the DO-RNC. These include memory allocation failures, radius attribute addition failures, etc.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToInternalErrorsTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12TxPathFailDueToNoPacketIdAvailableForServersTotal

Total number of A12 failures due to the DO-RNC having exhausted the packet Ids to be assigned to the allocated AaaServers.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToNoPacketIdAvailableForServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12TxPathFailDueToNoServerAvailableTotal

Total number of A12 failures when the DO-RNC cannot select any server for this terminal authentication attempt either because there is no more available server, or the retransmission limit has been reached.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToNoServerAvailableTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12TxPathFailDueToTransmitErrorForServersTotal

Total number of A12 failures due to transmit failures for the DO-RNC. The failure may be due to socket failures, route failures, etc.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToTransmitErrorForServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12UnknownOtherFailureReceivedFromAaaServersTotal

Total number of A12 messages from AN-AAA(s) that were dropped, by the DO-RNC, due to other reasons.

Data Source

DO-EMS

Source Field

a12UnknownOtherFailureReceivedFromAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12UnknownPacketReceivedFromAaaServersTotal

Total number of A12 messages with unknown packets (with no matching outstanding packet Ids) received from any AN-AAA server used by the DORNC / RNSM.

Data Source

DO-EMS

Source Field

a12UnknownPacketReceivedFromAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12UnknownServerReceivedFromAaaServersTotal

Total number of A12 messages received from any unknown AN-AAA server used by the DO-RNC.

Data Source

DO-EMS

Source Field

a12UnknownServerReceivedFromAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

a12UnknownTypeReceivedFromAaaServersTotal

Total number of A12 messages with unknown packet types (not one of the supported A12 packet types) received from any AN-AAA server used by the DO-RNC.

Data Source

DO-EMS

Source Field

a12UnknownTypeReceivedFromAaaServersTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

anPppAuthenticationAttemptsTotal

Number of AN-PPP authentications attempted by the DO-RNC.

Data Source

DO-EMS

Source Field

anPppAuthenticationAttemptsTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

averageConnectionSetupTime

The average connection setup time for all successful connection setups

Data Source

DO-EMS

Source Field

averageConnectionSetupTime

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

averagePageSetupTime

The average connection setup time in response to a RNC initiated page

Data Source

DO-EMS

Source Field

numDormantSessions

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

AvgNumSessionsAwaitingCloseFromAt

Average of 15 samples of numSessionsAwaitingCloseFromAt during collection interval

Data Source

DO-EMS

Source Field

numSessionsAwaitingCloseFromAt

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

clusterSessionLoadPercentage

Average of the 60-second RNC load values, in percentage units, reported to the DOM.

Data Source

DO-EMS

Source Field

clusterSessionLoadPercentage

Source Section

RNCCLusterLB (clusterRncObservablesObjects)

clusterSessionLoadPercentage_max

Maximum of the 60-second RNC load values, in percentage units, reported to the DOM.

Data Source

DO-EMS

Source Field

clusterSessionLoadPercentage

Source Section

RNCCLusterLB (clusterRncObservablesObjects)

clusterSessionLoadPercentage_min

Minimum of the 60-second RNC load values, in percentage units, reported to the DOM.

Data Source

DO-EMS

Source Field

clusterSessionLoadPercentage

Source Section

RNCCLusterLB (clusterRncObservablesObjects)

cNuConSetupSuccessA16_Rev0

The number of A16 related connection setups successfully opened after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNuConSetupSuccessA16 where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNuConSetupSuccessA16_RevA

The number of A16 related connection setups successfully opened after the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNuConSetupSuccessA16 where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumATInitiatedPageResponses_Rev0

The number of AT initiated ConnectionRequest messages that were received after the demarcation point during any paging cycle for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumATInitiatedPageResponses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumATInitiatedPageResponses_RevA

The number of AT initiated ConnectionRequest messages that were received after the demarcation point during any paging cycle for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumATInitiatedPageResponses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumATReportedTuneAwayDrops_Rev0

Number of times a Rev-0 connection failure record from rev-A ATs (RevA AT sends this record regardless of personality type), via IS856-A connection failure reporting message, is received by the RNC indicating connection failures due to the AT tuning away to 3G1X network while connected to 1xEVDO network and the timestamp reported in connection failure record is within 10 seconds of last RF related drop (FTC stopped timestamp stored at the RNC).

Data Source

DO-EMS

Source Field

cNumATReportedTuneAwayDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumATReportedTuneAwayDrops_RevA

Number of times a Rev-A connection failure record from rev-A ATs (RevA AT sends this record regardless of personality type), via IS856-A connection failure reporting message, is received by the RNC indicating connection failures due to the AT tuning away to 3G1X network while connected to 1xEVDO network and the timestamp reported in connection failure record is within 10 seconds of last RF related drop (FTC stopped timestamp stored at the RNC).

Data Source

DO-EMS

Source Field

cNumATReportedTuneAwayDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionsClosedNormalBeforeTCC_Rev0

Pegs after demarcation point when a Rev-0 DO Connection is closed by the AT with reason as normal or movedto3G1x in connection close message before sending TCC.

Data Source

DO-EMS

Source Field

cNumConnectionsClosedNormalBeforeTCC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionsClosedNormalBeforeTCC_RevA

Pegs after demarcation point when a Rev-A DO Connection is closed by the AT with reason as normal or movedto3G1x in connection close message before sending TCC.

Data Source

DO-EMS

Source Field

cNumConnectionsClosedNormalBeforeTCC where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionsClosedNormalBeforeTCCDuringSRAfterDC_Rev0

This RNC-wide statistic counts the number of Rev-0 DO Connections closed by the AT before Traffic Channel Complete with a reason code of normal or movedto3G1x during the silent retry period after a dropped call.

Data Source

DO-EMS

Source Field

cNumConnectionsClosedNormalBeforeTCCDuringSRAfterDC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionsClosedNormalBeforeTCCDuringSRAfterDC_RevA

This RNC-wide statistic counts the number of Rev-A DO Connections closed by the AT before Traffic Channel Complete with a reason code of normal or movedto3G1x during the silent retry period after a dropped call.

Data Source

DO-EMS

Source Field

cNumConnectionsClosedNormalBeforeTCCDuringSRAfterDC where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionsClosedNormalBeforeTCCDuringSRAfterFCA_Rev0

This RNC-wide statistic counts the number of Rev-0 DO Connections closed by the AT before Traffic Channel Complete with a reason code of normal or movedto3G1x during the silent retry period after failed call attempt.

Data Source

DO-EMS

Source Field

cNumConnectionsClosedNormalBeforeTCCDuringSRAfterFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionsClosedNormalBeforeTCCDuringSRAfterFCA_RevA

This RNC-wide statistic counts the number of Rev-A DO Connections closed by the AT before Traffic Channel Complete with a reason code of normal or movedto3G1x during the silent retry period after failed call attempt.

Data Source

DO-EMS

Source Field

cNumConnectionsClosedNormalBeforeTCCDuringSRAfterFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionSetupAttempts

The number of DO connection setup attempts made after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumConnectionSetupAttempts where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionSetupAttempts_RevA

The number of DO connection setup attempts made after the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumConnectionSetupAttempts where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionSetupsAbortNormalA10Close_Rev0

Connection Number of Connection Setups Abort Normal A10 Close for Rev-0 personality ATs from Template RNCPerfExtnByRNC_R4.0.

Data Source

DO-EMS

Source Field

cNumConnectionSetupsAbortNormalA10Close where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionSetupsAbortNormalA10Close_RevA

Connection Number of Connection Setups Abort Normal A10 Close for Rev-A personality ATs from Template RNCPerfExtnByRNC_R4.0.

Data Source

DO-EMS

Source Field

cNumConnectionSetupsAbortNormalA10Close where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionSetupsAbortRedirectTriggers_Rev0

Connection setup attempts that were aborted after the demarcation point because the RNC redirected the AT to an alternate carrier on receiving connection request for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumConnectionSetupsAbortRedirectTriggers where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionSetupsAbortRedirectTriggers_RevA

Connection setup attempts that were aborted after the demarcation point because the RNC redirected the AT to an alternate carrier on receiving connection request for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumConnectionSetupsAbortRedirectTriggers where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionSetupSuccess

The number of DO connections successfully opened after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumConnectionSetupSuccess where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumConnectionSetupSuccess_RevA

The number of DO connections successfully opened after the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumConnectionSetupSuccess where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumFirstPageResponses_Rev0

The number of page responses that were received after the demarcation point from the AT in a paging cycle, in response to the 1st Page Message that was sent from the AN for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumFirstPageResponses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumFirstPageResponses_RevA

The number of page responses that were received after the demarcation point from the AT in a paging cycle, in response to the 1st Page Message that was sent from the AN for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumFirstPageResponses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumHHODrops_Rev0

Connections that were dropped after the demarcation point, due to unsuccessful inter frequency hard handoffs for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumHHODrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumHHODrops_RevA

Connections that were dropped after the demarcation point, due to unsuccessful inter frequency hard handoffs for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumHHODrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumHHODropsBlockedByRn_Rev0

Connections that were dropped after the demarcation point, due to unsuccessful inter frequency hard handoff because the RNC received explicit block for resource allocation from at least one of the RNs involved in the hard handoff for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumHHODropsBlockedByRn where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumHHODropsBlockedByRn_RevA

Connections that were dropped after the demarcation point, due to unsuccessful inter frequency hard handoff because the RNC received explicit block for resource allocation from at least one of the RNs involved in the hard handoff for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumHHODropsBlockedByRn where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumHHODropsFTCDesriedAndRTCAcquiredNotRx_Rev0

Connections that were dropped after the demarcation point, due to unsuccessful inter frequency hard handoff because Target Carrier Acquired indication was not received but the Source Carrier Lost indication was received within the timeout interval: this implies that there was no available link left with the AT and so the connection was closed for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumHHODropsFTCDesriedAndRTCAcquiredNotRx where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumHHODropsFTCDesriedAndRTCAcquiredNotRx_RevA

Connections that were dropped after the demarcation point, due to unsuccessful inter frequency hard handoff because Target Carrier Acquired indication was not received but the Source Carrier Lost indication was received within the timeout interval: this implies that there was no available link left with the AT and so the connection was closed for Rev-A personality ATs.

Data Source

Source Field

cNumHHODropsFTCDesriedAndRTCAcquiredNotRx where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumIncomingPersonalityChangeTriggers_Rev0

Number of times a trigger was generated after the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumIncomingPersonalityChangeTriggers where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumIncomingPersonalityChangeTriggers_RevA

Number of times a trigger was generated after the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumIncomingPersonalityChangeTriggers where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNuMiscDropSrcA16Fail_Rev0

This OM is pegged by source RNC when it fails to transfer A16 active session to A16 target RNC and is unable to maintain the connection locally after demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNuMiscDropSrcA16Fail where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropSrcA16Fail_RevA

This OM is pegged by source RNC when it fails to transfer A16 active session to A16 target RNC and is unable to maintain the connection locally after demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropSrcA16Fail where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMCTAConnSetupAttempts_Rev0

Whenever a new connection request is received and MCTA is run on that connection, this will be pegged for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMCTAConnSetupAttempts where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMCTAConnSetupAttempts_RevA

Whenever a new connection request is received and MCTA is run on that connection, this will be pegged for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMCTAConnSetupAttempts where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMCTAConnSetupFailureRNBlocksWithSL_Rev0

Whenever MCTA determines that all sectors in the created list are fully loaded but selected originating carrier and the connection setup is failed due to RN block, this OM would be pegged for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMCTAConnSetupFailureRNBlocksWithSL where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMCTAConnSetupFailureRNBlocksWithSL_RevA

Whenever MCTA determines that all sectors in the created list are fully loaded but selected originating carrier and the connection setup is failed due to RN block, this OM would be pegged for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMCTAConnSetupFailureRNBlocksWithSL where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMCTAConnSetupFailures_Rev0

Whenever a initial connection is attempted and it is failed due to any failure, this would be pegged for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMCTAConnSetupFailures where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsAbnormalCloseBySession_Rev0

Connections that were dropped after the demarcation point because the SSM requested the CSM to close the connection abnormally for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsAbnormalCloseBySession where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsAbnormalCloseBySession_RevA

Connections that were dropped after the demarcation point because the SSM requested the CSM to close the connection abnormally for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsAbnormalCloseBySession where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsBEPriorityUpdateFail_Rev0

This statistic counts the number of Rev-0 connections that were dropped after the demarcation point due to a failure in dynamically updating the best effort modem flow on receiving a change in the inter-user BE priority level for the user when the connection is open.

Data Source

DO-EMS

Source Field

cNumMiscDropsBEPriorityUpdateFail where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsBEPriorityUpdateFail_RevA

This statistic counts the number of Rev-A connections that were dropped after the demarcation point due to a failure in dynamically updating the best effort modem flow on receiving a change in the inter-user BE priority level for the user when the connection is open.

Data Source

DO-EMS

Source Field

cNumMiscDropsBEPriorityUpdateFail where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsDueToRLP_Rev0

Number of times the connection was dropped after the demarcation point at the request of the Radio Link Protocol for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsDueToRLP where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsDueToRLP_RevA

Number of times the connection was dropped after the demarcation point at the request of the Radio Link Protocol for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsDueToRLP where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsInternalError_Rev0

Connections that were dropped after the demarcation point due to internal software errors for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsInternalError where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsInternalError_RevA

Connections that were dropped after the demarcation point due to internal software errors for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsInternalError where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsSectorDown_Rev0

Connections that were dropped after the demarcation point because there is only one pilot available for the connection and a sector down indication has been received for that pilot for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsSectorDown where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsSectorDown_RevA

Connections that were dropped after the demarcation point because there is only one pilot available for the connection and a sector down indication has been received for that pilot for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsSectorDown where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsStateMismatch_Rev0

Connections that were dropped after the demarcation point when the RNC finds a state mismatch between itself and the AT for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsStateMismatch where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscDropsStateMismatch_RevA

Connections that were dropped after the demarcation point when the RNC finds a state mismatch between itself and the AT for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscDropsStateMismatch where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscFCA

The number of DO Connection attempts that failed after the demarcation point due to reasons other than RF related or resource related issues for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscFCA_RevA

The number of DO Connection attempts that failed after the demarcation point due to reasons other than RF related or resource related issues for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscFCAA10Related_Rev0

Connection set-ups that failed after the demarcation point because either there was a failure in setting up the A10 connection or the RNC closed the open A10 connection for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscFCAA10Related where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscFCAA10Related_RevA

Connection set-ups that failed after the demarcation point because either there was a failure in setting up the A10 connection or the RNC closed the open A10 connection for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscFCAA10Related where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscFCAFailures_Rev0

Number of times the connection set-up failed after the demarcation point due to reasons not explicitly called out in other FCA OMs for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscFCAFailures where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscFCAFailures_RevA

Number of times the connection set-up failed after the demarcation point due to reasons not explicitly called out in other FCA OMs for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscFCAFailures where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscFCASWError_Rev0

Number of times the connection set-up failed after the demarcation point due to software errors for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscFCASWError where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMiscFCASWError_RevA

Number of times the connection set-up failed after the demarcation point due to software errors for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumMiscFCASWError where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMissedConnectionCloses_Rev0

The number of Rev-0 connections that were closed after the demarcation point when the RNC detected that Connection Close message from RIM device was missed.

Data Source

DO-EMS

Source Field

cNumMissedConnectionCloses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumMissedConnectionCloses_RevA

The number of Rev-A connections that were closed after the demarcation point when the RNC detected that Connection Close message from RIM device was missed.

Data Source

DO-EMS

Source Field

cNumMissedConnectionCloses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNetworkErrorDrops_Rev0

Connections that were closed after the demarcation point because the RNC closed the open A10 connection for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNetworkErrorDrops_RevA

Connections that were closed after the demarcation point because the RNC closed the open A10 connection for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsA10SetupFail_Rev0

Open connections that were closed before the demarcation point because there was failure in the A10 connection set-up for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsA10SetupFail where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsA10SetupFail_RevA

Open connections that were closed before the demarcation point because there was failure in the A10 connection set-up for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsA10SetupFail where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsRNCEXternal_Rev0

Open connections that were closed after the demarcation point because the existing A10 connection was closed due to PDSN going down or PDSN is not reachable or any other failure condition that is not because of the RNC for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsRNCEXternal where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsRNCEXternal_RevA

Open connections that were closed after the demarcation point because the existing A10 connection was closed due to PDSN going down or PDSN is not reachable or any other failure condition that is not because of the RNC for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsRNCEXternal where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsRNCInternal_Rev0

Open connections that were closed after the demarcation point because an internal error caused an existing A10 connection to be closed which results in a closure of a DO Connection Connection close that occur due to A10 failure during PDSN-re-registration should also peg this OM for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsRNCInternal where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsRNCInternal_RevA

Open connections that were closed after the demarcation point because an internal error caused an existing A10 connection to be closed which results in a closure of a DO Connection Connection close that occur due to A10 failure during PDSN-re-registration should also peg this OM for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsRNCInternal where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNormalConnectionCloses

The number of connections that were closed normally after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumNormalConnectionCloses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumNormalConnectionCloses_RevA

The number of connections that were closed normally after the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumNormalConnectionCloses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumOutgoingPersonalityChangeTriggers_Rev0

Number of times a trigger was generated, after the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumOutgoingPersonalityChangeTriggers where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumOutgoingPersonalityChangeTriggers_RevA

Number of times a trigger was generated, after the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumOutgoingPersonalityChangeTriggers where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumPageAbandoned_Rev0

The number of times that AN has aborted/abandoned the Page operation on this DO-RNC after the demarcation point during any paging cycle for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumPageAbandoned where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumPageAbandoned_RevA

The number of times that AN has aborted/abandoned the Page operation on this DO-RNC after the demarcation point during any paging cycle for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumPageAbandoned where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumPageRequests

The number of page requests sent to the AT after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumPageRequests where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumPageRequests_RevA

The number of page requests sent to the AT after the demarcation point. When the DO-Repag is enabled, only the first page request in a paging cycle will be pegged for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumPageRequests where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumPageResponses

The number of successful responses to page requests that were received from the AT after the demarcation point and before the page timer expired for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumPageResponses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumPageResponses_RevA

The number of successful responses to page requests that were received from the AT after the demarcation point and before the page timer expired for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumPageResponses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumPageTimeout_Rev0

The number of times paging cycles have expired after the demarcation point, waiting for a page response from the AT for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumPageTimeout where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumPageTimeout_RevA

The number of times paging cycles have expired after the demarcation point, waiting for a page response from the AT for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumPageTimeout where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumResourceRelatedFCA

The number of DO connection attempts that failed after the demarcation point due to blocks or failures during resource allocation at the RNC or the RN for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumResourceRelatedFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumResourceRelatedFCA_RevA

The number of DO connection attempts that failed after the demarcation point due to blocks or failures during resource allocation at the RNC or the RN for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumResourceRelatedFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumResourceRelatedFCABlockedByRN_Rev0

Number of times the connection setup was blocked by the RNC after the demarcation point because at least one of the resource allocation requests sent to the RN(s) was denied for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumResourceRelatedFCABlockedByRN where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumResourceRelatedFCABlockedByRN_RevA

Number of times the connection setup was blocked by the RNC after the demarcation point because at least one of the resource allocation requests sent to the RN(s) was denied for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumResourceRelatedFCABlockedByRN where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumResourceRelatedFCABlockedByRNCResources_Rev0

Number of times that the RNC blocked the connection set-up after the demarcation point because the CPU utilization on the RNC exceeds certain value and overload conditions occur for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumResourceRelatedFCABlockedByRNCResources where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumResourceRelatedFCABlockedByRNCResources_RevA

Number of times that the RNC blocked the connection set-up after the demarcation point because the CPU utilization on the RNC exceeds certain value and overload conditions occur for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumResourceRelatedFCABlockedByRNCResources where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumResourceRelatedFCAFailedByRN_Rev0

Number of times the connection set-up failed after the demarcation point because the Connection State Machine (CSM) received an error indication from the DownLeg State Machine (DLSM) from at least one of the Down Legs involved in the setup for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumResourceRelatedFCAFailedByRN where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumResourceRelatedFCAFailedByRN_RevA

Number of times the connection set-up failed after the demarcation point because the Connection State Machine (CSM) received an error indication from the DownLeg State Machine (DLSM) from at least one of the Down Legs involved in the setup for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumResourceRelatedFCAFailedByRN where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedDrops

The number of open DO connections that are dropped (abnormally closed) due to RF related issues after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedDrops_RevA

The number of open DO connections that are dropped (abnormally closed) due to RF related issues after the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedDropsNoFtc_Rev0

Connections that were dropped after the demarcation point because of indications that there is no active Forward Traffic Channel (FTC) available for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedDropsNoFtc where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedDropsNoFtc_RevA

Connections that were dropped after the demarcation point because of indications that there is no active Forward Traffic Channel (FTC) available for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedDropsNoFtc where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedDropsRTCLost_Rev0

Number of times the connection was dropped after the demarcation point because a Reverse Traffic Channel (RTC) lost indication was received, and as a result, no reverse link for the connection were available for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedDropsRTCLost where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedDropsRTCLost_RevA

Number of times the connection was dropped after the demarcation point because a Reverse Traffic Channel (RTC) lost indication was received, and as a result, no reverse link for the connection were available for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedDropsRTCLost where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedFCA

The number of DO Connection attempts that failed after the demarcation point due to RF related issues for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedFCA_RevA

The number of DO Connection attempts that failed after the demarcation point due to RF related issues, i.e. Route Update timeouts and TCC timeouts for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedFCARUTimeOut_Rev0

Number of times the connection set-up failed after the demarcation point because the route update message was not received from the AT within the stipulated time, or there were errors during the processing of the route update message for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedFCARUTimeOut where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedFCARUTimeOut_RevA

Number of times the connection set-up failed after the demarcation point because the route update message was not received from the AT within the stipulated time, or there were errors during the processing of the route update message for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedFCARUTimeOut where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedFCATCCTimeOut_Rev0

Number of times the connection setup failed after the demarcation point because the RNC did not receive TCC message from the AT within the stipulated time after sending TCA message for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedFCATCCTimeOut where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRFRelatedFCATCCTimeOut_RevA

Number of times the connection setup failed after the demarcation point because the RNC did not receive TCC message from the AT within the stipulated time after sending TCA message for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumRFRelatedFCATCCTimeOut where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRNCEstimated3G1xRollDownDrops_Rev0

Number of Rev-0 RF drops estimated by RNC after demarcation point as roll down drops due to a hybrid AT dropped 1xEVDO connection when it rolled down to 3G1X network.

Data Source

DO-EMS

Source Field

cNumRNCEstimated3G1xRollDownDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRNCEstimated3G1xRollDownDrops_RevA

Number of Rev-A RF drops estimated by RNC after demarcation point as roll down drops due to a hybrid AT dropped 1xEVDO connection when it rolled down to 3G1X network.

Data Source

DO-EMS

Source Field

cNumRNCEstimated3G1xRollDownDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRNCEstimatedTuneAwayDrops_Rev0

Number of Rev-0 RF drops estimated by RNC after demarcation point as tune aways due to FTC Stopped indication message (corresponding to RF drop) was received in the Rev0 hybrid AT's 3G1X paging cycle slot.

Data Source

DO-EMS

Source Field

cNumRNCEstimatedTuneAwayDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumRNCEstimatedTuneAwayDrops_RevA

Number of Rev-A RF drops estimated by RNC after demarcation point as tune aways due to FTC Stopped indication message (corresponding to RF drop) was received in the Rev0 hybrid AT's 3G1X paging cycle slot. RNC maintains an estimated histogram of the Rev0 AT's 3G1X paging cycle.

Data Source

DO-EMS

Source Field

cNumRNCEstimatedTuneAwayDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumSecondPageRequests_Rev0

The number of 2nd page requests sent to the AT in a paging cycle after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumSecondPageRequests where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumSecondPageRequests_RevA

The number of 2nd page requests sent to the AT in a paging cycle after the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumSecondPageRequests where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumSecondPageResponses_Rev0

The number of page responses that were received after the demarcation point from the AT in a paging cycle, in response to the 2nd Page Message that was sent from the AN for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumSecondPageResponses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumSecondPageResponses_RevA

The number of page responses that were received after the demarcation point from the AT in a paging cycle, in response to the 2nd Page Message that was sent from the AN for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumSecondPageResponses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumSilentRetriesAbandonedAfterDC_Rev0

Number of times silent retry process was abandoned after the demarcation point because a trigger was generated during connection setup to change the Rev-A capable AT from the source personality to the target personality for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumSilentRetriesAbandonedAfterDC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumSilentRetriesAbandonedAfterDC_RevA

Number of times silent retry process was abandoned after the demarcation point because a trigger was generated during connection setup to change the Rev-A capable AT from the source personality to the target personality for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumSilentRetriesAbandonedAfterDC where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumSilentRetriesAbandonedAfterFCA_Rev0

Number of times silent retry process was abandoned after the demarcation point because a trigger was generated during connection setup to change the Rev-A capable AT from the source personality to the target personality for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumSilentRetriesAbandonedAfterFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumSilentRetriesAbandonedAfterFCA_RevA

Number of times silent retry process was abandoned after the demarcation point because a trigger was generated during connection setup to change the Rev-A capable AT from the source personality to the target personality for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumSilentRetriesAbandonedAfterFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

cNumSilentRetryAttemptsAfterDC_Rev0

Connection setup attempts within the configurable DC silent retry period following a dropped connection for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumSilentRetryAttemptsAfterDC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

Fastest connection setup time in response to a RNC initiated page

Data Source

DO-EMS

Source Field

minPageSetupTime

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

minSessionSetupTime

The fastest Session setup time on this RNC

Data Source

DO-EMS

Source Field

minSessionSetupTime

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nA16SessSetupAttempts

Number of A16 session setup attempts on the DO-RNC.

Data Source

DO-EMS

Source Field

nA16SessSetupAttempts

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nA16SessSetupsFailed

Number of A16 session setups which failed on this DO-RNC. This OM is pegged on the target RNC.

Data Source

DO-EMS

Source Field

nA16SessSetupsFailed

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nA16SessSetupSuccess

Number of A16 session setups that were successful on this DO-RNC. This OM is pegged on the target RNC.

Data Source

DO-EMS

Source Field

nA16SessSetupSuccess

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nConCloseSrcA16Fail

This OM is pegged by source RNC when it fails to transfer A16 active session to A16 target RNC and is unable to maintain the connection locally.

Data Source

DO-EMS

Source Field

nConCloseSrcA16Fail

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nConOpenedA16

The number of Connections opened successfully on this (target) RNC due to A16 Session Transfer.

Data Source

DO-EMS

Source Field

nConOpenedA16

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nConSetupTgtA16LclCls

This OM represents the number of A16 related connection setups that failed on target RNC due to a local close generated by other state machines.

Data Source

DO-EMS

Source Field

nConSetupTgtA16LclCls

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nConSetupTgtA16Misc

This OM represents the number of A16 related connection setups that failed on target RNC due to internal or external miscellaneous errors.

Data Source

DO-EMS

Source Field

nConSetupTgtA16Misc

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nConSetupTgtA16RnBlk

This OM represents the number of A16 related connection setups that were blocked on target RNC because the DOM could not allocate resources.

Data Source

DO-EMS

Source Field

nConSetupTgtA16RnBlk

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nConSetupTgtA16RnFail

This OM represents the number of A16 related connection setups that failed on this target RNC because of a failure or timeout occurred while DOM resource allocation.

Data Source

DO-EMS

Source Field

nConSetupTgtA16RnFail

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nConSetupTgtA16TrafSw

This OM represents the number of A16 related connection setups that failed on target RNC because of failure or timeout occurred while DOM Traffic Channel Switch process.

Data Source

DO-EMS

Source Field

nConSetupTgtA16TrafSw

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

nSessTerminatedA16

Number of sessions closed on the source RNC due to successful A16 session transfer to the target RNC.

