

# Driving Efficiency in Information Storage

Ian Shave

Mid-range disk leader NE IOT

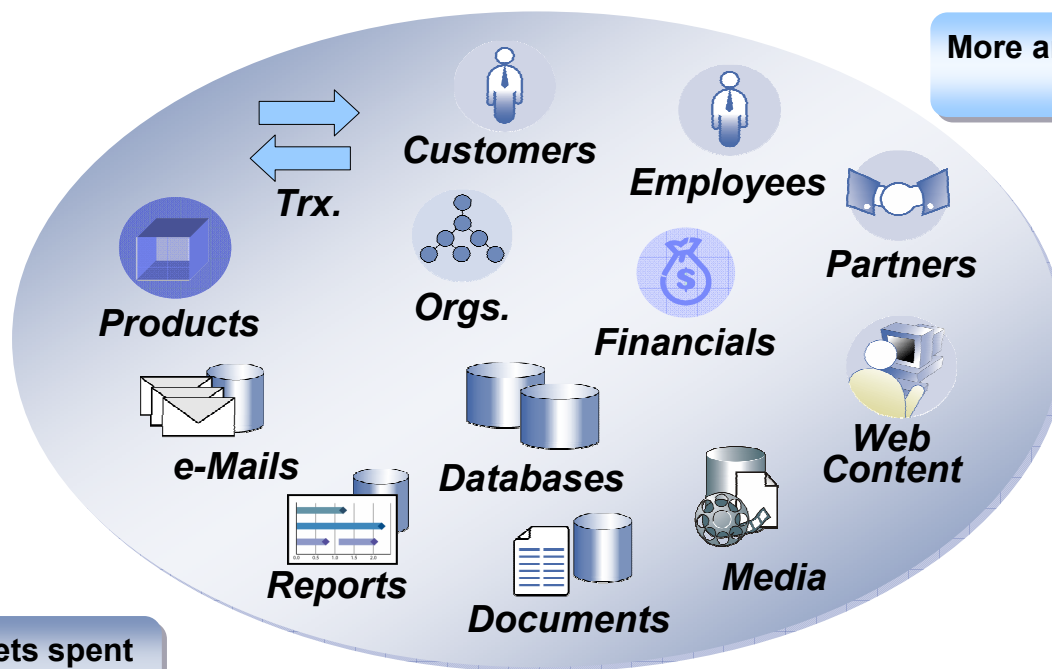

# Is Information restricting rather than driving your Business?

Data storage grows every year & does not look like stopping

Only 1/3rd of CFOs believe that the information is easy to use, tailored, cost effective or integrated.

More and more information is being kept "Just In Case"

85% of information is unstructured.

