

Saturn Business Systems

Company overview: Saturn Business Systems was established in 1982 by Ana and Alan Krieger. As a minority owned company, Saturn emerged onto the technology arena as a software company and gradually transitioned into a reseller of software and hardware products. Previously focusing on software programming and networking implementation, Saturn has recently directed its efforts to strengthening its IBM relationship along the RS/6000 and open system platforms. Our strategic vision, experienced management team and dedication to customer satisfaction has propelled Saturn's success since its inception and continues to do so in the coming years.
