	Topic	Goal	Method	Result
GROUP '07	Policy and Power	Understand strategies editors use to control article content.	Qualitative content analysis. Sample discussions, code for "power plays".	Set of frequent power plays with often hilarious examples

Prior consensus

Decision made in the past is presented as absolute and incontrovertible

Article scope

Central and peripheral content strictly defined

Legitimacy of source

A cited source is discredited or bolstered

Power of interpretation

One sub-community commands greater authority than another

Practice on other pages

Content organization on other articles is used to validate or discredit contributions

Legitimacy of contributor

Traits of contributors are used to bolster or undermine a position

Threat of sanction

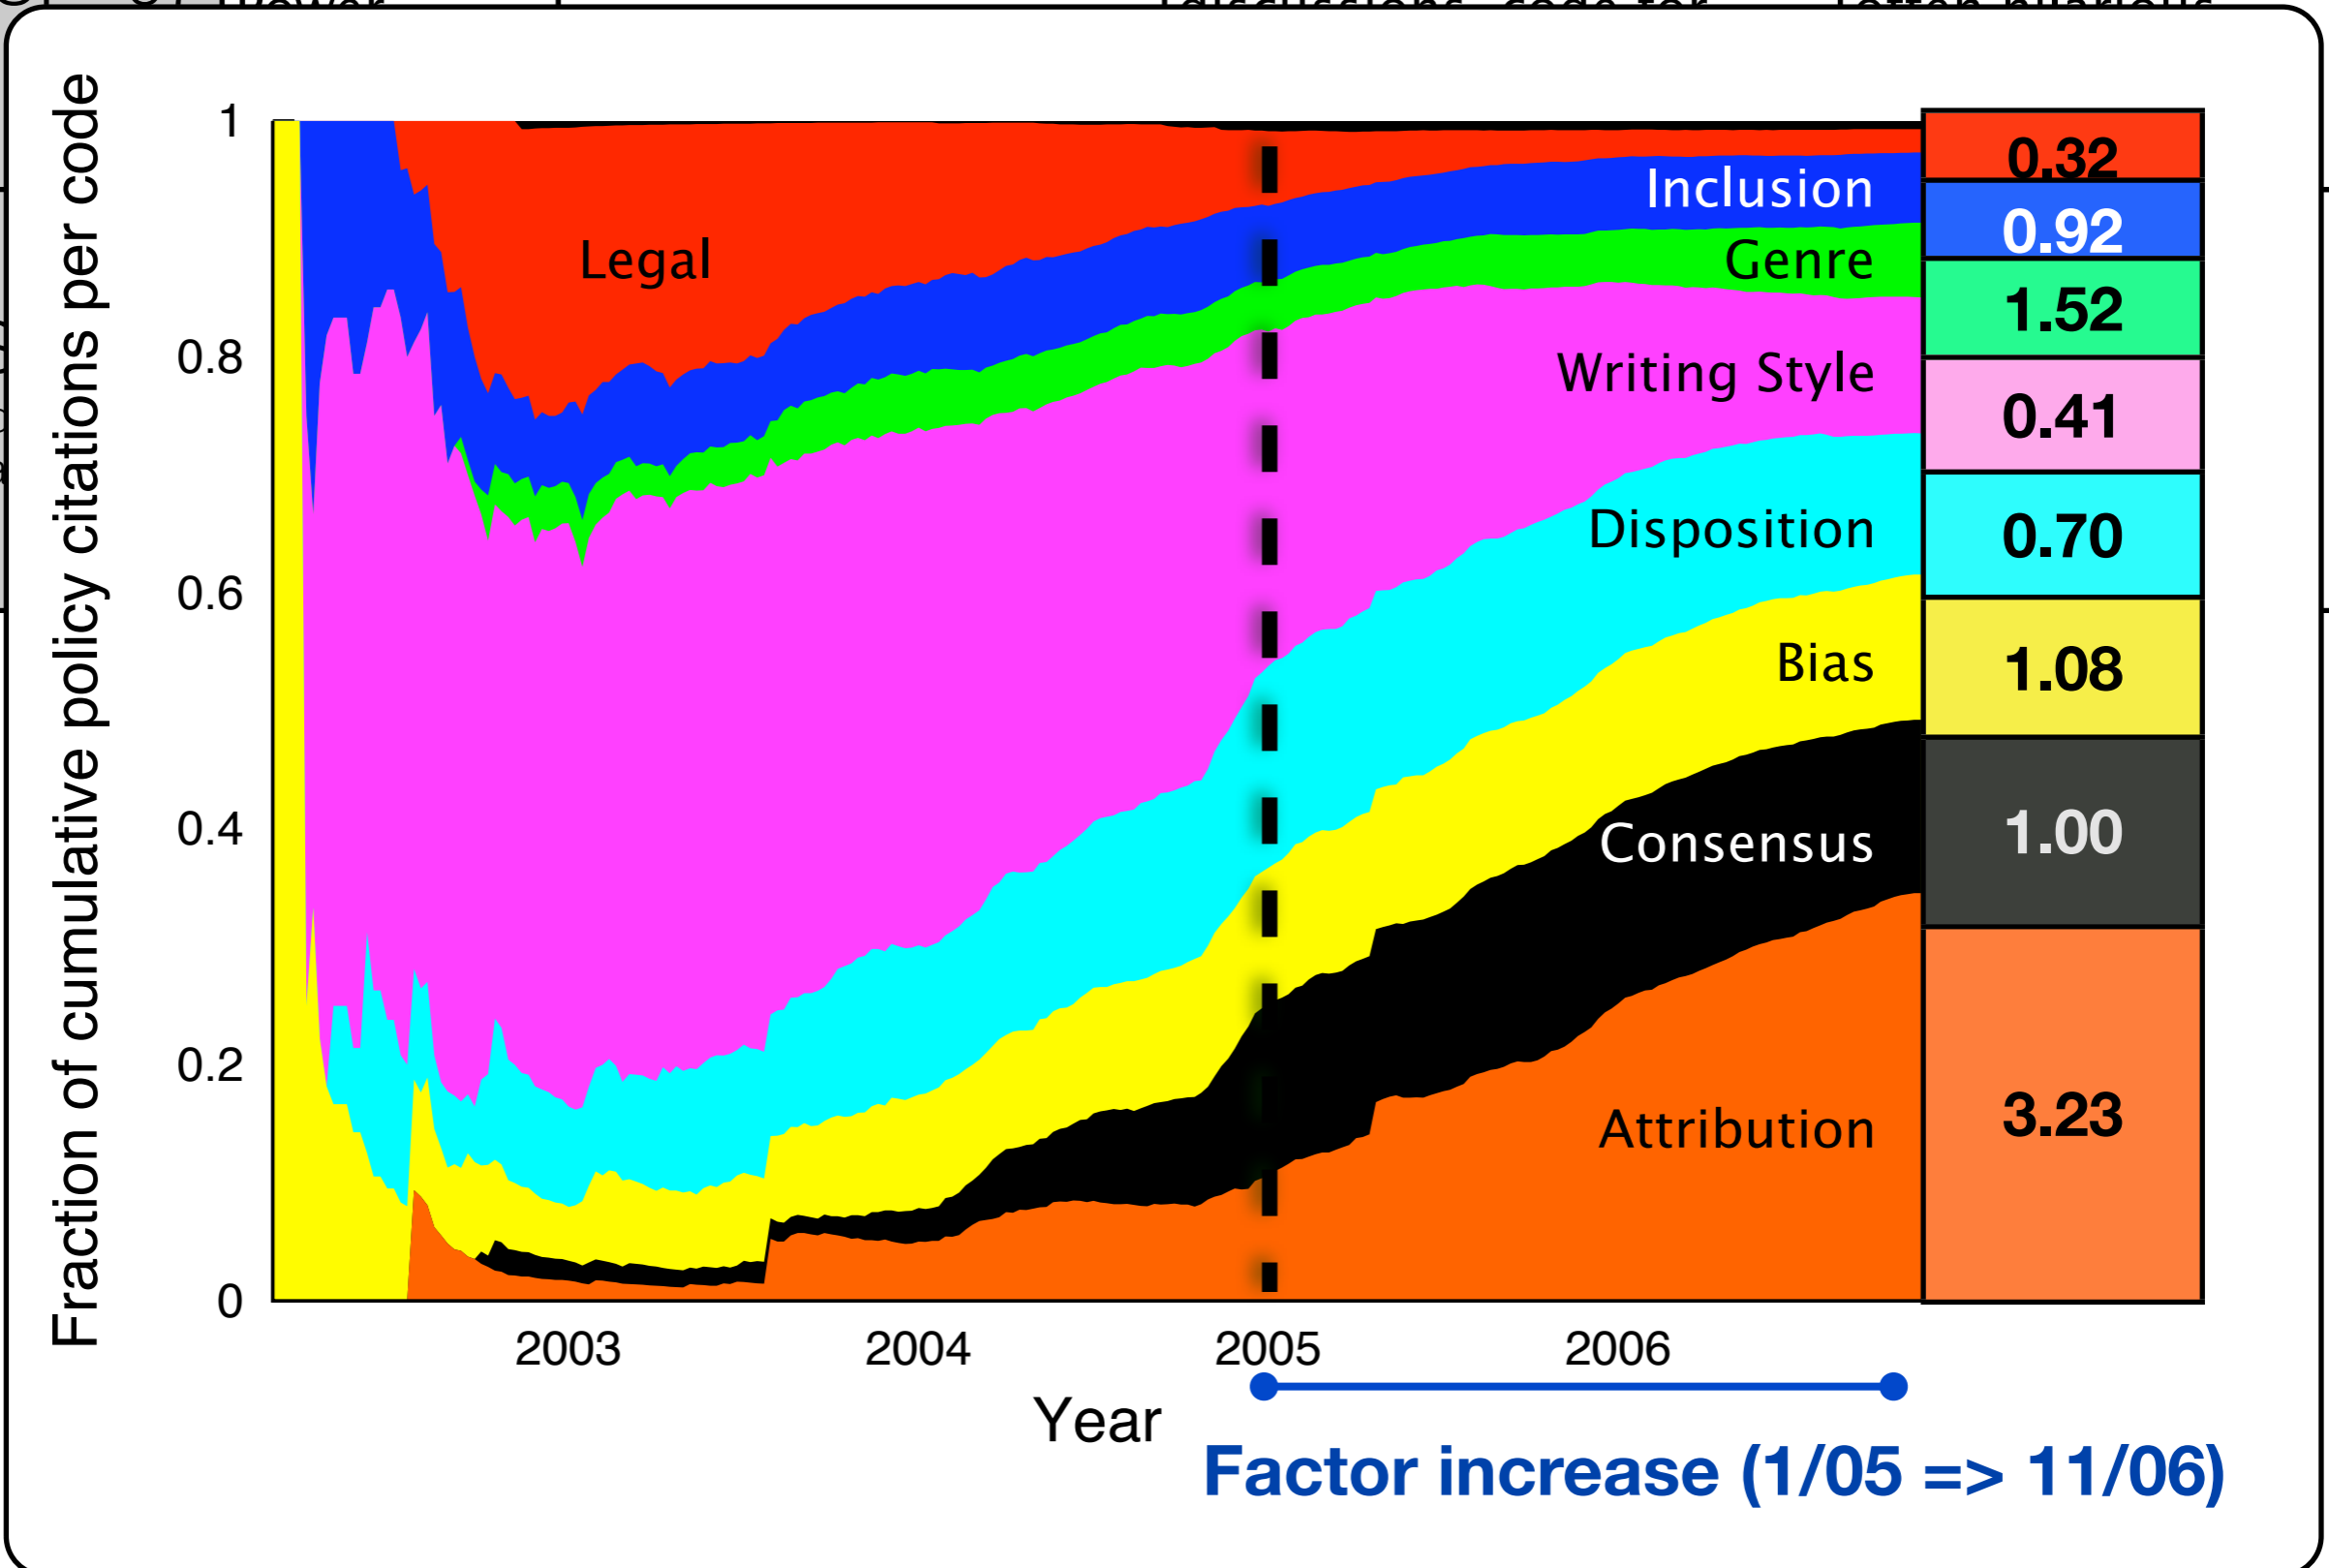

Threatening to use sanctioning mechanisms (e.g. blocking)

	Topic	Goal	Method	Result

Statement of the dispute

[\[edit\]](#)

I'm opening this RfC as an admin who has been lightly involved with some behavioral issues on

The MediaWiki Eco

Consensus-based decision making

MediaWiki features: tools in the toolbox