Data Source

DO-EMS

Source Field

nSessTerminatedA16

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10ClosedNetworkError

This OM is a counter for the total number of successfully established A10-Connections that are closed on the DO-RNC / RNSM due to network related errors between the DO-RNC and the PDSN.

Data Source

DO-EMS

Source Field

numA10ClosedNetworkError

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10ClosedOtherCausesExternal

This OM is a counter for the total number of successfully established A10-Connections that are closed on the DO-RNC / RNSM due to miscellaneous external reasons.

Data Source

DO-EMS

Source Field

numA10ClosedOtherCausesExternal

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10ClosedOtherCausesInternal

This OM is a counter for the total number of successfully established A10-Connections that are closed on the DO-RNC / RNSM due to miscellaneous internal reasons.

Data Source

DO-EMS

Source Field

numA10ClosedOtherCausesInternal

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10ClosedPDSNInitiatedRelease

This OM is a counter for the total number of successfully established A10-Connections that are closed on the DO-RNC / RNSM when the A10-Connection is released by the PDSN.

Data Source

DO-EMS

Source Field

numA10ClosedPDSNInitiatedRelease

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10ClosedPDSNReRegFailure

This OM is a counter for the total number of successfully established A10-Connections that are closed on the DO-RNC / RNSM when a re-registration with the PDSN of an existing A10-Connection, returns a failure indication.

Data Source

DO-EMS

Source Field

numA10ClosedPDSNReRegFailure

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10ClosedSessionTermination

This OM is a counter for the total number of successfully established A10-Connections that are closed on the DO-RNC / RNSM due to a DO-Session termination.

Data Source

DO-EMS

Source Field

numA10ClosedSessionTermination

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10ConnWithDurationAround30Sec

This OM is a counter for the total number of successfully established A10-Connections, with duration between 28 and 33 seconds, which are closed by a normal A10-Connection release by the PDSN.

Data Source

DO-EMS

Source Field

numA10ConnWithDurationAround30Sec

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10ConnWithVeryShortDurationRNC

Number of A10 Connections closed by PDSN with duration less than 20 seconds on the DO-RNC.

Data Source

DO-EMS

Source Field

numA10ConnWithVeryShortDurationRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10InterPcfHOREgAttempts

A10 Connection setup attempts initiated by the RNC due to Inter-PCF Handoff

Data Source

DO-EMS

Source Field

numA10InterPcfHOREgAttempts

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10InterPcfHOREgFailures

A10 Connection setup attempts initiated by the RNC due to Inter-PCF Handoff that failed

Data Source

DO-EMS

Source Field

numA10InterPcfHOREgFailures

Source Section

RncIS856PerfMIB

numA10InterPcfHOWithPDSNInfoRegAttempts

This OM is a counter for the total number of new A10 registration attempts that are initiated by the Call Control component on a specific RNSM, when the PDSN IP Address of the AT's previous A10-Connection is known.

Data Source

DO-EMS

Source Field

numA10InterPcfHOWWithPDSNInfoRegAttempts

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10InterPcfHOWWithPDSNInfoRegFailures

This OM is a counter for the total number of times a new A10 registration attempt fails on the DO-RNC/RNSM, when the process is initiated for an AT with information about its last A10 PDSN.

Data Source

DO-EMS

Source Field

numA10InterPcfHOWWithPDSNInfoRegFailures

Source Section

RncIS856PerfMIB

numA10LocUpdateDisabledRegAttempts

This OM is a counter for the total number of new A10 Registration attempts initiated by the Call Control component on a specific RNSM, when the Location Update Protocol is disabled on the DO-RNC.

Data Source

DO-EMS

Source Field

numA10LocUpdateDisabledRegAttempts

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10LocUpdateDisabledRegFailures

This OM is a counter for the total number of times a new A10 registration attempt fails on the DP-RNC/RNSM, when the process is initiated with the Location Update Protocol being disabled.

Data Source

DO-EMS

Source Field

numA10LocUpdateDisabledRegFailures

Source Section

RncIS856PerfMIB

numA10NonHOREgAttempts

A10 Connection setup attempts initiated by the RNC in a non-handoff situation

Data Source

DO-EMS

Source Field

numA10NonHOREgAttempts

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10NonHOREgFailures

A10 Connection setup attempts initiated by the RNC in a non-handoff situation that failed

Data Source

DO-EMS

Source Field

numA10NonHOREgFailures

Source Section

RncIS856PerfMIB

numA10Panid0RegAttempts

A10 Connection setup attempts initiated by the RNC when the PANID sent by the AT is 0

Data Source

DO-EMS

Source Field

numA10Panid0RegAttempts

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10Panid0RegFailures

A10 Connection setup attempts initiated by the RNC when the PANID sent by the AT is 0 that failed

Data Source

DO-EMS

Source Field

numA10Panid0RegFailures

Source Section

RncIS856PerfMIB

numA10SetupAttemptConnOpenInitiated

This OM is a counter for the total number of new A10-Connection setups that are initiated on the DO-RNC / RNSM due to a DO-Airlink connection open indication while A10-Connection Minimization is enabled.

Data Source

DO-EMS

Source Field

numA10SetupAttemptConnOpenInitiated

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupAttemptRLPDataInitiated

This OM is a counter for the total number of new A10-Connection setups that are initiated on the DO-RNC / RNSM due to the detection of Radio Link Protocol layer packets (i.e. data) from the AT while A10-Connection Minimization is enabled.

Data Source

DO-EMS

Source Field

numA10SetupAttemptRLPDataInitiated

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupAttemptsAutoA10Reconnect

Total number of automatic A10 reconnect attempts that are initiated on the DO-RNC.

Data Source

DO-EMS

Source Field

numA10SetupAttemptsAutoA10Reconnect

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupAttemptSrcRNCA10Initiated

This OM is a counter for the total number of new A10-Connection setups that are initiated on the DO-RNC / RNSM after an A13 Dormant handoff of an AT with an existing packet data session on the Source RNC while A10-Connection Minimization is enabled.

Data Source

DO-EMS

Source Field

numA10SetupAttemptSrcRNCA10Initiated

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupAttemptULNInitiated

This OM is a counter for the total number of new A10-Connection setups that are initiated on the DO-RNC / RNSM due to the reception of an Unsolicited Location Notification message from the AT while A10-Connection Minimization is enabled.

Data Source

DO-EMS

Source Field

numA10SetupAttemptULNInitiated

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupFailureLocationUpdate

This OM is a counter for the total number of new A10-Connection setups that are aborted on the DO-RNC / RNSM, due to a failure in the location update procedure prior to registering with the PDSN.

Data Source

DO-EMS

Source Field

numA10SetupFailureLocationUpdate

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupFailureNetworkError

This OM is a counter for the total number of new A10-Connection setups that are aborted on the DO-RNC / RNSM due to network related errors between the DO-RNC and the PDSN.

Data Source

DO-EMS

Source Field

numA10SetupFailureNetworkError

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupFailureOtherCausesExternal

This OM is a counter for the total number of new A10-Connection setups that are aborted on the DO-RNC / RNSM due to miscellaneous external reasons.

Data Source

DO-EMS

Source Field

numA10SetupFailureOtherCausesExternal

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupFailureOtherCausesInternal

This OM is a counter for the total number of new A10-Connection setups that are aborted on the DO-RNC / RNSM due to miscellaneous internal reasons.

Data Source

DO-EMS

Source Field

numA10SetupFailureOtherCausesInternal

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupFailurePDSNReg

This OM is a counter for the total number of new A10-Connection setups that are aborted on a specific RNSM when the registration process with the configured PDSNs on this RNC PCF for a new A10-Connection, returns a failure indication.

Data Source

DO-EMS

Source Field

numA10SetupFailurePDSNReg

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA10SetupFailureSessionTermination

This OM is a counter for the total number of new A10-Connection setups that are aborted on the DO-RNC / RNSM due to the DO-Session terminating while the A10-Setup is in progress.

Data Source

DO-EMS

Source Field

numA10SetupFailureSessionTermination

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13ConfirmIgnoredRemoteRncPerf

Total number of times A13-Session Information Confirm Messages were ignored due to A13 Confirm timeout.

Data Source

DO-EMS

Source Field

numA13ConfirmIgnoredRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13FailuresRemoteRncAdminStatusDownPriorSessionRemoteRncPerf

Total number of prior-session A13-Dormant handoff attempts that fail on a DO-RNC on the target RNC, due to the source RNC being in the "Admin down" state in the target RNC's peer RNC table.

Data Source

DO-EMS

Source Field

numA13FailuresRemoteRncAdminStatusDownPriorSessionRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13FailuresRemoteRncAdminStatusDownRemoteRncPerf

Total number of regular A13-Dormant handoff attempts that fail on a DO-RNC on the target RNC, due to the source RNC being in the "Admin down" state in the target RNC's peer RNC table.

Data Source

DO-EMS

Source Field

numA13FailuresRemoteRncAdminStatusDownRemoteRncPerf

numA13RejectProtSubtypeNotRecognizedRNC

Number of times an A13 dormant handoff on this RNC failed with A13 Reject 'Protocol subtype not recognized?'

Data Source

DO-EMS

Source Field

numA13RejectProtSubtypeNotRecognizedRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13RejectSentSessionNotFoundRNC

Total number of times A13 reject messages sent by RNC because a session is not found on the source RNC.

Data Source

DO-EMS

Source Field

numA13RejectSentSessionNotFoundRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13RejectSessionNotAuthenticPriorSessionRNC

Total Number of times (Prior session + Normal) an A13 dormant handoff on this RNC failed with A13 Reject 'Authentication Failed'

Data Source

DO-EMS

Source Field

numA13RejectSessionNotAuthenticPriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13RejectSessionNotAuthenticRNC

Number of times an A13 dormant handoff on this RNC failed with A13 Reject 'Authentication Failed'

Data Source

DO-EMS

Source Field

numA13RejectSessionNotAuthenticRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13RejectSessionNotFoundPriorSessionRNC

Total Number of times (Prior session + Normal) an A13 dormant handoff on this RNC failed with A13 Reject 'Session not Found'

Data Source

DO-EMS

Source Field

numA13RejectSessionNotFoundPriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13RejectSessionNotFoundRNC

Number of times an A13 dormant handoff on this RNC failed with A13 Reject 'Session not Found'

Data Source

DO-EMS

Source Field

numA13RejectSessionNotFoundRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13RejectsSentForInvalidSessions

Pegs on the source RNC when an A13 reject message is sent to the target RNC due to the invalid session transfer being disabled.

Data Source

DO-EMS

Source Field

numA13RejectsSentForInvalidSessions

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13ReqTimeoutPriorSessionRNC

Number of times a prior session dormant handoff on this RNC failed due to no A13 Response from the source RNC

Data Source

DO-EMS

Source Field

numA13ReqTimeoutPriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13ReqTimeoutRNC

Number of times an A13 dormant handoff on this RNC failed due to no A13 Response from the source RNC

Data Source

DO-EMS

Source Field

numA13ReqTimeoutRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13RequestsIgnoredRemoteRncNotConfiguredRemoteRncPerf

Total number of times A13-Session Information Request Messages were ignored by the source RNC because the target RNC is not configured in the Peer RNC Table.

Data Source

DO-EMS

Source Field

numA13RequestsIgnoredRemoteRncNotConfiguredRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13RequestsReTransmittedRemoteRncPerf

Total number of times that the A13-Session Information Request Messages were retransmitted to the Peer RNC by the DO-RNC.

Data Source

DO-EMS

Source Field

numA13RequestsReTransmittedRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13ResponsesSentActivePersonliltyRev0RemoteRncPerf

Total Number of A13-Session Information Response Messages sent when AT's current personality is Rev-0.

Data Source

DO-EMS

Source Field

numA13ResponsesSentActivePersonliltyRev0RemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13ResponsesSentActivePersonliltyRevARemoteRncPerf

Total Number of A13-Session Information Response Messages sent when AT's current personality is Rev-A.

Data Source

DO-EMS

Source Field

numA13ResponsesSentActivePersonliltyRevARemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13ResponsesSentDummyPdsnRemoteRncPerf

Number of A13-Session Information Reject messages sent because the requested session cannot be found on this DO-RNC.

Data Source

DO-EMS

Source Field

numA13ResponsesSentDummyPdsnRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13SessMarkedForReNegotiationDifflosVersionPriorSessionRemoteRncPerf

Number of times a Prior Session dormant handoff session is marked for renegotiation after successful A13 handoff because the response is received on a TIA-878-1 version A13 interface.

Data Source

DO-EMS

Source Field

numA13SessMarkedForReNegotiationDifflosVersionPriorSessionRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13SessMarkedForReNegotiationDifflosVersionRemoteRncPerf

Number of times a UATI initiated dormant handoff session is marked for renegotiation after successful A13 handoff because the response is received on a TIA-878-1 version A13 interface.

Data Source

DO-EMS

Source Field

numA13SessMarkedForReNegotiationDifflosVersionRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13SessMarkedForReNegotiationDifflosVersionTotalRemoteRncPerf

Number of times a UATI initiated dormant handoff session is marked for renegotiation after successful A13 handoff because the response is received on a TIA-878-1 version A13 interface.

Data Source

DO-EMS

Source Field

numA13SessMarkedForReNegotiationDifflosVersionTotalRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13SessReconfResultNoOperationPriorSessionRemoteRncPerf

Number of times a Prior Session dormant handoff session is marked for renegotiation after successful A13 handoff because the response is received on a TIA-878-1 version A13 interface resulted in no operation after marked for re configuration.

Data Source

DO-EMS

Source Field

numA13SessReconfResultNoOperationPriorSessionRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13SessReconfResultNoOperationRemoteRncPerf

Number of times a UATI initiated dormant handoff session that is marked for renegotiation after successful A13 handoff because the response is received on a TIA-878-1 version A13 interface resulted in no operation after marked for re configuration.

Data Source

DO-EMS

Source Field

numA13SessReconfResultNoOperationRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13SessReconfResultNoOperationTotalRemoteRncPerf

Number of times a UATI initiated dormant handoff session that is marked for renegotiation after successful A13 handoff because the response is received on a TIA-878-1 version A13 interface resulted in no operation after marked for re configuration.

Data Source

DO-EMS

Source Field

numA13SessReconfResultNoOperationTotalRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13SessReconfResultPersonalityChangeRevAPriorSessionRemoteRncPerf

Number of times a Prior Session dormant handoff session is marked for renegotiation after successful A13 handoff because the response is received on a TIA-878-1 version A13 interface resulted in Rev-A personality after reconfiguration.

Data Source

DO-EMS

Source Field

numA13SessReconfResultPersonalityChangeRevAPriorSessionRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13SessReconfResultPersonalityChangeRevARemoteRncPerf

Number of times a UATI initiated dormant handoff session that is marked for renegotiation after successful A13 handoff because the response is received on a TIA-878-1 version A13 interface resulted in Rev-A personality after reconfiguration.

Data Source

DO-EMS

Source Field

numA13SessReconfResultPersonalityChangeRevARemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13SessReconfResultPersonalityChangeRevATotalRemoteRncPerf

Number of times a UATI initiated dormant handoff session that is marked for renegotiation after successful A13 handoff because the response is received on a TIA-878-1 version A13 interface resulted in Rev-A personality after reconfiguration.

Data Source

DO-EMS

Source Field

numA13SessReconfResultPersonalityChangeRevATotalRemoteRncPerf

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13TotalRejectPriorSessionRNC

Total (Prior session + normal) number of times an A13 dormant handoff on this RNC failed with an A13 Reject response

Data Source

DO-EMS

Source Field

numA13TotalRejectPriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA13TotalRejectRNC

Total Number of times a regular A13 dormant handoff on this RNC failed with an A13 Reject response

Data Source

DO-EMS

Source Field

numA13TotalRejectRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numA16Aborts

Number of A16 session transfer attempts from the source RNC that have been aborted. This OM is pegged on the source RNC.

Data Source

DO-EMS

Source Field

numA16Aborts

Source Section

A16PerfSourceRNC (RNCA16MIB)

numA16Attempts

Number of outgoing A16 session transfer attempts by the source RNC.

Data Source

DO-EMS

Source Field

numA16Attempts

Source Section

A16PerfSourceRNC (RNCA16MIB)

numA16Rejects

Number of A16 session transfer attempts from the source RNC that have been rejected by the target RNC. This OM is pegged on the source RNC.

Data Source

DO-EMS

Source Field

numA16Rejects

Source Section

A16PerfSourceRNC (RNCA16MIB)

numA16Success

Number of successful outgoing A16 session transfers by the source RNC.

Data Source

DO-EMS

Source Field

numA16Success

Source Section

A16PerfSourceRNC (RNCA16MIB)

numA16SuppressedSrc

Number of A16 session transfer triggers on the source RNC that have been suppressed and ended with no A16 session transfer attempt.

Data Source

DO-EMS

Source Field

numA16SuppressedSrc

Source Section

A16PerfSourceRNC (RNCA16MIB)

numA16SuppressedTgt

Number of A16 session transfer requests that have been suppressed on the target RNC. This OM is pegged on the target RNC.

Data Source

DO-EMS

Source Field

numA16SuppressedTgt

Source Section

A16PerfSourceRNC (RNCA16MIB)

numA16SuppSrcUnknTgt

Number of A16 session transfer triggers that have been suppressed on the source RNC because the target RNC is not found in the A16 Peer RNC Table.

Data Source

DO-EMS

Source Field

numA16SuppSrcUnknTgt

Source Section

A16PerfSourceRNC (RNCA16MIB)

numA16SuppTgtUnknSrc

Number of A16 session transfer requests that have been suppressed on the target RNC because the source RNC is not found in the A16 Peer RNC Table.

Data Source

DO-EMS

Source Field

numA16SuppTgtUnknSrc

Source Section

A16PerfSourceRNC (RNCA16MIB)

numA16Timeout

Number of A16 session transfer attempts from the source RNC that have timed out without getting any response from the target RNC.

Data Source

DO-EMS

Source Field

numA16Timeout

Source Section

A16PerfSourceRNC (RNCA16MIB)

NumActiveA10Connections

Number of Currently active A10 connections homed to this RNC

Data Source

DO-EMS

Source Field

NumActiveA10Connections

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

numAdditionalBytesMulticast

The number of extra bytes sent as a result of soft multicasting. This number is incremented by n bytes every time when an RNSM duplicates a packet and sends to a DOM other than the user's current serving DOM.

Data Source

DO-EMS

Source Field

numAdditionalBytesMulticast

Source Section

RNCBytePacketCountByRNC (RncIS856PerfMIB)

numATsHandledUnkwnMfrCodeTotal

Number of times a p-IMSI is generated for an AT with an unknown manufacturer code. This OM is supported only after Release 3.0.1.

Data Source

DO-EMS

Source Field

numATsHandledUnkwnMfrCodeTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

numAtSrcRncAnidMismatch

The total number of A13-dormant handoff retrieved sessions on the target RNC, whose PANID information, as notified by the source RNC (during handoff) does not match that notified by the AT (during Location Update).

Data Source

DO-EMS

Source Field

numAtSrcRncAnidMismatch

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnCloseBEPriorityUpdateFail

Number of times an open connection is closed on the RNC due to a failure in dynamically updating the best effort modem flow on receiving a change in the inter-user BE priority level for the user when the connection is open.

Data Source

DO-EMS

Source Field

numConnCloseBEPriorityUpdateFail

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionCloseActiveModePersChangeATo0DC

The number of connections that were closed because the HHO involved a personality change from RevA to Rev0 across different carrier, while the AT has an active connection.

Data Source

DO-EMS

Source Field

numConnectionCloseActiveModePersChangeATo0DC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionCloseActiveModePersChangeATo0SC

The number of connections that were closed because the HHO involved a personality change from RevA to Rev0 on the same carrier, while the AT has an active connection.

Data Source

DO-EMS

Source Field

numConnectionCloseActiveModePersChangeATo0SC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseDormancyTimeout

Connections closed by DO-RNC as there was no data sent or received for a configurable dormancy timeout period

Data Source

DO-EMS

Source Field

NumConnectionCloseDormancyTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionCloseDormancyTimeoutHighCatRNC

Number of connections closed by the RNC due to dormancy when sectors involved in the connection were in the high traffic category.

Data Source

DO-EMS

Source Field

numConnectionCloseDormancyTimeoutHighCatRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionCloseDormancyTimeoutLowCatRNC

Number of connections closed by the RNC due to dormancy when sectors involved in the connection were in the low traffic category.

Data Source

DO-EMS

Source Field

numConnectionCloseDormancyTimeoutLowCatRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionCloseDormancyTimeoutMedCatRNC

Number of connections closed by the RNC due to dormancy when sectors involved in the connection were in the medium traffic category.

Data Source

DO-EMS

Source Field

numConnectionCloseDormancyTimeoutMedCatRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseFromAtError

Connection Close messages from the Access Terminal that had a reason code of Error

Data Source

DO-EMS

Source Field

NumConnectionCloseFromAtError

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionCloseFromAtMovedTo3G1X

This OM is pegged when a Connection Close messages from the Access Terminal is received with a reason code of transition from high rate packet data system to a 3G1X system.

Data Source

DO-EMS

Source Field

numConnectionCloseFromAtMovedTo3G1X

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseFromAtNormal

Connection Close messages from the Access Terminal that had a reason code of Normal

Data Source

DO-EMS

Source Field

NumConnectionCloseFromAtNormal

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseFromAtReply

Connection Close messages from the Access Terminal that had a reason code of Reply

Data Source

DO-EMS

Source Field

NumConnectionCloseFromAtReply

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseFromAtReserved

Connection Close messages from the Access Terminal that had a reason code of Reserved

Data Source

DO-EMS

Source Field

NumConnectionCloseFromAtReserved

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionCloseHHOBlockedByRn

The number of connections that were closed because the resource allocation requests were explicitly blocked by the RN during HHO.

Data Source

DO-EMS

Source Field

numConnectionCloseHHOBlockedByRn

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionCloseHHOFailedFTCAndRTCNotRxed

The number of connections that were closed due to HHO failures, because even though at least one of the messages (FTCDesired, RTCAcquired, TCC) was received on the target carrier, but both RTCAcquired and FTCDesired message were not received on the target carrier from DOM within the stipulated time.

Data Source

DO-EMS

Source Field

numConnectionCloseHHOFailedFTCAndRTCNotRxed

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseInternalError

Connections closed by DO-RNC because of internal software errors

Data Source

DO-EMS

Source Field

NumConnectionCloseInternalError

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseNoFtc

Connections closed by DO-RNC because of indications that there is no active Forward Traffic Channel

Data Source

DO-EMS

Source Field

NumConnectionCloseNoFtc

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseRlp

Connections closed by DO-RNC at the request of the Radio Link Protocol due to errors

Data Source

DO-EMS

Source Field

NumConnectionCloseRlp

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseRtcLost

Connections closed by DO-RNC because of indications that the reverse link(s) were lost

Data Source

DO-EMS

Source Field

NumConnectionCloseRtcLost

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseSectorDown

Connections closed by DO-RNC because of indications that a sector associated with the connection has changed state to down

Data Source

DO-EMS

Source Field

NumConnectionCloseSectorDown

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseSsm

The number of connections closed by DO-RNC at the request of the Session State machine

Data Source

DO-EMS

Source Field

NumConnectionCloseSsm

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseSsmDisable

Session State Machine requested an open connection (if any) be closed and the state machine not allow any further connection setups

Data Source

DO-EMS

Source Field

NumConnectionCloseSsmDisable

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseStateMismatch

Connections closed by DO-RNC due to state mismatch

Data Source

DO-EMS

Source Field

NumConnectionCloseStateMismatch

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseToAtError

Connection Close messages sent to the Access Terminal with a reason code of Error

Data Source

DO-EMS

Source Field

NumConnectionCloseToAtError

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseToAtNormal

Connection Close messages sent to the Access Terminal with a reason code of Normal

Data Source

DO-EMS

Source Field

NumConnectionCloseToAtNormal

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionCloseToAtReply

Connection Close messages sent to the Access Terminal with a reason code of Reply

Data Source

DO-EMS

Source Field

NumConnectionCloseToAtReply

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionRequestAttemptsAfterA13FromAT

The number of times a connection request, that was previously buffered pending the outcome of the A13 handoff, has been initiated.

Data Source

DO-EMS

Source Field

numConnectionRequestAttemptsAfterA13FromAT

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionRequestFailureAfterA13FromAT

The number of times a connection request attempt (made after a successful no UATI initiated A13 Handoff) failed.

Data Source

DO-EMS

Source Field

numConnectionRequestFailureAfterA13FromAT

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionRequestsFromAt

Connection Request messages received from the Access Terminal. It includes the responses to pages.

Data Source

DO-EMS

Source Field

NumConnectionRequestsFromAt

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionRequestsInResponseToPage

Access Terminal responded to the Page Message with a Connection Request message

Data Source

DO-EMS

Source Field

NumConnectionRequestsInResponseToPage

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnectionRequestSuccessesAfterA13FromAT

The number of times a connection request attempt (made after a successful no UATI initiated A13 Handoff) is successful.

Data Source

DO-EMS

Source Field

numConnectionRequestSuccessesAfterA13FromAT

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionSetupsBlockedByRn

Connection setups blocked because the RN could not allocate resources

Data Source

DO-EMS

Source Field

NumConnectionSetupsBlockedByRn

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionSetupsBlockedByRncResources

Connection setups blocked because the DO-RNC could not allocate resources

Data Source

DO-EMS

Source Field

NumConnectionSetupsBlockedByRncResources

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionSetupsFailedByRn

Connection setups that failed because RN resource allocation failed

Data Source

DO-EMS

Source Field

NumConnectionSetupsFailedByRn

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionSetupsFailedByRncResources

Connection setups that failed because DO-RNC resource allocation failed

Data Source

DO-EMS

Source Field

NumConnectionSetupsFailedByRncResources

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnectionsOpened

Connections opened successfully on this DO-RNC as the AT arrives on the Traffic Channel

Data Source

DO-EMS

Source Field

NumConnectionsOpened

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnReqsWhileOpen

Connection request messages received from an Access Terminal that already had an active connection

Data Source

DO-EMS

Source Field

NumConnReqsWhileOpen

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnReqsWhileSettingUp

Connection request messages from the Access Terminal received at the DO-RNC while a connection setup for that AT was in progress

Data Source

DO-EMS

Source Field

NumConnReqsWhileSettingUp

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnReqsWhileTearingDown

Connection request messages from the Access Terminal received at the DO-RNC while an active connection to that AT was being torn down

Data Source

DO-EMS

Source Field

NumConnReqsWhileTearingDown

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnRequestsRcvdForInvalidSessions

Pegs when a connection request is received for an invalid session. However, the existing connection setup request OMs are not pegged in this case.

Data Source

DO-EMS

Source Field

numConnRequestsRcvdForInvalidSessions

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numConnRequestsRcvdForUnAuthSessions

The number of ConnectionRequest messages received for the "Yet to Auth" sessions on the DO-RNC which trigger a TA attempt.

Data Source

DO-EMS

Source Field

numConnRequestsRcvdForUnAuthSessions

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnSetupsAborted

Connection setups that were aborted

Data Source

DO-EMS

Source Field

NumConnSetupsAborted

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnSetupsFailedRncTimeout

Connection setups that failed because no response from Resource Control on the DO-RNC

Data Source

DO-EMS

Source Field

NumConnSetupsFailedRncTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnSetupsFailedRuTimeout

Connection setups that failed because a Route Update message from the Access Terminal was not received in time

Data Source

DO-EMS

Source Field

NumConnSetupsFailedRuTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnSetupsFailedSWError

Connection setups that failed due to software error

Data Source

DO-EMS

Source Field

NumConnSetupsFailedSWError

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumConnSetupsFailedTccTimeout

Connection setups that failed because a Traffic Channel Complete message from the Access Terminal did not arrive in time

Data Source

DO-EMS

Source Field

NumConnSetupsFailedTccTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numCurrentInvalidSessionsEstablished

This OM is incremented whenever a session is opened with an invalid IMSI and is decremented when the invalid session is closed.

