# 1 About this document

This document was revised on November 11, 2002, to correct technical and formatting consistency edits.

This document describes the warehouse enablement pack for IBM® Tivoli® Monitoring for Web Infrastructure, Version 5.1.0: WebSphere® Application Server. It covers the following topics:

- Installing and configuring the warehouse pack
- The data flow and data structures used by the warehouse pack

With this warehouse pack and the prerequisite IBM Tivoli Monitoring warehouse Version 5.1.1 enablement pack, you can extract data from the IBM Tivoli Monitoring middle layer database into the central data warehouse. The data is then used to populate data marts created for reporting on IBM WebSphere administration servers and application servers and their components.

## 2 Overview

The following sections provide an overview of Tivoli Enterprise Data Warehouse and the IBM Tivoli Monitoring for Web Infrastructure 5.1.0 - WebSphere Application Server warehouse pack.

### 2.1 Overview of Tivoli Enterprise Data Warehouse

Tivoli Enterprise Data Warehouse provides the infrastructure for the following:

- Extract, transform, and load (ETL) processes through the IBM DB2 Data Warehouse Center tool
- Schema generation of the central data warehouse
- Historical reporting

As shown in Figure 1, Tivoli Enterprise Data Warehouse consists of a centralized data store where historical data from many management applications can be stored, aggregated, and correlated.

Figure 1. Tivoli Enterprise Data Warehouse overview

The *central data warehouse* uses a generic schema. As new components or new applications are added, more data is added to the database; however, no new tables or columns are added in the schema.

A *data mart* is a subset of a data warehouse that contains data tailored and optimized for the specific reporting needs of a department or team.

The *central data warehouse ETL* reads the data from the operational data stores of the application that collects it, verifies the data, makes the data conform to the schema, and places the data into the central data warehouse.

The *data mart ETL* extracts a subset of data from the central data warehouse, transforms it, and loads it into one or more star schemas, which can be included in data marts to answer specific business questions.

A program that provides these ETLs is called a *warehouse enablement pack*, or *warehouse pack*.

## **2.2 Overview of WebSphere Application Server Warehouse Enablement Pack**

The warehouse pack for IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server provides metadata to enable the IBM Tivoli Monitoring, Version 5.1.1, warehouse enablement pack central data warehouse ETL to load data into the Tivoli central data warehouse for WebSphere Application Server administration servers, application servers and their components.

For more information, see section 7.1, “Metadata tables for applications that use the resource model ETL.” The IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server resource models running on Tivoli endpoints collect and log this operational data. The Tivoli Enterprise Data Warehouse Support component then uploads and inserts the operational data into a middle layer database.

This warehouse pack also provides a data mart ETL, which is comprised of two warehouse processes that extract WebSphere Application Server performance and status data from the central data warehouse and inserts the data into the related IBM Tivoli Monitoring for Web Infrastructure, WebSphere Application Server star schemas. See section 5, “ETL processes,” and section 8.1, “Star schemas,” for more information. The star schemas are included in the data mart from which prepackaged reports are provided for IBM WebSphere Application Server performance analysis.

You can also use the data mart to create customized reports to meet your specific analytical needs.

## 3 Installing and Configuring

### 3.1 Prerequisites

This warehouse pack has the following prerequisites:

- Tivoli Enterprise Data Warehouse, Version 1.1, Fix Pack 1 (1.1-TDW-FP01A), efix 1.1-TDW-005E, and its prerequisite products  
**NOTE:** Tivoli Enterprise Data Warehouse 1.1 Fix Pack 2 (1.1-TDW-FP02) supersedes e-fix 1.1-TDW-0005E. When 1.1-TDW-FP02 becomes available, install 1.1-TDW-FP02, instead of 1.1-TDW-0005E.  
You can obtain the Tivoli Enterprise Data Warehouse e-fixes and fix pack from the Tivoli Enterprise Data Warehouse Web site (<http://www.ibm.com/software/sysmgmt/products/support/TivoliEnterpriseDataWarehouse.html>). Click the Downloads link in the Self-help section.
- DB2 UDB Version 7.2, FixPack 6 and efix 1.1-TDW-0002 for the central data warehouse  
You can obtain the Tivoli Enterprise Data Warehouse e-fixes and fix pack from the Tivoli Enterprise Data Warehouse Web site (<http://www.ibm.com/software/sysmgmt/products/support/TivoliEnterpriseDataWarehouse.html>). Click the Downloads link in the Self-help section.
- IBM Tivoli Monitoring, Version 5.1.1, Fix Pack 5.1.1-ITM-FP01 warehouse enablement pack and its prerequisite products  
You can obtain this Fix Pack from the following Web site: [ftp://ftp.tivoli.com/support/patches/patches\\_5.1.1/5.1.1-ITM-FP01](ftp://ftp.tivoli.com/support/patches/patches_5.1.1/5.1.1-ITM-FP01)
- IBM Tivoli Monitoring for Web Infrastructure, Version 5.1.0: WebSphere Application Server  
This product is not an installation prerequisite to the WebSphere Application Server Warehouse Enablement Pack, but it is required for the resource models to log data for this warehouse enablement pack.