Regulations and laws dictating information retention

Up to 40% of IT budgets spent on integration

Information needs to be available 24x7

Sources: IBM & Industry Studies, Customer Interviews

## Customer Concerns

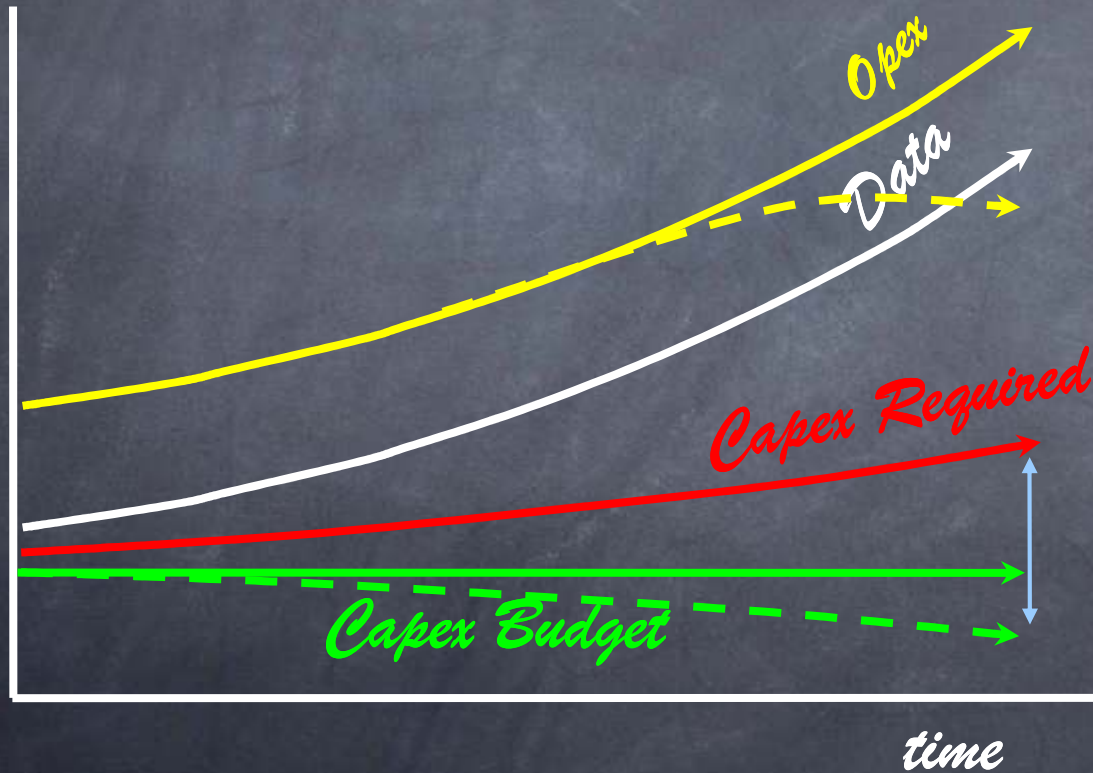

- Information Growth
- Inability of IT organisation to respond quickly enough to business demands
- Poor availability or service levels
- Lack of skilled staff for storage administration functions
- Poor asset utilisation