Data Source

DO-EMS

Source Field

numCurrentInvalidSessionsEstablished

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numCurrentOpenA10Conn

The total number of session instances on the DO-RNC / RNSM that have open A10-Connections.

Data Source

DO-EMS

Source Field

numCurrentOpenA10Conn

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numCurrentOpenTAP

This OM is a counter for the total number of session instances on the DORNC / RNSM that currently have open TAP-sessions.

Data Source

DO-EMS

Source Field

numCurrentOpenTAP

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numCurrentUnAuthSessionsEstablished

This OM is a count of the total number of sessions in Yet To Auth state that currently exist on the DO-RNC..

Data Source

DO-EMS

Source Field

numCurrentUnAuthSessionsEstablished

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffAttemptsPriorSessionRNC

Number of times a prior session dormant handoff was attempted on this RNC

Data Source

DO-EMS

Source Field

numDormantHandoffAttemptsPriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffAttemptsRNC

This OM counts the total number of session instances that are created on a DO-RNC / RNSM when a regular A13-Dormant handoff attempt is initiated with an unknown foreign UATI.

Data Source

DO-EMS

Source Field

numDormantHandoffAttemptsRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureAtIdResponseFailurePriorSessionRNC

Number of times a prior session A13 dormant handoff on this RNC failed due to AT ID response failure after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureAtIdResponseFailurePriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureAtIdResponseFailureRNC

Number of times a regular A13 dormant handoff on this RNC failed due to AT ID response failure after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureAtIdResponseFailureRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureAtIdTimeoutPriorSessionRNC

Number of times a prior session A13 dormant handoff on this RNC failed due to no AT ID response after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureAtIdTimeoutPriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureAtIdTimeoutRNC

Number of times a regular A13 dormant handoff on this RNC failed due to no AT ID response after receiving A13 Response.

Data Source

DO-EMS

Source Field

numDormantHandoffFailureAtIdTimeoutRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureATInitiatedClosePriorSessionRNC

Number of times a prior session A13 dormant handoff on this RNC failed due to an AT initiated session close

Data Source

DO-EMS

Source Field

numDormantHandoffFailureATInitiatedClosePriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureATInitiatedCloseRNC

Number of times a regular A13 dormant handoff on this RNC failed due to an AT initiated session close

Data Source

DO-EMS

Source Field

numDormantHandoffFailureATInitiatedCloseRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureHdwldTimeoutPriorSessionRNC

Number of times a prior session dormant handoff on this RNC failed due to Hardware ID after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureHdwldTimeoutPriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureHdwldTimeoutRNC

Number of times an A13 dormant handoff on this RNC failed due to Hardware ID after receiving A13 Response.

Data Source

DO-EMS

Source Field

numDormantHandoffFailureHdwIdTimeoutRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureInvalidHdwldTypePriorSessionRNC

Number of times a prior session A13 dormant handoff on this RNC failed due to invalid Hardware ID type after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidHdwldTypePriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureInvalidHdwldTypeRNC

Number of times a regular A13 dormant handoff on this RNC failed due to invalid Hardware ID type after receiving A13 Response.

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidHdwldTypeRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureInvalidHdwldValuePriorSessionRNC

Number of times a prior session A13 dormant handoff on this RNC failed due to invalid Hardware ID value after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidHdwIdValuePriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureInvalidHdwIdValueRNC

Number of times a regular A13 dormant handoff on this RNC failed due to invalid Hardware ID value after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidHdwIdValueRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureInvalidUatiCmpltRNC

Number of times a regular A13 dormant handoff on this RNC failed due to UATI Complete Message from the AT being invalid after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidUatiCmpltRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureMiscPriorSessionRNC

Number of times a prior session dormant handoff on this RNC failed due to internal errors on the target RNC

Data Source

Source Field

numDormantHandoffFailureTAAfterA13RspRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureToSourceLookupFailurePriorSessionRNC

Number of times a prior session dormant handoff on this RNC failed due to source RNC lookup failure

Data Source

DO-EMS

Source Field

numDormantHandoffFailureToSourceLookupFailurePriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureToSourceLookupFailureRNC

Number of times an A13 dormant handoff on this RNC failed due to source RNC lookup failure.

Data Source

DO-EMS

Source Field

numDormantHandoffFailureToSourceLookupFailureRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureUati104MatchesLocalSubnetPriorSessionRNC

Number of times a prior session A13 dormant handoff on this RNC failed because prior session UATI-104 from the AT matches the local subnet

Data Source

DO-EMS

Source Field

numDormantHandoffFailureUati104MatchesLocalSubnetPriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffFailureUati104RNC

Number of times an A13 dormant handoff on this RNC failed due to a mismatch in UATI-104 retrieved from the AT

Data Source

DO-EMS

Source Field

numDormantHandoffFailureUati104RNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffNoUatiReqAttempts

The number of A13 Dormant Handoff attempts that are initiated by an ACH signaling packet with a foreign UATI.

Data Source

DO-EMS

Source Field

numDormantHandoffNoUatiReqAttempts

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffNoUatiReqFailure

The number of times an A13 dormant handoff that is initiated by a ACH message with a foreign UATI message (no subsequent UATIRrequest message) resulted in a failure.

Data Source

DO-EMS

Source Field

numDormantHandoffNoUatiReqFailure

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffNoUatiReqSuccesses

The number of times an A13 dormant handoff that is initiated by a ACH message with a foreign UATI message (no subsequent UATIRequest message) is successful.

Data Source

DO-EMS

Source Field

numDormantHandoffNoUatiReqSuccesses

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffSuccessesPriorSessionRNC

Number of times a prior session dormant handoff succeeded on this RNC

Data Source

DO-EMS

Source Field

numDormantHandoffSuccessesPriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDormantHandoffSuccessesRNC

Number of times an A13 dormant handoff succeeded on this RNC.

Data Source

DO-EMS

Source Field

numDormantHandoffSuccessesRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumDrcSwitchesFailedFtcDesired

DRC switches among soft handoff legs that failed because a FTC Desired indication was not received in time

Data Source

DO-EMS

Source Field

NumDrcSwitchesFailedFtcDesired

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDscSwitchesFailedFtcDesired

The number of DSC switches among soft handoff legs that failed because a DSCSwitched indication was not received in time. This OM is pegged only when DSC switching is used.

Data Source

DO-EMS

Source Field

numDscSwitchesFailedFtcDesired

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDscSwitchesSuccess

The total number of successful forward link DSC switches on this RNC.

Data Source

DO-EMS

Source Field

numDscSwitchesSuccess

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numDscSwitchingMulticastOccurred

When an AT's serving DOM has a DSC erasure, it sends a DSC erasure indication to its controlling RNC.

Data Source

DO-EMS

Source Field

numDscSwitchingMulticastOccurred

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numFailedRncInitiatedPages

The number of RNC initiated connection setups that failed

Data Source

DO-EMS

Source Field

numFailedRncInitiatedPages

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumFastConnectsAttempted

DO-RNC Initiated Pages that resulted in a Fast Connect attempt

Data Source

DO-EMS

Source Field

NumFastConnectsAttempted

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numFixedModeEnableMsgsFromAt

Fixed Mode Enable messages from AT's to the RNC

Data Source

DO-EMS

Source Field

numFixedModeEnableMsgsFromAt

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numInvalidSessionsTerminated

Pegged when an existing session with an invalid IMSI is closed for any reason.

Data Source

DO-EMS

Source Field

numInvalidSessionsTerminated

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numLocationNotificationMsgsFromAt

Location Notification messages from AT's to the RNC

Data Source

DO-EMS

Source Field

numLocationNotificationMsgsFromAt

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numLocationRequestMsgsToAt

Location Request messages sent to the AT's by the RNC

Data Source

DO-EMS

Source Field

numLocationRequestMsgsToAt

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numMobilityTriggeredA10InterPcfHOREg

This OM is a counter for the total number of A10 re-registrations that are initiated on the DO-RNC/RNSM, when an Unsolicited Location Notification (ULN) message with PANID ? CANID is received from the AT when it already has an open A10-Connection with the

Data Source

DO-EMS

Source Field

numMobilityTriggeredA10InterPcfHOREg

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numMobilityTriggeredA10PANID0ReReg

This OM is a counter for the total number of A10 re-registrations that are initiated on the DO-RNC/RNSM, when an Unsolicited Location Notification (ULN) message with PANID=0 is received from the AT when it already has an open A10-Connection with the PDSN.

Data Source

DO-EMS

Source Field

numMobilityTriggeredA10PANID0ReReg

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numNisrRestorationAttemptsRNC

Counts the total number of session restoration attempts on the DORNC.

Data Source

DO-EMS

Source Field

numNisrRestorationAttemptsRNC

Source Section

NISRPerf (RncIS856PerfVer2MIB)

numNisrRestorationFailuresRNC

Counts the total number of network initiated session restoration failures on the DO-RNC.

Data Source

DO-EMS

Source Field

numNisrRestorationFailuresRNC

Source Section

NISRPerf (RncIS856PerfVer2MIB)

numNisrRestorationRetriesRNC

Counts the total number of times a SessionClose message is retransmitted to the AT by the NISR process.

Data Source

DO-EMS

Source Field

numNisrRestorationRetriesRNC

Source Section

NISRPerf (RncIS856PerfVer2MIB)

numNisrRestorationSuccessesRNC

Counts the total number of network initiated session restoration successes on the DO-RNC.

Data Source

DO-EMS

Source Field

numNisrRestorationSuccessesRNC

Source Section

NISRPerf (RncIS856PerfVer2MIB)

NumPageMessagesToAt

Page Message was actually sent to the Access Terminal to facilitate the setup of a connection. It does not include the Fast Connect.

Data Source

DO-EMS

Source Field

NumPageMessagesToAt

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numPageReqsWhileOpen

The number of times an application requested a connection to an Access Terminal while an active connection to that Access Terminal is already present.

Data Source

DO-EMS

Source Field

numPageReqsWhileOpen

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numPageReqsWhileSettingUp

An application requested a connection to an AT while a connection setup to that AT was in progress

Data Source

DO-EMS

Source Field

numPageReqsWhileSettingUp

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numPageReqsWhileTearingDown

An application requested a connection to an AT while an active connection to that AT was being torn down

Data Source

DO-EMS

Source Field

numPageReqsWhileTearingDown

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numPagesSucceeded

An application requested a connection to an Access Terminal while a connection setup to that Access Terminal was in progress

Data Source

DO-EMS

Source Field

numPagesSucceeded

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numRevLinkSHOAborted

The number of reverse link soft handoffs that were aborted because the connection closed for reasons other than reverse link soft handoff failures, blocks or timeouts.

Data Source

DO-EMS

Source Field

numRevLinkSHOAborted

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumRevLinkSHOAttempts

The number of reverse link SHO attempts

Data Source

DO-EMS

Source Field

NumRevLinkSHOAttempts

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumRevLinkSHOBlockedByRn

Reverse link soft handoffs blocked by RN resource allocation

Data Source

DO-EMS

Source Field

NumRevLinkSHOBlockedByRn

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumRevLinkSHOBlockedByRncResources

Reverse link soft handoffs blocked by DO-RNC resource allocation

Data Source

DO-EMS

Source Field

NumRevLinkSHOBlockedByRncResources

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumRevLinkSHOFailedByRn

Reverse link soft handoffs failed by RN resource allocation

Data Source

DO-EMS

Source Field

NumRevLinkSHOFailedByRn

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumRevLinkSHOFailedByRncResources

Reverse link soft handoffs failed by DO-RNC resource allocation

Data Source

DO-EMS

Source Field

NumRevLinkSHOFailedByRncResources

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumRevLinkSHOFailedTccTimeout

Reverse link soft handoffs failed because the Traffic Channel Complete message was not received from the Access Terminal in time

Data Source

DO-EMS

Source Field

NumRevLinkSHOFailedTccTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumRevLinkSHOFailRncTimeout

Reverse link soft handoffs failed because resource allocation/release on the DO-RNC did not complete in time

Data Source

DO-EMS

Source Field

NumRevLinkSHOFailRncTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumRevLinkSHOSuccess

The number of reverse link SHO successes

Data Source

DO-EMS

Source Field

NumRevLinkSHOSuccess

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numRncInitiatedPages

The total number of pages succeeded on this RNC

Data Source

DO-EMS

Source Field

numRncInitiatedPages

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numRnHomedCurRnc

Total number of RNs currently homed on this RNC

Data Source

DO-EMS

Source Field

numRnHomedCurRnc

Source Section

RNCResourceControl (RncResourceControlMIB)

numSessCfgFailedAbnormalConnectionClose

Pegged when the connection in use for session configuration negotiation between the AT and AN is abnormally closed.

Data Source

DO-EMS

Source Field

numSessCfgFailedAbnormalConnectionClose

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessCfgFailedConfigCompleteTimeout

Pegged when the RNC has not received a configuration complete message from the AT within the mandated time interval.

Data Source

DO-EMS

Source Field

numSessCfgFailedConfigCompleteTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessCfgFailedIndividualProtocolConfiguration

Pegged when protocol negotiation between the AT and AN fails for a specific protocol.

Data Source

DO-EMS

Source Field

numSessCfgFailedIndividualProtocolConfiguration

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessCfgFailedTransmitConfigCompleteTimeout

Pegged when the RNC has not transmitted a configuration complete message to the AT within the mandated time interval.

Data Source

DO-EMS

Source Field

numSessCfgFailedTransmitConfigCompleteTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessCfgPostA13ReconfNeededRNC

The total number of times the Session Configuration State Machine performs a re-negotiation of the protocols associated with an A13-Dormant handoff retrieved session.

Data Source

DO-EMS

Source Field

numSessCfgPostA13ReconfNeededRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionInstancesCreated

The total number of session instances that are created on the DO-RNC / RNSM when a signaling message is received with any unknown ATI

Data Source

DO-EMS

Source Field

numSessionInstancesCreated

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionInstancesCreatedWithUnknownLocalUATI

The total number of session instances that are created on the DO-RNC / RNSM, when an access channel message is received with an unknown local UATI.

Data Source

DO-EMS

Source Field

numSessionInstancesCreatedWithUnknownLocalUATI

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionSetupAttempts

Total number of Session setup attempts

Data Source

DO-EMS

Source Field

NumSessionSetupAttempts

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionSetupsBlockedToNoRncResource

Total number of Session Setups blocked because of No DO-RNC Resource

Data Source

DO-EMS

Source Field

NumSessionSetupsBlockedToNoRncResource

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionSetupsFailedToATInitiatedSessionClose

The total number of regular session-setups that are aborted on a DO-RNC / RNSM, when a standardized SessionClose message is received from the AT past the UATI Assignment stage of the 1xEV-DO session setup process.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToATInitiatedSessionClose

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionSetupsFailedToInvlDhwldType

The total number of regular session setup attempts that are aborted when an invalid Hardware ID ?type? is received from the AT

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToInvlDhwldType

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionSetupsFailedToInvlDhwldValue

The total number of regular session setup attempts that are aborted when the DO-RNC receives an invalid HardwareID ?value? from the AT

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToInvlDhwldValue

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionSetupsFailedToInvlDUATICmpltSeqNum

The total number of regular session setup attempts that are aborted when the DO-RNC / RNSM fails to receive a ?valid? UATIComplete message from the AT

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToInvlDUATICmpltSeqNum

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionSetupsFailedToOtherCauses

Total number of Session Setups failed due to other causes

Data Source

DO-EMS

Source Field

NumSessionSetupsFailedToOtherCauses

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionSetupsFailedToRNCInitiatedSessionClose

The total number of regular session-setups that are aborted on the DO-RNC / RNSM, when a (local) user-initiated request to close a session is received on that DO-RNC.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToRNCInitiatedSessionClose

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionSetupsFailedToSessionConfig

Total number of Session Setups failed due to the Session Configuration failure

Data Source

DO-EMS

Source Field

NumSessionSetupsFailedToSessionConfig

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionSetupsFailedToSessionInfoConfirm

The total number of regular session setup attempts that are aborted on the DO-RNC / RNSM, when an A13-Confirmation message is received on the source RNC after the associated session instance is successfully transferred to the target RNC.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToSessionInfoConfirm

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionSetupsFailedToTermAuth

Total number of Session Setups failed due to Terminal Authentication failure

Data Source

DO-EMS

Source Field

NumSessionSetupsFailedToTermAuth

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionSetupsFailedToUATICmplTTimeout

The total number of regular session setup attempts that are aborted when the DO-RNC / RNSM fails to receive a UATIComplete message from the AT

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToUATICmplTTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionSetupSuccessful

Total number of Session setups that were successful

Data Source

DO-EMS

Source Field

NumSessionSetupSuccessful

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionsTerminatedToAtClose

Total number of successfully established Sessions terminated due to the AT sending a 'Session Close'.

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToAtClose

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionsTerminatedToAtIdRspTimeout

Total number of sessions terminated due to AT Id Response Timeout. Note that it is a session setup failure, not a session termination.

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToAtIdRspTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionsTerminatedToHwldRspFailure

Total number of sessions terminated due to Hardware Id Response Failure. Note that it is a session setup failure, not a session termination.

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToHwldRspFailure

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionsTerminatedToInstantClose

Total number of sessions terminated due to instant close

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToInstantClose

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionsTerminatedToKeepAliveTimeout

Total number of successfully established Sessions due to Keep Alive Timeouts

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToKeepAliveTimeout

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionsTerminatedToLocalClose

Successfully established sessions terminated due to the session being closed locally

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToLocalClose

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionsTerminatedToReceivingUatiReq

Successfully established Sessions terminated due to a UATI Request from the AT when the Session is already established for that AT

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToReceivingUatiReq

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionsTerminatedToSessionConfigFailure

Successfully established sessions terminated due to the Session Configuration failure

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToSessionConfigFailure

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionsTerminatedToSessionInfoConfirm

This OM counts the total number of successfully established DO-sessions that are terminated on the DO-RNC / RNSM on the source RNC, when an A13-Session Information Confirm Message is received after the associated session instance is successfully transferr

Data Source

DO-EMS

Source Field

numSessionsTerminatedToSessionInfoConfirm

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionsTerminatedToTermAuth

The number of sessions closed due to TA failure on the DO-RNC.

Data Source

DO-EMS

Source Field

numSessionsTerminatedToTermAuth

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumSessionsTerminatedToUnknownLocalUati

Total number of sessions terminated by the DO RNC due to unknown UATI

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToUnknownLocalUati

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionTermDueToTaReauthIMSIDifferent

Number of sessions closed on the DO-RNC because the AN-AAA server returns an IMSI that is different from the existing IMSI on the RNC during TA re-auth.

Data Source

DO-EMS

Source Field

numSessionTermDueToTaReauthIMSIDifferent

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionTermDueToTaReauthNoTaStream

Number of sessions closed on the DO-RNC because no TA stream is allocated for session.

Data Source

DO-EMS

Source Field

numSessionTermDueToTaReauthNoTaStream

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSessionTermDueToTaReauthReject

Number of sessions closed on the DO-RNC because an A12 Access- Reject message is received from the AN-AAA server during TA re-auth.

Data Source

DO-EMS

Source Field

numSessionTermDueToTaReauthReject

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSntpFailure

number of Sntp Failure

Data Source

DO-EMS

Source Field

numSntpFailure

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSntpNegativeTimeCalculations

number of Sntp Negative Time Calculations

Data Source

DO-EMS

Source Field

numSntpNegativeTimeCalculations

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numSToCCrossovers

The number of connections that were opened before the demarcation point but were closed normally or abnormally after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

numSToCCrossovers where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

numSToCCrossovers_RevA

The number of connections that were opened before the demarcation point but were closed normally or abnormally after the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

numSToCCrossovers where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

numTotalDormantHandoffFailurePriorSessionRNC

Total Number of times a prior session A13 dormant handoff on this RNC failed

Data Source

DO-EMS

Source Field

numTotalDormantHandoffFailurePriorSessionRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numTotalDormantHandoffFailureRNC

Total Number of times a regular A13 dormant handoff on this RNC failed

Data Source

DO-EMS

Source Field

numTotalDormantHandoffFailureRNC

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

NumTotalSuccessSHO

The total number of DRCs switched on this DO-RNC

Data Source

DO-EMS

Source Field

NumTotalSuccessSHO

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numULNRcvdForInvalidSessions

Pegs when an ULN message is received for an invalid session..

Data Source

DO-EMS

Source Field

numULNRcvdForInvalidSessions

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numULNRcvdForUnAuthSessions

The number of ULNs received for the "Yet to Auth" sessions on the DO-RNC which trigger a TA attempt.

Data Source

DO-EMS

Source Field

numULNRcvdForUnAuthSessions

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

numUnAuthSessionsTerminated

The number of Yet to Auth sessions closed on the DO-RNC.

Data Source

DO-EMS

Source Field

numUnAuthSessionsTerminated

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

permanentRlpLossOfSync

RLP has permanently lost synchronization leading to a connection close

Data Source

DO-EMS

Source Field

permanentRlpLossOfSync

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

ReliableA11PktsReceived

Number of reliable A11 packets received from the PDSN

Data Source

DO-EMS

Source Field

ReliableA11PktsReceived

Source Section

A10A11BytePacketCountByRNC (RncPcfPerformanceMIB)

ReliableA11PktsRetransmitted

Number of reliable A11 packets retransmitted

Data Source

DO-EMS

Source Field

ReliableA11PktsRetransmitted

Source Section

A10A11BytePacketCountByRNC (RncPcfPerformanceMIB)

ReliableA11PktsSentSuccess

Number of reliable A11 packets sent successfully

Data Source

DO-EMS

Source Field

ReliableA11PktsSentSuccess

Source Section

A10A11BytePacketCountByRNC (RncPcfPerformanceMIB)

ReverseRlpBytes

Number of RLP Bytes received in the reverse direction

Data Source

DO-EMS

Source Field

ReverseRlpBytes

Source Section

RNCBytePacketCountByRNC (RncIS856PerfMIB)

ReverseRlpResets

Reverse RLP Reset Attempts

Data Source

Source Field

ReverseRlpResets

Source Section

RNCBytePacketCountByRNC (RncIS856PerfMIB)

sNumATInitiatedPageResponses_Rev0

The number of AT initiated ConnectionRequest messages that were received before the demarcation point during any paging cycle for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumATInitiatedPageResponses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumATInitiatedPageResponses_RevA

The number of AT initiated ConnectionRequest messages that were received before the demarcation point during any paging cycle for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumATInitiatedPageResponses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumATReportedTuneAwayDrops_Rev0

Number of times a Rev-0 connection failure record from rev-A ATs (RevA AT sends this record regardless of personality type), via IS856-A connection failure reporting message, is received by the RNC indicating connection failures due to the AT tuning away to 3G1X network while connected to 1xEVDO network and the timestamp reported in connection failure record is within 10 seconds of last RF related drop (FTC stopped timestamp stored at the RNC).

Data Source

DO-EMS

Source Field

sNumATReportedTuneAwayDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumATReportedTuneAwayDrops_RevA

Number of times a Rev-A connection failure record from rev-A ATs (RevA AT sends this record regardless of personality type), via IS856-A connection failure reporting message, is received by the RNC indicating connection failures due to the AT tuning away to 3G1X network while connected to 1xEVDO network and the timestamp reported in connection failure record is within 10 seconds of last RF related drop (FTC stopped timestamp stored at the RNC).

Data Source

DO-EMS

Source Field

sNumATReportedTuneAwayDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionRequestAttemptsAfterA13FromAT_Rev0

The number of times a Rev-0 connection request, that was previously buffered pending the outcome of the A13 handoff, has been initiated.

Data Source

DO-EMS

Source Field

sNumConnectionRequestAttemptsAfterA13FromAT where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionRequestAttemptsAfterA13FromAT_RevA

The number of times a Rev-A connection request, that was previously buffered pending the outcome of the A13 handoff, has been initiated.

Data Source

DO-EMS

Source Field

sNumConnectionRequestAttemptsAfterA13FromAT where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionRequestFailureAfterA13FromAT_Rev0

The number of times a Rev-0 connection request attempt (made after a successful no UATI initiated A13 Handoff) failed.

Data Source

DO-EMS

Source Field

sNumConnectionRequestFailureAfterA13FromAT where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionRequestFailureAfterA13FromAT_RevA

The number of times a Rev-A connection request attempt (made after a successful no UATI initiated A13 Handoff) failed.

Data Source

DO-EMS

Source Field

sNumConnectionRequestFailureAfterA13FromAT where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionRequestSuccessesAfterA13FromAT_Rev0

The number of times a Rev-0 connection request attempt (made after a successful no UATI initiated A13 Handoff) is successful.

Data Source

DO-EMS

Source Field

sNumConnectionRequestSuccessesAfterA13FromAT where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionRequestSuccessesAfterA13FromAT_RevA

The number of times a Rev-A connection request attempt (made after a successful no UATI initiated A13 Handoff) is successful.

Data Source

DO-EMS

Source Field

sNumConnectionRequestSuccessesAfterA13FromAT where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionsClosedNormalBeforeTCC_Rev0

Pegs before demarcation point when a Rev-0 DO Connection is closed by the AT with reason as normal or movedto3G1x in connection close message before sending TCC.

Data Source

DO-EMS

Source Field

sNumConnectionsClosedNormalBeforeTCC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionsClosedNormalBeforeTCC_RevA

Pegs before demarcation point when a Rev-A DO Connection is closed by the AT with reason as normal or movedto3G1x in connection close message before sending TCC.

Data Source

DO-EMS

Source Field

sNumConnectionsClosedNormalBeforeTCC where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionsClosedNormalBeforeTCCDuringSRAfterDC_Rev0

This OM is pegged after demarcation point when Rev-0 DO Connection is closed by the AT before Traffic Channel Complete with a reason code of normal or movedto3G1x during the silent retry period after a dropped call.

Data Source

DO-EMS

Source Field

sNumConnectionsClosedNormalBeforeTCCDuringSRAfterDC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionsClosedNormalBeforeTCCDuringSRAfterDC_RevA

This OM is pegged after demarcation point when Rev-A DO Connection is closed by the AT before Traffic Channel Complete with a reason code of normal or movedto3G1x during the silent retry period after a dropped call.

Data Source

DO-EMS

Source Field

sNumConnectionsClosedNormalBeforeTCCDuringSRAfterDC where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionsClosedNormalBeforeTCCDuringSRAfterFCA_Rev0

This OM is pegged before demarcation point when Rev-0 DO Connections closed by the AT before Traffic Channel Complete with a reason code of normal or movedto3G1x during the silent retry period after failed call attempt.

Data Source

DO-EMS

Source Field

sNumConnectionsClosedNormalBeforeTCCDuringSRAfterFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionsClosedNormalBeforeTCCDuringSRAfterFCA_RevA

This OM is pegged before demarcation point when Rev-A DO Connections closed by the AT before Traffic Channel Complete with a reason code of normal or movedto3G1x during the silent retry period after failed call attempt.

Data Source

DO-EMS

Source Field

sNumConnectionsClosedNormalBeforeTCCDuringSRAfterFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionSetupAttempts

The number of DO connection setup attempts made before the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumConnectionSetupAttempts where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionSetupAttempts_RevA

The number of DO connection setup attempts made before the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumConnectionSetupAttempts where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionSetupsAbortNormalA10Close_Rev0

Setup Number of Connection Setups Abort Normal A10 Close for Rev-0 personality ATs from Template RNCPerfExtnByRNC_R4.0.

Data Source

DO-EMS

Source Field

sNumConnectionSetupsAbortNormalA10Close where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionSetupsAbortNormalA10Close_RevA

Setup Number of Connection Setups Abort Normal A10 Close for Rev-A personality ATs from Template RNCPerfExtnByRNC_R4.0.

