DOM_If Primitive Calculations

The following is a list of primitive calculations for the DOM_If entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

""

IfIn_utilization_sum

Total number of seconds in the link input utilization measurements

Calculation

```
vsum (IfInBin0percent, IfInBin100percent, IfInBin10percent,  
IfInBin20percent, IfInBin30percent, IfInBin40percent, IfInBin50percent,  
IfInBin60percent, IfInBin70percent, IfInBin80percent, IfInBin90percent, 0)
```

IfIn00_09%_Util

Percentage of time the link input utilization is between 0 and 9 percent of its capacity

Calculation

```
IfInBin0percent * 100.0 / IfIn_utilization_sum
```

IfIn10_19%_Util

Percentage of time the link input utilization is between 10 and 19 percent of its capacity

Calculation

$\text{IfInBin10percent} * 100.0 / \text{IfIn_utilization_sum}$

IfIn100%_Util

Percentage of time the link input utilization is at 100 percent of its capacity

Calculation

$\text{IfInBin100percent} * 100.0 / \text{IfIn_utilization_sum}$

IfIn20_29%_Util

Percentage of time the link input utilization is between 20 and 29 percent of its capacity

Calculation

$\text{IfInBin20percent} * 100.0 / \text{IfIn_utilization_sum}$

IfIn30_39%_Util

Percentage of time the link input utilization is between 30 and 39 percent of its capacity

Calculation

$\text{IfInBin30percent} * 100.0 / \text{IfIn_utilization_sum}$

IfIn40_49%_Util

Percentage of time the link input utilization is between 40 and 49 percent of its capacity

Calculation

$\text{IfInBin40percent} * 100.0 / \text{IfIn_utilization_sum}$

IfIn50_59%_Util

Percentage of time the link input utilization is between 50 and 59 percent of its capacity

Calculation

$\text{IfInBin50percent} * 100.0 / \text{IfIn_utilization_sum}$

IfIn60_69%_Util

Percentage of time the link input utilization is between 60 and 69 percent of its capacity

Calculation

$\text{IfInBin60percent} * 100.0 / \text{IfIn_utilization_sum}$

IfIn70_79%_Util

Percentage of time the link input utilization is between 70 and 79 percent of its capacity

Calculation

`IfInBin70percent * 100.0 / IfIn_utilization_sum`

IfIn80_89%_Util

Percentage of time the link input utilization is between 80 and 89 percent of its capacity

Calculation

`IfInBin80percent * 100.0 / IfIn_utilization_sum`

IfIn90_99%_Util

Percentage of time the link input utilization is between 90 and 99 percent of its capacity

Calculation

`IfInBin90percent * 100.0 / IfIn_utilization_sum`

IfOut_utilization_sum

Total number of seconds in the link output utilization measurements

Calculation

`vsum (IfOutBin0percent, IfOutBin100percent, IfOutBin10percent,
IfOutBin20percent, IfOutBin30percent, IfOutBin40percent, IfOutBin50percent,
IfOutBin60percent, IfOutBin70percent, IfOutBin80percent, IfOutBin90percent,
0)`

IfOut00_09%_Util

Percentage of time the link output utilization is between 0 and 9 percent of its capacity

Calculation

`IfOutBin0percent * 100.0 / IfOut_utilization_sum`

IfOut10_19%_Util

Percentage of time the link output utilization is between 10 and 19 percent of its capacity

Calculation

`IfOutBin10percent * 100.0 / IfOut_utilization_sum`

IfOut100%_Util

Percentage of time the link output utilization is at 100 percent of its capacity

Calculation

`IfOutBin100percent * 100.0 / IfOut_utilization_sum`

IfOut20_29%_Util

Percentage of time the link output utilization is between 20 and 29 percent of its capacity

Calculation

$$\text{IfOutBin20percent} * 100.0 / \text{IfOut_utilization_sum}$$

IfOut30_39%_Util

Percentage of time the link output utilization is between 30 and 39 percent of its capacity

Calculation

$$\text{IfOutBin30percent} * 100.0 / \text{IfOut_utilization_sum}$$

IfOut40_49%_Util

Percentage of time the link output utilization is between 40 and 49 percent of its capacity

Calculation

$$\text{IfOutBin40percent} * 100.0 / \text{IfOut_utilization_sum}$$

IfOut50_59%_Util

Percentage of time the link output utilization is between 50 and 59 percent of its capacity

Calculation

$$\text{IfOutBin50percent} * 100.0 / \text{IfOut_utilization_sum}$$

IfOut60_69%_Util

Percentage of time the link output utilization is between 60 and 69 percent of its capacity

Calculation

$$\text{IfOutBin60percent} * 100.0 / \text{IfOut_utilization_sum}$$

IfOut70_79%_Util

Percentage of time the link output utilization is between 70 and 79 percent of its capacity

Calculation

$$\text{IfOutBin70percent} * 100.0 / \text{IfOut_utilization_sum}$$

IfOut80_89%_Util

Percentage of time the link output utilization is between 80 and 89 percent of its capacity

Calculation

$$\text{IfOutBin80percent} * 100.0 / \text{IfOut_utilization_sum}$$

IfOut90_99%_Util

Percentage of time the link output utilization is between 90 and 99 percent of its capacity

Calculation

$\text{IfOutBin90percent} * 100.0 / \text{IfOut_utilization_sum}$

DOM_Sector Primitive Calculations

The following is a list of primitive calculations for the DOM_Sector entity.

achSectorNumBadCapsules_Sum

Summation of all pegs for OM achSectorNumBadCapsules

Calculation

```
vsum (achSectorNumBadCapsules_SumRate1, achSectorNumBadCapsules_SumRate2,  
achSectorNumBadCapsules_SumRate3)
```

achSectorNumBadCapsules_SumRate1

Summation of all Rate1 pegs for OM achSectorNumBadCapsules

Calculation

```
vsum (achSectorNumBadCapsules_Size1Rate1,  
achSectorNumBadCapsules_Size2Rate1, achSectorNumBadCapsules_Size3Rate1,  
achSectorNumBadCapsules_Size4Rate1)
```

achSectorNumBadCapsules_SumRate2

Summation of all Rate2 pegs for OM achSectorNumBadCapsules

Calculation

```
vsum (achSectorNumBadCapsules_Size1Rate2,  
achSectorNumBadCapsules_Size2Rate2, achSectorNumBadCapsules_Size3Rate2,  
achSectorNumBadCapsules_Size4Rate2)
```

achSectorNumBadCapsules_SumRate3

Summation of all Rate3 pegs for OM achSectorNumBadCapsules

Calculation

```
vsum (achSectorNumBadCapsules_Size1Rate3,  
achSectorNumBadCapsules_Size2Rate3, achSectorNumBadCapsules_Size3Rate3,  
achSectorNumBadCapsules_Size4Rate3)
```

achSectorNumBadCapsules_SumSize1

Summation of all Size1 pegs for OM achSectorNumBadCapsules

Calculation

```
vsum (achSectorNumBadCapsules_Size1Rate1,  
achSectorNumBadCapsules_Size1Rate2, achSectorNumBadCapsules_Size1Rate3)
```

achSectorNumBadCapsules_SumSize2

Summation of all Size2 pegs for OM achSectorNumBadCapsules

Calculation

```
vsum (achSectorNumBadCapsules_Size2Rate1,  
achSectorNumBadCapsules_Size2Rate2, achSectorNumBadCapsules_Size2Rate3)
```

achSectorNumBadCapsules_SumSize3

Summation of all Size3 pegs for OM achSectorNumBadCapsules

Calculation

```
vsum (achSectorNumBadCapsules_Size3Rate1,  
achSectorNumBadCapsules_Size3Rate2, achSectorNumBadCapsules_Size3Rate3)
```

achSectorNumBadCapsules_SumSize4

Summation of all Size4 pegs for OM achSectorNumBadCapsules

Calculation

```
vsum (achSectorNumBadCapsules_Size4Rate1,  
achSectorNumBadCapsules_Size4Rate2, achSectorNumBadCapsules_Size4Rate3)
```

achSectorNumGoodCapsules_Sum

Summation of all pegs for OM achSectorNumGoodCapsules

Calculation

```
vsum (achSectorNumGoodCapsules_SumRate1,  
achSectorNumGoodCapsules_SumRate2, achSectorNumGoodCapsules_SumRate3)
```

achSectorNumGoodCapsules_SumRate1

Summation of all Rate1 pegs for OM achSectorNumGoodCapsules

Calculation

```
vsum (achSectorNumGoodCapsules_Size1Rate1,  
achSectorNumGoodCapsules_Size2Rate1, achSectorNumGoodCapsules_Size3Rate1,  
achSectorNumGoodCapsules_Size4Rate1)
```

achSectorNumGoodCapsules_SumRate2

Summation of all Rate2 pegs for OM achSectorNumGoodCapsules

Calculation

```
vsum (achSectorNumGoodCapsules_Size1Rate2,  
achSectorNumGoodCapsules_Size2Rate2, achSectorNumGoodCapsules_Size3Rate2,  
achSectorNumGoodCapsules_Size4Rate2)
```

achSectorNumGoodCapsules_SumRate3

Summation of all Rate3 pegs for OM achSectorNumGoodCapsules

Calculation

```
vsum (achSectorNumGoodCapsules_Size1Rate3,  
achSectorNumGoodCapsules_Size2Rate3, achSectorNumGoodCapsules_Size3Rate3,  
achSectorNumGoodCapsules_Size4Rate3)
```

achSectorNumGoodCapsules_SumSize1

Summation of all Size1 pegs for OM achSectorNumGoodCapsules

Calculation

```
vsum (achSectorNumGoodCapsules_Size1Rate1,  
achSectorNumGoodCapsules_Size1Rate2, achSectorNumGoodCapsules_Size1Rate3)
```

achSectorNumGoodCapsules_SumSize2

Summation of all Size2 pegs for OM achSectorNumGoodCapsules

Calculation

```
vsum (achSectorNumGoodCapsules_Size2Rate1,  
achSectorNumGoodCapsules_Size2Rate2, achSectorNumGoodCapsules_Size2Rate3)
```

achSectorNumGoodCapsules_SumSize3

Summation of all Size3 pegs for OM achSectorNumGoodCapsules

Calculation

```
vsum (achSectorNumGoodCapsules_Size3Rate1,  
achSectorNumGoodCapsules_Size3Rate2, achSectorNumGoodCapsules_Size3Rate3)
```

achSectorNumGoodCapsules_SumSize4

Summation of all Size4 pegs for OM achSectorNumGoodCapsules

Calculation

```
vsum (achSectorNumGoodCapsules_Size4Rate1,  
achSectorNumGoodCapsules_Size4Rate2, achSectorNumGoodCapsules_Size4Rate3)
```

ANInitiatedConnectionSetupFailureRateSC

AN-initiated Connection Setup Failure Rate

Calculation

```
100.0 * vsum(NumConnReqsANInitiatedSC, -1 * NumANConnReqsWhileSettingUpSC,

```

ATInitiatedConnectionSetupFailureRateSC

AT-initiated Connection Setup Failure Rate

Calculation

```
100.0 * vsum(NumConnReqsATInitiatedSC, -1 * NumATConnReqsWhileSettingUpSC,  
-1 * NumATConnReqsWhileTearingDownSC, -1 * NumATConnReqsWhileOpenSC, -1 *  
NumSuccessfulOpensForATConnRequestSC, 0) / vsum(NumConnReqsATInitiatedSC, -  
1 * NumATConnReqsWhileSettingUpSC, -1 * NumATConnReqsWhileTearingDownSC, -1  
* NumATConnReqsWhileOpenSC, 0)
```

ATInitiatedConnectionSetupsAttemptedbyRNCSC

AT-Initiated Connection Setups Attempted by RNC

Calculation

```
vsum(NumConnReqsATInitiatedSC, -1 * NumATConnReqsWhileSettingUpSC, -1 *  
NumATConnReqsWhileTearingDownSC, -1 * NumATConnReqsWhileOpenSC, 0)
```

cchSectorNumTxSyncCapsules_Sum

Summation of all Capsule Size pegs for OM cchSectorNumTxSyncCapsules

Calculation

```
vsum (cchSectorNumTxSyncCapsules_CapsuleSize1,  
cchSectorNumTxSyncCapsules_CapsuleSize2,  
cchSectorNumTxSyncCapsules_CapsuleSize3,  
cchSectorNumTxSyncCapsules_CapsuleSize4,  
cchSectorNumTxSyncCapsules_CapsuleSize5,  
cchSectorNumTxSyncCapsules_CapsuleSize6,  
cchSectorNumTxSyncCapsules_CapsuleSize7,  
cchSectorNumTxSyncCapsules_CapsuleSize8)
```

FastConnectConnectionSetupFailureRateSC

Fast Connect Connection Setup Failure Rate

Calculation

```
100.0 * vsum(NumFastConnectsInitiatedSC, -1 * NumSuccessfulOpensForFastConnectSC, 0) / NumFastConnectsInitiatedSC
```

ftcSectorNumTxMacBytes_Sum

Summation of all Packet Rate pegs for OM ftcSectorNumTxMacBytes

Calculation

```
vsum (ftcSectorNumTxMacBytes_PacketRate01,  
ftcSectorNumTxMacBytes_PacketRate02, ftcSectorNumTxMacBytes_PacketRate03,  
ftcSectorNumTxMacBytes_PacketRate04, ftcSectorNumTxMacBytes_PacketRate05,  
ftcSectorNumTxMacBytes_PacketRate06, ftcSectorNumTxMacBytes_PacketRate07,  
ftcSectorNumTxMacBytes_PacketRate08, ftcSectorNumTxMacBytes_PacketRate09,  
ftcSectorNumTxMacBytes_PacketRate10, ftcSectorNumTxMacBytes_PacketRate11,  
ftcSectorNumTxMacBytes_PacketRate12, ftcSectorNumTxMacBytes_PacketRate13,  
ftcSectorNumTxMacBytes_PacketRate14)
```

ftcSectorNumTxPhyPkts_Sum

Summation of all Packet Rate pegs for OM ftcSectorNumTxPhyPkts

Calculation

```
vsum (ftcSectorNumTxPhyPkts_PacketRate01,  
ftcSectorNumTxPhyPkts_PacketRate02, ftcSectorNumTxPhyPkts_PacketRate03,  
ftcSectorNumTxPhyPkts_PacketRate04, ftcSectorNumTxPhyPkts_PacketRate05,  
ftcSectorNumTxPhyPkts_PacketRate06, ftcSectorNumTxPhyPkts_PacketRate07,  
ftcSectorNumTxPhyPkts_PacketRate08, ftcSectorNumTxPhyPkts_PacketRate09,  
ftcSectorNumTxPhyPkts_PacketRate10, ftcSectorNumTxPhyPkts_PacketRate11,  
ftcSectorNumTxPhyPkts_PacketRate12, ftcSectorNumTxPhyPkts_PacketRate13,  
ftcSectorNumTxPhyPkts_PacketRate14)
```

ftcSectorNumTxSlots_Sum

Summation of all Packet Rate pegs for OM ftcSectorNumTxSlots

Calculation

```
vsum (ftcSectorNumTxSlots_PacketRate01, ftcSectorNumTxSlots_PacketRate02,  
ftcSectorNumTxSlots_PacketRate03, ftcSectorNumTxSlots_PacketRate04,  
ftcSectorNumTxSlots_PacketRate05, ftcSectorNumTxSlots_PacketRate06,  
ftcSectorNumTxSlots_PacketRate07, ftcSectorNumTxSlots_PacketRate08,  
ftcSectorNumTxSlots_PacketRate09, ftcSectorNumTxSlots_PacketRate10,  
ftcSectorNumTxSlots_PacketRate11, ftcSectorNumTxSlots_PacketRate12,  
ftcSectorNumTxSlots_PacketRate13, ftcSectorNumTxSlots_PacketRate14)
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

""

NUMDAYS

of days in Report

Calculation

DAYSINREPORT ()

NUMHOURS

of hours in Summation Data

Calculation

PercentGoodAccessCapsules

Percentage of access capsules with good CRC received at this sector across all the Access Channel rates.

Calculation

```
numTotalGoodAccessCapsules * 100.0 / vsum(numTotalGoodAccessCapsules, num-  
TotalBadAccessCapsules)
```

perSectorRev0RUHistSamples

The total number of samples for the per sector connection resources (MAC-Indices) histogram

Calculation

```
vsum (perSectorRev0RUHistBin000, perSectorRev0RUHistBin005,  
perSectorRev0RUHistBin010, perSectorRev0RUHistBin015,  
perSectorRev0RUHistBin020, perSectorRev0RUHistBin025,  
perSectorRev0RUHistBin030, perSectorRev0RUHistBin035,  
perSectorRev0RUHistBin040, perSectorRev0RUHistBin045,  
perSectorRev0RUHistBin050, perSectorRev0RUHistBin055, 0)
```

perSectorRev0RUPercent000

The percentage of samples for which 0 to 4 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

```
perSectorRev0RUHistBin000 * 100.0 / perSectorRev0RUHistSamples
```

perSectorRev0RUPercent005

The percentage of samples for which 5 to 9 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$$\text{perSectorRev0RUHistBin005} * 100.0 / \text{perSectorRev0RUHistSamples}$$

perSectorRev0RUPercent010

The percentage of samples for which 10 to 14 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$$\text{perSectorRev0RUHistBin010} * 100.0 / \text{perSectorRev0RUHistSamples}$$

perSectorRev0RUPercent015

The percentage of samples for which 15 to 19 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$$\text{perSectorRev0RUHistBin015} * 100.0 / \text{perSectorRev0RUHistSamples}$$

perSectorRev0RUPercent020

The percentage of samples for which 20 to 24 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$$\text{perSectorRev0RUHistBin020} * 100.0 / \text{perSectorRev0RUHistSamples}$$

perSectorRev0RUPercent025

The percentage of samples for which 25 to 29 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$$\text{perSectorRev0RUHistBin025} * 100.0 / \text{perSectorRev0RUHistSamples}$$

perSectorRev0RUPercent030

The percentage of samples for which 30 to 34 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$$\text{perSectorRev0RUHistBin030} * 100.0 / \text{perSectorRev0RUHistSamples}$$

perSectorRev0RUPercent035

The percentage of samples for which 35 to 39 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRev0RUHistBin035} * 100.0 / \text{perSectorRev0RUHistSamples}$

perSectorRev0RUPercent040

The percentage of samples for which 40 to 44 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRev0RUHistBin040} * 100.0 / \text{perSectorRev0RUHistSamples}$

perSectorRev0RUPercent045

The percentage of samples for which 45 to 49 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRev0RUHistBin045} * 100.0 / \text{perSectorRev0RUHistSamples}$

perSectorRev0RUPercent050

The percentage of samples for which 50 to 54 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRev0RUHistBin050} * 100.0 / \text{perSectorRev0RUHistSamples}$

perSectorRev0RUPercent055

The percentage of samples for which 55 to 59 simultaneous per sector DOM-0 connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRev0RUHistBin055} * 100.0 / \text{perSectorRev0RUHistSamples}$

perSectorRUHistSamples

The total number of samples for the per sector connection resources (MAC-Indices) histogram

Calculation

$\text{vsum}(\text{perSectorRUHistBin000}, \text{perSectorRUHistBin005}, \text{perSectorRUHistBin010}, \text{perSectorRUHistBin015}, \text{perSectorRUHistBin020}, \text{perSectorRUHistBin025}, \text{perSectorRUHistBin030}, \text{perSectorRUHistBin035}, \text{perSectorRUHistBin040}, \text{perSectorRUHistBin045}, \text{perSectorRUHistBin050}, \text{perSectorRUHistBin055},$

perSectorRUHistBin060, perSectorRUHistBin065, perSectorRUHistBin070,
perSectorRUHistBin075, perSectorRUHistBin080, perSectorRUHistBin085,
perSectorRUHistBin090, perSectorRUHistBin095, perSectorRUHistBin100,
perSectorRUHistBin105, perSectorRUHistBin110, perSectorRUHistBin115, 0)

perSectorRUPercent000

The percentage of samples for which 0 to 4 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin000} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent005

The percentage of samples for which 5 to 9 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin005} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent010

The percentage of samples for which 10 to 14 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin010} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent015

The percentage of samples for which 15 to 19 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin015} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent020

The percentage of samples for which 20 to 24 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin020} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent025

The percentage of samples for which 25 to 29 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin025} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent030

The percentage of samples for which 30 to 34 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin030} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent035

The percentage of samples for which 35 to 39 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin035} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent040

The percentage of samples for which 40 to 44 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin040} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent045

The percentage of samples for which 45 to 49 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin045} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent050

The percentage of samples for which 50 to 54 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin050} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent055

The percentage of samples for which 55 to 59 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin055} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent060

The percentage of samples for which 60 to 64 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin060} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent065

The percentage of samples for which 65 to 69 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin065} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent070

The percentage of samples for which 70 to 74 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin070} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent075

The percentage of samples for which 75 to 79 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin075} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent080

The percentage of samples for which 80 to 84 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin080} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent085

The percentage of samples for which 85 to 89 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin085} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent090

The percentage of samples for which 90 to 94 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin090} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent095

The percentage of samples for which 95 to 99 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin095} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent100

The percentage of samples for which 100 to 104 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin100} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent105

The percentage of samples for which 105 to 109 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin105} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent110

The percentage of samples for which 110 to 114 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

$\text{perSectorRUHistBin110} * 100.0 / \text{perSectorRUHistSamples}$

perSectorRUPercent115

The percentage of samples for which 115 simultaneous per sector connection resources (MAC-Indices) were in use.

Calculation

`perSectorRUHistBin115 * 100.0 / perSectorRUHistSamples`

PilotResourceAllocationFailureRate

Pilot Resource Allocation Failure Rate

Calculation

`100.0 * vsum(NumAllocationAttemptsTxRNSC, -1 * NumAllocationRNSuccessSC, 0)
/ NumAllocationAttemptsTxRNSC`

rlSectorNumDrcSlots_Sum

Summation of all Packet Rate pegs for OM rlSectorNumDrcSlots

Calculation

`vsum (rlSectorNumDrcSlots_PacketRate01, rlSectorNumDrcSlots_PacketRate02,
rlSectorNumDrcSlots_PacketRate03, rlSectorNumDrcSlots_PacketRate04,

rlSectorNumDrcSlots_PacketRate07, rlSectorNumDrcSlots_PacketRate08,
rlSectorNumDrcSlots_PacketRate09, rlSectorNumDrcSlots_PacketRate10,
rlSectorNumDrcSlots_PacketRate11, rlSectorNumDrcSlots_PacketRate12,
rlSectorNumDrcSlots_PacketRate13, rlSectorNumDrcSlots_PacketRate14)`

rtcSectorNumBadRxPhyPackets_Sum

Summation of all pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

`vsum (rtcSectorNumBadRxPhyPackets_SumSubPacket1,
rtcSectorNumBadRxPhyPackets_SumSubPacket2,
rtcSectorNumBadRxPhyPackets_SumSubPacket3,
rtcSectorNumBadRxPhyPackets_SumSubPacket4)`

rtcSectorNumBadRxPhyPackets_SumRate01

Summation of all Rate 1 (4.8Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

`vsum (rtcSectorNumBadRxPhyPackets_Rate01SubPacket1,
rtcSectorNumBadRxPhyPackets_Rate01SubPacket2,
rtcSectorNumBadRxPhyPackets_Rate01SubPacket3,
rtcSectorNumBadRxPhyPackets_Rate01SubPacket4)`

rtcSectorNumBadRxPhyPackets_SumRate02

Summation of all Rate 2 (9.6Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate02SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate02SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate02SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate02SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate03

Summation of all Rate 3 (19.2Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate03SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate03SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate03SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate03SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate04

Summation of all Rate 4 (28.8Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate04SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate04SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate04SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate04SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate05

Summation of all Rate 5 (38.4Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate05SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate05SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate05SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate05SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate06

Summation of all Rate 6 (57.6Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate06SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate06SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate06SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate06SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate07

Summation of all Rate 7 (76.8Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate07SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate07SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate07SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate07SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate08

Summation of all Rate 8 (115.2Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate08SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate08SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate08SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate08SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate09

Summation of all Rate 9 (153.6Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate09SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate09SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate09SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate09SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate10

Summation of all Rate 10 (230.4Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate10SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate10SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate10SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate10SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate11

Summation of all Rate 11 (307.2Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate11SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate11SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate11SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate11SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumRate12

Summation of all Rate 12 (460.8Kbps) pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate12SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate12SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate12SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate12SubPacket4)
```

rtcSectorNumBadRxPhyPackets_SumSubPacket1

Summation of all SubPacket1 pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate01SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate02SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate03SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate04SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate05SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate06SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate07SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate08SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate09SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate10SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate11SubPacket1,  
rtcSectorNumBadRxPhyPackets_Rate12SubPacket1)
```

rtcSectorNumBadRxPhyPackets_SumSubPacket2

Summation of all SubPacket2 pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate01SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate02SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate03SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate04SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate05SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate06SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate07SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate08SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate09SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate10SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate11SubPacket2,  
rtcSectorNumBadRxPhyPackets_Rate12SubPacket2)
```

rtcSectorNumBadRxPhyPackets_SumSubPacket3

Summation of all SubPacket3 pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate01SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate02SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate03SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate04SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate05SubPacket3,
```

```
rtcSectorNumBadRxPhyPackets_Rate06SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate07SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate08SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate09SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate10SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate11SubPacket3,  
rtcSectorNumBadRxPhyPackets_Rate12SubPacket3)
```

rtcSectorNumBadRxPhyPackets_SumSubPacket4

Summation of all SubPacket4 pegs for OM rtcSectorNumBadRxPhyPackets

Calculation

```
vsum (rtcSectorNumBadRxPhyPackets_Rate01SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate02SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate03SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate04SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate05SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate06SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate07SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate08SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate09SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate10SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate11SubPacket4,  
rtcSectorNumBadRxPhyPackets_Rate12SubPacket4)
```

rtcSectorNumGoodRxMacBytes_Sum

Summation of all pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_SumSubPacket1,  
rtcSectorNumGoodRxMacBytes_SumSubPacket2,  
rtcSectorNumGoodRxMacBytes_SumSubPacket3,  
rtcSectorNumGoodRxMacBytes_SumSubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate01

Summation of all Rate 1 (4.8Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate01SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate01SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate01SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate01SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate02

Summation of all Rate 2 (9.6Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate02SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate02SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate02SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate02SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate03

Summation of all Rate 3 (19.2Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate03SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate03SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate03SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate03SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate04

Summation of all Rate 4 (28.8Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate04SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate04SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate04SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate04SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate05

Summation of all Rate 5 (38.4Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate05SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate05SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate05SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate05SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate06

Summation of all Rate 6 (57.6Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate06SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate06SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate06SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate06SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate07

Summation of all Rate 7 (76.8Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate07SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate07SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate07SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate07SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate08

Summation of all Rate 8 (115.2Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate08SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate08SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate08SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate08SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate09

Summation of all Rate 9 (153.6Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate09SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate09SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate09SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate09SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate10

Summation of all Rate 10 (230.4Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate10SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate10SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate10SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate10SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate11

Summation of all Rate 11 (307.2Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate11SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate11SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate11SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate11SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumRate12

Summation of all Rate 12 (460.8Kbps) pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate12SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate12SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate12SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate12SubPacket4)
```

rtcSectorNumGoodRxMacBytes_SumSubPacket1

Summation of all SubPacket1 pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate01SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate02SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate03SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate04SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate05SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate06SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate07SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate08SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate09SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate10SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate11SubPacket1,  
rtcSectorNumGoodRxMacBytes_Rate12SubPacket1)
```

rtcSectorNumGoodRxMacBytes_SumSubPacket2

Summation of all SubPacket2 pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate01SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate02SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate03SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate04SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate05SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate06SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate07SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate08SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate09SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate10SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate11SubPacket2,  
rtcSectorNumGoodRxMacBytes_Rate12SubPacket2)
```

rtcSectorNumGoodRxMacBytes_SumSubPacket3

Summation of all SubPacket3 pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate01SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate02SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate03SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate04SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate05SubPacket3,
```

```
rtcSectorNumGoodRxMacBytes_Rate06SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate07SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate08SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate09SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate10SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate11SubPacket3,  
rtcSectorNumGoodRxMacBytes_Rate12SubPacket3)
```

rtcSectorNumGoodRxMacBytes_SumSubPacket4

Summation of all SubPacket4 pegs for OM rtcSectorNumGoodRxMacBytes

Calculation

```
vsum (rtcSectorNumGoodRxMacBytes_Rate01SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate02SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate03SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate04SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate05SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate06SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate07SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate08SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate09SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate10SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate11SubPacket4,  
rtcSectorNumGoodRxMacBytes_Rate12SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_Sum

Summation of all pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_SumSubPacket1,  
rtcSectorNumGoodRxPhyPackets_SumSubPacket2,  
rtcSectorNumGoodRxPhyPackets_SumSubPacket3,  
rtcSectorNumGoodRxPhyPackets_SumSubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate01

Summation of all Rate 1 (4.8Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate01SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate01SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate01SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate01SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate02

Summation of all Rate 2 (9.6Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate02SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate02SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate02SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate02SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate03

Summation of all Rate 3 (19.2Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate03SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate03SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate03SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate03SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate04

Summation of all Rate 4 (28.8Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate04SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate04SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate04SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate04SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate05

Summation of all Rate 5 (38.4Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate05SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate05SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate05SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate05SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate06

Summation of all Rate 6 (57.6Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate06SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate06SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate06SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate06SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate07

Summation of all Rate 7 (76.8Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate07SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate07SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate07SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate07SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate08

Summation of all Rate 8 (115.2Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate08SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate08SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate08SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate08SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate09

Summation of all Rate 9 (153.6Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate09SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate09SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate09SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate09SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate10

Summation of all Rate 10 (230.4Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate10SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate10SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate10SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate10SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate11

Summation of all Rate 11 (307.2Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate11SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate11SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate11SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate11SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumRate12

Summation of all Rate 12 (460.8Kbps) pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate12SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate12SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate12SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate12SubPacket4)
```

rtcSectorNumGoodRxPhyPackets_SumSubPacket1

Summation of all SubPacket1 pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate01SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate02SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate03SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate04SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate05SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate06SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate07SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate08SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate09SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate10SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate11SubPacket1,  
rtcSectorNumGoodRxPhyPackets_Rate12SubPacket1)
```

rtcSectorNumGoodRxPhyPackets_SumSubPacket2

Summation of all SubPacket2 pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate01SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate02SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate03SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate04SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate05SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate06SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate07SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate08SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate09SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate10SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate11SubPacket2,  
rtcSectorNumGoodRxPhyPackets_Rate12SubPacket2)
```

rtcSectorNumGoodRxPhyPackets_SumSubPacket3

Summation of all SubPacket3 pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate01SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate02SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate03SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate04SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate05SubPacket3,
```

```
rtcSectorNumGoodRxPhyPackets_Rate06SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate07SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate08SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate09SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate10SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate11SubPacket3,  
rtcSectorNumGoodRxPhyPackets_Rate12SubPacket3)
```

rtcSectorNumGoodRxPhyPackets_SumSubPacket4

Summation of all SubPacket4 pegs for OM rtcSectorNumGoodRxPhyPackets

Calculation

```
vsum (rtcSectorNumGoodRxPhyPackets_Rate01SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate02SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate03SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate04SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate05SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate06SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate07SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate08SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate09SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate10SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate11SubPacket4,  
rtcSectorNumGoodRxPhyPackets_Rate12SubPacket4)
```

TotalAccessFailuresSC

Total Access Failures

Calculation

```
vsum(NumATConnectionSetupsFailedTccTimeoutSC, NumANConnectionSetups-  
FailedTccTimeoutSC, NumFCCConnectionSetupsFailedTccTimeoutSC, 0)
```

DOM_Sector Peg Counts

The following is a list of peg counts for the DOM_Sector entity.

achSectorCapsulesUtilization

Average of 5-second values of access channel utilization, taking into account all access capsules (good or bad) received by DOM-A

Data Source

DO-EMS

Source Field

achSectorCapsulesUtilization

Source Section

RnACHcapsuleCCHSyncSubSyncAsyncSlotUtilization (RnPerformanceMIB)

achSectorCapsulesUtilization_max

Maximum of 5-second values of access channel utilization, taking into account all access capsules (good or bad) received by DOM-A

Data Source

DO-EMS

Source Field

achSectorCapsulesUtilization

Source Section

RnACHcapsuleCCHSyncSubSyncAsyncSlotUtilization (RnPerformanceMIB)

achSectorCapsulesUtilization_min

Minimum of 5-second values of access channel utilization, taking into account all access capsules (good or bad) received by DOM-A

Data Source

DO-EMS

Source Field

achSectorCapsulesUtilization

Source Section

RnACHcapsuleCCHSyncSubSyncAsyncSlotUtilization (RnPerformanceMIB)

achSectorNumBadCapsules_Size1Rate1

Number of access capsules received at this sector with bad CRC where CapsuleSize=1 and CapsuleRate=1

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=1 and CapsuleRate=1

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size1Rate2

Number of access capsules received at this sector with bad CRC where CapsuleSize=1 and CapsuleRate=2

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=1 and CapsuleRate=2

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size1Rate3

Number of access capsules received at this sector with bad CRC where CapsuleSize=1 and CapsuleRate=3

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=1 and CapsuleRate=3

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size2Rate1

Number of access capsules received at this sector with bad CRC where CapsuleSize=2 and CapsuleRate=1

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=2 and CapsuleRate=1

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size2Rate2

Number of access capsules received at this sector with bad CRC where CapsuleSize=2 and CapsuleRate=2

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=2 and CapsuleRate=2

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size2Rate3

Number of access capsules received at this sector with bad CRC where CapsuleSize=2 and CapsuleRate=3

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=2 and CapsuleRate=3

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size3Rate1

Number of access capsules received at this sector with bad CRC where CapsuleSize=3 and CapsuleRate=1

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=3 and CapsuleRate=1

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size3Rate2

Number of access capsules received at this sector with bad CRC where CapsuleSize=3 and CapsuleRate=2

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=3 and CapsuleRate=2

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size3Rate3

Number of access capsules received at this sector with bad CRC where CapsuleSize=3 and CapsuleRate=3

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=3 and CapsuleRate=3

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size4Rate1

Number of access capsules received at this sector with bad CRC where CapsuleSize=4 and CapsuleRate=1

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=4 and CapsuleRate=1

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size4Rate2

Number of access capsules received at this sector with bad CRC where CapsuleSize=4 and CapsuleRate=2

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=4 and CapsuleRate=2

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumBadCapsules_Size4Rate3

Number of access capsules received at this sector with bad CRC where CapsuleSize=4 and CapsuleRate=3

Data Source

DO-EMS

Source Field

achSectorNumBadCapsules where CapsuleSize=4 and CapsuleRate=3

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size1Rate1

The number of access capsules received at this sector with good CRC where CapsuleSize=1 and CapsuleRate=1

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=1 and CapsuleRate=1

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size1Rate2

The number of access capsules received at this sector with good CRC where CapsuleSize=1 and CapsuleRate=2

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=1 and CapsuleRate=2

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size1Rate3

The number of access capsules received at this sector with good CRC where CapsuleSize=1 and CapsuleRate=3

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=1 and CapsuleRate=3

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size2Rate1

The number of access capsules received at this sector with good CRC where CapsuleSize=2 and CapsuleRate=1

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=2 and CapsuleRate=1

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size2Rate2

The number of access capsules received at this sector with good CRC where CapsuleSize=2 and CapsuleRate=2

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=2 and CapsuleRate=2

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size2Rate3

The number of access capsules received at this sector with good CRC where CapsuleSize=2 and CapsuleRate=3

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=2 and CapsuleRate=3

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size3Rate1

The number of access capsules received at this sector with good CRC where CapsuleSize=3 and CapsuleRate=1

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=3 and CapsuleRate=1

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size3Rate2

The number of access capsules received at this sector with good CRC where CapsuleSize=3 and CapsuleRate=2

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=3 and CapsuleRate=2

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size3Rate3

The number of access capsules received at this sector with good CRC where CapsuleSize=3 and CapsuleRate=3

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=3 and CapsuleRate=3

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size4Rate1

The number of access capsules received at this sector with good CRC where CapsuleSize=4 and CapsuleRate=1

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=4 and CapsuleRate=1

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size4Rate2

The number of access capsules received at this sector with good CRC where CapsuleSize=4 and CapsuleRate=2

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=4 and CapsuleRate=2

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorNumGoodCapsules_Size4Rate3

The number of access capsules received at this sector with good CRC where CapsuleSize=4 and CapsuleRate=3

Data Source

DO-EMS

Source Field

achSectorNumGoodCapsules where CapsuleSize=4 and CapsuleRate=3

Source Section

RnSector_AchStats (AirvanaRnPerformanceMIB)

achSectorThroughputMac

The MAC layer access channel throughput in bits/second

Data Source

DO-EMS

Source Field

achSectorThroughputMac

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

achSectorThroughputPhy

The PHY layer access channel throughput in bits/second

Data Source

DO-EMS

Source Field

achSectorThroughputPhy

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

averageSessionSetupTimeSC

This OM maintains a record of the average regular session setup time for all successfully setup sessions on the Sector.

Data Source

DO-EMS

Source Field

averageSessionSetupTimeSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

avgA13HoDelayPriorSessionSC

Average delay for prior session A13 Handoff on this sector.

Data Source

DO-EMS

Source Field

avgA13HoDelayPriorSessionSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

avgA13HoDelaySC

Average delay for regular A13 Handoff on this sector.

Data Source

DO-EMS

Source Field

avgA13HoDelaySC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

borderStatusSC

This field has a value of "0" or "1". A value of "1" represents that this OM(s) is pegged on the border sector carrier. A value of "0" means that this OM is for the secondary sector-carrier.

Data Source

DO-EMS

Source Field

borderStatusSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

cchSectorAsyncSlotsUtilization

Average of 5-second values of control channel utilization for asynchronous capsules.

Data Source

DO-EMS

Source Field

cchSectorAsyncSlotsUtilization

Source Section

RnACHcapsuleCCHSyncSubSyncAsyncSlotUtilization (RnPerformanceMIB)

cchSectorAsyncSlotsUtilization_max

Maximum of 5-second values of control channel utilization for asynchronous capsules.

Data Source

DO-EMS

Source Field

cchSectorAsyncSlotsUtilization

Source Section

RnACHcapsuleCCHSyncSubSyncAsyncSlotUtilization (RnPerformanceMIB)

cchSectorAsyncSlotsUtilization_min

Minimum of 5-second values of control channel utilization for asynchronous capsules.

Data Source

DO-EMS

Source Field

cchSectorAsyncSlotsUtilization

Source Section

RnACHcapsuleCCHSyncSubSyncAsyncSlotUtilization (RnPerformanceMIB)

cchSectorNumDroppedMessages

Number of control channel messages that were dropped at this sector without transmission over the air

Data Source

DO-EMS

Source Field

cchSectorNumDroppedMessages

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

cchSectorNumLocalMessages

Control channel messages locally generated at the baseband module.

Data Source

DO-EMS

Source Field

cchSectorNumLocalMessages

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

cchSectorNumRxAcAckRequests

The number of attempts to send access probe acknowledgements through this sector.

Data Source

DO-EMS

Source Field

cchSectorNumRxAcAckRequests

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

cchSectorNumRxMessages

Number of Control Channel Messages that have been received from the BSC destined for transmission over the control channel of this sector since the sector turned operationally up

Data Source

DO-EMS

Source Field

cchSectorNumRxMessages

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

cchSectorNumTxMacPacketsInAsyncCapsules

Number of 128-byte Control Channel MAC packets that have been transmitted in asynchronous control channel capsules from this sector

Data Source

DO-EMS

Source Field

cchSectorNumTxMacPacketsInAsyncCapsules

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

cchSectorNumTxMacPacketsInSubSyncCapsules

Number of 128-byte Control Channel MAC packets that have been transmitted from this sector in sub-synchronous capsules

Data Source

DO-EMS

Source Field

cchSectorNumTxMacPacketsInSubSyncCapsules

Source Section

RnSector_Perf_2 (AirvanaRnPerformanceMIB)

cchSectorNumTxMacPacketsInSyncCapsules

Number of 128-byte Control Channel MAC packets that have been transmitted from this sector in synchronous capsules.

Data Source

DO-EMS

Source Field

cchSectorNumTxMacPacketsInSyncCapsules

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

cchSectorNumTxMessages

Control channel messages transmitted from this sector. This includes the messages received from the DO-RNC, Access channel acknowledgements and overhead messages.

Data Source

DO-EMS

Source Field

cchSectorNumTxMessages

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

cchSectorNumTxSyncCapsules_CapsuleSize1

Number of synchronous capsules transmitted from this sector where CapsuleSize=1

Data Source

DO-EMS

Source Field

cchSectorNumTxSyncCapsules where CapsuleSize=1

Source Section

RnSectorCchStats (AirvanaRnPerformanceMIB)

cchSectorNumTxSyncCapsules_CapsuleSize2

Number of synchronous capsules transmitted from this sector where CapsuleSize=2

Data Source

DO-EMS

Source Field

cchSectorNumTxSyncCapsules where CapsuleSize=2

Source Section

RnSectorCchStats (AirvanaRnPerformanceMIB)

cchSectorNumTxSyncCapsules_CapsuleSize3

Number of synchronous capsules transmitted from this sector where CapsuleSize=3

Data Source

DO-EMS

Source Field

cchSectorNumTxSyncCapsules where CapsuleSize=3

Source Section

RnSectorCchStats (AirvanaRnPerformanceMIB)

cchSectorNumTxSyncCapsules_CapsuleSize4

Number of synchronous capsules transmitted from this sector where CapsuleSize=4

Data Source

DO-EMS

Source Field

cchSectorNumTxSyncCapsules where CapsuleSize=4

Source Section

RnSectorCchStats (AirvanaRnPerformanceMIB)

cchSectorNumTxSyncCapsules_CapsuleSize5

Number of synchronous capsules transmitted from this sector where CapsuleSize=5

Data Source

DO-EMS

Source Field

cchSectorNumTxSyncCapsules where CapsuleSize=5

Source Section

RnSectorCchStats (AirvanaRnPerformanceMIB)

cchSectorNumTxSyncCapsules_CapsuleSize6

Number of synchronous capsules transmitted from this sector where CapsuleSize=6

Data Source

DO-EMS

Source Field

cchSectorNumTxSyncCapsules where CapsuleSize=6

Source Section

RnSectorCchStats (AirvanaRnPerformanceMIB)

cchSectorNumTxSyncCapsules_CapsuleSize7

Number of synchronous capsules transmitted from this sector where CapsuleSize=7

Data Source

DO-EMS

Source Field

cchSectorNumTxSyncCapsules where CapsuleSize=7

Source Section

RnSectorCchStats (AirvanaRnPerformanceMIB)

cchSectorNumTxSyncCapsules_CapsuleSize8

Number of synchronous capsules transmitted from this sector where CapsuleSize=8

Data Source

DO-EMS

Source Field

cchSectorNumTxSyncCapsules where CapsuleSize=8

Source Section

RnSectorCchStats (AirvanaRnPerformanceMIB)

cchSectorSlotUtilization

The fraction of slots used up by the control channel in thousands of percent

Data Source

DO-EMS

Source Field

cchSectorSlotUtilization

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

cchSectorSyncSubsyncSlotsUtilization

Average of 5-second values of control channel utilization for both synchronous and sub-synchronous capsules.

Data Source

DO-EMS

Source Field

cchSectorSyncSubsyncSlotsUtilization

Source Section

RnACHcapsuleCCHSyncSubSyncAsyncSlotUtilization (RnPerformanceMIB)

cchSectorSyncSubsyncSlotsUtilization_max

Maximum of 5-second values of control channel utilization for both synchronous and sub-synchronous capsules.

Data Source

DO-EMS

Source Field

cchSectorSyncSubsyncSlotsUtilization

Source Section

RnACHcapsuleCCHSyncSubSyncAsyncSlotUtilization (RnPerformanceMIB)

cchSectorSyncSubsyncSlotsUtilization_min

Minimum of 5-second values of control channel utilization for both synchronous and sub-synchronous capsules.

Data Source

DO-EMS

Source Field

cchSectorSyncSubsyncSlotsUtilization

Source Section

RnACHcapsuleCCHSyncSubSyncAsyncSlotUtilization (RnPerformanceMIB)

cchSectorThroughput

The control channel sector throughput in bits/second

Data Source

DO-EMS

Source Field

cchSectorThroughput

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

cchSectRxSetPhaseMsgsWithRpt

Number of page messages received from the DO-RNC that require repetition from the DOMs.

Data Source

DO-EMS

Source Field

cchSectRxSetPhaseMsgsWithRpt

Source Section

RnSectorPerf (RnPerformanceMIB)

channelRecordSC

Channel number corresponding to the frequency assignment of this pilot.

Data Source

DO-EMS

Source Field

channelRecordSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

channelRecordSSC

Channel number corresponding to the frequency assignment of this pilot (from Template RNC_ISSHO_PerfBySecondarySectorCarrier).

Data Source

DO-EMS

Source Field

channelRecordSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

drcEmNumFlowsClonedPeak

The peak number of cloned driver flows as a result of softer multicasting over the period time that starts from last EMS or CLI sampling until current time on a given sector-element of a DOM.

Data Source

DO-EMS

Source Field

drcEmNumFlowsClonedPeak

Source Section

RnDrcEmSectorPerf (RnPerformanceMIB)

drcEmTotalNumOccurrences

This OM represents the number of times DRC Erasure Mapping happens on a given sector-carrier.

Data Source

DO-EMS

Source Field

drcEmTotalNumOccurrences

Source Section

RnDrcEmSectorPerf (RnPerformanceMIB)

flSectorThroughputMac

The total MAC-layer forward link throughput through this sector

Data Source

DO-EMS

Source Field

flSectorThroughputMac

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

flSectorThroughputPhy

The total PHY-layer forward link throughput through this sector

Data Source

DO-EMS

Source Field

flSectorThroughputPhy

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

ftcSectorBEAggrMacBytes

The aggregate (cumulative) number of MAC layer forward link transmitted BE bytes per sector.

Data Source

DO-EMS

Source Field

ftcSectorBEAggrMacBytes

Source Section

RnSectorPerf (RnPerformanceMIB)

ftcSectorBEAggrPhyBytes

The aggregate (cumulative) number of Physical layer forward link transmitted BE bytes per sector.

Data Source

DO-EMS

Source Field

ftcSectorBEAggrPhyBytes

Source Section

RnSectorPerf (RnPerformanceMIB)

ftcSectorBEAggrSlots

The aggregate (cumulative) number of Physical layer forward link slots used for Best effort traffic per sector.

Data Source

DO-EMS

Source Field

ftcSectorBEAggrSlots

Source Section

RnSectorPerf (RnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate01

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 38.4Kbps

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=1

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate02

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 76.8Kbps

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=2

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate03

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 153.6Kbps

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=3

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate04

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 307.2Kbps (short)

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=4

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate05

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 307.2Kbps (long)

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=5

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate06

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 614.4Kbps (short)

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=6

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate07

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 614.4Kbps (long)

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=7

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate08

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 921.6Kbps

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=8

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate09

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 1228.8Kbps (short)

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=9

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate10

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 1228.8Kbps (long)

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=10

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate11

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 1843.2Kbps

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=11

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate12

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 2457.6Kbps

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=12

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate13

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 1536Kbps

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=13

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxMacBytes_PacketRate14

The number of MAC-layer bytes of FTC traffic that was transmitted from this sector at a rate of with a data rate of 3072Kbps

Data Source

DO-EMS

Source Field

ftcSectorNumTxMacBytes where PacketRate=14

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

ftcSectorNumTxPhyPkts_PacketRate01

The number of physical-layer packets that have been transmitted from this sector at a rate of with a data rate of 38.4Kbps

Data Source

DO-EMS

Source Field

ftcSectorNumTxPhyPkts where PacketRate=1

Source Section

RnSectorFtcStats (AirvanaRnPerformanceMIB)

The total number of FTC MAC-layer bytes that were transmitted from this sector for first-time transmissions.

Data Source

DO-EMS

Source Field

ftcSectorTotalNumFirstTimeTxMacBytes

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

ftcSectorTotalNumReTxMacBytes

The total number of FTC MAC-layer bytes that were transmitted from this sector due to DARQ or RLP-based re-transmissions

Data Source

DO-EMS

Source Field

ftcSectorTotalNumReTxMacBytes

Source Section

RnSectorPerf (AirvanaRnPerformanceMIB)

maxSessionSetupTimeSC

This OM maintains a record of the slowest regular successful session setup attempt among all successfully setup sessions on the Sector.

Data Source

DO-EMS

Source Field

maxSessionSetupTimeSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

minSessionSetupTimeSC

This OM maintains a record of the fastest regular successful session setup attempt among all successfully setup sessions on the Sector.

Data Source

DO-EMS

Source Field

minSessionSetupTimeSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numA0ANSetupTriggersRedirectRev0ToRevASC

Number of times a redirect trigger was generated (for an AN-initiated Connection Request) to redirect A0 ATs from Rev0 carrier to a RevA carrier, when a connection request was received.

Data Source

DO-EMS

Source Field

numA0ANSetupTriggersRedirectRev0ToRevASC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numA0ATSetupTriggersRedirectRev0ToRevASC

Number of times a redirect trigger was generated to redirect A0 ATs from Rev0 carrier to a RevA carrier, when a connection request was received.

Data Source

DO-EMS

Source Field

numA0ATSetupTriggersRedirectRev0ToRevASC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numA16AbortsATLostSSC

Number of A16 session transfer attempts from the source RNC that have been aborted with the reason code "03", which is "AT lost".

Data Source

DO-EMS

Source Field

numA16AbortsATLostSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numA16AbortsConnRelSSC

Number of A16 session transfer attempts from the source RNC that have been aborted with the reason code "02", which is "Connection Release".

Data Source

DO-EMS

Source Field

numA16AbortsConnRelSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numA16AbortsMiscSSC

Number of A16 session transfer attempts from the source RNC that have been aborted with reason code other than "02", or "03".

Data Source

DO-EMS

Source Field

numA16AbortsMiscSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numA16AttemptsSSC

Number of outgoing A16 session transfer attempts by the source RNC when this sector-carrier is the strongest pilot in the active set.

Data Source

DO-EMS

Source Field

numA16AttemptsSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numA16RejectsMiscSSC

Number of A16 session transfer attempts from the source RNC that have been rejected by the target RNC with the reason code other than "02".

Data Source

DO-EMS

Source Field

numA16RejectsMiscSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numA16RejectsRadioSSC

Number of A16 session transfer attempts from the source RNC that have been rejected by the target RNC with the reason code "02", which is "Insufficient radio resources in the target AN to support session".

Data Source

DO-EMS

Source Field

numA16RejectsRadioSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numA16SuccessSSC

Number of successful outgoing A16 session transfers by the source RNC when this sector-carrier is the strongest pilot in the active set.

Data Source

DO-EMS

Source Field

numA16SuccessSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numA16SuppressedSrcRnSwSSC

Number of A16 session transfer triggers on the source RNC which have been suppressed because at least one of the DOMs in the active set is running pre- 6.0 software.

Data Source

DO-EMS

Source Field

numA16SuppressedSrcRnSwSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numA16TimeoutSSC

Number of A16 session transfer attempts from the source RNC that have timed out without getting any response from the target RNC.

Data Source

DO-EMS

Source Field

numA16TimeoutSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numAaANSetupTriggersRedirectRev0ToRevASC

Number of times a redirect trigger was generated (for an AN-initiated Connection Request) to redirect Aa ATs from Rev0 carrier to a RevA carrier, when a connection request was received.

Data Source

DO-EMS

Source Field

numAaANSetupTriggersRedirectRev0ToRevASC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAaATSetupTriggersRedirectRev0ToRevASC

Number of times a redirect trigger was generated to redirect Aa ATs from Rev0 carrier to a RevA carrier, when a connection request was received (this should be rare, or none).

Data Source

DO-EMS

Source Field

numAaATSetupTriggersRedirectRev0ToRevASC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumAllocationAttemptsTxRNSC

Number of times the RNC sent a resource allocation request to open a traffic channel

Data Source

DO-EMS

Source Field

NumAllocationAttemptsTxRNSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationAttemptsTxRnSSC

This statistic counts the number of times the DO-RNC sent a resource allocation request (to open a traffic channel) for this sector.

Data Source

DO-EMS

Source Field

numAllocationAttemptsTxRnSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnACLimitSC

Number of times that the allocation request was rejected at the RN by admission control.

Data Source

DO-EMS

Source Field

numAllocationBlockRnACLimitSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnACLimitSSC

Number of times that the allocation request was rejected at the RN by admission control.

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

NumAllocationBlockRNConnectionLimitSC

Number of times that the allocation request was rejected at the RN because the configured maximum airlinks had been used up

Data Source

DO-EMS

Source Field

NumAllocationBlockRNConnectionLimitSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnConnectionLimitSSC

This statistic counts the number of times that the allocation request was rejected at the DOM because the configured maximum airlinks had been used up.

Data Source

DO-EMS

Source Field

numAllocationBlockRnConnectionLimitSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

NumAllocationBlockRNDriverResourceSC

Number of times the ASIC driver on the RN rejected a request to allocate/open a traffic channel

Data Source

DO-EMS

Source Field

NumAllocationBlockRNDriverResourceSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnDriverResourceSSC

This statistic counts the number of times the ASIC driver on the DOM rejected a request to allocate/open a traffic channel on this sector.

Data Source

DO-EMS

Source Field

numAllocationBlockRnDriverResourceSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnFlowLimitSC

Number of times that the allocation request was rejected at the RN because flow queue resource had been used up.