### 3.2 Supported hardware and software

IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server warehouse enablement pack supports IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server. It supports all versions of DB2, Informix, Microsoft SQL Server, Oracle, and Sybase database products as documented in the *IBM Tivoli Monitoring 5.1.1 Release Notes*, GI10-5797-01.

### 3.3 Limitations

This warehouse pack has no known limitations.

### 3.4 Database sizing considerations

You need to consider the volume of data you expect to collect for the execution of the IBM Tivoli Monitoring 5.1.1 central data warehouse ETL and define an appropriate amount of space for the Tivoli central data warehouse database. In addition, you should estimate additional space for this database because some of the staging tables utilized by the IBM Tivoli Monitoring 5.1.1 central data warehouse ETL are purged only when the AMX\_c10\_RIM\_Prune warehouse process is executed.

### 3.5 Data sources and targets

The warehouse pack for IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server leverages the IBM Tivoli Monitoring, Version 5.1.1, warehouse enablement pack central data warehouse ETL; no additional data sources nor target sources are required for operational data. However, see the Post-installation section below for information about configuring the AMX\_TWH\_CDW\_Source and AMX\_ITM\_RIM\_Source warehouse sources and the AMX\_TWH\_CDW\_Target warehouse target.

Warehouse sources and targets specific to the IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server warehouse enablement pack are IZY\_TWH\_CDW\_Source for the central data warehouse database, IZY\_TWH\_MART\_Target for the data mart database, and IZY\_TWH\_MD\_Target for the metadata database.

### 3.6 Pre-installation procedures

Before installing the warehouse pack for IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server, you must install the IBM Tivoli Monitoring, Version 5.1.1, warehouse enablement pack. See the *IBM Tivoli Monitoring Version 5.1.1 Warehouse Enablement Pack Implementation Guide* for more information.

If you install the warehouse pack with one user ID, and the IBM Tivoli Monitoring 5.1.1, Warehouse Enablement or this warehouse enablement pack with another user ID, you must create a temporary tablespace for the warehouse enablement pack install user.

To create a temporary tablespace: On the system that's identified as the Tivoli Enterprise Data Warehouse control server, open a DB2 command window and issue the following commands, where *<userid>* is the warehouse enablement pack install user and *<password>* is the password of that user.

```
db2 connect to TWH_CDW user <userid> using <password>

db2 create user temporary tablespace usertmp2 managed by system using ('usertmp2')

db2 connect to TWH_MART user <userid> using <password>

db2 create user temporary tablespace usertmp3 managed by system using ('usertmp3')
```

### 3.7 Installation procedure

To install the IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server warehouse enablement pack, perform the following steps:

1. Ensure that Tivoli Enterprise Data Warehouse and the required DB2 database software are installed as defined in the Prerequisites section. For instructions about installing Tivoli Enterprise Data Warehouse, refer to *Installing and Configuring Tivoli Enterprise Data Warehouse, Version 1, Release 1*.
2. Install the IBM Tivoli Monitoring, warehouse enablement pack. See the *IBM Tivoli Monitoring for Web Infrastructure Installation and Setup Guide* for more installation information.
3. Perform any pre-installation steps as described in Pre-installation on page 11.
4. Install the IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server warehouse enablement pack as described in the instructions in *IBM Tivoli Monitoring for Web Infrastructure Installation and Setup Guide*. Also, see the installation information in *Installing and Configuring Tivoli Enterprise Data Warehouse, Version 1, Release 1*.

The installation media for this warehouse pack is located on the *IBM Tivoli Monitoring for Web Infrastructure, Version 5.1.0: WebSphere Application Server Software CD* in directory /tedw\_apps\_etl.

5. Perform the post-installation steps described in Post-installation on page 11.

### 3.8 Post-installation procedures

Complete the following steps after installation of the IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server warehouse enablement pack:

1. Manually stop and restart the following Tivoli Presentation Services:

- Server for IBM Console
- Web Services for the IBM Console.

