

# Triade InformationSystems GmbH

**Company overview:**

TRIADE, located in Neuss, Germany, was founded in 1991 as an independent consultant company for document-management and workflow solutions in the banking, finance, government, pharmaceutical, automotive, and trade industries. Since 1996, TRIADE, specialists in Compliance-Storage and Archiving Projects, has planned and delivered complete solutions (hardware, software, and services) based on various, standard, DMS products (e.g., IBM ContentManager or PacSol ImageView), including application-integration for the enterprise (EAI).

**Web site:** [www.triade.de](http://www.triade.de)

**Core competency:** NFS/CIFS/FTP NAS Gateway

**Product name:** TriFSG Gateway for DR550

**Operating environments supported**

AIX®	Linux®	OS/400®	OS/390®	Microsoft® Windows®	Sun® Solaris®	HP-UX®	Novell® Netware®
	x Linux P Linux I			Windows XP, Windows 2000			

**Product description:**

Converts NFS / CIFS / FTP into TSM API calls...TRIADE developed special DMS functions for high-security and high-productive document-capturing (scanning, fax, e-mail, COLD) functions for document processing automation, like document content-read, content-analyse, document-classification, and data/index extraction, as well as priority-controlled document-import into e-archive-systems. Those software components are extensions for existing standard DMS solutions, like IBM ContentManager, PacSol's ImageView (AS/400), and others. Prerequisites: Recommend rack-mountable pSeries Appliance with AIX5.3 or a separate LPAR on the internal pSeries of the DR550.

**Supported geos:** Europe

**Supported region:** Germany

**Headquarters location:** Germany

**Compelling differentiation:** TriFSG allows storage and retrieval of Files in the DR550 through standard network protocols NFS, CIFS and the FileTransferProtocol FTP. There is no TSM-ClientAPI-Programming needed to integrate with the DR550 which behaves like a network WORM Server with additional compliance features. This is managed using standard protocols – no protocol modifications needed as required with other vendors e.g. NetApp. TriFSG offers the outstanding ILM features of DR550 to (nearly) all applications with filesystem-interface by simply mapping the management class properties to standard network-shares.