Data Source

DO-EMS

Source Field

numAllocationBlockRnFlowLimitSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnFlowLimitSSC

Number of times that the allocation request was rejected at the RN because flow queue resource had been used up.

Data Source

DO-EMS

Source Field

numAllocationBlockRnFlowLimitSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnMACIDLimitSC

Number of times that the allocation request was rejected at the RN because Mac ID resource had been used up.

Data Source

DO-EMS

Source Field

numAllocationBlockRnMACIDLimitSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnMACIDLimitSSC

Number of times that the allocation request was rejected at the RN because Mac ID resource had been used up.

Data Source

DO-EMS

Source Field

numAllocationBlockRnMACIDLimitSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

NumAllocationBlockRNMessageValidationSC

RNC allocation request rejected at the RN because the message was malformed

Data Source

DO-EMS

Source Field

NumAllocationBlockRNMessageValidationSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnMessageValidationSSC

This statistic counts the number of times the allocation request from the DORNC was rejected at the DOM because the message was malformed.

Data Source

DO-EMS

Source Field

numAllocationBlockRnMessageValidationSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

NumAllocationBlockRNModemTimeoutSC

Number of times that the SC on the RN did not receive a response from the modem cards within the stipulated time

Data Source

DO-EMS

Source Field

NumAllocationBlockRNModemTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnModemTimeoutSSC

This statistic counts the number of times that the SC on the DOM did not receive a response from the modem cards within the stipulated time.

Data Source

DO-EMS

Source Field

numAllocationBlockRnModemTimeoutSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

NumAllocationBlockRNNNoConnectionSC

RNC allocation request rejected at the RN because the RN could not identify the 'existing open connection'

Data Source

DO-EMS

Source Field

NumAllocationBlockRNNNoConnectionSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnNoConnectionSSC

This statistic counts the number of times the allocation request from the DO-RNC was rejected at the DOM because the DOM could not identify the ?existing open connection?.

Data Source

DO-EMS

Source Field

numAllocationBlockRnNoConnectionSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

NumAllocationBlockRNSectorCarrierDownSC

Number of times that the allocation request was rejected at the RN because the sector carrier was operationally down

Data Source

DO-EMS

Source Field

NumAllocationBlockRNSectorCarrierDownSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationBlockRnSectorCarrierDownSSC

This statistic counts the number of times that the allocation request was rejected at the DOM because the sector carrier was operationally down.

Data Source

DO-EMS

Source Field

numAllocationBlockRnSectorCarrierDownSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

NumAllocationRNSuccessSC

Number of times the RN was able to successfully allocate the resources and open a traffic channel

Data Source

DO-EMS

Source Field

NumAllocationRNSuccessSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numAllocationRnSuccessSSC

This statistic counts the number of times the RN was able to successfully allocate the resource (& open a traffic channel) for this sector.

Data Source

DO-EMS

Source Field

numAllocationRnSuccessSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numANAttemptedTriggersSwitchA0ToAaSC

Number of times a trigger was attempted (for an AN-initiated Connection Request) to switch the RevA capable AT's personality from Rev0 to RevA.

Data Source

DO-EMS

Source Field

numANAttemptedTriggersSwitchA0ToAaSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANAttemptedTriggersSwitchA0ToAaSSC

Number of times a trigger was attempted (for an AN-initiated Connection Request) to switch the RevA capable AT's personality from Rev0 to RevA.

Data Source

DO-EMS

Source Field

numANAttemptedTriggersSwitchA0ToAaSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numANAttemptedTriggersSwitchAaToA0SC

Number of times a trigger was attempted (for an AN-initiated Connection Request) to switch the RevA capable AT's personality from RevA to Rev0.

Data Source

DO-EMS

Source Field

numANAttemptedTriggersSwitchAaToA0SC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANAttemptedTriggersSwitchAaToA0SSC

Number of times a trigger was attempted (for an AN-initiated Connection Request) to switch the RevA capable AT's personality from RevA to Rev0.

Data Source

DO-EMS

Source Field

numANAttemptedTriggersSwitchAaToA0SSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numANConnectionSetupsAbortedSC

The number of times the connection setup failed because of reasons that are not explicitly called out otherwise.

Data Source

DO-EMS

Source Field

numANConnectionSetupsAbortedSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANConnectionSetupsBlockedByRncCpuSC

The number of times the DO-RNC blocked the connection setup due to CPU overload.

Data Source

DO-EMS

Source Field

numANConnectionSetupsBlockedByRncCpuSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumANConnectionSetupsBlockedByRncResourceSC

RNC blocked the connection setup for an AN-initiated Connection Request because Resource Control on the RNC was unable to allocate the requested resource

Data Source

DO-EMS

Source Field

NumANConnectionSetupsBlockedByRncResourceSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumANConnectionSetupsBlockedByRnSC

RNC blocked the connection setup for an AN-initiated Connection Request because at least one of the resource allocation requests sent to the RN(s) was denied

Data Source

DO-EMS

Source Field

NumANConnectionSetupsBlockedByRnSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANConnectionSetupsFailedByRncResourceTimeoutSC

The number of times that the connection setup failed because a response to a resource allocation request sent by Call Control to Resource Control on the DO-RNC was not received within the stipulated time.

Data Source

DO-EMS

Source Field

numANConnectionSetupsFailedByRncResourceTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANConnectionSetupsFailedByRnTimeoutSC

The number of times that the connection setup failed because at least one response for resource allocation requests sent to the DOM(s) was not received within the stipulated time.

Data Source

DO-EMS

Source Field

numANConnectionSetupsFailedByRnTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANConnectionSetupsFailedRuTimeoutSC

The number of times that the connection setup failed because the Route Update from the AT was either not received at the DO-RNC or was not resolved by the DO-RNC.

Data Source

DO-EMS

Source Field

numANConnectionSetupsFailedRuTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANConnectionSetupsFailedSwErrorSC

The number of times that the connection setup failed because of software errors.

Data Source

DO-EMS

Source Field

numANConnectionSetupsFailedSwErrorSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumANConnectionSetupsFailedTccTimeoutSC

Setup failed for an AN-initiated Connection Request because it did not receive the TCC message from the AT within the stipulated time

Data Source

DO-EMS

Source Field

NumANConnectionSetupsFailedTccTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANConnReqsWhileOpenRevAConnSC

Number of times that the AN-initiated Connection Request message was received at a time when the RNC thought a RevA Connection was already open.

Data Source

DO-EMS

Source Field

numANConnReqsWhileOpenRevAConnSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumANConnReqsWhileOpenSC

AN-initiated Connection Request message received when the RNC thought a Connection was already open indicating a mismatch in states between the AT and the RNC

Data Source

DO-EMS

Source Field

NumANConnReqsWhileOpenSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANConnReqsWhileSettingUpRevAConnSC

Number of times that the AN-initiated Connection Request message was received while the RNC was already in the process of setting up a RevA connection.

Data Source

DO-EMS

Source Field

numANConnReqsWhileSettingUpRevAConnSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumANConnReqsWhileSettingUpSC

AN-initiated Connection Request message received while the RNC was already in the process of setting up a connection

Data Source

DO-EMS

Source Field

NumANConnReqsWhileSettingUpSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANConnReqsWhileTearingDownRevAConnSC

Number of times that the AN-initiated Connection Request message was received at a time when the RNC was in the process of tearing down a RevA connection.

Data Source

DO-EMS

Source Field

numANConnReqsWhileTearingDownRevAConnSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumANConnReqsWhileTearingDownSC

AN-initiated Connection Request message received while the RNC was already in the process of tearing down a connection

Data Source

DO-EMS

Source Field

NumANConnReqsWhileTearingDownSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANRevAConnectionSetupsAbortedSC

Number of times that RevA connection setup failed (for an AN-initiated Connection Request) because of reasons that are not explicitly called out in this list.

Data Source

DO-EMS

Source Field

numANRevAConnectionSetupsAbortedSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANRevAConnectionSetupsBlockedByRncCpuSC

Number of times the RNC blocked RevA connection setup (for an AN-initiated Connection Request) due to CPU overload.

Data Source

DO-EMS

Source Field

numANRevAConnectionSetupsBlockedByRncCpuSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANRevAConnectionSetupsBlockedByRnSC

Number of times that the RNC blocked RevA connection setup (for an AN-initiated Connection Request) because at least one of the resource allocation requests sent to the RN(s) was denied.

Data Source

DO-EMS

Source Field

numANRevAConnectionSetupsBlockedByRnSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANRevAConnectionSetupsFailedByRnTimeoutSC

Number of times that RevA connection setup failed (for an AN-initiated Connection Request) because at least one response for resource allocation requests sent to the RN(s) was not received within the stipulated time.

Data Source

DO-EMS

Source Field

numANRevAConnectionSetupsFailedByRnTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANRevAConnectionSetupsFailedRuTimeoutSC

Number of times that RevA connection setup failed (for an AN-initiated Connection Request) because the Route Update from the AT (specifying the pilots to consider for inclusion in the Active Set) was either not received at the RNC (within the stipulated time) or was not resolved by the RNC (within the stipulated time).

Data Source

DO-EMS

Source Field

numANRevAConnectionSetupsFailedRuTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANRevAConnectionSetupsFailedSwErrorSC

Number of times that RevA connection setup failed (for an AN-initiated Connection Request) because of software errors.

Data Source

DO-EMS

Source Field

numANRevAConnectionSetupsFailedSwErrorSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANRevAConnectionSetupsFailedTccTimeoutSC

Number of times that the RevA connection setup failed (for an AN-initiated Connection Request) because RNC did not receive the TCC message from the AT within the stipulated time.

Data Source

DO-EMS

Source Field

numANRevAConnectionSetupsFailedTccTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANSetupTriggersRedirectRevAToRev0SC

Number of times a redirect trigger was generated (for an AN-initiated Connection Request) to redirect Rev0 ATs from RevA carrier to a Rev0 carrier, when a connection request was received.

Data Source

DO-EMS

Source Field

numANSetupTriggersRedirectRevAToRev0SC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANSetupTriggersSwitchA0ToAaAbortedSC

Number of times that RevA connection setup failed (for an AN-initiated Connection Request) in response to the numANAttemptedTriggersSwitchA0ToAaSC triggers, because of reasons that are not captured by any other OM.

Data Source

DO-EMS

Source Field

numANSetupTriggersSwitchA0ToAaAbortedSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numANSetupTriggersSwitchA0ToAaAbortedSSC

Number of times that RevA connection setup failed (for an AN-initiated Connection Request) in response to the numANAttemptedTriggersSwitchA0ToAaSSC triggers, because of reasons that are not captured by any other OM.

Data Source

DO-EMS

Source Field

numANSetupTriggersSwitchA0ToAaAbortedSSC

Source Section

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numANSetupTriggersSwitchA0ToAaBlockedByRnSC

Number of times that the RNC blocked RevA connection setup in response to the numANAttemptedTriggersSwitchA0ToAaSC triggers (for an AN-initiated Connection Request) because at least one of the resource allocation requests sent to the RN(s) was denied.

Data Source

DO-EMS

Source Field

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumATConnReqsWhileOpenSC

AT-initiated Connection Request message received when the RNC thought a Connection was already open indicating a mismatch in states between the AT and the RNC

Data Source

DO-EMS

Source Field

NumATConnReqsWhileOpenSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numATConnReqsWhileSettingUpRevAConnSC

Number of times an AT-initiated Connection Request message received while the RNC was already in the process of setting up a RevA connection.

Data Source

DO-EMS

Source Field

numATConnReqsWhileSettingUpRevAConnSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumATConnReqsWhileSettingUpSC

AT-initiated Connection Request message received while the RNC was already in the process of setting up a connection

Data Source

DO-EMS

Source Field

NumATConnReqsWhileSettingUpSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numATConnReqsWhileTearingDownRevAConnSC

Number of times an AT-initiated Connection Request message was received at a time when the RNC was in the process of tearing down a RevA connection.

Data Source

DO-EMS

Source Field

numATConnReqsWhileTearingDownRevAConnSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

NumATConnReqsWhileTearingDownSC

AT-initiated Connection Request message received while the RNC was already in the process of tearing down a connection

Data Source

DO-EMS

Source Field

NumATConnReqsWhileTearingDownSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numATReportedTuneAwayDropsSC

Number of times connection failure records from rev-A ATs, via IS856-A connection failure reporting message, received by the RNC indicating connection failures due to the RevA AT tuning away to 3G1X network while connected to 1xEVDO network and the timestamp in connection failure record is within 10 seconds of last RF related drop (FTC stopped timestamp stored at the RNC).

Data Source

DO-EMS

RNCISSHOPerfBySecondarySectorCarrier (RncIS856PerfMIB)

numATRevAConnectionSetupsAbortedSC

Number of times that RevA connection setup failed (for an AT-initiated Connection Request) because of reasons that are not explicitly called out in this list.

Data Source

DO-EMS

Source Field

numATRevAConnectionSetupsAbortedSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numATRevAConnectionSetupsBlockedByRncCpuSC

Number of times the RNC blocked RevA connection setup (for an AT-initiated Connection Request) due to CPU overload. This OM is always pegged on the source sector on which this connection request was received.

Data Source

DO-EMS

Source Field

numATRevAConnectionSetupsBlockedByRncCpuSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numATRevAConnectionSetupsBlockedByRnSC

Number of times that the RNC blocked RevA connection setup (for an AT-initiated Connection Request) because at least one of the resource allocation requests sent to the RN(s) was denied.

Data Source

DO-EMS

Source Field

numATRevAConnectionSetupsBlockedByRnSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numATRevAConnectionSetupsFailedByRnTimeoutSC

Number of times that RevA connection setup failed (for an AT-initiated Connection Request) because at least one response for resource allocation requests sent to the RN(s) was not received within the stipulated time. This OM is always pegged on the source sector on which this connection request was received.

Data Source

DO-EMS

Source Field

numATRevAConnectionSetupsFailedByRnTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numATRevAConnectionSetupsFailedRuTimeoutSC

Number of times that RevA connection setup failed (for an AT-initiated Connection Request) because the Route Update from the AT (specifying the pilots to consider for inclusion in the Active Set) was either not received at the RNC (within the stipulated time) or was not resolved by the RNC (within the stipulated time).

Data Source

DO-EMS

Source Field

numATRevAConnectionSetupsFailedRuTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numATRevAConnectionSetupsFailedSwErrorSC

Number of times that RevA connection setup failed (for an AT-initiated Connection Request) because of software errors.

Data Source

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsFailedInvlIdUATICmplTSeqNumSC

This OM is a counter for the total number of regular session setup attempts that are aborted when the DO-RNC / RNSM fails to receive a ?valid? UATIComplete message from the AT (in response to a UATIAssignment message).

Data Source

DO-EMS

Source Field

numSessionSetupsFailedInvldUATICmpltSeqNumSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsFailedOtherCausesSC

The number of times that session setup failed for reasons not explicitly identified in other fields.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedOtherCausesSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsFailedRNCInitiatedSessionCloseSC

The total number of regular session-setups that are aborted on the DO-RNC / RNSM, when a (local) user-initiated request to close a session is received on that DO-RNC.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedRNCInitiatedSessionCloseSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsFailedSessionConfigSC

This statistic counts the number of times that a session setup attempt failed because the DO-RNC was unable to successfully conclude the Session Configuration phase.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedSessionConfigSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsFailedSessionInfoConfirmSC

This OM is a counter for the total number of regular session setup attempts that are aborted on the DO-RNC / RNSM, when an A13-Confirmation message is received on the source RNC after the associated session instance is successfully transferred to the targ

Data Source

DO-EMS

Source Field

numSessionSetupsFailedSessionInfoConfirmSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsFailedTermAuthSC

The number of times that a session setup attempt failed because the DO-RNC was unable to successfully conclude the Terminal Authentication phase.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedTermAuthSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsFailedUATICompleteTimeoutSC

The number of times that a session setup attempt failed because the DO-RNC did not receive the UATI Complete message from the AT.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedUATICompleteTimeoutSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsFailedUnknownForeignUatiRequestSC

This statistic tallies counts if the AT had sent a UATI Request message with the ATI type of UATI such that the UATI is not local to the DO-RNC.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedUnknownForeignUatiRequestSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsFailedUnknownLocalUatiRequestSC

If the AT had sent a UATI Request message such that the UATI is local to the DORNC and no session with that UATI is known at the DORNC, this statistic will tally.

Data Source

DO-EMS

Source Field

numSessionSetupsFailedUnknownLocalUatiRequestSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSessionSetupsSuccessfulSC

The number of successfully setup sessions where the UATI Request was received on the corresponding sector.

Data Source

DO-EMS

Source Field

numSessionSetupsSuccessfulSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSignalStrengthHHOA0ToA0AbortsSC

This OM is pegged for Signal Strength trigger based hard handoffs for Rev0 connections between two sectors on different carriers, that aborted for several reasons, some of the reasons could be: resource allocation for none of the pilots succeeded, downleg creation for none of the pilots succeeded.

Data Source

DO-EMS

Source Field

numSignalStrengthHHOA0ToA0AbortsSC

Source Section

RNCPerfBySectorCarrier (RncIS856PerfMIB)

numSignalStrengthHHOA0ToA0AbortsSSC

Number of Signal Strength trigger based hard handoffs for Rev0 connections between two sectors on different carriers, that aborted for several reasons, some of the reasons could be: resource allocation for none of the pilots succeeded, downleg creation for none of the pilots succeeded.

Data Source

DO-EMS

Source Field

Calculation

rtcSeHiCapBadPhyPkts

Total number of High-Capacity RTC Physical Layer packets received with bad CRC.

Calculation

```
vsum (rtcSeHiCapBadPhyPkts_PktRate01, rtcSeHiCapBadPhyPkts_PktRate02,  
rtcSeHiCapBadPhyPkts_PktRate03, rtcSeHiCapBadPhyPkts_PktRate04,  
rtcSeHiCapBadPhyPkts_PktRate05, rtcSeHiCapBadPhyPkts_PktRate06,  
rtcSeHiCapBadPhyPkts_PktRate07, rtcSeHiCapBadPhyPkts_PktRate08,  
rtcSeHiCapBadPhyPkts_PktRate09, rtcSeHiCapBadPhyPkts_PktRate10,  
rtcSeHiCapBadPhyPkts_PktRate11, rtcSeHiCapBadPhyPkts_PktRate12, 0)
```

rtcSeHiCapGdMacBytes

Total number of RTC MAC bytes received in good High-Capacity packets.

Calculation

```
vsum (rtcSeHiCapGdMacBytes_PktRate01, rtcSeHiCapGdMacBytes_PktRate02,  
rtcSeHiCapGdMacBytes_PktRate03, rtcSeHiCapGdMacBytes_PktRate04,  
rtcSeHiCapGdMacBytes_PktRate05, rtcSeHiCapGdMacBytes_PktRate06,  
rtcSeHiCapGdMacBytes_PktRate07, rtcSeHiCapGdMacBytes_PktRate08,  
rtcSeHiCapGdMacBytes_PktRate09, rtcSeHiCapGdMacBytes_PktRate10,  
rtcSeHiCapGdMacBytes_PktRate11, rtcSeHiCapGdMacBytes_PktRate12, 0)
```

rtcSeHiCapGdPhyPkts

Total number of High-Capacity RTC Physical Layer packets received with good CRC.

Calculation

```
vsum (rtcSeHiCapGdPhyPkts_PktRate01, rtcSeHiCapGdPhyPkts_PktRate02,  
rtcSeHiCapGdPhyPkts_PktRate03, rtcSeHiCapGdPhyPkts_PktRate04,  
rtcSeHiCapGdPhyPkts_PktRate05, rtcSeHiCapGdPhyPkts_PktRate06,  
rtcSeHiCapGdPhyPkts_PktRate07, rtcSeHiCapGdPhyPkts_PktRate08,  
rtcSeHiCapGdPhyPkts_PktRate09, rtcSeHiCapGdPhyPkts_PktRate10,  
rtcSeHiCapGdPhyPkts_PktRate11, rtcSeHiCapGdPhyPkts_PktRate12, 0)
```

rtcSeLoLatBadPhyPkts

Total number of Low-Latency RTC Physical Layer packets received with bad CRC.

Calculation

```
vsum (rtcSeLoLatBadPhyPkts_PktRate01, rtcSeLoLatBadPhyPkts_PktRate02,  
rtcSeLoLatBadPhyPkts_PktRate03, rtcSeLoLatBadPhyPkts_PktRate04,  
rtcSeLoLatBadPhyPkts_PktRate05, rtcSeLoLatBadPhyPkts_PktRate06,  
rtcSeLoLatBadPhyPkts_PktRate07, rtcSeLoLatBadPhyPkts_PktRate08,  
rtcSeLoLatBadPhyPkts_PktRate09, rtcSeLoLatBadPhyPkts_PktRate10,  
rtcSeLoLatBadPhyPkts_PktRate11, rtcSeLoLatBadPhyPkts_PktRate12, 0)
```

rtcSeLoLatGdMacBytes

Total number of RTC MAC bytes received in good Low-Latency packets.

Calculation

```
vsum (rtcSeLoLatGdMacBytes_PktRate01, rtcSeLoLatGdMacBytes_PktRate02,  
rtcSeLoLatGdMacBytes_PktRate03, rtcSeLoLatGdMacBytes_PktRate04,  
rtcSeLoLatGdMacBytes_PktRate05, rtcSeLoLatGdMacBytes_PktRate06,  
rtcSeLoLatGdMacBytes_PktRate07, rtcSeLoLatGdMacBytes_PktRate08,  
rtcSeLoLatGdMacBytes_PktRate09, rtcSeLoLatGdMacBytes_PktRate10,  
rtcSeLoLatGdMacBytes_PktRate11, rtcSeLoLatGdMacBytes_PktRate12, 0)
```

rtcSeLoLatGdPhyPkts

Total number of Low-Latency RTC Physical Layer packets received with good CRC.

Calculation

```
vsum (rtcSeLoLatGdPhyPkts_PktRate01, rtcSeLoLatGdPhyPkts_PktRate02,  
rtcSeLoLatGdPhyPkts_PktRate03, rtcSeLoLatGdPhyPkts_PktRate04,  
rtcSeLoLatGdPhyPkts_PktRate05, rtcSeLoLatGdPhyPkts_PktRate06,

DOM_Sector_Priority Peg Counts

The following is a list of peg counts for the DOM_Sector_Priority entity.

ftcSectorBEMacBytes

The cumulative number of MAC layer forward link transmitted BE bytes per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

ftcSectorBEMacBytes

Source Section

RnSectorPerfFTCIUBE (RnPerformanceMIB)

ftcSectorBEPhyBytes

The cumulative number of Physical layer forward link transmitted BE bytes per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

ftcSectorBEPhyBytes

Source Section

RnSectorPerfFTCIUBE (RnPerformanceMIB)

ftcSectorBESlots

The cumulative number of slots used for forward link Physical layer BE packets per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

ftcSectorBESlots

Source Section

RnSectorPerfFTCIUBE (RnPerformanceMIB)

ftcSeSchBEDelHis_Bin0

The cumulative number of FL MAC layer BE bytes which have experienced a delay of 0-7 slots.

Data Source

DO-EMS

Source Field

ftcSeSchBEDelHis where mPfSeIUBESchBinId=0

Source Section

RnSectorPerfDelIUBE (RnPerformanceMIB)

ftcSeSchBEDelHis_Bin1

The cumulative number of FL MAC layer BE bytes which have experienced a delay of 8-15 slots.

Data Source

DO-EMS

Source Field

ftcSeSchBEDelHis where mPfSeIUBESchBinId=1

Source Section

RnSectorPerfDelIUBE (RnPerformanceMIB)

ftcSeSchBEDelHis_Bin2

The cumulative number of FL MAC layer BE bytes which have experienced a delay of 16-31 slots.

Data Source

DO-EMS

Source Field

ftcSeSchBEDelHis where mPfSeIUBESchBinId=2

Source Section

RnSectorPerfDelIUBE (RnPerformanceMIB)

ftcSeSchBEDelHis_Bin3

The cumulative number of FL MAC layer BE bytes which have experienced a delay of 32-63 slots.

Data Source

DO-EMS

Source Field

ftcSeSchBEDelHis where mPfSeIUBESchBinId=3

Source Section

RnSectorPerfDelIUBE (RnPerformanceMIB)

ftcSeSchBEDelHis_Bin4

The cumulative number of FL MAC layer BE bytes which have experienced a delay of 64-127 slots.

Data Source

DO-EMS

Source Field

ftcSeSchBEDelHis where mPfSeIUBESchBinId=4

Source Section

RnSectorPerfDelIUBE (RnPerformanceMIB)

ftcSeSchBEDelHis_Bin5

The cumulative number of FL MAC layer BE bytes which have experienced a delay of 128-255 slots.

Data Source

DO-EMS

Source Field

ftcSeSchBEDelHis where mPfSeIUBESchBinId=5

Source Section

RnSectorPerfDelIUBE (RnPerformanceMIB)

ftcSeSchBEDelHis_Bin6

The cumulative number of FL MAC layer BE bytes which have experienced a delay of 256-511 slots.

Data Source

DO-EMS

Source Field

ftcSeSchBEDelHis where mPfSeIUBESchBinId=6

Source Section

RnSectorPerfDelIUBE (RnPerformanceMIB)

ftcSeSchBEDelHis_Bin7

The cumulative number of FL MAC layer BE bytes which have experienced a delay of 512 and up slots.

Data Source

DO-EMS

Source Field

ftcSeSchBEDelHis where mPfSeIUBESchBinId=7

Source Section

RnSectorPerfDelIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate01

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 4.8 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where rnPfSeRtcIUBEpktRate=1

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate02

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 9.6 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where rnPfSeRtcIUBEpktRate=2

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate03

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 19.2 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where rnPfSeRtcIUBEpktRate=3

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate04

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 28.8 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where mPfSeRtcIUBEPktRate=4

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate05

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 38.4 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where mPfSeRtcIUBEPktRate=5

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate06

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 57.6 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where mPfSeRtcIUBEPktRate=6

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate07

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 76.8 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where mPfSeRtcIUBEPktRate=7

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate08

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 115.2 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where mPfSeRtcIUBEPktRate=8

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate09

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 153.6 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where rnPfSeRtcIUBEpktRate=9

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate10

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 230.4 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DO-EMS

Source Field

rtcSeHiCapBadPhyPkts where rnPfSeRtcIUBEpktRate=10

Source Section

RnSectorPerfRTCIUBE (RnPerformanceMIB)

rtcSeHiCapBadPhyPkts_PktRate11

Total number of High-Capacity RTC Physical Layer packets received with bad CRC for RL nominal data rate of 307.2 Kbps per inter-user BE priority level per sector, pegged according to the priority level received from the RNC.

Data Source

DS1Carrier Peg Counts

The following is a list of peg counts for the DS1Carrier entity.

DS1AIS

Register DS1AIS counts messages the system receives from the PM and indicates that the PM receives an alarm indication signal.

Data Source

MTX OM

Source Field

DS1AIS

Source Section

DS1CARR

DS1BER

Register DS1BER counts messages that the system receives from the PM. The messages indicate that the bit error rate exceeds maintenance or OOS thresholds.

Data Source

MTX OM

Source Field

DS1BER

Source Section

DS1CARR

DS1CBU

Register DS1CBU is a usage register. The scan rate is 100 s. It records if the DS-1 carrier is C-side busy. The DS-1 carrier is C-side busy because the C-side PM of the carrier is OOS.

Data Source

MTX OM

Source Field

DS1CBU

Source Section

DS1CARR

DS1ECF

Register DS1ECF counts the number of echo canceller failures in the DS-1 carrier during a 10 min audit cycle.

Data Source

MTX OM

Source Field

DS1ECF

Source Section

DS1CARR

DS1ES

Register DS1ES counts DS-1 error seconds during XMS-based peripheral module (XPM) audits. Table CARRMTC identifies error second thresholds.

Data Source

MTX OM

Source Field

DS1ES

Source Section

DS1CARR

DS1LCGA

The system reports a local carrier group alarm when the system loses framing on incoming data for 2.5s. The alarm clears when the system regains framing for 10s.

Data Source

MTX OM

Source Field

DS1LCGA

Source Section

DS1CARR

DS1LOF

Register DS1LOF counts occurrences of frame loss on the incoming side of the associated digital carrier.

Data Source

MTX OM

Source Field

DS1LOF

Source Section

DS1CARR

DS1MBU

Register DS1MBU is a usage register. The scan rate is 100 s. It records if a DS-1 carrier is manual busy.

Data Source

MTX OM

Source Field

DS1MBU

Source Section

DS1CARR

DS1PBU

Register DS1PBU is a usage register. The scan rate is 100 s. It records if a DS-1 carrier is P-side busy. A carrier is P-side busy when the carrier remote (P-side) PM is OOS.

Data Source

MTX OM

Source Field

DS1PBU

Source Section

DS1CARR

DS1RCGA

The system reports a remote DS-1 carrier group alarm when DIGIT TWO is zero for all incoming words for 450 ms. The alarm clears when the system removes the far-end DIGIT TWO forcing signal for 75 ms.

Data Source

MTX OM

Source Field

DS1RCGA

Source Section

DS1CARR

DS1SBU

Register DS1SBU is a usage register. The scan rate is 100 s. A carrier system becomes busy when the carrier reaches an OOS threshold.

Data Source

MTX OM

Source Field

DS1SBU

Source Section

DS1CARR

DS1SES

Register DS1SES counts DS-1 severe error seconds during XPM audits.

Data Source

MTX OM

Source Field

DS1SES

Source Section

DS1CARR

DS1SLP

Register DS1SLP counts occurrences of frame slip on an associated digital carrier. Flame slip occurs as a result of overrun or underrun of the incoming bit stream.

Data Source

MTX OM

Source Field

DS1SLP

Source Section

DS1CARR

DS1UAS

Register DS1UAS counts DS-1 unavailable seconds during XPM audits.

Data Source

MTX OM

Source Field

DS1UAS

SCH Burst Setup (Group ID 9)

FwdBurstNonDowngrade_4X

This OM should be pegged whenever a request to setup a Forward 4X SCH is granted (at 4X without being downgraded) based only on ACP capacity (i.e. prior to BTS resources considerations).

Data Source

NBSS SBSC OMs

Source Field

FwdBurstNonDowngrade_4X (Seq# 48)

Source Section

SCH Burst Setup (Group ID 9)

FwdBurstNonDowngrade_8X

This OM should be pegged whenever a request to setup a Forward 8X SCH is granted (at 8X without being downgraded) based only on ACP capacity (i.e. prior to BTS resources considerations).

Data Source

NBSS SBSC OMs

Source Field

FwdBurstNonDowngrade_8X (Seq# 49)

Source Section

SCH Burst Setup (Group ID 9)

FwdBurstNonDowngradeChange_16X

This OM is pegged when the BSC fair share algorithm downgraded a fwd burst request (from 16x to a lower data rate) that was not downgraded initially before it was queued at the BTS scheduler.

Data Source

NBSS SBSC OMs

Source Field

FwdBurstNonDowngradeChange_16X (Seq# 86)

The total number of renewal registration requests denied by the PDSN/FA. Reasons for a PDSN/FA denial are described later in this table.

Data Source

PDSN16000

Source Section

MIPFA1

Source Field

%denied-pdsn-renewal%

denied_pdsn_resource

The total number of registration requests for which a FA reply code of 42H (Registration Denied - insufficient resources) was sent.

Data Source

PDSN16000

Source Section

MIPFA1

Source Field

%denied-pdsn-resource%

denied_pdsn_revtunmand

The total number of registration requests for which a PDSN reply code of 4BH (Registration Denied - reverse tunnel is mandatory and Tbit not set) was sent.

Data Source

PDSN16000

Source Section

MIPFA2

Source Field

%denied-pdsn-revtunmand%

denied_pdsn_revtununavail

The total number of registration requests for which a PDSN reply code of 4AH (Registration Denied - requested reverse tunnel unavailable) was sent.

Data Source

PDSN16000

Source Section

MIPFA2

Source Field

%denied-pdsn-revtununavail%

denied_pdsn_stalechallenge

The total number of registration requests for which a FA reply code of 6AH (Registration Denied - stale challenge) was sent.

Data Source

PDSN16000

Source Section

MIPFA1

Source Field

%denied-pdsn-stalechallenge%

denied_pdsn_styleunavail

The total number of registration requests for which a FA reply code of 4FH (Registration Denied - reverse tunneling delivery style unavailable) was sent.

Data Source

PDSN16000

Source Section

MIPFA1

Source Field

%denied-pdsn-styleunavail%

denied_pdsn_timeout

The total number of registration requests for which a FA reply code of 4EH (Registration Denied - registration timeout) was sent.

Data Source

PDSN16000

Source Section

MIPFA1

Source Field

%denied-pdsn-timeout%

denied_pdsn_total

The total number of registration requests that have been denied by the Packet Data Service Node/Foreign Agent (PDSNFA). Reasons for a PDSN/FA denial are described later in this table.

Data Source

PDSN16000

Source Section

MIPFA1

Source Field

%denied-pdsn-total%

denied_pdsn_unkchallenge

The total number of registration requests for which a FA reply code of 68H (Registration Denied - unknown challenge) was sent.

Data Source

PDSN16000

Source Section

MIPFA1

Source Field

%denied-pdsn-unkchallenge%

denied_pdsn_unspec

The total number of registration requests for which an FA reply code of 40H (Registration Denied - reason unspecified) was sent.

Data Source

PDSN16000

Source Section

MIPFA1

Source Field

%denied-pdsn-unspec%

denied_renewal

The total number of renewal registration requests denied.

Data Source

PDSN16000

HA_Service Peg Counts

The following is a list of peg counts for the HA_Service entity.

accept_dereg

The total number of requests for de-registration accepted.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%accept-dereg%

accept_ho

The total number of handoff registration requests accepted.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%accept-ho%

accept_reg

The total number of initial registration requests accepted.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%accept-reg%

accept_renew

The total number of renewal registration requests accepted.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%accept-renew%

accept_total

The total number of registration requests accepted.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%accept-total%

admindrop

The total number of sessions that were disconnected due to an administrative clearing of calls (i.e. executing the clear subscribercommand).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%admindrop%

denied_dereg

The total number of requests for de-registration denied.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%denied-dereg%

denied_ho

The total number of handoff registration requests denied.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%denied-ho%

denied_initial

The total number of initial registration requests denied.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%denied-initial%

denied_renew

The total number of renewal registration requests denied.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%denied-renew%

denied_total

The total number of registration requests that were denied.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%denied-total%

dereg

The total number of sessions that were disconnected due to de-registrations.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%dereg%

discard_total

The total number of registration requests that were discarded.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%discard-total%

disconnects

The total number of sessions that were disconnected.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%disconnects%

expiry

The total number of sessions that were disconnected due to the expiration of their lifetime setting.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%expiry%

farevocation

The total number of FA revocations that occurred.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%farevocation%

num_sessions

The current total number of Mobile IP HA sessions.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%num-sessions%

recv_dereg

The total number of requests for de-registration received.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%recv-dereg%

recv_ho

The total number of handoff requests received

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%recv-ho%

recv_initial

The total number of initial registration requests received.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%recv-initial%

recv_renew

The total number of renewal registration requests received.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%recv-renew%

recv_total

The total number of registration requests received.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%recv-total%

reply_acceptdereg

The total number of successful de-registration replies sent.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-acceptdereg%

reply_acceptreg

The total number of successful registration replies sent.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-acceptreg%

reply_adminprohib

The total number of denied registration replies that were sent with a reply code of 81H (Registration Denied - administratively prohibited).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-adminprohib%

reply_badreq

The total number of denied registration replies that were sent with a reply code of 86H (Registration Denied - poorly formed request).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-badreq%

reply_denied

The total number of denied registration replies sent.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-denied%

reply_encapunavail

The total number of denied registration replies that were sent with a reply code of 8BH (Registration Denied - reverse tunneling encapsulation style unavailable).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-encapunavail%

reply_error

The total number of reply errors that occurred.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-error%

reply_faauthfail

The total number of denied registration replies that were sent with a reply code of 84H (Registration Denied - home agent failed authentication).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-faauthfail%

reply_mismatchid

The total number of denied registration replies that were sent with a reply code of 85H (Registration Denied - registration identification mismatch).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-mismatchid%

reply_mnauthfail

The total number of denied registration replies that were sent with a reply code of 83H (Registration Denied - mobile node failed authentication).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-mnauthfail%

reply_noresource

The total number of denied registration replies that were sent with a reply code of 82H (Registration Denied - insufficient resources).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-noresource%

reply_revtunmand

The total number of denied registration replies that were sent with a reply code of 8AH (Registration Denied - reverse tunneling mandatory).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-revtunmand%

reply_revtununavail

The total number of denied registration replies that were sent with a reply code of 89H (Registration Denied - reverse tunneling unavailable).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-revtununavail%

reply_senderror

The total number of errors that occurred while sending replies.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-senderror%

reply_simulbind

The total number of denied registration replies that were sent with a reply code of 87H (Registration Denied - too many simultaneous mobility bindings).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-simulbind%

reply_total

The total number of registration replies sent.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-total%

reply_unknownha

The total number of denied registration replies that were sent with a reply code of 88H (Registration Denied - unknown home agent address).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-unknownha%

reply_unspecerr

The total number of denied registration replies that were sent with a reply code of 80H (Registration Denied - reason unspecified).

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%reply-unspecerr%

vpnid

The identification number of the context configured on the system that is currently facilitating the HA service. This is an internal reference number.

Data Source

PDSN16000

Source Section

MIPHA

Source Field

%vpnid%

HoSector Peg Counts

The following is a list of peg counts for the HoSector entity.

HOACNT

Pegs when the cell reports that it is serving a mobile that should be handed off

Data Source

MTX OM, SDM

Source Field

HOACNTxx

Source Section

HODACNTR

HOCcnt

Pegs when the mobile is handed off to the nth cell in the HOCELLS vector

Data Source

MTX OM, SDM

Source Field

HOCcntxx

Source Section

HODCCNTR

HONHTL

Pegs when the normalized RSSI is greater than PCPTL of the target, but not better than the relative criteria. Also, the normalized RSSI is greater than the HOTL of the target.

Data Source

SDM

Source Field

HONHTLxx

Source Section

HOLOHOTL

HONPCP

Handoff completions that occur to a lower RSSI, when the RSSI in the target is above the PCPTL of the target cell and not above the HOTL of the target cell.

Data Source

SDM

Source Field

HONPCPxx

Source Section

HOLPCPTL

MACSUM

Pegs when the RSSI value of a mobile is accepted by the corresponding cell specified

Data Source

MTX OM, SDM

Source Field

MACSUMxx

Source Section

MASUMCAN

MASSUM

Pegs when the RSSI value of a mobile is accepted by the corresponding cell specified

Data Source

MTX OM, SDM

Source Field

MASSUMxx

Source Section

MASUMSRV

MHOCAN

Pegs when a candidate cell is reported by the base station to have passed MAHO prescreening as a possible handoff target cell

Data Source

MTX OM, SDM

Source Field

MHOCANxx

Source Section

MAHOCAND

MHOCMP

Pegs when a candidate cell is reported by the base station as the handoff target cell

Data Source

MTX OM, SDM

Source Field

MHOCMPxx

Source Section

MAHOCMPT

NBHOAT

Number of normal burst handoffs attempted from a particular serving cell to an adjacent cell.

Data Source

SDM

Source Field

NBHOATxx

Source Section

NBHOATTS

NBHOCP

Number of completed normal burst handoffs to a particular adjacent cell from a particular serving cell.

RTNERRIC

Pegs when a valid TCAP return error message is received

Data Source

MTX OM, SDM

Source Field

RTNERRIC

Source Section

NWKIC2

RTNERROG

Pegs when a TCAP return error message is sent

Data Source

MTX OM, SDM

Source Field

RTNERROG

Source Section

NWKOG2

SMBKIIC

Pegs a valid SMDBACK backward invoke when it is received by the MTX.

Data Source

MTX OM, SDM

Source Field

SMBKIIC + 65536 * NWKICX.SMBKII2

Source Section

NWKIC3

SMBKIOG

Pegs when a valid SMDBACK invoke is sent by the MTX.

Data Source

MTX OM, SDM

Source Field

SMBKIOG + 65536 * NWKOGX.SMBKIO2

Source Section

NWKOG3

SMBKRRIC

Pegs a valid SMDBACK return result when it is received by the MTX.

Data Source

MTX OM, SDM

Source Field

SMBKRRIC + 65536 * NWKICX.SMBKRRI2

Source Section

NWKIC3

SMBKRROG

Pegs when a valid SMDBACK return result is sent by the MTX.

Data Source

MTX OM, SDM

Source Field

SMBKRROG + 65536 * NWKOGX.SMBKRRO2

Source Section

NWKOG3

SMFWIIC

Pegs a valid SMDFWD invoke when it is received by the MTX.

Data Source

MTX OM, SDM

Source Field

SMFWIIC + 65536 * NWKICX.SMFWII2

Source Section

NWKIC3

SMFWIOG

Pegs when a valid SMDFWD invoke is sent by the MTX.

Data Source

MTX OM, SDM

Source Field

SMFWIOG + 65536 * NWKOGX.SMFWIO2

Source Section

NWKOG3

SMFWRRIC

Pegs when a valid SMDFWD return result is received by the MTX.

Data Source

MTX OM, SDM

Source Field

SMFWRRIC + 65536 * NWKICX.SMFWRR12

Source Section

NWKIC3

SMFWRROG

Pegs when a valid SMDFWD return result is sent by the MTX.

Data Source

MTX OM, SDM

Source Field

SMFWRROG + 65536 * NWKOGX.SMFWRRO2

Source Section

NWKOG3

SMNTIOG

Pegs when a valid SMSNOT invoke is sent by the MTX.

Data Source

MTX OM, SDM

Source Field

SMNTIOG + 65536 * NWKOGX.SMNTIO2

Source Section

NWKOG3

SMNTRRIC

Pegs when a valid SMSNOT return result is received by the MTX.

Data Source

MTX OM, SDM

Source Field

SMNTRRIC + 65536 * NWKICX.SMNTRRI2

Source Section

NWKIC3

SMPPIC

Pegs for incoming SMS mobile text messaging.

Data Source

MTX OM, SDM

Source Field

SMPPIC + 65536 * NWKICX.SMPPII2

Source Section

NWKIC3

SMPPIOG

Pegs when a SMS mobile text message invoke outgoing message is sent.

Data Source

MTX OM, SDM

Source Field

SMPPIOG + 65536 * NWKOGX.SMPPIO2

Source Section

NWKOG3

SMPPRRIC

Pegs for SMS incoming return results mobile text messaging.

Data Source

MTX OM, SDM

Source Field

SMPPRRIC + 65536 * NWKICX.SMPPRRI2

Source Section

NWKIC3

SMPPRROG

Pegs when a SMS mobile text message outgoing return result message is sent.

Data Source

MTX OM, SDM

Source Field

SMPPRROG + 65536 * NWKOGX.SMPPRRO2

Source Section

NWKOG3

SMRQIIC

Pegs when a valid SMSREQ invoke is received by the MTX.

Data Source

MTX OM, SDM

Source Field

SMRQIIC + 65536 * NWKICX.SMRQII2

Source Section

NWKIC3

SMRQIOG

Pegs when a valid incoming SMSREQ invoke is sent by the system.

Data Source

MTX OM, SDM

Source Field

SMRQIOG + 65536 * NWKOGX.SMRQIO2

Source Section

NWKOG3

SMRQRRIC

Pegs when a valid incoming SMSREQ return result is received by the MTX.

Data Source

MTX OM, SDM

Source Field

SMRQRRIC + 65536 * NWKICX.SMRQRRIC2

Source Section

NWKIC3

SMRQRROG

Pegs when a valid SMSREQ return result is sent by the MTX.

Data Source

MTX OM, SDM

Source Field

SMRQRROG + 65536 * NWKOGX.SMRQRRO2

Source Section

NWKOG3

SMSBDDAT

Pegs when a Forward Data Delivery (FDD) message is sent by the Border system to the mobile.

Data Source

SDM

Source Field

SMSBDDAT + 65536 * SMSBDDA2

Source Section

SMSBIPG

SMSBDDFL

Pegs when a Reverse Data Delivery (RDD) message is not received from the mobile (i.e. the Border system times out) or the RDD contains a failure cause code.

Data Source

SDM

Source Field

SMSBDDFL + 65536 * SMSBDDF2

Source Section

SMSBIPG

SMSBDDRS

Pegs when a Reverse Data Delivery (RDD) message is received from the mobile indicating that the SMS was successfully received by the mobile.

Data Source

SDM

Source Field

SMSBDDRS + 65536 * SMSBDDR2

Source Section

SMSBIPG

SPMOVLD

CONF

Counts the number of callp confusion messages.

Data Source

SDM

Source Field

CONF

Source Section

SPMUSAGE

ECANDENY

Counts the number of denied ECAN requests.

Data Source

SDM

Source Field

ECANDENY

Source Section

ECANRMAN

ECANFAIL

Counts the number of ECAN failures to converge SOS events.

Data Source

SDM

Source Field

ECANFAIL

Source Section

ECANRMAN

ECANHI

Counts the highest number of ECAN resources allocated from the node-level pool during a collection/transfer period.

Data Source

SDM

Source Field

ECANHI

Source Section

ECANRMAN

ECANLOST

Counts the ECAN resources removed from SPM resource management users (such as call processing) due to sparing actions.

Data Source

SDM

Source Field

ECANLOST

Source Section

ECANRMAN

ECANLOW

Counts the low-water-mark threshold violations on the SPM node-level pool of ECAN resources since the last collection period.

Data Source

SDM

Source Field

ECANLOW

Source Section

ECANRMAN

ECANUTIL

Calculates the percentage of the total ECAN resources in the node-level pool allocated to resource management users (such as call processing).

Data Source

SDM

Source Field

ECANUTIL

Source Section

ECANRMAN

EXIT

Counts the number of callp exit messages.

Data Source

SDM

Source Field

EXIT, EXIT_MSG

Source Section

SPMUSAGE

IWCRLVL1

Duration in secs for which the callrate is below 14 Hcps.

Data Source

SDM

Source Field

IWCRLVL1

Source Section

IWBMNODE

IWCRLVL2

Duration in secs for which the callrate is greater than or equal to 14 Hcps and less than 24 Hcps.

Data Source

SDM

Source Field

IWCRLVL2

Source Section

IWBMNODE

IWCRLVL3

Duration in secs for which the callrate is greater than or equal to 24 Hcps and less than 34 Hcps.

SPMOVLD

SCLSDND

SOC Calls Denied counts the number of calls that were lost for any reason.

Data Source

SDM

Source Field

SCLSDND

Source Section

SPMOVLD

SHDROVFL

SOC Header Overflow counts the number of messages of any type that were lost due to system overload control header array overflow.

Data Source

SDM

Source Field

SHDROVFL

Source Section

SPMOVLD

SMSGLOST

SOC Messages Lost counts the number of messages that were of messages lost because of system overload control limits.

Data Source

SDM

Source Field

SMSGLOST

Source Section

SPMOVLD

SMSGPTQ

SOC Message PTQ counts the number of messages of any type that were lost due to PTQ overflow.

Data Source

SDM

Source Field

SMSGPTQ

Source Section

SPMOVLD

SNUMORIG

SOC Number of Originations counts the number of originations passing through the system overload component whether or not they were delayed.

Data Source

SDM

Source Field

SNUMORIG

Source Section

SPMOVLD

SOVLDNUM

SOC Overload Number counts the number of times the node entered overload

Data Source

SDM

Source Field

SOVLDNUM

Source Section

SPMOVLD

SOVLDUSG

SOC Overload Usage counts the number of messages that were processed by the system overload component while the CEM was in a beyond capacity state.

Data Source

SDM

Source Field

SOVLDUSG

Source Section

SPMOVLD

TERMHI

Measures the high water mark call termination rate

Data Source

SDM

Source Field

TERMHI

Source Section

SPMACT

TOTLORIG

Measures the total call originations for a transfer period.

Data Source

SDM

Source Field

TOTLORIG

Source Section

SPMACT

TOTLTERM

Measures the total call terminations for a transfer period.

Data Source

SDM

Source Field

TOTLTERM

Source Section

SPMACT

TXFAIL

Counts the number of call deny messages.

Data Source

SDM

Source Field

TXFAIL

Source Section

SPMUSAGE

USGSECS

Counts the total of seconds during the collection period for which at least one ECAN was allocated.

Data Source

SDM

Source Field

USGSECS

Source Section

MWIZONPG

MWI_PGZNREQ

This register measures the number of CDMA Page Zone requests on a initial MWI page. It is used in part to determine how effective the Page Zone attempt is on the first page.

Data Source

MTX OM, SDM

Source Field

PGZNREQ + 65536 * PGZNREQ2

Source Section

MWIZONPG

MWI_PGZNRES

This register measures the number of CDMA Page Zone responses from a initial MWI page. It is used to determine how effective the Page Zone attempt is on the first page.

Data Source

MTX OM, SDM

Source Field

PGZNRES + 65536 * PGZNRES2

Source Section

MWIZONPG

MWI_PGZNT0

This register measures the number of CDMA Page Zone timeouts on a initial MWI page. It is used to determine how effective the Page Zone attempt is on the first page.

Data Source

MTX OM, SDM

Source Field

PGZNT0

Source Section

MWIZONPG

MWI_REPGTO

This register measures the number of CDMA repage time outs for either a system or a zone MWI repage and is used in part to determine the effectiveness of the MWI repage attempt.

Data Source

MTX OM, SDM

Source Field

REPGTO

Source Section

MWIZONPG

MWI_RPGZNREQ

This register measures the number of MWI repage zone requests performed when the initial MWI Page Zone has timed out. It is used in to determine the effectiveness of the repage zone attempt.

Data Source

MTX OM, SDM

Source Field

RPGZNREQ + 65536 * RPGZNRQ2

Source Section

MWIZONPG

MWI_RPGZNRES

This register measures the number of MWI Page Zone responses from a zone MWI repage. It is used in part to determine the effectiveness of the zone repage attempt.

Data Source

MTX OM, SDM

Source Field

RPGZNRES + 65536 * RPGZNR2

Source Section

MWIZONPG

MWI_RPSYSRQ

This register measures the number of MWI system page retry request, for the orig zone. It is used in part to determine the number of out of Page Zone attempt is on the repage.

Data Source

MTX OM, SDM

Source Field

RPSYSRQ + 65536 * RPSYSRQ2

Source Section

MWIZONPG

MWI_RPSYSRS

This register measures the number of CDMA System Page responses from a system repage. It is used in part to determine how many in zone system Page responses are received.

Data Source

MTX OM, SDM

Source Field

RPSYSRS + 65536 * RPSYRS2

Source Section

MWIZONPG

PG3LPAT

Counts the number of attempts of a Zone plus List Page for the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3LPAT + 65536 * CDMAPGZX.PG3LPATX

Source Section

CDMAPGZN

PG3LPIR

Counts the number of page responses in Zone for a Zone plus List Page for the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3LPIR + 65536 * CDMAPGZX.PG3LPIRX

Source Section

CDMAPGZN

PG3LPOR

Counts the number of responses out of Zone for a Zone plus List Page for the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3LPOR + 65536 * CDMAPGZX.PG3LPORX

Source Section

CDMAPGZN

PG3SYSRI

Counts the number of page responses in Zone for a System Page on the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3SYSRI + 65536 * CDMAPGZX.PG3SYRIX

Source Section

CDMAPGZN

PG3SYSRO

Counts the number of page responses out of Zone for a System Page on the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3SYSRO + 65536 * CDMAPGZX.PG3SYROX

Source Section

CDMAPGZN

PG3SYSRQ

Counts the number of page attempts for a System Page for the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3SYSRQ + 65536 * CDMAPGZX.PG3SYRQX

Source Section

CDMAPGZN

PG3ZNAB

Counts the number of abandons on the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3ZNAB + 65536 * CDMAPGZX.PG3ZNABX

Source Section

CDMAPGZN

PG3ZNREQ

Counts the number of Zone page attempts on the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3ZNREQ + 65536 * CDMAPGZX.PG3ZNRQX

Source Section

CDMAPGZN

PG3ZNRES

Counts the number of page responses for a Zone Page on the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3ZNRES + 65536 * CDMAPGZX.PG3ZNRX

Source Section

CDMAPGZN

PG3ZNTO

Counts the number of time-outs on the Third Page attempt.

Data Source

MTX OM, SDM

Source Field

PG3ZNTO + 65536 * CDMAPGZX.PG3ZNTX

Source Section

CDMAPGZN

PGZNAB

Counts the number of abandons on the First Page attempt.

Data Source

MTX OM, SDM

Source Field

PGZNAB + 65536 * CDMAPGZX.PGZNABX

Source Section

CDMAPGZN

PGZNIDR

Counts the number of In-Zone delayed page responses received for page attempt 1.

Data Source

MTX OM, SDM

Source Field

PGZNIDR

Source Section

CDMAPGZ2

PGZNLPAT

Counts the number of attempts of a Zone plus List Page for the First Page attempt.

Data Source

MTX OM, SDM

Source Field

PGZNLPAT + 65536 * CDMAPGZX.PGZNLPA

Source Section

CDMAPGZN

PGZNLPIR

Counts the number of page responses in Zone for a Zone plus List Page for the First Page attempt.

Data Source

MTX OM, SDM

Source Field

PGZNLPIR + 65536 * CDMAPGZX.PGZNLPIX

Source Section

CDMAPGZN

PGZNLPOR

Counts the number of responses out of Zone for a Zone plus List Page for the First Page attempt.

Data Source

MTX OM, SDM

Source Field

PGZNLPOR + 65536 * CDMAPGZX.PGZNLPOX

Source Section

CDMAPGZN

PGZNODR

Counts the number of Out-of-Zone delayed page responses received for page attempt 1.

Data Source

MTX OM, SDM

Source Field

PGZNODR

Source Section

CDMAPGZ2

PGZNREQ

Measures the number of CDMA Page Zone requests on an initial page

Data Source

MTX OM, SDM

Source Field

Source Section

CDMAPGZN

PGZNRES

Measures the number of CDMA Page Zone responses from an initial page

Data Source

MTX OM, SDM

Source Field

PGZNRES + 65536 * CDMAPGZX.PGZNRESX

Source Section

CDMAPGZN

PGZNSYIR

Counts the number of page responses in Zone for a System Page on the First Page attempt.

Data Source

MTX OM, SDM

Source Field

PGZNSYIR + 65536 * CDMAPGZX.PGZNSYIX

Source Section

CDMAPGZN

PGZNSYOR

Counts the number of page responses out of Zone for a System Page on the First Page attempt.

Data Source

MTX OM, SDM

Source Field

PGZNSYOR + 65536 * CDMAPGZX.PGZNSYOX

Source Section

CDMAPGZN

PGZNSYRQ

Counts the number of page attempts for a System Page for the First Page attempt.

Data Source

MTX OM, SDM

Source Field

PGZNSYRQ + 65536 * CDMAPGZX.PGZNSYRX

Source Section

CDMAPGZN

PGZNTO

Measures the number of CDMA Page Zone timeouts on an initial page

Data Source

MTX OM, SDM

Source Field

PGZNTO + 65536 * CDMAPGZX.PGZNTOX

Source Section

CDMAPGZN

PGZSDB3G

Measures the number of Page Zone Short Data Bursts for 3G Data Call

Data Source

MTX OM, SDM

Source Field

PGZSDB3G

Source Section

CDMAPGZN

REPGTO

Pegs when no response is received for a repage is done for a zone

Data Source

MTX OM, SDM

Source Field

REPGTO + 65536 * CDMAPGZX.REPGTOX

Source Section

CDMAPGZN

RPGLPAT

Counts the number of attempts of a Zone plus List Page for the Second Page attempt.

Data Source

MTX OM, SDM

Source Field

RPGLPAT + 65536 * CDMAPGZX.RPGLPATX

Source Section

CDMAPGZN

RPGLPIR

Counts the number of page responses in Zone for a Zone plus List Page for the Second Page attempt.

Data Source

MTX OM, SDM

Source Field

RPGLPIR + 65536 * CDMAPGZX.RPGLPIRX

Source Section

CDMAPGZN

RPGLPOR

Counts the number of responses out of Zone for a Zone plus List Page for the Second Page attempt.

Data Source

MTX OM, SDM

Source Field

RPGLPOR + 65536 * CDMAPGZX.RPGLPORX

Source Section

CDMAPGZN

RPGSYSTO

Measures the number of CDMA System Page timeouts on a repage

Data Source

MTX OM, SDM

Source Field

RPGSYSTO

Source Section

CDMAPGZN

RPGZNAB

Counts the number of abandons on the Second Page attempt.

Data Source

MSC Primitive Calculations

The following is a list of primitive calculations for the MSC entity.

BSCFails

Call setup failures due to BSC time-out and software faults

Calculation

`(vsum(sum(PM,RMSRMNAK), sum(PM,RMSRMT0),
sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUESWFL),0))`

COTPNOT

Cdma OTaPa NOTification

Calculation

`(COTAPNOT)`

GetTerminalAttSuccOFC

Number of successful attempts to get DPT terminal

Calculation

`(DPGTAT - DPGTFL - DPGTFLO)`

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

`""`

INVATT

Invalid call attempts for all call types (2G, 3G voice and Packet calls).

Calculation

`vsum (INVATT_2G, INVATT_3GV, INVATT_Packet, PM.INVATT, 0)`

MCFDOFR

Pegged when the opportunity to forward the call is detected by the MSC

Calculation

`(MCFDOFR)`

MiscBlocks

Call setup failures due to miscellaneous reasons

Calculation

`(vsum(sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUOBLKS),
sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUTBLKS),
sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUHBLKS),0) -
(vsum(sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUERSFL), sum(PM,RMNORREQ),`