See “Starting and Stopping Tivoli Presentation Services” in *Installing and Configuring Tivoli Enterprise Data Warehouse*.

2. If not already performed after installing the IBM Tivoli Monitoring, Version 5.1.1 warehouse enablement pack, you must update the user ID and password for the AMX\_TWH\_CDW\_Source and the AMX\_TWH\_ITM\_RIM\_Source data sources and the AMX\_TWH\_CDW\_Target data target. You must also configure the data source name for the AMX\_TWH\_ITM\_RIM\_Source data source to the ODBC system data source name that is created for the IBM Tivoli Monitoring middle layer database.
3. Through the IBM DB2 Data Warehouse Center, update the user ID and password for the IZY\_TWH\_CDW\_Source data sources and the IZY\_TWH\_MART\_Target and the IZY\_TWH\_MD\_Target target sources.
  1. Through the IBM DB2 Data Warehouse Center, open the Warehouse Sources folder.
  2. Right-click IZY\_TWH\_CDW\_Source and select Properties.
  3. Select the **Data Source** tab. Set the **User ID** and **Password** that were specified in the installation of the Tivoli Enterprise Data Warehouse for configuring DB2.
  4. Repeat Steps 2 and 3 for IZY\_TWH\_MART\_Target in the Warehouse Targets folder to set the user ID and password for TWH\_MART database.
  5. Repeat Steps 2 and 3 for IZY\_TWH\_MD\_Target in the Warehouse Targets folder to set user ID and password for the TWH\_MD database.
4. Follow the steps in *Installing and Configuring Tivoli Enterprise Data Warehouse* on configuring and scheduling warehouse pack ETL processes.

**Note:** The IZY\_m05\_s010\_dimension step must be run successfully before the IZY\_m10\_s010\_Fact step can be run. The IZY\_m10\_s010\_Fact step must be run successfully before any of the Rollup steps can be run.

5. Edit the resource models to enable data logging for the Tivoli Enterprise Data Warehouse. See “Modifying data logging settings” in the *IBM Tivoli Monitoring for Web Infrastructure: WebSphere Application Server User’s Guide*, for more information.

**Note:** Do not delete IZY.STAGE\_D\_WAS\_METRIC located in the TWH\_CDW database. This table is created during the installation process and is not recreated by any of the data warehouse processes.

## 4 Maintaining

### 4.1 *Backing up and restoring*

Because this warehouse pack does not create any tables in the IBM Tivoli Monitoring middle layer repository, no additional backup of this database nor any special precautions are required before executing the provided warehouse processes.

### 4.2 *Pruning*

Pruning data from the WebSphere Application Server fact tables in the data mart database is implemented in the IZY\_m10\_s010\_Fact step. The prune mart control table (Prune\_Mart\_Control) governs what data is pruned and contains a date duration value for every WebSphere Application Server fact table.

Entries in the hourly and daily fact tables are deleted after 3 months. Entries in the corresponding weekly and monthly fact tables are deleted after a year. You can change this in the IZY.PRUNE\_MART\_CONTROL table in the TWH\_MART database. The format for the pmartc\_duration field is *yyyymmdd*, *yyyy* is number of years, *mm* is number of months and *dd* is number of days. The default setting for the hourly and daily fact tables is 300, or 3 months. The default value for the weekly and monthly fact tables is 10000, or 1 year.

## 5 ETL processes

Because this warehouse pack leverages the IBM Tivoli Monitoring, Version 5.1.1, warehouse enablement pack central data warehouse ETL, the IBM Tivoli Monitoring 5.1.1 warehouse process AMX\_c05\_ETL1\_Process must run to insert WebSphere Application Server data into the central data warehouse database. Therefore, consider scheduling the AMX\_c05\_ETL1\_Process warehouse process to run before the IZY\_m05\_Dimension process.

### 5.1 IZY\_m05\_Dimension\_Process

The IZY\_m05\_Dimension\_Process populates the dimension tables with the IBM WebSphere Application Server components monitored by the resource models.

This process has one step:

- IZY\_m05\_s010\_Dimension

This step populates the following tables:

- The IZY.D\_WAS\_METRIC table with the measurement types
- The IZY.D\_WAS\_HOST table with the IBM WebSphere Application Server nodes
- The IZY.D\_WAS\_ADMINSRV table with the corresponding administration servers
- The IZY.D\_WAS\_APPLSRV table with the application servers
- The IZY.D\_WAS\_APPLCMP table with the application server components
- The IZY.D\_WAS\_SUBCMP table with the servlets and connection pool subcomponents.

This step must be run successfully before the IZY\_m10\_Fact\_Process can be run.

