\* The target rate is the transfer rate given to an Aspera client. fasp attempts to maintain this rate in both fixed and adaptive rate modes and will not exceed this cap. In some tests the target rate was set to less than the actual link capacity.

\*\* FTP measurement not taken or unavailable. FTP throughput estimated using the standard TCP Rate Equation, assuming a typical average round-trip delay and packet loss rate. Actual FTP throughput varies with network load, which increases loss and round-trip time.