```
sum (PM,RMSRMNAK) , sum (PM,RMSRMT0) ,  
sum (BSC.BTS.BTS_Cell.Cell_Sector,CAUESWFL) ,0))
```

NORESSO

Attempts where there are no resources provisioned but the user is authorized, for all call types (2G, 3G voice and Packet calls).

Calculation

```
vsum (NORESSO_2G, NORESSO_3GV, NORESSO_Packet, PM.NORESSO, 0)
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT ()
```

NUMHOURS

of hours in Summation Data

Calculation

OTAORIGA

OTA origination attempt

Calculation

```
(OTAORIGA)
```

pBSCFails

Call setup failure percentage due to BSC time-outs and software faults

Calculation

```
(100.0 * BSCFails / vsum (sum (BSC.BTS.BTS_Cell.Cell_Sector,CAUOATTS) ,  
sum (BSC.BTS.BTS_Cell.Cell_Sector,CAUPGRES) ,  
sum (BSC.BTS.BTS_Cell.Cell_Sector,CAUHATTS) ,0))
```

pCDMACallDelivery

CDMA Call Delivery Percentage

Calculation

```
vsum (CDMAPRS1, CDMAPRS2, CDMAPRS3, IS41.ISETIVOG, CDPG1RES, CDPG2RES,  
CDPG3RES) * 100.0 / vsum (CDMAPREQ, CDPG1REQ, CDPG2REQ, CDPG3REQ)
```

pGetTerminalAttSuccOFC

Percentage of successful attempts to get a DPT Terminal

Calculation

```
vsum (DPGTAT, -1 * DPGTFL, -1 * DPGTFLO, 0) * 100.0 / DPGTAT
```

pMiscBlocks

Call setup failure percentage due to miscellaneous reasons

Calculation

```
(100.0 * MiscBlocks / vsum(sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUOATTS),  
sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUPGRES),  
sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUHATTS),0))
```

pPSTNBlock

Percentage of calls the system routes to the generalized no circuit treatment

Calculation

```
(100.0 * TRSGNCT / vsum(sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUOSUCC),  
sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUTSUCC),  
sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUHSUCC),0))
```

proc_type

Processor Type - pcal of processor_type

Calculation

```
processor_type
```

pSBSBlocks

SBS resource allocation request failure percentage due to lack of resources

Calculation

```
(100.0 * SBSBlocks / vsum(sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUOATTS),  
sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUPGRES),  
sum(BSC.BTS.BTS_Cell.Cell_Sector,CAUHATTS),0))
```

PSTNBlock

Number of calls the system routes to the generalized no circuit treatment

Calculation