Data Source

DO-EMS

Source Field

sNumConnectionSetupsAbortNormalA10Close where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionSetupsAbortRedirectTriggers_Rev0

Connection setup attempts that were aborted before the demarcation point because the RNC redirected the AT to an alternate carrier on receiving connection request for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumConnectionSetupsAbortRedirectTriggers where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionSetupsAbortRedirectTriggers_RevA

Connection setup attempts that were aborted before the demarcation point because the RNC redirected the AT to an alternate carrier on receiving connection request for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumConnectionSetupsAbortRedirectTriggers where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionSetupSuccess

The number of DO connections successfully opened before the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumConnectionSetupSuccess where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumConnectionSetupSuccess_RevA

The number of DO connections successfully opened before the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumConnectionSetupSuccess where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumFirstPageResponses_Rev0

The number of page responses that were received before the demarcation point from the AT in a paging cycle, in response to the 1st Page Message that was sent from the AN for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumFirstPageResponses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumFirstPageResponses_RevA

The number of page responses that were received before the demarcation point from the AT in a paging cycle, in response to the 1st Page Message that was sent from the AN for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumFirstPageResponses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumHHODrops_Rev0

Connections that were dropped before the demarcation point, due to unsuccessful inter frequency hard handoffs for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumHHODrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumHHODrops_RevA

Connections that were dropped before the demarcation point, due to unsuccessful inter frequency hard handoffs for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumHHODrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumHHODropsBlockedByRn_Rev0

Connections that were dropped before the demarcation point, due to unsuccessful inter frequency hard handoff because the RNC received explicit block for resource allocation from at least one of the RNs involved in the hard handoff for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumHHODropsBlockedByRn where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumHHODropsBlockedByRn_RevA

Connections that were dropped before the demarcation point, due to unsuccessful inter frequency hard handoff because the RNC received explicit block for resource allocation from at least one of the RNs involved in the hard handoff for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumHHODropsBlockedByRn where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumHHODropsFTCDesriedAndRTCAcquiredNotRx_Rev0

Connections that were dropped before the demarcation point, due to unsuccessful inter frequency hard handoff because Target Carrier Acquired indication was not received but the Source Carrier Lost indication was received within the timeout interval: this implies that there was no available link left with the AT and so the connection was closed for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumHHODropsFTCDesriedAndRTCAcquiredNotRx where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumHHODropsFTCDesriedAndRTCAcquiredNotRx_RevA

Connections that were dropped before the demarcation point, due to unsuccessful inter frequency hard handoff because Target Carrier Acquired indication was not received but the Source Carrier Lost indication was received within the timeout interval: this implies that there was no available link left with the AT and so the connection was closed for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumHHODropsFTCDesriedAndRTCAcquiredNotRx where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumIncomingPersonalityChangeTriggers_Rev0

Number of times a trigger was generated before the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumIncomingPersonalityChangeTriggers where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumIncomingPersonalityChangeTriggers_RevA

Number of times a trigger was generated before the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumIncomingPersonalityChangeTriggers where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDrops

The number of open DO connections that are dropped (abnormally closed) before the demarcation point due to reasons other than RF related issues and soft handoff failures for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDrops_RevA

The number of open DO connections that are dropped (abnormally closed) before the demarcation point due to reasons other than RF related issues and soft handoff failures for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsAbnormalCloseBySession_Rev0

Connections that were dropped before the demarcation point because the SSM requested the CSM to close the connection abnormally for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsAbnormalCloseBySession where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsAbnormalCloseBySession_RevA

Connections that were dropped before the demarcation point because the SSM requested the CSM to close the connection abnormally for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsAbnormalCloseBySession where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsDueToRLP_Rev0

Number of times the connection was dropped before the demarcation point at the request of the Radio Link Protocol for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsDueToRLP where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsDueToRLP_RevA

Number of times the connection was dropped before the demarcation point at the request of the Radio Link Protocol for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsDueToRLP where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsInternalError_Rev0

Connections that were dropped before the demarcation point due to internal software errors for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsInternalError where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsInternalError_RevA

Connections that were dropped before the demarcation point due to internal software errors for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsInternalError where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsSectorDown_Rev0

Connections that were dropped before the demarcation point because there is only one pilot available for the connection and a sector down indication has been received for that pilot for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsSectorDown where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsSectorDown_RevA

Connections that were dropped before the demarcation point because there is only one pilot available for the connection and a sector down indication has been received for that pilot for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsSectorDown where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsStateMismatch_Rev0

Connections that were dropped before the demarcation point when the RNC finds a state mismatch between itself and the AT for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsStateMismatch where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscDropsStateMismatch_RevA

Connections that were dropped before the demarcation point when the RNC finds a state mismatch between itself and the AT for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsStateMismatch where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscFCA

The number of DO Connection attempts that failed before the demarcation point due to reasons other than RF related or resource related issues for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscFCA_RevA

The number of DO Connection attempts that failed before the demarcation point due to reasons other than RF related or resource related issues for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscFCAA10Related_Rev0

Connection set-ups that failed before the demarcation point because either there was a failure in setting up the A10 connection or the RNC closed the open A10 connection for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCAA10Related where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscFCAA10Related_RevA

Connection set-ups that failed before the demarcation point because either there was a failure in setting up the A10 connection or the RNC closed the open A10 connection for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCAA10Related where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscFCAFailures_Rev0

Number of times the connection set-up failed before the demarcation point due to reasons not explicitly called out in other FCA OMs for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCAFailures where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscFCAFailures_RevA

Number of times the connection set-up failed before the demarcation point due to reasons not explicitly called out in other FCA OMs for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCAGFailures where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscFCASWError_Rev0

Number of times the connection set-up failed before the demarcation point due to software errors for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCASWError where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumMiscFCASWError_RevA

Number of times the connection set-up failed before the demarcation point due to software errors for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCASWError where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumNetworkErrorDrops_Rev0

Connections that were closed before the demarcation point because the RNC closed the open A10 connection for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumNetworkErrorDrops_RevA

Connections that were closed before the demarcation point because the RNC closed the open A10 connection for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsA10SetupFail_Rev0

Open connections that were closed before the demarcation point because there was failure in the A10 connection set-up for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsA10SetupFail where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsA10SetupFail_RevA

Open connections that were closed before the demarcation point because there was failure in the A10 connection set-up for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsA10SetupFail where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsRNCEXternal_Rev0

Open connections that were closed before the demarcation point because the existing A10 connection was closed due to PDSN going down or PDSN is not reachable or any other failure condition that is not because of the RNC for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsRNCEXternal where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsRNCEXternal_RevA

Open connections that were closed before the demarcation point because the existing A10 connection was closed due to PDSN going down or PDSN is not reachable or any other failure condition that is not because of the RNC for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsRNCEXternal where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsRNCInternal_Rev0

Open connections that were closed before the demarcation point because an internal error caused an existing A10 connection to be closed which results in a closure of a DO Connection Connection close that occur due to A10 failure during PDSN-re-registration should also peg this OM for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsRNCInternal where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsRNCInternal_RevA

Open connections that were closed before the demarcation point because an internal error caused an existing A10 connection to be closed which results in a closure of a DO Connection Connection close that occur due to A10 failure during PDSN-re-registration should also peg this OM for Rev-A personality ATs.

Data Source

DO-EMS

sNumPageAbandoned where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumPageRequests

The number of page requests sent to the AT before the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumPageRequests where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumPageRequests_RevA

The number of page requests sent to the AT before the demarcation point. When the DO-Repag is enabled, only the first page request in a paging cycle will be pegged for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumPageRequests where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumPageResponses

The number of successful responses to page requests that were received from the AT before the demarcation point and before the page timer expired for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumPageResponses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumPageResponses_RevA

The number of successful responses to page requests that were received from the AT before the demarcation point and before the page timer expired for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumPageResponses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumPageTimeout_Rev0

The number of times paging cycles have expired before the demarcation point, waiting for a page response from the AT for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumPageTimeout where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumPageTimeout_RevA

The number of times paging cycles have expired before the demarcation point, waiting for a page response from the AT for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumPageTimeout where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCA

The number of DO connection attempts that failed before the demarcation point due to blocks or failures during resource allocation at the RNC or the RN for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCA_RevA

The number of DO connection attempts that failed before the demarcation point due to blocks or failures during resource allocation at the RNC or the RN for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCABlockedByRN_Rev0

Number of times the connection setup was blocked by the RNC before the demarcation point because at least one of the resource allocation requests sent to the RN(s) was denied for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCABlockedByRN where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCABlockedByRN_RevA

Number of times the connection setup was blocked by the RNC before the demarcation point because at least one of the resource allocation requests sent to the RN(s) was denied for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCABlockedByRN where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCABlockedByRNCResources_Rev0

Number of times that the RNC blocked the connection set-up before the demarcation point because the CPU utilization on the RNC exceeds to a certain value and overload conditions occurs for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCABlockedByRNCResources where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCABlockedByRNCResources_RevA

Number of times that the RNC blocked the connection set-up before the demarcation point because the CPU utilization on the RNC exceeds to a certain value and overload conditions occurs for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCABlockedByRNCResources where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCAFailedByRN_Rev0

Number of times the connection set-up failed before the demarcation point because the Connection State Machine (CSM) received an error indication from the DownLeg State Machine (DLSM) from at least one of the Down Legs involved in the setup for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCAFailedByRN where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCAFailedByRN_RevA

Number of times the connection set-up failed before the demarcation point because the Connection State Machine (CSM) received an error indication from the DownLeg State Machine (DLSM) from at least one of the Down Legs involved in the setup for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCAFailedByRN where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedDrops

The number of open DO connections that are dropped (abnormally closed) due to RF related issues before the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedDrops_RevA

The number of open DO connections that are dropped (abnormally closed) due to RF related issues before the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedDropsNoFtc_Rev0

Connections that were dropped before the demarcation point because of indications that there is no active Forward Traffic Channel (FTC) available for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedDropsNoFtc where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedDropsNoFtc_RevA

Connections that were dropped before the demarcation point because of indications that there is no active Forward Traffic Channel (FTC) available for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedDropsNoFtc where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedDropsRTCLost_Rev0

Number of times the connection was dropped before the demarcation point because a Reverse Traffic Channel (RTC) lost indication was received, and as a result, no reverse link for the connection were available for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedDropsRTCLost where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedDropsRTCLost_RevA

Number of times the connection was dropped before the demarcation point because a Reverse Traffic Channel (RTC) lost indication was received, and as a result, no reverse link for the connection were available for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedDropsRTCLost where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedFCA

The number of DO Connection attempts that failed before the demarcation point due to RF related issues for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedFCA_RevA

The number of DO Connection attempts that failed before the demarcation point due to RF related issues, i.e. Route Update timeouts and TCC timeouts for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedFCARUTimeOut_Rev0

Number of times the connection set-up failed before the demarcation point because the route update message was not received from the AT within the stipulated time, or there were errors during the processing of the route update message for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedFCARUTimeOut where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedFCARUTimeOut_RevA

Number of times the connection set-up failed before the demarcation point because the route update message was not received from the AT within the stipulated time, or there were errors during the processing of the route update message for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedFCARUTimeOut where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedFCATCCTimeOut_Rev0

Number of times the connection setup failed before the demarcation point because the RNC did not receive the TCC message from the AT within the stipulated time after sending TCA message for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedFCATCCTimeOut where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRFRelatedFCATCCTimeOut_RevA

Number of times the connection setup failed before the demarcation point because the RNC did not receive the TCC message from the AT within the stipulated time after sending TCA message for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumRFRelatedFCATCCTimeOut where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRNCEstimated3G1xRollDownDrops_Rev0

Number of Rev-0 RF drops estimated by RNC before demarcation point as roll down drops due to a hybrid AT dropped 1xEVDO connection when it rolled down to 3G1X network.

Data Source

DO-EMS

Source Field

sNumRNCEstimated3G1xRollDownDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRNCEstimated3G1xRollDownDrops_RevA

Number of Rev-A RF drops estimated by RNC before demarcation point as roll down drops due to a hybrid AT dropped 1xEVDO connection when it rolled down to 3G1X network.

Data Source

DO-EMS

Source Field

sNumRNCEstimated3G1xRollDownDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRNCEstimatedTuneAwayDrops_Rev0

Number of Rev-0 RF drops estimated by RNC before demarcation point as tune aways due to FTC Stopped indication message (corresponding to RF drop) was received in the Rev0 hybrid AT's 3G1X paging cycle slot.

Data Source

DO-EMS

Source Field

sNumRNCEstimatedTuneAwayDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumRNCEstimatedTuneAwayDrops_RevA

Number of Rev-A RF drops estimated by RNC before demarcation point as tune aways due to FTC Stopped indication message (corresponding to RF drop) was received in the Rev0 hybrid AT's 3G1X paging cycle slot. RNC maintains an estimated histogram of the Rev0 AT's 3G1X paging cycle.

Data Source

DO-EMS

Source Field

sNumRNCEstimatedTuneAwayDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSecondPageRequests_Rev0

The number of 2nd page requests sent to the AT in a paging cycle before the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSecondPageRequests where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSecondPageRequests_RevA

The number of 2nd page requests sent to the AT in a paging cycle before the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSecondPageRequests where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSecondPageResponses_Rev0

The number of page responses that were received before the demarcation point from the AT in a paging cycle, in response to the 2nd Page Message that was sent from the AN for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSecondPageResponses where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSecondPageResponses_RevA

The number of page responses that were received before the demarcation point from the AT in a paging cycle, in response to the 2nd Page Message that was sent from the AN for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSecondPageResponses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetriesAbandonedAfterDC_Rev0

Number of times silent retry process was abandoned before the demarcation point because a trigger was generated during connection setup to change the Rev-A capable AT from the source personality to the target personality for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetriesAbandonedAfterDC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetriesAbandonedAfterDC_RevA

Number of times silent retry process was abandoned before the demarcation point because a trigger was generated during connection setup to change the Rev-A capable AT from the source personality to the target personality for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetriesAbandonedAfterDC where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetriesAbandonedAfterFCA_Rev0

Number of times silent retry process was abandoned before the demarcation point because a trigger was generated during connection setup to change the Rev-A capable AT from the source personality to the target personality for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetriesAbandonedAfterFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetriesAbandonedAfterFCA_RevA

Number of times silent retry process was abandoned before the demarcation point because a trigger was generated during connection setup to change the Rev-A capable AT from the source personality to the target personality for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetriesAbandonedAfterFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetryAttemptsAfterDC_Rev0

Connection setup attempts within the configurable DC silent retry period following a dropped connection (abnormal close) for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetryAttemptsAfterDC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetryAttemptsAfterDC_RevA

Connection setup attempts within the configurable DC silent retry period following a dropped connection (abnormal close) for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetryAttemptsAfterDC where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetryAttemptsAfterFCA_Rev0

Connection setup-attempts made within the configurable FCA silent retry period following a failed connection setup attempt for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetryAttemptsAfterFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetryAttemptsAfterFCA_RevA

Connection setup-attempts made within the configurable FCA silent retry period following a failed connection setup attempt for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetryAttemptsAfterFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetryFailuresAfterDC_Rev0

Connection set-up attempts that failed due to any reason within the configurable DC silent retry period following a connection drop for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetryFailuresAfterDC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetryFailuresAfterDC_RevA

Connection set-up attempts that failed due to any reason within the configurable DC silent retry period following a connection drop for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetryFailuresAfterDC where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetryFailuresAfterFCA_Rev0

Connection set-up attempts that failed due to any reason within the configurable FCA silent retry period following a failed connection setup attempt for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetryFailuresAfterFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetryFailuresAfterFCA_RevA

Connection set-up attempts that failed due to any reason within the configurable FCA silent retry period following a failed connection setup attempt for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetryFailuresAfterFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetrySuccessesAfterDC_Rev0

Successful connection setup attempts within the configurable DC silent retry period following a connection drop for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetrySuccessesAfterDC where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetrySuccessesAfterDC_RevA

Successful connection setup attempts within the configurable DC silent retry period following a connection drop for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetrySuccessesAfterDC where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetrySuccessesAfterFCA_Rev0

Successful connection setup-attempts within the configurable FCA silent retry period following a failed connection setup attempt for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSilentRetrySuccessesAfterFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSilentRetrySuccessesAfterFCA_RevA

Data Source

DO-EMS

Source Field

sNumSilentRetrySuccessesAfterFCA where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSoftHandoffRelatedDrops

The number of open DO connections that are dropped (abnormally closed) due to RF related issues after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSoftHandoffRelatedDrops where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSoftHandoffRelatedDrops_RevA

The number of open DO connections that are dropped (abnormally closed) due to unsuccessful soft handoffs before the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSoftHandoffRelatedDrops where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSoftHandoffRelatedDropsBlockedByRN_Rev0

Connections that were dropped before the demarcation point due to unsuccessful reverse link soft-handoff because the RNC received explicit block from one (or multiple) of the RNs involved in the soft-handoff for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumSoftHandoffRelatedDropsBlockedByRN where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumSoftHandoffRelatedDropsBlockedByRN_RevA

Connections that were dropped before the demarcation point due to unsuccessful reverse link soft-handoff because the RNC received explicit block from one (or multiple) of the RNs involved in the soft-handoff for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSoftHandoffRelatedDropsBlockedByRN where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumTermauthResourceRelatedFCA_Rev0

This OM counts the number of DO Connections setups blocked due to lack of the Terminal Authentication Resources for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumTermauthResourceRelatedFCA where atDescriptor=1

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

sNumTermauthResourceRelatedFCA_RevA

The total number of connections closed, normally or abnormally, before the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumTotalConnectionCloses where atDescriptor=2

Source Section

RNCPerfExtnByRNC (RncIS856PerfExtensionMIB)

termAuthAccessRejectsIgnoredTotal

When Ignore Access-Reject mode is enabled, if an Access-Reject is received from the AAA server, RNC assigns a invalid IMSI and sets up a session. In this case the above OM is pegged.

Data Source

DO-EMS

Source Field

termAuthAccessRejectsIgnoredTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

termAuthChapTimeoutsTotal

Number of times a CHAP timeout occurred due to AT not responding to CHAP challenges on this DO-RNC.

Data Source

DO-EMS

Source Field

termAuthChapTimeoutsTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

termAuthFailedDueToSessionCloseTotal

TA failures due to abnormal session close.

Data Source

DO-EMS

Source Field

termAuthFailedDueToSessionCloseTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

termAuthFailureSessionTaTimeoutTotal

Number of times the terminal authentication fails because the Session TA timer expires.

Data Source

DO-EMS

Source Field

termAuthFailureSessionTaTimeoutTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

termAuthInvalidNaiFromAtTotal

Number of times the DO-RNC received an invalid or empty NAI Realm from the AT.

Data Source

DO-EMS

Source Field

termAuthInvalidNaiFromAtTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

termAuthLcpConfigTimeoutsIgnoredTotal

When Enhanced TA - A12 Bypass feature is enabled, this OM pegs the page failures and unconfirmed LCP time-outs during terminal authentication.

Data Source

DO-EMS

Source Field

termAuthLcpConfigTimeoutsIgnoredTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

termAuthLcpConfigTimeoutsTotal

Number of times an LCP timeout occurred due to AT not responding to LCP Config Requests on this DO-RNC.

Data Source

DO-EMS

Source Field

termAuthLcpConfigTimeoutsTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

termAuthNaiFromAtMatchesA12BypassListTotal

Number of times the DO-RNC received an NAI Realm from the AT CHAP Response which matched an A12 bypass list entry.

Data Source

DO-EMS

Source Field

termAuthNaiFromAtMatchesA12BypassListTotal

Source Section

TermAuthPerfByRNC (RncTermAuthMIB)

termReauthAttemptsTotal

Number of TA re-auth attempts on the DO-RNC.

Data Source

DO-EMS

Source Field

totalA10SetupAttemptsWithA10ConnMinEnabled

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

totalA10SetupAttemptWithA10ConnMinDisabled

This OM is a counter for the total number of times a new A10-Connection setup is initiated on the DO-RNC / RNSM with the A10-Connection Minimization feature disabled by the operator.

Data Source

DO-EMS

Source Field

totalA10SetupAttemptWithA10ConnMinDisabled

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

totalA10SetupFailure

This OM is a counter for the total number of new A10-Connection setups that are aborted on a specific RNSM.

Data Source

DO-EMS

Source Field

totalA10SetupFailure

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

totalA10Switches

Number of A10 switches attempted. Whenever an A10 is open on a Secondary PDSN, and a connection goes from dormant to active, an A10 switch is attempted from the Secondary PDSN to a Primary PDSN.

Data Source

DO-EMS

Source Field

totalA10Switches

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

TotalA11EgressBytes

Total A11 Egress Bytes

Data Source

DO-EMS

Source Field

TotalA11EgressBytes

Source Section

A10A11BytePacketCountByRNC (RncPcfPerformanceMIB)

TotalA11IngressBytes

Total A11 Ingress Bytes

Data Source

DO-EMS

Source Field

TotalA11IngressBytes

Source Section

A10A11BytePacketCountByRNC (RncPcfPerformanceMIB)

TotalA11SessionSetupReconnectAttempts

Total Session Setup Reconnect Attempts

Data Source

DO-EMS

Source Field

TotalA11SessionSetupReconnectAttempts

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

TotalA11SessionSetupReconnectFailures

Total Session Setup Reconnect Failures

Data Source

DO-EMS

Source Field

TotalA11SessionSetupReconnectFailures

Source Section

A10A11PerfByRNC (RncPcfPerformanceMIB)

totalAtIdAssociationRequests

AT Identifiers (IMSI, Hardware Id) association requests

Data Source

DO-EMS

Source Field

totalAtIdAssociationRequests

Source Section

ResourceAllocationPerfByRNC (RncResourceControlMIB)

totalAtIdAssociationSuccessResponse

AT Identifiers (IMSI, Hardware Id) association successful

Data Source

DO-EMS

Source Field

totalAtIdAssociationSuccessResponse

Source Section

ResourceAllocationPerfByRNC (RncResourceControlMIB)

totalHwIdToUatiRequests

Requests to get UATI from AT's Hardware Identifier

Data Source

DO-EMS

Source Field

totalHwIdToUatiRequests

Source Section

RNCResourceControl (RncResourceControlMIB)

totalImsiToUatiRequests

Total number of requests to get UATI from IMSI

Data Source

DO-EMS

Source Field

totalImsiToUatiRequests

Source Section

RNCResourceControl (RncResourceControlMIB)

totalMobilityTriggeredA10ReReg

This OM is a counter for the total number of A10 Re-registrations on the DORNC / RNSM.

Data Source

DO-EMS

Source Field

totalMobilityTriggeredA10ReReg

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

TotalRnHomingRequests

Total number of RN homing requests received by this DO-RNC

Data Source

DO-EMS

Source Field

TotalRnHomingRequests

Source Section

ResourceAllocationPerfByRNC (RncResourceControlMIB)

TotalRnHomingRequestsDenied

Total number of RN homing requests denied by this DO-RNC

Data Source

DO-EMS

Source Field

TotalRnHomingRequestsDenied

Source Section

ResourceAllocationPerfByRNC (RncResourceControlMIB)

totalSessionCloseDueToDuplicateAtlds

Total number of Session Closed due to duplicate AT Identifiers

Data Source

DO-EMS

Source Field

totalSessionCloseDueToDuplicateAtIds

Source Section

ResourceAllocationPerfByRNC (RncResourceControlMIB)

totalSessionCloseDueToDuplicateImsi

Total number of sessions closed on the DO-RNC due to duplicate IMSI collisions.

Data Source

DO-EMS

Source Field

totalSessionCloseDueToDuplicateImsi

Source Section

RNCResourceControl (RncResourceControlMIB)

TotalSessionSetupsBlocked

Total number of Session Setups which were blocked

Data Source

DO-EMS

Source Field

TotalSessionSetupsBlocked

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

TotalSessionSetupsFailed

Total number of Session setups which failed

Data Source

DO-EMS

Source Field

TotalSessionSetupsFailed

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

totalSessionsTerminated

The total number of successfully established DO-Sessions that are terminated on the DO-RNC / RNSM

Data Source

DO-EMS

Source Field

totalSessionsTerminated

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

totalTimesTAPEnabled

This OM is a counter for the total times TAP is enabled on the DO-RNC/RNSM since the RNSM/RNC was last rebooted.

Data Source

DO-EMS

Source Field

totalTimesTAPEnabled

Source Section

RNCPerfByRNC (RncIS856PerfMIB)

totalUatiAllocated

Total number of UATIs allocated by this RNC

Data Source

DO-EMS

Source Field

totalUatiAllocated

Source Section

RNCResourceControl (RncResourceControlMIB)

totalUatiAllocatedCur

UATIs currently allocated by this RNC

Data Source

DO-EMS

Source Field

totalUatiAllocatedCur

Source Section

RNCResourceControl (RncResourceControlMIB)

totalUatiReleased

Total number of UATI Released

Data Source

DO-EMS

Source Field

totalUatiReleased

Source Section

ResourceAllocationPerfByRNC (RncResourceControlMIB)

totalUatiReleasedDueToModuleReset

Total number of UATI Released due to module reset

Data Source

DO-EMS

Source Field

totalUatiToImsiRequests

Source Section

RNCResourceControl (RncResourceControlMIB)

DO_RNC_Card Primitive Calculations

The following is a list of primitive calculations for the DO_RNC_Card entity.

AbnormalSessionClosesSlot

Number of Abnormal Session Closes

Calculation

```
vsum(NumSessionsTerminatedToReceivingUatiReqSlot, NumSessionsTerminated-  
ToSessionConfigFailureSlot, NumSessionsTerminatedToLocalCloseSlot,  
NumSessionsTerminatedToInstantCloseSlot)
```

AccessFailureRateSlot

RF-related failure rate excluding the resource blocks and other non-RF related failures

Calculation

```
100.0 * NumConnSetupsFailedTccTimeoutSlot / vsum(NumConnectionRequestsFro-  
mAtSlot, NumFastConnectsAttemptedSlot, -1 * NumConnReqsWhileSettingUpSlot,  
-1 * NumConnReqsWhileTearingDownSlot, -1 * NumConnReqsWhileOpenSlot, 0)
```

AirlinkResourceAllocationFailuresSlot

Airlink Resource Allocation Failures

Calculation

```
vsum(TotalAirlinkRsrcAllocationsFailedSectorCarrierDownSlot,  
TotalAirlinkRsrcAllocationsFailedSectorCarrierNotHomedSlot, 0)
```

AverageConnectionDurationSlot

The average connection duration time in Seconds for all connections that were open

Calculation

AverageConnectionDurationSlot_Raw / 10.0

AverageSessionDurationSlot

The average Session duration times in Seconds for all Sessions that were open

Calculation

AverageSessionDurationSlot_Raw / 10.0

ConnectionDropsSlot

Number of abnormal connection closes due to loss of RF link or other error conditions

Calculation

vsum(NumConnectionCloseRtcLostSlot, NumConnectionCloseNoFtcSlot, NumConnectionCloseSsmSlot, NumConnectionCloseDormancyTimeoutSlot, 0)

ConnectionSetupAttemptsSlot

Valid and invalid ConnectionRequest messages

Calculation

vsum(NumConnectionRequestsFromAtSlot, NumFastConnectsAttemptedSlot, 0)

ConnectionSetupErrorsSlot

Number of Connection Setup Errors

Calculation

vsum(NumConnSetupsFailedRuTimeoutSlot, NumConnSetupsFailedTccTimeoutSlot, NumConnSetupsFailedSWErrorSlot, NumConnSetupsAbortedSlot, 0)

ConnectionSetupSuccessRateSlot

Connection Setup Success Rate

Calculation

100.0 * NumConnectionsOpenedSlot / vsum(NumConnectionRequestsFromAtSlot, NumFastConnectsAttemptedSlot, -1 * NumConnReqsWhileSettingUpSlot, -1 * NumConnReqsWhileTearingDownSlot, -1 * NumConnReqsWhileOpenSlot, 0)

EvdoSessionSetupSuccessRateSlot

EV-DO Session Setup Success Rate

Calculation

100.0 * NumSessionSetupSuccessfulSlot / vsum(NumSessionSetupAttemptsSlot, -1.0 * NumSessionsTerminatedToReceivingUatiReqSlot, 0)

FwdPercentPktsSized1001to1100bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 1001 to 1100 bytes.

