Understand your current IT estate and your Total Cost of Ownership - Free Study from IBM

Which IT infrastructure really costs less: a distributed platform, or zEnterprise?

IBM offers, at no charge, a comprehensive IT discovery and Total Cost of Ownership Study to help you examine the cost differences between alternative approaches you might be considering, and to provide recommendations to assist you in making a decision on your strategic IT infrastructure.

IBM provide a unique approach to working with you to analyse your individual situation, with a focus on factors that are the most important to you and your business.
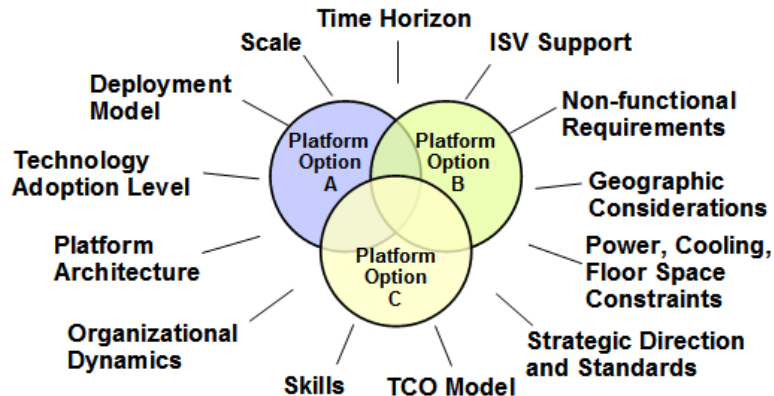

This Study reviews your current IT estate and considers key costs in operating an IT platform over a span of 3-5 years, a one-year study is insufficient to show the benefit of strategic spending over time. The study is tailored to your organisation as results are different for every customer.

What is covered in this Study?

Example scenarios to study:

Consolidation to zLinux
zEnterprise Offload to distributed
New Workload Placement
Platform Comparison
Workload/Application Consolidation
Assist in determine Strategic IT Infrastructure