```
(TRSGNCT)
```

RFLossPerErlg

RF Losses per Erlang of Usage

Calculation

$$(1.0 * (\text{sum}(\text{Cell.Sector}, \text{RFLossQ})) / (\text{sum}(\text{TrunkGroup}, \text{TfUsage})))$$

SBSBlocks

SBS resource allocation request failure due to lack of resources

Calculation

$$\text{sum}(\text{PM}, \text{RMNORREQ})$$

TRKOFAIL

Call setup failures due to PSTN blocking for all call types.

Calculation

$$\text{vsum}(\text{TRKOFAIL_2G}, \text{TRKOFAIL_3GV}, \text{TRKOFAIL_Packet}, \text{PM.TRKOFAIL}, 0)$$

UNSUBSO

User requested a service option that is not authorized for this user for all call types.

Calculation

$$\text{vsum}(\text{UNSUBSO_2G}, \text{UNSUBSO_3GV}, \text{UNSUBSO_Packet}, \text{PM.UNSUBSO}, 0)$$

XACMIC

Number of CMIC packet faults detected on the XA-Core.

Calculation

$$(\text{XCMIC})$$

XARTIF

Number of RTIF packet faults detected on the XA-Core system.

Calculation

$$(\text{XRTIF})$$

MSC Peg Counts

The following is a list of peg counts for the MSC entity.

A2FACH

This register tracks the number of A2 interface connection setup failures after the mobile arrives on the traffic channel. This OM is pegged when an error descriptor is present in the H.248 Modify Reply message from the MGW with the termination ID validated. The error occurs on the BSC-facing endpoint during origination, termination, or hard handoff.

Data Source

SDM

Source Field

A2FACH

Source Section

MTXMGSYS

A2FBCHH

This register tracks the number of A2 interface connection setup failures during hard handoff and before the mobile arrives on the traffic channel. This OM is pegged when an error descriptor is present in the H.248 Add Reply message from the MGW received on the BSC-facing endpoint during originator or terminator hard handoffs.

Data Source

SDM

Source Field

WASSIGND

Source Section

WPSOM1

WDASSGND

Total number of successful (i.e. radio traffic channel assigned) WPS CSD call invocations per system, when soc is on.

Data Source

MTX OM, SDM

Source Field

WDASSGND

Source Section

WPSOM1

WDINVOKE

Total number of WPS CSD calls attempted per system when WPS soc is on.

Data Source

MTX OM, SDM

Source Field

WDINVOKE

Source Section

WPSOM1

WGINVOKE

WPS GETS calls originated with the WPS Prefix digits by WPS users.

Data Source

MTX OM, SDM

Source Field

WGINVOKE

Source Section

WPSOM2

WINITC

Counts calls in progress that were lost because of a warm restart

Data Source

MTX OM, SDM

Source Field

WINITC

Source Section

CP

WINVALD

Total WPS Origination Failures with failure reason = Validation failure when, a WPS call request is denied because it failed WPS validation before it was queued.

Data Source

MTX OM, SDM

Source Field

WINVALD

Source Section

WPSOM1

WINVALDQ

Total WPS Origination Failures with failure reason = Validation failure when, a WPS call request is denied because it failed WPS validation while it was queued.

Data Source

MTX OM, SDM

Source Field

WINVALDQ

Source Section

WPSOM1

WINVOKE

Total number of WPS calls invoked per system for a given time interval.

Data Source

MTX OM, SDM

Source Field

WINVOKE

Source Section

WPSOM1

WNOPTY

WPS call origination requests that have no priority specified and therefore are assigned to a default priority.

Data Source

MTX OM, SDM

Source Field

WNOPRTY

Source Section

WPSSRVC

WPS2L3WC

WPS invokes on a second leg of a 3WC/CNF call, by an authorized WPS originator or controller

Data Source

MTX OM, SDM

Source Field

WPS2L3WC

Source Section

WPSOM2

WPSORSNQ

Total number of successful (i.e. radio traffic channel assigned) WPS calls invoked per system, for a given time interval.

Data Source

MTX OM, SDM

Source Field

WPSORSNQ

Source Section

WPSOM2

WPSPODRP

Total Public Originations Denied when the public call is denied an attempt to get radio resources due to a H-PURDA algorithm indicating that it is WPS turn.

Data Source

MTX OM, SDM

Source Field

WPSPODRP

Source Section

WPSOM2

WPSPTDRP

Total Public Terminations Denied when the public call is denied radio resources due to a H-PURDA algorithm indicating that it is WPS turn.

Data Source

MTX OM, SDM

Source Field

WPSPTDRP

Source Section

WPSOM2

WPSSVSP1

Spare register 1 for OM group WPSSRVC.

Data Source

MTX OM, SDM

Source Field

WPSSVSP1

Source Section

WPSSRVC

WPSSVSP2

Spare register 2 for OM group WPSSRVC.

Data Source

MTX OM, SDM

Source Field

WPSSVSP2

Source Section

WPSSRVC

WPSTERM

WPS total termination attempts

Data Source

MTX OM, SDM

Source Field

WPSTERM

Source Section

WPSOM2

WPSTMSNQ

WPS total termination successes with no queuing.

Data Source

MTX OM, SDM

Source Field

WPSTMSNQ

Source Section

WPSOM2

WPUBFRSL

Total public calls allowed but failed due to resource limitation.

Data Source

MTX OM, SDM

Source Field

WPUBFRSL

Source Section

WPSOM2

WPUBWPSQ

Number of occurrences of a radio traffic channel becoming available and being allocated to non-NS/EP call when an NS/EP call request(s) is in the WPS queue.

Data Source

MTX OM, SDM

Source Field

WPUBWPSQ

Source Section

NSEPQOM

WQABAND

Number of NS/EP call requests removed from the WPS queue because of Loss of radio contact with either the originating MS while the WPS call is enqueued on the originating side or with the terminating MS while the WPS call is enqueued on the terminating side.

Data Source

MTX OM, SDM

Source Field

WQABAND

Source Section

NSEPQOM

WQABNFAR

Total queuing abandoned due to failure to assign newly available resource.

Data Source

MTX OM, SDM

Source Field

WQABNFAR

Source Section

WPSOM2

WQABNINC

Total queuing abandoned due to user initiating new calls.

Data Source

MTX OM, SDM

Source Field

WQABNINC

Source Section

WPSOM2

WQABNLC

Total queuing abandoned due to loss of channel.

Data Source

MTX OM, SDM

Source Field

WQABNLC

Source Section

WPSOM2

WQABNRIC

Total queuing abandoned due to release of incoming call.

Data Source

MTX OM, SDM

Source Field

WQABNRIC

Source Section

WPSOM2

WQABNUA

Total queuing abandoned due to user abandonment.

Data Source

MTX OM, SDM

Source Field

WQABNUA

Source Section

WPSOM2

WQOVFL

The MSC generates peg counts for the WPS failures with failure reason = queue failure when a call needs to be queued and the queue is full.

Data Source

MTX OM, SDM

Source Field

WQOVFL

Source Section

WPSOM1

WQTOUT

The MSC generates peg counts for the WPS failures with failure reason = queue failure when a call fails because it has spent the maximum time allowed on the queue.

Data Source

MTX OM, SDM

Source Field

WQTOUT

Source Section

WPSOM1

WQUEUED

Total number of WPS calls that are queued successfully due to an immediate lack of SBS or BTS resources.

Data Source

MTX OM, SDM

Source Field

WQUEUED

Source Section

WPSOM1

WRETRIES

Number of WPS Retries due to a Resource Allocation failure. This register pegs when the CM sends WPS Setup Conversation message to the CAU.

Data Source

MTX OM, SDM

Source Field

WRETRIES

Source Section

WPSOM1

WTATTMPT

Number of originated WPS calls that attempt to terminate to outgoing PSTN trunks. It can be pegged multiple times per WPS origination.

Data Source

MTX OM, SDM

Source Field

WTATTMPT

Source Section

NSEPPROG

WVALID

WPS call requests from VALID users.

Data Source

MTX OM, SDM

Source Field

WVALID

Source Section

WPSSRVC

XADISK

Number of disk faults detected on the XA-Core system.

Data Source

MTX OM, SDM

Source Field

XADISK

Source Section

XACORE

XAIOP

Counts critical IOP faults on XACORE and HIOP circuit packs

Data Source

MTX OM, SDM

Source Field

XAIOP

Source Section

XACORE

XALKMAJU

The length of time a MScomm (message switch communication) major alarm condition exists on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XALKMAJU

Source Section

XACSRVC

XALOCP

Number of critical faults on the local port of the Reset Terminal Interface (RTIF) packet.

Data Source

MTX OM, SDM

Source Field

XALOCP

Source Section

XACORE

XAMCINI

The number of cold restarts that result from a manual action.

Data Source

MTX OM, SDM

Source Field

XAMCINI

Source Section

XACSRVC

XAMDCRIU

The length of time (in 100 second increments) that an AMDI critical alarm condition exists on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XAMDCRIU

Source Section

XACSRVC

XAMDI

Number of critical AMDI packet faults detected on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XAMDI

Source Section

XACORE

XAMDILNK

Number of critical AMDI link faults detected on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XAMDILNK

Source Section

XACORE

XAMDIPRT

Number of critical AMDI port faults detected on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XAMDIPRT

Source Section

XACORE

XAMDMAJU

The length of time (in 100 second increments) that an AMDI major alarm condition exists on the XA-Core.

Data Source

SDM

Source Field

XAMDMAJU

Source Section

XACSRVC

XAMSMPXU

The length of time a simplex shared memory (SM) condition exists on the XA-Core as a result of a manual action.

Data Source

MTX OM, SDM

Source Field

XAMSMPXU

Source Section

XACSRVC

XAMWINI

The number of warm restarts that result from a manual action.

Data Source

MTX OM, SDM

Source Field

XAMWINI

Source Section

XACSRVC

XAPE

Number of processor element (PE) faults detected on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XAPE

Source Section

XACORE

XAPECRIU

The length of time that a LowPE critical alarm condition exists on the XA Core.

Data Source

MTX OM, SDM

Source Field

XAPECRIU

Source Section

XACSRVC

XAPEMAJU

The length of time (in 100 second increments) that a LowPE major alarm condition exists on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XAPEMAJU

Source Section

XACSRVC

XAREMP

Number of critical faults on a Reset Terminal Interface (RTIF) remote port.

Data Source

MTX OM, SDM

Source Field

XAREMP

Source Section

XACORE

XARSMPXU

The length of time that a simplex shared memory condition exists on the XA-Core as a result of the REx test.

Data Source

MTX OM, SDM

Source Field

XARSMPXU

Source Section

XACSRVC

XARXABRT

Number of times the system Routine Exercise (REx) test aborts.

Data Source

MTX OM, SDM

Source Field

XARXABRT

Source Section

XACORE

XARXALL

Number of times the REX ALL class test failed.

Data Source

MTX OM, SDM

Source Field

XARXALL

Source Section

XACORE

XARXBASE

Number of times the REX Base hardware class test fails.

Data Source

MTX OM, SDM

Source Field

XARXBASE

Source Section

XACORE

XARXFULL

Number of times the REX Full class test fails.

Data Source

MTX OM, SDM

Source Field

XARXFULL

Source Section

XACORE

XARXIO

Number of times the REx IO Class test failed.

Data Source

MTX OM, SDM

Source Field

XARXIO

Source Section

XACORE

XARXPE

Number of times that the processor element (PE) Routine Exercise (REx) class test fails.

Data Source

MTX OM, SDM

Source Field

XARXPE

Source Section

XACORE

XARXSM

Number of times the shared memory (SM) routine exercise (REx) class test fails.

Data Source

MTX OM, SDM

Source Field

XARXSM

Source Section

XACORE

XASAUXCP

Ratio of AUXCP usage compared to the AUXCP_CPU_SHARE office parameter

Data Source

MTX OM, SDM

Source Field

XASAUXCP

Source Section

XASTAT

XASBKG

Ratio of background class usage compared to allocation

Data Source

MTX OM, SDM

Source Field

XASBKG

Source Section

XASTAT

XASCINI

The number of cold restarts that result from a system action.

Data Source

MTX OM, SDM

Source Field

XASCINI

Source Section

XACSRVC

XASCMPLEX

Ratio of complexity of the observed call mix compared to the standard office

Data Source

MTX OM, SDM

Source Field

XASCMPLEX

Source Section

XASTAT

XASDNC

Ratio of NOSFT usage compared to allocation

Data Source

MTX OM, SDM

Source Field

XASDNC

Source Section

XASTAT

XASFORE

Ratio of operating system overhead compared to the overhead allocated at capacity

Data Source

MTX OM, SDM

Source Field

XASFORE

Source Section

XASTAT

XASGTERM

Ratio of GTerm usage compared to GUARANTEED_TERMINAL_CPU_SHARE office parameter

Data Source

MTX OM, SDM

Source Field

XASGTERM

Source Section

XASTAT

XASM

Number of critical shared memory faults detected on the XA-Core system.

Data Source

MTX OM, SDM

Source Field

XASM

Source Section

XACORE

XASMAINT

Ratio of maintenance usage compared to allocation

Data Source

MTX OM, SDM

Source Field

XASMAINT

Source Section

XASTAT

XASMCRIU

The length of time a low shared memory critical alarm condition exists on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XASMCRIU

Source Section

XACSRVC

XASNETM

Ratio of NETMTC usage compared to allocation

Data Source

MTX OM, SDM

Source Field

XASNETM

Source Section

XASTAT

XASNXFR

Number of transfer periods

Data Source

MTX OM, SDM

Source Field

XASNXFR

Source Section

XASTAT

XASOM

Ratio of OM usage compared to allocation

Data Source

MTX OM, SDM

Source Field

XASOM

Source Section

XASTAT

XASOTHLD

One minute intervals during which system utilization exceeded the office parameter
CC_ENGLEVEL_WARNING_THRESHOLD

Data Source

MTX OM, SDM

Source Field

XASOTHLD

Source Section

XASTAT

XASOVER

Number of minutes that XASUTIL exceeds 100

Data Source

MTX OM, SDM

Source Field

XASOVER

Source Section

XASTAT

XASPESC

One minute intervals during the transfer period in which a PE state change occurred

Data Source

MTX OM, SDM

Source Field

XASPESC

Source Section

XASTAT

XASPUTIL

XA-Core peak call processing usage

Data Source

MTX OM, SDM

Source Field

XASPUTIL

Source Section

XASTAT

XASSCHED

Ratio of scheduling overhead compared to the expected capacity

Data Source

MTX OM, SDM

Source Field

XASSCHED

Source Section

XASTAT

XASSMPXU

The length of time a simplex shared memory condition exists on the XA Core as a result of a system action.

Data Source

MTX OM, SDM

Source Field

XASSMPXU

Source Section

XACSRVC

XASSNIP

Ratio of SNIP usage compared to allocation

Data Source

MTX OM, SDM

Source Field

XASSNIP

Source Section

XASTAT

XASUTIL

Percentage of call processing capacity used within the provisioned recommendation for the grade of service specifications

Data Source

MTX OM, SDM

Source Field

XASUTIL

Source Section

XASTAT

XASWINI

The number of warm restarts that result from a system action.

Data Source

MTX OM, SDM

Source Field

XASWINI

Source Section

XACSRVC

XATAPE

Number of critical Tape faults detected on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XATAPE

Source Section

XACORE

XATRAP

The number of trap interrupts in The XA-Core system.

Data Source

MTX OM, SDM

Source Field

XATRAP

Source Section

XACSRVC

XCMIC

Number of CMIC packet faults detected on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XCMIC

Source Section

XACORE

XCMICLNK

Number of CMIC link faults detected on the XA-Core.

Data Source

MTX OM, SDM

Source Field

XCMICLNK

Source Section

XACORE

XCMICPRT

Number of CMIC port faults detected on the XA-Core.

Data Source

MTX OM, SDM

MSC Roll-up Fields

The following is a list of roll-up fields for the MSC entity.

DDRPCALS

Pegs when a call is Drp due to digital SAT fade

DIRETRY

Pegs when a directed retry msg is sent by the serving subcell to the CCH in response to origination/page response msg

DMBORACO

Digital-capable mobile receives a request msg that was comp on an analog channel

DMBTRACO

Digital-capable mobile receives a pg response msg that was comp on an analog channel

DROPCALL

Active call is Drp due to loss of SAT for an analog call or loss of DVCC for a digital call

DROPHO

Call is Drp during Ho because the target subcell fails to receive a SAT for an analog call

HONOVCH

Handoff no voice channels

LMATTS

Pegs when a call is made to connect a land line trunk to a subscriber unit

LMCOMPS

Pegs when a call is Comp from a land line trunk to a subscriber unit

LPANNONE

LPI analog voice channel request not allocated

MBLORG

ICP receives from the CCH an origination msg from a SU

MBLORGCO

ICP receives a SAT present msg from the CCH for an originating SU

MBLREORD

ICP sends a reorder msg to the CCHs in response to access attempt from SU

MBLTERCO

Pegs when a call terminated to a SU and the SU successfully tunes to a voice channel

MLATTS

Pegs when a call is made from the serving subcell to a land trunk

MLCOMPS

Pegs when a call is successfully Comp from a serving subcell to a land trunk

MMATTS

Pegs when a call is made from a subscriber unit to another subscriber unit

MMCOMPS

Pegs when a call is successfully Comp from a subscriber unit to another subscriber unit

PAGERESP

Pegs when an ICP receives a page response msg from the CCHs

STIMEOUT

Pegs when the switch receives a SAT failure msg or a DVCC failure msg from the serving subcell during call setup

TRU

Every 100s records if a trunk is call processing busy/call processing busy deload/locked for Sector Trunks

TRU_TRUNK

Every 100s records if a trunk is call processing busy/call processing busy deload/locked for All Trunks

MSC_MGW Peg Counts

The following is a list of peg counts for the MSC_MGW entity.

ALFRESND

This register pegs the number of H.248 ALF resend messages.

Data Source

SDM

Source Field

ALFRESND

Source Section

H248OM

HEARTFLD

This register pegs the number of Heart Beat Failures.

Data Source

SDM

Source Field

HEARTFLD

Source Section

H248OM

HEARTRCV

This register pegs the number of Heart Beat Recoveries.

Data Source

SDM

Source Field

HEARTRCV

Source Section

H248OM

ICREPLY

This register pegs the number of incoming H.248 reply messages.

Data Source

SDM

Source Field

ICREPLY + 65536 * ICREPLY2

Source Section

H248OM

ICREQST

This register pegs the number of incoming H.248 request messages.

Data Source

SDM

Source Field

ICREQST + 65536 * ICREQST2

Source Section

H248OM

NOICTRID

This register pegs the incoming TRID shortage scenario.

Data Source

SDM

Source Field

NOICTRID

Source Section

H248OM

NOOGTRID

This register pegs the outgoing TRID shortage scenario.

Data Source

SDM

Source Field

NOOGTRID

Source Section

H248OM

OGREPLY

This register pegs the number of outgoing H.248 reply messages.

Data Source

SDM

Source Field

OGREPLY + 65536 * OGREPLY2

Source Section

H248OM

OGREQST

This register pegs the number of outgoing H.248 requests messages.

Data Source

SDM

OGREQST + 65536 * OGREQST2

Source Section

H248OM

OGRQRSND

This register pegs the resent encoded requests due to timeout.

Data Source

SDM

Source Field

OGRQRSND

Source Section

H248OM

PORGFAIL

This register pegs when H.248 fails through the MSC on mobile originations or originator HHOs. There are two instances in which an H.248 in mobile origination or originator HHO may fail resulting in the call being taken down: (a) an error descriptor is present in the H.248 Add or Modify Reply messages, or (b) a H.248 transaction timeout has occurred in the H.248 Add or Modify Reply messages.

Data Source

SDM

Source Field

PORGFAIL

Source Section

H248OM

PORIGATT

This register pegs for each H.248 attempt through the MSC on mobile originations or originator HHOs after successfully obtaining an MTID. MTID is an identifier of the call which contains MGW related information.

Data Source

SDM

Source Field

PORIGATT + 65536 * PORIGAT2

Source Section

H248OM

PTERMATT

This register pegs for each H.248 attempt through the MSC on mobile terminations or terminator HHOs after successfully obtaining an MTID. MTID is an identifier of the call which contains MGW related information.

Data Source

SDM

Source Field

PTERMATT + 65536 * PTERMAT2

Source Section

H248OM

PTRMFAIL

This register pegs when when the H.248 fails through the MSC on mobile terminations or terminator HHOs. There are two instances in which an H.248 in mobile termination or terminator HHO may fail resulting in the call being taken down: (a) an error descriptor is present in the H.248 Add or Modify Reply messages, or (b) a H.248 transaction timeout has occurred in the H.248 Add or Modify Reply messages.

Msgtoolargeforsegmentation

MSUsDiscUnrecSCCPMsgCount

This OM measures the number of MSUs discarded because of an unrecognized SCCP message type.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

MSUsDiscUnrecSCCPMsgCount

NoRouteMSUDiscardCount

This OM measures the number of MSUs discarded due to routing failure of various causes (for example, an inaccessible DPC).

Data Source

USP

Source Section

SystemTotals

Source Field

NoRouteMSUDiscardCount

NoTranslationforAddrCount

This OM measures the number of times a match could not be found for the GTA in the translation table. The count is kept across all translation types.

Data Source

USP

Source Section

SCCPGTT

Source Field

NoTranslationforAddrCount

OutofsequenceSCCPmsgcount

This OM measures the number of times Segments are received out of sequence

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

OutofsequenceSCCPmsgcount

Reassemblybufferunavailable

This OM measures the number of times Reassembly resources unavailable occurred

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

Reassemblybufferunavailable

Reassemblyfailed

This OM measures the number of times Reassembly fails for any non specified reason.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

Reassemblyfailed

ReassemblyTimerExpired

This OM measures the number of times Reassembly Timer expired

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

ReassemblyTimerExpired

RoutingFailureUnequipUser

This OM measures the number of times SCCP Routing control fails to find a subsystem to route the message.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

RoutingFailureUnequipUser

SCCPRoutingFailureCount

This OM measures the number of messages that SCCP was unable to route.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

SCCPRoutingFailureCount

Segmentationfailed

This OM measures the number of times segmentation fails for any non specified reason.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

Segmentationfailed

SSAReceivedCount

This OM measures the number of subsystem-allowed (SSA)messages received.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

SSAReceivedCount

SSATransmittedCount

This OM measures the number of subsystem-allowed (SSA)messages transmitted.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

SSATransmittedCount

SSPReceivedCount

This OM measures the number of subsystem-prohibited (SSP)messages received.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

SSPReceivedCount

SSPTransmittedCount

This OM measures the number of subsystem-prohibited (SSP)messages transmitted.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

SSPTransmittedCount

SSTReceivedCount

This OM measures the number of subsystem-status-test (SST)messages received.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

SSTReceivedCount

SSTTransmittedCount

This OM measures the number of subsystem-status-test (SST)messages transmitted.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

SSTTransmittedCount

Totalmessageshandled

This OM measures all messages processed by SCCP routing control in both incoming and outgoing directions, whether or not the message is processed or delivered successfully.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

Totalmessageshandled

TransTypeNotFoundCount

This OM measures the number of times the translation type specified in the MSU was not supported by the USP.

Data Source

USP

Source Section

SCCPGTT

Source Field

TransTypeNotFoundCount

UDTMsgRcvdCount

This OM measures the number of UDT messages that the SCCP level received.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

UDTMsgRcvdCount

UDTMsgSentCount

This OM measures the number of UDT messages sent from the SCCP level.

Data Source

USP

Source Section

SCCPSystemTotals

Source Field

UDTMsgSentCount

UDTMsgRcvdCount

This OM measures the number of UDTS messages that the SCCP level received.

Data Source

USP

Source Field

CRMReceivedCount

CSVRReceivedCount

This OM measures the number of ISUP Closed User Group Selection and Validation Request Messages (CSVR) received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

CSVRReceivedCount

CSVSReceivedCount

This OM measures the number of ISUP Closed User Group Selection and Validation Response Messages (CSVS) received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

CSVSReceivedCount

CumDurofFEProcessorOut

This OM measures the cumulative duration in seconds during which the use of the link was precluded due to a remote (far-end) processor outage condition, summed across all far-end processor outage events.

Data Source

USP

Source Section

SAALLinkManagement

Source Field

CumDurofFEProcessorOut

CumDurofLackofCredit

This OM measures the cumulative duration of time in seconds during which SSCOP had PDUs to send to its peer but could not do so because it was not given credit by the far end, summed over all the Lack-of-Credit event occurring during the measurement interval.

Data Source

USP

Source Section

SAALLinkManagement

Source Field

CumDurofLackofCredit

CVRReceivedCount

This OM measures the number of ISUP Circuit Validation Response Messages (CVR)received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

CVRReceivedCount

CVTReceivedCount

This OM measures the number of ISUP Circuit Validation Test Messages (CVT)received from the SS7 Network.

FACReceivedCount

This OM measures the number of ISUP Facility Messages (FAC)received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

FACReceivedCount

FADReceivedCount

This OM measures the number of ISUP Facility Deactivated Messages (FAD) received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

FADReceivedCount

FAIReceivedCount

This OM measures the number of ISUP Facility Information Messages (FAM) received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

FAIReceivedCount

FarEndMgmtInhibitCount

This OM measures the number of times a link was successfully inhibited from the far end.

Data Source

USP

Source Section

LinkManagement

Source Field

FarEndMgmtInhibitCount

FARReceivedCount

This OM measures the number of ISUP Facility Request Messages (FAR)received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

FARReceivedCount

FOTReceivedCount

This OM measures the number of ISUP Forward Transfer Messages (FOT)received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

FOTReceivedCount

FRJReceivedCount

This OM measures the number of ISUP Facility Rejected Messages (FRJ)received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

FRJReceivedCount

GRAReceivedCount

This OM measures the number of ISUP Circuit Group Reset Acknowledgement Messages (GRA) received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

GRAReceivedCount

GRSReceivedCount

This OM measures the number of ISUP Circuit Group Reset Messages (GRS) received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

GRSReceivedCount

IAMN1ReceivedCount

This OM measures the number of ISUP Initial Address Message NotPriority One Messages (IAMN1) received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

IAMN1ReceivedCount

IAMReceivedCount

This OM measures the number of ISUP Initial Address Message Messages (IAM)received from the SS7 Network.

Data Source

Source Field

InNDCvalidcellsonHSLVCL

INRReceivedCount

This OM measures the number of ISUP Information Request Messages (INR)received from the SS7 Network.

Data Source

USP

Source Section

ISUPReceivedMessageCounts

Source Field

INRReceivedCount

InvalidAffctDestinationCount

This OM measures the number of MSUs rejected on a particular link, because the destination fields in signaling-route-set-test, TFX-TCX, or TFC messages from the MSUs did not pass GWS checking based on the provisioned criteria.

Data Source

USP

Source Section

GatewayScreeningResults

Source Field

InvalidAffctDestinationCount

InvalidAffctPCSSNCount

This OM measures the number of MSUs rejected on a particular link, because the affected PCs in SCCP subsystem-prohibited (SSP) and subsystem-allowed (SSA) messages and an invalid PC or SSN in SCCP subsystem-status-test (SST) messages from the MSUs did not pass GWS checking based on the provisioned criteria.

Data Source

USP

Source Section

GatewayScreeningResults

Source Field

InvalidAffctPCSSNCount

InvalidCngPartyAddrCount

This OM measures the number of MSUs rejected on a particular link, because the Calling Party Addresses (PC or SSN) from the MSUs did not pass GWS checking based on the provisioned criteria.

Data Source

USP

Source Section

GatewayScreeningResults

Source Field

InvalidCngPartyAddrCount

InvalidDPCCount

This OM measures the number of MSUs rejected on a particular link, because the DPCs from the MSUs did not pass GWS checking based on the provisioned criteria.

Data Source

USP

Source Section

GatewayScreeningResults

Source Field

InvalidDPCCount

InvalidOPCCount

This OM measures the number of MSUs rejected on a particular link, because the OPCs from the MSUs did not pass GWS checking based on the provisioned criteria.

Data Source

USP

Source Section

GatewayScreeningResults

Source Field

InvalidOPCCount

InvalidSIOCount

This OM measures the number of MSUs rejected on a particular link, because the SIOs from the MSUs did not pass GWS checking based on the provisioned criteria.

PSeverelyErrFrameAISSecs

This OM measures the Near End Performance data: Severely Errored Frame-AIS Seconds - Path.

Data Source

USP

Source Section

Carrier

Source Field

PSeverelyErrFrameAISSecs

RawCellCount

This OM measures the number of raw cells. Raw cells are typically bad cells or OAM cells.

Data Source

USP

Source Section

ATMDriverMessaging

Source Field

RawCellCount

RawMessageCount

This OM measures the number of ATM raw messages. Raw messages are messages not assigned to a protocol.

Data Source

USP

Source Section

ATMDriverMessaging

Source Field

RawMessageCount

RTC12PassiveAuditCount

This OM hooks into the node maintenance audit, and is pegged on the control shelf CCs, when it does not receive audit request from RTC12 even once. Thus this is a passive audit of RTC

Data Source

USP

Source Section

RTCSanity

Source Field

RTC12PassiveAuditCount

RTC15PassiveAuditCount

This OM hooks into the node maintenance audit, and is pegged on both the control shelf CCs, when it does not receive audit request from RTC15 even once. Thus this is a passive audit of RTC.

Data Source

USP

Source Section

RTCSanity

Source Field

RTC15PassiveAuditCount

SequenceNumberResetCount

This OM measures the number of times the sequence numbers are reset due to the receipt of five consecutive duplicate cells.

Data Source

USP

Source Section

ATMDriverMessaging

Source Field

SequenceNumberResetCount

SSCOPMessageCount

This OM measures the number of incoming SSCOP messages.

PCHMessagesReceivedDropped (Seq# 301[19])

Source Section

Advanced Sector MO

BSACKORDMReceived

Number of Base Station Acknowledgement Order messages received.

Data Source

NBSS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[17])

Source Section

Advanced Sector MO

BufferOverloadPeriod

The period of time (in seconds) that the paging channel was using an excessive number of buffers

Data Source

NBSS BTS MO

Source Field

BufferOverloadPeriod (Seq# 152[5])

Source Section

Advanced Sector MO

CAMDropped

Number of Channel Assignment messages dropped by the reason of out of buffer.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[12])

Source Section

Advanced Sector MO

CAMReceived

Number of Channel Assignment messages received.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[11])

Source Section

Advanced Sector MO

CAMRepeatStaleDropped

Number of 2nd and 3rd attempt of Channel Assignment messages dropped by the reason of being too old (or being a stale message).

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[13])

Source Section

Advanced Sector MO

DBMDropped

Number of Data Burst messages dropped.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[5])

Source Section

Advanced Sector MO

DBMReceived

Number of Data Burst messages received.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[4])

Source Section

Advanced Sector MO

ECAMDropped

Number of Extended Channel Assignment messages dropped by the reason of out of buffer.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[9])

Source Section

Advanced Sector MO

ECAMReceived

Number of Extended Channel Assignment messages received.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[8])

Source Section

Advanced Sector MO

ECAMRepeatStaleDropped

Number of 2nd and 3rd attempt of Extended Channel Assignment messages dropped by the reason of being too old (or being a stale message).

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[10])

Source Section

Advanced Sector MO

FNMDropped

Number of Feature Notification messages dropped.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[7])

Source Section

Advanced Sector MO

FNMReceived

Number of Feature Notification messages received.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[6])

Source Section

NBSS BTS MO

Source Field

FPCHMessagesDroppedByReason (Seq# 355[4])

Source Section

Advanced Sector MO

FPCHMessagesDropped_StaleMessages

Paging Channel Messages dropped by CEM at BTS, with reason Stale Message

Data Source

NBSS BTS MO

Source Field

FPCHMessagesDroppedByReason (Seq# 355[2])

Source Section

Advanced Sector MO

FPCHSMSBMsgRecvDrop_HighPriorityDrop

Counts the number of high-priority Broadcast SMS messages dropped.

Data Source

NBSS BTS MO

Source Field

FPCHSMSBMsgsReceivedDropped (Seq# 372[6])

Source Section

Advanced Sector MO

FPCHSMSBMsgRecvDrop_HighPriorityRecv

Counts the number of high-priority Broadcast SMS messages received.

Data Source

NBSS BTS MO

Source Field

FPCHSMSBMsgsReceivedDropped (Seq# 372[5])

Source Section

Advanced Sector MO

FPCHSMSBMsgRecvDrop_OtherLevelDrop

Counts the number of Broadcast SMS messages in other CMAS level except for presidential level dropped.

Data Source

NBSS BTS MO

Source Field

FPCHSMSBMsgsReceivedDropped (Seq# 372[4])

Source Section

Advanced Sector MO

FPCHSMSBMsgRecvDrop_OtherLevelRecv

Counts the number of Broadcast SMS messages in other CMAS level except for presidential level received.

Data Source

NBSS BTS MO

Source Field

FPCHSMSBMsgsReceivedDropped (Seq# 372[3])

Source Section

Advanced Sector MO

FPCHSMSBMsgRecvDrop_OverallFiltered

Counts the number of Broadcast SMS messages filtered due to message size limit, paging rate = half rate, Cell Id is not destined or BCAST_INDEX =0 and the corresponding SMSBPriortyMapping is 255.

Data Source

NBSS BTS MO

Source Field

FPCHSMSBMsgsReceivedDropped (Seq# 372[7])

Source Section

Advanced Sector MO

FPCHSMSBMsgRecvDrop_PresidLevelDrop

Counts the number of Broadcast SMS messages in presidential level dropped.

Data Source

NBSS BTS MO

Source Field

FPCHSMSBMsgsReceivedDropped (Seq# 372[2])

Source Section

Advanced Sector MO

FPCHSMSBMsgRecvDrop_PresidLevelRecv

Counts the number of Broadcast SMS messages in presidential level received.

Data Source

NBSS BTS MO

Source Field

FPCHSMSBMsgsReceivedDropped (Seq# 372[1])

Source Section

Advanced Sector MO

GPMDropped

Number of General Page messages dropped.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[3])

Source Section

Advanced Sector MO

GPMReceived

Number of General Page messages received.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[2])

Source Section

Advanced Sector MO

LevelOnePeriod

The period of time (in seconds) that the paging channel was at an overload level of 1

Data Source

NBSS BTS MO

Source Field

LevelOnePeriod (Seq# 152[2])

Source Section

Advanced Sector MO

LevelThreePeriod

The period of time (in seconds) that the paging channel was at an overload level of 3

Data Source

NBSS BTS MO

Source Field

LevelThreePeriod (Seq# 152[4])

Source Section

Advanced Sector MO

LevelTwoPeriod

The period of time (in seconds) that the paging channel was at an overload level of 2

Data Source

NBSS BTS MO

Source Field

LevelTwoPeriod (Seq# 152[3])

Source Section

Advanced Sector MO

MECAMOutOfBufferDropped

Number of MEID Enhanced Channel Assignment messages dropped by the reason of out of buffer.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[15])

Source Section

Advanced Sector MO

MECAMReceived

Number of MEID Enhanced Channel Assignment messages received.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[14])

Source Section

Advanced Sector MO

MECAMRepeatStaleDropped

Number of 2nd and 3rd attempt of MEID Enhanced Channel Assignment messages dropped by the reason of being too old (or being a stale message).

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[16])

Source Section

Advanced Sector MO

OtherORDMDropped

Number of Order messages (other than Base Station Acknowledgement Order messages) dropped.

Data Source

NBSS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[20])

Source Section

Advanced Sector MO

OtherORDMReceived

Number of Order messages (except Base Station Acknowledgement Order) received.

Data Source

NBSS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[18])

Source Section

Advanced Sector MO

PagingChannelMessageDroppedCount

Number of paging messages received by the paging channel element.

Data Source

NBSS BTS MO

Source Field

PagingChannelMessageDroppedCount (Seq# 269)

Source Section

Advanced Sector MO

PagingChannelMessageReceivedCount

Number of paging messages dropped by the paging channel element.

Data Source

NBSS BTS MO

Source Field

PagingChannelMessageReceivedCount (Seq# 268)

Source Section

Advanced Sector MO

PagingChanPeakDuration

The number of seconds indicating how long the paging channel was operating within the peak occupancy range

Data Source

NBSS BTS MO

Source Field

PagingChanPeakDuration (Seq# 141[3])

Source Section

Advanced Sector MO

PagingChanPeakOccupancy

The lower bound of the peak occupancy range for the paging channel

Data Source

NBSS BTS MO

Source Field

PagingChanPeakOccupancy (Seq# 141[2])

Source Section

Advanced Sector MO

PagingChanRange0to4

The number of seconds that the paging channel was operating within the occupancy range of 0% to 4%

Data Source

NBSS BTS MO

Source Field

PagingChanRange0to4 (Seq# 141[6])

Source Section

Advanced Sector MO

PagingChanRange10to14

The number of seconds that the paging channel was operating within the occupancy range of 10% to 14%

Data Source

NBSS BTS MO

Source Field

PagingChanRange10to14 (Seq# 141[8])

Source Section

Advanced Sector MO

PagingChanRange15to19

The number of seconds that the paging channel was operating within the occupancy range of 15% to 19%

Data Source

NBSS BTS MO

Source Field

PagingChanRange15to19 (Seq# 141[9])

Source Section

Advanced Sector MO

PagingChanRange20to24

The number of seconds that the paging channel was operating within the occupancy range of 20% to 24%

Data Source

NBSS BTS MO

Source Field

PagingChanRange20to24 (Seq# 141[10])

Source Section

Advanced Sector MO

PagingChanRange25to29

The number of seconds that the paging channel was operating within the occupancy range of 25% to 29%

Data Source

NBSS BTS MO

Source Field

PagingChanRange25to29 (Seq# 141[11])

Source Section

Advanced Sector MO

PagingChanRange30to34

The number of seconds that the paging channel was operating within the occupancy range of 30% to 34%

Data Source

NBSS BTS MO

Source Field

PagingChanRange30to34 (Seq# 141[12])

Source Section

Advanced Sector MO

PagingChanRange35to39

The number of seconds that the paging channel was operating within the occupancy range of 35% to 39%

Data Source

NBSS BTS MO

Source Field

PagingChanRange35to39 (Seq# 141[13])

Source Section

Advanced Sector MO

PagingChanRange40to44

The number of seconds that the paging channel was operating within the occupancy range of 40% to 44%

Data Source

NBSS BTS MO

Source Field

PagingChanRange40to44 (Seq# 141[14])

Source Section

Advanced Sector MO

PagingChanRange45to49

The number of seconds that the paging channel was operating within the occupancy range of 45% to 49%

Data Source

NBSS BTS MO

Source Field

PagingChanRange45to49 (Seq# 141[15])

Source Section

Advanced Sector MO

PagingChanRange50to54

The number of seconds that the paging channel was operating within the occupancy range of 50% to 54%

Data Source

NBSS BTS MO

Source Field

PagingChanRange50to54 (Seq# 141[16])

Source Section

Advanced Sector MO

PagingChanRange55to59

The number of seconds that the paging channel was operating within the occupancy range of 55% to 59%

Data Source

NBSS BTS MO

Source Field

PagingChanRange55to59 (Seq# 141[17])

Source Section

Advanced Sector MO

PagingChanRange5to9

The number of seconds that the paging channel was operating within the occupancy range of 5% to 9%

Data Source

NBSS BTS MO

Source Field

PagingChanRange5to9 (Seq# 141[7])

Source Section

Advanced Sector MO

PagingChanRange60to64

The number of seconds that the paging channel was operating within the occupancy range of 60% to 64%

Data Source

NBSS BTS MO

Source Field

PagingChanRange60to64 (Seq# 141[18])

Source Section

Advanced Sector MO

PagingChanRange65to69

The number of seconds that the paging channel was operating within the occupancy range of 65% to 69%

Data Source

NBSS BTS MO

Source Field

PagingChanRange65to69 (Seq# 141[19])

Source Section

Advanced Sector MO

PagingChanRange70to74

The number of seconds that the paging channel was operating within the occupancy range of 70% to 74%

Data Source

NBSS BTS MO

Source Field

PagingChanRange70to74 (Seq# 141[20])

Source Section

Advanced Sector MO

PagingChanRange75to79

The number of seconds that the paging channel was operating within the occupancy range of 75% to 79%

Data Source

NBSS BTS MO

Source Field

PagingChanRange75to79 (Seq# 141[21])

Source Section

Advanced Sector MO

PagingChanRange80to84

The number of seconds that the paging channel was operating within the occupancy range of 80% to 84%

Data Source

NBSS BTS MO

Source Field

PagingChanRange80to84 (Seq# 141[22])

Source Section

Advanced Sector MO

PagingChanRange85to89

The number of seconds that the paging channel was operating within the occupancy range of 85% to 89%

Data Source

NBSS BTS MO

Source Field

PagingChanRange85to89 (Seq# 141[23])

Source Section

Advanced Sector MO

PagingChanRange90to94

The number of seconds that the paging channel was operating within the occupancy range of 90% to 94%

Data Source

NBSS BTS MO

Source Field

PagingChanRange90to94 (Seq# 141[24])

Source Section

Advanced Sector MO

PagingChanRange95to99

The number of seconds that the paging channel was operating within the occupancy range of 95% to 99%

Data Source

NBSS BTS MO

Source Field

PagingChanRange95to99 (Seq# 141[25])

Source Section

Advanced Sector MO

PchMessageDroppedCountAtCm

Total number of paging messages dropped due to overload control at the Control Module.

Data Source

NBSS BTS MO

Source Field

PchMessageDroppedCountAtCm (Seq# 271)

Source Section

Advanced Sector MO

PchMessageReceivedCountAtCm

Total number of paging messages received at the Control Module.

Data Source

NBSS BTS MO

Source Field

PchMessageReceivedCountAtCm (Seq# 270)

Source Section

Advanced Sector MO

PgChanLowerBoundOfAvgOccupancy

The lower bound of the average occupancy for the paging channel

Data Source

NBSS BTS MO

Source Field

PgChanLowerBoundOfAvgOccupancy (Seq# 141[4])

Source Section

Advanced Sector MO

PgChanUpperBoundOfAvgOccupancy

The upper bound of the average occupancy for the paging channel

Data Source

NBSS BTS MO

Source Field

PgChanUpperBoundOfAvgOccupancy (Seq# 141[5])

Source Section

Advanced Sector MO

SRDMDropped

Number of Service Redirection messages received.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[26])

Source Section

Advanced Sector MO

SRDMReceived

Number of Service Redirection messages dropped.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[25])

Source Section

Advanced Sector MO

STRQMDropped

Number of Status Request messages dropped.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[22])

Source Section

Advanced Sector MO

STRQMReceived

Number of Status Request messages received.

Data Source

NBSS BTS MO

Source Field

PCHMessagesReceivedDropped (Seq# 301[21])

Source Section

Advanced Sector MO

PCU Primitive Calculations

The following is a list of primitive calculations for the PCU entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

""

NUMDAYS

of days in Report

Calculation

DAYSINREPORT ()

NUMHOURS

of hours in Summation Data

Calculation

R_P_PktSessionSetupFailureRate

Percentage of packet session setup failures

Calculation

$(100.0 * \text{TotalSessionSetupFailures} / \text{vsum}(\text{TotalSessionSetupInitialAttempts}, \text{TotalSessionSetupReconnectAttempts}, 0))$

PCU Peg Counts

The following is a list of peg counts for the PCU entity.

ActiveSessionTransitionsQueued

This OM is pegged whenever a request for Dormant to Active session transition by an individual packet session is queued by the PCU because of being in the Session Throttle Mode.

Data Source

NBSS SBSC OMs

Source Field

ActiveSessionTransitionsQueued (Seq# 11)

Source Section

Packet Session Signaling (Group ID 12)

AttachedActiveUsers

This OM provides number of attached active users on a PCU when Peak number of Dormant users are determined during an OM period.

Data Source

NBSS SBSC OMs

Source Field

AttachedActiveUsers (Seq# 7)

Source Section

Packet Session Data (Group ID 13)

AttachedDormantUsers

This OM provides number of attached dormant users on a PCU when Peak number of Active users are determined during an OM period.

Data Source

NBSS SBSC OMs

Source Field

AttachedDormantUsers (Seq# 9)

Source Section

Packet Session Data (Group ID 13)

AvgActiveDCR_QueueDepth

This OM provides the average queue depth in percentage among all DCRQs measured in the forward direction during the OM reporting period.

Data Source

NBSS SBSC OMs

Source Field

AvgActiveDCR_QueueDepth (Seq# 12)

Source Section

PCU Queue Occupancy (Group ID 72)

AvgActiveRR_QueueDepth

This OM provides the average queue depth in percentage among all RRQs measured in the reverse direction during the OM reporting period.

Data Source

NBSS SBSC OMs

Source Field

AvgActiveRR_QueueDepth (Seq# 14)

Source Section

PCU Queue Occupancy (Group ID 72)

DCR_NumOfStopTransmitMsgsSent

Number of Stop Transmit messages sent from RLPQ

Data Source

NBSS SBSC OMs

Source Field

DCR_NumOfStopTransmitMsgsSent (Seq# 4)

Source Section

Packet Session Data (Group ID 13)

DCRBufferOverflows

Number of DCR buffer overflows

Data Source

NBSS SBSC OMs

Source Field

DCRBufferOverflows (Seq# 3)

Source Section

Packet Session Data (Group ID 13)

DormantDCR_QueueAtD2A_10

This OM provides the number of times the percentage DCRQ queue depth is $0 \leq x < 10$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_10 (Seq# 1)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_100

This OM provides the number of times the percentage DCRQ queue depth is $90 \leq x < 100$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_100 (Seq# 10)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_20

This OM provides the number of times the percentage DCRQ queue depth is $10 \leq x < 20$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_20 (Seq# 2)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_30

This OM provides the number of times the percentage DCRQ queue depth is $20 \leq x < 30$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_30 (Seq# 3)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_40

This OM provides the number of times the percentage DCRQ queue depth is $30 \leq x < 40$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_40 (Seq# 4)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_50

This OM provides the number of times the percentage DCRQ queue depth is $40 \leq x < 50$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_50 (Seq# 5)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_60

This OM provides the number of times the percentage DCRQ queue depth is $50 \leq x < 60$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_60 (Seq# 6)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_70

This OM provides the number of times the percentage DCRQ queue depth is $60 \leq x < 70$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_70 (Seq# 7)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_80

This OM provides the number of times the percentage DCRQ queue depth is $70 \leq x < 80$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_80 (Seq# 8)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_90

This OM provides the number of times the percentage DCRQ queue depth is $80 \leq x < 90$ percent.

Data Source

NBSS SBSC OMs

Source Field

DormantDCR_QueueAtD2A_90 (Seq# 9)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantReleaseIndDroppedDueToFullTxWindow

This OM is pegged whenever the transport layer discards the DormantReleaseInd message due to a full Tx window.

Data Source

NBSS SBSC OMs

Source Field

DormantReleaseIndDroppedDueToFullTxWindow (Seq# 16)

Source Section

Packet Session Signaling (Group ID 12)

DormantToActiveIndDroppedDueToFullTxWindow

This OM is pegged whenever the transport layer discards the DormantToActiveInd message due to a full Tx window.

Data Source

NBSS SBSC OMs

Source Field

DormantToActiveIndDroppedDueToFullTxWindow (Seq# 15)

Source Section

Packet Session Signaling (Group ID 12)

EnteredActiveSessionTransitionThrottleMode

This OM is pegged whenever the individual PCU can no longer grant Dormant to Active Session Transitions immediately because it has exceeded the maximum rate of Session transitions.

Data Source

NBSS SBSC OMs

Source Field

EnteredActiveSessionTransitionThrottleMode (Seq# 9)

Source Section

Packet Session Signaling (Group ID 12)

EnteredNullSessionTransitionThrottleMode

This OM is pegged whenever the individual PCU can no longer grant a Session Transition request to Null state.

Data Source

NBSS SBSC OMs

Source Field

EnteredNullSessionTransitionThrottleMode (Seq# 10)

Source Section

Packet Session Signaling (Group ID 12)

EnteredSessionTransitionThrottleMode

EnteredSessionTransitionThrottleMode

Data Source

NBSS SBSC OMs

Source Field

EnteredSessionTransitionThrottleMode (Seq# 11)

Source Section

Packet Session Data (Group ID 13)

EnteredSessionTransitionTypeOneThrottleMode

This OM is pegged whenever the individual PCU can no longer grant either Dormant to Active or Active to Null session transitions because it has exceeded the maximum session transition rate.

Data Source

NBSS SBSC OMs

Source Field

EnteredSessionTransitionTypeOneThrottleMode (Seq# 17)

Source Section

Packet Session Signaling (Group ID 12)

EnteredSessionTransitionTypeTwoThrottleMode

This OM is pegged whenever the individual PCU can no longer grant Dormant to Null session transitions because it has exceeded the maximum session transition rate.

Data Source

NBSS SBSC OMs

Source Field

EnteredSessionTransitionTypeTwoThrottleMode (Seq# 18)

Source Section

Packet Session Signaling (Group ID 12)

ExitedActiveSessionTransitionThrottleMode

This OM is pegged whenever the Individual PCU which was in a throttle mode exits out of this mode.

Data Source

NBSS SBSC OMs

Source Field

ExitedActiveSessionTransitionThrottleMode (Seq# 13)

Source Section

Packet Session Signaling (Group ID 12)

ExitedNullSessionTransitionThrottleMode

This OM is pegged whenever the Individual PCU which was in a throttle mode exits out of this mode.

Data Source

NBSS SBSC OMs

Source Field

ExitedNullSessionTransitionThrottleMode (Seq# 14)

Source Section

Packet Session Signaling (Group ID 12)

ExitedSessionTransitionThrottleMode

ExitedSessionTransitionThrottleMode

Data Source

NBSS SBSC OMs

Source Field

ExitedSessionTransitionThrottleMode (Seq# 13)

Source Section

Packet Session Data (Group ID 13)

ExitedSessionTransitionTypeOneThrottleMode

This OM is pegged whenever the individual PCU which was in an Session transition Type One Throttle mode exits out of this mode.

Data Source

NBSS SBSC OMs

Source Field

ExitedSessionTransitionTypeOneThrottleMode (Seq# 21)

Source Section

Packet Session Signaling (Group ID 12)

ExitedSessionTransitionTypeTwoThrottleMode

This OM is pegged whenever the individual PCU which was in an Session transition Type Two Throttle mode exits out of this mode.

Data Source

NBSS SBSC OMs

Source Field

ExitedSessionTransitionTypeTwoThrottleMode (Seq# 22)

Source Section

Packet Session Signaling (Group ID 12)

NIDTA_AckTimeout

This OM is pegged when the PCU does not receive an acknowledgement for a NIDTA request.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_AckTimeout (Seq# 22)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailureCAU_Internal

This OM is pegged when the PCU receives a failure response with CAU Internal Failure reason code for a NIDTA request.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_FailureCAU_Internal (Seq# 19)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailureCM_Internal

This OM is pegged when the PCU receives a failure response with CM Internal Failure reason code for a NIDTA request.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_FailureCM_Internal (Seq# 20)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailurePagingTimeout

This OM is pegged when the PCU receives a failure response with Page Timeout reason code for a NIDTA request.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_FailurePagingTimeout (Seq# 17)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailureRMU_NoResource

This OM is pegged when the PCU receives a failure response with RMU No Resource reason code for a NIDTA request.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_FailureRMU_NoResource (Seq# 18)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailureRMU_Overload

This OM is pegged when the PCU receives a failure response with RMU Overload or RMU Internal failure reason code for a NIDTA request.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_FailureRMU_Overload (Seq# 21)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_MaxAckTimeout

This OM captures the High Water Mark for the number of NIDTA Failures when the PCU does not receive acknowledgements for a NIDTA request occurring per queue monitoring period.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_MaxAckTimeout (Seq# 28)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_MaxFailureCAU_Internal

This OM captures the High Water Mark for the number of NIDTA Failures due to CAU Internal failure reason occurring per queue monitoring period.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_MaxFailureCAU_Internal (Seq# 26)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_MaxFailureRMU_Overload

This OM captures the High Water Mark for the number of NIDTA Failures due to RMU Overload or RMU Internal failure reason occurring per queue monitoring period.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_MaxFailureRMU_Overload (Seq# 25)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_MaxTransportError

This OM captures the High Water Mark for the number of NIDTA Failures due to Transport Error occurring per queue monitoring period.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_MaxTransportError (Seq# 27)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_OtherFailures

This OM is pegged when the PCU receives a failure response for a NIDTA request with the failure codes of Unknown Failure, Mobile Power Down, Active Voice, Mobile Trouble, Mobile

Inactive, Cell Site Trouble, No VLR, Mobile in AMPS, Active Data or Page Response in Border.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_OtherFailures (Seq# 24)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_Timeout

This OM is pegged when the PCU times out on receiving the trigger to transition from dormant to active state after the PCU has received an acknowledgement from the CAU for the NIDTA request.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_Timeout (Seq# 23)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAArrivalRateCriticalThreshold

This OM is pegged when the NIDTA transitions arrival rate exceeds the predefined critical threshold level at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_ArrivalRateCriticalThreshold (Seq# 4)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAArrivalRateMajorThreshold

This OM is pegged when the NIDTA transitions arrival rate exceeds the predefined major threshold level at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_ArrivalRateMajorThreshold (Seq# 3)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAArrivalRateMinorThreshold

This OM is pegged when the NIDTA transitions arrival rate exceeds the predefined minor threshold level at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_ArrivalRateMinorThreshold (Seq# 2)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAArrivals

This OM is pegged on every NIDTA Request arrival at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_Arrivals (Seq# 1)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAAttemptsForwardedToMTX

This OM is pegged when a NIDTA request is forwarded to the MTX by the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_AttemptsForwardedToMTX (Seq# 16)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscarded

This OM is pegged whenever the NIDTA transition is discarded at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_Discarded (Seq# 6)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToAckTimeout

This OM is pegged when a NIDTA request is discarded at the PCU because the number of NIDTA Failures due to ACK Timeout reason exceeds the predefined threshold.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_DiscardedDueToAckTimeout (Seq# 15)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToCAUFailure

This OM is pegged when a NIDTA request is discarded at the PCU because the number of NIDTA Failures due to CAU Failure reason exceeds the predefined threshold.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_DiscardedDueToCAUFailure (Seq# 14)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToResponsePending

This OM is pegged when a NIDTA request is discarded due to NIDTA Request Response Pending Queue Length exceeding a predefined threshold at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_DiscardedDueToResponsePending (Seq# 11)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToRMU_Overload

This OM is pegged when a NIDTA request is discarded at the PCU because the number of NIDTA Failures due to RMU Overload reason exceeds the predefined threshold.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_DiscardedDueToRMU_Overload (Seq# 12)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToTransportError

This OM is pegged when a NIDTA request is discarded at the PCU because the number of NIDTA Failures due to AWS Failure reason exceeds the predefined threshold.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_DiscardedDueToTransportError (Seq# 13)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedRateCriticalThreshold

This OM is pegged when the NIDTA transitions discard rate exceeds the predefined critical threshold level at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_DiscardedRateCriticalThreshold (Seq# 9)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedRateMajorThreshold

This OM is pegged when the NIDTA transitions discard rate exceeds the predefined major threshold level at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_DiscardedRateMajorThreshold (Seq# 8)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedRateMinorThreshold

This OM is pegged when the NIDTA transitions discard rate exceeds the predefined minor threshold level at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_DiscardedRateMinorThreshold (Seq# 7)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAMaxArrivalRate

This OM records highest value of the NIDTA Arrival rate for the OM period at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_MaxArrivalRate (Seq# 5)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAMaxDiscardRate

This OM records the highest value of the NIDTA transitions discard rate for the OM period at the PCU.

Data Source

NBSS SBSC OMs

Source Field

NIDTA_MaxDiscardRate (Seq# 10)

Source Section

Packet Session Signaling Overload (Group ID 69)

NullSessionTransitionsQueued

This OM is pegged whenever a request for session transition, Active to Null or Dormant to Null, by an individual packet session is queued by the PCU because of being in the Session Throttle Mode.

Data Source

NBSS SBSC OMs

Source Field

NullSessionTransitionsQueued (Seq# 12)

Source Section

Packet Session Signaling (Group ID 12)

NumberOfDormantCallsGoingActive

This OM provides information regarding the total number of dormant calls going to active over the OM period.

Data Source

NBSS SBSC OMs

Source Field

NumberOfDormantCallsGoingActive (Seq# 10)

Source Section

Packet Session Data (Group ID 13)

PeakActiveDCR_QueueDepth

This OM provides the peak queue depth in percentage among all DCRQs measured in the forward direction during the OM reporting period.

Data Source

NBSS SBSC OMs

Source Field

PeakActiveDCR_QueueDepth (Seq# 11)

Source Section

PCU Queue Occupancy (Group ID 72)

PeakActiveRR_QueueDepth

This OM provides the peak queue depth in percentage among all RRQs measured in the reverse direction during the OM reporting period.

Data Source

NBSS SBSC OMs

Source Field

PeakActiveRR_QueueDepth (Seq# 13)

Source Section

PCU Queue Occupancy (Group ID 72)

PeakNumberOfAttachedActiveUsers

This OM provides peak number of attached Active users on a PCU at a given time during an OM period. This is a high watermark which represents peak number of Active sessions supported by a PCU at a given time.

Data Source

NBSS SBSC OMs

Source Field

PeakNumberOfAttachedActiveUsers (Seq# 8)

Source Section

Packet Session Data (Group ID 13)

PeakNumberOfAttachedDormantUsers

This OM provides peak number of attached Dormant users on a PCU at a given time during an OM period. This is a high watermark which represents peak number of Dormant sessions supported by a PCU at a given time.

Data Source

NBSS SBSC OMs

Source Field

PeakNumberOfAttachedDormantUsers (Seq# 6)

Source Section

Packet Session Data (Group ID 13)

RP_DormantSessionDeletions

This OM is pegged for the number of old dormant RP-sessions that were released so that the requested dormant RP-session could be setup.

Data Source

NBSS SBSC OMs

Source Field

RP_DormantSessionDeletions (Seq# 23)

Source Section

Packet Session Signaling (Group ID 12)

RRBufferOverflows

Number of RR buffer overflows

Data Source

NBSS SBSC OMs

Source Field

RRBufferOverflows (Seq# 5)

Source Section

Packet Session Data (Group ID 13)

SessionTransitionsQueued

SessionTransitionsQueued

Data Source

NBSS SBSC OMs

Source Field

SessionTransitionsQueued (Seq# 12)

Source Section

Packet Session Data (Group ID 13)

SessionTransitionsTypeOneQueued

This OM is pegged whenever a request for Dormant to Active or Active to Null session transition by an individual packet session is queued by the PCU because of being in the session throttle mode.

Data Source

NBSS SBSC OMs

Source Field

SessionTransitionsTypeOneQueued (Seq# 19)

Source Section

Packet Session Signaling (Group ID 12)

SessionTransitionsTypeTwoQueued

This OM is pegged whenever a request for Dormant to Null session transition by an individual packet session is queued by the PCU because of being in the session throttle mode.

Data Source

NBSS SBSC OMs

Source Field

SessionTransitionsTypeTwoQueued (Seq# 20)

Source Section

Packet Session Signaling (Group ID 12)

TotalActiveSessionSeconds

This OM is a cumulative count of the total number of active session seconds per PCU.

Data Source

NBSS SBSC OMs

Source Field

TotalActiveSessionSeconds (Seq# 15)

Source Section

Packet Session Data (Group ID 13)

TotalDormantBufferLimitOverflows

This OM provides the number of times the Dormant buffer overflows.

Data Source

NBSS SBSC OMs

Source Field

TotalDormantBufferLimitOverflows (Seq# 14)

Source Section

Packet Session Data (Group ID 13)

TotalDormantSessionSeconds

This OM is a cumulative count of the total number of dormant session seconds per PCU.

Data Source

NBSS SBSC OMs

Source Field

TotalDormantSessionSeconds (Seq# 16)

Source Section

Packet Session Data (Group ID 13)

TotalFwdPacketsDropped

Number of PPP packets dropped in the forward direction

Data Source

NBSS SBSC OMs

Source Field

TotalFwdPacketsDropped (Seq# 1)

Source Section

Packet Session Data (Group ID 13)

TotalInitialRPSessionSetupFailures

Measures number of PDSN Session Setup Failures per PCU.

Data Source

NBSS SBSC OMs

Source Field

TotalInitialRPSessionSetupFailures (Seq# 5)

Source Section

Packet Session Signaling (Group ID 12)

TotalReleasesBeforeHandoffSessionSetup

The number of user-initiated data call releases before the RP Session was completely setup during the Handoffs.

Data Source

NBSS SBSC OMs

Source Field

TotalReleasesBeforeHandoffSessionSetup (Seq# 8)

Source Section

Packet Session Signaling (Group ID 12)

TotalReleasesBeforeInitialSessionSetup

The number of user-initiated data call releases before the initial RP session was completely setup.

Data Source

NBSS SBSC OMs

Source Field

TotalReleasesBeforeInitialSessionSetup (Seq# 7)

Source Section

Packet Session Signaling (Group ID 12)

TotalRevPacketsDropped

Number of PPP packets dropped in the reverse direction

Data Source

NBSS SBSC OMs

Source Field

TotalRevPacketsDropped (Seq# 2)

Source Section

Packet Session Data (Group ID 13)

TotalRPSessionHandoffFailures

Pegged when the PCU gives up on an Inter-PCU or Inter-PDSN handoff attempts.

Data Source

NBSS SBSC OMs

Source Field

TotalRPSessionHandoffFailures (Seq# 6)

Source Section

Packet Session Signaling (Group ID 12)

TotalSessionSetupFailures

Number of failed packet session setups

Data Source

NBSS SBSC OMs

Source Field

TotalSessionSetupFailures (Seq# 4)

Source Section

Packet Session Signaling (Group ID 12)

TotalSessionSetupInitialAttempts

Number of packet session setups attempted during initial session setup

Data Source

NBSS SBSC OMs

Source Field

TotalSessionSetupInitialAttempts (Seq# 1)

Source Section

Packet Session Signaling (Group ID 12)

TotalSessionSetupReconnectAttempts

Number of packet session setups attempted when reconnecting to an existing PPP session

Data Source

NBSS SBSC OMs

Source Field

TotalSessionSetupReconnectAttempts (Seq# 2)

Source Section

Packet Session Signaling (Group ID 12)

TotalSessionSetupSuccess

Number of successful packet session setups either by initial or reconnect attempts

Data Source

NBSS SBSC OMs

Source Field

TotalSessionSetupSuccess (Seq# 3)

Source Section

Packet Session Signaling (Group ID 12)

PCU_PCUIFP Primitive Calculations

The following is a list of primitive calculations for the PCU_PCUIFP entity.

GRAPHmultiLineSeparator

Calculation

PCU_PCUIFP Peg Counts

The following is a list of peg counts for the PCU_PCUIFP entity.

ActiveSessionTransitionsQueued

This OM is pegged whenever a request for Dormant to Active session transition by an individual packet session is queued by the PCU because of being in the Session Throttle Mode.

Data Source

CPDS

Source Field

ActiveSessionTransitionsQueued (Seq# 11)

Source Section

Packet Session Signaling (Group ID 12)

AttachedActiveUsers

Number of attached active users when Peak number of Dormant users are determined during OM period

Data Source

CPDS

Source Field

AttachedActiveUsers (Seq# 7)

Source Section

Packet Session Data (Group ID 13)

AttachedDormantUsers

Number of attached dormant users when Peak number of Active users are determined during OM period

Data Source

CPDS

Source Field

AttachedDormantUsers (Seq# 9)

Source Section

Packet Session Data (Group ID 13)

AvgActiveDCR_QueueDepth

This OM provides the average queue depth in percentage among all DCRQs measured in the forward direction during the OM reporting period.

Data Source

CPDS

Source Field

AvgActiveDCR_QueueDepth (Seq# 12)

Source Section

PCU Queue Occupancy (Group ID 72)

AvgActiveRR_QueueDepth

This OM provides the average queue depth in percentage among all RRQs measured in the reverse direction during the OM reporting period.

Data Source

CPDS

Source Field

AvgActiveRR_QueueDepth (Seq# 14)

Source Section

PCU Queue Occupancy (Group ID 72)

CPU_UsageExceededThreshold

The number of times the CPU Usage has exceeded a pre-defined CPU threshold for a certain monitoring timeperiod.

Data Source

CPDS

Source Field

CPU_UsageExceededThreshold (Seq# 8)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_1

The number of times the CPU Usage in a monitoring period is less than 30%

Data Source

CPDS

Source Field

CPU_UsageIndex_1 (Seq# 1)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_2

The number of times the CPU Usage in a monitoring period is greater than 30% and less than equal to 40%.

Data Source

CPDS

Source Field

CPU_UsageIndex_2 (Seq# 2)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_3

The number of times the CPU Usage in a monitoring period is greater than 40% and less than equal to 50%.

Data Source

CPDS

Source Field

CPU_UsageIndex_3 (Seq# 3)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_4

The number of times the CPU Usage in a monitoring period is greater than 50% and less than equal to 60%.

Data Source

CPDS

Source Field

CPU_UsageIndex_4 (Seq# 4)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_5

The number of times the CPU Usage in a monitoring period is greater than 60% and less than equal to 70%.

Data Source

CPDS

Source Field

CPU_UsageIndex_5 (Seq# 5)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_6

The number of times the CPU Usage in a monitoring period is greater than 70% and less than equal to 80%.

Data Source

CPDS

Source Field

CPU_UsageIndex_6 (Seq# 6)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_7

The number of times the CPU Usage in a monitoring period is greater than 80%

Data Source

CPDS

Source Field

CPU_UsageIndex_7 (Seq# 7)

Source Section

CPU Usage (Group ID 19)

DCRBufferOverflows

Number of DCR buffer overflows per PCU

Data Source

CPDS

Source Field

DCRBufferOverflows (Seq# 3)

Source Section

Packet Session Data (Group ID 13)

DCRNumOfStopTransmitMsgsSent

Number of Stop Transmit messages sent from RLPQ per PCU

Data Source

CPDS

Source Field

DCRNumOfStopTransmitMsgsSent (Seq# 4)

Source Section

Packet Session Data (Group ID 13)

DormantDCR_QueueAtD2A_10

This OM provides the number of times the percentage DCRQ queue depth is $0 \leq x < 10$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_10 (Seq# 1)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_100

This OM provides the number of times the percentage DCRQ queue depth is $90 \leq x < 100$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_100 (Seq# 10)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_20

This OM provides the number of times the percentage DCRQ queue depth is $10 \leq x < 20$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_20 (Seq# 2)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_30

This OM provides the number of times the percentage DCRQ queue depth is $20 \leq x < 30$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_30 (Seq# 3)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_40

This OM provides the number of times the percentage DCRQ queue depth is $30 \leq x < 40$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_40 (Seq# 4)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_50

This OM provides the number of times the percentage DCRQ queue depth is $40 \leq x < 50$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_50 (Seq# 5)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_60

This OM provides the number of times the percentage DCRQ queue depth is $50 \leq x < 60$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_60 (Seq# 6)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_70

This OM provides the number of times the percentage DCRQ queue depth is $60 \leq x < 70$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_70 (Seq# 7)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_80

This OM provides the number of times the percentage DCRQ queue depth is $70 \leq x < 80$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_80 (Seq# 8)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantDCR_QueueAtD2A_90

This OM provides the number of times the percentage DCRQ queue depth is $80 \leq x < 90$ percent.

Data Source

CPDS

Source Field

DormantDCR_QueueAtD2A_90 (Seq# 9)

Source Section

PCU Queue Occupancy (Group ID 72)

DormantReleaseIndDroppedDueToFullTxWindow

This OM is pegged whenever the transport layer discards the DormantReleaseInd message due to a full Tx window.

Data Source

CPDS

Source Field

DormantReleaseIndDroppedDueToFullTxWindow (Seq# 16)

Source Section

Packet Session Signaling (Group ID 12)

DormantToActiveIndDroppedDueToFullTxWindow

This OM is pegged whenever the transport layer discards the DormantToActiveInd message due to a full Tx window.

Data Source

CPDS

Source Field

DormantToActiveIndDroppedDueToFullTxWindow (Seq# 15)

Source Section

Packet Session Signaling (Group ID 12)

DormantToActiveTrasitionsInhibited

Pegged whenever a request for Dormant to Active transition by a packet session is inhibited by PCU due to overload condition

Data Source

CPDS

Source Field

DormantToActiveTransitionsInhibited (Seq# 4)

Source Section

PCU Overload (Group ID 25)

EACH_RSDB_Histogram_1

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 1-25 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_1 (Seq# 1)

Source Section

Short Data Burst (Group ID 66)

EACH_RSDB_Histogram_10

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 226-255 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_10 (Seq# 10)

Source Section

Short Data Burst (Group ID 66)

EACH_RSDB_Histogram_2

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 26-50 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_2 (Seq# 2)

Source Section

Short Data Burst (Group ID 66)

EACH_RSDB_Histogram_3

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 51-75 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_3 (Seq# 3)

Source Section

Short Data Burst (Group ID 66)

EACH_RSDB_Histogram_4

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 76-100 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_4 (Seq# 4)

Source Section

Short Data Burst (Group ID 66)

EACH_RSDB_Histogram_5

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 101-125 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_5 (Seq# 5)

Source Section

Short Data Burst (Group ID 66)

EACH_RSDB_Histogram_6

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 126-150 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_6 (Seq# 6)

Source Section

Short Data Burst (Group ID 66)

EACH_RSDB_Histogram_7

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 151-175 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_7 (Seq# 7)

Source Section

Short Data Burst (Group ID 66)

EACH_RSDB_Histogram_8

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 176-200 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_8 (Seq# 8)

Source Section

Short Data Burst (Group ID 66)

EACH_RSDB_Histogram_9

Pegs when a R-SDB (sent by the mobile on the R-EACH) of size 201-225 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

EACH_RSDB_Histogram_9 (Seq# 9)

Source Section

Short Data Burst (Group ID 66)

EnteredActiveSessionTransitionThrottleMode

This OM is pegged whenever the individual PCU can no longer grant Dormant to Active Session Transitions immediately because it has exceeded the maximum rate of Session transitions.

Data Source

CPDS

Source Field

EnteredActiveSessionTransitionThrottleMode (Seq# 9)

Source Section

Packet Session Signaling (Group ID 12)

EnteredNullSessionTransitionThrottleMode

This OM is pegged whenever the individual PCU can no longer grant a Session Transition request to Null state.

Data Source

CPDS

Source Field

EnteredNullSessionTransitionThrottleMode (Seq# 10)

Source Section

Packet Session Signaling (Group ID 12)

EnteredSessionTransitionTypeOneThrottleMode

This OM is pegged whenever the individual PCU can no longer grant either Dormant to Active or Active to Null session transitions because it has exceeded the maximum session transition rate.

Data Source

CPDS

Source Field

EnteredSessionTransitionTypeOneThrottleMode (Seq# 17)

Source Section

Packet Session Signaling (Group ID 12)

EnteredSessionTransitionTypeTwoThrottleMode

This OM is pegged whenever the individual PCU can no longer grant Dormant to Null session transitions because it has exceeded the maximum session transition rate.

Data Source

CPDS

Source Field

EnteredSessionTransitionTypeTwoThrottleMode (Seq# 18)

Source Section

Packet Session Signaling (Group ID 12)

EntSessTransitionThrottleMode

Pegged when individual PCU can no longer grant Session Transitions because it has exceeded the maximum rate of Session transitions.

Data Source

CPDS

Source Field

EnteredSessionTransitionThrottleMode (Seq# 11)

Source Section

Packet Session Data (Group ID 13)

ESL_CongestedSignalingConnFailure

Number of congested ESL signaling connection failures.

Data Source

CPDS

Source Field

ESL_CongestedSignalingConnectionFailure (Seq# 12)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingRelAckWaitTO

Number of times the socket timed out waiting for an Ack to a reliable congested ESL signaling message.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableAckWaitTimeout (Seq# 15)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableRxMsg

Number of reliable ESL congested signaling messages received.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableRxMsg (Seq# 11)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingReliableTxMsg

Number of reliable ESL congested signaling messages sent.

Data Source

CPDS

Source Field

ESL_CongestedSignalingReliableTxMsg (Seq# 10)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingTxMsgFailure

Number of congested ESL signaling messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_CongestedSignalingTxMsgFailure (Seq# 14)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_CongestedSignalingUnknDestMsg

Number of congested ESL signaling messages received without a socket registered for it.

Data Source

CPDS

Source Field

ESL_CongestedSignalingUnknownDestinationMsg (Seq# 13)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_InvalidMsgRx

Number of invalid ESL messages received.

Data Source

CPDS

Source Field

ESL_InvalidMsgRx (Seq# 19)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitRxMsg

Number of ESL Node Init messages received.

Data Source

CPDS

Source Field

ESL_NodeInitRxMsg (Seq# 17)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsg

Number of ESL Node Init messages sent.

Data Source

CPDS

Source Field

ESL_NodeInitTxMsg (Seq# 16)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_NodeInitTxMsgFailure

Number of ESL Node Init messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_NodeInitTxMsgFailure (Seq# 18)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingConnectionFailure

Number of connection failures for ESL signaling messages.

Data Source

CPDS

Source Field

ESL_SignalingConnectionFailure (Seq# 5)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableAckWaitTimeout

Number of times the socket timed out waiting for an Ack to a reliable ESL signaling message.

Data Source

CPDS

Source Field

ESL_SignalingReliableAckWaitTimeout (Seq# 9)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableRxMsg

Number of reliable ESL signaling messages received.

Data Source

CPDS

Source Field

ESL_SignalingReliableRxMsg (Seq# 2)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsg

Number of reliable ESL signaling messages sent.

Data Source

CPDS

Source Field

ESL_SignalingReliableTxMsg (Seq# 1)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingReliableTxMsgFailure

Number off ESL signaling messages successfully sent.

Data Source

CPDS

Source Field

ESL_SignalingReliableTxMsgFailure (Seq# 7)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnknownDestinationMsg

Number of ESL signaling messages received without a socket registered for it.

Data Source

CPDS

Source Field

ESL_SignalingUnknownDestinationMsg (Seq# 6)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableRxMsg

Number of unreliable ESL signaling messages received.

Data Source

CPDS

Source Field

ESL_SignalingUnreliableRxMsg (Seq# 4)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnreliableTxMsg

Number of unreliable ESL signaling messages sent.

Data Source

CPDS

Source Field

ESL_SignalingUnreliableTxMsg (Seq# 3)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ESL_SignalingUnReliableTxMsgFailure

Number off ESL signaling messages unsuccessfully sent.

Data Source

CPDS

Source Field

ESL_SignalingUnReliableTxMsgFailure (Seq# 8)

Source Section

BCN Enhanced Socket Layer (Group ID 26)

ExitedActiveSessionTransitionThrottleMode

This OM is pegged whenever the Individual PCU which was in a throttle mode exits out of this mode.

Data Source

CPDS

Source Field

ExitedActiveSessionTransitionThrottleMode (Seq# 13)

Source Section

Packet Session Signaling (Group ID 12)

ExitedNullSessionTransitionThrottleMode

This OM is pegged whenever the Individual PCU which was in a throttle mode exits out of this mode.

Data Source

CPDS

Source Field

ExitedNullSessionTransitionThrottleMode (Seq# 14)

Source Section

Packet Session Signaling (Group ID 12)

ExitedSessionTransitionTypeOneThrottleMode

This OM is pegged whenever the individual PCU which was in an Session transition Type One Throttle mode exits out of this mode.

Data Source

CPDS

Source Field

ExitedSessionTransitionTypeOneThrottleMode (Seq# 21)

Source Section

Packet Session Signaling (Group ID 12)

ExitedSessionTransitionTypeTwoThrottleMode

This OM is pegged whenever the individual PCU which was in an Session transition Type Two Throttle mode exits out of this mode.

Data Source

CPDS

Source Field

ExitedSessionTransitionTypeTwoThrottleMode (Seq# 22)

Source Section

Packet Session Signaling (Group ID 12)

ExitSessTransitionThrottleMode

Pegged when individual PCU which was in a throttle mode exits out of this mode

Data Source

CPDS

Source Field

ExitedSessionTransitionThrottleMode (Seq# 13)

Source Section

Packet Session Data (Group ID 13)

GRE_DataDiscardMode

Pegged when PCU enters bearer traffic discard mode, an overload condition where the PCU cannot accept any more incoming data messages

Data Source

CPDS

Source Field

GRE_DataDiscardMode (Seq# 1)

Source Section

PCU Overload (Group ID 25)

GRE_ExitDataDiscardMode

Pegged when PCU exits GRE data discard mode

Data Source

CPDS

Source Field

GRE_ExitDataDiscardMode (Seq# 3)

Source Section

PCU Overload (Group ID 25)

LL_CongestedSignaling_FrameRx

Number of Signaling frames received (for STL-B).

Data Source

CPDS

Source Field

LL_CongestedSignaling_FrameRx (Seq# 5)

Source Section

BCN Link Layer (Group ID 18)

LL_CongestedSignaling_FrameTx

Number of Signaling frames sent (for STL-B).

CPDS

Source Field

LL_CongestedSignaling_FrameTx (Seq# 4)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameRx

Number of Data frames received (for STL-D).

Data Source

CPDS

Source Field

LL_DataFrameRx (Seq# 11)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameTx

Number of Data frames sent (for STL-D).

Data Source

CPDS

Source Field

LL_DataFrameTx (Seq# 10)

Source Section

BCN Link Layer (Group ID 18)

LL_InvalidFrameType

Number of frames with an invalid type tag⁷.

Data Source

CPDS

Source Field

LL_InvalidFrameType (Seq# 1)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameRx

Number of Node Init frames received.

Data Source

CPDS

Source Field

LL_NodeInitFrameRx (Seq# 3)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameTx

Number of Node Init frames sent.

Data Source

CPDS

Source Field

LL_NodeInitFrameTx (Seq# 2)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameRx

Number of Signaling frames received (for STL-A).

Data Source

CPDS

Source Field

LL_SignalingFrameRx (Seq# 7)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameTx

Number of Signaling frames sent (for STL-A).

Data Source

CPDS

Source Field

LL_SignalingFrameTx (Seq# 6)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameRx

Number of Traffic frames received.

Data Source

CPDS

Source Field

LL_TrafficFrameRx (Seq# 9)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameTx

Number of Traffic frames sent.

Data Source

CPDS

Source Field

LL_TrafficFrameTx (Seq# 8)

Source Section

BCN Link Layer (Group ID 18)

NIDTA_AckTimeout

This OM is pegged when the PCU does not receive an acknowledgement for a NIDTA request.

Data Source

CPDS

Source Field

NIDTA_AckTimeout (Seq# 22)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailureCAU_Internal

This OM is pegged when the PCU receives a failure response with CAU Internal Failure reason code for a NIDTA request.

Data Source

CPDS

Source Field

NIDTA_FailureCAU_Internal (Seq# 19)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailureCM_Internal

This OM is pegged when the PCU receives a failure response with CM Internal Failure reason code for a NIDTA request.

Data Source

CPDS

Source Field

NIDTA_FailureCM_Internal (Seq# 20)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailurePagingTimeout

This OM is pegged when the PCU receives a failure response with Page Timeout reason code for a NIDTA request.

Data Source

CPDS

Source Field

NIDTA_FailurePagingTimeout (Seq# 17)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailureRMU_NoResource

This OM is pegged when the PCU receives a failure response with RMU No Resource reason code for a NIDTA request.

Data Source

CPDS

Source Field

NIDTA_FailureRMU_NoResource (Seq# 18)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_FailureRMU_Overload

This OM is pegged when the PCU receives a failure response with RMU Overload or RMU Internal failure reason code for a NIDTA request.

Data Source

CPDS

Source Field

NIDTA_FailureRMU_Overload (Seq# 21)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_MaxAckTimeout

This OM captures the High Water Mark for the number of NIDTA Failures when the PCU does not receive acknowledgements for a NIDTA request occurring per queue monitoring period.

Data Source

CPDS

Source Field

NIDTA_MaxAckTimeout (Seq# 28)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_MaxFailureCAU_Internal

This OM captures the High Water Mark for the number of NIDTA Failures due to CAU Internal failure reason occurring per queue monitoring period.

Data Source

CPDS

Source Field

NIDTA_MaxFailureCAU_Internal (Seq# 26)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_MaxFailureRMU_Overload

This OM captures the High Water Mark for the number of NIDTA Failures due to RMU Overload or RMU Internal failure reason occurring per queue monitoring period.

Data Source

CPDS

Source Field

NIDTA_MaxFailureRMU_Overload (Seq# 25)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_MaxTransportError

This OM captures the High Water Mark for the number of NIDTA Failures due to Transport Error occurring per queue monitoring period.

Data Source

CPDS

Source Field

NIDTA_MaxTransportError (Seq# 27)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_OtherFailures

This OM is pegged when the PCU receives a failure response for a NIDTA request with the failure codes of Unknown Failure, Mobile Power Down, Active Voice, Mobile Trouble, Mobile Inactive, Cell Site Trouble, No VLR, Mobile in AMPS, Active Data or Page Response in Border.

Data Source

CPDS

Source Field

NIDTA_OtherFailures (Seq# 24)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTA_Timeout

This OM is pegged when the PCU times out on receiving the trigger to transition from dormant to active state after the PCU has received an acknowledgement from the CAU for the NIDTA request.

Data Source

CPDS

Source Field

NIDTA_Timeout (Seq# 23)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAArrivalRateCriticalThreshold

This OM is pegged when the NIDTA transitions arrival rate exceeds the predefined critical threshold level at the PCU.

Data Source

CPDS

Source Field

NIDTA_ArrivalRateCriticalThreshold (Seq# 4)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAArrivalRateMajorThreshold

This OM is pegged when the NIDTA transitions arrival rate exceeds the predefined major threshold level at the PCU.

Data Source

CPDS

Source Field

NIDTA_ArrivalRateMajorThreshold (Seq# 3)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAArrivalRateMinorThreshold

This OM is pegged when the NIDTA transitions arrival rate exceeds the predefined minor threshold level at the PCU.

Data Source

CPDS

Source Field

NIDTA_ArrivalRateMinorThreshold (Seq# 2)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAArrivals

This OM is pegged on every NIDTA Request arrival at the PCU.

Data Source

CPDS

Source Field

NIDTA_Arrivals (Seq# 1)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAAttemptsForwardedToMTX

This OM is pegged when a NIDTA request is forwarded to the MTX by the PCU.

Data Source

CPDS

Source Field

NIDTA_AttemptsForwardedToMTX (Seq# 16)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscarded

This OM is pegged whenever the NIDTA transition is discarded at the PCU.

Data Source

CPDS

Source Field

NIDTA_Discarded (Seq# 6)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToAckTimeout

This OM is pegged when a NIDTA request is discarded at the PCU because the number of NIDTA Failures due to ACK Timeout reason exceeds the predefined threshold.

Data Source

CPDS

Source Field

NIDTA_DiscardedDueToAckTimeout (Seq# 15)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToCAUFailure

This OM is pegged when a NIDTA request is discarded at the PCU because the number of NIDTA Failures due to CAU Failure reason exceeds the predefined threshold.

Data Source

CPDS

Source Field

NIDTA_DiscardedDueToCAUFailure (Seq# 14)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToResponsePending

This OM is pegged when a NIDTA request is discarded due to NIDTA Request Response Pending Queue Length exceeding a predefined threshold at the PCU.

Data Source

CPDS

Source Field

NIDTA_DiscardedDueToResponsePending (Seq# 11)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToRMU_Overload

This OM is pegged when a NIDTA request is discarded at the PCU because the number of NIDTA Failures due to RMU Overload reason exceeds the predefined threshold.

Data Source

CPDS

Source Field

NIDTA_DiscardedDueToRMU_Overload (Seq# 12)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedDueToTransportError

This OM is pegged when a NIDTA request is discarded at the PCU because the number of NIDTA Failures due to AWS Failure reason exceeds the predefined threshold.

Data Source

CPDS

Source Field

NIDTA_DiscardedDueToTransportError (Seq# 13)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedRateCriticalThreshold

This OM is pegged when the NIDTA transitions discard rate exceeds the predefined critical threshold level at the PCU.

Data Source

CPDS

Source Field

NIDTA_DiscardedRateCriticalThreshold (Seq# 9)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedRateMajorThreshold

This OM is pegged when the NIDTA transitions discard rate exceeds the predefined major threshold level at the PCU.

Data Source

CPDS

Source Field

NIDTA_DiscardedRateMajorThreshold (Seq# 8)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTADiscardedRateMinorThreshold

This OM is pegged when the NIDTA transitions discard rate exceeds the predefined minor threshold level at the PCU.

Data Source

CPDS

Source Field

NIDTA_DiscardedRateMinorThreshold (Seq# 7)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAMaxArrivalRate

This OM records highest value of the NIDTA Arrival rate for the OM period at the PCU.

Data Source

CPDS

Source Field

NIDTA_MaxArrivalRate (Seq# 5)

Source Section

Packet Session Signaling Overload (Group ID 69)

NIDTAMaxDiscardRate

This OM records the highest value of the NIDTA transitions discard rate for the OM period at the PCU.

Data Source

CPDS

Source Field

NIDTA_MaxDiscardRate (Seq# 10)

Source Section

Packet Session Signaling Overload (Group ID 69)

NullSessionTransitionsQueued

This OM is pegged whenever a request for session transition, Active to Null or Dormant to Null, by an individual packet session is queued by the PCU because of being in the Session Throttle Mode.

Data Source

CPDS

Source Field

NullSessionTransitionsQueued (Seq# 12)

Source Section

Packet Session Signaling (Group ID 12)

NumOfDormantCallsGoingActive

Number of dormant calls going to active over the OM period

Data Source

CPDS

Source Field

NumberOfDormantCallsGoingActive (Seq# 10)

Source Section

Packet Session Data (Group ID 13)

PCU_InitiatedSessReleaseOther

This OM is pegged when PCU releases packet session for reasons not described by other pegs.

Data Source

CPDS

Source Field

PCU_InitiatedSessionReleaseOther (Seq# 21)

Source Section

RP Session Signaling (Group ID 22)

PCU_InitiatedSessReleasePacketSessDrop

Pegged when PCU drops packet session due to PCU lock or PDSN deleted actions.

Data Source

CPDS

Source Field

PCU_InitiatedSessionReleasePacketSessionDrop (Seq# 17)

Source Section

RP Session Signaling (Group ID 22)

PCU_InitiatedSessReleasePDSN_Reject

Pegged when PDSN sends RRP with a failure code

Data Source

CPDS

Source Field

PCU_InitiatedSessionReleasePDSN_Reject (Seq# 20)

Source Section

RP Session Signaling (Group ID 22)

PCU_InitSessReleasePacketSessDisconnect

Pegged when the Packet Session on the PCU sends a disconnect request

Data Source

CPDS

Source Field

PCU_InitiatedSessionReleasePacketSessionDisconnect (Seq# 16)

Source Section

RP Session Signaling (Group ID 22)

PeakActiveDCR_QueueDepth

This OM provides the peak queue depth in percentage among all DCRQs measured in the forward direction during the OM reporting period.

Data Source

CPDS

Source Field

PeakActiveDCR_QueueDepth (Seq# 11)

Source Section

PCU Queue Occupancy (Group ID 72)

PeakActiveRR_QueueDepth

This OM provides the peak queue depth in percentage among all RRQs measured in the reverse direction during the OM reporting period.

Data Source

CPDS

Source Field

PeakActiveRR_QueueDepth (Seq# 13)

Source Section

PCU Queue Occupancy (Group ID 72)

PeakNumOfAttachedActiveUsers

Peak number of attached Active users at a given time during OM period

Data Source

CPDS

Source Field

PeakNumberOfAttachedActiveUsers (Seq# 8)

Source Section

Packet Session Data (Group ID 13)

PeakNumOfAttachedDormantUsers

Peak number of attached Dormant users at a given time during OM period

Data Source

CPDS

Source Field

PeakNumberOfAttachedDormantUsers (Seq# 6)

Source Section

Packet Session Data (Group ID 13)

RFCH_RSDB_Histogram_1

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 1-25 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_1 (Seq# 11)

Source Section

Short Data Burst (Group ID 66)

RFCH_RSDB_Histogram_10

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 226-255 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_10 (Seq# 20)

Source Section

Short Data Burst (Group ID 66)

RFCH_RSDB_Histogram_2

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 26-50 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_2 (Seq# 12)

Source Section

Short Data Burst (Group ID 66)

RFCH_RSDB_Histogram_3

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 51-75 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_3 (Seq# 13)

Source Section

Short Data Burst (Group ID 66)

RFCH_RSDB_Histogram_4

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 76-100 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_4 (Seq# 14)

Source Section

Short Data Burst (Group ID 66)

RFCH_RSDB_Histogram_5

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 101-125 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_5 (Seq# 15)

Source Section

Short Data Burst (Group ID 66)

RFCH_RSDB_Histogram_6

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 126-150 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_6 (Seq# 16)

Source Section

Short Data Burst (Group ID 66)

RFCH_RSDB_Histogram_7

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 151-175 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_7 (Seq# 17)

Source Section

Short Data Burst (Group ID 66)

RFCH_RSDB_Histogram_8

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 176-200 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_8 (Seq# 18)

Source Section

Short Data Burst (Group ID 66)

RFCH_RSDB_Histogram_9

Pegs when a R-SDB (sent by the mobile on the R-FCH) of size 201-225 bytes is received by the PCU (PCUFP).

Data Source

CPDS

Source Field

RFCH_RSDB_Histogram_9 (Seq# 19)

Source Section

Short Data Burst (Group ID 66)

RP_DormantSessionDeletions

This OM is pegged for the number of old dormant RP-sessions that were released so that the requested dormant RP-session could be setup.

Data Source

CPDS

Source Field

RP_DormantSessionDeletions (Seq# 23)

Source Section

Packet Session Signaling (Group ID 12)

RPTotalOutofSequencePacketsReceived

Pegged for all out of sequence GRE packet received in the forward direction sent over RP link.

Data Source

CPDS

Source Field

RPTotalOutOfSequencePacketsReceived (Seq# 1)

Source Section

RP Session Data (Group ID 23)

RPTotalUnreliableBytesReceived

Provides the cumulative number of bytes each R-P session in the PCU received by PDSN

Data Source

CPDS

Source Field

RPTotalUnreliableBytesReceived (Seq# 3)

Source Section

RP Session Data (Group ID 23)

RPTotalUnreliableBytesTransmitted

Provides the cumulative number of bytes each R-P session in the PCU transmitted to PDSN

Data Source

CPDS

Source Field

RPTotalUnreliableBytesTransmitted (Seq# 2)

Source Section

RP Session Data (Group ID 23)

RRBufferOverflows

Number of RR buffer overflows

Data Source

CPDS

Source Field

RRBufferOverflows (Seq# 5)

Source Section

Packet Session Data (Group ID 13)

SessionTransitionsQueued

Pegged when a request for session transition by an individual packet session queued by the PCU because of being in the Session Throttle Mode

Data Source

CPDS

Source Field

SessionTransitionsQueued (Seq# 12)

Source Section

Packet Session Data (Group ID 13)

SessionTransitionsTypeOneQueued

This OM is pegged whenever a request for Dormant to Active or Active to Null session transition by an individual packet session is queued by the PCU because of being in the session throttle mode.

Data Source

CPDS

Source Field

SessionTransitionsTypeOneQueued (Seq# 19)

Source Section

Packet Session Signaling (Group ID 12)

SessionTransitionsTypeTwoQueued

This OM is pegged whenever a request for Dormant to Null session transition by an individual packet session is queued by the PCU because of being in the session throttle mode.

Data Source

CPDS

Source Field

SessionTransitionsTypeTwoQueued (Seq# 20)

Source Section

Packet Session Signaling (Group ID 12)

SL_MaxLargeStreamBufferUsed

Maximum number of Large stream buffer used.

Data Source

CPDS

Source Field

SL_MaxLargeStreamBufferUsed (Seq# 4)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxMediumStreamBufferUsed

Maximum number of Medium stream buffer used.

Data Source

CPDS

Source Field

SL_MaxMediumStreamBufferUsed (Seq# 5)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxSmallStreamBufferUsed

Maximum number of Small stream buffer used.

Data Source

CPDS

Source Field

SL_MaxSmallStreamBufferUsed (Seq# 6)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLA_UnknownDestinationMsg

Number of STL-A messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLA_UnknownDestinationMsg (Seq# 1)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLB_UnknownDestinationMsg

Number of STL-B messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLB_UnknownDestinationMsg (Seq# 2)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLD_UnknownDestinationMsg

Number of STL-D messages received on this stack but without a socket registered for it.

Data Source

CPDS

Source Field

SL_STLD_UnknownDestinationMsg (Seq# 3)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocFailure

Number of Stream buffer unsuccessfully allocated.

Data Source

CPDS

Source Field

SL_StreamBufferAllocFailure (Seq# 8)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocSuccess

Number of Stream buffer successfully allocated.

Data Source

CPDS

Source Field

SL_StreamBufferAllocSuccess (Seq# 7)

Source Section

BCN Socket Layer (Group ID 15)

STLA_BestEffortReassemblyTimeout

Number of best effort messages dropped (missing frame(s))

Data Source

CPDS

Source Field

STLA_BestEffortReassemblyTimeout (Seq# 17)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortRxMsg

Number of Best Effort messages received.(thruput)

Data Source

CPDS

Source Field

STLA_BestEffortRxMsg (Seq# 4)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortTxMsg

Number of Best Effort messages sent.(thruput)

Data Source

CPDS

Source Field

STLA_BestEffortTxMsg (Seq# 3)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailed

Obsolete in NBSS14. Number of connections that couldn't be set up or that were lost.

Data Source

CPDS

Source Field

STLA_ConnectionFailed (Seq# 22)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxFaults

Number of connections that could not be set up or that were lost due to the threshold of max faults being exceeded.

Data Source

CPDS

Source Field

STLA_ConnectionFailedDueToMaxFaults (Seq# 23)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxTxAttempts

Number of connections that could not be set up or that were lost due to the threshold of max transmission attempts being exceeded.

Data Source

CPDS

Source Field

STLA_ConnectionFailedDueToMaxTxAttempts (Seq# 24)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFault

Number of faults that occurred in the stack for all the connections.

Data Source

CPDS

Source Field

STLA_ConnectionFault (Seq# 21)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_FailedMsgCRC

Number of messages (reliable and best effort) dropped due to a bad CRC.

Data Source

CPDS

Source Field

STLA_FailedMsgCRC (Seq# 20)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenRxConnection

Maximum number of open connections to receive messages.

Data Source

CPDS

Source Field

STLA_MaxOpenRxConnection (Seq# 33)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenTxConnection

Maximum number of open connections to transmit messages.

Data Source

CPDS

Source Field

STLA_MaxOpenTxConnection (Seq# 34)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxBuffer

Maximum number of buffers used to receive incoming frames.

Data Source

CPDS

Source Field

STLA_MaxRxBuffer (Seq# 14)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxQueue

Maximum number of queues to receive messages.

Data Source

CPDS

Source Field

STLA_MaxRxQueue (Seq# 31)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxLargeBuffer

Maximum number of large buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxLargeBuffer (Seq# 11)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxMediumBuffer

Maximum number of medium buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxMediumBuffer (Seq# 10)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxQueue

Maximum number of queues to transmit messages.

Data Source

CPDS

Source Field

STLA_MaxTxQueue (Seq# 32)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxSmallBuffer

Maximum number of small buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLA_MaxTxSmallBuffer (Seq# 9)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenRxConnection

Number of Receive connection opened.

Data Source

CPDS

Source Field

STLA_OpenRxConnection (Seq# 6)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenTxConnection

Number of Transmit connection opened.

Data Source

CPDS

Source Field

STLA_OpenTxConnection (Seq# 5)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfRxFrameBuffer

Number of received frames rejected due to lack of buffers.

Data Source

CPDS

Source Field

STLA_OutOfRxFrameBuffer (Seq# 13)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfTxBuffer

Number of transmit failures due to lack of transmit message buffers.

Data Source

CPDS

Source Field

STLA_OutOfTxBuffer (Seq# 12)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsg

Obsoleted in NBSS14. Number of messages, which were over the window size.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsg (Seq# 15)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToMaxWS

Number of messages which were over the window size due to size of message exceeding the window size.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToMaxWS (Seq# 26)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToReducedWS

Number of messages which were over the window size due to a reduced window size setting.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToReducedWS (Seq# 25)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToZeroWS

Number of messages which were over the window size due to the window size being set to zero.

Data Source

CPDS

Source Field

STLA_OutOfWindowMsgDueToZeroWS (Seq# 27)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ProtocolRevisionError

Number of mesaages with protocol revision errors.

Data Source

CPDS

Source Field

STLA_ProtocolRevisionError (Seq# 30)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedRxConnection

Number of connection refused on receives because maximum reached.

Data Source

CPDS

Source Field

STLA_RefusedRxConnection (Seq# 7)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedTxConnection

Number of connection refused on transmits because maximum reached.

Data Source

CPDS

Source Field

STLA_RefusedTxConnection (Seq# 8)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableAckWaitTimeout

Number of missing Ack when transmitting a reliable message.

Data Source

CPDS

Source Field

STLA_ReliableAckWaitTimeout (Seq# 19)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableReassemblyTimeout

Number of reliable messages dropped (missing frame(s)).

Data Source

CPDS

Source Field

STLA_ReliableReassemblyTimeout (Seq# 16)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRetransmittedMsg

Number of reliable messages, which needed to be retransmitted.

Data Source

CPDS

Source Field

STLA_ReliableRetransmittedMsg (Seq# 18)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRxMsg

Number of reliable messages received.(thruput)

Data Source

CPDS

Source Field

STLA_ReliableRxMsg (Seq# 2)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableTxMsg

Number of reliable messages sent.(thruput)

Data Source

CPDS

Source Field

STLA_ReliableTxMsg (Seq# 1)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowReduced

Number of messages with the window shut.

Data Source

CPDS

Source Field

STLA_TxWindowReduced (Seq# 28)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowShut

Number of messages with a reduced window size.

Data Source

CPDS

Source Field

STLA_TxWindowShut (Seq# 29)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLD_BestEffortReassemblyTimeout

Number of best effort messages dropped (missing frame(s))

Data Source

CPDS

Source Field

STLD_BestEffortReassemblyTimeout (Seq# 11)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_BestEffortRxMsg

Number of Best Effort messages received.

Data Source

CPDS

Source Field

STLD_BestEffortRxMsg (Seq# 2)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_BestEffortTxMsg

Number of Best Effort messages sent.

Data Source

CPDS

Source Field

STLD_BestEffortTxMsg (Seq# 1)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxRxBuffer

Maximum number of buffers used to receive incoming frames.

Data Source

CPDS

Source Field

STLD_MaxRxBuffer (Seq# 10)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxRxQueue

Maximum number of queues to receive messages.

Data Source

CPDS

Source Field

STLD_MaxRxQueue (Seq# 12)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxBufferWithoutCopy

Maximum number of without copy buffers used to transmit all of the messages.

Data Source

CPDS

Source Field

STLD_MaxTxBufferWithoutCopy (Seq# 7)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxLargeBuffer

Maximum number of large buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxLargeBuffer (Seq# 5)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxMediumBuffer

Maximum number of medium buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxMediumBuffer (Seq# 4)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxQueue

Maximum number of queues to transmit messages.

Data Source

CPDS

Source Field

STLD_MaxTxQueue (Seq# 13)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_MaxTxSmallBuffer

Maximum number of small buffers used to transmit all the messages.

Data Source

CPDS

Source Field

STLD_MaxTxSmallBuffer (Seq# 3)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfRxFrameBuffer

Number of received frames rejected due to lack of buffers.

Data Source

CPDS

Source Field

STLD_OutOfRxFrameBuffer (Seq# 9)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfTxBuffer

Number of transmit failures due to lack of transmit message buffers.

Data Source

CPDS

Source Field

STLD_OutOfTxBuffer (Seq# 6)

Source Section

BCN STLD Transport Layer (Group ID 17)

STLD_OutOfTxBufferWithoutCopy

Number of transmit failures due to lack of transmit message without copy buffers.

Data Source

CPDS

Source Field

STLD_OutOfTxBufferWithoutCopy (Seq# 8)

Source Section

BCN STLD Transport Layer (Group ID 17)

TotalActiveSessionSeconds

This OM is a cumulative count of the total number of active session seconds per PCU.

Data Source

CPDS

Source Field

TotalActiveSessionSeconds (Seq# 15)

Source Section

Packet Session Data (Group ID 13)

TotalDormantSessionSeconds

This OM is a cumulative count of the total number of dormant session seconds per PCU.

Data Source

CPDS

Source Field

TotalDormantSessionSeconds (Seq# 16)

Source Section

Packet Session Data (Group ID 13)

TotalFwdPacketsDropped

Number of PPP packets dropped in the forward direction per PCU

Data Source

CPDS

Source Field

TotalFwdPacketsDropped (Seq# 1)

Source Section

Packet Session Data (Group ID 13)

TotalGRE_PacketsDropped

Pegged for each dropped bearer traffic packet when in GRE data pitching mode

Data Source

CPDS

Source Field

TotalGRE_PacketsDropped (Seq# 2)

Source Section

PCU Overload (Group ID 25)

TotalInitialRPSessionSetupFailures

Pegged when a session setup during initial attempt fails.

Data Source

CPDS

Source Field

TotalInitialRPSessionSetupFailures (Seq# 5)

Source Section

Packet Session Signaling (Group ID 12)

TotalRegRequestMsgSent

Pegged every time a registration request message is sent to PDSN after session setup or handoff is complete

Data Source

CPDS

Source Field

TotalRegistrationRequestMsgSent (Seq# 22)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectIdMismatch

Pegged every time a registration request message is rejected by PDSN for reason ID Mismatch

Data Source

CPDS

Source Field

TotalRegistrationRequestRejectReasonIdMismatch (Seq# 25)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectMobileAuthFailure

Pegged every time a registration request message is rejected by PDSN for reason Mobile Authentication Failure

Data Source

CPDS

Source Field

TotalRegistrationRequestRejectReasonMobileAuthFailure (Seq# 27)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectNoResources

Pegged every time a registration request message is rejected by PDSN for reason insufficient resources

Data Source

CPDS

Source Field

TotalRegistrationRequestRejectReasonInsufficientResources (Seq# 26)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectOther

Pegged when PCU releases packet session for reasons not specified in other Oms

Data Source

CPDS

Source Field

TotalRegistrationRequestRejectReasonOther (Seq# 24)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRejectPDSN_NotResponding

Pegged every time PDSN does not send response to a registration request message after session setup or handoff is complete

Data Source

CPDS

Source Field

TotalRegistrationRequestRejectReasonPDSN_NotResponding (Seq# 28)

Source Section

RP Session Signaling (Group ID 22)

TotalRegRequestRetries

Pegged every time a registration request message is resent to PDSN

Data Source

CPDS

Source Field

TotalRegistrationRequestRetries (Seq# 23)

Source Section

RP Session Signaling (Group ID 22)

TotalReleasesBeforeHandoffSessionSetup

The number of user-initiated data call releases before the RP Session was completely setup during the Handoffs.

Data Source

CPDS

Source Field

TotalReleasesBeforeHandoffSessionSetup (Seq# 8)

Source Section

Packet Session Signaling (Group ID 12)

TotalReleasesBeforeInitialSessionSetup

The number of user-initiated data call releases before the initial RP session was completely setup.

Data Source

CPDS

Source Field

TotalReleasesBeforeInitialSessionSetup (Seq# 7)

Source Section

Packet Session Signaling (Group ID 12)

TotalRevPacketsDropped

Number of PPP packets dropped in the reverse direction per PCU

Data Source

CPDS

Source Field

TotalRevPacketsDropped (Seq# 2)

Source Section

Packet Session Data (Group ID 13)

TotalRP_SessHandoffAttempts

Pegged for session Handoff attempt, both dormant and active

Data Source

CPDS

Source Field

TotalRP_SessionHandoffAttempts (Seq# 8)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffFailPDSN_NotRespond

Session Handoff Rejection due to PDSN not responding

Data Source

CPDS

Source Field

TotalRP_SessionHandoffFailuresReasonPDSN_NotResponding (Seq# 14)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffRejectAuthFailure

Session Handoff Rejection due to mobile authentication failure

Data Source

CPDS

Source Field

TotalRP_SessionHandoffRejectReasonMobileAuthFailure (Seq# 13)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffRejectIdMismatch

Session Handoff Rejection due to ID Mismatch

Data Source

CPDS

Source Field

TotalRP_SessionHandoffRejectReasonIdMismatch (Seq# 11)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffRejectNoResources

Session Handoff Rejection due to insufficient resources

Data Source

CPDS

Source Field

TotalRP_SessionHandoffRejectReasonInsufficientResources (Seq# 12)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffRejectOther

PDSN Session Handoff Rejection not specified in other Handoff Rejection Oms

Data Source

CPDS

Source Field

TotalRP_SessionHandoffRejectReasonOther (Seq# 10)

Source Section

RP Session Signaling (Group ID 22)

TotalRP_SessHandoffSuccesses

Pegged for successful session Handoff, both dormant and active

Data Source

CPDS

Source Field

TotalRP_SessionHandoffSuccesses (Seq# 9)

Source Section

RP Session Signaling (Group ID 22)

TotalRPSessionHandoffFailures

Pegged when the PCU gives up on a Inter-PCU or Inter-PDSN handoff attempt

Data Source

CPDS

Source Field

TotalRPSessionHandoffFailures (Seq# 6)

Source Section

Packet Session Signaling (Group ID 12)

TotalRSDB_Dropped

Pegs when a R-SDB is not sent by the PCU (PCUFP) to the PDSN.

Data Source

CPDS

Source Field

TotalRSDB_Dropped (Seq# 22)

Source Section

Short Data Burst (Group ID 66)

TotalRSDB_Forwarded

Pegs when a R-SDB is sent by the PCU (PCUFP) to the PDSN.

Data Source

CPDS

Source Field

TotalRSDB_Forwarded (Seq# 21)

Source Section

Short Data Burst (Group ID 66)

TotalSessionSetupFailures

Number of failed R-P session setups either during initial or reconnect attempts

Data Source

CPDS

Source Field

TotalSessionSetupFailures (Seq# 4)

Source Section

Packet Session Signaling (Group ID 12)

TotalSessionSetupInitialAttempts

Number of R-P session setups attempted for initial R-P session setup

Data Source

CPDS

Source Field

TotalSessionSetupInitialAttempts (Seq# 1)

Source Section

Packet Session Signaling (Group ID 12)

TotalSessionSetupReconnectAttempts

Number of R-P session reconnect attempts for PCU or PDSN change

Data Source

CPDS

Source Field

TotalSessionSetupReconnectAttempts (Seq# 2)

Source Section

Packet Session Signaling (Group ID 12)

TotalSessionSetupSuccess

Number of R-P session setups during initial or reconnect attempts

Data Source

CPDS

Source Field

TotalSessionSetupSuccess (Seq# 3)

Source Section

Packet Session Signaling (Group ID 12)

TotalSignallingMsgReceived

Pegged for each signaling message received from a PDSN. Unroutable messages are not included.

Data Source

CPDS

Source Field

TotalSignallingMsgReceived (Seq# 29)

Source Section

RP Session Signaling (Group ID 22)

TotDormantBufferLimitOverflows

Number of forward packets dropped due to the total dormant buffer limit

Data Source

CPDS

Source Field

TotalDormantBufferLimitOverflows (Seq# 14)

Source Section

Packet Session Data (Group ID 13)

TotlInitRP_SessSetupAttempts

Should only be pegged when a session setup is attempted for the first time

Data Source

CPDS

Source Field

TotalInitialRP_SessionSetupAttempts (Seq# 1)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupFailPDSN_NotRespond

Setup Failure due to PDSN not responding

Data Source

CPDS

Source Field

TotalInitialRP_SessionSetupFailuresReasonPDSN_NotResponding (Seq# 7)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupRejectAuthFail

PDSN Setup Rejection due to Mobile Authentication Failure

Data Source

CPDS

Source Field

TotalInitialRP_SessionSetupRejectReasonMobileAuthFailure (Seq# 6)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupRejectIdMismatch

PDSN Setup Rejection due to ID Mismatch

Data Source

CPDS

Source Field

TotalInitialRP_SessionSetupRejectReasonIdMismatch (Seq# 4)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupRejectInsuffResources

PDSN Setup Rejection due to insufficient Resources

Data Source

CPDS

Source Field

TotalInitialRP_SessionSetupRejectReasonInsufficientResources (Seq# 5)

Source Section

RP Session Signaling (Group ID 22)

TotlInitRP_SessSetupRejectOther

Pegged for Setup Rejections not specified in other rejection Oms

Data Source

CPDS

Source Field

TotalInitialRP_SessionSetupRejectReasonOther (Seq# 3)

Source Section

RP Session Signaling (Group ID 22)

TotInitRP_SessSetupSuccesses

Should only be pegged when a session is successfully setup

Data Source

CPDS

Source Field

TotalInitialRP_SessionSetupSuccesses (Seq# 2)

Source Section

RP Session Signaling (Group ID 22)

PCU_PDSN Peg Counts

The following is a list of peg counts for the PCU_PDSN entity.

NumberOfTunnelFailures

The number of times a L2TP tunnel was torn down due to failure of reliable packet transmission per L2TP tunnel

Data Source

NBSS BSC OMs

Source Field

NumberOfTunnelFailures (PCU_PDSN Seq# 7)

Source Section

RP Session L2TP (Group ID 14)

ReliablePacketReceived

The number of messages the PCU received with reliable delivery acknowledgement requested per L2TP tunnel

Data Source

NBSS BSC OMs

Source Field

ReliablePacketReceived (PCU_PDSN Seq# 5 + Seq# 6)

Source Section

RP Session L2TP (Group ID 14)

ReliablePacketReTransmitted

The number of reliable packets that had to be retransmitted because no ACK was received

Data Source

NBSS BSC OMs

Source Field

ReliablePacketReTransmitted (PCU_PDSN Seq# 3 + Seq# 4)

Source Section

RP Session L2TP (Group ID 14)

ReliablePacketSentSuccess

The number of ACKs received as a result of reliable packets being sent

Data Source

NBSS BSC OMs

Source Field

ReliablePacketSentSuccess (PCU_PDSN Seq# 1 + Seq# 2)

Source Section

RP Session L2TP (Group ID 14)

TotalUnreliableBytesReceived

The cumulative number of bytes each session in the PCU received from PCU_PDSN per L2TP tunnel

Data Source

NBSS BSC OMs

Source Field

TotalUnreliableBytesReceived (PCU_PDSN Seq# 10 + Seq# 11)

PMC_CNFP Primitive Calculations

The following is a list of primitive calculations for the PMC_CNFP entity.

CPU_Usage_30to40%

The percentage of time that the CPU usage is greater than 30% and less than or equal to 40%.

Calculation

$$\text{CPU_UsageIndex_2} * 100.0 / \text{CPU_UsageIndex_Total}$$

CPU_Usage_40to50%

The percentage of time that the CPU usage is greater than 40% and less than or equal to 50%.

Calculation

$$\text{CPU_UsageIndex_3} * 100.0 / \text{CPU_UsageIndex_Total}$$

CPU_Usage_50to60%

The percentage of time that the CPU usage is greater than 50% and less than or equal to 60%.

Calculation

$$\text{CPU_UsageIndex_4} * 100.0 / \text{CPU_UsageIndex_Total}$$

CPU_Usage_60to70%

The percentage of time that the CPU usage is greater than 60% and less than or equal to 70%.

Calculation

$$\text{CPU_UsageIndex_5} * 100.0 / \text{CPU_UsageIndex_Total}$$

CPU_Usage_70to80%

The percentage of time that the CPU usage is greater than 70% and less than or equal to 80%.

Calculation

$$\text{CPU_UsageIndex_6} * 100.0 / \text{CPU_UsageIndex_Total}$$

CPU_Usage_GT80%

The percentage of time that the CPU usage is greater than 80%.

Calculation

`CPU_UsageIndex_7 * 100.0 / CPU_UsageIndex_Total`

CPU_Usage_LTE30%

The percentage of time that the CPU usage is less than or equal to 30%.

Calculation

`CPU_UsageIndex_1 * 100.0 / CPU_UsageIndex_Total`

CPU_Usage_Overload%

The percentage of time that the CPU usage has exceeded a pre-defined CPU threshold (the 'cpuOverloadThreshold' attribute).

Calculation

`CPU_UsageExceededThreshold * 100.0 / CPU_UsageIndex_Total`

CPU_UsageIndex_Total

The sum of the CPU Usage indices.

Calculation

`vsum(CPU_UsageIndex_1, CPU_UsageIndex_2, CPU_UsageIndex_3,
CPU_UsageIndex_4, CPU_UsageIndex_5, CPU_UsageIndex_6, CPU_UsageIndex_7, 0)`

PMC_CNFP Peg Counts

The following is a list of peg counts for the PMC_CNFP entity.

ACN_NOIS_MsgDiscardedDueToOverload

This OM is pegged whenever the NRM discards every NOIS message (regardless of message type) received over the ACN due to CPU overload condition.

Data Source

CNFP

Source Field

ACN_NOIS_MsgDiscardedDueToOverload (Seq# 1)

Source Section

NRM Message Request Processing (Group ID 62)

AllocationRequestDenied

This OM is pegged when the NRM denies the incoming resource allocation request from the CAU.

Data Source

CNFP

Source Field

AllocationRequestDenied (Seq# 3)

Source Section

Call Resource Request Processing (Group ID 33)

AllocationRequestReceived

This OM is pegged when the NRM receives a resource allocation request message from the CAU.

Data Source

CNFP

Source Field

AllocationRequestReceived (Seq# 1)

Source Section

Call Resource Request Processing (Group ID 33)

AllocationRequestRedirectionCctToPkt

This OM is pegged when resources for circuit connection type are requested by the CAU but instead, the NRM successfully finds resources for packet connection type.

Data Source

CNFP

Source Field

AllocationRequestRedirectionCctToPkt (Seq# 6)

Source Section

Connection Resource Redirection (Group ID 73)

AllocationRequestRedirectionCctToTrFO

This OM is pegged when resources for circuit connection type are requested by the CAU but instead, the NRM successfully finds resources for TrFO connection type.

Data Source

CNFP

Source Field

AllocationRequestRedirectionCctToTrFO (Seq# 5)

Source Section

Connection Resource Redirection (Group ID 73)

AllocationRequestRedirectionPktToCct

This OM is pegged when resources for packet connection type are requested by the CAU but instead, the NRM successfully finds resources for circuit connection type.

Data Source

CNFP

Source Field

AllocationRequestRedirectionPktToCct (Seq# 4)

Source Section

Connection Resource Redirection (Group ID 73)

AllocationRequestRedirectionPktToTrFO

This OM is pegged when resources for packet connection type are requested by the CAU but instead, the NRM successfully finds resources for TrFO connection type.

Data Source

CNFP

Source Field

AllocationRequestRedirectionPktToTrFO (Seq# 3)

Source Section

Connection Resource Redirection (Group ID 73)

AllocationRequestRedirectionTrFO_ToCct

This OM is pegged when resources for TrFO connection type are requested by the CAU but instead, the NRM successfully finds resources for circuit connection type.

Data Source

CNFP

Source Field

AllocationRequestRedirectionTrFO_ToCct (Seq# 1)

Source Section

Connection Resource Redirection (Group ID 73)

AllocationRequestRedirectionTrFO_ToPkt

This OM is pegged when resources for TrFO connection type are requested by the CAU but instead, the NRM successfully finds resources for packet connection type.

Data Source

CNFP

Source Field

AllocationRequestRedirectionTrFO_ToPkt (Seq# 2)

Source Section

Connection Resource Redirection (Group ID 73)

AllocationRequestRedirectionUnspecifiedToCct

This OM is pegged when the CAU requests resources with an empty Connection Type indicator and the NRM successfully finds resources for circuit connection type.

Data Source

CNFP

Source Field

AllocationRequestRedirectionUnspecifiedToCct (Seq# 7)

Source Section

Connection Resource Redirection (Group ID 73)

AllocationRequestRedirectionUnspecifiedToPkt

This OM is pegged when the CAU requests resources with an empty Connection Type indicator and the NRM successfully finds resources for packet connection type.

Data Source

CNFP

Source Field

AllocationRequestRedirectionUnspecifiedToPkt (Seq# 8)

Source Section

Connection Resource Redirection (Group ID 73)

AllocationRequestRedirectionUnspecifiedToTrFO

This OM is pegged when the CAU requests resources with an empty Connection Type indicator and the NRM successfully finds resources for TrFO connection type.

Data Source

CNFP

Source Field

AllocationRequestRedirectionUnspecifiedToTrFO (Seq# 9)

Source Section

Connection Resource Redirection (Group ID 73)

AllocationRequestRejectedDueToOverload

This OM is pegged when the NRM rejects the resource allocation request message from the CAU due to an NRM CPU overload condition.

Data Source

CNFP

Source Field

AllocationRequestRejectedDueToOverload (Seq# 2)

Source Section

Call Resource Request Processing (Group ID 33)

BSC_AllocationRequestDenied

This OM is pegged when the SBSRM denies the incoming resource allocation request from the NRM.

Data Source

CNFP

Source Field

BSC_AllocationRequestDenied (Seq# 3)

Source Section

BSC Resource Request Processing (Group ID 46)

BSC_AllocationRequestDiscardedDueToOverload

This OM is pegged when the SBSRM discards or drops the resource allocation request message from the NRM due to SBSRM CPU overload condition.

Data Source

CNFP

Source Field

BSC_AllocationRequestDiscardedDueToOverload (Seq# 2)

Source Section

BSC Resource Request Processing (Group ID 46)

BSC_AllocationRequestReceived

This OM is pegged when the SBSRM receives a resource allocation request message from the NRM.

Data Source

CNFP

Source Field

BSC_AllocationRequestReceived (Seq# 1)

Source Section

BSC Resource Request Processing (Group ID 46)

CPU_UsageExceededThreshold

The number of times the CPU Usage has exceeded a pre-defined CPU threshold (the 'cpuOverloadThreshold' attribute) for a certain monitoring time-period.

Data Source

CNFP

Source Field

CPU_UsageExceededThreshold (Seq# 8)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_1

The number of times the CPU Usage in a monitoring period is less than or equal to 30%. The CPU Usage is examined every 4 seconds.

Data Source

CNFP

Source Field

CPU_UsageIndex_1 (Seq# 1)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_2

The number of times the CPU Usage in a monitoring period is greater than 30% and less than or equal to 40%. The CPU Usage is examined every 4 seconds.

Data Source

CNFP

Source Field

CPU_UsageIndex_2 (Seq# 2)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_3

The number of times the CPU Usage in a monitoring period is greater than 40% and less than or equal to 50%. The CPU Usage is examined every 4 seconds.

Data Source

CNFP

Source Field

CPU_UsageIndex_3 (Seq# 3)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_4

The number of times the CPU Usage in a monitoring period is greater than 50% and less than or equal to 60%. The CPU Usage is examined every 4 seconds.

Data Source

CNFP

Source Field

CPU_UsageIndex_4 (Seq# 4)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_5

The number of times the CPU Usage in a monitoring period is greater than 60% and less than or equal to 70%. The CPU Usage is examined every 4 seconds.

Data Source

CNFP

Source Field

CPU_UsageIndex_5 (Seq# 5)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_6

The number of times the CPU Usage in a monitoring period is greater than 70% and less than or equal to 80%. The CPU Usage is examined every 4 seconds.

Data Source

CNFP

Source Field

CPU_UsageIndex_6 (Seq# 6)

Source Section

CPU Usage (Group ID 19)

CPU_UsageIndex_7

The number of times the CPU Usage in a monitoring period is greater than 80%. The CPU Usage is examined every 4 seconds.

Data Source

CNFP

Source Field

CPU_UsageIndex_7 (Seq# 7)

Source Section

CPU Usage (Group ID 19)

DHO_AllocationRequestDenied

This OM is pegged when the NRM denies the incoming DHO PCU allocation request from the CAU.

Data Source

CNFP

Source Field

DHO_AllocationRequestDenied (Seq# 3)

Source Section

DHO Call Resource Request Processing (Group ID 51)

DHO_AllocationRequestReceived

This OM is pegged when the NRM receives a DHO PCU allocation request message from the CAU.

Data Source

CNFP

Source Field

DHO_AllocationRequestReceived (Seq# 1)

Source Section

DHO Call Resource Request Processing (Group ID 51)

DHO_AllocationRequestRejectedDueToOverload

Currently there are no scenarios for which this OM is pegged.

Data Source

CNFP

Source Field

DHO_AllocationRequestRejectedDueToOverload (Seq# 2)

Source Section

DHO Call Resource Request Processing (Group ID 51)

DHO_PlatformPreferenceChange

This OM pegs when the Primary and Secondary platforms are exchanged compared to the Platform table configuration.

Data Source

CNFP

Source Field

DHO_PlatformPreferenceChange (Seq# 2)

Source Section

DHO Platform Selection Overload (Group ID 63)

DHO_PlatformSelectionFailuresDueToTQ_Exceeded

This OM pegs when the dormant handoff request fails because the Transaction Queue (TQ) associated with both platforms (EBSC and BSC) exceeds internal thresholds.

Data Source

CNFP

Source Field

DHO_PlatformSelectionFailuresDueToTQ_Exceeded (Seq# 1)

Source Section

DHO Platform Selection Overload (Group ID 63)

DHO_SecondaryPlatformDroppedDueToTQ_Exceeded

This OM pegs when NRM drops the Secondary Platform choice from consideration.

Data Source

CNFP

Source Field

DHO_SecondaryPlatformDroppedDueToTQ_Exceeded (Seq# 3)

Source Section

DHO Platform Selection Overload (Group ID 63)

DTA_PlatformPreferenceChange

This OM pegs when the Primary and Secondary platforms are exchanged compared to the platform requested by the CAU.

Data Source

CNFP

Source Field

DTA_PlatformPreferenceChange (Seq# 2)

Source Section

DTA Platform Selection Overload (Group ID 64)

DTA_PlatformSelectionFailuresDueToTQ_Exceeded

This OM pegs when Resource Allocation fails because the Transaction Queue (TQ) associated with both platforms (EBSC and BSC) exceeds internal thresholds.

Data Source

CNFP

Source Field

DTA_PlatformSelectionFailuresDueToTQ_Exceeded (Seq# 1)

Source Section

DTA Platform Selection Overload (Group ID 64)

DTA_SecondaryPlatformDroppedDueToTQ_Exceeded

This OM pegs when the NRM drops the Secondary Platform choice from consideration.

Data Source

CNFP

Source Field

DTA_SecondaryPlatformDroppedDueToTQ_Exceeded (Seq# 3)

Source Section

DTA Platform Selection Overload (Group ID 64)

EBSC_VoiceAllocationRequestAccepted

This OM is pegged when the CSRSM accepts the resource allocation request message from the NRM and continues to process that request.

Data Source

CNFP

Source Field

EBSC_VoiceAllocationRequestAccepted (Seq# 2)

Source Section

EBSC Voice Resource Request Processing (Group ID 61)

EBSC_VoiceAllocationRequestDenied

This OM is pegged when the CSRSM denies the incoming resource allocation request from the NRM.

Data Source

CNFP

Source Field

EBSC_VoiceAllocationRequestDenied (Seq# 3)

Source Section

EBSC Voice Resource Request Processing (Group ID 61)

EBSC_VoiceAllocationRequestDiscardedDueToOverload

This OM is pegged when the CSRSM discards or drops the resource allocation request message from the NRM due to a CSRSM CPU overload condition.

Data Source

CNFP

Source Field

EBSC_VoiceAllocationRequestDiscardedDueToOverload (Seq# 4)

Source Section

EBSC Voice Resource Request Processing (Group ID 61)

EBSC_VoiceAllocationRequestReceived

This OM is pegged when the CSRSM receives a resource allocation request message from the NRM.

Data Source

CNFP

Source Field

EBSC_VoiceAllocationRequestReceived (Seq# 1)

Source Section

EBSC Voice Resource Request Processing (Group ID 61)

LL_CongestedSignalingFrameRx

Number of Signaling frames received (for STL-B).

Data Source

CNFP

Source Field

LL_CongestedSignalingFrameRx (Seq# 5)

Source Section

BCN Link Layer (Group ID 18)

LL_CongestedSignalingFrameTx

Number of Signaling frames sent (for STL-B).

Data Source

CNFP

Source Field

LL_CongestedSignalingFrameTx (Seq# 4)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameRx

Number of Data frames received (for STL-D).

Data Source

CNFP

Source Field

LL_DataFrameRx (Seq# 11)

Source Section

BCN Link Layer (Group ID 18)

LL_DataFrameTx

Number of Data frames sent (for STL-D).

Data Source

CNFP

Source Field

LL_DataFrameTx (Seq# 10)

Source Section

BCN Link Layer (Group ID 18)

LL_InvalidFrameType

Number of frames with an invalid type tag⁷.

Data Source

CNFP

Source Field

LL_InvalidFrameType (Seq# 1)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameRx

Number of Node Init frames received.

Data Source

CNFP

Source Field

LL_NodeInitFrameRx (Seq# 3)

Source Section

BCN Link Layer (Group ID 18)

LL_NodeInitFrameTx

Number of Node Init frames sent.

Data Source

CNFP

Source Field

LL_NodeInitFrameTx (Seq# 2)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameRx

Number of Signaling frames received (for STL-A).

Data Source

CNFP

Source Field

LL_SignalingFrameRx (Seq# 7)

Source Section

BCN Link Layer (Group ID 18)

LL_SignalingFrameTx

Number of Signaling frames sent (for STL-A).

Data Source

CNFP

Source Field

LL_SignalingFrameTx (Seq# 6)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameRx

Number of Traffic frames received.

Data Source

CNFP

Source Field

LL_TrafficFrameRx (Seq# 9)

Source Section

BCN Link Layer (Group ID 18)

LL_TrafficFrameTx

Number of Traffic frames sent.

Data Source

CNFP

Source Field

LL_TrafficFrameTx (Seq# 8)

Source Section

BCN Link Layer (Group ID 18)

PlatformPreferenceChange

This OM pegs when the Primary and Secondary platforms are exchanged compared to the Platform table configuration for services that are supported on both platforms.

Data Source

CNFP

Source Field

PlatformPreferenceChange (Seq# 2)

Source Section

Platform Selection Overload (Group ID 65)

PlatformSelectionFailuresDueToTQ_Exceeded

This OM pegs when Resource Allocation fails because the Transaction Queue (TQ) associated with all applicable platforms (EBSC and/or BSC) exceeds internal thresholds.

Data Source

CNFP

Source Field

PlatformSelectionFailuresDueToTQ_Exceeded (Seq# 1)

Source Section

Platform Selection Overload (Group ID 65)

SecondaryPlatformDroppedDueToTQ_Exceeded

This OM pegs when the NRM drops the Secondary Platform choice from consideration for services supported on both platforms.

Data Source

CNFP

Source Field

SecondaryPlatformDroppedDueToTQ_Exceeded (Seq# 3)

Source Section

Platform Selection Overload (Group ID 65)

SL_MaxLargeStreamBufferUsed

Maximum number of Large stream buffer used.

Data Source

CNFP

Source Field

SL_MaxLargeStreamBufferUsed (Seq# 4)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxMediumStreamBufferUsed

Maximum number of Medium stream buffer used.

Data Source

CNFP

Source Field

SL_MaxMediumStreamBufferUsed (Seq# 5)

Source Section

BCN Socket Layer (Group ID 15)

SL_MaxSmallStreamBufferUsed

Maximum number of Small stream buffer used.

Data Source

CNFP

Source Field

SL_MaxSmallStreamBufferUsed (Seq# 6)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLA_UnknownDestinationMsg

Number of STL-A messages received on this stack but without a socket registered for it.

Data Source

CNFP

Source Field

SL_STLA_UnknownDestinationMsg (Seq# 1)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLB_UnknownDestinationMsg

Number of STL-B messages received on this stack but without a socket registered for it.

Data Source

CNFP

Source Field

SL_STLB_UnknownDestinationMsg (Seq# 2)

Source Section

BCN Socket Layer (Group ID 15)

SL_STLD_UnknownDestinationMsg

Number of STL-D messages received on this stack but without a socket registered for it.

Data Source

CNFP

Source Field

SL_STLD_UnknownDestinationMsg (Seq# 3)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocFailure

Number of Stream buffer unsuccessfully allocated.

Data Source

CNFP

Source Field

SL_StreamBufferAllocFailure (Seq# 8)

Source Section

BCN Socket Layer (Group ID 15)

SL_StreamBufferAllocSuccess

Number of Stream buffer successfully allocated.

Data Source

CNFP

Source Field

SL_StreamBufferAllocSuccess (Seq# 7)

Source Section

BCN Socket Layer (Group ID 15)

STLA_BestEffortReassemblyTimeout

Number of best effort messages dropped (missing frame(s))

Data Source

CNFP

Source Field

STLA_BestEffortReassemblyTimeout (Seq# 17)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortRxMsg

Number of Best Effort messages received. (thruput)

Data Source

CNFP

Source Field

STLA_BestEffortRxMsg (Seq# 4)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_BestEffortTxMsg

Number of Best Effort messages sent.(thruput)

Data Source

CNFP

Source Field

STLA_BestEffortTxMsg (Seq# 3)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxFaults

Number of failures that occurred due to maximum number of faults (See BCNSpec for the definition of a failure).

Data Source

CNFP

Source Field

STLA_ConnectionFailedDueToMaxFaults (Seq# 23)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFailedDueToMaxTxAttempts

Number of failures that occurred due to maximum number of transmit attempts (See BCNSpec for the definition of a failure).

Data Source

CNFP

Source Field

STLA_ConnectionFailedDueToMaxTxAttempts (Seq# 24)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ConnectionFault

Number of faults that occurred in the stack for all the connections. (See BCNSpec for the definition of a fault).

Data Source

CNFP

Source Field

STLA_ConnectionFault (Seq# 21)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_FailedMsgCRC

Number of messages (reliable and best effort) dropped due to a bad CRC.

Data Source

CNFP

Source Field

STLA_FailedMsgCRC (Seq# 20)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenRxConnection

Maximum number of open connections to receive messages.

Data Source

CNFP

Source Field

STLA_MaxOpenRxConnection (Seq# 33)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxOpenTxConnection

Maximum number of open connections to transmit messages.

Data Source

CNFP

Source Field

STLA_MaxOpenTxConnection (Seq# 34)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxBuffer

Maximum number of buffers used to receive incoming frames.

Data Source

CNFP

Source Field

STLA_MaxRxBuffer (Seq# 14)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxRxQueue

Maximum number of queues to receive messages.

Data Source

CNFP

Source Field

STLA_MaxRxQueue (Seq# 31)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxLargeBuffer

Maximum number of large buffers used to transmit all the messages.

Data Source

CNFP

Source Field

STLA_MaxTxLargeBuffer (Seq# 11)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxMediumBuffer

Maximum number of medium buffers used to transmit all the messages.

Data Source

CNFP

Source Field

STLA_MaxTxMediumBuffer (Seq# 10)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxQueue

Maximum number of queues to transmit messages.

Data Source

CNFP

Source Field

STLA_MaxTxQueue (Seq# 32)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_MaxTxSmallBuffer

Maximum number of small buffers used to transmit all the messages.

Data Source

CNFP

Source Field

STLA_MaxTxSmallBuffer (Seq# 9)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenRxConnection

Number of Receive connection opened.

Data Source

CNFP

Source Field

STLA_OpenRxConnection (Seq# 6)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OpenTxConnection

Number of Transmit connection opened.

Data Source

CNFP

Source Field

STLA_OpenTxConnection (Seq# 5)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfRxFrameBuffer

Number of received frames rejected due to lack of buffers.

Data Source

CNFP

Source Field

STLA_OutOfRxFrameBuffer (Seq# 13)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfTxBuffer

Number of transmit failures due to lack of transmit message buffers.

Data Source

CNFP

Source Field

STLA_OutOfTxBuffer (Seq# 12)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToMaxWS

Number of messages over the window size where the size of the window is equal to the maximum size (128 messages).

Data Source

CNFP

Source Field

STLA_OutOfWindowMsgDueToMaxWS (Seq# 26)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToReducedWS

Number of messages over the window size where the size of the window is less than the maximum size (128 messages).

Data Source

CNFP

Source Field

STLA_OutOfWindowMsgDueToReducedWS (Seq# 25)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_OutOfWindowMsgDueToZeroWS

Number of messages over the window size where the size of the window is 0.

Data Source

CNFP

Source Field

STLA_OutOfWindowMsgDueToZeroWS (Seq# 27)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ProtocolRevisionError

Number of times Protocol Revision error occurred.

Data Source

CNFP

Source Field

STLA_ProtocolRevisionError (Seq# 30)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedRxConnection

Number of connection refused on receives because maximum reached.

Data Source

CNFP

Source Field

STLA_RefusedRxConnection (Seq# 7)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_RefusedTxConnection

Number of connection refused on transmits because maximum reached.

Data Source

CNFP

Source Field

STLA_RefusedTxConnection (Seq# 8)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableAckWaitTimeout

Number of missing Ack when transmitting a reliable message.

Data Source

CNFP

Source Field

STLA_ReliableAckWaitTimeout (Seq# 19)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableReassemblyTimeout

Number of reliable messages dropped (missing frame(s)).

Data Source

CNFP

Source Field

STLA_ReliableReassemblyTimeout (Seq# 16)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRetransmittedMsg

Number of reliable messages, which needed to be retransmitted.

Data Source

CNFP

Source Field

STLA_ReliableRetransmittedMsg (Seq# 18)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableRxMsg

Number of reliable messages received.(thruput)

Data Source

CNFP

Source Field

STLA_ReliableRxMsg (Seq# 2)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_ReliableTxMsg

Number of reliable messages sent.(thruput)

Data Source

CNFP

Source Field

STLA_ReliableTxMsg (Seq# 1)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowReduced

Number of times the window size is reduced.

Data Source

CNFP

Source Field

STLA_TxWindowReduced (Seq# 28)

Source Section

BCN STLA Transport Layer (Group ID 16)

STLA_TxWindowShut

Number of times the window size is set to zero.

Data Source

CNFP

Source Field

STLA_TxWindowShut (Seq# 29)

Source Section

BCN STLA Transport Layer (Group ID 16)

Radio_Sector Peg Counts

The following is a list of peg counts for the Radio_Sector entity.

SectorPercentPowerLimiting

This OM provides the percentage of time the sector was in a power limiting state over the thirty minute observation period. A sector is defined to be in a power limiting state when all carrier-sectors configured in that sector are in a power limiting state.

Data Source

NBSS BTS MO

Source Field

SectorPercentPowerLimiting (Seq# 23)

Source Section

Radio Sector MO

SectorTxPowerAvg

This OM provides the average sector transmit power at the module output (i.e. at the DPM antenna port) over the thirty minute observation period. Measured in units of dBm/16, the value has a range of 0 to 1120.

Data Source

NBSS BTS MO

Source Field

SectorTxPowerAvg (Seq# 55)

Source Section

Radio Sector MO

SectorTxPowerMax

This OM provides the maximum sector transmit power at the module output (i.e. at the DPM antenna port) during the thirty minute observation period. Range is 0-1120 (Units = dBm/16).

Data Source

NBSS BTS MO

Source Field

SectorTxPowerMax (Seq# 24)

Source Section

Radio Sector MO

VSWRReturnLoss

This OM provides the lowest (worst) return loss measured for the sector during the 30 minute observation period. This OM helps the customer detect changes in the performance of RF equipment external to the MFRM-3 radio (i.e. antennas, cabling, etc.) prior to service impacts. (Units = dB/16).

Data Source

NBSS BTS MO

Source Field

VSWRReturnLoss (Seq# 48)

Source Section

Radio Sector MO

RadioConfiguration Primitive Calculations

The following is a list of primitive calculations for the RadioConfiguration entity.

CEFrameCntFCH_RC1

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC1 Voice only

Calculation