COST TAKE DOWN

CHALK AND TALK

*Data continues to grow*

*So does Capex required*

*Capex available today...or*

*"Must be reduced by X%"*

*Understanding the business issue*

*Do you buy cheaper storage at the cost of compromised service levels?*

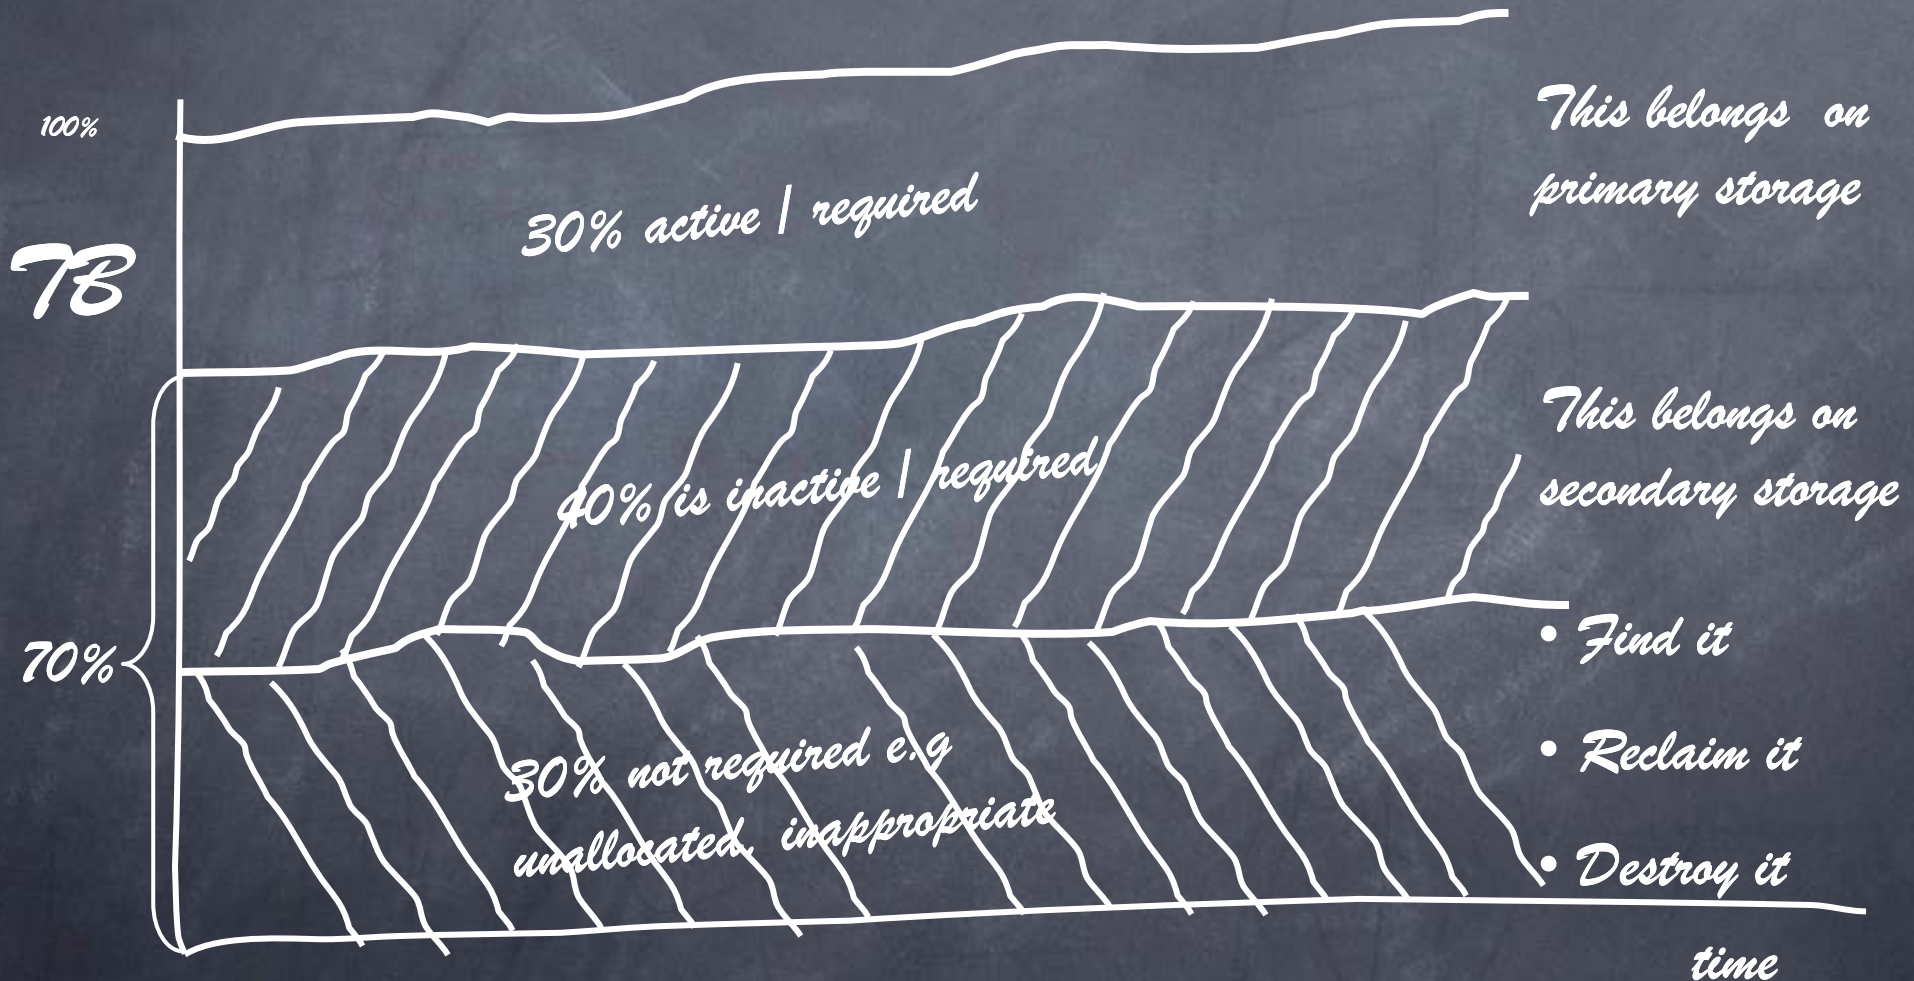

*Operating costs keep rising driven by more data to manage*