Calculation

$\text{fwdPktSizeBin12PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$

FwdPercentPktsSized101to200bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 101 to 200 bytes.

Calculation

$\text{fwdPktSizeBin3PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$

FwdPercentPktsSized1101to1200bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 1101 to 1200 bytes.

Calculation

$\text{fwdPktSizeBin13PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$

FwdPercentPktsSized1201to1300bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 1201 to 1300 bytes.

Calculation

$\text{fwdPktSizeBin14PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$

FwdPercentPktsSized1301to1400bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 1301 to 1400 bytes.

Calculation

$\text{fwdPktSizeBin15PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$

FwdPercentPktsSized1401bytesOrMore

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of greater than or equal to 1401 bytes.

Calculation

$\text{fwdPktSizeBin16PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$

FwdPercentPktsSized201to300bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 201 to 300 bytes.

Calculation

$$\text{fwdPktSizeBin4PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$$

FwdPercentPktsSized301to400bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 301 to 400 bytes.

Calculation

$$\text{fwdPktSizeBin5PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$$

FwdPercentPktsSized401to500bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 401 to 500 bytes.

Calculation

$$\text{fwdPktSizeBin6PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$$

FwdPercentPktsSized501to600bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 501 to 600 bytes.

Calculation

$$\text{fwdPktSizeBin7PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$$

FwdPercentPktsSized50bytesOrLess

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of less than or equal to 50 bytes.

Calculation

$$\text{fwdPktSizeBin1PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$$

FwdPercentPktsSized51to100bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 51 to 100 bytes.

Calculation

$$\text{fwdPktSizeBin2PerSlot} * 100.0 / \text{FwdPktSizeTotalCount}$$

FwdPercentPktsSized601to700bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 601 to 700 bytes.

Calculation

```
fwdPktSizeBin8PerSlot * 100.0 / FwdPktSizeTotalCount
```

FwdPercentPktsSized701to800bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 701 to 800 bytes.

Calculation

```
fwdPktSizeBin9PerSlot * 100.0 / FwdPktSizeTotalCount
```

FwdPercentPktsSized801to900bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 801 to 900 bytes.

Calculation

```
fwdPktSizeBin10PerSlot * 100.0 / FwdPktSizeTotalCount
```

FwdPercentPktsSized901to1000bytes

Percentage of packets that are received by the RNSM in the forward direction from PDSNs with packet size of 901 to 1000 bytes.

Calculation

```
fwdPktSizeBin11PerSlot * 100.0 / FwdPktSizeTotalCount
```

FwdPktSizeTotalCount

Total number of packets that are received by the RNSM in the forward direction from PDSNs.

Calculation

```
vsum (fwdPktSizeBin1PerSlot, fwdPktSizeBin2PerSlot, fwdPktSizeBin3PerSlot,  
fwdPktSizeBin4PerSlot, fwdPktSizeBin5PerSlot, fwdPktSizeBin6PerSlot,  
fwdPktSizeBin7PerSlot, fwdPktSizeBin8PerSlot, fwdPktSizeBin9PerSlot,  
fwdPktSizeBin10PerSlot, fwdPktSizeBin11PerSlot, fwdPktSizeBin12PerSlot,  
fwdPktSizeBin13PerSlot, fwdPktSizeBin14PerSlot, fwdPktSizeBin15PerSlot,  
fwdPktSizeBin16PerSlot, 0)
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

""

InvalidConnectionSetupRequestsSlot

Number of Invalid Connection Setup Requests

Calculation

```
vsum(NumConnReqsWhileSettingUpSlot, NumConnReqsWhileTearingDownSlot, Num-  
ConnReqsWhileOpenSlot, 0)
```

MaxConnectionDurationSlot

The maximum amount of time in Seconds that a connection was open

Calculation

```
MaxConnectionDurationSlot_Raw / 10.0
```

MaxSessionDurationSlot

The maximum amount of time in Seconds that a Session was open

Calculation

```
MaxSessionDurationSlot_Raw / 10.0
```

MinConnectionDurationSlot

The least amount of time in Seconds that a connection was open

Calculation

```
MinConnectionDurationSlot_Raw / 10.0
```

MinSessionDurationSlot

The least amount of time in Seconds that a Session was open

Calculation

```
MinSessionDurationSlot_Raw / 10.0
```

NormalSessionClosesSlot

Number of normal Session Closes

Calculation

```
vsum(NumSessionsTerminatedToKeepAliveTimeoutSlot, NumSessionsTerminated-  
ToAtCloseSlot, 0)
```

NUMDAYS

of days in Report

Calculation

DAYSINREPORT ()

NUMHOURS

of hours in Summation Data

Calculation

PageSuccessRateSlot

Page Success Rate

Calculation

100.0 * NumConnectionRequestsInResponseToPageSlot / NumPageMessagesToAtSlot

PercentQosSetupRequestsAccepted_EMFPA

Percentage of QoS setup requests received from the AT using EMFPA that the RNSM accepted.

Calculation

numQosSetupRequestsAcceptedPerSlot_EMFPA * 100.0 /
numQosSetupRequestsReceivedPerSlot_EMFPA

PercentQosSetupRequestsAccepted_MFPA

Percentage of QoS setup requests received from the AT using MFPA that the RNSM accepted.

Calculation

numQosSetupRequestsAcceptedPerSlot_MFPA * 100.0 /
numQosSetupRequestsReceivedPerSlot_MFPA

PercentReservationOffRequestsAccepted_EMFPA

Percentage of ReservationOffRequest messages received from the AT using EMFPA that the RNSM accepted.

Calculation

numReservationOffRequestsAcceptedPerSlot_EMFPA * 100.0 /
numReservationOffRequestsReceivedPerSlot_EMFPA

PercentReservationOffRequestsAccepted_MFPA

Percentage of ReservationOffRequest messages received from the AT using MFPA that the RNSM accepted.

Calculation

$$\frac{\text{numReservationOffRequestsAcceptedPerSlot_MFPA} * 100.0}{\text{numReservationOffRequestsReceivedPerSlot_MFPA}}$$

PercentReservationOnRequestsAccepted_EMFPA

Percentage of ReservationOnRequest messages received from the AT using EMFPA that the RNSM accepted.

Calculation

$$\frac{\text{numReservationOnRequestsAcceptedPerSlot_EMFPA} * 100.0}{\text{numReservationOnRequestsReceivedPerSlot_EMFPA}}$$

PercentReservationOnRequestsAccepted_MFPA

Percentage of ReservationOnRequest messages received from the AT using MFPA that the RNSM accepted.

Calculation

$$\frac{\text{numReservationOnRequestsAcceptedPerSlot_MFPA} * 100.0}{\text{numReservationOnRequestsReceivedPerSlot_MFPA}}$$

RevPercentPktsSized1200to1450bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 1200 to 1450 bytes.

Calculation

$$\frac{\text{revPktSizeBin13PerSlot} * 100.0}{\text{RevPktSizeTotalCount}}$$

RevPercentPktsSized127to189bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 127 to 189 bytes.

Calculation

$$\frac{\text{revPktSizeBin7PerSlot} * 100.0}{\text{RevPktSizeTotalCount}}$$

RevPercentPktsSized13bytesOrLess

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of less than or equal to 13 bytes.

Calculation

$\text{revPktSizeBin1PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized14to30bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 14 to 30 bytes.

Calculation

$\text{revPktSizeBin2PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized190to254bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 190 to 254 bytes.

Calculation

$\text{revPktSizeBin8PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized255to381bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 255 to 381 bytes.

Calculation

$\text{revPktSizeBin9PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized31to62bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 31 to 62 bytes.

Calculation

$\text{revPktSizeBin3PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized382to510bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 382 to 510 bytes.

Calculation

$\text{revPktSizeBin10PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized511to765bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 511 to 765 bytes.

Calculation

$\text{revPktSizeBin11PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized63to83bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 63 to 83 bytes.

Calculation

$\text{revPktSizeBin4PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized766to1021bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 766 to 1021 bytes.

Calculation

$\text{revPktSizeBin12PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized84to93bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 84 to 93 bytes.

Calculation

$\text{revPktSizeBin5PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPercentPktsSized94to126bytes

Percentage of packets that are received by the RNSM in the reverse direction from the DOMs with packet size of 94 to 126 bytes.

Calculation

$\text{revPktSizeBin6PerSlot} * 100.0 / \text{RevPktSizeTotalCount}$

RevPktSizeTotalCount

Total number of packets that are received by the RNSM in the reverse direction from the DOMs.

Calculation

$\text{vsum}(\text{revPktSizeBin1PerSlot}, \text{revPktSizeBin2PerSlot}, \text{revPktSizeBin3PerSlot}, \text{revPktSizeBin4PerSlot}, \text{revPktSizeBin5PerSlot}, \text{revPktSizeBin6PerSlot}, \text{revPktSizeBin7PerSlot}, \text{revPktSizeBin8PerSlot}, \text{revPktSizeBin9PerSlot}, \text{revPktSizeBin10PerSlot}, \text{revPktSizeBin11PerSlot}, \text{revPktSizeBin12PerSlot}, \text{revPktSizeBin13PerSlot}, 0)$

RevSHOAllocationFailuresSlot

Reverse Link unsuccessful soft handoffs due to allocation failures

Calculation

```
vsum(NumRevLinkSHOFailedByRnSlot, NumRevLinkSHOFailedByRnResourcesSlot,  
NumRevLinkSHOFailRncTimeoutSlot, 0)
```

RevSHOBlockingsSlot

Reverse Link unsuccessful soft handoffs due to blocking

Calculation

```
vsum(NumRevLinkSHOBlockedByRnSlot, NumRevLinkSHOBlockedByRncResourcesSlot)
```

RevSHOUnsuccessfulResourcesAllocationSlot

Total Reverse Link unsuccessful soft handoffs due to blocking or allocation failures

Calculation

```
vsum(NumRevLinkSHOBlockedByRnSlot, NumRevLinkSHOBlockedByRncResourcesS-  
lot, NumRevLinkSHOFailedByRnSlot, NumRevLinkSHOFailedByRnResourcesSlot,  
NumRevLinkSHOFailRncTimeoutSlot, 0)
```

SuccessfulReverseLinkSHORateSlot

Successful Reverse Link Soft Handoff Rate where a handoff is considered to be successful if all the requested pilots are added or removed

Calculation

```
100.0 * NumRevLinkSHOSuccessSlot / NumRevLinkSHOAttemptsSlot
```

TotalANInitiatedConnectionClosesSlot

Total Access Network initiated connection closes

Calculation

```
vsum(NumConnectionCloseToAtNormalSlot , NumConnectionCloseToAtErrorSlot, 0)
```

TotalATInitiatedConnectionClosesSlot

Total Access Terminal initiated connection closes

Calculation

```
vsum(NumConnectionCloseFromAtNormalSlot, NumConnectionCloseFromAtError-  
Slot, NumConnectionCloseFromAtReservedSlot, 0)
```

TotalConnectionClosesSlot

Total Connection Closes

Calculation

```
vsum(NumConnectionCloseFromAtNormalSlot, NumConnectionCloseFromAtErrorSlot, NumConnectionCloseFromAtReservedSlot, NumConnectionCloseToAtNormalSlot, NumConnectionCloseToAtErrorSlot, 0)
```

TotalRLPFrameByteCountSlot

Total RLP frame byte count

Calculation

```
vsum(ForwardRlpBytesSlot, ReverseRlpBytesSlot, 0)
```

UnsuccessfulResourcesAllocationSlot

Number of Unsuccessful Resource Allocations

Calculation

```
vsum(NumConnectionSetupsBlockedByRnSlot, NumConnectionSetupsBlockedByRncResourcesSlot, NumConnectionSetupsFailedByRnSlot, NumConnectionSetupsFailedByRncResourcesSlot, NumConnSetupsFailedRncTimeoutSlot)
```

ValidEvdoSessionSetupAttemptsSlot

Valid EV-DO Session Setup Attempts

Calculation