```
protect (LocalKey = "1" ? nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFrameCntFCH) : 0)
```

CEFrameCntFCH_RC2

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC2 Voice only

Calculation

```
protect (LocalKey = "2" ? nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFrameCntFCH) : 0)
```

CEFrameCntFCH_RC3

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC3 Voice only

Calculation

```
protect ((LocalKey = "3D" OR LocalKey = "3V") ? nullvalue (sum (RC_Beam,  
CEFrameCountFCH), CEFrameCntFCH) : 0)
```

CEFrameCntFCH_RC3D

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC3 Data

Calculation

```
protect (LocalKey = "3D" ? nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFr-  
ameCntFCH) : 0)
```

CEFrameCntFCH_RC3V

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC3 Voice

Calculation

```
protect (LocalKey = "3V" ? nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFr-  
ameCntFCH) : 0)
```

CEFrameCntFCH_RC4

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC4 Voice only

Calculation

```
protect ((LocalKey = "4D" OR LocalKey = "4V") ? nullvalue (sum (RC_Beam,  
CEFrameCountFCH), CEFrameCntFCH) : 0)
```

CEFrameCntFCH_RC4D

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC4 Data

Calculation

```
protect (LocalKey = "4D" ? nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFr-  
ameCntFCH) : 0)
```

CEFrameCntFCH_RC4V

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC4 Voice

Calculation

```
protect (LocalKey = "4V" ? nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFr-  
ameCntFCH) : 0)
```

CEFrameCntFCH_RC5

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC5 Voice only

Calculation

```
protect ((LocalKey = "5D" OR LocalKey = "5V") ? nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFrameCntFCH) : 0)
```

CEFrameCntFCH_RC5D

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC5 Data

Calculation

```
protect (LocalKey = "5D" ? nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFrameCntFCH) : 0)
```

CEFrameCntFCH_RC5V

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC5 Voice

Calculation

```
protect (LocalKey = "5V" ? nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFrameCntFCH) : 0)
```

CEFrameCountFCH

This PCALC returns the aggregated value of peg CEFrameCountFCH in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg CEFrameCntFCH.

Calculation

```
nullvalue (sum (RC_Beam, CEFrameCountFCH), CEFrameCntFCH)
```

CEFrameCountFwdSCH_16X

This PCALC returns the aggregated value of peg CEFrameCountFwdSCH_16X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg CEFrameCntFwdSCH_16X.

Calculation

```
nullvalue (sum (RC_Beam, CEFrameCountFwdSCH_16X), CEFrameCntFwdSCH_16X)
```

CEFrameCountFwdSCH_2X

This PCALC returns the aggregated value of peg CEFrameCountFwdSCH_2X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg CEFrameCntFwdSCH_2X.

Calculation

```
nullvalue (sum (RC_Beam, CEFrameCountFwdSCH_2X), CEFrameCntFwdSCH_2X)
```

CEFrameCountFwdSCH_4X

This PCALC returns the aggregated value of peg CEFrameCountFwdSCH_4X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg CEFrameCntFwdSCH_4X.

Calculation

```
nullvalue (sum (RC_Beam, CEFrameCountFwdSCH_4X), CEFrameCntFwdSCH_4X)
```

CEFrameCountFwdSCH_8X

This PCALC returns the aggregated value of peg CEFrameCountFwdSCH_8X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg CEFrameCntFwdSCH_8X.

Calculation

```
nullvalue (sum (RC_Beam, CEFrameCountFwdSCH_8X), CEFrameCntFwdSCH_8X)
```

CEFrameCountRevSCH_16X

This PCALC returns the aggregated value of peg CEFrameCountRevSCH_16X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg CEFrameCntRevSCH_16X.

Calculation

```
nullvalue (sum (RC_Beam, CEFrameCountRevSCH_16X), CEFrameCntRevSCH_16X)
```

CEFrameCountRevSCH_2X

This PCALC returns the aggregated value of peg CEFrameCountRevSCH_2X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg CEFrameCntRevSCH_2X.

Calculation

```
nullvalue (sum (RC_Beam, CEFrameCountRevSCH_2X), CEFrameCntRevSCH_2X)
```

CEFrameCountRevSCH_4X

This PCALC returns the aggregated value of peg CEFrameCountRevSCH_4X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg CEFrameCntRevSCH_4X.

Calculation

```
nullvalue (sum (RC_Beam, CEFrameCountRevSCH_4X), CEFrameCntRevSCH_4X)
```

CEFrameCountRevSCH_8X

This PCALC returns the aggregated value of peg CEFrameCountRevSCH_8X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg CEFrameCntRevSCH_8X.

Calculation

```
nullvalue (sum (RC_Beam, CEFrameCountRevSCH_8X), CEFrameCntRevSCH_8X)
```

DataFchForwardLinkUtilAverage_Aggregated

This PCALC returns the aggregated value of peg DataFchForwardLinkUtilAverage in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg DataFchForwardLinkUtilAverage.

Calculation

```
nullvalue (sum (RC_Beam, DataFchForwardLinkUtilAverage), DataFchForwardLinkUtilAverage)
```

FrameCntFCH_RC1

Frames sent on the forward link for every user on the fundamental channel for RC1 Voice only

Calculation

```
protect (LocalKey = "1" ? nullvalue (sum (RC_Beam, FrameCountFCH),  
FrameCntFCH) : 0)
```

FrameCntFCH_RC2

Frames sent on the forward link for every user on the fundamental channel for RC2 Voice only

Calculation

```
protect (LocalKey = "2" ? nullvalue (sum (RC_Beam, FrameCountFCH),  
FrameCntFCH) : 0)
```

FrameCntFCH_RC3

Frames sent on the forward link for every user on the fundamental channel for RC3 Voice only

Calculation

```
protect ((LocalKey = "3D" OR LocalKey = "3V") ? nullvalue (sum (RC_Beam,  
FrameCountFCH), FrameCntFCH) : 0)
```

FrameCntFCH_RC3D

Frames sent on the forward link for every user on the fundamental channel for RC3 Data

Calculation

```
protect (LocalKey = "3D" ? nullvalue (sum (RC_Beam, FrameCountFCH),  
FrameCntFCH) : 0)
```

FrameCntFCH_RC3V

Frames sent on the forward link for every user on the fundamental channel for RC3 Voice

Calculation

```
protect (LocalKey = "3V" ? nullvalue (sum (RC_Beam, FrameCountFCH),  
FrameCntFCH) : 0)
```

FrameCntFCH_RC4

Frames sent on the forward link for every user on the fundamental channel for RC4 Voice only

Calculation

```
protect ((LocalKey = "4D" OR LocalKey = "4V") ? nullvalue (sum (RC_Beam,  
FrameCountFCH), FrameCntFCH) : 0)
```

FrameCntFCH_RC4D

Frames sent on the forward link for every user on the fundamental channel for RC4 Data

Calculation

```
protect (LocalKey = "4D" ? nullvalue (sum (RC_Beam, FrameCountFCH),  
FrameCntFCH) : 0)
```

FrameCntFCH_RC4V

Frames sent on the forward link for every user on the fundamental channel for RC4 Voice

Calculation

```
protect (LocalKey = "4V" ? nullvalue (sum (RC_Beam, FrameCountFCH),  
FrameCntFCH) : 0)
```

FrameCntFCH_RC5

Frames sent on the forward link for every user on the fundamental channel for RC5 Voice only

Calculation

```
protect ((LocalKey = "5D" OR LocalKey = "5V") ? nullvalue (sum (RC_Beam,  
FrameCountFCH), FrameCntFCH) : 0)
```

FrameCntFCH_RC5D

Frames sent on the forward link for every user on the fundamental channel for RC5 Data

Calculation

```
protect (LocalKey = "5D" ? nullvalue (sum (RC_Beam, FrameCountFCH),  
FrameCntFCH) : 0)
```

FrameCntFCH_RC5V

Frames sent on the forward link for every user on the fundamental channel for RC5 Voice

Calculation

```
protect (LocalKey = "5V" ? nullvalue (sum (RC_Beam, FrameCountFCH),  
FrameCntFCH) : 0)
```

FrameCountFCH

This PCALC returns the aggregated value of peg FrameCountFCH in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg FrameCntFCH.

Calculation

```
nullvalue (sum (RC_Beam, FrameCountFCH), FrameCntFCH)
```

FrameCountFwdSCH_16X

This PCALC returns the aggregated value of peg FrameCountFwdSCH_16X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg FrameCntFwdSCH_16X.

Calculation

```
nullvalue (sum (RC_Beam, FrameCountFwdSCH_16X), FrameCntFwdSCH_16X)
```

FrameCountFwdSCH_2X

This PCALC returns the aggregated value of peg FrameCountFwdSCH_2X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg FrameCntFwdSCH_2X.

Calculation

```
nullvalue (sum (RC_Beam, FrameCountFwdSCH_2X), FrameCntFwdSCH_2X)
```

FrameCountFwdSCH_4X

This PCALC returns the aggregated value of peg FrameCountFwdSCH_4X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg FrameCntFwdSCH_4X.

Calculation

```
nullvalue (sum (RC_Beam, FrameCountFwdSCH_4X), FrameCntFwdSCH_4X)
```

FrameCountFwdSCH_8X

This PCALC returns the aggregated value of peg FrameCountFwdSCH_8X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg FrameCntFwdSCH_8X.

Calculation

```
nullvalue (sum (RC_Beam, FrameCountFwdSCH_8X), FrameCntFwdSCH_8X)

Calculation

```
protect ((LocalKey = "3D" OR LocalKey = "3V") ? nullvalue (sum (RC_Beam,  
PrimaryFrameCountFCH), PrimaryFrameCntFCH) : 0)
```

PrimaryFrameCntFCH_RC3D

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC3 Data

Calculation

```
protect (LocalKey = "3D" ? nullvalue (sum (RC_Beam, PrimaryFrameCountFCH),  
PrimaryFrameCntFCH) : 0)
```

PrimaryFrameCntFCH_RC3V

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC3 Voice

Calculation

```
protect (LocalKey = "3V" ? nullvalue (sum (RC_Beam, PrimaryFrameCountFCH),  
PrimaryFrameCntFCH) : 0)
```

PrimaryFrameCntFCH_RC4

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC4 Voice only

Calculation

```
protect ((LocalKey = "4D" OR LocalKey = "4V") ? nullvalue (sum (RC_Beam,  
PrimaryFrameCountFCH), PrimaryFrameCntFCH) : 0)
```

PrimaryFrameCntFCH_RC4D

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC4 Data

Calculation

```
protect (LocalKey = "4D" ? nullvalue (sum (RC_Beam, PrimaryFrameCountFCH),  
PrimaryFrameCntFCH) : 0)
```

PrimaryFrameCntFCH_RC4V

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC4 Voice

Calculation

```
protect (LocalKey = "4V" ? nullvalue (sum (RC_Beam, PrimaryFrameCountFCH),  
PrimaryFrameCntFCH) : 0)
```

PrimaryFrameCntFCH_RC5

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC5 Voice only

Calculation

```
protect ((LocalKey = "5D" OR LocalKey = "5V") ? nullvalue (sum (RC_Beam,  
PrimaryFrameCountFCH), PrimaryFrameCntFCH) : 0)
```

PrimaryFrameCntFCH_RC5D

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC5 Data

Calculation

```
protect (LocalKey = "5D" ? nullvalue (sum (RC_Beam, PrimaryFrameCountFCH),  
PrimaryFrameCntFCH) : 0)
```

PrimaryFrameCntFCH_RC5V

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC5 Voice

Calculation

```
protect (LocalKey = "5V" ? nullvalue (sum (RC_Beam, PrimaryFrameCountFCH),  
PrimaryFrameCntFCH) : 0)
```

PrimaryFrameCountFCH

This PCALC returns the aggregated value of peg PrimaryFrameCountFCH in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PrimaryFrameCntFCH.

Calculation

```
nullvalue (sum (RC_Beam, PrimaryFrameCountFCH), PrimaryFrameCntFCH)
```

PrimaryFrameCountFwdSCH_16X

This PCALC returns the aggregated value of peg PrimaryFrameCountFwdSCH_16X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PrimaryFrameCntFwdSCH_16X.

Calculation

```
nullvalue (sum (RC_Beam, PrimaryFrameCountFwdSCH_16X),  
PrimaryFrameCntFwdSCH_16X)
```

PrimaryFrameCountFwdSCH_2X

This PCALC returns the aggregated value of peg PrimaryFrameCountFwdSCH_2X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PrimaryFrameCntFwdSCH_2X.

Calculation

```
nullvalue (sum (RC_Beam, PrimaryFrameCountFwdSCH_2X),  
PrimaryFrameCntFwdSCH_2X)
```

PrimaryFrameCountFwdSCH_4X

This PCALC returns the aggregated value of peg PrimaryFrameCountFwdSCH_4X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PrimaryFrameCntFwdSCH_4X.

Calculation

```
nullvalue (sum (RC_Beam, PrimaryFrameCountFwdSCH_4X),  
PrimaryFrameCntFwdSCH_4X)
```

PrimaryFrameCountFwdSCH_8X

This PCALC returns the aggregated value of peg PrimaryFrameCountFwdSCH_8X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PrimaryFrameCntFwdSCH_8X.

Calculation

```
nullvalue (sum (RC_Beam, PrimaryFrameCountFwdSCH_8X),  
PrimaryFrameCntFwdSCH_8X)
```

PrimaryFrameCountRevSCH_16X

This PCALC returns the aggregated value of peg PrimaryFrameCountRevSCH_16X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PrimaryFrameCntRevSCH_16X.

Calculation

```
nullvalue (sum (RC_Beam, PrimaryFrameCountRevSCH_16X),  
PrimaryFrameCntRevSCH_16X)
```

PrimaryFrameCountRevSCH_2X

This PCALC returns the aggregated value of peg PrimaryFrameCountRevSCH_2X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PrimaryFrameCntRevSCH_2X.

Calculation

```
nullvalue (sum (RC_Beam, PrimaryFrameCountRevSCH_2X),  
PrimaryFrameCntRevSCH_2X)
```

PrimaryFrameCountRevSCH_4X

This PCALC returns the aggregated value of peg PrimaryFrameCountRevSCH_4X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PrimaryFrameCntRevSCH_4X.

Calculation

```
nullvalue (sum (RC_Beam, PrimaryFrameCountRevSCH_4X),  
PrimaryFrameCntRevSCH_4X)
```

PrimaryFrameCountRevSCH_8X

This PCALC returns the aggregated value of peg PrimaryFrameCountRevSCH_8X in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PrimaryFrameCntRevSCH_8X.

Calculation

```
nullvalue (sum (RC_Beam, PrimaryFrameCountRevSCH_8X),  
PrimaryFrameCntRevSCH_8X)
```

SchForwardLinkUtilAverage_Aggregated

This PCALC returns the aggregated value of peg SchForwardLinkUtilAverage in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg SchForwardLinkUtilAverage.

Calculation

```
nullvalue (sum (RC_Beam, SchForwardLinkUtilAverage), SchForwardLinkUtilAverage)
```

VoiceFchForwardLinkUtilAverage_Aggregated

This PCALC returns the aggregated value of peg VoiceFchForwardLinkUtilAverage in entity RC_Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg VoiceFchForwardLinkUtilAverage.

Calculation

```
nullvalue (sum (RC_Beam, VoiceFchForwardLinkUtilAverage), VoiceFchForwardLinkUtilAverage)
```

RadioConfiguration Peg Counts

The following is a list of peg counts for the RadioConfiguration entity.

CEFrameCntFCH

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntFCH (Seq# 130)

Source Section

Advanced Sector MO

CEFrameCntFwdSCH_16X

Equivalent to FrameCntFwdSCH_16X divided by number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntFwdSCH_16X (Seq# 243)

Source Section

Advanced Sector MO

CEFrameCntFwdSCH_2X

Equivalent to FrameCntFwdSCH_2X divided by number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntFwdSCH_2X (Seq# 240)

Source Section

Advanced Sector MO

CEFrameCntFwdSCH_4X

Equivalent to FrameCntFwdSCH_4X divided by number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntFwdSCH_4X (Seq# 241)

Source Section

Advanced Sector MO

CEFrameCntFwdSCH_8X

Equivalent to FrameCntFwdSCH_8X divided by number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntFwdSCH_8X (Seq# 242)

Source Section

Advanced Sector MO

CEFrameCntRevSCH_16X

Equivalent to FrameCntRevSCH_16X divided by number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntRevSCH_16X (Seq# 255)

Source Section

Advanced Sector MO

CEFrameCntRevSCH_2X

Equivalent to FrameCntRevSCH_2X divided by number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntRevSCH_2X (Seq# 252)

Source Section

Advanced Sector MO

CEFrameCntRevSCH_4X

Equivalent to FrameCntRevSCH_4X divided by number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntRevSCH_4X (Seq# 253)

Source Section

Advanced Sector MO

CEFrameCntRevSCH_8X

Equivalent to FrameCntRevSCH_8X divided by number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntRevSCH_8X (Seq# 254)

Source Section

Advanced Sector MO

CEFrameCntSCH

Number of forward frames for each user on the supplemental channel/ number of softer handoff links

Data Source

NBSS BTS MO

Source Field

CEFrameCntSCH (Seq# 131)

Source Section

Advanced Sector MO

DataFchForwardLinkUtilAverage

Average forward power used by Radio Configurations supporting packet data sessions on the fundamental channel

Data Source

NBSS BTS MO

Source Field

DataFchForwardLinkUtilAverage (Seq# 98)

Source Section

Advanced Sector MO

FFCH_BadDataFrames

This OM is the total number of bad forward fundamental channel frames reported by the mobiles, for all packet data calls in a carrier-sector for a specific radio configuration.

Data Source

NBSS BSC OMs

Source Field

FFCH_BadDataFrames (Seq# 5)

Source Section

Reference Sector FER (Group ID 29)

FFCH_BadNonDataFrames

This OM is the total number of bad forward fundamental channel frames reported by the mobiles, for all non-packet data calls in a carrier-sector for a specific radio configuration.

Data Source

NBSS BSC OMs

Source Field

FFCH_BadNonDataFrames (Seq# 1)

Source Section

Reference Sector FER (Group ID 29)

FFCH_TotalDataFrames

This OM is the total number of forward fundamental channel frames reported by the mobiles, for all packet data calls in a carrier-sector for a specific radio configuration.

Data Source

NBSS BSC OMs

Source Field

FFCH_TotalDataFrames (Seq# 6)

Source Section

Reference Sector FER (Group ID 29)

FFCH_TotalNonDataFrames

This OM is the total number of forward fundamental channel frames reported by the mobiles, for all non-packet data calls in a carrier-sector for a specific radio configuration.

Data Source

NBSS BSC OMs

Source Field

FFCH_TotalNonDataFrames (Seq# 2)

Source Section

Reference Sector FER (Group ID 29)

FrameCntFCH

Frames sent on the forward link for every user on the fundamental channel

Data Source

NBSS BTS MO

Source Field

FrameCntFCH (Seq# 128)

Source Section

Advanced Sector MO

FrameCntFwdSCH_16X

Total number of 16X forward frames for every user on the supplemental channel.

Data Source

NBSS BTS MO

Source Field

FrameCntFwdSCH_16X (Seq# 239)

Source Section

Advanced Sector MO

FrameCntFwdSCH_2X

Total number of 2x forward frames for every user on the supplemental channel.

Data Source

NBSS BTS MO

Source Field

FrameCntFwdSCH_2X (Seq# 236)

Source Section

Advanced Sector MO

FrameCntFwdSCH_4X

Total number of 4X forward frames for every user on the supplemental channel.

Data Source

NBSS BTS MO

Source Field

FrameCntFwdSCH_4X (Seq# 237)

Source Section

Advanced Sector MO

FrameCntFwdSCH_8X

Total number of 8X forward frames for every user on the supplemental channel.

Data Source

NBSS BTS MO

Source Field

FrameCntFwdSCH_8X (Seq# 238)

Source Section

Advanced Sector MO

FrameCntRevSCH_16X

Total number of 16X reverse frames for every user on the supplemental channel.

Data Source

NBSS BTS MO

Source Field

FrameCntRevSCH_16X (Seq# 251)

Source Section

Advanced Sector MO

FrameCntRevSCH_2X

Total number of 2x reverse frames for every user on the supplemental channel.

Data Source

NBSS BTS MO

Source Field

FrameCntRevSCH_2X (Seq# 248)

Source Section

Advanced Sector MO

FrameCntRevSCH_4X

Total number of 4X reverse frames for every user on the supplemental channel.

Data Source

NBSS BTS MO

Source Field

FrameCntRevSCH_4X (Seq# 249)

Source Section

Advanced Sector MO

FrameCntRevSCH_8X

Total number of 8X reverse frames for every user on the supplemental channel.

Data Source

NBSS BTS MO

Source Field

FrameCntRevSCH_8X (Seq# 250)

Source Section

Advanced Sector MO

FrameCntSCH

Number of forward frames for each user on the supplemental channel

Data Source

NBSS BTS MO

Source Field

FrameCntSCH (Seq# 129)

Source Section

Advanced Sector MO

FSCH_BadFrames_16X

This OM is the total number of bad forward supplemental channel frames reported by the mobiles, for all 16X packet data calls in a carrier-sector for a specific radio configuration.

