

Make smarter use of your time with IMS software

Teleconference – December 17, 2013

Highlights

Topics

- Solution Packs that can recommend reorganizing a specific database
- Initiating a reorganization job stream and tracking it through to completion
- Defining a database group to be reorganized as a single unit
- Reducing the amount of time and manual intervention required to maintain and optimize databases

Speaker

- *Nick Griffin*, Worldwide Sales Advisor, Information Management for System z®, IBM Software Group

Broadcast date: December 17, 2013,
11:00 a.m. EST / 4:00 p.m. GMT / 3:00 p.m. UTC

Developed for: Application programmers and development managers; database administrators and managers; operations managers; system administrators; project managers

Technical level: Intermediate

There's no question that industry-wide, DBA resources are dwindling. That can leave little time and few resources available for developing new applications, pursuing new technologies and working on projects that support business growth. This also increases the burden of system management and maintenance, as well as opening the door to unanticipated problems that may result in downtime and ultimately, loss of revenue.

Teleconference

Join us for this complimentary teleconference as we discuss how IMS™ software is helping IT make smarter choices in the way IMS databases are managed. Because of tight schedules, IT has lost the luxury of constantly monitoring and managing the health of every database. With IMS, you can now focus more time and effort on higher priority items and still feel confident that databases will be available and performing as expected. This technologically advanced software also ensures that reorganizations are done in the most efficient and convenient way possible. IMS software can access system information to anticipate and react to database events automatically, before they become issues. By taking advantage of the expertise and capabilities it can provide, IMS administrators have time to identify new opportunities for making full use of the IMS systems in their enterprises.