Social practices: working with tools

Statement by LjL [\[edit\]](#)

Wikipedia is [not censored](#), so relevant images and text should not be removed because some people object to their viewing. [No disclaimers](#) should be used (although the current lead image may be moved to a more appropriate section if a better lead image is found). Even disregarding these guidelines on the grounds that [they should be ignored in this case](#), the claimed harm is 1) not ultimately, definitely provable 2) so indirect that it cannot be taken to require an exception to policy 3) claimed to be potentially generated by such a wide variety of content that virtually all article content on test description and interpretation ought to be removed on its ground (for instance, sources state that test subjects should not receive any hints whatsoever that "color" may be important in their responses, because that will skew results).

A compromise involving removal of some of the 10 images (note, a very limited set of material that cannot grow in number, not really an [image gallery](#) in the "unwanted" sense) is not acceptable, because sizeable parts of the article content specifically discuss the images individually or in groups (for instance by color components).

Where was the notice?

[\[edit\]](#)

I voted against this several months ago and did not see any notice this was being discussed again. Why was this not publicized more effectively? I only found out about it via the Signpost, which was published today. I watch many Flagged revisions-related articles and saw no notice of such a discussion on any of them. Was it so that only those in favor of such a change to Wikipedia would know such a discussion was being proposed? The relatively small number of voters, and the tilt in

Continuous feedback on state of consensus

- How do you tell you have “consensus”?
 - maybe we can detect when endorsements are not changing
- Periodically ask participants to review & revise their position
 - dynamic summaries are easier to shop around
 - more intelligent awareness mechanisms than watchlists
 - ▶ a position you endorsed has been updated
 - ▶ please highlight the most convincing reason
- Maybe consensus can be achieved on intermediate states
 - are all options clearly stated?
 - have all arguments been summarized?