Data Source

NBSS BSC OMs

Source Field

FSCH_BadFrames_16X (Seq# 12)

Source Section

Reference Sector FER (Group ID 29)

FSCH_BadFrames_2X

This OM is the total number of bad forward supplemental channel frames reported by the mobiles, for all 2X packet data calls in a carrier-sector for a specific radio configuration

Data Source

NBSS BSC OMs

Source Field

FSCH_BadFrames_2X (Seq# 9)

Source Section

Reference Sector FER (Group ID 29)

FSCH_BadFrames_4X

This OM is the total number of bad forward supplemental channel frames reported by the mobiles, for all 4X packet data calls in a carrier-sector for a specific radio configuration.

Data Source

NBSS BSC OMs

Source Field

FSCH_BadFrames_4X (Seq# 10)

Source Section

Reference Sector FER (Group ID 29)

FSCH_BadFrames_8X

This OM is the total number of bad forward supplemental channel frames reported by the mobiles, for all 8X packet data calls in a carrier-sector for a specific radio configuration.

Data Source

NBSS BSC OMs

Source Field

FSCH_BadFrames_8X (Seq# 11)

Source Section

Reference Sector FER (Group ID 29)

FSCH_TotalFrames_16X

This OM is the total number of forward supplemental channel frames reported by the mobiles, for all 16X packet data calls in a carrier-sector for a specific radio configuration.

Data Source

NBSS BSC OMs

Source Field

FSCH_TotalFrames_16X (Seq# 16)

Source Section

Reference Sector FER (Group ID 29)

FSCH_TotalFrames_2X

This OM is the total number of forward supplemental channel frames reported by the mobiles, for all 2X packet data calls in a carrier-sector for a specific radio configuration.

Data Source

NBSS BSC OMs

Source Field

FSCH_TotalFrames_2X (Seq# 13)

SBS_TrunkGroup Peg Counts

The following is a list of peg counts for the SBS_TrunkGroup entity.

ACCCONG

times a trunk group enters ACC congestion

Data Source

MTX OM, SDM

Source Field

ACCCONG

Source Section

TRK

ANF

Counts incoming centralized-automatic message accounting or TOPS calls

Data Source

MTX OM, SDM

Source Field

ANF

Source Section

TRK

ANSWER

When incoming line/trunk originates a call and an outgoing trunk reports an answer to CM

Data Source

MTX OM, SDM

Source Field

ANSWER + 65536 * TRNK2.ANSWER2

Source Section

TRK

AOF

Counts incoming calls for which the originating office detects an ANI failure

Data Source

MTX OM, SDM

Source Field

AOF

Source Section

TRK

BLKCTRK

Blocked calls on trunk

Data Source

MTX OM, SDM

Source Field

BLKCTRK

Source Section

TRK

CONNECT

Counts outgoing seizure attempts on trunk group that result in successful connection

Data Source

MTX OM, SDM

Source Field

CONNECT + 65536 * TRNK2.CONNECT2

Source Section

TRK

DEFLDCA

Counts calls that the system prevents from accessing the trunk group

Data Source

MTX OM, SDM

Source Field

DEFLDCA + 65536 * TRNK2.DEFLDCA2

Source Section

TRK

DELAY

The number of calls for which the delay QOS statistic has exceeded the datafilled DELAY threshold.

Data Source

SDM

Source Field

DELAYQOS

Source Section

TRKQOSOM

DREU

Every 100s this register records if DRE activates for a two-way trunk group

Data Source

MTX OM, SDM

Source Field

DREU

Source Section

TRK

GLARE

Increases when the system drops a trunk that the system selects at an earlier time

Data Source

MTX OM, SDM

Source Field

GLARE

Source Section

TRK

GUARDQ

Measures the trunk guard queue usage on a per trunk group basis.

Data Source

MTX OM, SDM

Source Field

GUARDQ + 65536 * GUARDQ2

Source Section

MTXOMTRK

INANS

Answered calls for incoming traffic

Data Source

MTX OM, SDM

Source Field

INANS + 65536 * INANS2

Source Section

MTXOMTRK

INCATOT

Counts incoming seizures on a trunk group

Data Source

MTX OM, SDM

Source Field

INCATOT + 65536 * TRNK2.INCATOT2

Source Section

TRK

INFAIL

Increases when any one of the events that can result in call failure occurs on a trunk

Data Source

MTX OM, SDM

Source Field

INFAIL

Source Section

TRK

INTRU

Trunk usage for incoming traffic

Data Source

MTX OM, SDM

Source Field

INTRU + 65536 * INTRU2

Source Section

MTXOMTRK

INVAUTH

Counts authorization codes that are not correct

Data Source

MTX OM, SDM

Source Field

INVAUTH

Source Section

TRK

JITTER

The number of calls for which the jitter QOS statistic has exceeded the datafilled JITTER threshold.

Data Source

SDM

Source Field

JITTER

Source Section

TRKQOSOM

MAXBU

Every 100s increases if # busy circuits exceeds max # the system recorded earlier

Data Source

MTX OM, SDM

Source Field

MAXBU

Source Section

TRK

MBU

Every 100s records if a trunk is in manual busy/seized/network management busy

Data Source

MTX OM, SDM

Source Field

MBU

Source Section

TRK

MIDFAIL

MTX OM, SDM

Data Source

MTX OM, SDM

Source Field

MIDFAIL + 65536 * TRNK2.MIDFAIL2

Source Section

TRK

NATTMPT

Increases when the system routes an outgoing call to a Trunk group

Data Source

MTX OM, SDM

Source Field

NATTMPT + 65536 * TRNK2.NATTMPT2

Source Section

TRK

NCCT

total # trunk circuits in the group

Data Source

MTX OM, SDM

Source Field

NCCT (Info field 2)

Source Section

TRK

NCTFAIL

Records total # failed network call transfers

Data Source

MTX OM, SDM

Source Field

NCTFAIL

Source Section

TRK

NCTPASS

Records the total number of completed network call Transfers

Data Source

MTX OM, SDM

Source Field

NCTPASS

Source Section

TRK

NDEV

devices in the trunk route

Data Source

MTX OM

Source Field

NDEV

Source Section

Devices in TrunkRoute

NOANSWER

No Answer

Data Source

MTX OM, SDM

Source Field

NOANSWER

Source Section

TRK

NOVFLATB

Increases when a call with access to the trunk group overflows the group

Data Source

MTX OM, SDM

Source Field

NOVFLATB

Source Section

TRK

NPBDRTF

NP Routing Error

Data Source

MTX OM, SDM

Source Field

NPBDRTF

Source Section

TRK

NPQUERY

NP Query Initiated

Data Source

MTX OM, SDM

Source Field

NPQUERY + 65536 * TRNK2.NPQUERY2

Source Section

TRK

NPRESP

NP Response Received

Data Source

MTX OM, SDM

Source Field

NPRESP + 65536 * TRNK2.NPRESP2

Source Section

TRK

NWCCT

trunk circuits available at end of reporting period

Data Source

MTX OM, SDM

Source Field

NWCCT (Info field 3)

Source Section

TRK

OUTANS

Answered calls for outgoing traffic

Data Source

MTX OM, SDM

Source Field

OUTANS + 65536 * OUTANS2

Source Section

MTXOMTRK

OUTFAIL

Counts attempts to seize an outgo trunk in the trunk group failure

Data Source

MTX OM, SDM

Source Field

OUTFAIL

Source Section

TRK

OUTMTCHF

Counts attempts to find path from an incoming trunk or originating line to a selected trunk that fail

Data Source

MTX OM, SDM

Source Field

OUTMTCHF

Source Section

TRK

OUTTRU

Trunk usage for outgoing traffic

Data Source

MTX OM, SDM

Source Field

OUTTRU + 65536 * OUTTRU2

Source Section

MTXOMTRK

PKTLOSS

The number of calls for which the packet loss QOS statistic has exceeded the datafilled LOSS threshold.

Data Source

SDM

Source Field

PKTLOSS

Source Section

TRKQOSOM

PRERTEAB

Counts incoming attempts system abandons before the system can complete routing

Data Source

MTX OM, SDM

Source Field

PRERTEAB

Source Section

TRK

PREU

Every 100s records if the system turns the PRE on for a two-way trunk group

Data Source

MTX OM, SDM

Source Field

PREU

Source Section

TRK

SBU

100s records if a trunk is in remote busy/PM busy/system busy/carrier fail/deloaded

Data Source

MTX OM, SDM

Source Field

SBU + 65536 * TRNK2.SBU2

Source Section

TRK

TANDEM

Counts incoming calls on a trunk group that first routes to an outgoing trunk group

Data Source

MTX OM, SDM

Source Field

TANDEM + 65536 * TRNK2.TANDEM2

Source Section

TRK

TOTU

Every 100s records if any trunk in the group is busy

Data Source

MTX OM, SDM

Source Field

TOTU + 65536 * TRNK2.TOTU2

Source Section

TRK

TRU

Every 100s records if a trunk is call processing busy/call processing busy deload/locked

Data Source

MTX OM, SDM

Source Field

TRU + 65536 * TRNK2.TRU2

Source Section

TRK

TRU2WIN

Every 100s records if a two-way trunk in a group is call processing busy

Data Source

MTX OM, SDM

Source Field

TRU2WIN + 65536 * TRNK2.TRU2WIN2

Source Section

Sector Primitive Calculations

The following is a list of primitive calculations for the Sector entity.

AccessAtts

Access Attempts excluding handoffs and access threshold blocks

Calculation

$(\text{vsum}(\text{MBLORG}, \text{PAGERESP}, 0) - \text{PSigQ})$

AccessBlks

Access Attempts blocked due to no traffic channel available

Calculation

$(\text{vsum}(\text{LPANNONE}, \text{HONOVCH}, 0))$

AccessComps

Access Attempts that successfully reach the traffic channel

Calculation

$(\text{vsum}(\text{MBLORGCO}, \text{MBLTERCO}, \text{DMBORACO}, \text{DMBTRACO}, 0))$

AccessFails

Number of mobiles failing to reach the target traffic channel on initial channel assignment only

Calculation

(STIMEOUT)

AllAtts

All Channel assignments including Handoffs

Calculation

$(\text{vsum}(\text{AccessAtts}, \text{HOCOMPS}, 0))$

AllBlks

Primary Attempts Blocked or Redirected

Calculation

$(\text{vsum}(\text{LPANNONE}, \text{DIRETRY}, 0))$

CellName

Name of the parent cell

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

""

ICSrctHoAtts

Number of inter-cell handoff attempts when the sector was the source

Calculation

(HOATTS - DHOATTS)

ICTrgtHoAtts

Number of inter-cell handoff attempts when the sector was the target

Calculation

(HOCOMPS - DHOCOMPS)

ICTrgtHoComps

Number of inter-cell handoff completions when the sector was the target

Calculation

(ICTrgtHoAtts - ICTrgtHoFails)

ICTrgtHoFails

Number of inter-cell handoff failures/drops when the sector was the target

Calculation

(DROPHO - DDROPHO)

LostCalls

Total number of calls dropped

Calculation

(vsum(RFLossQ, TotHoFails, 0))

MACSUMOF

Records when an overflow condition is detected

Calculation

(vsum(MACSUMOF_O, MACSUMOF_N, 0))

MASSUMOF

Records when an overflow condition is detected

Calculation

(vsum(MASSUMOF_O, MASSUMOF_N, 0))

MLAttempts

Land Terminated Call Attempts

Calculation

(vsum(MLATTS, MOATTS, 0))

MLCompletions

Land Terminated Call Completions

Calculation

(vsum(MLCOMPS, MOCOMPS, 0))

NUMDAYS

of days in Report

Calculation

DAYSINREPORT()

NUMHOURS

of hours in Summation Data

Calculation

OrigTermAssAtts

Access Attempts assigned to a traffic channel

Calculation

(AccessAtts - AccessBlks)

OrigTermAtts

Access Attempts including access threshold blocks

Calculation

(vsum(MBLORG, PAGERESP, 0))

OrigTermDenied

Origination and Termination Attempts not completed

Calculation

$(\text{vsum}(\text{PSigQ}, \text{AccessBlks}, \text{AccessFails}, 0))$

pAccessBlks

Percentage of access attempts that failed due to no radio channels available

Calculation

$(100.0 * (\text{AccessBlks} / \text{AccessAtts}))$

pAccessFails

Percentage of access assignments that failed to reach the target channel on access attempt

Calculation

$(100.0 * (\text{AccessFails} / (\text{AccessAtts} - \text{AccessBlks})))$

pICTrgtHoFails

Percentage of inter-cell handoff failures/drops when the sector was the target

Calculation

$(100.0 * (\text{ICTrgtHoFails} / \text{ICTrgtHoAtts}))$

pLMCompletions

Percentage of Land Originated Call Completions

Calculation

$(100.0 * (\text{LMCOMPS} / \text{LMATTS}))$

pLostCallsPerComp

Percentage of Lost Calls per Access Completes

Calculation

$(100.0 * (\text{LostCalls} / \text{AccessComps}))$

pMLCompletions

Percentage of Land Terminated Call Completions

Calculation

$(100.0 * \text{MLCompletions} / \text{MLAttempts})$

pMMCompletions

Percentage of Mobile-to-Mobile Call Completions

Calculation

$(100.0 * \text{MMCOMPS} / \text{MMATTS})$

pOrigTermDenied

Percentage of Origination & Termination Attempts not completed

Calculation

$(100.0 * (\text{OrigTermDenied} / \text{OrigTermAtts}))$

pPSigPerAtt

Percentage of access threshold blocks per access attempt

Calculation

$(100.0 * (\text{PSigQ} / \text{OrigTermAtts}))$

pRegCompletions

Percentage of successful registration attempts

Calculation

$(100.0 * \text{REGCOMPS} / \text{REGATTS})$

pRFLossPerComp

Percentage of RF Losses per Access Completion

Calculation

$(100.0 * (\text{RFLossQ} / \text{AccessComps}))$

PSigQ

Poor Signal Quantity

Calculation

$(\text{vsum}(\text{ORRSSILO}, \text{PGRSSILO}, 0))$

RFLossQ

Sum of Uplink and Downlink RF Losses

Calculation

$(\text{vsum}(\text{DROPCALL}, \text{DDRPCALS}, 0))$

SLNTRTAF

Alternate peg name for SILNTRT2

Calculation

(SILNTRT2)

SRTDBORG

Alternate peg name for SILENTRT

Calculation

(SILENTRT)

TotHoFails

Total Handoff Attempts that did not complete

Calculation

(DROPHO - DDROPHO)

Sector Peg Counts

CELL101

CELL101_CellFailure_TSI10

Call state of 10 or 110 (trouble code CELL_FAILURE) - Waiting for a release acknowledgment from the mobile unit

Data Source

MTX Log

Source Field

TSI=10 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI11

Call state of 11 or 111 (trouble code CELL_FAILURE) - ACTIVE_RELEASE_SETUP

Data Source

MTX Log

Source Field

TSI=11 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI12

Call state of 12 or 112 (trouble code CELL_FAILURE) - Waiting for an alert acknowledgment from the mobile unit (second attempt)

Data Source

MTX Log

Source Field

TSI=12 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI13

Call state of 13 or 113 (trouble code CELL_FAILURE) - ALERT_2

Data Source

MTX Log

Source Field

TSI=13 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI14

Call state of 14 or 114 (trouble code CELL_FAILURE) - Waiting for the called address from the mobile unit

Data Source

MTX Log

Source Field

TSI=14 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI15

Call state of 15 or 115 (trouble code CELL_FAILURE) - Waiting for a setup message from the MTX

Data Source

MTX Log

Source Field

TSI=15 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI16

Call state of 16 or 116 (trouble code CELL_FAILURE) - The VCH is being used for locating channel receiver (LCR) redundancy

Data Source

MTX Log

Source Field

TSI=16 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI17

Call state of 17 or 117 (trouble code CELL_FAILURE) - The VCH is undergoing in-service testing

Data Source

MTX Log

Source Field

TSI=17 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI18

Call state of 18 or 118 (trouble code CELL_FAILURE) - The VCH is waiting for the One-second guard timer to expire after the mobile unit disconnects or hands off. After the timer expires, the mobile unit is put back on the IDLE queue

Data Source

MTX Log

Source Field

TSI=18 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI19

Call state of 19 or 119 (trouble code CELL_FAILURE) - Failure has occurred during the call. The intelligent cellular peripheral (ICP) sends a CARRIER OFF command to the VCH to put it back into the idle voice task and expects an answer

Data Source

MTX Log

Source Field

TSI=19 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI2

Call state of 2 or 102 (trouble code CELL_FAILURE) - Waiting for setup acknowledgment from the voice channel (VCH). This state is used

Data Source

MTX Log

Source Field

TSI=2 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI20

Call state of 20 or 120 (trouble code CELL_FAILURE) - Waiting for a power order confirmation from the VCH in response to a power command to change the transmit power level of the mobile unit

Data Source

MTX Log

Source Field

TSI=20 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI21

Call state of 21 or 121 (trouble code CELL_FAILURE) - Waiting for a stop alert confirmation from the VCH in response to a stop alert order

Data Source

MTX Log

Source Field

TSI=21 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI22

Call state of 22 or 122 (trouble code CELL_FAILURE) - Waiting for an audit confirmation from the VCH in response to an audit order

Data Source

MTX Log

Source Field

TSI=22 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI23

Call state of 23 or 123 (trouble code CELL_FAILURE) - Waiting for a reorder confirmation from the VCH in response to the abbreviated reorder order

Data Source

MTX Log

Source Field

TSI=23 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI24

Call state of 24 or 124 (trouble code CELL_FAILURE) - Waiting for an intercept confirmation from the VCH in response to the abbreviated intercept order

Data Source

MTX Log

Source Field

TSI=24 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI25

Call state of 25 or 125 (trouble code CELL_FAILURE) - Waiting for an alert confirmation from the VCH in response to the abbreviated alert order

Data Source

MTX Log

Source Field

TSI=25 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI26

Call state of 26 or 126 (trouble code CELL_FAILURE) - Waiting for a disconnect message from the mobile unit

Data Source

MTX Log

Source Field

TSI=26 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI27

Call state of 27 or 127 (trouble code CELL_FAILURE) - A carrier fail message was reported from DS1MTCE

Data Source

MTX Log

Source Field

TSI=27 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI28

Call state of 28 or 128 (trouble code CELL_FAILURE) - MB_SEIZE. Used to distinguish manual busy and carrier fail from an in-service seize

Data Source

MTX Log

Source Field

TSI=28 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI29

Call state of 29 or 129 (trouble code CELL_FAILURE) - VCH will be removed after a maintenance handoff

Data Source

MTX Log

Source Field

TSI=29 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI3

Call state of 3 or 103 (trouble code CELL_FAILURE) - Waiting for setup acknowledgment from the VCH. This state is used on terminations

Data Source

MTX Log

Source Field

TSI=3 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI30

Not currently used

Data Source

MTX Log

Source Field

TSI=30 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI31

Not currently used

Data Source

MTX Log

Source Field

TSI=31 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI32

Call state of 32 or 132 (trouble code CELL_FAILURE) - Waiting for a release from the CC after sending it a HANDOFF_JACK

Data Source

MTX Log

Source Field

TSI=32 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI4

Call state of 4 or 104 (trouble code CELL_FAILURE) - Waiting for SAT_PRESENT on termination

Data Source

MTX Log

Source Field

TSI=4 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI5

Call state of 5 or 105 (trouble code CELL_FAILURE) - ACTIVE_SAT_WAIT_RELEASE

Data Source

MTX Log

Source Field

TSI=5 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI6

Call state of 6 or 106 (trouble code CELL_FAILURE) - Waiting for initial SAT detection on the VCH from the originating mobile unit

Data Source

MTX Log

Source Field

TSI=6 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI7

Call state of 7 or 107 (trouble code CELL_FAILURE) - Waiting for a release acknowledgment from the peripheral

Data Source

MTX Log

Source Field

TSI=7 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI8

Call state of 8 or 108 (trouble code CELL_FAILURE) - Waiting for an ANSWER MESSAGE from a terminating mobile unit after receiving a SAT_PRESENT message.

Data Source

MTX Log

Source Field

TSI=8 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellFailure_TSI9

Call state of 9 or 109 (trouble code CELL_FAILURE) - The mobile unit is in conversation

Data Source

MTX Log

Source Field

TSI=9 and TRBL=CELL_FAILURE

Source Section

CELL101

CELL101_CellTaskTimeout

Number of CELL101 events with trouble code of CELL_TASK_TIMEOUT

Data Source

MTX Log

Source Field

TRBL=CELL_TASK_TIMEOUT

Source Section

CELL101

CELL101_CellTaskTimeout_TSI1

Call state of 1 or 101 (trouble code CELL_TASK_TIMEOUT) - Idle

Data Source

MTX Log

Source Field

TSI=1 and TRBL=CELL_TASK_TIMEOUT

Source Section

CELL101

CELL101_CellTaskTimeout_TSI10

Call state of 10 or 110 (trouble code CELL_TASK_TIMEOUT) - Waiting for a release acknowledgment from the mobile unit

Data Source

MTX Log

Source Field

TSI=10 and TRBL=CELL_TASK_TIMEOUT

Source Section

CELL101

CELL101_CellTaskTimeout_TSI11

Call state of 11 or 111 (trouble code CELL_TASK_TIMEOUT) - ACTIVE_RELEASE_SETUP

Data Source

MTX Log

Source Field

TSI=11 and TRBL=CELL_TASK_TIMEOUT

Source Section

CELL101

CELL101_CellTaskTimeout_TSI12

Call state of 12 or 112 (trouble code CELL_TASK_TIMEOUT) - Waiting for an alert acknowledgment from the mobile unit (second attempt)

Data Source

MTX Log

Source Field

TSI=12 and TRBL=CELL_TASK_TIMEOUT

Source Section

CELL101

CELL101_CellTaskTimeout_TSI13

Call state of 13 or 113 (trouble code CELL_TASK_TIMEOUT) - ALERT_2

Data Source

MTX Log

Source Field

TSI=13 and TRBL=CELL_TASK_TIMEOUT

Source Section

CELL101

CELL101_CellTaskTimeout_TSI14

Call state of 14 or 114 (trouble code CELL_TASK_TIMEOUT) - Waiting for the called address from the mobile unit

Data Source

MTX Log

Source Field

TSI=14 and TRBL=CELL_TASK_TIMEOUT

Source Section

CELL101

CELL101_CellTaskTimeout_TSI15

Call state of 15 or 115 (trouble code CELL_TASK_TIMEOUT) - Waiting for a setup message from the MTX

CLFL105_MobileRelTimeout

Number of CLFL105 events with trouble code of SERV_NO_HO_ACK

Data Source

MTX Log

Source Field

TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI1

Call state of 1 or 101 - Idle

Data Source

MTX Log

Source Field

TSI=1 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI10

Call state of 10 or 110 - Waiting for a release acknowledgment from the mobile unit

Data Source

MTX Log

Source Field

TSI=10 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI11

Call state of 11 or 111 - ACTIVE_RELEASE_SETUP

Data Source

MTX Log

Source Field

TSI=11 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI12

Call state of 12 or 112 - Waiting for an alert acknowledgment from the mobile unit (second attempt)

Data Source

MTX Log

Source Field

TSI=12 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI13

Call state of 13 or 113 - ALERT_2

Data Source

MTX Log

Source Field

TSI=13 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI14

Call state of 14 or 114 - Waiting for the called address from the mobile unit

Data Source

MTX Log

Source Field

TSI=14 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI15

Call state of 15 or 115 - Waiting for a setup message from the MTX

Data Source

MTX Log

Source Field

TSI=15 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI16

Call state of 16 or 116 - The VCH is being used for locating channel receiver (LCR) redundancy

Data Source

MTX Log

Source Field

TSI=16 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI17

Call state of 17 or 117 - The VCH is undergoing in-service testing

Data Source

MTX Log

Source Field

TSI=17 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI18

Call state of 18 or 118 - The VCH is waiting for the One-second guard timer to expire after the mobile unit disconnects or hands off. After the timer expires, the mobile unit is put back on the IDLE queue

Data Source

MTX Log

Source Field

TSI=18 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI19

Call state of 19 or 119 - Failure has occurred during the call. The intelligent cellular peripheral (ICP) sends a CARRIER OFF command to the VCH to put it back into the idle voice task and expects an answer

Data Source

MTX Log

Source Field

TSI=19 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI2

Call state of 2 or 102 - Waiting for setup acknowledgment from the voice channel (VCH). This state is used

Data Source

MTX Log

Source Field

TSI=2 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI20

Call state of 20 or 120 - Waiting for a power order confirmation from the VCH in response to a power command to change the transmit power level of the mobile unit

Data Source

MTX Log

Source Field

TSI=20 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI21

Call state of 21 or 121 - Waiting for a stop alert confirmation from the VCH in response to a stop alert order

Data Source

MTX Log

Source Field

TSI=21 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI22

Call state of 22 or 122 - Waiting for an audit confirmation from the VCH in response to an audit order

Data Source

MTX Log

Source Field

TSI=22 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI23

Call state of 23 or 123 - Waiting for a reorder confirmation from the VCH in response to the abbreviated reorder order

Data Source

MTX Log

Source Field

TSI=23 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI24

Call state of 24 or 124 - Waiting for an intercept confirmation from the VCH in response to the abbreviated intercept order

Data Source

MTX Log

Source Field

TSI=24 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI25

Call state of 25 or 125 - Waiting for an alert confirmation from the VCH in response to the abbreviated alert order

Data Source

MTX Log

Source Field

TSI=25 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI26

Call state of 26 or 126 - Waiting for a disconnect message from the mobile unit

Data Source

MTX Log

Source Field

TSI=26 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI27

Call state of 27 or 127 - A carrier fail message was reported from DS1MTCE

Data Source

MTX Log

Source Field

TSI=27 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI28

Call state of 28 or 128 - MB_SEIZE. Used to distinguish manual busy and carrier fail from an in-service seize

Data Source

MTX Log

Source Field

TSI=28 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI29

Call state of 29 or 129 - VCH will be removed after a maintenance handoff

Data Source

MTX Log

Source Field

TSI=29 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI3

Call state of 3 or 103 - Waiting for setup acknowledgment from the VCH. This state is used on terminations

Data Source

MTX Log

Source Field

TSI=3 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI30

Not currently used

Data Source

CLFL105

CLFL105_TSI31

Not currently used

Data Source

MTX Log

Source Field

TSI=31 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI32

Call state of 32 or 132 - Waiting for a release from the CC after sending it a HANDOFF_JACK

Data Source

MTX Log

Source Field

TSI=32 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI4

Call state of 4 or 104 - Waiting for SAT_PRESENT on termination

Data Source

MTX Log

Source Field

TSI=4 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI5

Call state of 5 or 105 - ACTIVE_SAT_WAIT_RELEASE

Data Source

MTX Log

Source Field

TSI=5 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI6

Call state of 6 or 106 - Waiting for initial SAT detection on the VCH from the originating mobile unit

Data Source

MTX Log

Source Field

TSI=6 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI7

Call state of 7 or 107 - Waiting for a release acknowledgment from the peripheral

Data Source

MTX Log

Source Field

TSI=7 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI8

Call state of 8 or 108 - Waiting for an ANSWER MESSAGE from a terminating mobile unit after receiving a SAT_PRESENT message.

Data Source

MTX Log

Source Field

TSI=8 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

CLFL105_TSI9

Call state of 9 or 109 - The mobile unit is in conversation

Data Source

MTX Log

Source Field

TSI=9 and TRBL=MOBILERELTIMEOUT

Source Section

CLFL105

Sector_Carrier Primitive Calculations

The following is a list of primitive calculations for the Sector_Carrier entity.

AccFails_fq

RF Access Failures by carrier during Origination and Termination and Hard Handoff

Calculation

$(\text{vsum}(\text{MCTERLFL}, \text{MCTHRLFL}, 0))$

AccFails_fq3GD

3G Data RF Access Failures by carrier during Origination and Termination and Hard Handoff

Calculation

$(\text{vsum}(\text{MCTERLFL3GD}, \text{MCTHRLFL3GD}, 0))$

AccFails_fq3GV

3G Voice RF Access Failures by carrier during Origination and Termination and Hard Handoff

Calculation

(vsum(MCTERLFL3GV, MCTHRLFL3GV, 0))

BTS_CellName

Name of the parent BTS_Cell

CallCont

Peg when an MCTA frequency is successfully selected by the Carrier Determination Algorithm

Calculation

(vsum(MCTOATTS, MCTTATTS, MCTHATTS, 0))

CallCont3GD

Peg for 3G Data when an MCTA frequency is successfully selected by the Carrier Determination Algorithm

Calculation

(vsum(MCTOATTS3GD, MCTTATTS3GD, MCTHATTS3GD, 0))

CallCont3GV

Peg for 3G Voice when an MCTA frequency is successfully selected by the Carrier Determination Algorithm

Calculation

(vsum(MCTOATTS3GV, MCTTATTS3GV, MCTHATTS3GV, 0))

CallDrops_fq

Calls dropped per carrier due to RF-related call failure reasons

Calculation

(MCTDROPR)

CallDrops_fq3GD

3G data calls dropped per carrier due to RF-related call failure reasons

Calculation

(MCTDROPR3GD)

CallDrops_fq3GV

3G Voice calls dropped per carrier due to RF-related call failure reasons

Calculation

(MCTDROPR3GV)

CallSucc_fq

Total successful established calls per carrier including origination and termination and handoff successes

Calculation

(vsum(MCTOSUCC, MCTTSUCC, MCTHSUCC, 0))

CallSucc_fq3GD

Total 3G Data successful established calls per carrier including origination and termination and hard handoff successes

Calculation

(vsum(MCTOSUCC3GD, MCTTSUCC3GD, MCTHSUCC3GD, 0))

CallSucc_fq3GV

Total 3G Voice successful established calls per carrier including origination and termination and hard handoff successes

Calculation

(vsum(MCTOSUCC3GV, MCTTSUCC3GV, MCTHSUCC3GV, 0))

CallUsageCCS

Total Call Usage in CCS

Calculation

vsum(PrimaryFrameCntFCH_RC1, PrimaryFrameCntFCH_RC2,
PrimaryFrameCntFCH_RC3, PrimaryFrameCntFCH_RC4, PrimaryFrameCntFCH_RC5, 0)
/ 5000.0

CallUsageErlangs

Total Call Usage in Erlangs

Calculation

vsum(PrimaryFrameCntFCH_RC1, PrimaryFrameCntFCH_RC2,
PrimaryFrameCntFCH_RC3, PrimaryFrameCntFCH_RC4, PrimaryFrameCntFCH_RC5, 0)
/ 180000.0

CDMA_CHANNEL

CDMA_CHANNEL

Calculation

CE_USER_SC

Channel Elements per User for sector carrier entity

Calculation

$(1.0 * \text{MOU_CE_SC} / \text{MOU_TRAFFIC_SC})$

CEFrameCntFCH_RC1

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC1 Voice only

Calculation

$\text{sum}(\text{RadioConfiguration}, \text{CEFrameCntFCH_RC1})$

CEFrameCntFCH_RC2

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC2 Voice only

Calculation

$\text{sum}(\text{RadioConfiguration}, \text{CEFrameCntFCH_RC2})$

CEFrameCntFCH_RC3

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC3 Voice only

Calculation

$\text{sum}(\text{RadioConfiguration}, \text{CEFrameCntFCH_RC3})$

CEFrameCntFCH_RC3D

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC3 Data

Calculation

$\text{sum}(\text{RadioConfiguration}, \text{CEFrameCntFCH_RC3D})$

CEFrameCntFCH_RC3V

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC3 Voice

Calculation

$\text{sum}(\text{RadioConfiguration}, \text{CEFrameCntFCH_RC3V})$

CEFrameCntFCH_RC4

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC4 Voice only

Calculation

sum (RadioConfiguration, CEFrameCntFCH_RC4)

CEFrameCntFCH_RC4D

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC4 Data

Calculation

sum (RadioConfiguration, CEFrameCntFCH_RC4D)

CEFrameCntFCH_RC4V

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC4 Voice

Calculation

sum (RadioConfiguration, CEFrameCntFCH_RC4V)

CEFrameCntFCH_RC5

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC5 Voice only

Calculation

sum (RadioConfiguration, CEFrameCntFCH_RC5)

CEFrameCntFCH_RC5D

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC5 Data

Calculation

sum (RadioConfiguration, CEFrameCntFCH_RC5D)

CEFrameCntFCH_RC5V

Frames sent on the forward link for every user on the fundamental channel / number of softer handoff links for RC5 Voice

Calculation

sum (RadioConfiguration, CEFrameCntFCH_RC5V)

ConfiguredFwdCallBlockingThreshold_Aggregated

This PCALC returns the aggregated value of peg ConfiguredFwdCallBlockingThreshold in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ConfiguredFwdCallBlockingThreshold.

Calculation

```
nullvalue (sum (Beam, ConfiguredFwdCallBlockingThreshold), ConfiguredFwd-  
CallBlockingThreshold)
```

ConfiguredFwdDataCallBlockingThreshold_Aggregated

This PCALC returns the aggregated value of peg ConfiguredFwdDataCallBlockingThreshold in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ConfiguredFwdDataCallBlockingThreshold.

Calculation

```
nullvalue (sum (Beam, ConfiguredFwdDataCallBlockingThreshold), ConfiguredF-  
wdDataCallBlockingThreshold)
```

ConfiguredFwdHandoffBlockingThreshold_Aggregated

This PCALC returns the aggregated value of peg ConfiguredFwdHandoffBlockingThreshold in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ConfiguredFwdHandoffBlockingThreshold.

Calculation

```
nullvalue (sum (Beam, ConfiguredFwdHandoffBlockingThreshold), ConfiguredF-  
wdHandoffBlockingThreshold)
```

ConfiguredFwdVoiceCallBlockingThreshold_Aggregated

This PCALC returns the aggregated value of peg ConfiguredFwdVoiceCallBlockingThreshold in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ConfiguredFwdVoiceCallBlockingThreshold.

Calculation

```
nullvalue (sum (Beam, ConfiguredFwdVoiceCallBlockingThreshold), Configured-  
FwdVoiceCallBlockingThreshold)
```

DataUsageCCS3G

3G Data Only Usage in CCS

Calculation

```
vsum(PrimaryFrameCntFCH_RC3D , PrimaryFrameCntFCH_RC4D ,  
PrimaryFrameCntFCH_RC5D, 0)/5000.0
```

DataUsageErlangs3G

3G Data Only Usage in Erlangs

Calculation

```
vsum(PrimaryFrameCntFCH_RC3D , PrimaryFrameCntFCH_RC4D ,  
PrimaryFrameCntFCH_RC5D, 0)/180000.0
```

ForwardTxPowerUsageHistogram_00_09

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_00_09 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_0_9.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_00_09),  
ForwardTxPowerUsageHist_0_9)
```

ForwardTxPowerUsageHistogram_10_19

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_10_19 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_10_19.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_10_19),  
ForwardTxPowerUsageHist_10_19)
```

ForwardTxPowerUsageHistogram_20_29

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_20_29 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_20_29.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_20_29),  
ForwardTxPowerUsageHist_20_29)
```

ForwardTxPowerUsageHistogram_30_39

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_30_39 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_30_39.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_30_39),  
ForwardTxPowerUsageHist_30_39)
```

ForwardTxPowerUsageHistogram_40_49

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_40_49 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_40_49.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_40_49),  
ForwardTxPowerUsageHist_40_49)
```

ForwardTxPowerUsageHistogram_50_59

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_50_59 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_50_59.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_50_59),  
ForwardTxPowerUsageHist_50_59)
```

ForwardTxPowerUsageHistogram_60_69

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_60_69 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_60_69.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_60_69),  
ForwardTxPowerUsageHist_60_69)
```

ForwardTxPowerUsageHistogram_70_79

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_70_79 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_70_79.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_70_79),  
ForwardTxPowerUsageHist_70_79)
```

ForwardTxPowerUsageHistogram_80_89

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_80_89 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_80_89.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_80_89),  
ForwardTxPowerUsageHist_80_89)
```

ForwardTxPowerUsageHistogram_90_100

This PCALC returns the aggregated value of peg ForwardTxPowerUsageHistogram_90_100 in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg ForwardTxPowerUsageHist_90_99.

Calculation

```
nullvalue (sum (Beam, ForwardTxPowerUsageHistogram_90_100),  
ForwardTxPowerUsageHist_90_99)
```

FrameCntFCH_RC1

Frames sent on the forward link for every user on the fundamental channel for RC1 Voice only

Calculation

```
sum (RadioConfiguration, FrameCntFCH_RC1)
```

FrameCntFCH_RC2

Frames sent on the forward link for every user on the fundamental channel for RC2 Voice only

Calculation

```
sum (RadioConfiguration, FrameCntFCH_RC2)
```

FrameCntFCH_RC3

Frames sent on the forward link for every user on the fundamental channel for RC3 Voice only

Calculation

```
sum (RadioConfiguration, FrameCntFCH_RC3)
```

FrameCntFCH_RC3D

Frames sent on the forward link for every user on the fundamental channel for RC3 Data

Calculation

```
sum (RadioConfiguration, FrameCntFCH_RC3D)
```

FrameCntFCH_RC3V

Frames sent on the forward link for every user on the fundamental channel for RC3 Voice

Calculation

```
sum (RadioConfiguration, FrameCntFCH_RC3V)
```

FrameCntFCH_RC4

Frames sent on the forward link for every user on the fundamental channel for RC4 Voice only

Calculation

sum (RadioConfiguration, FrameCntFCH_RC4)

FrameCntFCH_RC4D

Frames sent on the forward link for every user on the fundamental channel for RC4 Data

Calculation

sum (RadioConfiguration, FrameCntFCH_RC4D)

FrameCntFCH_RC4V

Frames sent on the forward link for every user on the fundamental channel for RC4 Voice

Calculation

sum (RadioConfiguration, FrameCntFCH_RC4V)

FrameCntFCH_RC5

Frames sent on the forward link for every user on the fundamental channel for RC5 Voice only

Calculation

sum (RadioConfiguration, FrameCntFCH_RC5)

FrameCntFCH_RC5D

Frames sent on the forward link for every user on the fundamental channel for RC5 Data

Calculation

sum (RadioConfiguration, FrameCntFCH_RC5D)

FrameCntFCH_RC5V

Frames sent on the forward link for every user on the fundamental channel for RC5 Voice

Calculation

sum (RadioConfiguration, FrameCntFCH_RC5V)

FSCH_CFDSRadioConfig

Description

Calculation

vsum (FSCH_CFDS_RadioConfig, 0.0)

FSCH_DataRateDowngradeRate

Percentage of F-SCH data rate downgrades

Calculation

$(100.0 * \text{FSCHLinkDowngrade} / \text{FSCHLinkSetupAttempts})$

FSCH_RadioAccessFailureRate

Percentage of F-SCH radio access failures

Calculation

$(100.0 * \text{FSCHRadioLinkAccessFailure} / \text{FSCHLinkSetupAttempts})$

FSCH_RadioAccessFailureRate_2X

Percentage of 2X F-SCH radio access failures

Calculation

$(100.0 * \text{FSCHRadioLinkAccessFailure}_2\text{X} / \text{FSCHLinkSetupAttempts}_2\text{X})$

FSCH_RadioAccessFailureRate_4X

Percentage of 4X F-SCH radio access failures

Calculation

$(100.0 * \text{FSCHRadioLinkAccessFailure}_4\text{X} / \text{FSCHLinkSetupAttempts}_4\text{X})$

FSCH_RadioAccessFailureRate_8X

Percentage of 8X F-SCH radio access failures

Calculation

$(100.0 * \text{FSCHRadioLinkAccessFailure}_8\text{X} / \text{FSCHLinkSetupAttempts}_8\text{X})$

FSCH_SetupFailDueCFDSConfigRate

Percentage of F-SCH setup failures due to CFDS configuration

Calculation

$(100.0 * \text{FSCH_CFDS_RadioConfig} / \text{FSCHLinkSetupAttempts})$

FSCH_SetupFailDueToTimeoutRate

Percentage of F-SCH setup failures due to resource request timeouts

Calculation

$(100.0 * \text{FSCHTimeout} / \text{FSCHLinkSetupAttempts})$

FSCH_SetupFailLackofPhysResrcRate

Percentage of F-SCH setup failures due to lack of available channel resources

Calculation

$(100.0 * \text{FSCHNoPhysRes} / \text{FSCHLinkSetupAttempts})$

FSCH_SetupFailLackofWalshCodeRate

Percentage of F-SCH setup failures due to lack of available Walsh codes

Calculation

$(100.0 * \text{FSCHNoWalshCode} / \text{FSCHLinkSetupAttempts})$

FSCH_SetupFailNoFrameOffsetAvlRate

Percentage of F-SCH setup failures due to lack of available frame offset

Calculation

$(100.0 * \text{FSCHNoFrameOffset} / \text{FSCHLinkSetupAttempts})$

FSCH_SetupFailureLackofFwdPwrRate

Percentage of F-SCH setup failures due to lack of available forward power

Calculation

$(100.0 * \text{FSCHNoFwdPower} / \text{FSCHLinkSetupAttempts})$

FSCH_SetupFailureRate

Percentage of overall F-SCH setup failures

Calculation

$(100.0 * \text{FSCHLinkSetupBlock} / \text{FSCHLinkSetupAttempts})$

FSCH_SetupFailureRate_16X

Percentage of overall 16X F-SCH setup failures

Calculation

$(100.0 * \text{FSCHLinkSetupBlock}_{16X} / \text{FSCHLinkSetupAttempts}_{16X})$

FSCH_SetupFailureRate_2X

Percentage of overall 2X F-SCH setup failures

Calculation

$(100.0 * \text{FSCHLinkSetupBlock}_{2X} / \text{FSCHLinkSetupAttempts}_{2X})$

FSCH_SetupFailureRate_4X

Percentage of overall 4X F-SCH setup failures

Calculation

(100.0 * FSCHLinkSetupBlock_4X / FSCHLinkSetupAttempts_4X)

FSCH_SetupFailureRate_8X

Percentage of overall 8X F-SCH setup failures

Calculation

(100.0 * FSCHLinkSetupBlock_8X / FSCHLinkSetupAttempts_8X)

FSCHRadioAccessFailureRate_16X

Percentage of 16X F-SCH radio access failures

Calculation

(100.0 * FSCHRadioLinkAccessFailure_16X / FSCHLinkSetupAttempts_16X)

GRAPHmultiLineSeparator

(vsum(MOU_ALPHA_SC, MOU_BETA_SC, MOU_GAMMA_SC,0))
```

NUMDAYS

of days in Report

Calculation

DAYSINREPORT ()

NUMHOURS

of hours in Summation Data

Calculation

OCNSForwardLinkUtilTWAvg

This PCALC returns the aggregated value of peg OCNSForwardLinkUtilTWAvg in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg OCNSForwardLinkUtilUWAvg.

Calculation

nullvalue (sum (Beam, OCNSForwardLinkUtilTWAvg), OCNSForwardLinkUtilUWAvg)

OverheadForwardLinkUtilUWavg_Aggregated

This PCALC returns the aggregated value of peg OverheadForwardLinkUtilUWavg in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg OverheadForwardLinkUtilUWavg.

Calculation

nullvalue (sum (Beam, OverheadForwardLinkUtilUWavg), OverheadForwardLinkUtilUWavg)

pAccFails_fq

RF Access Fail percentage per carrier during Origination and Termination and Hard Handoff

Calculation

(100.0 * AccFails_fq / CallCont)

pAccFails_fq3GD

3G Data RF Access Fail percentage per carrier during Origination and Termination and Hard Handoff

Calculation

(100.0 * AccFails_fq3GD / CallCont3GD)

pAccFails_fq3GV

3G Voice RF Access Fail percentage per carrier during Origination and Termination and Hard Handoff

Calculation

$(100.0 * \text{AccFails_fq3GV} / \text{CallCont3GV})$

PagingChannelMessageDroppedCount

This PCALC returns the aggregated value of peg PagingChannelMessageDroppedCount in entity PagingChan (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PagingChannelMessagesDropped.

Calculation

$\text{nullvalue}(\text{sum}(\text{PagingChan}, \text{PagingChannelMessageDroppedCount}), \text{PagingChannelMessagesDropped})$

PagingChannelMessageReceivedCount

This PCALC returns the aggregated value of peg PagingChannelMessageReceivedCount in entity PagingChan (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PagingChannelMessageCount.

Calculation

$\text{nullvalue}(\text{sum}(\text{PagingChan}, \text{PagingChannelMessageReceivedCount}), \text{PagingChannelMessageCount})$

pCallDrops_fq

Percentage of calls dropped per carrier due to RF-related call failure reason

Calculation

$(100.0 * \text{CallDrops_fq} / \text{CallSucc_fq})$

pCallDrops_fq3GD

Percentage of 3G Data calls dropped per carrier due to RF-related call failure reason

Calculation

$(100.0 * \text{CallDrops_fq3GD} / \text{CallSucc_fq3GD})$

pCallDrops_fq3GV

Percentage of 3G Voice calls dropped per carrier due to RF-related call failure reason

Calculation

$(100.0 * \text{CallDrops_fq3GV} / \text{CallSucc_fq3GV})$

pCallSucc_fq

Successful call established percentage per carrier including origination and termination and hard handoff successes

Calculation

$(100.0 * \text{CallSucc_fq} / \text{CallCont})$

pCallSucc_fq3GD

Successful 3G Data call established percentage per carrier including origination and termination and hard handoff successes

Calculation

$(100.0 * \text{CallSucc_fq3GD} / \text{CallCont3GD})$

pCallSucc_fq3GV

Successful 3G Voice call established percentage per carrier including origination and termination and hard handoff successes

Calculation

$(100.0 * \text{CallSucc_fq3GV} / \text{CallCont3GV})$

PercentTimeAboveFwdCallBlockingThreshold

This PCALC returns the aggregated value of peg PercentTimeAboveFwdCallBlockingThreshold in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PercentTimeAboveFwdCallBlockThrshld.

Calculation

$\text{nullvalue}(\text{sum}(\text{Beam}, \text{PercentTimeAboveFwdCallBlockingThreshold}), \text{PercentTimeAboveFwdCallBlockThrshld})$

PercentTimeAboveFwdDataCallBlockingThreshold

This PCALC returns the aggregated value of peg PercentTimeAboveFwdDataCallBlockingThreshold in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PercentTimeAboveFwdDataCallBlockThrshld.

Calculation

$\text{nullvalue}(\text{sum}(\text{Beam}, \text{PercentTimeAboveFwdDataCallBlockingThreshold}), \text{PercentTimeAboveFwdDataCallBlockThrshld})$

PercentTimeAboveFwdHandoffBlockingThreshold

This PCALC returns the aggregated value of peg PercentTimeAboveFwdHandoffBlockingThreshold in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PercentTimeAboveFwdHandoffBlockThrshld.

Calculation

```
nullvalue (sum (Beam, PercentTimeAboveFwdHandoffBlockingThreshold),  
PercentTimeAboveFwdHandoffBlockThrshld)
```

PercentTimeAboveFwdVoiceCallBlockingThreshold

This PCALC returns the aggregated value of peg PercentTimeAboveFwdVoiceCallBlockingThreshold in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg PercentTimeAboveFwdVoiceCallBlockThrshld.

Calculation

```
nullvalue (sum (Beam, PercentTimeAboveFwdVoiceCallBlockingThreshold),  
PercentTimeAboveFwdVoiceCallBlockThrshld)
```

pFwdCap

Percentage of MCTA call setup failures due to lack of forward link capacity after a frequency has been selected

Calculation

```
(100.0 * MCTFWCAP / CallCont)
```

pFwdCap3GD

Percentage of 3G Data MCTA call setup failures due to lack of forward link capacity after a frequency has been selected

Calculation

```
(100.0 * MCTFWCAP3GD / CallCont3GD)
```

pFwdCap3GV

Percentage of 3G Voice MCTA call setup failures due to lack of forward link capacity after a frequency has been selected

Calculation

```
(100.0 * MCTFWCAP3GV / CallCont3GV)
```

pHandoff

Percentage of MCTA hard handoff RF access failures after a frequency has been selected

Calculation

```
(100.0 * MCTHRLFL / CallCont)
```

pHandoff3GD

Percentage of 3G Data MCTA hard handoff RF access failures after a frequency has been selected

Calculation

$$(100.0 * MCTHRLFL3GD / CallCont3GD)$$

pHandoff3GV

Percentage of 3G Voice MCTA hard handoff RF access failures after a frequency has been selected

Calculation

$$(100.0 * MCTHRLFL3GV / CallCont3GV)$$

pHrdHandoffAccFail

Percentage of MCTA hard handoff RF access failures after a frequency has been selected

Calculation

$$(100.0 * MCTHRLFL / CallCont)$$

pHrdHandoffAccFail3GD

Percentage of 3G Data MCTA hard handoff RF access failures after a frequency has been selected

Calculation

$$(100.0 * MCTHRLFL3GD / CallCont3GD)$$

pHrdHandoffAccFail3GV

Percentage of 3G Voice MCTA hard handoff RF access failures after a frequency has been selected

Calculation

$$(100.0 * MCTHRLFL3GV / CallCont3GV)$$

pOrgTrm

Percentage of MCTA origination and termination RF access failures after a frequency has been selected

Calculation

$$(100.0 * MCTERLFL / CallCont)$$

pOrgTrm3GD

Percentage of 3G Data origination and termination RF access failures after a frequency has been selected

Calculation

$$(100.0 * MCTERLFL3GD / CallCont3GD)$$

pOrgTrm3GV

Percentage of 3G Voice origination and termination RF access failures after a frequency has been selected

Calculation

$$(100.0 * MCTERLFL3GV / CallCont3GV)$$

pRevCap

Percentage of MCTA call setup failures due to lack of reverse link capacity after a frequency has been selected

Calculation

$$(100.0 * MCTRECAP / CallCont)$$

pRevCap3GD

Percentage of 3G Data MCTA call setup failures due to lack of reverse link capacity after a frequency has been selected

Calculation

$$(100.0 * MCTRECAP3GD / CallCont3GD)$$

pRevCap3GV

Percentage of 3G Voice MCTA call setup failures due to lack of reverse link capacity after a frequency has been selected

Calculation

$$(100.0 * MCTRECAP3GV / CallCont3GV)$$

PrimaryFrameCntFCH_RC1

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links * softer handoff links for RC1 Voice only

Calculation

$$\text{sum (RadioConfiguration, PrimaryFrameCntFCH_RC1)}$$

PrimaryFrameCntFCH_RC2

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC2 Voice only

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC2)

PrimaryFrameCntFCH_RC3

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC3 Voice only

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC3)

PrimaryFrameCntFCH_RC3D

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC3 Data

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC3D)

PrimaryFrameCntFCH_RC3V

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC3 Voice

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC3V)

PrimaryFrameCntFCH_RC4

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC4 Voice only

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC4)

PrimaryFrameCntFCH_RC4D

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC4 Data

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC4D)

PrimaryFrameCntFCH_RC4V

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC4 Voice

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC4V)

PrimaryFrameCntFCH_RC5

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC5 Voice only

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC5)

PrimaryFrameCntFCH_RC5D

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC5 Data

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC5D)

PrimaryFrameCntFCH_RC5V

Frames sent on the forward link for every user on the fundamental channel/ soft handoff links *
softer handoff links for RC5 Voice

Calculation

sum (RadioConfiguration, PrimaryFrameCntFCH_RC5V)

pSoftHo_SC

Soft Handoff Overhead Percentage for sector_carrier entity

Calculation

$(100.0 * (CE_USER_SC - 1) / (CE_USER_SC))$

pTCE

Percentage of MCTA call setup failures due to lack of appropriate BTS CE resources after a
frequency has been selected

Calculation

$(100.0 * MCTNOTCE / CallCont)$

pTCE3GD

Percentage of 3G Data MCTA call setup failures due to lack of appropriate BTS CE resources after a frequency has been selected

Calculation

$(100.0 * \text{MCTNOTCE3GD} / \text{CallCont3GD})$

pTCE3GV

Percentage of 3G Voice MCTA call setup failures due to lack of appropriate BTS CE resources after a frequency has been selected

Calculation

$(100.0 * \text{MCTNOTCE3GV} / \text{CallCont3GV})$

pTotalBlocks_fq

Total call setup failures percentage per carrier due to resource shortage on originations and terminations and hard handoffs

Calculation

$(100.0 * \text{TotalBlocks_fq} / \text{CallCont})$

pTotalBlocks_fq3GD

Total 3G Data call setup failures percentage per carrier due to resource shortage on originations and terminations and hard handoffs

Calculation

$(100.0 * \text{TotalBlocks_fq3GD} / \text{CallCont3GD})$

pTotalBlocks_fq3GV

Total 3G Voice call setup failures percentage per carrier due to resource shortage on originations and terminations and hard handoffs

Calculation

$(100.0 * \text{TotalBlocks_fq3GV} / \text{CallCont3GV})$

pTrafDist

Percentage of total traffic distributed by carrier

Calculation

$(100.0 * \text{vsum}(\text{MCTOATTS}, \text{MCTTATTS}, \text{MCTHATTS}, 0) / \text{vsum}(\text{sum}(\text{Cell_Sector.Sector_Carrier}, \text{MCTOATTS}), \text{sum}(\text{Cell_Sector.Sector_Carrier}, \text{MCTTATTS}), \text{sum}(\text{Cell_Sector.Sector_Carrier}, \text{MCTHATTS}), 0))$

pTrafDist3GD

Percentage of total 3G Data traffic distributed by carrier

Calculation

```
(100.0 * vsum(MCTOATTS3GD, MCTTATTS3GD, MCTHATTS3GD,0) /  
vsum(sum(Cell_Sector.Sector_Carrier,MCTOATTS3GD),  
sum(Cell_Sector.Sector_Carrier,MCTTATTS3GD),  
sum(Cell_Sector.Sector_Carrier,MCTHATTS3GD),0))
```

pTrafDist3GV

Percentage of total 3G Voice traffic distributed by carrier

Calculation

```
(100.0 * vsum(MCTOATTS3GV, MCTTATTS3GV, MCTHATTS3GV,0) /  
vsum(sum(Cell_Sector.Sector_Carrier,MCTOATTS3GV),  
sum(Cell_Sector.Sector_Carrier,MCTTATTS3GV),  
sum(Cell_Sector.Sector_Carrier,MCTHATTS3GV),0))
```

pWCD

Percentage of MCTA call setup failures due to lack of walsh codes after a frequency has been selected

Calculation

```
(100.0 * MCTNOWCD / CallCont)
```

pWCD3GD

Percentage of 3G Data MCTA call setup failures due to lack of walsh codes after a frequency has been selected

Calculation

```
(100.0 * MCTNOWCD3GD / CallCont3GD)
```

pWCD3GV

Percentage of 3G Voice MCTA call setup failures due to lack of walsh codes after a frequency has been selected

Calculation

```
(100.0 * MCTNOWCD3GV / CallCont3GV)
```

RSCH_CFDSHighSpeed

Description

Calculation

$\text{vsum}(\text{RSCH_CFDS_HighSpeed}, 0.0)$

RSCH_CFDSRadioConfig

Description

Calculation

$\text{vsum}(\text{RSCH_CFDS_RadioConfig}, 0.0)$

RSCH_DataRateDowngradesRate

Percentage of R-SCH data rate downgrades

Calculation

$(100.0 * \text{RSCHLinkDowngrade} / \text{RSCHLinkSetupAttempt})$

RSCH_RadioAccessFailuresRate

Percentage of R-SCH radio access failures

Calculation

$(100.0 * \text{RSCHRadioLinkAccessFailure} / \text{RSCHLinkSetupAttempt})$

RSCH_RadioAccessFailuresRate_2X

Percentage of 2X R-SCH radio access failures

Calculation

$(100.0 * \text{RSCHRadioLinkAccessFailure}_2\text{X} / \text{RSCHLinkSetupAttempts}_2\text{X})$

RSCH_RadioAccessFailuresRate_4X

Percentage of 4X R-SCH radio access failures

Calculation

$(100.0 * \text{RSCHRadioLinkAccessFailure}_4\text{X} / \text{RSCHLinkSetupAttempts}_4\text{X})$

RSCH_RadioAccessFailuresRate_8X

Percentage of 8X R-SCH radio access failures

Calculation

$(100.0 * \text{RSCHRadioLinkAccessFailure}_8\text{X} / \text{RSCHLinkSetupAttempts}_8\text{X})$

RSCH_SetupFailDueCFDSConfigRate

Percentage of R-SCH setup failures due to CFDS configuration

Calculation

$(100.0 * \text{RSCH_CFDS_RadioConfig} / \text{RSCHLinkSetupAttempt})$

RSCH_SetupFailDueToTimeoutRate

Percentage of R-SCH setup failures due to resource request timeouts

Calculation

$(100.0 * \text{RSCHTimeout} / \text{RSCHLinkSetupAttempt})$

RSCH_SetupFailLackofPhysResrcRate

Percentage of R-SCH setup failures due to lack of available channel resources

Calculation

$(100.0 * \text{RSCHNoPhysRes} / \text{RSCHLinkSetupAttempt})$

RSCH_SetupFailNoFrameOffsetAviRate

Percentage of R-SCH setup failures due to lack of available frame offset

Calculation

$(100.0 * \text{RSCHNoFrameOffset} / \text{RSCHLinkSetupAttempt})$

RSCH_SetupFailRvsHiSpdCFDS_CfgRate

Percentage of R-SCH setup failures due to reverse high speed CFDS configuration

Calculation

$(100.0 * \text{RSCH_CFDS_HighSpeed} / \text{RSCHLinkSetupAttempt})$

RSCH_SetupFailureRate

Percentage of overall R-SCH setup failures

Calculation

$(100.0 * \text{RSCHLinkSetupBlock} / \text{RSCHLinkSetupAttempt})$

RSCH_SetupFailureRate_16X

Percentage of overall 16X R-SCH setup failures

Calculation

$(100.0 * \text{RSCHLinkSetupBlock_16X} / \text{RSCHLinkSetupAttempts_16X})$

RSCH_SetupFailureRate_2X

Percentage of overall 2X R-SCH setup failures

Calculation

$(100.0 * \text{RSCHLinkSetupBlock_2X} / \text{RSCHLinkSetupAttempts_2X})$

RSCH_SetupFailureRate_4X

Percentage of overall 4X R-SCH setup failures

Calculation

$(100.0 * \text{RSCHLinkSetupBlock_4X} / \text{RSCHLinkSetupAttempts_4X})$

RSCH_SetupFailureRate_8X

Percentage of overall 8X R-SCH setup failures

Calculation

$(100.0 * \text{RSCHLinkSetupBlock_8X} / \text{RSCHLinkSetupAttempts_8X})$

RSCHRadioAccessFailuresRate_16X

Percentage of 16X R-SCH radio access failures

Calculation

$(100.0 * \text{RSCHRadioLinkAccessFailure_16X} / \text{RSCHLinkSetupAttempts_16X})$

SCH_DropRate

Percentage of SCH Drops

Calculation

$(100.0 * \text{SCHDrop} / (\text{vsum}(\text{FSCHLinkSetupSuccess}, \text{RSCHLinkSetupSuccess}, 0) - \text{vsum}(\text{FSCHRadioLinkAccessFailure}, \text{RSCHRadioLinkAccessFailure}, 0)))$

SCH_DropRate_16X

Percentage of 16X SCH Drops

Calculation

$(100.0 * \text{SCHDrop_16X} / (\text{vsum}(\text{FSCHLinkSetupSuccess_16X}, \text{RSCHLinkSetupSuccess_16X}, 0) - \text{vsum}(\text{FSCHRadioLinkAccessFailure_16X}, \text{RSCHRadioLinkAccessFailure_16X}, 0)))$

SCH_DropRate_2X

Percentage of 2X SCH Drops

Calculation

$(100.0 * \text{SCHDrop_2X} / (\text{vsum}(\text{FSCHLinkSetupSuccess_2X}, \text{RSCHLinkSetupSuccess_2X}, 0) - \text{vsum}(\text{FSCHRadioLinkAccessFailure_2X}, \text{RSCHRadioLinkAccessFailure_2X}, 0)))$

SCH_DropRate_4X

Percentage of 4X SCH Drops

Calculation

```
(100.0 * SCHDrop_4X /  
(vsum(FSCHLinkSetupSuccess_4X,RSCHLinkSetupSuccess_4X,0) -  
vsum(FSCHRadioLinkAccessFailure_4X,RSCHRadioLinkAccessFailure_4X,0)))
```

SCH_DropRate_8X

Percentage of 8X SCH Drops

Calculation

```
(100.0 * SCHDrop_8X /  
(vsum(FSCHLinkSetupSuccess_8X,RSCHLinkSetupSuccess_8X,0) -  
vsum(FSCHRadioLinkAccessFailure_8X,RSCHRadioLinkAccessFailure_8X,0)))
```

TCEForwardLinkUtilUWavg_Aggregated

This PCALC returns the aggregated value of peg TCEForwardLinkUtilUWavg in entity Beam (introduced under NBSS14) or if unavailable, the pre-NBSS14 value it replaced in this entity, peg TCEForwardLinkUtilUWavg.