```
vsum(NumSessionSetupAttemptsSlot, -1 * NumSessionsTerminatedToReceivingUatireqSlot, 0)
```

DO_RNC_Card Peg Counts

The following is a list of peg counts for the DO_RNC_Card entity.

a12AcceptsReceivedFromAaaServersForSlot

Number of A12 Access Accepts received from any AN-AAA server used by the RNSM.

Data Source

DO-EMS

Source Field

a12AcceptsReceivedFromAaaServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12AccessChallengesReceivedFromAaaServersForSlot

Number of A12 Access Challenges received from any AN-AAA server used by the RNSM.

Data Source

DO-EMS

Source Field

a12AccessChallengesReceivedFromAaaServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12BadAuthenticatorReceivedFromAaaServersForSlot

Number of A12 messages with bad authenticators received from any ANAAA server used by the RNSM.

Data Source

DO-EMS

Source Field

a12BadAuthenticatorReceivedFromAaaServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12MalformedResponseReceivedFromAaaServersForSlot

Number of malformed A12 messages received from any AN-AAA server used by the RNSM.

Data Source

DO-EMS

Source Field

a12MalformedResponseReceivedFromAaaServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12RejectsReceivedFromAaaServersForSlot

Number of A12 Access Rejects received by the RNSM.

Data Source

DO-EMS

Source Field

a12RejectsReceivedFromAaaServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12RequestsSentToAaaServersFromSlot

Number of A12-Access Requests sent by the RNSM. It does not count retransmissions.

Data Source

DO-EMS

Source Field

a12RequestsSentToAaaServersFromSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12RetransmitsSentToAaaServersFromSlot

Number of A12-Access Request retransmissions sent by the RNSM.

Data Source

DO-EMS

Source Field

a12RetransmitsSentToAaaServersFromSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12TimeoutEventsInThisSlot

Number of A12-Access Requests timeouts that occurred for requests sent to any AN-AAA server used by the RNSM.

Data Source

DO-EMS

Source Field

a12TimeoutEventsInThisSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12TxPathFailDueToAnPppForSlot

Total number of A12 failures due to AnPpp connection failures for the DORNC / RNSM.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToAnPppForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12TxPathFailDueToInternalErrorsForSlot

Total number of A12 failures due to various internal errors in the RNSM. These include memory allocation failures, radius attribute addition failures, etc.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToInternalErrorsForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12TxPathFailDueToNoPacketIdAvalableForServersForSlot

Total number of A12 failures due to the RNSM having exhausted the packet Ids to be assigned to the allocated AaaServers.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToNoPacketIdAvalableForServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12TxPathFailDueToNoServerAvailableForSlot

Total number of A12 failures when the RNSM cannot select any server for this terminal authentication attempt either because there is no more available server, or the retransmission limit has been reached.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToNoServerAvailableForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12TxPathFailDueToTransmitErrorForServersForSlot

Total number of A12 failures due to transmit failures for the RNSM. The failure may be due to socket failures, route failures, etc.

Data Source

DO-EMS

Source Field

a12TxPathFailDueToTransmitErrorForServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12UnknownOtherFailureReceivedFromAaaServersForSlot

Total number of A12 messages from AN-AAA(s) that were dropped, by the RNSM, due to other reasons.

Data Source

DO-EMS

Source Field

a12UnknownOtherFailureReceivedFromAaaServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12UnknownPacketTypeReceivedFromAaaServersForSlot

Total number of A12 messages with unknown packets (with no matching outstanding packet Ids) received from any AN-AAA server used by the DORNC / RNSM.

Data Source

DO-EMS

Source Field

a12UnknownPacketTypeReceivedFromAaaServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12UnknownServerReceivedFromAaaServersForSlot

Total number of A12 messages received from any unknown AN-AAA server used by the RNSM.

Data Source

DO-EMS

Source Field

a12UnknownServerReceivedFromAaaServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

a12UnknownTypeReceivedFromAaaServersForSlot

Total number of A12 messages with unknown packet types (not one of the supported A12 packet types) received from any AN-AAA server used by the RNSM.

Data Source

DO-EMS

Source Field

a12UnknownTypeReceivedFromAaaServersForSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

anPppAuthenticationAttemptsSlot

Number of AN-PPP authentications attempted by the RNSM.

Data Source

DO-EMS

Source Field

anPppAuthenticationAttemptsSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

averageConnectionSetupTimeSlot

The average connection setup time for all successful connection setups

Data Source

DO-EMS

Source Field

averageConnectionSetupTimeSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

averagePageSetupTimeSlot

The average connection setup time in response to a RNC initiated page

Data Source

Source Field

averagePageSetupTimeSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

averageRevAConnectionDurationSlot

This attribute indicates the average amount of time for which a Rev-A connection was open on this RNSM (Unit : 100 ms).

Data Source

DO-EMS

Source Field

averageRevAConnectionDurationSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

averageRevAConnectionSetupTimeSlot

The average time taken, on this RNSM, for the successful set-up of a connection (Unit : 10 ms).

Data Source

DO-EMS

Source Field

averageRevAConnectionSetupTimeSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

averageSessionSetupTimeSlot

The average Session setup time for all successful Session setups

Data Source

DO-EMS

Source Field

averageSessionSetupTimeSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

avgA13HoDelayPriorSessionSlot

Average delay for prior session A13 Handoff on this slot

Data Source

DO-EMS

Source Field

avgA13HoDelayPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

avgA13HoDelaySlot

This OM maintains a record of the average setup time for all successful regular A13-Dormant handoff attempts on a DO-RNC / RNSM.

Data Source

DO-EMS

Source Field

avgA13HoDelaySlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

avgNumConnectionsCurrentlyOpenSlot

Average of the number of currently open connections.

Data Source

DO-EMS

Source Field

numConnectionsCurrentlyOpenSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

avgNumCurrentSessionsEstablishedSlot

Average of 15 samples of numCurrentSessionsEstablished during collection interval.

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsRNCInternalSlot_Rev0

Open connections that were closed after the demarcation point because an internal error caused an existing A10 connection to be closed which results in a closure of a DO Connection Connection close that occur due to A10 failure during PDSN-re-registration should also peg this OM for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsRNCInternalSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsRNCInternalSlot_RevA

Open connections that were closed after the demarcation point because an internal error caused an existing A10 connection to be closed which results in a closure of a DO Connection Connection close that occur due to A10 failure during PDSN-re-registration should also peg this OM for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsRNCInternalSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsSlot_Rev0

Connections that were closed after the demarcation point because the RNC closed the open A10 connection for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumNetworkErrorDropsSlot_RevA

Connections that were closed after the demarcation point because the RNC closed the open A10 connection for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumNetworkErrorDropsSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumNormalConnectionClosesSlot_Rev0

The number of connections that were closed normally after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumNormalConnectionClosesSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumNormalConnectionClosesSlot_RevA

The number of connections that were closed normally after the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumNormalConnectionClosesSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumOutgoingPersonalityChangeTriggersSlot_Rev0

Number of times a trigger was generated, after the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumOutgoingPersonalityChangeTriggersSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumOutgoingPersonalityChangeTriggersSlot_RevA

Number of times a trigger was generated, after the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumOutgoingPersonalityChangeTriggersSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumPageAbandonedSlot_Rev0

The number of times that AN has aborted/abandoned the Page operation on this RNSM after the demarcation point during any paging cycle for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumPageAbandonedSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumPageAbandonedSlot_RevA

The number of times that AN has aborted/abandoned the Page operation on this RNSM after the demarcation point during any paging cycle for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumPageAbandonedSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumPageRequestsSlot_Rev0

The number of page requests sent to the AT after the demarcation point. When the DO-Repag is enabled, only the first page request in a paging cycle will be pegged for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumPageRequestsSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumPageRequestsSlot_RevA

The number of page requests sent to the AT after the demarcation point. When the DO-Repag is enabled, only the first page request in a paging cycle will be pegged for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumPageRequestsSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumPageResponsesSlot_Rev0

The number of successful responses to page requests that were received from the AT after the demarcation point and before the page timer expired for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumPageResponsesSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumPageResponsesSlot_RevA

The number of successful responses to page requests that were received from the AT after the demarcation point and before the page timer expired for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

cNumPageResponsesSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumPageTimeoutSlot_Rev0

The number of times paging cycles have expired after the demarcation point, waiting for a page response from the AT for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

cNumPageTimeoutSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

cNumPageTimeoutSlot_RevA

The number of times paging cycles have expired after the demarcation point, waiting for a page response from the AT for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

numA10ClosedOtherCausesInternalSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numA10ClosedPDSNInitiatedReleaseSlot

This OM is a counter for the total number of successfully established A10-Connections that are closed on the DO-RNC / RNSM when the A10-Connection is released by the PDSN.

Data Source

DO-EMS

Source Field

numA10ClosedPDSNInitiatedReleaseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numA10ClosedPDSNReRegFailureSlot

This OM is a counter for the total number of successfully established A10-Connections that are closed on the DO-RNC / RNSM when a re-registration with the PDSN of a existing A10-Connection, returns a failure indication.

Data Source

DO-EMS

Source Field

numA10ClosedPDSNReRegFailureSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numA10ClosedSessionTerminationSlot

This OM is a counter for the total number of successfully established A10-Connections that are closed on the DO-RNC / RNSM due to a DO-Session termination.

Data Source

DO-EMS

Source Field

numA10ClosedSessionTerminationSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numA10ConnWithDurationAround30SecSlot

This OM is a counter for the total number of successfully established A10-Connections, with duration between 28 and 33 seconds, which are closed by a normal A10-Connection release by the PDSN.

Data Source

DO-EMS

Source Field

numA10ConnWithDurationAround30SecSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numA10ConnWithVeryShortDurationSlot

Number of A10 Connections closed by PDSN with duration less than 20 seconds on the RNSM.

Data Source

DO-EMS

Source Field

numA10ConnWithVeryShortDurationSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numA10InterPcfHOREgAttemptsSlot

A10 Connection setup attempts initiated by the RNC due to Inter-PCF Handoff

Data Source

DO-EMS

Source Field

numA10InterPcfHOREgAttemptsSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numA10InterPcfHOREgFailuresSlot

A10 Connection setup attempts initiated by the RNC due to Inter-PCF Handoff that failed

Data Source

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numAdditionalBytesMulticastSlot

The number of extra bytes sent as a result of soft multicasting. This number is incremented by n bytes every time when an RNSM duplicates a packet and sends to a DOM other than the user's current serving DOM.

Data Source

DO-EMS

Source Field

numAdditionalBytesMulticastSlot

Source Section

RNCBytePacketCountBySlot (RncIS856PerfMIB)

numATsHandledUnkwnMfrCodeSlot

Number of times a p-IMSI is generated for an AT with an unknown manufacturer code.

Data Source

DO-EMS

Source Field

numATsHandledUnkwnMfrCodeSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

numAtSrcRncAnidMismatchSlot

This OM is a counter for the total number of A13-dormant handoff retrieved sessions on the target RNC, whose PANID information, as notified by the source RNC (during handoff) does not match that notified by the AT (during Location Update).

Data Source

DO-EMS

Source Field

numAtSrcRncAnidMismatchSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numATsWithOnePersonalitySlot

Number of ATs with single personality on the RNSM. Whenever single personality is given to an access terminal, this OM will be updated. Rev-0 AT will be considered as Single Personality AT.

Data Source

DO-EMS

Source Field

numATsWithOnePersonalitySlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numATsWithTwoPersonalitiesSlot

Number of ATs with two personalities on the RNSM. Whenever two personalities are assigned to an access terminal, this OM will be updated.

Data Source

DO-EMS

Source Field

numATsWithTwoPersonalitiesSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numConnCloseBEPriorityUpdateFailSlot

Number of times an open connection is closed on the RNC due to a failure in dynamically updating the best effort modem flow on receiving a change in the inter-user BE priority level for the user when the connection is open.

Data Source

DO-EMS

Source Field

numConnCloseBEPriorityUpdateFailSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numConnectionCloseActiveModePersChangeATo0DiffCarrSlot

The number of connections that were closed because the HHO involved a personality change from RevA to Rev0 across different carrier, while the AT has an active connection.

Data Source

DO-EMS

Source Field

numConnectionCloseActiveModePersChangeATo0DiffCarrSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numConnectionCloseActiveModePersChangeATo0SameCarrSlot

The number of connections that were closed because the HHO involved a personality change from RevA to Rev0 on the same carrier, while the AT has an active connection.

Data Source

DO-EMS

Source Field

numConnectionCloseActiveModePersChangeATo0SameCarrSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionCloseDormancyTimeoutSlot

Connections closed by DO-RNC as there was no data sent or received for a configurable dormancy timeout period

Data Source

DO-EMS

Source Field

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numConnectionCloseRLSHOBlockedByRnSlot

The number of connections that were closed because the resource allocation requests were explicitly blocked by the RN during reverse link soft handoffs.

Data Source

DO-EMS

Source Field

numConnectionCloseRLSHOBlockedByRnSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionCloseRtcLostSlot

Connections closed by DO-RNC because of indications that the reverse link(s) were lost

Data Source

DO-EMS

Source Field

NumConnectionCloseRtcLostSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionCloseSectorDownSlot

Connections closed by DO-RNC because of indications that a sector associated with the connection has changed state to down

Data Source

DO-EMS

Source Field

NumConnectionCloseSectorDownSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionCloseSsmDisableSlot

Session State Machine requested an open connection (if any) be closed and the state machine not allow any further connection setups

Data Source

DO-EMS

Source Field

NumConnectionCloseSsmDisableSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionCloseSsmSlot

The number of connections closed by DO-RNC at the request of the Session State machine

Data Source

DO-EMS

Source Field

NumConnectionCloseSsmSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionCloseStateMismatchSlot

Connections closed by DO-RNC due to state mismatch

Data Source

DO-EMS

Source Field

NumConnectionCloseStateMismatchSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionCloseToAtErrorSlot

Connection Close messages sent to the Access Terminal with a reason code of Error

Data Source

DO-EMS

Source Field

NumConnectionCloseToAtErrorSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionCloseToAtNormalSlot

Connection Close messages sent to the Access Terminal with a reason code of Normal

Data Source

DO-EMS

Source Field

NumConnectionCloseToAtNormalSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionCloseToAtReplySlot

Connection Close messages sent to the Access Terminal with a reason code of Reply

Data Source

DO-EMS

Source Field

NumConnectionCloseToAtReplySlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numConnectionRequestAttemptsAfterA13FromATSlot

The number of times a connection request, that was previously buffered pending the outcome of the A13 handoff, has been initiated.

Data Source

DO-EMS

Source Field

numConnectionRequestAttemptsAfterA13FromATSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numConnectionRequestFailureAfterA13FromATSlot

The number of times a connection request attempt (made after a successful no UATI initiated A13 Handoff) failed.

Data Source

DO-EMS

Source Field

numConnectionRequestFailureAfterA13FromATSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionRequestsFromAtSlot

Connection Request messages received from the Access Terminal

Data Source

DO-EMS

Source Field

NumConnectionRequestsFromAtSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionRequestsInResponseToPageSlot

Access Terminal responded to the Page Message with a Connection Request message

Data Source

DO-EMS

Source Field

NumConnectionRequestsInResponseToPageSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numConnectionRequestSuccessesAfterA13FromATSlot

The number of times a connection request attempt (made after a successful no UATI initiated A13 Handoff) is successful.

Data Source

DO-EMS

Source Field

numConnectionRequestSuccessesAfterA13FromATSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionSetupsBlockedByRncResourcesSlot

Connection setups blocked because the DO-RNC could not allocate resources

Data Source

DO-EMS

Source Field

NumConnectionSetupsBlockedByRncResourcesSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionSetupsBlockedByRnSlot

Connection setups blocked because the RN could not allocate resources

Data Source

DO-EMS

Source Field

NumConnectionSetupsBlockedByRnSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionSetupsFailedByRncResourcesSlot

Connection setups that failed because DO-RNC resource allocation failed

Data Source

DO-EMS

Source Field

NumConnectionSetupsFailedByRncResourcesSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionSetupsFailedByRnSlot

Connection setups that failed because RN resource allocation failed

Data Source

DO-EMS

Source Field

NumConnectionSetupsFailedByRnSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnectionsOpenedSlot

Connections opened successfully on this DO-RNC as the AT arrives on the Traffic Channel

Data Source

DO-EMS

Source Field

NumConnectionsOpenedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnReqsWhileOpenSlot

Connection request messages received from an Access Terminal that already had an active connection

Data Source

DO-EMS

Source Field

NumConnReqsWhileOpenSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnReqsWhileSettingUpSlot

Connection request messages from the Access Terminal received at the DO-RNC while a connection setup for that AT was in progress

Data Source

DO-EMS

Source Field

NumConnReqsWhileSettingUpSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnReqsWhileTearingDownSlot

Connection request messages from the Access Terminal received at the DO-RNC while an active connection to that AT was being torn down

Data Source

DO-EMS

Source Field

NumConnReqsWhileTearingDownSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numConnRequestsRcvdForInvalidSessionsRncPerfSlot

Pegs when a connection request is received for an invalid session.

Data Source

DO-EMS

Source Field

numConnRequestsRcvdForInvalidSessionsRncPerfSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numConnRequestsRcvdForUnAuthSessionsSlot

The number of ConnectionRequest messages received for the "Yet to Auth" sessions on the RNSM which trigger a TA attempt.

Data Source

DO-EMS

Source Field

numConnRequestsRcvdForUnAuthSessionsSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numConnsConnectedToSecondaryRnSlot

Number of connections that contribute to the connectedTimeSecondaryRnSlot counter.

Data Source

DO-EMS

Source Field

numConnsConnectedToSecondaryRnSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnSetupsAbortedSlot

Connection setups that were aborted

Data Source

DO-EMS

Source Field

NumConnSetupsAbortedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnSetupsFailedRncTimeoutSlot

Connection setups that failed because no response from Resource Control on the DO-RNC

Data Source

DO-EMS

Source Field

NumConnSetupsFailedRncTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnSetupsFailedRuTimeoutSlot

Connection setups that failed because a Route Update message from the Access Terminal was not received in time

Data Source

DO-EMS

Source Field

NumConnSetupsFailedRuTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnSetupsFailedSWErrorSlot

Connection setups that failed due to software error

Data Source

DO-EMS

Source Field

NumConnSetupsFailedSWErrorSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumConnSetupsFailedTccTimeoutSlot

Connection setups that failed because a Traffic Channel Complete message from the Access Terminal did not arrive in time

Data Source

DO-EMS

Source Field

NumConnSetupsFailedTccTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numCurrentInvalidSessionsEstablishedRncPerfSlot

Pegs whenever a session is opened with an invalid IMSI.

Data Source

DO-EMS

Source Field

numCurrentInvalidSessionsEstablishedRncPerfSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numCurrentOpenA10ConnSlot

This OM is a counter for the total number of session instances on the DO-RNC / RNSM that have open A10-Connections.

Data Source

DO-EMS

Source Field

numCurrentOpenA10ConnSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numCurrentOpenTAPSlot

This OM is a counter for the total number of session instances on the DO-RNC / RNSM that currently have open TAP-sessions.

Data Source

DO-EMS

Source Field

numCurrentOpenTAPSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numCurrentUnAuthSessionsEstablishedSlot

This OM is a count of the total number of sessions in Yet To Auth state that currently exist on the RNSM..

Data Source

DO-EMS

Source Field

numCurrentUnAuthSessionsEstablishedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numD2APktsArrived

Number of D2A packets arriving at the RNSM destined for a dormant AT.

Data Source

DO-EMS

Source Field

numD2APktsArrived

Source Section

RNCPageOvldCtrl (PagingOcmMIB)

numD2APktsDroppedByLimit

Number of packets arriving to dormant ATs dropped due to either per-AT or global limit being reached.

Data Source

DO-EMS

Source Field

numD2APktsDroppedByLimit

Source Section

RNCPageOvldCtrl (PagingOcMIB)

numD2APktsDroppedOtherReason

The number of D2A packets dropped due to reasons other than exceeding the per AT and per global limits.

Data Source

DO-EMS

Source Field

numD2APktsDroppedOtherReason

Source Section

RNCPageOvldCtrl (PagingOcMIB)

numD2APktsQueued

The number of successfully enqueued D2A packets if the arrived packet meets the per AT and per global packet limit.

Data Source

DO-EMS

Source Field

numD2APktsQueued

Source Section

RNCPageOvldCtrl (PagingOcMIB)

numDormantHandoffAttemptsPriorSessionSlot

Number of times a prior session dormant handoff was attempted on this slot

Data Source

DO-EMS

Source Field

numDormantHandoffAttemptsPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffAttemptsSlot

This OM is a counter for the total number of session instances that are created on a DO-RNC / RNSM when a regular A13-Dormant handoff attempt is initiated with an unknown foreign UATI.

Data Source

DO-EMS

Source Field

numDormantHandoffAttemptsSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureAtIdResponseFailurePriorSessionSlot

Number of times a prior session A13 dormant handoff on this slot failed due to AT ID response failure after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureAtIdResponseFailurePriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureAtIdResponseFailureSlot

Number of times a regular A13 dormant handoff on this slot failed due to AT ID response failure after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureAtIdResponseFailureSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureAtIdTimeoutPriorSessionSlot

Number of times a prior session A13 dormant handoff on this slot failed due to no AT ID response after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureAtIdTimeoutPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureAtIdTimeoutSlot

Number of times a regular A13 dormant handoff on this slot failed due to no AT ID response after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureAtIdTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureATInitiatedClosePriorSessionSlot

Number of times a prior session A13 dormant handoff on this slot failed due to an AT initiated session close

Data Source

DO-EMS

Source Field

numDormantHandoffFailureATInitiatedClosePriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureATInitiatedCloseSlot

Number of times a regular A13 dormant handoff on this slot failed due to an AT initiated session close

Data Source

DO-EMS

Source Field

numDormantHandoffFailureATInitiatedCloseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureHdwldTimeoutPriorSessionSlot

Number of times a prior session dormant handoff on this slot failed due to Hardware ID after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureHdwldTimeoutPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureHdwldTimeoutSlot

Number of times an A13 dormant handoff on this slot failed due to Hardware ID after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureHdwldTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureInvalidHdwldTypePriorSessionSlot

Number of times a prior session A13 dormant handoff on this slot failed due to invalid Hardware ID type after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidHdwldTypePriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureInvalidHdwldTypeSlot

Number of times a regular A13 dormant handoff on this slot failed due to invalid Hardware ID type after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidHdwldTypeSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureInvalidHdwldValuePriorSessionSlot

Number of times a prior session A13 dormant handoff on this slot failed due to invalid Hardware ID value after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidHdwldValuePriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureInvalidHdwldValueSlot

Number of times a regular A13 dormant handoff on this slot failed due to invalid Hardware ID value after receiving A13 Response.

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidHdwldValueSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureInvalidUatiCmpltSlot

Number of times a regular A13 dormant handoff on this slot failed due to UATI Complete Message from the AT being invalid after receiving A13 Response.

Data Source

DO-EMS

Source Field

numDormantHandoffFailureInvalidUatiCmpltSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureMiscPriorSessionSlot

Number of times a prior session dormant handoff on this slot failed due to internal errors on the target RNC

Data Source

DO-EMS

Source Field

numDormantHandoffFailureMiscPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureMiscSlot

Number of times an A13 dormant handoff on this slot failed due to internal errors on the target RNC

Data Source

DO-EMS

Source Field

numDormantHandoffFailureMiscSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureNoRncResourceSlot

Number of times a regular A13 dormant handoff on this slot failed because of no RNC resources available.

Data Source

DO-EMS

Source Field

numDormantHandoffFailureNoRncResourceSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureNoUatiCmpltSlot

Number of times an A13 dormant handoff on this slot failed due to no UATI Complete Message from the AT after receiving A13 Response

Data Source

DO-EMS

Source Field

numDormantHandoffFailureNoUatiCmpltSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureNoUatiReqSlot

Number of times an A13 dormant handoff on this slot failed due to UATI Request never received after receiving a message with a foreign UATI

Data Source

DO-EMS

Source Field

numDormantHandoffFailureNoUatiReqSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureRetrievedConfigUnacceptablePriorSessionSlot

Number of times a prior session dormant handoff on this slot failed due to retrieved config attributes being unacceptable

Data Source

DO-EMS

Source Field

numDormantHandoffFailureRetrievedConfigUnacceptablePriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureRetrievedConfigUnacceptableSlot

Number of times an A13 dormant handoff on this slot failed due to retrieved config attributes being unacceptable

Data Source

DO-EMS

Source Field

numDormantHandoffFailureRetrievedConfigUnacceptableSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureRNCInitiatedClosePriorSessionSlot

Number of times a prior session A13 dormant handoff on this slot failed due to an RNC initiated session close

Data Source

DO-EMS

Source Field

numDormantHandoffFailureRNCInitiatedClosePriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureRNCInitiatedCloseSlot

Number of times a regular A13 dormant handoff on this slot failed due to an RNC initiated session close

Data Source

DO-EMS

Source Field

numDormantHandoffFailureRNCInitiatedCloseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureSessionConfigDuringInitialConfigPriorSession Slot

Number of times a prior session A13 dormant handoff on this slot failed due to a session config failure while a prior-session configuration is in progress

Data Source

DO-EMS

Source Field

numDormantHandoffFailureSessionConfigDuringInitialConfigPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureSessionConfigDuringReconfigurationPriorSessionSlot

Number of times a prior session A13 dormant handoff on this slot failed due to a session reconfiguration failure

Data Source

DO-EMS

Source Field

numDormantHandoffFailureSessionConfigDuringReconfigurationPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureSessionConfigDuringReconfigurationSlot

Number of times a regular A13 dormant handoff on this slot failed due to a session reconfiguration failure

Data Source

DO-EMS

Source Field

numDormantHandoffFailureSessionConfigDuringReconfigurationSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureSourceUnreachablePriorSessionSlot

Number of times a prior session dormant handoff on this slot failed due to problems sending A13 request on the socket to the source RNC

Data Source

DO-EMS

Source Field

numDormantHandoffFailureSourceUnreachablePriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureSourceUnreachableSlot

Number of times an A13 dormant handoff on this slot failed due to problems sending A13 request on the socket to the source RNC

Data Source

DO-EMS

Source Field

numDormantHandoffFailureSourceUnreachableSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureTAAfterA13RspPriorSessionSlot

Number of times a prior session dormant handoff on this slot failed due to failing TA

Data Source

DO-EMS

Source Field

numDormantHandoffFailureTAAfterA13RspPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureTAAfterA13RspSlot

Number of times an A13 dormant handoff on this slot failed due to failing TA

Data Source

DO-EMS

Source Field

numDormantHandoffFailureTAAfterA13RspSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureToSourceLookupFailurePriorSessionSlot

Number of times a prior session dormant handoff on this slot failed due to source RNC lookup failure

Data Source

DO-EMS

Source Field

numDormantHandoffFailureToSourceLookupFailurePriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureToSourceLookupFailureSlot

Number of times an A13 dormant handoff on this slot failed due to source RNC lookup failure

Data Source

DO-EMS

Source Field

numDormantHandoffFailureToSourceLookupFailureSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureUati104MatchesLocalSubnetPriorSessionSlot

Number of times a prior session A13 dormant handoff on this slot failed because prior session UATI-104 from the AT matches the local subnet

Data Source

DO-EMS

Source Field

numDormantHandoffFailureUati104MatchesLocalSubnetPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffFailureUati104Slot

Number of times an A13 dormant handoff on this slot failed due to a mismatch in UATI-104 retrieved from the AT

Data Source

DO-EMS

Source Field

numDormantHandoffFailureUati104Slot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffNoUatiReqAttemptsRncPerfSlot

The number of A13 Dormant Handoff attempts that are initiated by an ACH signaling packet with a foreign UATI.

Data Source

DO-EMS

Source Field

numDormantHandoffNoUatiReqAttemptsRncPerfSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffNoUatiReqFailureRncPerfSlot

The number of times an A13 dormant handoff that is initiated by a ACH message with a foreign UATI message (no subsequent UATIRequest message) resulted in a failure.

Data Source

DO-EMS

Source Field

numDormantHandoffNoUatiReqFailureRncPerfSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffNoUatiReqSuccessesRncPerfSlot

The number of times an A13 dormant handoff that is initiated by a ACH message with a foreign UATI message (no subsequent UATIRequest message) is successful.

Data Source

DO-EMS

Source Field

numDormantHandoffNoUatiReqSuccessesRncPerfSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffSuccessesPriorSessionSlot

Number of times a prior session dormant handoff succeeded on this slot

Data Source

DO-EMS

Source Field

numDormantHandoffSuccessesPriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDormantHandoffSuccessesSlot

Number of times an A13 dormant handoff succeeded on this slot

Data Source

DO-EMS

Source Field

numDormantHandoffSuccessesSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumDormantSessionsSlot

Total number of successfully established Sessions which are dormant

Data Source

DO-EMS

Source Field

NumDormantSessionsSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDOSMsgsTransmittedOnA10Slot

Number of DoS messages received from the AT on this RNSM, and transmitted over the A10 to the PDSN.

Data Source

DO-EMS

Source Field

numDOSMsgsTransmittedOnA10Slot

Source Section

DoSPerSlot (RncIS856PerfVer2MIB)

NumDrcSwitchesFailedFtcDesiredSlot

DRC switches among soft handoff legs that failed because a FTC Desired indication was not received in time

Data Source

DO-EMS

Source Field

NumDrcSwitchesFailedFtcDesiredSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDSCSwitchesFailedFtcDesiredSlot

The number of DSC switches among soft handoff legs that failed because a DSCSwitched indication was not received in time. This OM is pegged only when DSC switching is used.

Data Source

DO-EMS

Source Field

numDSCSwitchesFailedFtcDesiredSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDSCSwitchesSuccessSlot

The total number of successful forward link DSC switches on this RNC.

Data Source

DO-EMS

Source Field

numDSCSwitchesSuccessSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numDscSwitchingMulticastOccurredSlot

When an AT's serving DOM has a DSC erasure, it sends a DSC erasure indication to its controlling RNC.

Data Source

DO-EMS

Source Field

numDscSwitchingMulticastOccurredSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numFailedRncInitiatedPagesSlot

RNC initiated connection setups that failed

Data Source

DO-EMS

Source Field

numFailedRncInitiatedPagesSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumFastConnectsAttemptedSlot

DO-RNC Initiated Pages that resulted in a Fast Connect attempt

Data Source

DO-EMS

Source Field

NumFastConnectsAttemptedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numFirstD2APktsAccepted

The number of First D2A packets that are successfully queued and are eligible for a page request.

Data Source

DO-EMS

Source Field

numFirstD2APktsAccepted

Source Section

RNCPageOvldCtrl (PagingOcMIB)

numFirstD2APktsDropped

Number of first-time D-to-A packets dropped due to either per-AT or global limit.

Data Source

DO-EMS

Source Field

numFirstD2APktsDropped

Source Section

RNCPageOvldCtrl (PagingOcMIB)

numFirstPageAbandonedSlot

This OM will be pegged in error cases when CSM decides that waiting for a response for the first Page Message is no longer necessary (for example, SSM may indicate to CSM that the Session instance needs to be destroyed).

Data Source

DO-EMS

Source Field

numFirstPageAbandonedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numFirstPageResponseRxSlot

This OM will peg when an Access Network (AN) initiated Connect Request is received in a paging cycle, in response to the first Page message that was sent from the Access Network.

Data Source

DO-EMS

Source Field

numFirstPageResponseRxSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numFirstPageTimeoutSlot

This OM will be pegged when Connection State Machine (CSM) sends the first Page Message to the AT and does not receive any response before the first Page Message times out.

Data Source

DO-EMS

Source Field

numFirstPageTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numFixedModeEnableMsgsFromAtSlot

Fixed Mode Enable messages from AT's to the RNC

Data Source

DO-EMS

Source Field

numFixedModeEnableMsgsFromAtSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numFwdReservationOffMessagesSentPerSlot_EMFPA

The number of times the RNSM sent a FwdReservationOff message to the AT using EMFPA to deactivate a forward reservation.

Data Source

DO-EMS

Source Field

numFwdReservationOffMessagesSentPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numFwdReservationOffMessagesSentPerSlot_MFPA

The number of times the RNSM sent a FwdReservationOff message to the AT using MFPA to deactivate a forward reservation.

Data Source

DO-EMS

Source Field

numFwdReservationOffMessagesSentPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numFwdReservationOnMessagesSentPerSlot_EMFPA

The number of times the RNSM sent a FwdReservationOn message to the AT using EMFPA to activate a forward reservation.

Data Source

DO-EMS

Source Field

numFwdReservationOnMessagesSentPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numFwdReservationOnMessagesSentPerSlot_MFPA

The number of times the RNSM sent a FwdReservationOn message to the AT using MFPA to activate a forward reservation.

Data Source

DO-EMS

Source Field

numFwdReservationOnMessagesSentPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numGAUPReTxAttributeUpdateRequestSlot

Number of retransmitted GAUP AttributeUpdateRequest messages sent by the RNSM. This OM is incremented by the number of retransmitted messages.

Data Source

DO-EMS

Source Field

numGAUPReTxAttributeUpdateRequestSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numGAUPRxAttributeUpdateAcceptSlot

Number of the GAUP AttributeUpdateAccept messages received by the RNSM. This OM will NOT be incremented when a duplicated message is received.

Data Source

DO-EMS

Source Field

numGAUPRxAttributeUpdateAcceptSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numGAUPRxAttributeUpdateAcceptTimeoutSlot

Number of times that the RNSM fails to receive a GAUP AttributeUpdateAccept message after sending a GAUP AttributeUpdateRequest message to AT.

Data Source

DO-EMS

Source Field

numGAUPRxAttributeUpdateAcceptTimeoutSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numGAUPRxAttributeUpdateRequestSlot

Number of the GAUP AttributeUpdateRequest messages received by the RNSM. This OM will NOT be incremented when a duplicated message is received.

Data Source

DO-EMS

Source Field

numGAUPRxAttributeUpdateRequestSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numGAUPTxAttributeUpdateAcceptSlot

Number of the GAUP AttributeUpdateAccept messages sent by the RNSM in response to the GAUP AttributeUpdateRequest message from the AT.

Data Source

DO-EMS

Source Field

numGAUPTxAttributeUpdateAcceptSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numGAUPTxAttributeUpdateRejectSlot

Number of the GAUP AttributeUpdateReject messages sent by the RNSM in response to the GAUP AttributeUpdateRequest message from the AT.

Data Source

DO-EMS

Source Field

numGAUPTxAttributeUpdateRejectSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numGAUPTxAttributeUpdateRequestSlot

Number of initial GAUP AttributeUpdateRequest messages sent by the RNSM. This OM does not peg the retransmitted AttributeUpdateRequest messages.

Data Source

DO-EMS

Source Field

numGAUPTxAttributeUpdateRequestSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numInvalidSessionsTerminatedRncPerfSlot

Pegged when an existing session with an invalid IMSI is closed for any reason.

Data Source

DO-EMS

Source Field

numInvalidSessionsTerminatedRncPerfSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numLatePageResponseSlot

This OM will be pegged when CSM receives a Connect Request from the AT that has the AN-initiated code point in it.

Data Source

DO-EMS

Source Field

numLatePageResponseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numLocationNotificationMsgsFromAtSlot

Location Notification messages from AT's the RNC

Data Source

DO-EMS

Source Field

numLocationNotificationMsgsFromAtSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numLocationRequestMsgsToAtSlot

Location Request messages sent to the AT's by the RNC

Data Source

DO-EMS

Source Field

numLocationRequestMsgsToAtSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numMobilityTriggeredA10InterPcfHOREgSlot

This OM is a counter for the total number of A10 re-registrations that are initiated on the DO-RNC / RNSM, when an Unsolicited Location Notification (ULN) message with PANID ? CANID is received from the AT when it already has an open A10-Connection with t

Data Source

DO-EMS

Source Field

numMobilityTriggeredA10InterPcfHOREgSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numMobilityTriggeredA10PANID0ReRegSlot

This OM is a counter for the total number of A10 re-registrations that are initiated on the DO-RNC / RNSM, when an Unsolicited Location Notification (ULN) message with PANID=0 is received from the AT when it already has an open A10-Connection with the PDS

Data Source

DO-EMS

Source Field

numMobilityTriggeredA10PANID0ReRegSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numPageAbandonedSlot

This OM will be pegged in error cases when CSM decides that waiting for a response to the Page Message is no longer necessary (for example, SSM may indicate to CSM that the Session instance needs to be destroyed).

Data Source

DO-EMS

Source Field

numPageAbandonedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumPageMessagesToAtSlot

Page Message was actually sent to the Access Terminal to facilitate the setup of a connection

Data Source

DO-EMS

Source Field

NumPageMessagesToAtSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numPageNoPrimarySectorSlot

Number of times when it was determined during a Distance Based Paging attempt that there is no primary-homed sector in the RouteUpdate message and therefore, no preferred sector can be identified.

Data Source

DO-EMS

Source Field

numPageNoPrimarySectorSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numPageReqGeneratedByFP

The number of page request generated by the FP.

Data Source

DO-EMS

Source Field

numPageReqGeneratedByFP

Source Section

RNCPageOvldCtrl (PagingOcmIB)

numPageReqsWhileOpenSlot

The number of times an application requested a connection to an Access Terminal while an active connection to that Access Terminal is already present.

Data Source

DO-EMS

Source Field

numPageReqsWhileOpenSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numPageReqsWhileSettingUpSlot

An application requested a connection to an AT while a connection setup to that AT was in progress

Data Source

DO-EMS

Source Field

numPageReqsWhileSettingUpSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numPageReqsWhileTearingDownSlot

An application requested a connection to an AT while an active connection to that AT was being torn down

Data Source

DO-EMS

Source Field

numPageReqsWhileTearingDownSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numPageResponseRxSlot

This OM will be pegged when CSM sends a Page Message to the AT and receives a Connect Request from the AT that has the AN-initiated code point in it ? this message should be received before the paging cycle terminates.

Data Source

DO-EMS

Source Field

numPageResponseRxSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numPagesSucceededSlot

An application requested a connection to an Access Terminal while a connection setup to that Access Terminal was in progress

Data Source

DO-EMS

Source Field

numPagesSucceededSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numPageTimeoutSlot

This OM will be pegged when CSM sends a Page Message to the AT and does not receive any response during a Paging Cycle. This paging cycle includes all the page attempts as configured in the AN.

Data Source

DO-EMS

Source Field

numPageTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numPersonalityReSyncsNeededPostPersonalitySwitchSlot

Number of times Access Network's active personality is synced up with what the AT considers as it's active personality.

Data Source

DO-EMS

Source Field

numPersonalityReSyncsNeededPostPersonalitySwitchSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numPersonalitySwitchAttemptsATInitiatedSlot

Number of times that the AT initiates a Personality Switch.

Data Source

DO-EMS

Source Field

numPersonalitySwitchAttemptsATInitiatedSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numPersonalitySwitchAttemptsCSMInitiatedSlot

Number of times that the AN initiates a Personality Switch. The AN immediately switches the personality on AN side even when it does not get the confirmation from the AT.

Data Source

DO-EMS

Source Field

numPersonalitySwitchAttemptsCSMInitiatedSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numPersonalitySwitchFailuresCSMInitiatedSlot

Number of times that the AN initiated Personality Switch is unsuccessful.

Data Source

DO-EMS

Source Field

numPersonalitySwitchFailuresCSMInitiatedSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numPersonalitySwitchSuccessesCSMInitiatedSlot

Number of times that the AN initiated Personality Switch is successful.

Data Source

DO-EMS

Source Field

numPersonalitySwitchSuccessesCSMInitiatedSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numQosInitiatedSessionClosePerSlot

Number of Qos Control initiated session closes per RNSM.

Data Source

DO-EMS

Source Field

numQosInitiatedSessionClosePerSlot

Source Section

QoSCommonPerfBySlot (RncQoSPerfMIB)

numQosReleaseRequestsReceivedPerSlot_EMFPA

Number of QoS release requests from the AT using EMFPA received by the RNSM.

Data Source

DO-EMS