*How can we manage this growth and risk with less Capex and Opex available?*

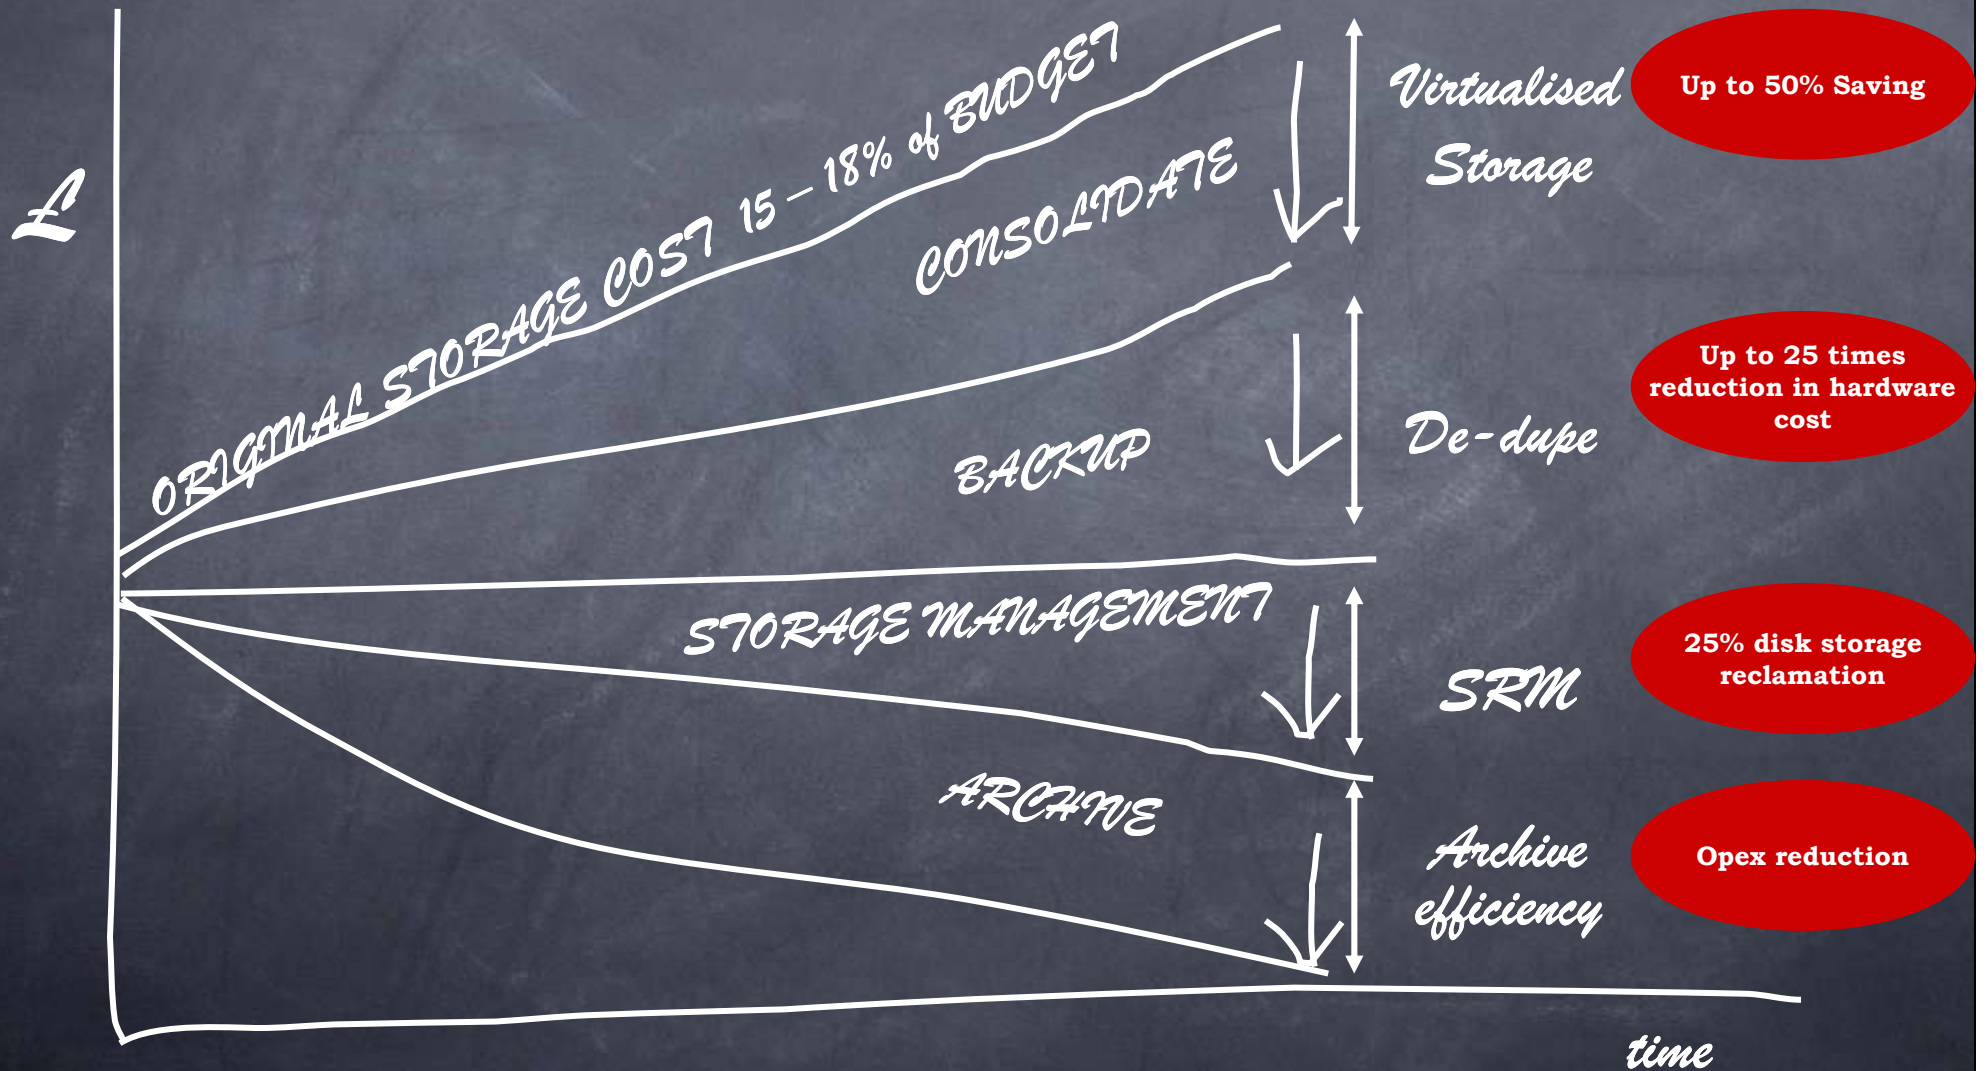

# How is storage being used today?

## Risk Assessment?

# CONTROLLING STORAGE COST

## IBM Information Storage Solutions can help;

- **Drive Efficiency**
  - Manage disk storage more efficiently
- **Control Costs**
  - Increase storage utilisation
- **Improve Flexibility**
  - Enable a tiered storage environment in which the cost of storage can be better matched to the value of data
- **Simplify Management**
  - Automation to improve storage administrator productivity
  - Improve application availability
- **Maximise value**
  - Improved Return on Investment