Calculation

```
nullvalue (sum (Beam, TCEForwardLinkUtilUWavg), TCEForwardLinkUtilUWavg)
```

TotalBlocks_fq

Total call setup failures per carrier due to resource shortage on originations and terminations and hard handoffs

Calculation

```
(vsum(MCTNOTCE, MCTNOWCD, MCTFWCAP, MCTRECAP,0))
```

TotalBlocks_fq3GD

Total 3G Data call setup failures per carrier due to resource shortage on originations and terminations and hard handoffs

Calculation

```
(vsum(MCTNOTCE3GD, MCTNOWCD3GD, MCTFWCAP3GD, MCTRECAP3GD,0))
```

TotalBlocks_fq3GV

Total 3G Voice call setup failures per carrier due to resource shortage on originations and terminations and hard handoffs

Calculation

`(vsum(MCTNOTCE3GV, MCTNOWCD3GV, MCTFWCAP3GV, MCTRECAP3GV, 0))`

UpperBoundFwdAvgTXPower

UpperBoundFwdAvgTXPower

Calculation

`((ForwardTxPowerUsageHist_0_9 * 9) + (ForwardTxPowerUsageHist_10_19 * 19) +
(ForwardTxPowerUsageHist_20_29 * 29) + (ForwardTxPowerUsageHist_30_39 * 39)
+ (ForwardTxPowerUsageHist_40_49 * 49) + (ForwardTxPowerUsageHist_50_59 *
59) + (ForwardTxPowerUsageHist_60_69 * 69) + (ForwardTxPowerUsageHist_70_79
* 79) + (ForwardTxPowerUsageHist_80_89 * 89) +
(ForwardTxPowerUsageHist_90_99 * 100)) /
(vsum(ForwardTxPowerUsageHist_0_9, ForwardTxPowerUsageHist_10_19, ForwardTxP
owerUsageHist_20_29, ForwardTxPowerUsageHist_30_39, ForwardTxPowerUsageHist_
40_49, ForwardTxPowerUsageHist_50_59, ForwardTxPowerUsageHist_60_69, ForwardT
xPowerUsageHist_70_79, ForwardTxPowerUsageHist_80_89, ForwardTxPowerUsageHis
t_90_99))`

UpperBoundWCUsage

Upper Bound of WC Distribution

Calculation

`((WalshCodeUsageDistribution0to30 * 30) + (WalshCodeUsageDistribution31to60
* 60) + (WalshCodeUsageDistribution61to70 * 70) +
(WalshCodeUsageDistribution71to80 * 80) + (WalshCodeUsageDistribution81to90
* 90) + (WalshCodeUsageDistribution91to100 * 100) +
(WalshCodeUsageDistribution101to110 * 110) +
(WalshCodeUsageDistribution111to120 * 120) +
(WalshCodeUsageDistribution121to128 * 128)) /
(vsum(WalshCodeUsageDistribution0to30, WalshCodeUsageDistribution31to60, Wal
shCodeUsageDistribution61to70, WalshCodeUsageDistribution71to80, WalshCodeUs
ageDistribution81to90, WalshCodeUsageDistribution91to100, WalshCodeUsageDist
ribution101to110, WalshCodeUsageDistribution111to120, WalshCodeUsageDistribu
tion121to128))`

UsageErlangs2G

2G Usage in Erlangs

Calculation

`vsum(PrimaryFrameCntFCH_RC1 , PrimaryFrameCntFCH_RC2 , 0)/180000.0`

VoiceUsageErlangs3G

3G Voice Only Usage in Erlangs

Calculation

```
vsum(PrimaryFrameCntFCH_RC3V , PrimaryFrameCntFCH_RC4V ,  
PrimaryFrameCntFCH_RC5V, 0)/180000.0
```

WC_UsageErlangs

Total Walsh Code Usage in Erlangs

Calculation

```
vsum(FrameCntFCH_RC1, FrameCntFCH_RC2, FrameCntFCH_RC3, FrameCntFCH_RC4,  
FrameCntFCH_RC5, 0)/180000.0
```

Sector_Carrier Peg Counts

The following is a list of peg counts for the Sector_Carrier entity.

AccChanOverloadControlLevel0

The period of time (in seconds) that the sector spent in overload control level 0

Data Source

NBSS BTS MO

Source Field

AccChanOverloadControlLevel (Seq# 158[0])

Source Section

Advanced Sector MO

AccChanOverloadControlLevel1

The period of time (in seconds) that the sector spent in overload control level 1

Data Source

NBSS BTS MO

Source Field

AccChanOverloadControlLevel (Seq# 158[1])

Source Section

Advanced Sector MO

AccChanOverloadControlLevel2

The period of time (in seconds) that the sector spent in overload control level 2

Data Source

NBSS BTS MO

Source Field

AccChanOverloadControlLevel (Seq# 158[2])

Source Section

Advanced Sector MO

AccChanOverloadControlLevel3

The period of time (in seconds) that the sector spent in overload control level 3

Data Source

NBSS BTS MO

Source Field

AccChanOverloadControlLevel (Seq# 158[3])

Source Section

Advanced Sector MO

AccChanOverloadControlLevel4

The period of time (in seconds) that the sector spent in overload control level 4

Data Source

NBSS BTS MO

Source Field

AccChanOverloadControlLevel (Seq# 158[4])

Source Section

Advanced Sector MO

AccChanOverloadControlLevel5

The period of time (in seconds) that the sector spent in overload control level 5

Data Source

NBSS BTS MO

Source Field

AccChanOverloadControlLevel (Seq# 158[5])

Source Section

Advanced Sector MO

AccChanOverloadControlLevel6

The period of time (in seconds) that the sector spent in overload control level 6

Data Source

NBSS BTS MO

Source Field

AccChanOverloadControlLevel (Seq# 158[6])

Source Section

Advanced Sector MO

AccChanOverloadControlLevel7

The period of time (in seconds) that the sector spent in overload control level 7

Data Source

NBSS BTS MO

Source Field

AccChanOverloadControlLevel (Seq# 158[7])

Source Section

Advanced Sector MO

AccChanOverloadControlLevel8

The period of time (in seconds) that the sector spent in overload control level 8

Data Source

NBSS BTS MO

Source Field

AccChanOverloadControlLevel (Seq# 158[8])

Source Section

Advanced Sector MO

AccRing1AttemptsCnt

Access attempts for Rural Cell access ring 1 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing1AttemptsCnt (Seq# 70[0])

Source Section

Advanced Sector MO

AccRing1FailureCnt

Access failures for Rural Cell access ring 1 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing1FailureCnt (Seq# 70[2])

Source Section

Advanced Sector MO

AccRing1SuccessCnt

Access successes for Rural Cell access ring 1 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing1SuccessCnt (Seq# 70[1])

Source Section

Advanced Sector MO

AccRing2AttemptsCnt

Access attempts for Rural Cell access ring 2 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing2AttemptsCnt (Seq# 70[3])

Source Section

Advanced Sector MO

AccRing2FailureCnt

Access failures for Rural Cell access ring 2 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing2FailureCnt (Seq# 70[5])

Source Section

Advanced Sector MO

AccRing2SuccessCnt

Access successes for Rural Cell access ring 2 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing2SuccessCnt (Seq# 70[4])

Source Section

Advanced Sector MO

AccRing3AttemptsCnt

Access attempts for Rural Cell access ring 3 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing3AttemptsCnt (Seq# 70[6])

Source Section

Advanced Sector MO

AccRing3FailureCnt

Access failures for Rural Cell access ring 3 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing3FailureCnt (Seq# 70[8])

Source Section

Advanced Sector MO

AccRing3SuccessCnt

Access successes for Rural Cell access ring 3 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing3SuccessCnt (Seq# 70[7])

Source Section

Advanced Sector MO

AccRing4AttemptsCnt

Access attempts for Rural Cell access ring 4 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing4AttemptsCnt (Seq# 70[9])

Source Section

Advanced Sector MO

AccRing4FailureCnt

Access failures for Rural Cell access ring 4 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing4FailureCnt (Seq# 70[11])

Source Section

Advanced Sector MO

AccRing4SuccessCnt

Access successes for Rural Cell access ring 4 in the sector

Data Source

NBSS BTS MO

Source Field

AccRing4SuccessCnt (Seq# 70[10])

Source Section

Advanced Sector MO

AvgTxPowerAboveMaxSPP

The average transmit power transmitted above the configured power limiting threshold for a carrier-sector. Measured in units of dB/16, the value has a range of 0 to 160. This OM is collected on MFRM3 only.

Data Source

NBSS BTS MO

Source Field

AvgTxPowerAboveMaxSPP (Seq# 94)

Source Section

Power Management MO

BAMSBSAT

Pegs when a call originated and terminated on a frequency regardless of where the resources for the call were setup.

Data Source

MTX OM

Source Field

BAMSBSAT

Source Section

BAMCPFRQ

BAMSBSFL

Tracks the access failures for the attempts that are tracked by BAMSBSFL.

Data Source

MTX OM

Source Field

BAMSBSFL

Source Section

BAMCPFRQ

BAMSCSAT

Pegs if a call originated or terminated on a frequency, and resources for the call were setup on the same originating frequency.

Data Source

MTX OM

Source Field

BAMSCSAT

Source Section

BAMCPFRQ

BAMSCSFL

Tracks the access failures for the attempts that are tracked by BAMSCSAT.

Data Source

MTX OM

Source Field

BAMSCSFL

Source Section

BAMCPFRQ

BlockedFchHandoffs2G0

2G handoffs blocked on the fundamental channel due to no physical resources

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G0 (Seq# 118[0])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G1

2G handoffs blocked on the fundamental channel due to no forward capacity

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G1 (Seq# 118[1])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G10

2G handoffs blocked on the fundamental channel due to BTS queue full

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G10 (Seq# 118[10])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G11

2G handoffs blocked on the fundamental channel due to exceed BCN capacity

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G10 (Seq# 118[11])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G12

2G handoffs blocked on the fundamental channel due to exceed backhaul capacity

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G10 (Seq# 118[12])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G13

2G handoffs blocked on the fundamental channel due to out of ACN addresses.

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G10 (Seq# 118[13])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G2

2G handoffs blocked on the fundamental channel due to no reverse capacity

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G2 (Seq# 118[2])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G3

2G handoffs blocked on the fundamental channel due to no walsh code

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G3 (Seq# 118[3])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G4

2G handoffs blocked on the fundamental channel because of no frame offset

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G4 (Seq# 118[4])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G5

2G handoffs blocked on the fundamental channel due to no extended Cell support

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G5 (Seq# 118[5])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G6

2G handoffs blocked on the fundamental channel due to CFDS radio config state

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G6 (Seq# 118[6])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G7

2G handoffs blocked on the fundamental channel due to high data rate screening

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G7 (Seq# 118[7])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G8

2G handoffs blocked on the fundamental channel due to max data rate exceeded

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G8 (Seq# 118[8])

Source Section

Advanced Sector MO

BlockedFchHandoffs2G9

2G handoffs blocked on the fundamental channel due to CPU capacity exceeded

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs2G9 (Seq# 118[9])

Source Section

Advanced Sector MO

BlockedFchHandoffs3GData0

3G data handoffs blocked on the fundamental channel due to no physical resources

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs3GData0 (Seq# 122[0])

Source Section

Advanced Sector MO

BlockedFchHandoffs3GData1

3G data handoffs blocked on the fundamental channel due to no forward capacity

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs3GData1 (Seq# 122[1])

Source Section

Advanced Sector MO

BlockedFchHandoffs3GData10

3G data handoffs blocked on the fundamental channel due to BTS queue full

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs3GData10 (Seq# 122[10])

Source Section

Advanced Sector MO

BlockedFchHandoffs3GData11

3G data handoffs blocked on the fundamental channel due to exceed BCN capacity

Data Source

NBSS BTS MO

Source Field

BlockedFchHandoffs3GData10 (Seq# 122[11])

Source Section

Advanced Sector MO

BlockedFchHandoffs3GData12

3G data handoffs blocked on the fundamental channel due to exceed backhaul capacity

Data Source

BRTDATT

Pegs when the CM receives the handoff candidates message indicating that a Border RTD hard handoff is being requested.

Data Source

MTX OM, SDM

Source Field

BRTDATT

Source Section

OMMTXHO3

BRTDBLK

Pegs when the CM receives an indication that a handoff setup failure has occurred due to a target cell resource allocation problem. This can happen when either a response is not received at all or when the response indicates resource shortages. Pegs for Border RTD hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

BRTDBLK

Source Section

OMMTXHO3

BRTDNSR

Pegs when neither the SAT Present message (from the target cell) nor the handoff response message (from the source cell) is received within 10 seconds of the handoff process starting. Indicates that a handoff never occurred and does not indicate a dropped call. Pegs for Border RTD hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

BRTDNSR

Source Section

OMMTXHO3

BRTDRJT

Pegs in rare conditions when the CM cannot allocate the handoff data block due to resource problems or any other reasons, or when CM is processing the handoff candidate message it finds that the VLR entry for the request MIN is not found, or when CM is in outpulsing, dialing, or collecting state when the handoff candidate message is received. Pegs for Border RTD hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

BRTDRJT

Source Section

OMMTXHO3

BRTDRLS

Pegs when the call is released from either one of the mobiles after a hard handoff has been initiated. Pegs for Border RTD hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

BRTDRLS

Source Section

OMMTXHO3

BRTDSFL

Pegs when the mobile does not arrive on the target traffic channel. Also pegs when CM call processing does not receive a SAT Present message from the CAU (intrasystem) or from the IS41 link (intersystem). Pegs for Border RTD hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

BRTDSFL

Source Section

OMMTXHO3

BRTDSUC

Pegs when the CM receives an indication that the mobile arrived on the target traffic channel.
Also pegs when the CM receives a SAT Present message from the CAU (intrasystem) or from a IS41 link (intersystem) for Border RTD hard handoff trigger.

CEFrameCntFSCH_RC5

Total number of forward frames on the FSCH divided by soft handoff links RC5. Increments proportionally, ie 2X frame pgs 2, 4X pgs 4 ,etc.

Data Source

NBSS BTS MO

Source Field

CEFrameCntFSCH (Seq# 131[2])

Source Section

Advanced Sector MO

CEFrameCntRSCH_RC3

RC3 Traffic Frame Count, divided by way-softer, summed across all RSCH

Data Source

NBSS BTS MO

Source Field

CEFrameCntRSCH (Seq# 205[0])

Source Section

Advanced Sector MO

CEFrameCntRSCH_RC4

RC4 Traffic Frame Count, divided by way-softer, summed across all RSCH

Data Source

NBSS BTS MO

Source Field

CEFrameCntRSCH (Seq# 205[1])

Source Section

Advanced Sector MO

ConfiguredFwdCallBlockingThreshold

Total amount of power available for new originations and terminations in bits squared

Data Source

NBSS BTS MO

Source Field

ConfiguredFwdCallBlockingThreshold (Seq# 104)

Source Section

Advanced Sector MO

ConfiguredFwdDataCallBlockingThreshold

Amount of power available for data originations terminations and handoffs into the BTS

Data Source

NBSS BTS MO

Source Field

ConfiguredFwdDataCallBlockingThreshold (Seq# 107)

Source Section

Advanced Sector MO

ConfiguredFwdHandoffBlockingThreshold

Total amount of power available for soft and hard handoff attempts into the BTS

Data Source

NBSS BTS MO

Source Field

ConfiguredFwdHandoffBlockingThreshold (Seq# 105)

Source Section

Advanced Sector MO

ConfiguredFwdVoiceCallBlockingThreshold

Amount of power available for voice originations terminations and handoffs into the BTS

Data Source

NBSS BTS MO

Source Field

ConfiguredFwdVoiceCallBlockingThreshold (Seq# 106)

Source Section

Advanced Sector MO

ConfiguredPowerLimitingThresholdSPP

The power level at which power limiting in the carrier-sector will be activated referenced on the module output (i.e. at the DPM antenna port). Measured in mW. This OM is collected on MFRM3 only.

Data Source

NBSS BTS MO

Source Field

ConfiguredPowerLimitingThresholdSPP (Seq# 103)

Source Section

Power Management MO

ConfiguredPwrLimitingThreshold

Power level in mW at which power limiting will be activated

Data Source

NBSS BTS MO

Source Field

ConfiguredPwrLimitingThreshold (Seq# 91)

Source Section

Power Management MO

DeliveredPowerPercentTimeAboveConfiguredPowerLimitingThreshold

The percentage of time the delivered transmit power in the carrier-sector was above ConfiguredPowerLimitingThreshold. Units are percent/10 (0-1000). MFRM3 only.

Data Source

NBSS BTS MO

Source Field

DeliveredPowerStats (Seq# 105[7])

Source Section

Power Management MO

DeliveredPowerStats_50thPercentile

For 50% of the time, the delivered transmit power in the carrier-sector was less than or equal to this power value. Units are percentage of ConfiguredPowerLimitingThreshold/10. MFRM3 only.

Data Source

NBSS BTS MO

Source Field

DeliveredPowerStats (Seq# 105[1])

Source Section

Power Management MO

DeliveredPowerStats_80thPercentile

For 80% of the time, the delivered transmit power in the carrier-sector was less than or equal to this power value. Units are percentage of ConfiguredPowerLimitingThreshold/10. MFRM3 only.

Data Source

NBSS BTS MO

Source Field

DeliveredPowerStats (Seq# 105[2])

Source Section

Power Management MO

DeliveredPowerStats_90thPercentile

For 90% of the time, the delivered transmit power in the carrier-sector was less than or equal to this power value. Units are percentage of ConfiguredPowerLimitingThreshold/10. MFRM3 only.

Data Source

NBSS BTS MO

Source Field

DeliveredPowerStats (Seq# 105[3])

Source Section

Power Management MO

DeliveredPowerStats_95thPercentile

For 95% of the time, the delivered transmit power in the carrier-sector was less than or equal to this power value. Units are percentage of ConfiguredPowerLimitingThreshold/10. MFRM3 only.

Data Source

NBSS BTS MO

Source Field

DeliveredPowerStats (Seq# 105[4])

Source Section

Power Management MO

DeliveredPowerStats_98thPercentile

For 98% of the time, the delivered transmit power in the carrier-sector was less than or equal to this power value. Units are percentage of ConfiguredPowerLimitingThreshold/10. MFRM3 only.

Data Source

NBSS BTS MO

Source Field

DeliveredPowerStats (Seq# 105[5])

Source Section

Power Management MO

DeliveredPowerStats_99thPercentile

For 99% of the time, the delivered transmit power in the carrier-sector was less than or equal to this power value. Units are percentage of ConfiguredPowerLimitingThreshold/10. MFRM3 only.

Data Source

NBSS BTS MO

Source Field

DeliveredPowerStats (Seq# 105[6])

Source Section

Power Management MO

DemandedPowerPercentTimeAboveConfiguredPowerLimitingThreshold

The percentage of time the demanded transmit power in the carrier-sector was above ConfiguredPowerLimitingThreshold. Units are percent/10 (0-1000). MFRM3 only.

Data Source

NBSS BTS MO

Source Field

DemandedPowerStats (Seq# 104[7])

Source Section

Power Management MO

**DemandedPowerPercentTimeAboveConfiguredPowerLimitingThresholdSP
P**

The percentage of time the demanded transmit power in the carrier-sector was above ConfiguredPowerLimitingThresholdSPP. Units are percent/10 (0-1000). MFRM3 only.

Data Source

NBSS BTS MO

Source Field

DemandedPowerStats (Seq# 104[8])

OMMTXHO3

FchHandoffNoBlocking2G0

Number of successful BTS resource allocations for a 2G non VPN based soft handoff

Data Source

NBSS BTS MO

Source Field

FchHandoffNoBlocking2G0 (Seq# 109)

Source Section

Advanced Sector MO

FchHandoffNoBlocking2G1

Number of successful BTS resource allocations for a 2G VPN based soft handoff

Data Source

NBSS BTS MO

Source Field

FchHandoffNoBlocking2G1 (Seq# 109)

Source Section

Advanced Sector MO

FchHandoffNonBlocking3GData

Number of successful BTS resource allocations for 3G data handoffs on the fundamental channel

Data Source

NBSS BTS MO

Source Field

FchHandoffNonBlocking3GData (Seq# 114)

Source Section

Advanced Sector MO

FchHandoffNonBlocking3GVoice

Number of successful BTS resource allocations for 3G voice handoffs on the fundamental channel

Data Source

NBSS BTS MO

Source Field

FchHandoffNonBlocking3GVoice (Seq# 113)

Source Section

Advanced Sector MO

FchOriginationNonBlocking2G

Number of successful BTS resource allocations for 2G calls

Data Source

NBSS BTS MO

Source Field

FchOriginationNonBlocking2G (Seq# 108)

Source Section

Advanced Sector MO

FchOriginationNonBlocking3GData

Number of successful BTS resource allocations for 3G data calls on the fundamental channel

Data Source

NBSS BTS MO

Source Field

FchOriginationNonBlocking3GData (Seq# 111)

Source Section

Advanced Sector MO

FchOriginationNonBlocking3GDowngrade2G

Number of successful BTS resource allocations for fundamental channel 2G calls which were downgraded from 3G call attempts

Data Source

NBSS BTS MO

Source Field

FchOriginationNonBlocking3GDowngrade2G (Seq# 112)

Source Section

Advanced Sector MO

FchOriginationNonBlocking3gDowngrade2gNoAcn

Pegged when FCH downgrade from 3G Voice to 2G Voice due to the lack of ACN addresses.

Data Source

NBSS BTS MO

Source Field

FchOriginationNonBlocking3gDowngrade2gNoAcn (Seq# 264)

Source Section

Advanced Sector MO

FchOriginationNonBlocking3gDowngrade2gNoBcn

Pegged when FCH downgrade from 3G Voice to 2G Voice due to the lack of BCN link capacity.

Data Source

NBSS BTS MO

Source Field

FchOriginationNonBlocking3gDowngrade2gNoBcn (Seq# 265)

Source Section

Advanced Sector MO

FchOriginationNonBlocking3GVoice

Number of successful BTS resource allocations for 3G voice calls on the fundamental channel.

Data Source

NBSS BTS MO

Source Field

FchOriginationNonBlocking3GVoice (Seq# 110)

FFCH_PhysicalFrames

Physical frames with RLP data that are sent on all forward FCH setup

Data Source

NBSS BSC OMs

Source Field

FFCH_PhysicalFrames (Seq# 1)

Source Section

RLP Data Throughput (Group ID 11)

FFCH_ReTxRLP_DataBytes

Retransmitted RLP user-databytes (bearer data only) sent on all forward FCH setup

Data Source

NBSS BSC OMs

Source Field

FFCH_ReTxRLP_DataBytes (Seq# 11)

Source Section

RLP Data Throughput (Group ID 11)

FFCH_RLP_DataBytes

Original (excluding retransmitted) RLP user-databytes (bearer data only) sent on all forward FCH setup

Data Source

NBSS BSC OMs

Source Field

FFCH_RLP_DataBytes (Seq# 6)

Source Section

RLP Data Throughput (Group ID 11)

FFCH_RLP_Frames

RLP frames (containing bearer data) sent on all forward FCH setup

Data Source

NBSS BSC OMs

Source Field

FFCH_RLP_Frames (Seq# 16)

Source Section

RLP Data Throughput (Group ID 11)

FFCH_RLP_OverheadFrames

This OM provides the number of RLP overhead signaling frames sent over FCH in the forward direction.

Data Source

NBSS BSC OMs

Source Field

FFCH_RLP_OverheadFrames (Seq# 41)

Source Section

RLP Data Throughput (Group ID 11)

FFCH_RLP_ZeroPayloadFrames

This OM provides the number of RLP zero payload frames sent over FCH in the forward direction.

Data Source

NBSS BSC OMs

Source Field

FFCH_RLP_ZeroPayloadFrames (Seq# 42)

Source Section

RLP Data Throughput (Group ID 11)

ForwardTxPowerUsageHist_0_9

Forward transmit power usage histogram

Data Source

NBSS BTS MO

Source Field

ForwardTxPowerUsageHistogram (Seq# 235[0])

Source Section

Advanced Sector MO

ForwardTxPowerUsageHist_10_19

Forward transmit power usage histogram

FrameCntRSCH_RC3

RC3 Traffic Frame Count, summed across all users on sector

Data Source

NBSS BTS MO

Source Field

FrameCntRSCH (Seq# 204[0])

Source Section

Advanced Sector MO

FrameCntRSCH_RC4

RC4 Traffic Frame Count, summed across all users on sector

Data Source

NBSS BTS MO

Source Field

FrameCntRSCH (Seq# 204[1])

Source Section

Advanced Sector MO

FrameErrorRateGroupPeggingAttempts

This OM is the total number of attempts to peg the reference sector FER OM group for a specific EBID.

Data Source

NBSS BSC OMs

Source Field

FrameErrorRateGroupPeggingAttempts (Seq# 3)

Source Section

Pegging Limitation Exceeded (Group ID 31)

FrameErrorRateGroupPeggingFailures

This OM is the total number of failures to peg the reference sector FER OM group for a specific EBID.

Data Source

NBSS BSC OMs

Source Field

FrameErrorRateGroupPeggingFailures (Seq# 4)

Source Section

Pegging Limitation Exceeded (Group ID 31)

FSCH_BTS_Release_16X

This OM is pegged when the Fwd leg at 16x is pre-empted due to contention at BTS.

Data Source

NBSS BSC OMs

Source Field

FSCH_BTS_Release_16X (Seq# 8)

Source Section

SCH Radio Link Release (Group ID 21)

FSCH_BTS_Release_2X

This OM is pegged when the Fwd leg at 2x is pre-empted due to contention at BTS.

Data Source

NBSS BSC OMs

Source Field

FSCH_BTS_Release_2X (Seq# 5)

Source Section

SCH Radio Link Release (Group ID 21)

FSCH_BTS_Release_4X

This OM is pegged when the Fwd leg at 4x is pre-empted due to contention at BTS.

Data Source

NBSS BSC OMs

Source Field

FSCH_BTS_Release_4X (Seq# 6)

Source Section

SCH Radio Link Release (Group ID 21)

FSCH_BTS_Release_8X

This OM is pegged when the Fwd leg at 8x is pre-empted due to contention at BTS.

Data Source

NBSS BSC OMs

Source Field

FSCH_BTS_Release_8X (Seq# 7)

Source Section

SCH Radio Link Release (Group ID 21)

FSCH_CFDS_RadioConfig

Pegged if the FSCHBlock reason indicates SCH burst functionality has not been enabled through CFDS

Data Source

NBSS BSC OMs

Source Field

FSCH_CFDS_RadioConfig (Seq# 11)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

FSCH_PhysicalFrames_16X

Physical frames with RLP data that are sent on all forward 16X SCH setup

Data Source

NBSS BSC OMs

Source Field

FSCH_PhysicalFrames_16X (Seq# 5)

Source Section

RLP Data Throughput (Group ID 11)

FSCH_PhysicalFrames_2X

Physical frames with RLP data that are sent on all forward 2X SCH setup

Data Source

NBSS BSC OMs

Source Field

FSCH_PhysicalFrames_2X (Seq# 2)

Source Section

RLP Data Throughput (Group ID 11)

FSCH_PhysicalFrames_4X

Physical frames with RLP data that are sent on all forward 4X SCH setup

Data Source

NBSS BSC OMs

Source Field

FSCH_PhysicalFrames_4X (Seq# 3)

Source Section

RLP Data Throughput (Group ID 11)

FSCH_PhysicalFrames_8X

Physical frames with RLP data that are sent on all forward 8X SCH setup

Data Source

SCH Primary Radio Link Setup (Group ID 10)

FSCHNoFrameOffset

Pegged if the FSCHBlock reason indicates there is no available frame offset

Data Source

NBSS BSC OMs

Source Field

FSCHNoFrameOffset (Seq# 9)

Source Section

SCH Radio Link Setup (Group ID 10)

FSCHNoFwdPower

Pegged if the FSCHBlock reason indicates a lack of available forward power

Data Source

NBSS BSC OMs

Source Field

FSCHNoFwdPower (Seq# 6)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

FSCHNoPhysRes

Pegged if the FSCHBlock reason indicates there are no available channel elements

Data Source

NBSS BSC OMs

Source Field

FSCHNoPhysRes (Seq# 8)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

FSCHNoWalshCode

Pegged if the FSCHBlock reason indicates a lack of available Walsh codes

Data Source

NBSS BSC OMs

Source Field

FSCHNoWalshCode (Seq# 7)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

FSCHRadiolinkAccessFailure

This OM is pegged in the event the resources for the FSCH are set up successfully but the mobile does not arrive on the FSCH

Data Source

NBSS BSC OMs

Source Field

FSCHRadioLinkAccessFailure (Seq# 5)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

FSCHRadioLinkAccessFailure_16X

Resources for the 16X FSCH are set up successfully but the mobile does not arrive on the FSCH

Data Source

NBSS BSC OMs

Source Field

FSCHRadioLinkAccessFailure_16X (Seq# 38)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

Data Source

NBSS BSC OMs

Source Field

FSCHRadioLinkAccessFailure_8X (Seq# 37)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

FSCHTimeout

Pegged if a response to the BTS resource request is never received

Data Source

NBSS BSC OMs

Source Field

FSCHTimeout (Seq# 10)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

FwdSCHBurstSetupPeakDelay

Maximum value that causes a peg in the DistributionofDataRateDelay

Data Source

NBSS BTS MO

Source Field

FwdSCHBurstSetupPeakDelay (Seq# 202)

Source Section

Advanced Sector MO

H3G2GATT

Pegs when the CM receives the handoff candidates message indicating that a 3G-to-2G hard handoff is being requested.

Data Source

MTX OM, SDM

Source Field

H3G2GATT

Source Section

OMMTXHO3

H3G2GBLK

Pegs when the CM receives an indication that a handoff setup failure has occurred due to a target cell resource allocation problem. This can happen when either a response is not received at all or when the response indicates resource shortages. Pegs for 3G-to-2G hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

H3G2GBLK

Source Section

OMMTXHO3

H3G2GNSR

Pegs when neither the SAT Present message (from the target cell) nor the handoff response message (from the source cell) is received within 10 seconds of the handoff process starting. Indicates that a handoff never occurred and does not indicate a dropped call. Pegs for 3G-to-2G hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

H3G2GNSR

Source Section

OMMTXHO3

H3G2GRJT

Pegs in rare conditions when the CM cannot allocate the handoff data block due to resource problems or any other reasons, or when CM is processing the handoff candidate message it finds that the VLR entry for the request MIN is not found, or when CM is in outpulsing, dialing, or collecting state when the handoff candidate message is received. Pegs for 3G-to-2G hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

H3G2GRJT

Source Section

OMMTXHO3

H3G2GRLS

Pegs when the call is released from either one of the mobiles after a hard handoff has been initiated. Pegs for 3G-to-2G hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

H3G2GRLS

Source Section

OMMTXHO3

H3G2GSFL

Pegs when the mobile does not arrive on the target traffic channel. Also pegs when CM call processing does not receive a SAT Present message from the CAU (intrasystem) or from the IS41 link (intersystem). Pegs for 3G-to-2G hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

H3G2GSFL

Source Section

OMMTXHO3

H3G2GSUC

Pegs when the CM receives an indication that the mobile arrived on the target traffic channel. Also pegs when the CM receives a SAT Present message from the CAU (intrasystem) or from a IS41 link (intersystem) for 3G-to-2G hard handoff trigger.

PBCONATT

Pegs when the CM receives the handoff candidates message indicating that a Pilot Beacon hard handoff is being requested.

Data Source

MTX OM, SDM

Source Field

PBCONATT

Source Section

OMMTXHO3

PBCONBLK

Pegs when the CM receives an indication that a handoff setup failure has occurred due to a target cell resource allocation problem. This can happen when either a response is not received at all or when the response indicates resource shortages. Pegs for Pilot Beacon hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

PBCONBLK

Source Section

OMMTXHO3

PBCONNSR

Pegs when neither the SAT Present message (from the target cell) nor the handoff response message (from the source cell) is received within 10 seconds of the handoff process starting. Indicates that a handoff never occurred and does not indicate a dropped call. Pegs for Pilot Beacon hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

PBCONNSR

Source Section

OMMTXHO3

PBCONRJT

Pegs in rare conditions when the CM cannot allocate the handoff data block due to resource problems or any other reasons, or when CM is processing the handoff candidate message it finds that the VLR entry for the request MIN is not found, or when CM is in outpulsing, dialing, or collecting state when the handoff candidate message is received. Pegs for Pilot Beacon hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

PBCONRJT

Source Section

OMMTXHO3

PBCONRLS

Pegs when the call is released from either one of the mobiles after a hard handoff has been initiated. Pegs for Pilot Beacon hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

PBCONRLS

Source Section

OMMTXHO3

PBCONSFL

Pegs when the mobile does not arrive on the target traffic channel. Also pegs when CM call processing does not receive a SAT Present message from the CAU (intrasystem) or from the IS41 link (intersystem). Pegs for Pilot Beacon hard handoff trigger only.

Data Source

MTX OM, SDM

Source Field

PBCONSFL

Source Section

OMMTXHO3

PBCONSUC

Pegs when the CM receives an indication that the mobile arrived on the target traffic channel. Also pegs when the CM receives a SAT Present message from the CAU (intrasystem) or from a IS41 link (intersystem) for Pilot Beacon hard handoff trigger.

OMMTXHO3

PeakWalshCodeUsage

Highest number of Walsh Codes in simultaneous use during the collection period

Data Source

NBSS BTS MO

Source Field

PeakWalshCodeUsage (Seq# 165[0])

Source Section

Advanced Sector MO

PercentPowerLimiting

The percentage of time the RFM is in a power limiting mode in a 30 minute interval

Data Source

NBSS BTS MO

Source Field

PercentPowerLimiting (Seq# 67)

Source Section

Power Management MO

PercentTimeAboveFwdCallBlockThrshld

The percentage of the measuring interval time based on 2-second samples that forward link power exceeds the forward call blocking threshold.

Data Source

NBSS BTS MO

Source Field

PercentTimeAboveFwdCallBlockThrshld (Seq# 100)

Source Section

Advanced Sector MO

PercentTimeAboveFwdDataCallBlockThrshld

The percentage of time during the interval time that data calls would be blocked

Data Source

NBSS BTS MO

Source Field

PercentTimeAboveFwdDataCallBlockThrshld (Seq# 103)

Source Section

Advanced Sector MO

PercentTimeAboveFwdHandoffBlockThrshld

The percentage of the measuring interval time based on 2-second samples that forward link power exceeds the forward handoff blocking threshold.

Data Source

NBSS BTS MO

Source Field

PercentTimeAboveFwdHandoffBlockThrshld (Seq# 101)

Source Section

Advanced Sector MO

PercentTimeAboveFwdVoiceCallBlockThrshld

The percentage of time during the interval time that voice and 2G circuit switched data calls would be blocked

Data Source

NBSS BTS MO

Source Field

PercentTimeAboveFwdVoiceCallBlockThrshld (Seq# 102)

Source Section

Advanced Sector MO

PrimaryFrameCntFSCH_RC3

Total number of forward frames on the FSCH divided by the produce of soft and softer handoff links RC3. Increments proportionally, ie 2X frame pegs 2, 4X pegs 4 ,etc.

Data Source

NBSS BTS MO

Source Field

PrimaryFrameCntFSCH (Seq# 133[0])

Source Section

Advanced Sector MO

PrimaryFrameCntFSCH_RC4

Total number of forward frames on the FSCH divided by the produce of soft and softer handoff links RC4. Increments proportionally, ie 2X frame pegs 2, 4X pegs 4 ,etc.

Data Source

NBSS BTS MO

Source Field

PrimaryFrameCntFSCH (Seq# 133[1])

Source Section

Advanced Sector MO

PrimaryFrameCntFSCH_RC5

Total number of forward frames on the FSCH divided by the produce of soft and softer handoff links RC5. Increments proportionally, ie 2X frame pegs 2, 4X pegs 4 ,etc.

Data Source

NBSS BTS MO

Source Field

PrimaryFrameCntFSCH (Seq# 133[2])

Source Section

Advanced Sector MO

PrimaryFrameCntRSCH_RC3

RC3 Traffic Frame Count, divided by (way-soft,way-softer), summed across all RSCH

Data Source

NBSS BTS MO

Source Field

PrimaryFrameCntRSCH (Seq# 206[0])

Source Section

Advanced Sector MO

PrimaryFrameCntRSCH_RC4

RC4 Traffic Frame Count, divided by (way-soft,way-softer), summed across all RSCH

Data Source

NBSS BTS MO

Source Field

RFCH_PhysicalFrames

Physical frames with RLP data that are sent on all reverse FCH setup

Data Source

NBSS BSC OMs

Source Field

RFCH_PhysicalFrames (Seq# 21)

Source Section

RLP Data Throughput (Group ID 11)

RFCH_ReTxRLP_DataBytes

Retransmitted RLP user-data-bytes (bearer data only) sent on all reverse FCH setup

Data Source

NBSS BSC OMs

Source Field

RFCH_ReTxRLP_DataBytes (Seq# 31)

Source Section

RLP Data Throughput (Group ID 11)

RFCH_RLP_DataBytes

Original (excluding retransmitted) RLP user-databytes (bearer data only) sent on all reverse FCH setup

Data Source

NBSS BSC OMs

Source Field

RFCH_RLP_DataBytes (Seq# 26)

Source Section

RLP Data Throughput (Group ID 11)

RFCH_RLP_Frames

RLP frames (containing bearer data) sent on all reverse FCH setup

Data Source

NBSS BSC OMs

Source Field

RFCH_RLP_Frames (Seq# 36)

Source Section

RLP Data Throughput (Group ID 11)

RFCH_RLP_OverheadFrames

This OM provides the number of RLP overhead signaling frames sent over FCH in the reverse direction.

Data Source

NBSS BSC OMs

Source Field

RFCH_RLP_OverheadFrames (Seq# 43)

Source Section

RLP Data Throughput (Group ID 11)

RFCH_RLP_ZeroPayloadFrames

This OM provides the number of RLP zero payload frames sent over FCH in the reverse direction.

Data Source

NBSS BSC OMs

Source Field

RFCH_RLP_ZeroPayloadFrames (Seq# 44)

Source Section

RLP Data Throughput (Group ID 11)

RFCHGatingDeactivations

This OM is pegged whenever an eighth rate FCH gating is deactivated on soft handoff for a call in progress due to differences in values in reverse power control delay values between 2 BTSs.

Data Source

NBSS BSC OMs

Source Field

RFCHGatingDeactivations (Seq# 5)

Source Section

RFCH Gating (Group ID 27)

RFCHGatingDeniedRequests

This OM is pegged whenever the BTS denies an eighth rate RFCH gating request from the BSC due to the forward power in use being above the ReverseFCHGatingCapacityThreshold set in the AdvancedSector MO of the BTS.

Data Source

NBSS BSC OMs

Source Field

RFCHGatingDeniedRequests (Seq# 3)

Source Section

RFCH Gating (Group ID 27)

RFCHGatingEnabledHandoffs

This OM is pegged when a soft handoff link is added for a call that has eighth rate FCH gating enabled.

Data Source

NBSS BSC OMs

Source Field

RFCHGatingEnabledHandoffs (Seq# 4)

Source Section

RFCH Gating (Group ID 27)

RFCHGatingGrantedRequests

This OM is pegged whenever a call is setup with 1/8 rate FCH gating enabled.

Data Source

NBSS BSC OMs

Source Field

RFCHGatingGrantedRequests (Seq# 2)

Source Section

RFCH Gating (Group ID 27)

RFCHGatingRequests

This OM is pegged for link setups for which gating is requested by the mobile in Origination or Page Response messages.

Data Source

NBSS BSC OMs

Source Field

RFCHGatingRequests (Seq# 1)

Source Section

RFCH Gating (Group ID 27)

RLP_DataThroughputGroupPeggingAttempts

This OM is the total number of attempts to peg the RLP Data Throughput OM group for a specific EBID.

Data Source

NBSS BSC OMs

Source Field

RLP_DataThroughputGroupPeggingAttempts (Seq# 9)

Source Section

Pegging Limitation Exceeded (Group ID 31)

RLP_DataThroughputGroupPeggingFailures

This OM is the total number of failures to peg the RLP Data Throughput OM group for a specific EBID.

Data Source

NBSS BSC OMs

Source Field

RLP_DataThroughputGroupPeggingFailures (Seq# 10)

Source Section

Pegging Limitation Exceeded (Group ID 31)

RSCH_BTS_Release_16X

This OM is pegged when the Rev leg at 16x is pre-empted due to contention at BTS.

Data Source

NBSS BSC OMs

Source Field

RSCH_BTS_Release_16X (Seq# 12)

Source Section

SCH Radio Link Release (Group ID 21)

RSCH_BTS_Release_2X

This OM is pegged when the Rev leg at 2x is pre-empted due to contention at BTS.

Data Source

NBSS BSC OMs

Source Field

RSCH_BTS_Release_2X (Seq# 9)

Source Section

SCH Radio Link Release (Group ID 21)

RSCH_BTS_Release_4X

This OM is pegged when the Rev leg at 4x is pre-empted due to contention at BTS.

Data Source

NBSS BSC OMs

Source Field

RSCH_BTS_Release_4X (Seq# 10)

Source Section

SCH Radio Link Release (Group ID 21)

RSCH_BTS_Release_8X

This OM is pegged when the Rev leg at 8x is pre-empted due to contention at BTS.

Data Source

NBSS BSC OMs

Source Field

RSCH_BTS_Release_8X (Seq# 11)

Source Section

SCH Radio Link Release (Group ID 21)

RSCH_CFDS_HighSpeed

Pegged if the FSCHBlock reason indicates high speed RSCH has not been enabled through CFDS

Data Source

NBSS BSC OMs

Source Field

RSCH_CFDS_HighSpeed (Seq# 18)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCH_CFDS_RadioConfig

Pegged if the FSCHBlock reason indicates SCH functionality has not been enabled through CFDS

Data Source

NBSS BSC OMs

Source Field

RSCH_CFDS_RadioConfig (Seq# 17)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCH_PhysicalFrames_16X

Physical frames with RLP data that are sent on all reverse 16X SCH setup

Data Source

NBSS BSC OMs

Source Field

RSCH_PhysicalFrames_16X (Seq# 25)

Source Section

RLP Data Throughput (Group ID 11)

RSCH_PhysicalFrames_2X

Physical frames with RLP data that are sent on all reverse 2X SCH setup

Data Source

NBSS BSC OMs

Source Field

RSCH_PhysicalFrames_2X (Seq# 22)

Source Section

RLP Data Throughput (Group ID 11)

RSCH_PhysicalFrames_4X

Physical frames with RLP data that are sent on all reverse 4X SCH setup

Data Source

Source Field

RschDowngradeDuetoPhysRes3 (Seq# 163[3])

Source Section

Advanced Sector MO

RSCHLinkDowngrade

Number of RSCH setup attempts that are not granted the requested data rate due to lack of resources but are granted a lower data rate

Data Source

NBSS BSC OMs

Source Field

RSCHLinkDowngrade (Seq# 14)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupAttempt

Number of reverse supplemental channel (RSCH) setup attempts

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupAttempt (Seq# 12)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupAttempts_16X

Reverse 16X supplemental channel (RSCH) setup attempts

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupAttempts_16X (Seq# 42)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupAttempts_2X

Reverse 2X supplemental channel (RSCH) setup attempts

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupAttempts_2X (Seq# 39)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupAttempts_4X

Reverse 4X supplemental channel (RSCH) setup attempts

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupAttempts_4X (Seq# 40)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupAttempts_8X

Reverse 8X supplemental channel (RSCH) setup attempts

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupAttempts_8X (Seq# 41)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupBlock

Number of RSCH setup attempts that are blocked for lack of resources

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupBlock (Seq# 13)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupBlock_16X

16X RSCH setup attempts that are blocked for lack of resources

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupBlock_16X (Seq# 46)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupBlock_2X

2X RSCH setup attempts that are blocked for lack of resources

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupBlock_2X (Seq# 43)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupBlock_4X

4X RSCH setup attempts that are blocked for lack of resources

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupBlock_4X (Seq# 44)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupBlock_8X

8X RSCH setup attempts that are blocked for lack of resources

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupBlock_8X (Seq# 45)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupBlockSW_Error

This OM is pegged when the RSCH blocking reason indicates that the setup request failed due to non-resource and non-timeout related software conditions/erros for primary RSCH links.

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupBlockSW_Error (Seq# 72)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupSuccess

Number of RSCH setup successes

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupSuccess (Seq# 15)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupSuccess_16X

16X RSCH setup successes

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupSuccess_16X (Seq# 50)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupSuccess_2X

2X RSCH setup successes

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupSuccess_2X (Seq# 47)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupSuccess_4X

4X RSCH setup successes

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupSuccess_4X (Seq# 48)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHLinkSetupSuccess_8X

8X RSCH setup successes

Data Source

NBSS BSC OMs

Source Field

RSCHLinkSetupSuccess_8X (Seq# 49)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHNoFrameOffset

Pegged if the RSCHBlock reason indicates there is no available frame offset

Data Source

NBSS BSC OMs

Source Field

RSCHNoFrameOffset (Seq# 20)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHNoPhysRes

Pegged if the RSCHBlock reason indicates there are no available channel elements

Data Source

NBSS BSC OMs

Source Field

RSCHNoPhysRes (Seq# 19)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHRadioLinkAccessFailure

This OM is pegged in the event the resources for the RSCH are setup successfully but the mobile does not arrive on the RSCH

Data Source

NBSS BSC OMs

Source Field

RSCHRadioLinkAccessFailure (Seq# 16)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHRadioLinkAccessFailure_16X

Resources for the 16X RSCH are set up successfully but the mobile does not arrive on the RSCH

Data Source

NBSS BSC OMs

Source Field

RSCHRadioLinkAccessFailure_16X (Seq# 54)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHRadioLinkAccessFailure_2X

Resources for the 2X RSCH are set up successfully but the mobile does not arrive on the RSCH

Data Source

NBSS BSC OMs

Source Field

RSCHRadioLinkAccessFailure_2X (Seq# 51)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHRadioLinkAccessFailure_4X

Resources for the 4X RSCH are set up successfully but the mobile does not arrive on the RSCH

Data Source

NBSS BSC OMs

Source Field

RSCHRadioLinkAccessFailure_4X (Seq# 52)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHRadioLinkAccessFailure_8X

Resources for the 8X RSCH are set up successfully but the mobile does not arrive on the RSCH

Data Source

NBSS BSC OMs

Source Field

RSCHRadioLinkAccessFailure_8X (Seq# 53)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RSCHTimeout

Pegged if a response to the BTS resource request is never received

Data Source

NBSS BSC OMs

Source Field

RSCHTimeout (Seq# 21)

Source Section

SCH Primary Radio Link Setup (Group ID 10)

RTD_AboveRTDmin

This OM is pegged when the measured RTD in the received RTD report becomes greater than the datafilled value of RTDmin.

Data Source

NBSS BSC OMs

Source Field

RTD_AboveRTDmin (Seq# 1)

Source Section

HHO Trigger (Group ID 30)

RTD_DroppedBelowRTDmin

This OM is pegged when the measured RTD in the received RTD report becomes less than the datafilled value of RTDmin.

Data Source

NBSS BSC OMs

Source Field

RTD_DroppedBelowRTDmin (Seq# 2)

Source Section

HHO Trigger (Group ID 30)

RTDdelaytimerHHO_Attempts

Pegged when the call came to this target sector after a successful HHO and the RTD report shows that RTD HHO trigger conditions are met and RTD delay timer has been started.

Data Source

NBSS BSC OMs

Source Field

RTDdelaytimerHHO_Attempts (Seq# 3)

Source Section

HHO Trigger (Group ID 30)

RTDdelaytimerHHO_Blocks

Pegged when the call came to this target sector after a successful HHO and the RTD report shows that RTD HHO trigger conditions are met and RTD delay timer has not been expired.