Source Field

numQosReleaseRequestsReceivedPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQosReleaseRequestsReceivedPerSlot_MFPA

Number of QoS release requests from the AT using MFPA received by the RNSM.

Data Source

DO-EMS

Source Field

numQosReleaseRequestsReceivedPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQosResObjUsedSlot

Instantaneous number of QoS Reservations in use on the RNSM.

Data Source

DO-EMS

Source Field

numQosResObjUsedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numQosSetupRejNoObjPerSlot

Number of QoS reservation setup requests received from the AT that the RNSM rejected because the RNSM fails to allocate memory objects to represent the requested QoS reservation(s) due to the lack of memory pool resources.

Data Source

DO-EMS

Source Field

numQosSetupRejNoObjPerSlot

Source Section

QoSCommonPerfBySlot (RncQoSPerfMIB)

numQosSetupRequestsAcceptedPerSlot_EMFPA

Number of QoS setup requests received from the AT using EMFPA that the RNSM accepted.

Data Source

DO-EMS

Source Field

numQosSetupRequestsAcceptedPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQosSetupRequestsAcceptedPerSlot_MFPA

Number of QoS setup requests received from the AT using MFPA that the RNSM accepted.

Data Source

DO-EMS

Source Field

numQosSetupRequestsAcceptedPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQosSetupRequestsReceivedPerSlot_EMFPA

Number of QoS setup requests from the AT using EMFPA received by the RNSM.

Data Source

DO-EMS

Source Field

numQosSetupRequestsReceivedPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQosSetupRequestsReceivedPerSlot_MFPA

Number of QoS setup requests from the AT using MFPA received by the RNSM.

Data Source

DO-EMS

Source Field

numQosSetupRequestsReceivedPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQosSetupRequestsRejectedPerSlot_EMFPA

Number of QoS setup requests received from the AT using EMFPA that the RNSM rejected.

Data Source

DO-EMS

Source Field

numQosSetupRequestsRejectedPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQosSetupRequestsRejectedPerSlot_MFPA

Number of QoS setup requests received from the AT using MFPA that the RNSM rejected.

Data Source

DO-EMS

Source Field

numQosSetupRequestsRejectedPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQosSetupRequestsRejectedReservationLimitPerSlot_EMFPA

Number of QoS setup requests received from the AT using EMFPA that the RNSM rejected because the per AT limit on the maximum number of Reservations supported was reached.

Data Source

DO-EMS

Source Field

numQoSSetupRequestsRejectedReservationLimitPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQoSSetupRequestsRejectedReservationLimitPerSlot_MFPA

Number of QoS setup requests received from the AT using MFPA that the RNSM rejected because the per AT limit on the maximum number of Reservations supported was reached.

Data Source

DO-EMS

Source Field

numQoSSetupRequestsRejectedReservationLimitPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numQoSSubscriberProfileUpdatesRcvdPerSlot

Number of subscriber profile updates received by the RNSM.

Data Source

DO-EMS

Source Field

numQoSSubscriberProfileUpdatesRcvdPerSlot

Source Section

QoSCommonPerfBySlot (RncQoSPerfMIB)

numReservationActivationWithConnectionOpenPerSlot_EMFPA

The number of times the RNSM activated a EMFPA Reservation upon opening of air link connection because the ReservationKKIdleState attribute was so configured.

Data Source

DO-EMS

Source Field

numReservationActivationWithConnectionOpenPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numReservationActivationWithConnectionOpenPerSlot_MFPA

The number of times the RNSM activated a MFPA Reservation upon opening of air link connection because the ReservationKKIdleState attribute was so configured.

Data Source

DO-EMS

Source Field

numReservationActivationWithConnectionOpenPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numReservationAuthorizedQosWasNullPerSlot_EMFPA

Number of times the authorized QoS for a EMFPA Reservation was NULL.

Data Source

DO-EMS

Source Field

numReservationAuthorizedQosWasNullPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numReservationAuthorizedQosWasNullPerSlot_MFPA

Number of times the authorized QoS for a MFPA Reservation was NULL.

Data Source

DO-EMS

Source Field

numReservationAuthorizedQosWasNullPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numReservationDeactivationWithConnectionClosePerSlot_EMFPA

The number of times the RNSM deactivated a EMFPA Reservation upon closing of air link connection because the ReservationKKIdleState attribute was so configured.

Data Source

DO-EMS

Source Field

numReservationDeactivationWithConnectionClosePerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numReservationDeactivationWithConnectionClosePerSlot_MFPA

The number of times the RNSM deactivated a MFPA Reservation upon closing of air link connection because the ReservationKKIdleState attribute was so configured.

Data Source

DO-EMS

Source Field

numReservationDeactivationWithConnectionClosePerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numReservationOffRequestsAcceptedPerSlot_EMFPA

Number of ReservationOffRequest messages received from the AT using EMFPA that the RNSM accepted.

Data Source

DO-EMS

Source Field

numReservationOffRequestsAcceptedPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numReservationOffRequestsAcceptedPerSlot_MFPA

Number of ReservationOffRequest messages received from the AT using MFPA that the RNSM accepted.

Data Source

DO-EMS

Source Field

numReservationOffRequestsAcceptedPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numReservationOffRequestsReceivedPerSlot_EMFPA

Number of ReservationOffRequest messages from the AT using EMFPA received by the RNSM.

Data Source

DO-EMS

Source Field

numReservationOffRequestsReceivedPerSlot where rncSlotPacketApplication=2

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

QoSPerfBySlot (RncQoSPerfMIB)

numRevReservationOnMessagesSentPerSlot_MFPA

The number of times the RNSM sent a RevReservationOn message to the AT using MFPA to activate a reverse Reservation.

Data Source

DO-EMS

Source Field

numRevReservationOnMessagesSentPerSlot where rncSlotPacketApplication=1

Source Section

QoSPerfBySlot (RncQoSPerfMIB)

numRlpNakdOctetsNotRcvdSlot

Number of RLP octets Nakd not received.

Data Source

DO-EMS

Source Field

numRlpNakdOctetsNotRcvdSlot

Source Section

RNCBytePacketCountBySlot (RncIS856PerfMIB)

numRlpOctetsNakdSlot

Number of RLP octets whose retransmission is requested from the AT.

Data Source

DO-EMS

Source Field

numRlpOctetsNakdSlot

Source Section

RNCBytePacketCountBySlot (RncIS856PerfMIB)

numRncInitiatedPagesSlot

The total number of pages succeeded on this slot

Data Source

DO-EMS

Source Field

numRncInitiatedPagesSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numRnHomedCurSlot

Number of RNs presently homed on this slot

Data Source

DO-EMS

Source Field

numRnHomedCurSlot

Source Section

AirlinkResourceAllocationPerfBySlot (RncResourceControlMIB)

numRxATInitiateDuringFirstPageSlot

This OM will be pegged when CSM sends the first Page Message to the AT and receives a Connect Request from the AT that has the AT-initiated code point in it and this connect request is received before the first Page Message times out.

Data Source

DO-EMS

Source Field

numRxATInitiateDuringFirstPageSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numRxATInitiateDuringPageSlot

This OM will be pegged when CSM sends a Page Message to the AT and receives a Connect Request from the AT that has the AT-initiated code point in it - this message should be received before a Paging Cycle is terminated.

Data Source

DO-EMS

Source Field

numRxATInitiateDuringPageSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numRxATInitiateDuringSecondPageSlot

This OM will be pegged when CSM sends the second Page Message to the AT and receives a Connect Request from the AT that has the AT-initiated code point in it and this connect request is received before the second Page Message times out.

Data Source

DO-EMS

Source Field

numRxATInitiateDuringSecondPageSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numRxATInitiateDuringThirdPageSlot

This OM will be pegged when CSM sends the third Page Message to the AT and receives a Connect Request from the AT that has the AT-initiated code point in it and this Connect Request is received before the third Page Message times out.

Data Source

DO-EMS

Source Field

numRxATInitiateDuringThirdPageSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSecondPageAbandonedSlot

This OM will be pegged in error cases when CSM decides that waiting for a response for the second Page Message is no longer necessary (for example, SSM may indicate to CSM that the Session instance needs to be destroyed).

Data Source

DO-EMS

Source Field

numSecondPageAbandonedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSecondPageResponseRxSlot

This OM will peg when an AN initiated Connect Request is received in a paging cycle, in response to the second Page message (or in other words the first page message retry) that was sent from the AN.

Data Source

DO-EMS

Source Field

numSecondPageResponseRxSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSecondPageTimeoutSlot

This OM will be pegged when CSM sends the second Page Message to the AT and does not receive any response before the second Page Message times out.

Data Source

DO-EMS

Source Field

numSecondPageTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSecondPageTxSlot

This OM will peg when a second Page is attempted in a Paging Cycle.

Data Source

DO-EMS

Source Field

numSecondPageTxSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessCfgAttemptsTotalSlot

Number of session configuration attempts on the RNSM. It counts both the initial session configurations and reconfigurations.

Data Source

DO-EMS

Source Field

numSessCfgAttemptsTotalSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessCfgFailedAbnormalConnectionCloseSlot

To keep track of an event on a slot basis where the connection in use for session configuration negotiation between the AT and AN is abnormally closed.

Data Source

DO-EMS

Source Field

numSessCfgFailedAbnormalConnectionCloseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessCfgFailedConfigCompleteTimeoutSlot

To keep track of an event on a slot basis where the RNC has not received a configuration complete message from the AT within the mandated time interval.

Data Source

DO-EMS

Source Field

numSessCfgFailedConfigCompleteTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessCfgFailedIndividualProtocolConfigurationSlot

To keep track of an event on a slot basis where protocol negotiation between the AT and AN fails for a specific protocol.

Data Source

DO-EMS

Source Field

numSessCfgFailedIndividualProtocolConfigurationSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessCfgFailedTransmitConfigCompleteTimeoutSlot

To keep track of an event on a slot basis where RNC has not transmitted a configuration complete message to the AT within the mandated time interval.

Data Source

DO-EMS

Source Field

numSessCfgFailedTransmitConfigCompleteTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessCfgFailuresTotalSlot

Number of session configuration failures on the RNSM. It counts both the initial session configuration failures and reconfiguration failures.

Data Source

DO-EMS

Source Field

numSessCfgFailuresTotalSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessCfgPostA13ReconfNeededTotalSlot

This OM is a counter for the total number of times the Session Configuration State Machine performs a re-negotiation of the protocols associated with an A13-Dormant handoff retrieved session.

Data Source

DO-EMS

Source Field

numSessCfgPostA13ReconfNeededTotalSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessCfgSuccessesTotalSlot

Number of session configuration successes on the RNSM. It counts both the initial session configuration successes and reconfiguration successes.

Data Source

DO-EMS

Source Field

numSessCfgSuccessesTotalSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessInitCfgFailAbnormalConnCloseSlot

Number of initial session configuration failures on the RNSM because of receiving an abnormal connection close while the RNSM is in the middle of session configuration.

Data Source

DO-EMS

Source Field

numSessInitCfgFailAbnormalConnCloseSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessInitCfgFailCfgCompleteTOANInitPhaseSlot

Number of initial session configuration failures on the RNSM when the Session Configuration Protocol on the RNSM fails to send a ConfigurationComplete message to the AT within the Tx Configuration Complete timeout during the AN initiated session configuration phase.

Data Source

DO-EMS

Source Field

numSessInitCfgFailCfgCompleteTOANInitPhaseSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessInitCfgFailCfgCompleteTOATInitPhaseSlot

Number of initial session configuration failures on the RNSM when the Session Configuration Protocol on the RNSM fails to receive a ConfigurationComplete message from the AT within the Rx Configuration Complete timeout during the AT initiated session configuration phase.

Data Source

DO-EMS

Source Field

numSessInitCfgFailCfgCompleteTOATInitPhaseSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessInitCfgFailInternalErrorSlot

Number of initial session configuration failures on the RNSM when the Session Configuration Protocol abnormally stopped because of other component problems.

Data Source

DO-EMS

Source Field

numSessInitCfgFailInternalErrorSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessInitCfgFailProtocolConfigErrorSlot

Number of initial session configuration failures on the RNSM due to a failure in negotiation between the AT and the AN for an individual protocol.

Data Source

DO-EMS

Source Field

numSessInitCfgFailProtocolConfigErrorSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessInitialCfgAttemptsTotalSlot

Number of initial session configuration attempts on the RNSM. Note: Initial session configuration is the session configuration performed for the first time on a given session.

Data Source

DO-EMS

Source Field

numSessInitialCfgAttemptsTotalSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessInitialCfgFailuresTotalSlot

Number of initial session configuration failures on the RNSM.

Data Source

DO-EMS

Source Field

numSessInitialCfgFailuresTotalSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessInitialCfgSuccessesTotalSlot

Number of initial session configuration successes on the RNSM.

Data Source

DO-EMS

Source Field

numSessInitialCfgSuccessesTotalSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessionInstancesCreatedSlot

This OM is a counter for the total number of session instances that are created on the DO-RNC / RNSM when a signaling message is received with any unknown ATI (i.e. RATI, unknown local UATI, or UATI).

Data Source

DO-EMS

Source Field

numSessionInstancesCreatedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionInstancesCreatedWithUnknownLocalUATISlot

This OM is a counter for the total number of session instances that are created on the DO-RNC / RNSM, when an access channel message is received with an unknown local UATI.

Data Source

DO-EMS

Source Field

numSessionInstancesCreatedWithUnknownLocalUATISlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionsAwaitingCloseFromAtSlot

Session instances which are awaiting a 'Close' message from the AT

Data Source

DO-EMS

Source Field

numSessionsAwaitingCloseFromAtSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionSetupAttemptsSlot

Total number of Session setup attempts

Data Source

DO-EMS

Source Field

NumSessionsSetupAttemptsSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionSetupsBlockedToNoRncResourceSlot

Total number of Session Setups blocked because of No DO-RNC Resource

Data Source

DO-EMS

Source Field

NumSessionSetupsBlockedToNoRncResourceSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionSetupsFailedToATInitiatedSessionCloseSlot

This OM is a counter for the total number of regular session-setups that are aborted on a DO-RNC / RNSM, when a standardized SessionClose message is received from the AT past the UATI Assignment stage of the 1xEV-DO session setup process.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToATInitiatedSessionCloseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionSetupsFailedToInvldHwldTypeSlot

This OM is a counter for all the total number of regular session setup attempts that are aborted when an invalid Hardware ID ?type? is received from the AT (in response to a HardwareID Request).

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToInvldHwIdTypeSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionSetupsFailedToInvldHwIdValueSlot

This OM is a counter for the total number of regular session setup attempts that are aborted when the DO-RNC receives an invalid HardwareID ?value? from the AT (in response to a HardwareID Request).

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToInvldHwIdValueSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionSetupsFailedToInvldUATICmpltSeqNumSlot

This OM is a counter for the total number of regular session setup attempts that are aborted when the DO-RNC / RNSM fails to receive a ?valid? UATIComplete message from the AT (in response to a UATIAssignment message).

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToInvldUATICmpltSeqNumSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionSetupsFailedToOtherCausesSlot

Total number of Session Setups failed due to other causes

Data Source

DO-EMS

Source Field

NumSessionSetupsFailedToOtherCausesSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionSetupsFailedToRNCInitiatedSessionCloseSlot

This OM is a counter for the total number of regular session-setups that are aborted on the DO-RNC / RNSM, when a (local) user-initiated request to close a session is received on that DO-RNC.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToRNCInitiatedSessionCloseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionSetupsFailedToSessionConfigSlot

Total number of Session Setups failed due to the Session Configuration failure

Data Source

DO-EMS

Source Field

NumSessionSetupsFailedToSessionConfigSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionSetupsFailedToSessionInfoConfirmSlot

This OM is a counter for the total number of regular session setup attempts that are aborted on the DO-RNC / RNSM, when an A13-Confirmation message is received on the source RNC after the associated session instance is successfully transferred to the targ

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToSessionInfoConfirmSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionSetupsFailedToTermAuthSlot

Total number of Session Setups failed due to Terminal Authentication failure

Data Source

DO-EMS

Source Field

NumSessionSetupsFailedToTermAuthSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionSetupsFailedToUATICmplTimeoutSlot

This OM is a counter for the total number of regular session setup attempts that are aborted when the DO-RNC / RNSM fails to receive a UATIComplete message from the AT (in response to a UATIAssignment message).

Data Source

DO-EMS

Source Field

numSessionSetupsFailedToUATICmplTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionSetupSuccessfulSlot

Total number of Session setups that were successful

Data Source

DO-EMS

Source Field

NumSessionSetupSuccessfulSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionsTerminatedToAtCloseSlot

Total number of successfully established Sessions terminated due to the AT sending a 'Session Close'.

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToAtCloseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionsTerminatedToAtIdRspTimeoutSlot

Total number of sessions terminated due to AT Id Response Timeout

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToAtIdRspTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionsTerminatedToHwldRspFailureSlot

Total number of sessions terminated due to Hardware Id Response Failure

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToHwIdRspFailureSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionsTerminatedToInstantCloseSlot

Total number of sessions terminated due to instant close

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToInstantCloseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionsTerminatedToKeepAliveTimeoutSlot

Total number of successfully established Sessions due to Keep Alive Timeouts

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToKeepAliveTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionsTerminatedToLocalCloseSlot

Successfully established sessions terminated due to the session being closed locally

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToLocalCloseSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionsTerminatedToReceivingUatiReqSlot

Successfully established Sessions terminated due to a UATI Request from the AT when the Session is already established for that AT

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToReceivingUatiReqSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionsTerminatedToSessionConfigFailureSlot

Successfully established sessions terminated due to the Session Configuration failure

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToSessionConfigFailureSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionsTerminatedToSessionInfoConfirmSlot

This OM is a counter for the total number of regular session setup attempts that are aborted on the DO-RNC / RNSM, when an A13-Confirmation message is received on the source RNC after the associated session instance is successfully transferred to the target RNC.

Data Source

DO-EMS

Source Field

numSessionsTerminatedToSessionInfoConfirmSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionsTerminatedToTermAuthSlot

The number of sessions closed due to TA failure on the RNSM.

Data Source

DO-EMS

Source Field

numSessionsTerminatedToTermAuthSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

NumSessionsTerminatedToUnknownLocalUatiSlot

Total number of sessions terminated by the DO RNC due to unknown UATI

Data Source

DO-EMS

Source Field

NumSessionsTerminatedToUnknownLocalUatiSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionTermDueToTaReauthIMSIDifferentSlot

Number of sessions closed on the RNSM because the AN-AAA server returns an IMSI that is different from the existing IMSI on the RNC during TA re-auth.

Data Source

DO-EMS

Source Field

numSessionTermDueToTaReauthIMSIDifferentSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionTermDueToTaReauthNoTaStreamSlot

Number of sessions closed on the RNSM because no TA stream is allocated for session.

Data Source

DO-EMS

Source Field

numSessionTermDueToTaReauthNoTaStreamSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessionTermDueToTaReauthRejectSlot

Number of sessions closed on the RNSM because an A12 Access- Reject message is received from the AN-AAA server during TA re-auth.

Data Source

DO-EMS

Source Field

numSessionTermDueToTaReauthRejectSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSessReCfgAttemptsTotalSlot

Number of session reconfiguration attempts on the RNSM.

Data Source

DO-EMS

Source Field

numSessReCfgAttemptsTotalSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessReCfgFailAbnormalConnCloseSlot

Number of session reconfiguration failures on the RNSM because of receiving an abnormal connection close while the RNSM is in the middle of session configuration.

Data Source

DO-EMS

Source Field

numSessReCfgFailAbnormalConnCloseSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessReCfgFailCfgCompleteTOANInitPhaseSlot

Number of session reconfiguration failures on the RNSM when the Session Configuration Protocol on the RNSM fails to send a ConfigurationComplete message to the AT within the Tx Configuration Complete timeout during the AN initiated session configuration phase.

Data Source

DO-EMS

Source Field

numSessReCfgFailCfgCompleteTOANInitPhaseSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessReCfgFailCfgCompleteTOATInitPhaseSlot

Number of session reconfiguration failures on the RNSM when the Session Configuration Protocol on the RNSM fails to receive a ConfigurationComplete message from the AT within the Rx Configuration Complete timeout during the AT initiated session configuration phase.

Data Source

DO-EMS

Source Field

numSessReCfgFailCfgCompleteTOATInitPhaseSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessReCfgFailInternalErrorSlot

Number of session reconfiguration failures on the RNSM when the Session Configuration Protocol abnormally stopped because of other component problems.

Data Source

DO-EMS

Source Field

numSessReCfgFailInternalErrorSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessReCfgFailProtocolConfigErrorSlot

Number of session reconfiguration failures on the RNSM due to a failure in negotiation between the AT and the AN for an individual protocol.

Data Source

DO-EMS

Source Field

numSessReCfgFailProtocolConfigErrorSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessReCfgFailuresATInitSlot

Session reconfiguration failures where the reconfiguration was initiated by the AT.

Data Source

DO-EMS

Source Field

numSessReCfgFailuresATInitSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessReCfgFailuresPostRegA13CfgMismatchSlot

This OM will be pegged whenever the AN initiates a session reconfiguration on a session transferred from a source RNC and there is mismatch in the transferred session's configuration and the target RNC's operator preferred configuration and the AN is unsuccessful in the reconfiguration of the session.

Data Source

DO-EMS

Source Field

numSessReCfgFailuresPostRegA13CfgMismatchSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessReCfgFailuresPostRegA13IntfVerMismatchSlot

This OM will be pegged whenever the AN initiates a session reconfiguration on a session transferred from a source RNC and A13 module specifically requests for session reconfiguration because there was an interface version mismatch between the source and the target RNC and the AN is unsuccessful in the reconfiguration of the session.

Data Source

DO-EMS

Source Field

numSessReCfgFailuresPostRegA13IntfVerMismatchSlot

Source Section

RNCPerSessionConfig (RncIS856PerfVer2MIB)

numSessReCfgFailuresTotalSlot

Number of session reconfiguration failures on the RNSM.

Data Source

DO-EMS

Source Field

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numSToCCrossoversSlot_Rev0

The number of connections that were opened before the demarcation point but were closed normally or abnormally after the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

numSToCCrossoversSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

numSToCCrossoversSlot_RevA

The number of connections that were opened before the demarcation point but were closed normally or abnormally after the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

numSToCCrossoversSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

numSubD2APktsAccepted

The number of subsequent D2A packets that are successfully queued.

Data Source

DO-EMS

Source Field

numSubD2APktsAccepted

Source Section

RNCPageOvldCtrl (PagingOcMIB)

numSubD2APktsDropped

The number of subsequent D2A packets dropped at the FP due to D2A packet queue limit being exceeded.

Data Source

DO-EMS

Source Field

numSubD2APktsDropped

Source Section

RNCPageOvldCtrl (PagingOcMIB)

numThirdPageAbandonedSlot

This OM will be pegged in error cases when CSM decides that waiting for a response for the third Page Message is no longer necessary (for example, SSM may indicate to CSM that the Session instance needs to be destroyed).

Data Source

DO-EMS

Source Field

numThirdPageAbandonedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numThirdPageResponseRxSlot

This OM will peg when an AN initiated Connect Request is received in a paging cycle, in response to the third Page message (or in other words the second page retry) that was sent from the AN.

Data Source

DO-EMS

Source Field

numThirdPageResponseRxSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numThirdPageTimeoutSlot

This OM will be pegged when CSM sends third Page Message to the AT and does not receive any response before the third Page Message times out.

Data Source

DO-EMS

Source Field

numThirdPageTimeoutSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numThirdPageTxSlot

This OM will peg when a third Page is attempted in a Paging Cycle.

Data Source

DO-EMS

Source Field

numThirdPageTxSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numTotalDormantHandoffFailurePriorSessionSlot

Total number of times a prior session A13 dormant handoff on this slot failed

Data Source

DO-EMS

Source Field

numTotalDormantHandoffFailurePriorSessionSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

numTotalDormantHandoffFailureSlot

Source Section

RNCOvldCtrl (OvldCtrlMIB)

overloadConnectionDimDenied

Number of times a connection request is dropped due to the connection dimension being in overload state while the overall system is in a healthy state. During this time, the connection

dimension is throttled at the healthy limit i.e., any requests exceeding the healthy limit are discarded.

Data Source

DO-EMS

Source Field

overloadConnectionDimDenied

Source Section

RNCOvldCtrl (OvldCtrlMIB)

overloadConnectionDimHealthySeconds

The amount of time (in seconds) the connection dimension is in a healthy state.

Data Source

The number of open DO connections that are dropped (abnormally closed) before the demarcation point due to reasons other than RF related issues and soft handoff failures for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscDropsSlot_RevA

The number of open DO connections that are dropped (abnormally closed) before the demarcation point due to reasons other than RF related issues and soft handoff failures for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscDropsStateMismatchSlot_Rev0

Connections that were dropped before the demarcation point when the RNC finds a state mismatch between itself and the AT for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsStateMismatchSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscDropsStateMismatchSlot_RevA

Connections that were dropped before the demarcation point when the RNC finds a state mismatch between itself and the AT for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscDropsStateMismatchSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscFCAA10RelatedSlot_Rev0

Connection set-ups that failed before the demarcation point because either there was a failure in setting up the A10 connection or the RNC closed the open A10 connection for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCAA10RelatedSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscFCAA10RelatedSlot_RevA

Connection set-ups that failed before the demarcation point because either there was a failure in setting up the A10 connection or the RNC closed the open A10 connection for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCAA10RelatedSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscFCAFailuresSlot_Rev0

Number of times the connection set-up failed before the demarcation point due to reasons not explicitly called out in other FCA OMs for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCAFailuresSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscFCAFailuresSlot_RevA

Number of times the connection set-up failed before the demarcation point due to reasons not explicitly called out in other FCA OMs for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCAFailuresSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscFCASlot_Rev0

The number of DO Connection attempts that failed before the demarcation point due to reasons other than RF related or resource related issues for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCASlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscFCASlot_RevA

The number of DO Connection attempts that failed before the demarcation point due to reasons other than RF related or resource related issues for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCASlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscFCASWErrorSlot_Rev0

Number of times the connection set-up failed before the demarcation point due to software errors for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCASWErrorSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumMiscFCASWErrorSlot_RevA

Number of times the connection set-up failed before the demarcation point due to software errors for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumMiscFCASWErrorSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsA10SetupFailSlot_Rev0

Open connections that were closed before the demarcation point because there was failure in the A10 connection set-up for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsA10SetupFailSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsA10SetupFailSlot_RevA

Open connections that were closed before the demarcation point because there was failure in the A10 connection set-up for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsA10SetupFailSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsRNCEXternalSlot_Rev0

Open connections that were closed before the demarcation point because the existing A10 connection was closed due to PDSN going down or PDSN is not reachable or any other failure condition that is not because of the RNC for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsRNCEXternalSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsRNCEXternalSlot_RevA

Open connections that were closed before the demarcation point because the existing A10 connection was closed due to PDSN going down or PDSN is not reachable or any other failure condition that is not because of the RNC for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsRNCEXternalSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsRNCInternalSlot_Rev0

Open connections that were closed before the demarcation point because an internal error caused an existing A10 connection to be closed which results in a closure of a DO Connection Connection close that occur due to A10 failure during PDSN-re-registration should also peg this OM for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsRNCInternalSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsRNCInternalSlot_RevA

Open connections that were closed before the demarcation point because an internal error caused an existing A10 connection to be closed which results in a closure of a DO Connection Connection close that occur due to A10 failure during PDSN-re-registration should also peg this OM for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsRNCInternalSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsSlot_Rev0

Connections that were closed before the demarcation point because the RNC closed the open A10 connection for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNetworkErrorDropsSlot_RevA

Connections that were closed before the demarcation point because the RNC closed the open A10 connection for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumNetworkErrorDropsSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNormalConnectionClosesSlot_Rev0

The number of connections that were closed normally before the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumNormalConnectionClosesSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumNormalConnectionClosesSlot_RevA

The number of connections that were closed normally before the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumNormalConnectionClosesSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumOutgoingPersonalityChangeTriggersSlot_Rev0

Number of times a trigger was generated, before the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumOutgoingPersonalityChangeTriggersSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumOutgoingPersonalityChangeTriggersSlot_RevA

Number of times a trigger was generated, before the demarcation point, to change the Rev-A capable AT from the source personality to the target personality during connection set-up for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumOutgoingPersonalityChangeTriggersSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumPageAbandonedSlot_Rev0

The number of times that AN has aborted/abandoned the Page operation on this RNSM before the demarcation point during any paging cycle for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumPageAbandonedSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumPageAbandonedSlot_RevA

The number of times that AN has aborted/abandoned the Page operation on this RNSM before the demarcation point during any paging cycle for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumPageAbandonedSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumPageRequestsSlot_Rev0

The number of page requests sent to the AT before the demarcation point. When the DO-Repag is enabled, only the first page request in a paging cycle will be pegged for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumPageRequestsSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumPageRequestsSlot_RevA

The number of page requests sent to the AT before the demarcation point. When the DO-Repag is enabled, only the first page request in a paging cycle will be pegged for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumPageRequestsSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumPageResponsesSlot_Rev0

The number of successful responses to page requests that were received from the AT before the demarcation point and before the page timer expired for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumPageResponsesSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumPageResponsesSlot_RevA

The number of successful responses to page requests that were received from the AT before the demarcation point and before the page timer expired for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumPageResponsesSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumPageTimeoutSlot_Rev0

The number of times paging cycles have expired before the demarcation point, waiting for a page response from the AT for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumPageTimeoutSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumPageTimeoutSlot_RevA

The number of times paging cycles have expired before the demarcation point, waiting for a page response from the AT for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumPageTimeoutSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCABlockedByRNCResourcesSlot_Rev0

Number of times that the RNC blocked the connection set-up before the demarcation point because the CPU utilization on the RNC exceeds to a certain value and overload conditions occurs for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCABlockedByRNCResourcesSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCABlockedByRNCResourcesSlot_RevA

Number of times that the RNC blocked the connection set-up before the demarcation point because the CPU utilization on the RNC exceeds to a certain value and overload conditions occurs for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCABlockedByRNCResourcesSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCABlockedByRNSlot_Rev0

Number of times the connection setup was blocked by the RNC before the demarcation point because at least one of the resource allocation requests sent to the RN(s) was denied for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumResourceRelatedFCABlockedByRNSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumResourceRelatedFCABlockedByRNSlot_RevA

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumSoftHandoffRelatedDropsSlot_RevA

The number of open DO connections that are dropped (abnormally closed) due to unsuccessful soft handoffs before the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumSoftHandoffRelatedDropsSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumTermAuthResourceRelatedFCASlot_Rev0

This OM counts the number of DO Connections setups blocked due to lack of the Terminal Authentication Resources for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumTermauthResourceRelatedFCASlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumTermauthResourceRelatedFCASlot_RevA

This OM counts the number of DO Connections setups blocked due to lack of the Terminal Authentication Resources for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumTermauthResourceRelatedFCASlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumThirdPageRequestsSlot_Rev0

The number of 3rd page requests sent to the AT in a paging cycle before the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumThirdPageRequestsSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumThirdPageRequestsSlot_RevA

The number of 3rd page requests sent to the AT in a paging cycle before the demarcation point for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumThirdPageRequestsSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumThirdPageResponsesSlot_Rev0

The number of page responses that were received before the demarcation point from the AT in a paging cycle, in response to the 3rd Page Message that was sent from the AN for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumThirdPageResponsesSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumThirdPageResponsesSlot_RevA

The number of page responses that were received before the demarcation point from the AT in a paging cycle, in response to the 3rd Page Message that was sent from the AN for Rev-A personality ATs.

Data Source

DO-EMS

Source Field

sNumThirdPageResponsesSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumTotalConnectionClosesSlot_Rev0

The total number of connections closed, normally or abnormally, before the demarcation point for Rev-0 personality ATs.

Data Source

DO-EMS

Source Field

sNumTotalConnectionClosesSlot where atDescriptor=1

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

sNumTotalConnectionClosesSlot_RevA

The total number of connections closed, normally or abnormally, before the demarcation point for Rev-A personality ATs.

sNumTotalConnectionClosesSlot where atDescriptor=2

Source Section

RNCPerfExtnBySlot (RncIS856PerfExtensionMIB)

termAuthAccessRejectsIgnoredSlot

When Ignore Access-Reject mode is enabled, if an Access-Reject is received from the AAA server, RNC assigns a invalid IMSI and sets up a session. In this case the above OM is pegged.

Data Source

DO-EMS

Source Field

termAuthAccessRejectsIgnoredSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termAuthChapTimeoutsSlot

Number of times a CHAP timeout occurred due to AT not responding to CHAP challenges on this RNSM.

Data Source

DO-EMS

Source Field

termAuthChapTimeoutsSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termAuthFailureSessionTaTimeoutSlot

Number of times the terminal authentication fails because the Session TA timer expires.

Data Source

DO-EMS

Source Field

termAuthFailureSessionTaTimeoutSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termAuthInvalidNaiFromAtSlot

Number of times the RNSM received an invalid or empty NAI Realm from the AT.

Data Source

DO-EMS

Source Field

termAuthInvalidNaiFromAtSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termAuthLcpConfigTimeoutsIgnoredSlot

When Enhanced TA - A12 Bypass feature is enabled, this OM pegs the page failures and unconfirmed LCP time-outs during terminal authentication.

Data Source

DO-EMS

Source Field

termAuthLcpConfigTimeoutsIgnoredSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termAuthLcpConfigTimeoutsSlot

Number of times an LCP timeout occurred due to AT not responding to LCP Config Requests on this RNSM.

Data Source

DO-EMS

Source Field

termAuthLcpConfigTimeoutsSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termAuthNaiFromAtMatchesA12BypassListSlot

Number of times the RNSM received an NAI Realm from the AT CHAP Response which matched an A12 bypass list entry.

Data Source

DO-EMS

Source Field

termAuthNaiFromAtMatchesA12BypassListSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termReauthAttemptsSlot

Number of TA re-auth attempts on the RNSM.

Data Source

DO-EMS

Source Field

termReauthAttemptsSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termReauthRejectSlot

Number of failed TA re-auth attempts on the RNSM due to the receipt of an A12 Access Reject from the AN-AAA.

Data Source

DO-EMS

Source Field

termReauthRejectSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termReauthSuccessSlot

Number of successful TA re-auth attempts on the RNSM.

Data Source

DO-EMS

Source Field

termReauthSuccessSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

termReauthUnresolvedSlot

Number of unresolved TA re-auth attempts on the RNSM.

termReauthUnresolvedSlot

Source Section

TermAuthPerfBySlot (RncTermAuthMIB)

TotalA10ClosedByPdsnSlot

Number of A10 connections on this slot closed by the PDSN

Data Source

DO-EMS

Source Field

TotalA10ClosedByPdsnSlot

Source Section

A10ByteCountAndStatsBySlot (RncPcfPerformanceMIB)

TotalA10ClosedByRncSlot

Number of A10 connections on this slot closed by the RNC

Data Source

DO-EMS

Source Field

TotalA10ClosedByRncSlot

Source Section

A10ByteCountAndStatsBySlot (RncPcfPerformanceMIB)

totalA10ClosedSlot

This OM is a counter for the total number of successfully established A10-Connection that are closed on the Do-RNC / RNSM.

Data Source

DO-EMS

Source Field

totalA10ClosedSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

totalA10RegAttemptsSlot

This OM is a counter for the total number of new A10 registration attempts that are initiated on the DO-RNC / RNSM.

Data Source

DO-EMS

Source Field

totalA10RegAttemptsSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

totalA10RegFailuresSlot

This OM is a counter for the total number of new A10 registration failures on the DO-RNC / RNSM.

Data Source

DO-EMS

Source Field

totalA10RegFailuresSlot

Source Section

RncIS856PerfMIB

TotalA10RxBytesSlot

Number of bytes received by this slot from the PDSN

Data Source

DO-EMS

Source Field

TotalA10RxBytesSlot

Source Section

A10ByteCountAndStatsBySlot (RncPcfPerformanceMIB)

totalA10SetupAttemptsSlot

This OM is a counter for the total number of new A10-Connection setups that are aborted on the DO-RNC / RNSM.

Data Source

DO-EMS

Source Field

totalA10SetupAttemptsSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

totalA10SetupAttemptsWithA10ConnMinEnabledSlot

This OM is a counter for the total number of times a new A10-Connection setup is initiated on the DO-RNC / RNSM while the A10-Connection Minimization feature enabled by the operator.

Data Source

DO-EMS

Source Field

totalA10SetupAttemptsWithA10ConnMinEnabledSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

totalA10SetupAttemptWithA10ConnMinDisabledSlot

This OM is a counter for the total number of times a new A10-Connection setup is initiated on the DO-RNC / RNSM with the A10-Connection Minimization feature disabled by the operator.

Data Source

DO-EMS

Source Field

totalA10SetupAttemptWithA10ConnMinDisabledSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

totalA10SetupFailureSlot

This OM is a counter for the total number of new A10-Connection setups that are aborted on a specific RNSM.

Data Source

DO-EMS

Source Field

totalA10SetupFailureSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

totalA10SwitchesSlot

Number of A10 switches attempted. Whenever an A10 is open on a Secondary PDSN, and a connection goes from dormant to active, an A10 switch is attempted from the Secondary PDSN to a Primary PDSN.

Data Source

DO-EMS

Source Field

totalA10SwitchesSlot

Source Section

RNCPerfBySlot (RncIS856PerfMIB)

TotalA10TxBytesSlot

Number of bytes transmitted from this slot to the PDSN

Data Source

DO-EMS

Source Field

TotalA10TxBytesSlot

Source Section

A10ByteCountAndStatsBySlot (RncPcfPerformanceMIB)

TotalAirlinkRsrcAllocationsFailedSectorCarrierDownSlot

Airlink resource allocation failed because sector-carrier was out of service

Data Source

DO-EMS

Source Field

TotalAirlinkRsrcAllocationsFailedSectorCarrierDownSlot

Source Section

AirlinkResourceAllocationPerfBySlot (RncResourceControlMIB)

TotalAirlinkRsrcAllocationsFailedSectorCarrierNotHomedSlot

Airlink resource allocation failed because sector-carrier was not homed on this DO-RNC

Data Source

DO-EMS

Source Field

TotalAirlinkRsrcAllocationsFailedSectorCarrierNotHomedSlot

Source Section

AirlinkResourceAllocationPerfBySlot (RncResourceControlMIB)

TotalAirlinkRsrcRequestsSlot

Total number of airlink resource requests

Data Source

DO-EMS

Source Field

TotalAirlinkRsrcRequestsSlot

Source Section

AirlinkResourceAllocationPerfBySlot (RncResourceControlMIB)

TotalAirlinksAllocatedCurSlot

Total number of airlink resources currently allocated

Data Source

DO-EMS

Source Field

TotalAirlinksAllocatedCurSlot

Source Section

AirlinkResourceAllocationPerfBySlot (RncResourceControlMIB)

TotalAirlinksAllocatedSlot

Total number of airlink resources allocated

Calculation

""

lfn_utilization_sum

Total number of seconds in the link input utilization measurements

Calculation