### 5.2 IZY\_m10\_Fact\_Process

This process populates the fact tables with the new data from the warehouse measurement (TWG.MSMT) table.

This process has the following steps:

- IZY\_m10\_s010\_Fact

This step populates the IZY.F\_ADMINSRV\_HOUR, IZY.F\_APPLSRV\_HOUR, IZY.F\_APPLCMP\_HOUR, and IZY.F\_SUBCMP\_HOUR tables with the new data from the warehouse measurement (TWG.MSMT) table. In addition, it prunes any expired data from the fact tables, if necessary. See the Pruning section for more information. This step must be run successfully before any of the rollup steps below can be run.

- IZY\_m10\_s020\_AdminSrv\_Rollup

This step rolls up the hourly data from the IZY.F\_ADMINSRV\_HOUR table into the IZY.F\_ADMINSRV\_DAY, IZY.F\_ADMINSRV\_WEEK, and IZY.F\_ADMINSRV\_MONTH tables for reports using the daily, weekly, or monthly star schemas.

- IZY\_m10\_s030\_ApplSrv\_Rollup

This step rolls up the hourly data from the IZY.F\_APPLSRV\_HOUR table into the IZY.F\_APPLSRV\_DAY, IZY.F\_APPLSRV\_WEEK, and IZY.F\_APPLSRV\_MONTH tables for reports using the daily, weekly, or monthly star schemas.

- IZY\_m10\_s040\_ApplComp\_Rollup

This step rolls up the hourly data from the IZY.F\_APPLCMP\_HOUR table into the IZY.F\_APPLCMP\_DAY, IZY.F\_APPLCMP\_WEEK, and IZY.F\_APPLCMP\_MONTH tables for reports using the daily, weekly, or monthly star schemas.

- IZY\_m10\_s050\_SubComp\_Rollup

This step rolls up the hourly data from the IZY F\_SUBCMP\_HOUR table into the IZY F\_SUBCMP\_DAY, IZY.F\_SUBCMP\_WEEK, and IZY.F\_SUBCMP\_MONTH tables for reports using the daily, weekly, or monthly star schemas.

## 6 Generic schema implementation

Before reading this section, read about the generic schema for the Tivoli Enterprise Data Warehouse central data warehouse, which is described in *Enabling an Application for Tivoli Enterprise Data Warehouse*. That document defines the content of each table and explains the relationships between the tables in this document.

Shaded columns in the following tables are translated. Translated columns are also identified with an asterisk (\*) in the column heading.

### 6.3 Helper tables

The Tivoli central data warehouse data model supports a multicustomer and multicenter environment. For more information, refer to the "Customers and centers" section in the *Enabling an Application for Tivoli Enterprise Data Warehouse* document. To support an environment with multiple customers or centers, you must update the AMX.Cust\_Lookup and the AMX.Centr\_Lookup tables provided in the Tivoli central data warehouse database by the IBM Tivoli Monitoring, Version 5.1.1, warehouse pack.

### 6.4 Exception tables

This warehouse pack does not place data in exception tables.

### 6.5 Incremental extraction

This warehouse pack uses incremental extraction to extract data from the central data warehouse and store it in the data mart tables. The data in the TWG.Extract\_Control table controls this process.

#### NOTES:

1. The values for MsmTyp\_Nm are stored in the central data warehouse database as a short string, but are displayed in reports as descriptive, translated phrases. In the reports, the Met\_name value does not contain the underscores as defined in the MsmTyp\_Nm value.
2. Do not delete IZY.STAGE\_D\_WAS\_METRIC located in the TWH\_CDW database. This table is created during the installation process and is not recreated by any of the data warehouse processes.

#### **8.4.1.1.4 IZY EJB Performance Health**

This health check report compares the performance (method response time), load (concurrent active), and throughput (total requests), aggregated for the application server.

Time Column: Day  
Start/End time: current date -1 day (can be changed at report run time)  
Time Interval: Hour  
Order By: Group by attribute

**Note:** Due to the fact that the EJB\_request\_rate can be a very large number and the Average\_EJB\_response\_time and Average\_concurrent\_EJB\_requests are small numbers, the IZY EJB Performance Health report does not scale well. This is currently a limitation in the Tivoli Enterprise Data Warehouse Reporting Interface.

**Note:** Due to the fact that the Servlet\_request\_rate can be a very large number and the Average\_servlet\_response\_time and concurrent\_servlet\_requests are small numbers, the IZY Servlet Performance Health report does not scale well. This is currently a limitation in the Tivoli Enterprise Data Warehouse Reporting Interface.