Data Source

NBSS BSC OMs

Source Field

RTDdelaytimerHHO_Blocks (Seq# 5)

Source Section

HHO Trigger (Group ID 30)

RTDdelaytimerHHO_Triggers

Pegged when the call came to this target sector after a successful HHO and the RTD report shows that RTD HHO trigger conditions are met and RTD delay timer has been expired.

Data Source

NBSS BSC OMs

Source Field

RTDdelaytimerHHO_Triggers (Seq# 4)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_FSCHRadioLinkAccessFailure

This OM is pegged in the event the resources for the FSCH are set up successfully but the mobile does not arrive on the FSCH. It is pegged against each handoff link in the SCH active set for all data rates combined.

Data Source

NBSS BSC OMs

Source Field

SHO_FSCHRadioLinkAccessFailure (Seq# 4)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_FSCHRadioLinkAccessFailure_16X

This OM is pegged in the event the resources for the 16X data rate FSCH are set up successfully but the mobile does not arrive on the FSCH. It is pegged against each handoff link in the SCH active set.

Data Source

NBSS BSC OMs

Source Field

SHO_FSCHRadioLinkAccessFailure_16X (Seq# 33)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_FSCHRadioLinkAccessFailure_2X

This OM is pegged in the event the resources for the 2X data rate FSCH are set up successfully but the mobile does not arrive on the FSCH. It is pegged against each handoff link in the SCH active set.

Data Source

NBSS BSC OMs

Source Field

SHO_FSCHRadioLinkAccessFailure_2X (Seq# 30)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_FSCHRadioLinkAccessFailure_4X

This OM is pegged in the event the resources for the 4X data rate FSCH are set up successfully but the mobile does not arrive on the FSCH. It is pegged against each handoff link in the SCH active set.

Data Source

NBSS BSC OMs

Source Field

SHO_FSCHRadioLinkAccessFailure_4X (Seq# 31)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_FSCHRadioLinkAccessFailure_8X

This OM is pegged in the event the resources for the 8X data rate FSCH are set up successfully but the mobile does not arrive on the FSCH. It is pegged against each handoff link in the SCH active set.

Data Source

NBSS BSC OMs

Source Field

SHO_FSCHRadioLinkAccessFailure_8X (Seq# 32)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_FSCHTimeout

This OM is pegged if a response to the BTS Resource Request is never received due to failed communications with the BTS.

Data Source

NBSS BSC OMs

Source Field

SHO_FSCHTimeout (Seq# 9)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCH_CFDS_HighSpeed

This OM is pegged if the RSCHBlock reason indicates high speed RSCH has not been enabled through CFDS.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCH_CFDS_HighSpeed (Seq# 14)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupAttempt

This OM provides number of RSCH setup attempts for all data rates combined.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupAttempt (Seq# 10)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupAttempts_16X

This OM provides number of RSCH setup attempts for the 16X data rate.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupAttempts_16X (Seq# 37)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupAttempts_2X

This OM provides number of RSCH setup attempts for the 2X data rate.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupAttempts_2X (Seq# 34)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupAttempts_4X

This OM provides number of RSCH setup attempts for the 4X data rate.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupAttempts_4X (Seq# 35)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupAttempts_8X

This OM provides number of RSCH setup attempts for the 8X data rate.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupAttempts_8X (Seq# 36)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupBlock

This OM provides number of RSCH setup attempts that are blocked due to either lack of resources or failed communications between the SBS and BTS, for all data rates combined.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupBlock (Seq# 11)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupBlock_16X

This OM provides number of RSCH setup attempts at the 16X data rate that are blocked due to lack of resources or failed communications between the SBS and BTS.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupBlock_16X (Seq# 41)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupBlock_2X

This OM provides number of RSCH setup attempts at the 2X data rate that are blocked due to lack of resources or failed communications between the SBS and BTS.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupBlock_2X (Seq# 38)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupBlock_4X

This OM provides number of RSCH setup attempts at the 4X data rate that are blocked due to lack of resources or failed communications between the SBS and BTS.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupBlock_4X (Seq# 39)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupBlock_8X

This OM provides number of RSCH setup attempts at the 8X data rate that are blocked due to lack of resources or failed communications between the SBS and BTS.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupBlock_8X (Seq# 40)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupBlockSW_Error

This OM is pegged when the RSCH blocking reason indicates that the setup request failed due to non-resource and non-timeout related software conditions/errors for RSCH handoff links.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupBlockSW_Error (Seq# 54)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupSuccess

This OM provides number of RSCH setup successes for all data rates combined.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupSuccess (Seq# 12)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupSuccess_16X

This OM provides number of RSCH setup successes for the 16X data rate.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupSuccess_16X (Seq# 45)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupSuccess_2X

This OM provides number of RSCH setup successes for the 2X data rate.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupSuccess_2X (Seq# 42)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupSuccess_4X

This OM provides number of RSCH setup successes for the 4X data rate.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupSuccess_4X (Seq# 43)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHLinkSetupSuccess_8X

This OM provides number of RSCH setup successes for the 8X data rate.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHLinkSetupSuccess_8X (Seq# 44)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHNoFrameOffset

This OM is pegged if the RSCHBlock reason indicates there is no available frame offset.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHNoFrameOffset (Seq# 16)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHNoPhysRes

This OM is pegged if the RSCHBlock reason indicates there are no available channel elements.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHNoPhysRes (Seq# 15)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHRadioLinkAccessFailure

This OM is pegged in the event the resources for the RSCH are set up successfully but the mobile does not arrive on the RSCH. It is pegged against each handoff link in the SCH active set for all data rates combined.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHRadioLinkAccessFailure (Seq# 13)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHRadioLinkAccessFailure_16X

This OM is pegged in the event the resources for the 16X data rate RSCH are set up successfully but the mobile does not arrive on the RSCH. It is pegged against each handoff link in the SCH active set.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHRadioLinkAccessFailure_16X (Seq# 49)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHRadioLinkAccessFailure_2X

This OM is pegged in the event the resources for the 2X data rate RSCH are set up successfully but the mobile does not arrive on the RSCH. It is pegged against each handoff link in the SCH active set.

Data Source

NBSS BSC OMs

Source Field

SHO_RSCHRadioLinkAccessFailure_2X (Seq# 46)

Source Section

SCH Handoff Radio Link Setup (Group ID 70)

SHO_RSCHRadioLinkAccessFailure_4X

This OM is pegged in the event the resources for the 4X data rate RSCH are set up successfully but the mobile does not arrive on the RSCH. It is pegged against each handoff link in the SCH active set.

Data Source

NBSS BSC OMs

Source Field

ServiceType Peg Counts

The following is a list of peg counts for the ServiceType entity.

AlternateBSC_AllocationAttempts

NRM sends an alternate resource allocation request to the SBSRM for the required service option, after a failed resource allocation attempt on the initially selected CPDS/ CSVS platform.

Data Source

NBSS BSC OMs

Source Field

AlternateBSC_AllocationAttempts (Seq# 12)

Source Section

Service Resource Setup (Group ID 36)

AlternateBSC_AllocationFailures

NRM fails to allocate the SBS resource, for an alternate resource allocation request (to the SBS platform) that was made after a failed resource allocation attempt on the initially selected CPDS/CSVS platform.

Data Source

NBSS BSC OMs

Source Field

AlternateBSC_AllocationFailures (Seq# 14)

Source Section

Service Resource Setup (Group ID 36)

AlternateBSC_AllocationSuccesses

NRM receives successful resource allocation response from SBSRM for an alternate resource allocation request that was made after a failed resource allocation attempt on the initially selected CPDS/CSVS platform.

Data Source

NBSS BSC OMs

Source Field

AlternateBSC_AllocationSuccesses (Seq# 13)

Source Section

Service Resource Setup (Group ID 36)

AlternateEBSC_AllocationAttempts

NRM sends an alternate resource allocation request to the CSRM (in the case of voice Service group) or SDRM (in the case of a Service group of packetData or other) for the required service option, after a failed resource allocation attempt on the initially selected SBS platform.

Data Source

NBSS BSC OMs

Source Field

AlternateEBSC_AllocationAttempts (Seq# 5)

Source Section

Service Resource Setup (Group ID 36)

AlternateEBSC_AllocationSuccesses

NRM receives successful resource allocation response(s) from both the CSRM and SDRM (voice Service group) or SDRM only (packetData or other) for an alternate resource allocation request that was made after a failed resource allocation attempt on the initially selected SBS platform.

Data Source

NBSS BSC OMs

Source Field

AlternateEBSC_AllocationSuccesses (Seq# 6)

Source Section

Service Resource Setup (Group ID 36)

AlternateEBSC_MG_AllocationFailures

NRM fails to allocate the Media Gateway resource (i.e., DSP, CIC) in the case of voice Service group only, for an alternate resource allocation request (to the CPDS/CSVs platform) that was made after a failed resource allocation attempt on the initially selected SBS platform.

Data Source

NBSS BSC OMs

Source Field

AlternateEBSC_MG_AllocationFailures (Seq# 7)

Source Section

Service Resource Setup (Group ID 36)

AlternateEBSC_SDU_AllocationFailures

NRM fails to allocate the SDU (Selection and Distribution Unit) resource, for an alternate resource allocation request (to the CPDS/CSVs platform) that was made after a failed resource allocation attempt on the initially selected SBS platform.

Data Source

NBSS BSC OMs

Source Field

AlternateEBSC_SDU_AllocationFailures (Seq# 8)

Source Section

Service Resource Setup (Group ID 36)

ResourceCheckAttempts

NRM checks resource availability in the entire system for a service.

Data Source

NBSS BSC OMs

Source Field

ResourceCheckAttempts (Seq# 1)

Source Section

Resource Availability Check (Group ID 47)

ResourceCheckAvailable

NRM determines that the resources are available in the system for a service.

Data Source

NBSS BSC OMs

Source Field

ResourceCheckAvailable (Seq# 3)

Source Section

Resource Availability Check (Group ID 47)

ResourceCheckUnavailable

NRM determines that there are no resources available in the entire system for a service.

Data Source

NBSS BSC OMs

Source Field

ResourceCheckUnavailable (Seq# 2)

Source Section

Resource Availability Check (Group ID 47)

SelectedBSC_AllocationAttempts

NRM has selected the SBS platform for allocating resources and sends a resource allocation request to the SBSRM for the required service option.

Data Source

NBSS BSC OMs

Source Field

SelectedBSC_AllocationAttempts (Seq# 9)

Source Section

Service Resource Setup (Group ID 36)

SelectedBSC_AllocationFailures

NRM fails to allocate the SBS resource, when the SBS platform was initially selected for resource allocation.

Data Source

NBSS BSC OMs

Source Field

SelectedBSC_AllocationFailures (Seq# 11)

Source Section

Service Resource Setup (Group ID 36)

SelectedBSC_AllocationSuccesses

NRM receives successful resource allocation response from SBSRM, where the SBS platform was initially selected for allocating resources.

Data Source

NBSS BSC OMs

Source Field

SelectedBSC_AllocationSuccesses (Seq# 10)

Source Section

Service Resource Setup (Group ID 36)

SelectedEBSC_AllocationAttempts

NRM has selected the CPDS/CSVS platform for allocating resources and sends a resource allocation request to the CSRM or SDRM.

Data Source

NBSS BSC OMs

Source Field

SelectedEBSC_AllocationAttempts (Seq# 1)

Source Section

Service Resource Setup (Group ID 36)

SelectedEBSC_AllocationSuccesses

NRM receives successful resource allocation response(s) from both the CSRM and SDRM (in the case of voice Service group) or SDRM only (in the case of a Service group of packetData or other), where the CPDS/CSVS platform was initially selected for allocating resources.

Data Source

Calculation

SS7Link Peg Counts

The following is a list of peg counts for the SS7Link entity.

C7ABATE1

When ST transmission buffer congestion falls below the first abatement threshold

Data Source

MTX OM, SDM

Source Field

C7ABATE1

Source Section

C7LINK2

C7ABATE2

When ST transmission buffer congestion falls below the second abatement threshold

Data Source

MTX OM, SDM

Source Field

C7ABATE2

Source Section

C7LINK2

C7ABATE3

When ST transmission buffer congestion falls below the third abatement threshold

Data Source

MTX OM, SDM

Source Field

C7ABATE3

Source Section

C7LINK2

C7ABATEV

When ST transmission buffer congestion falls below the overflow threshold

Data Source

MTX OM, SDM

Source Field

C7ABATEV

Source Section

C7LINK2

C7ABNRFB

Counts CCS7 link sync failures FIB or BSN that the ST receives cause the failures

Data Source

MTX OM, SDM

Source Field

C7ABNRFB

Source Section

C7LINK1

C7AISSP

AIS Seconds-Path: AISS-P

Data Source

MTX OM, SDM

Source Field

C7AISSP

Source Section

C7HSLCAR

C7ALIGNF

Counts CCS7 link sync failures when the system checks links for synchronization

Data Source

MTX OM, SDM

Source Field

C7ALIGNF

Source Section

C7LINK1

C7AUTOCO

Counts CCS7 automatic changeovers (traffic reroutes) away from the link

Data Source

MTX OM, SDM

Source Field

C7AUTOCO

Source Section

C7LINK1

C7BFOVFL

CCS7 buffer overflow

Data Source

MTX OM, SDM

Source Field

C7BFOVFL

Source Section

C7LINK3

C7BSYOFF

Counts the busy signal transmission stops at the ST

Data Source

MTX OM, SDM

Source Field

C7BSYOFF

Source Section

C7LINK1

C7BSYON

Counts the busy signal transmission starts at the ST

Data Source

MTX OM, SDM

Source Field

C7BSYON

Source Section

C7LINK1

C7BYTRT

Counts bytes that the ST transmits again

Data Source

MTX OM, SDM

Source Field

$C7BYTRT + 65536 * C7BYTRT2$

Source Section

C7LINK2

C7BYTRX

Counts bytes that the ST receives

Data Source

MTX OM, SDM

Source Field

$C7BYTRX + 65536 * C7BYTRX2$

Source Section

C7LINK2

C7BYTTX

Counts bytes that the ST transmits

Data Source

MTX OM, SDM

Source Field

$C7BYTTX + 65536 * C7BYTTX2$

Source Section

C7LINK2

C7CBK

Counts changebacks on the link

Data Source

MTX OM, SDM

Source Field

C7CBK

Source Section

C7LINK1

C7CDFEPO

Cumulative Duration of Far-end Processor Outage

Data Source

MTX OM, SDM

Source Field

C7CDFEPO

Source Section

C7HSLAL2

C7CDLOC

Cumulative Duration of Lack of Credit

Data Source

MTX OM, SDM

Source Field

C7CDLOC

Source Section

C7HSLAL2

C7CDLPO

Cumulative Duration of Local Processor Outage

Data Source

MTX OM, SDM

Source Field

C7CDLPO

Source Section

C7HSLAL2

C7CLB

Number of times that controlled link blocking was applied to the link During an OM period

Data Source

MTX OM, SDM

Source Field

C7CLB

Source Section

C7LINK1

C7CLBU

The duration that controlled link blocking is applied to the link during an OM period

Data Source

MTX OM, SDM

Source Field

C7CLBU

Source Section

C7LINK3

C7COV

Counts changeovers (traffic reroutes) away from the link

Data Source

MTX OM, SDM

Source Field

C7COV

Source Section

C7LINK1

C7CSPF

Far-end Controlled Slips-Path: CS-PFE

Data Source

MTX OM, SDM

Source Field

C7CSPF

Source Section

C7HSLCAR

C7CVL

Code Violations-Line: CV-L

Data Source

MTX OM, SDM

Source Field

C7CVL

Source Section

C7HSLCAR

C7CVP

Code Violations-Path: CV-P

Data Source

MTX OM, SDM

Source Field

C7CVP

Source Section

C7HSLCAR

C7CVPF

Far-end Code Violations-Path: CV-PFE

Data Source

MTX OM, SDM

Source Field

C7CVPF

Source Section

C7HSLCAR

C7DISHEC

Number of Cells Discarded Due to Header Error Control (HEC) Violations

Data Source

MTX OM, SDM

Source Field

C7DISHEC

Source Section

C7HSLATM

C7DISPE

Number of Cells Discarded Due to Protocol (ATM-layer Header) Errors

Data Source

MTX OM, SDM

Source Field

C7DISPE

Source Section

C7HSLATM

C7ERRSEC

Reports the time the system detects a minimum of one in-service error on a signaling link

Data Source

MTX OM, SDM

Source Field

C7ERRSEC

Source Section

C7LINK1

C7ESL

Errored Seconds-Line: ES-L

Data Source

MTX OM, SDM

Source Field

C7ESL

Source Section

C7HSLCAR

C7ESLF

Far-end Errored Seconds-Line: ES-LFE

Data Source

MTX OM, SDM

Source Field

C7ESLF

Source Section

C7HSLCAR

C7ESP

Errored Seconds-Path: ES-P

Data Source

MTX OM, SDM

Source Field

C7ESP

Source Section

C7HSLCAR

C7ESPF

Far-end Errored Seconds-Path: ES-PFE

Data Source

MTX OM, SDM

Source Field

C7ESPF

Source Section

C7HSLCAR

C7EXCONG

Counts CCS7 link sync that fail because of prolonged congestion on the link

Data Source

MTX OM, SDM

Source Field

C7EXCONG

Source Section

C7LINK1

C7EXDLAY

Counts CCS7 link synchronizations that fail

Data Source

MTX OM, SDM

Source Field

C7EXDLAY

Source Section

C7LINK1

C7EXERR

Counts CCS7 link sync that fail because the ST detects excessive signal unit errors

Data Source

MTX OM, SDM

Source Field

C7EXERR

Source Section

C7LINK1

C7FCP

Failure Count-Path: FC-P

Data Source

MTX OM, SDM

Source Field

C7FCP

Source Section

C7HSLCAR

C7FCPF

Far-end Failure Count-Path: FC-PFE

Data Source

MTX OM, SDM

Source Field

C7FCPF

Source Section

C7HSLCAR

C7HTSCSC

Hourly Marginal Performance Thresholds Exceeded for SSCOP Connection Sum-of-errors Counter.

Data Source

MTX OM, SDM

Source Field

C7HTSCSC

Source Section

C7HSLAL2

C7HTSEPC

Hourly Marginal Performance Thresholds Exceeded for SSCOP Errored PDUs Sum-of-errors Counter

Data Source

MTX OM, SDM

Source Field

C7HTSEPC

Source Section

C7HSLAL2

C7HTSPRR

Hourly Marginal Performance Thresholds Exceeded for SSCOP SD PDUs Transmitted Requiring Retransmission

Data Source

MTX OM, SDM

Source Field

C7HTSPRR

Source Section

C7HSLAL2

C7HWILLP

CCS7 high water mark for Inter link to link protocol (ILLP) interface

Data Source

MTX OM, SDM

Source Field

C7HWILLP

Source Section

C7LINK3

C7HWMTS

CCS7 high water mark for message transport system (MTS) interface

Data Source

MTX OM, SDM

Source Field

C7HWMTS

Source Section

C7LINK3

C7HWST

CCS7 high water mark for signaling terminal (ST) interface

Data Source

MTX OM, SDM

Source Field

C7HWST

Source Section

C7LINK3

C7HWTOT

CCS7 high water mark total interfaces

Data Source

MTX OM, SDM

Source Field

C7HWTOT

Source Section

C7LINK3

C7ISPDUR

Invalid SSCOP PDUs Received

Data Source

MTX OM, SDM

Source Field

C7ISPDUR

Source Section

C7HSLAL2

C7LINH

Increases when local inhibit is applied to the link

Data Source

MTX OM, SDM

Source Field

C7LINH

Source Section

C7LINK1

C7LINKTU

Documentation for register C7LINKTU in OM group C7LINK1 is not available.

Data Source

MTX OM, SDM

Source Field

C7LINKTU

Source Section

C7LINK1

C7LKFAIL

Counts CCS7 link synchronization failures This register counts in-service link failures

Data Source

MTX OM, SDM

Source Field

C7LKFAIL

Source Section

C7LINK1

C7LKSYNU

Records if a CCS7 link is synchronized and able to carry signaling units to the far-end ST

Data Source

MTX OM, SDM

Source Field

C7LKSYNU

Source Section

C7LINK1

C7LKUNAU

Records if a link is not available for traffic

Data Source

MTX OM, SDM

Source Field

C7LKUNAU

Source Section

C7LINK1

C7LOCE

Lack of Credit Events

Data Source

MTX OM, SDM

Source Field

C7LOCE

Source Section

C7HSLAL2

C7LOSSL

Loss of Signal Seconds-Line: LOSS-L

Data Source

MTX OM, SDM

Source Field

C7LOSSL

Source Section

C7HSLCAR

C7LPO

Counts local processor outages (LPO) that the ST detects

Data Source

MTX OM, SDM

Source Field

C7LPO

Source Section

C7LINK1

C7LPOU

CCS7 local processor outages

Data Source

MTX OM, SDM

Source Field

C7LPOU

Source Section

C7LINK3

C7LUNINH

Increases when local inhibiting status is removed from the link

Data Source

MTX OM, SDM

Source Field

C7LUNINH

Source Section

C7LINK1

C7LV1CGU

CCS7 level 1 link congestion

Data Source

MTX OM, SDM

Source Field

C7LV1CGU

Source Section

C7LINK3

C7LV2CGU

CCS7 level 2 link congestion

Data Source

MTX OM, SDM

Source Field

C7LV2CGU

Source Section

C7LINK3

C7LV3CGU

CCS7 level 3 link congestion

Data Source

MTX OM, SDM

Source Field

C7LV3CGU

Source Section

C7LINK3

C7MANB

Increases when the link is manual busy

Data Source

MTX OM, SDM

Source Field

C7MANB

Source Section

C7LINK1

C7MSBRET

CCS7 message switch buffer retrieval

Data Source

MTX OM, SDM

Source Field

C7MSBRET

Source Section

C7LINK2

C7MSGLOS

Counts lost messages on paths from incoming LIU7 link to outgoing LIU7 links in the STP

Data Source

MTX OM, SDM

Source Field

C7MSGLOS

Source Section

C7LINK2

C7MSGMSQ

Counts messages not sequenced correctly on paths from all incoming LIU7 links

Data Source

MTX OM, SDM

Source Field

C7MSGMSQ

Source Section

C7LINK2

C7MSOR

CCS7 MSU octets originated

Data Source

MTX OM, SDM

Source Field

C7MSOR + 65536 * C7MSOR2

Source Section

C7LINK3

C7MSTE

CCS7 MSU octets terminated

Data Source

MTX OM, SDM

Source Field

C7MSTE + 65536 * C7MSTE2

Source Section

C7LINK3

C7MSTS

CCS7 MSU octets through switched

Data Source

MTX OM, SDM

Source Field

C7MSTS + 65536 * C7MSTS2

Source Section

C7LINK3

C7MSUBOV

CCS7 MSU buffer overflow

Data Source

MTX OM, SDM

Source Field

C7MSUBOV

Source Section

C7LINK3

C7MSUDC1

CCS7 message signal units discarded because of congestion level 1

Data Source

MTX OM, SDM

Source Field

C7MSUDC1

Source Section

C7LINK2

C7MSUDC2

CCS7 message signal units discarded because of congestion level 2

Data Source

MTX OM, SDM

Source Field

C7MSUDC2

Source Section

C7LINK2

C7MSUDC3

CCS7 message signal units discarded because of congestion level 3

Data Source

MTX OM, SDM

Source Field

C7MSUDC3

Source Section

C7LINK2

C7MSUDSC

Counts message signal units that the ST discards

Data Source

MTX OM, SDM

Source Field

C7MSUDSC

Source Section

C7LINK2

C7MSUOR

Counts message signal units that originate at the ST

Data Source

MTX OM, SDM

Source Field

$C7MSUOR + 65536 * C7MSUOR2$

Source Section

C7LINK2

C7MSURX

Counts message signal units the ST received

Data Source

MTX OM, SDM

Source Field

$C7MSURX + 65536 * C7MSURX2$

Source Section

C7LINK2

C7MSUTE

Counts message signal units that terminate at an STP

Data Source

MTX OM, SDM

Source Field

C7MSUTE + 65536 * C7MSUTE2

Source Section

C7LINK2

C7MSUTS

Counts message signal units that an STP relays to other signaling points (through-switched)

Data Source

MTX OM, SDM

Source Field

C7MSUTS + 65536 * C7MSUTS2

Source Section

C7LINK2

C7MSUTX

Counts message signal units that the ST transmits

Data Source

MTX OM, SDM

Source Field

C7MSUTX + 65536 * C7MSUTX2

Source Section

C7LINK2

C7NACKRX

Counts negative acknowledgements received from the far-end ST

Data Source

MTX OM, SDM

Source Field

C7NACKRX

Source Section

C7LINK1

C7NETCON

Increases when link sync fails because of failure to connect with the network

Data Source

MTX OM, SDM

Source Field

C7NETCON

Source Section

C7LINK1

C7NUCFL

Increases when link activation cannot establish a permanent network connection

Data Source

MTX OM, SDM

Source Field

C7NUCFL

Source Section

C7LINK1

C7OCDAN

Out-of-cell Delineation (OCD) Anomalies

Data Source

MTX OM, SDM

Source Field

C7OCDAN

Source Section

C7HSLATM

C7ONSET1

Increases when ST transmission buffer congestion passes the first onset threshold

Data Source

MTX OM, SDM

Source Field

C7ONSET1

Source Section

C7LINK2

C7ONSET2

Increases when ST transmission buffer congestion passes the second onset threshold

Data Source

MTX OM, SDM

Source Field

C7ONSET2

Source Section

C7LINK2

C7ONSET3

Increases when ST transmission buffer congestion passes the third onset threshold

Data Source

MTX OM, SDM

Source Field

C7ONSET3

Source Section

C7LINK2

C7ONSETV

Increases when message signal units overflow the ST transmission buffer

Data Source

MTX OM, SDM

Source Field

C7ONSETV

Source Section

C7LINK2

C7RCAUI

Total Received ATM User Information Cells

Data Source

MTX OM, SDM

Source Field

$C7RCAUI + 65536 * C7RCAUI2$

Source Section

C7HSLATM

C7RCNDCV

Total Received NDC-valid ATM Cells

Data Source

MTX OM, SDM

Source Field

$C7RCNDCV + 65536 * C7RCNDC2$

Source Section

C7HSLATM

C7RINH

Increases when operating company personnel apply remote inhibit to the link

Data Source

MTX OM, SDM

Source Field

C7RINH

Source Section

C7LINK1

C7RPO

Counts remote processor outages ST reports

Data Source

MTX OM, SDM

Source Field

C7RPO

Source Section

C7LINK1

C7RPOU

CCS7 remote processor outages

Data Source

MTX OM, SDM

Source Field

C7RPOU

Source Section

C7LINK3

C7RTOVLD

CCS7 real time overload

Data Source

MTX OM, SDM

Source Field

C7RTOVLD

Source Section

C7LINK3

C7RUNINH

Increases when remote inhibiting is removed from a link

Data Source

MTX OM, SDM

Source Field

C7RUNINH

Source Section

C7LINK1

C7SASP

Severely Errored Frame/AIS Seconds-Path: SAS-P

Data Source

MTX OM, SDM

Source Field

C7SASP

Source Section

C7HSLCAR

C7SCDIS

SSCOP Connection Disconnect

Data Source

MTX OM, SDM

Source Field

C7SCDIS

Source Section

C7HSLAL2

C7SCIFL

SSCOP Connection Initiation Failure

Data Source

MTX OM, SDM

Source Field

C7SCIFL

Source Section

C7HSLAL2

C7SCRRSY

SSCOP Connection Re-establishment/Resynchronization

Data Source

MTX OM, SDM

Source Field

C7SCRRSY

Source Section

C7HSLAL2

C7SCSEC

SSCOP Connection Sum-of-errors Counter

Data Source

MTX OM, SDM

Source Field

C7SCSEC

Source Section

C7HSLAL2

C7SDISS

Duration in the In-service State

Data Source

MTX OM, SDM

Source Field

C7SDISS + 65536 * C7SDISS2

Source Section

C7HSLAL2

C7SEFSPF

Far-end Severely Errored Frame Seconds-Path: SEFS-PFE

Data Source

MTX OM, SDM

Source Field

C7SEFSPF

Source Section

C7HSLCAR

C7SEPSEC

SSCOP Errored PDUs Sum-of-errors Counter

Data Source

MTX OM, SDM

Source Field

C7SEPSEC

Source Section

C7HSLAL2

C7SESL

Severely Errored Seconds-Line: SES-L

Data Source

MTX OM, SDM

Source Field

C7SESL

Source Section

C7HSLCAR

C7SESP

Severely Errored Seconds-Path: SES-P

Data Source

MTX OM, SDM

Source Field

C7SESP

Source Section

C7HSLCAR

C7SESPF

Far-end Severely Errored Seconds-Path: SES-PFE

Data Source

MTX OM, SDM

Source Field

C7SESPF

Source Section

C7HSLCAR

C7SLTFL

Increases when signaling cannot take place because of a signaling link test (SLT) failure

Data Source

MTX OM, SDM

Source Field

C7SLTFL

Source Section

C7LINK1

C7SPDURR

SSCOP SD PDUs Transmitted Requiring Retransmission

Data Source

MTX OM, SDM

Source Field

C7SPDURR

Source Section

C7HSLAL2

C7SPOR1

SSCOP SD PDU Octets Received

Data Source

MTX OM, SDM

Source Field

C7SPOR1 + 65536 * C7SPOR2

Source Section

C7HSLAL1

C7SPORT1

SSCOP SD PDU Octets Retransmitted

Data Source

MTX OM, SDM

Source Field

C7SPORT1 + 65536 * C7SPORT2

Source Section

C7HSLAL1

C7SPR1

SSCOP SD PDUs Received

Data Source

MTX OM, SDM

Source Field

C7SPR1 + 65536 * C7SPR2

Source Section

C7HSLAL1

C7SPRLEE

SSCOP PDUs Received with List Element Errors

Data Source

MTX OM, SDM

Source Field

C7SPRLEE

Source Section

C7HSLAL2

C7SSPOT1

SSCOP SD PDU Octets Transmitted

Data Source

MTX OM, SDM

Source Field

C7SSPOT1 + 65536 * C7SSPOT2

Source Section

C7HSLAL1

C7SSPRT1

SSCOP SD PDUs Retransmitted

Data Source

MTX OM, SDM

Source Field

C7SSPRT1 + 65536 * C7SSPRT2

Source Section

C7HSLAL1

C7SSPT1

SSCOP SD PDUs Transmitted

Data Source

MTX OM, SDM

Source Field

C7SSPT1 + 65536 * C7SSPT2

Source Section

C7HSLAL1

C7STALFL

Increases when signaling cannot take place because the ST cannot be allocated

Data Source

MTX OM, SDM

Source Field

C7STALFL

Source Section

C7LINK1

C7STPOR1

Total SSCOP PDU Octets Received

Data Source

MTX OM, SDM

Source Field

$C7STPOR1 + 65536 * C7STPOR2$

Source Section

C7HSLAL1

C7STPOT1

Total SSCOP PDU Octets Transmitted

Data Source

MTX OM, SDM

Source Field

$C7STPOT1 + 65536 * C7STPOT2$

Source Section

C7HSLAL1

C7STPR1

Total SSCOP PDUs Received

Data Source

MTX OM, SDM

Source Field

$C7STPR1 + 65536 * C7STPR2$

Source Section

C7HSLAL1

C7STPT1

Total SSCOP PDUs Transmitted

Data Source

MTX OM, SDM

Source Field

C7STPT1 + 65536 * C7STPT2

Source Section

C7HSLAL1

C7STRET

CCS7 signal terminal retrieval

Data Source

MTX OM, SDM

Source Field

C7STRET

Source Section

C7LINK2

C7SUERR

Counts signal units on a link received in error

Data Source

MTX OM, SDM

Source Field

C7SUERR

Source Section

Calculation

PeakLinkUtilization

Number of not necessarily contiguous seconds that link utilization exceeds the high water mark.

Calculation

`vsum(PeakLinkUtilizationI, PeakLinkUtilizationII)`

SEFAISSecondPath

SAS-P. Count of 1-second intervals with SEF>=1 or AIS>=1

Calculation

`vsum(SEFAISSecondPathI, SEFAISSecondPathII)`

SeverelyErroredSecondLine

Severely errored second -line. Count of 1-second intervals with BPV+EXZ=1544 or LOS>=1

Calculation

`vsum(SeverelyErroredSecondLineI, SeverelyErroredSecondLineII)`

SeverelyErroredSecondPath

SES-P. Severly errored second path

Calculation

`vsum(SeverelyErroredSecondPathI, SeverelyErroredSecondPathII)`

UnavailableSecondPath

UAS-P. Count of 1-second intervals for which DS1 path is unavailable.

Calculation

`vsum(UnavailableSecondPathI, UnavailableSecondPathII)`

T1E1Trunk Peg Counts

The following is a list of peg counts for the T1E1Trunk entity.

AverageLinkUtilizationI

Average link utilization in percent over the first 15-minute interval of 30-minterval

Data Source

NBSS BTS MO

Source Field

AverageUtilizationPercentI (Seq# 40)

Source Section

T1E1Trunk MO

AverageLinkUtilizationII

Average link utilization in percent over the first 15-minute interval of 30-minute interval I.e. average of AverageLinkUtilizationI and AverageLinkUtilizationII

Data Source

NBSS BTS MO

Source Field

AverageUtilizationPercentI (Seq# 41)

Source Section

T1E1Trunk MO

CodeViolationLineI

CV-L Over the first 15-minute interval of the 30-minute period. Count of BPV+EXZ

Data Source

NBSS BTS MO

Source Field

CodeViolationLineI (Seq# 44)

Source Section

T1E1Trunk MO

CodeViolationLineII

CV-L Over the second 15-minute interval of the 30-minute period. Count of BPV+EXZ

Data Source

NBSS BTS MO

Source Field

CodeViolationLineII (Seq# 45)

Source Section

T1E1Trunk MO

CodeViolationPathI

CV-P over the first 15-minute interval of the 30-minute period (T1 SF:Count of FE; T1 ESF: Count of CRC6 errors; E1 DoubleFrame: Count of FE; E1 MultiFrame: Count of CRC4 errors)

Data Source

NBSS BTS MO

Source Field

CodeViolationPathI (Seq# 50)

Source Section

T1E1Trunk MO

CodeViolationPathII

CV-P over the first 15-minute interval of the 30-minute period (T1 SF:Count of FE; T1 ESF: Count of CRC6 errors; E1 DoubleFrame: Count of FE; E1 MultiFrame: Count of CRC4 errors)

Data Source

NBSS BTS MO

Source Field

CodeViolationPathI (Seq# 51)

Source Section

T1E1Trunk MO

ErroredSecondLineI

ES-L over the first 15-minute interval of the 30-minute period. Count of 1-second intervals with BPV>=1 or EXZ>=1 or LOS>=1

Data Source

NBSS BTS MO

Source Field

ErroredSecondLine1 (Seq# 46)

Source Section

T1E1Trunk MO

ErroredSecondLineI

ES-L over the second 15-minute interval of the 30-minute period. Count of 1-second intervals with BPV>=1 or EXZ>=1 or LOS>=1

Data Source

NBSS BTS MO

Source Field

ErroredSecondLine1 (Seq# 47)

Source Section

T1E1Trunk MO

ErroredSecondPathI

ES-P over the first 15-minute interval of the 30-minute period

Data Source

NBSS BTS MO

Source Field

ErroredSecondPathI (Seq# 52)

Source Section

T1E1Trunk MO

ErroredSecondPathII

ES-P over the second 15-minute interval of the 30-minute period

Data Source

NBSS BTS MO

Source Field

ErroredSecondPathI (Seq# 53)

Source Section

T1E1Trunk MO

MaxLinkUtilization

Maximum link utilization in percent, calculated by applying the function $\max(\text{AverageLinkUtilizationI}, \text{AverageLinkUtilizationII})$

Data Source

NBSS BTS MO

Source Field

$\max(\text{AverageUtilizationPercentI}, \text{AverageUtilizationPercentII})$

Source Section

T1E1Trunk MO

PeakLinkUtilizationI

Number of not necessarily contiguous seconds that link utilization exceeds the high water mark over the first 15-minute interval of the hour.

Data Source

NBSS BTS MO

Source Field

PeakLinkUtilizationCounterI (Seq# 42)

Source Section

T1E1Trunk MO

PeakLinkUtilizationII

Number of not necessarily contiguous seconds that link utilization exceeds the high water mark over the second 15-minute interval of the hour.

Data Source

NBSS BTS MO

Source Field

PeakLinkUtilizationCounterII (Seq# 43)

Source Section

T1E1Trunk MO

SEFAISSecondPathI

SAS-P over the first 15-minute interval of the 30-minute period. Count of 1-second intervals with SEF>=1 or AIS>=1

Data Source

NBSS BTS MO

Source Field

SEFAISSecondPathI (Seq# 56)

Source Section

T1E1Trunk MO

SEFAISSecondPathII

SAS-P over the second 15-minute interval of the 30-minute period. Count of 1-second intervals with SEF>=1 or AIS>=1

Data Source

NBSS BTS MO

Source Field

SEFAISSecondPathII (Seq# 57)

Source Section

T1E1Trunk MO

SeverelyErroredSecondLineI

SES-L over the first 15-minute interval of the 30-minute period. Count of 1-second intervals with BPV+EXZ=1544 or LOS>=1

Data Source

NBSS BTS MO

Source Field

SeverelyErroredSecondLineI (Seq# 48)

Source Section

T1E1Trunk MO

SeverelyErroredSecondLineII

SES-L over the second 15-minute interval of the 30-minute period. Count of 1-second intervals with BPV+EXZ=1544 or LOS>=1

Data Source

NBSS BTS MO

Source Field

SeverelyErroredSecondLineI (Seq# 49)

Source Section

T1E1Trunk MO

SeverelyErroredSecondPathI

SES-P over the first 15-minute interval of the 30-minute period

Data Source

NBSS BTS MO

Source Field

SeverelyErroredSecondPathI (Seq# 54)

Source Section

T1E1Trunk MO

SeverelyErroredSecondPathII

SES-P over the second 15-minute interval of the 30-minute period

Data Source

NBSS BTS MO

Source Field

SeverelyErroredSecondPathI (Seq# 55)

Source Section

T1E1Trunk MO

UnavailableSecondPathI

UAS-P over the first 15-minute interval of the 30-minute period. Count of 1-second intervals for which DS1 path is unavailable.

Data Source

NBSS BTS MO

Source Field

UnavailableSecondPathI (Seq# 58)

Source Section

T1E1Trunk MO

UnavailableSecondPathII

UAS-P over the first 15-minute interval of the 30-minute period. Count of 1-second intervals for which DS1 path is unavailable.

TrunkGroup Primitive Calculations

The following is a list of primitive calculations for the TrunkGroup entity.

ADMININFO

TrunkGroup AdminInf

AllTrkBsyMin

Number of minutes when all the circuits in the trunk group were busy

Calculation

$(MAXBU * 100.0 / 60.0)$

AvgHoldTimeSec

Average hold time on trunks in secs

Calculation

$((TfUsage * 3600.0) / TotCallAtts)$

EngCapB

Engineering Capacity Erlang B

Calculation

$capacityB(NDEV, GOS)$

EngCapP

Engineering Capacity Poisson

Calculation

$capacityP(NDEV, GOS)$

GOS

Grade of Service

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

""

NChanDis

Max. number of Traffic Channels disabled during the reporting time interval

Calculation

$(NCCT - NWCCT)$

NUMDAYS

of days in Report

Calculation

$DAYSINREPORT()$

NUMHOURS

of hours in Summation Data

Calculation

OffCapB

Offered Capacity Erlang B

Calculation

$(\text{capacity}(\text{NDEV}, \text{GOS}) / (1 - \text{GOS}))$

OffCapP

Offered Capacity Poisson

Calculation

$(\text{capacityP}(\text{NDEV}, \text{GOS}) / (1 - \text{GOS}))$

OgSigFailCnt

Number of signaling protocol failures

Calculation

$(\text{vsum}(\text{OUTFAIL}, \text{GLARE}, 0))$

pTotCallComps

Total Call Completion percentage

Calculation

$((\text{TotCallComp} / \text{TotCallAtts}) * 100.0)$

pTrkOvf

Percentage of Trunks overflow per attempt (M-L)

Calculation

$(100.0 * \text{NOVFLATB} / \text{NATTMPT})$

TfUsage

Traffic Usage in Erlangs

Calculation

$(\text{TRU} / 36.0)$

TotCallAtts

Total Call Attempts

Calculation

$(\text{vsum}(\text{NATTMPT}, \text{INCATOT}, 0))$

TotCallComp

Total Calls Completed

Calculation

(INCATOT + NATTMPT - INFALL - OUTFAIL)

TotCallFails

Total Call Failures

Calculation

(vsum(INFAIL, OUTFAIL, 0))

TrunkGroup Peg Counts

The following is a list of peg counts for the TrunkGroup entity.

A2PDELAY

This register pegs each time the delayqos value in the end of call statistics for the associated A2P interface exceeds the DELAY threshold value defined in office parameter MTX_MGW_QOS_THRESHOLDS.

Data Source

SDM

Source Field

A2PDELAY

Source Section

MGWQOS

A2PJITER

This register pegs each time the jitter value in end of call statistics for the associated A2P interface exceeds the JITTER threshold value defined in office parameter MTX_MGW_QOS_THRESHOLDS.

Data Source

SDM

Source Field

A2PJITER

Source Section

MGWQOS

A2PLOSS

This register pegs each time the packet loss value in end of call statistics for the associated A2P interface exceeds the Packet LOSS threshold value defined in office parameter MTX_MGW_QOS_THRESHOLDS.

Data Source

Call state of 14 or 114 (trouble code FORCED_HANDOFF_DISCONNECT) - Waiting for the called address from the mobile unit

Data Source

MTX Log

Source Field

TSI=14 and TRBL=FORCED_HANDOFF_DISCONNECT

Source Section

CELL101

CELL101_ForcedHODisc_TSI15

Call state of 15 or 115 (trouble code FORCED_HANDOFF_DISCONNECT) - Waiting for a setup message from the MTX

Data Source

MTX Log

Source Field

TSI=15 and TRBL=FORCED_HANDOFF_DISCONNECT

Source Section

CELL101

CELL101_ForcedHODisc_TSI16

Call state of 16 or 116 (trouble code FORCED_HANDOFF_DISCONNECT) - The VCH is being used for locating channel receiver (LCR) redundancy

Data Source

MTX Log

Source Field

TSI=16 and TRBL=FORCED_HANDOFF_DISCONNECT

Source Section

CELL101

CELL101_ForcedHODisc_TSI17

Call state of 17 or 117 (trouble code FORCED_HANDOFF_DISCONNECT) - The VCH is undergoing in-service testing

Data Source

MTX Log

Source Field

TSI=17 and TRBL=FORCED_HANDOFF_DISCONNECT

Source Section

CELL101

CELL101_ForcedHODisc_TSI18

Call state of 18 or 118 (trouble code FORCED_HANDOFF_DISCONNECT) - The VCH is waiting for the One-second guard timer to expire after the mobile unit disconnects or hands off. After the timer expires, the mobile unit is put back on the IDLE queue

Data Source

MTX Log

Source Field

TSI=18 and TRBL=FORCED_HANDOFF_DISCONNECT

Source Section

CELL101

CELL101_ForcedHODisc_TSI19

Call state of 19 or 119 (trouble code FORCED_HANDOFF_DISCONNECT) - Failure has occurred during the call. The intelligent cellular peripheral (ICP) sends a CARRIER OFF command to the VCH to put it back into the idle voice task and expects an answer

Data Source

SBU

100s records if a trunk is in remote busy/PM busy/system busy/carrier fail/deloaded

Data Source

MTX OM, SDM

Source Field

SBU + 65536 * TRNK2.SBU2

Source Section

TRK

TANDEM

Counts incoming calls on a trunk group that first routes to an outgoing trunk group

Data Source

MTX OM, SDM

Source Field

TANDEM + 65536 * TRNK2.TANDEM2

Source Section

TRK

TOTU

Every 100s records if any trunk in the group is busy

Data Source

MTX OM, SDM

Source Field

TOTU + 65536 * TRNK2.TOTU2

Source Section

TRK

TRKDIR

trunk group direction

Data Source

MTX OM, SDM

Source Field

TRKDIR (Info field 1)

Source Section

TRK

TRU

Every 100s records if a trunk is call processing busy/call processing busy deload/locked

Data Source

MTX OM, SDM

Source Field

TRU + 65536 * TRNK2.TRU2

Source Section

TRK

TRU2WIN

Every 100s records if a two-way trunk in a group is call processing busy

Data Source

MTX OM, SDM

Source Field

TRU2WIN + 65536 * TRNK2.TRU2WIN2

Source Section

TRK

YYDELAY

This register pegs each time the delayqos value in the end of call statistics for the associated YY interface exceeds the DELAY threshold value defined in office parameter MTX_MGW_QOS_THRESHOLDS.

Data Source

SDM

Source Field

YYDELAY

Source Section

MGWQOS

YYJITER

This register pegs each time the jitter value in end of call statistics for the associated YY interface exceeds the JITTER threshold value defined in office parameter MTX_MGW_QOS_THRESHOLDS.

Data Source

SDM

Source Field

YYJITER

Source Section

MGWQOS

YYLOSS

This register pegs each time the packet loss value in end of call statistics for the associated YY interface exceeds the packet LOSS threshold value defined in office parameter MTX_MGW_QOS_THRESHOLDS.

UAS Peg Counts

The following is a list of peg counts for the UAS entity.

norUasAckfail

Number of negative acknowledgements (nacks) received.

Data Source

UAS_PM

Source Field

norUasAckfail

norUasAudioSegmentFailed

Number of failed attempts to play audio.

Data Source

UAS_PM

Source Field

norUasAudioSegmentFailed

norUasAudioSegmentPlayed

Number of successful attempts to play audio.

Data Source

UAS_PM

Source Field

norUasAudioSegmentPlayed

norUasCallControlMessageSendFailures

Number of times the call control message maximum retransmission count was exceeded.

Data Source

UAS_PM

Source Field

norUasCallControlMessageSendFailures

norUasComperror

The number of times the call engine failed to build a response to a call agent message.

Data Source

UAS_PM

Source Field

norUasComperror

norUasConfLackOfResourceRejections

The number of times a conference request was rejected due to lack of resources since the last application restart.

Data Source

UAS_PM

Source Field

norUasConfLackOfResourceRejections

norUasConfPlays

The total number of plays made into conferences since the last application restart.

Data Source

UAS_PM

Source Field

norUasConfPlays

norUasConfTotal

The total number of conferences processed since the last application restart.

Data Source

UAS_PM

Source Field

norUasConfTotal

norUasConndeleted

Number of times that the call engine receives a bad connection id from the call agent.

Data Source

UAS_PM

Source Field

norUasConndeleted

norUasEndpointsInUse

Number of endpoints that the call engine is currently using for all packet network-related functions.

Data Source

UAS_PM

Source Field

norUasEndpointsInUse

norUasMgcpMessageRetransmissionFailures

Number of times a retransmitted media gateway control protocol message was not acknowledged.

Data Source

UAS_PM

Source Field

norUasMgcpMessageRetransmissionFailures

norUasMgcpMessageRetransmissions

Number of retransmissions of media gateway control protocol messages.

Data Source

UAS_PM

Source Field

norUasMgcpMessageRetransmissions

norUasNumberOfPlayRecordErrors

The total number of failed play record operations.

Data Source

UAS_PM

Source Field

norUasNumberOfPlayRecordErrors

norUasNumberOfPlayRecords

The total number of play record operations.

Data Source

UAS_PM

Source Field

norUasNumberOfPlayRecords

norUasNumDupsForCompletedTransactions

The number of times a duplicate transaction request was received after the initial transaction had already been completed.

Data Source

UAS_PM

Source Field

norUasNumDupsForCompletedTransactions

norUasNumDupsForOutstandingTransactions

The number of times a duplicate transaction request was received while the initial transaction was outstanding, that is, still in progress.

Data Source

UAS_PM

Source Field

norUasNumDupsForOutstandingTransactions

norUasProterror

Number of call control protocol errors detected.

Data Source

UAS_PM

Source Field

norUasProterror

norUasProtocolMessageValidationErrors

Number of times an incoming call control message had valid syntax, but failed validation.

Data Source

UAS_PM

Source Field

norUasProtocolMessageValidationErrors

norUasProtocolSyntaxErrors

Number of syntax errors detected in incoming call control messages.

Data Source

UAS_PM

Source Field

norUasProtocolSyntaxErrors

norUasRestart

Number of abnormal restarts of one of two critical threads in the call processing process.

Data Source

UAS_PM

Source Field

norUasRestart

norUasTimeout

Number of times the call engine timed out waiting for an acknowledgement

Data Source

UAS_PM

Source Field

norUasTimeout

norUasUdpReceiveErrors

Number of times there was a failure in receiving a call control message.

Data Source

UAS_PM

Source Field

norUasUdpReceiveErrors

norUasUdpSendErrors

Number of times there was a failure in sending a call control message.

Data Source

UAS_PM

Source Field

norUasUdpSendErrors

XIU Peg Counts

The following is a list of peg counts for the XIU entity.

MDLPFDR

Forward MDLP frames dropped at the XLIU Traffic Interface

Data Source

MTX OM, SDM

Source Field

MDLPFDR + 65536 * MDLPFDOF

Source Section

VERFYXIU

MDLPFWD

MDLP frames transmitted in the forward direction to the radio

Data Source

MTX OM, SDM

Source Field

MDLPFWD + 65536 * MDLPFOF

Source Section

CAPACXIU

MDLPRDR

Reverse MDLP frames dropped in the CDPD protocol stack because of depleted memory in the XLIU

Data Source

MTX OM, SDM

Source Field

MDLPRDR + 65536 * MDLPRDOF

Source Section

VERFYXIU

MDLPREV

MDLP frames received in the reverse direction from the radio

Data Source

MTX OM, SDM

Source Field

MDLPREV + 65536 * MDLPROF

Source Section

CAPACXIU

MDLPRTRY

MDLP layer resends after a previous attempt to send that frame has failed

Data Source

MTX OM, SDM

Source Field

MDLPRTRY + 65536 * MDLPRTOF

Source Section

VERFYXIU

REQCLXFR

Inter XLIU cell transfer requests per XLIU

Data Source

MTX OM, SDM

Source Field

REQCLXFR

Source Section

CAPACXIU

RIXCLXFR

XLIU receives an intra-XLIU cell transfer notification message from the HFP

Data Source

MTX OM, SDM

Source Field

RIXCLXFR

Source Section

CAPACXIU

SNDCPFDR

Forward SNDCP frames dropped in the CDPD protocol stack because of depleted memory in the XLIU

Data Source

MTX OM, SDM

Source Field

SNDCPFDR + 65536 * SNDCFDOF

Source Section

VERFYXIU

SNDCPFWD

SNDCP frames received in the forward direction from the slave router.

Data Source

MTX OM, SDM

Source Field

SNDCPFWD + 65536 * SNDCPFOF

Source Section

CAPACXIU

SNDCPRDR

Reverse SNDCP frames dropped in the CDPD protocol stack because of depleted memory in the XLIU

Data Source

MTX OM, SDM

Source Field

SNDCPRDR + 65536 * SNDCRDOF

Source Section

VERFYXIU

SNDCPREV

SNDCP frames received in the reverse direction from the MDLP layer

Data Source

MTX OM, SDM

Source Field

SNDCPREV + 65536 * SNDCPROF

Source Section

CAPACXIU

SN DIPFDR

Forward IP packets dropped in the SNDCP layer of the CDPD stack

Data Source

MTX OM, SDM

Source Field

SN DIPFDR + 65536 * SN DIFDOF

Source Section

VERFYXIU

SUCCLXFR

Inter XLIU cell transfer requests successful per XLIU

Data Source

MTX OM

Source Field

SUCCLXFR

Source Section

CAPACXIU

XAMFRPKT

New entries for accounting cannot be allocated in the AM in the XLIU

Data Source

MTX OM, SDM

Source Field

XAMFRPKT

Source Section

VERFYXIU

XCHCAPFL

Channel capacity flag is set due to the registrations on a particular XLIU reaching capacity

Data Source

MTX OM, SDM

Source Field

XCHCAPFL

Source Section

VERFYXIU

XCPUOVR

IPF call processing plus I/O CPU occupancy goes into overload state

Data Source

MTX OM, SDM

Source Field

XCPUOVR

Source Section

VERFYXIU

XHOLDFUL

Accounting holding buffers full on the XLIU

Data Source

MTX OM, SDM

Source Field

XHOLDFUL

Source Section

CAPACXIU

XIUCALLP

The average IPF call processing plus I/O CPU occupancy percentage

Data Source

MTX OM

Source Field

XIUCALLP

Source Section

VERFYXIU

XLIBREQT

Broadcast requests received by the XLIU

Data Source

MTX OM, SDM

Source Field

XLIBREQT

Source Section

CAPACXIU

XMEMOVRL

XLIU CDPD protocol stack enters memory overload condition

Data Source

MTX OM, SDM

Source Field

XMEMOVRL

Source Section

VERFYXIU

XPITCHMD

XLIU CDPD protocol stack enters data frame pitching condition because of lack of memory

Data Source

MTX OM, SDM

Source Field

XPITCHMD

Source Section

VERFYXIU

XSRFWRDP

Router fails to determine the destination of a forward datagram or is under congestion

Data Source

MTX OM, SDM

Source Field

XSRFWRDP + 65536 * XSFWDPOF

Source Section

VERFYXIU

XSRFWTOT

Router attempts to process each forward datagram

Data Source

MTX OM, SDM

Source Field

XSRFWTOT + 65536 * XSRFWTOF

Source Section

CAPACXIU

XSRRVDRP

Router fails to determine the next hop a reverse datagram should take or is under congestion

Data Source

MTX OM, SDM

Source Field

XSRRVDRP + 65536 * XSRVDPOF

Source Section

VERFYXIU

XSRRVTOT

Router attempts to process each reverse datagram

Data Source

MTX OM, SDM

Source Field

XSRRVTOT + 65536 * XSRRVTOF

Source Section

CAPACXIU

XSRTBLUP

Entry in the slave router table is either deleted or added

Data Source

MTX OM, SDM

Source Field

XSRTBLUP

11400 Burnet Road
Austin, TX 78758 U.S.A.

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

Trademarks

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide.