```
vsum (IfInBin0percent, IfInBin10percent, IfInBin10percent,  
IfInBin20percent, IfInBin30percent, IfInBin40percent, IfInBin50percent,  
IfInBin60percent, IfInBin70percent, IfInBin80percent, IfInBin90percent, 0)
```

IfIn00_09%_Util

Percentage of time the link input utilization is between 0 and 9 percent of its capacity

Calculation

```
IfInBin0percent * 100.0 / IfIn_utilization_sum
```

IfIn10_19%_Util

Percentage of time the link input utilization is between 10 and 19 percent of its capacity

Calculation

```
IfInBin10percent * 100.0 / IfIn_utilization_sum
```

IfIn100%_Util

Percentage of time the link input utilization is at 100 percent of its capacity

Calculation

```
IfInBin100percent * 100.0 / IfIn_utilization_sum
```

IfIn20_29%_Util

Percentage of time the link input utilization is between 20 and 29 percent of its capacity

Calculation

```
IfInBin20percent * 100.0 / IfIn_utilization_sum
```

IfIn30_39%_Util

Percentage of time the link input utilization is between 30 and 39 percent of its capacity

Calculation

```
IfInBin30percent * 100.0 / IfIn_utilization_sum
```

IfIn40_49%_Util

Percentage of time the link input utilization is between 40 and 49 percent of its capacity

Calculation

```
IfInBin40percent * 100.0 / IfIn_utilization_sum
```

IfIn50_59%_Util

Percentage of time the link input utilization is between 50 and 59 percent of its capacity

Calculation

```
IfInBin50percent * 100.0 / IfIn_utilization_sum
```

IfIn60_69%_Util

Percentage of time the link input utilization is between 60 and 69 percent of its capacity

Calculation

```
IfInBin60percent * 100.0 / IfIn_utilization_sum
```

IfIn70_79%_Util

Percentage of time the link input utilization is between 70 and 79 percent of its capacity

Calculation

```
IfInBin70percent * 100.0 / IfIn_utilization_sum
```

IfIn80_89%_Util

Source Field

numDormantHandoffFailureToSourceLookupFailureSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numDormantHandoffFailureUati104MatchesLocalSubnetPriorSessionSourceRncPerf

Number of times a prior session A13 dormant handoff for this source RNC failed because prior session UATI-104 from the AT matches the local subnet

Data Source

DO-EMS

Source Field

numDormantHandoffFailureUati104MatchesLocalSubnetPriorSessionSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numDormantHandoffFailureUati104SourceRncPerf

Number of times a dormant handoff failed due to a mismatch in UATI-104 retrieved from the AT, for this source RNC

Data Source

DO-EMS

Source Field

numDormantHandoffFailureUati104SourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numDormantHandoffNoUatiReqAttemptsSourceRncPerf

The number of A13 Dormant Handoff attempts that are initiated by an ACH signaling packet with a foreign UATI.

Data Source

DO-EMS

Source Field

numDormantHandoffNoUatiReqAttemptsSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numDormantHandoffNoUatiReqFailureSourceRncPerf

The number of times an A13 dormant handoff that is initiated by a ACH message with a foreign UATI message (no subsequent UATIRequest message) resulted in a failure.

Data Source

DO-EMS

Source Field

numDormantHandoffNoUatiReqFailureSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numDormantHandoffNoUatiReqSuccessesSourceRncPerf

The number of times an A13 dormant handoff that is initiated by a ACH message with a foreign UATI message (no subsequent UATIRequest message) is successful.

Data Source

DO-EMS

Source Field

numDormantHandoffNoUatiReqSuccessesSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numDormantHandoffSuccessesPriorSessionSourceRncPerf

Number of times a prior session dormant handoff was successful from this source RNC

Data Source

DO-EMS

Source Field

numDormantHandoffSuccessesPriorSessionSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numDormantHandoffSuccessesSourceRncPerf

Number of times a dormant handoff succeeded from this source RNC

Data Source

DO-EMS

Source Field

numDormantHandoffSuccessesSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numRejectSentSessionNotFoundToPeerRNCRemoteRncPerf

Number of A13-Session Information Reject messages sent because the requested session cannot be found on this DO-RNC.

Data Source

DO-EMS

Source Field

numRejectSentSessionNotFoundToPeerRNCRemoteRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numSessCfgPostA13ReconfNeededPriorSessionSourceRncPerf

The total number of times the Session Configuration State Machine performs a re-negotiation of the protocols associated with a prior session A13-Dormant handoff retrieved session.

Data Source

DO-EMS

Source Field

numSessCfgPostA13ReconfNeededPriorSessionSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numSessCfgPostA13ReconfNeededSourceRncPerf

The total number of times the Session Configuration State Machine performs a re-negotiation of the protocols associated with an A13-Dormant handoff retrieved session.

Data Source

DO-EMS

Source Field

numSessCfgPostA13ReconfNeededSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numTotalDormantHandoffFailurePriorSessionSourceRncPerf

Total Number of times a prior session A13 dormant handoff for this source RNC failed

Data Source

DO-EMS

Source Field

numTotalDormantHandoffFailurePriorSessionSourceRncPerf

Source Section

A13PerfSourceRNC (AirvanaRncA13MIB)

numTotalDormantHandoffFailureSourceRncPerf

Total Number of times a regular A13 dormant handoff for this source RNC failed

DO_RNC_TrafficType Peg Counts

The following is a list of peg counts for the DO_RNC_TrafficType entity.

numCallCloseAppTrafficPerRnc

Sum of the events pegged by the OMs "numCallDropsAppTrafficPerRnc" and "numCallNormalCloseAppTrafficPerRnc".

Data Source

DO-EMS

Source Field

numCallCloseAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numCallDropsAppTrafficPerRnc

Number of traffic type dropped connections.

Data Source

DO-EMS

Source Field

numCallDropsAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numCallNormalCloseAppTrafficPerRnc

Number of normal traffic type connection closes.

Data Source

DO-EMS

Source Field

numCallNormalCloseAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numConnectionTimeoutAppTrafficPerRnc

Number of connection closes due to inactivity timeout based on traffic type.

Data Source

DO-EMS

Source Field

numConnectionTimeoutAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numFirstPageAbandonedAppTrafficPerRnc

Number of times a first page attempt is abandoned for a QoS Reservation or BE flow during a paging cycle.

Data Source

DO-EMS

Source Field

numFirstPageAbandonedAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numFirstPageLateResponsesAppTrafficPerRnc

Page responses received for the first page attempt after a second page attempt is sent out.

Data Source

DO-EMS

Source Field

numFirstPageLateResponsesAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numFirstPageRequestsAppTrafficPerRnc

Number of times an initial page attempt is made for either a BE or QoS traffic type.

Data Source

DO-EMS

Source Field

numFirstPageRequestsAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numFirstPageResponsesAppTrafficPerRnc

Number of times a page response (Connection Request) is received for the first page attempt.

Data Source

DO-EMS

Source Field

numFirstPageResponsesAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numFirstPageTimeoutAppTrafficPerRnc

Number of times the first page attempt for a QoS or BE traffic type has timed out waiting for a page response.

Data Source

DO-EMS

Source Field

numFirstPageTimeoutAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numPageAbandonedAppTrafficPerRnc

Number of traffic type abandoned pages. This OM is pegged when AN decides to abort the page while page is in progress.

Data Source

DO-EMS

Source Field

numPageAbandonedAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numPageRequestsAppTrafficPerRnc

Number of traffic type Page attempts. This OM is pegged at the time of sending a Page message to AT.

Data Source

DO-EMS

Source Field

numPageRequestsAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numPageResponsesAppTrafficPerRnc

Number of traffic type page successes.

Data Source

DO-EMS

Source Field

numPageResponsesAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numPageTimeoutAppTrafficPerRnc

Number of traffic type page timeouts. This OM is pegged only after attempting all the page retries.

Data Source

DO-EMS

Source Field

numPageTimeoutAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numRanRsrcActAttemptsAppTrafficPerRnc

Number of traffic type connection attempts.

Data Source

DO-EMS

Source Field

numRanRsrcActAttemptsAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numRanRsrcActFailuresAppTrafficPerRnc

Number of traffic type connection attempt failures.

Data Source

DO-EMS

Source Field

numRanRsrcActFailuresAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numRanRsrcActSuccessAppTrafficPerRnc

Number of successful traffic type connection attempts.

Data Source

DO-EMS

Source Field

numRanRsrcActSuccessAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numSecondPageAbandonedAppTrafficPerRnc

Number of times a second page attempt is abandoned for a QoS Reservation or BE flow during a paging cycle.

Data Source

DO-EMS

Source Field

numSecondPageAbandonedAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numSecondPageLateResponsesAppTrafficPerRnc

Page responses received for the second page attempt after a third page attempt is sent out.

Data Source

DO-EMS

Source Field

numSecondPageLateResponsesAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numSecondPageRequestsAppTrafficPerRnc

Number of times an second page attempt is made for either a BE or QoS traffic type.

Data Source

DO-EMS

Source Field

numSecondPageRequestsAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numSecondPageResponsesAppTrafficPerRnc

Number of times a page response (Connection Request) is received for the second page attempt.

Data Source

DO-EMS

Source Field

numSecondPageResponsesAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numSecondPageTimeoutAppTrafficPerRnc

Number of times the second page attempt for a QoS or BE traffic type has timed out waiting for a page response.

Data Source

DO-EMS

Source Field

numSecondPageTimeoutAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numThirdPageAbandonedAppTrafficPerRnc

Number of times a first page attempt is abandoned for a QoS Reservation or BE flow during a paging cycle.

Data Source

DO-EMS

Source Field

numThirdPageAbandonedAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numThirdPageLateResponsesAppTrafficPerRnc

Page responses received after a time out is declared on the thrid page attempt.

Data Source

DO-EMS

Source Field

numThirdPageLateResponsesAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numThirdPageRequestsAppTrafficPerRnc

Number of times an third page attempt is made for either a BE or QoS traffic type.

Data Source

DO-EMS

Source Field

numThirdPageRequestsAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numThirdPageResponsesAppTrafficPerRnc

Number of times a page response (Connection Request) is received for the third page attempt.

Data Source

DO-EMS

Source Field

numThirdPageResponsesAppTrafficPerRnc

Source Section

QoSTrafficTypePerf (RNCQoSPerfMIB)

numThirdPageTimeoutAppTrafficPerRnc

Number of times the first page attempt for a QoS or BE traffic type has timed out waiting for a page response.

Calculation

perModemFlowHistTotalSamples

The total number of samples in the Per Modem Flow Histogram which measures the simultaneous connection resources (driver flows) that were in use.

Calculation

```
vsum (perModemFlowHistBin000, perModemFlowHistBin024,  
perModemFlowHistBin048, perModemFlowHistBin072, perModemFlowHistBin096,  
perModemFlowHistBin120, perModemFlowHistBin144, perModemFlowHistBin168,  
perModemFlowHistBin192, perModemFlowHistBin216, perModemFlowHistBin240,  
perModemFlowHistBin264, perModemFlowHistBin288, perModemFlowHistBin312,  
perModemFlowHistBin336, perModemFlowHistBin360, perModemFlowHistBin384,  
perModemFlowHistBin408, perModemFlowHistBin432, perModemFlowHistBin456,  
perModemFlowHistBin480, perModemFlowHistBin504, perModemFlowHistBin528,  
perModemFlowHistBin552, perModemFlowHistBin576, perModemFlowHistBin600,  
perModemFlowHistBin624, perModemFlowHistBin648, perModemFlowHistBin672,  
perModemFlowHistBin696, perModemFlowHistBin720, perModemFlowHistBin744,  
perModemFlowHistBin768, perModemFlowHistBin792, perModemFlowHistBin816,  
perModemFlowHistBin840, perModemFlowHistBin864, perModemFlowHistBin888,  
perModemFlowHistBin912, perModemFlowHistBin936, perModemFlowHistBin960,  
perModemFlowHistBin984, perModemFlowHistBin1008, perModemFlowHistBin1032,  
perModemFlowHistBin1056, perModemFlowHistBin1080, perModemFlowHistBin1104,  
perModemFlowHistBin1128, perModemFlowHistBin1152)
```

perModemFlowPercentage000

The percentage of samples for which 0 to 23 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

```
perModemFlowHistBin000 * 100.0 / perModemFlowHistTotalSamples
```

perModemFlowPercentage024

The percentage of samples for which 24 to 47 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

```
perModemFlowHistBin024 * 100.0 / perModemFlowHistTotalSamples
```

perModemFlowPercentage048

The percentage of samples for which 48 to 71 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

```
perModemFlowHistBin048 * 100.0 / perModemFlowHistTotalSamples
```

perModemFlowPercentage072

The percentage of samples for which 72 to 95 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

```
perModemFlowHistBin072 * 100.0 / perModemFlowHistTotalSamples
```

perModemFlowPercentage096

The percentage of samples for which 96 to 119 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin096} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage1008

The percentage of samples for which 1008 to 1031 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin1008} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage1032

The percentage of samples for which 1032 to 1055 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin1032} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage1056

The percentage of samples for which 1056 to 1079 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin1056} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage1080

The percentage of samples for which 1080 to 1103 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin1080} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage1104

The percentage of samples for which 1104 to 1127 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin1104} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage1128

The percentage of samples for which 1128 to 1151 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin1128} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage1152

The percentage of samples for which 1152 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin1152} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage120

The percentage of samples for which 120 to 143 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin120} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage144

The percentage of samples for which 144 to 167 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin144} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage168

The percentage of samples for which 168 to 191 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin168} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage192

The percentage of samples for which 192 to 215 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin192} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage216

The percentage of samples for which 216 to 239 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin216} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage240

The percentage of samples for which 240 to 263 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin240} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage264

The percentage of samples for which 264 to 287 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin264} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage288

The percentage of samples for which 288 to 311 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin288} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage312

The percentage of samples for which 312 to 335 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin312} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage336

The percentage of samples for which 336 to 359 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin336} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage360

The percentage of samples for which 360 to 383 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin360} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage384

The percentage of samples for which 384 to 407 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin384} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage408

The percentage of samples for which 408 to 431 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin408} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage432

The percentage of samples for which 432 to 455 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin432} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage456

The percentage of samples for which 456 to 479 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin456} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage480

The percentage of samples for which 480 to 503 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin480} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage504

The percentage of samples for which 504 to 527 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin504} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage528

The percentage of samples for which 528 to 551 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin528} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage552

The percentage of samples for which 552 to 575 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin552} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage576

The percentage of samples for which 576 to 599 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin576} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage600

The percentage of samples for which 600 to 623 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin600} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage624

The percentage of samples for which 624 to 647 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin624} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage648

The percentage of samples for which 648 to 671 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin648} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage672

The percentage of samples for which 672 to 695 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin672} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage696

The percentage of samples for which 696 to 719 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin696} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage720

The percentage of samples for which 720 to 743 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin720} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage744

The percentage of samples for which 744 to 767 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin744} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage768

The percentage of samples for which 768 to 791 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin768} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage792

The percentage of samples for which 792 to 815 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin792} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage816

The percentage of samples for which 816 to 839 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin816} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage840

The percentage of samples for which 840 to 863 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin840} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage864

The percentage of samples for which 864 to 887 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin864} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage888

The percentage of samples for which 888 to 911 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin888} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage912

The percentage of samples for which 912 to 935 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$$\text{perModemFlowHistBin912} * 100.0 / \text{perModemFlowHistTotalSamples}$$

perModemFlowPercentage936

The percentage of samples for which 936 to 959 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$\text{perModemFlowHistBin936} * 100.0 / \text{perModemFlowHistTotalSamples}$

perModemFlowPercentage960

The percentage of samples for which 960 to 983 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$\text{perModemFlowHistBin960} * 100.0 / \text{perModemFlowHistTotalSamples}$

perModemFlowPercentage984

The percentage of samples for which 984 to 1007 simultaneous per DOM-A connection resources (driver flows) were in use.

Calculation

$\text{perModemFlowHistBin984} * 100.0 / \text{perModemFlowHistTotalSamples}$

DOM Peg Counts

The following is a list of peg counts for the DOM entity.

MLPPP_iflnBin0percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 0-9% inclusively.

Data Source

DO-EMS

Source Field

iflnBin0percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_iflnBin100percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 100%.

Data Source

DO-EMS

Source Field

ifInBin100percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifInBin10percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 10-19% inclusively.

Data Source

DO-EMS

Source Field

ifInBin10percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifInBin20percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 20-29% inclusively.

Data Source

DO-EMS

Source Field

ifInBin20percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifInBin30percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 30-39% inclusively.

Data Source

DO-EMS

Source Field

ifInBin30percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifInBin40percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 40-49% inclusively.

Data Source

DO-EMS

Source Field

ifInBin40percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifInBin50percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 50-59% inclusively.

Data Source

DO-EMS

Source Field

ifInBin50percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifInBin60percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 60-69% inclusively.

Data Source

DO-EMS

Source Field

ifInBin60percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifInBin70percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 70-79% inclusively.

Data Source

DO-EMS

Source Field

ifInBin70percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifInBin80percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 80-89% inclusively.

Data Source

DO-EMS

Source Field

ifInBin80percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifInBin90percent

Number of seconds where the ingress link utilization for the Multilink PPP interface is 90-99% inclusively.

Data Source

DO-EMS

Source Field

ifInBin90percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifIndex

Interface index number of the Multilink PPP interface.

Data Source

DO-EMS

Source Field

ifIndex for MLPPP interface

Source Section

InterfaceUtilizationByPort (RFC1213MIB)

MLPPP_ifOutBin0percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 0-9% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin0percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin100percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 100%.

Data Source

DO-EMS

Source Field

ifOutBin100percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin10percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 10-19% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin10percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin20percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 20-29% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin20percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin30percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 30-39% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin30percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin40percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 40-49% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin40percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin50percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 50-59% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin50percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin60percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 60-69% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin60percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin70percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 70-79% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin70percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin80percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 80-89% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin80percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

MLPPP_ifOutBin90percent

Number of seconds where the egress link utilization for the Multilink PPP interface is 90-99% inclusively.

Data Source

DO-EMS

Source Field

ifOutBin90percent for MLPPP interface

Source Section

InterfaceUtilizationByPort (InterfaceEXMIB)

perModemChanElmtLimit

This OM captures the maximum number of channel elements that are available based on the licensing.

Data Source

DO-EMS

Source Field

perModemChanElmtLimit

Source Section

RnAConnectionResourceUsageHistogramPerModem (RnConnectionResourceUsageMib)

perModemConnBlksNoChElmt

This attribute specifies the number of resources requests, both during initial connection setup and/or soft handoff when the connection is open, that are blocked at DOM-A because of no available connection resources (channel elements) on this modem.

Data Source

DO-EMS

Source Field

perModemConnBlksNoChElmt

Source Section

RnAConnectionResourceUsageHistogramPerModem (RnConnectionResourceUsageMib)

perModemConnectionBlocksNoCxnResources

The number of connection requests that are blocked at DOM because of no available connection resources (MAC-Indices) on this sector-element.

Data Source

DO-EMS

Source Field

perModemConnectionBlocksNoCxnResources

Source Section

RnConnectionResourceUsageHistogramPerModem (RnConnectionResourceUsageMIB)

perModemConnectionBlocksNoFlows

This attribute specifies the number of resources requests, both during initial connection setup and/or soft handoff when the connection is open, that are blocked at DOM-A because of no available connection resources (driver flows) on this modem. This attribute doesn't reset when histogram data is reset.

Data Source

DO-EMS

Source Field

perModemConnectionBlocksNoFlows

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin000

The number of samples for which 0 to 23 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin000

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin024

The number of samples for which 24 to 47 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin024

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin048

The number of samples for which 48 to 71 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin048

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin072

The number of samples for which 72 to 95 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin072

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin096

The number of samples for which 96 to 119 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin096

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin1008

The number of samples for which 1008 to 1031 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin1008

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin1032

The number of samples for which 1032 to 1055 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin1032

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin1056

The number of samples for which 1056 to 1079 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin1056

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin1080

The number of samples for which 1080 to 1103 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin1080

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin1104

The number of samples for which 1104 to 1127 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin1104

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin1128

The number of samples for which 1128 to 1151 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin1128

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin1152

The number of samples for which 1152 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin1152

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin120

The number of samples for which 120 to 143 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin120

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin144

The number of samples for which 144 to 167 simultaneous per DOM-A connection resources (driver flows) were in use.

Data Source

DO-EMS

Source Field

perModemFlowHistBin144

Source Section

PerModemFlowUsageHistogram (RnConnectionResourceUsageMIB)

perModemFlowHistBin168
