

INNOVATOR PRO

Same Independent Suspension As You'll Find In A 4-Wheeler

*We're so quiet...
we're making all the noise!*

Limb-BoltSUSPENSION™
Patent pending independent dual limb bolt suspension system - quiet, impact, and vibration FREE.

Andrews Interlocking System (AIS)
Patented AIS system mechanically interlocks an internal mechanism within our proprietary BowDAMP™ Suspension Material. Due to the AIS system, the cam/wheel drive axle, as shown, can be 100% de-coupled (free floating) from the limbs. With the AIS system, it is impossible to have wheel lean or repeatability issues.

PocketSUSPENSION™
Patented independent dual pocket suspension system (AIS Integrated) is quiet, impact, and vibration FREE.

HyperSUSPENSION™ Bow Technology

With complex suspension engineering, numerous of rock-solid patents, and years of research and development, Whisper Creek Archery offers for the first time ever within the archery industry the same suspension drive technology you'll find on a 4-wheeler or SUV. The HyperSUSPENSION™ Technology is truly state-of-the-art cutting edge bow technology which is the only suspension technology that is offered on a bow in the world! This system is so energy efficient that it completely removes nearly 100% of impact or recoil from the system shot after shot; thus, making it an extreme "hyper" Damping Suspension System.

15-30 dBA
(Decibels)
Quieter Than The
Competition!

RollerSUSPENSION™
Patented independent dual suspension roller system (AIS Integrated) - quiet and vibration FREE with integrated double-sealed ball bearings!

In-Line StringSUSPENSION™
Patented independent eccentrics in-line string suspension system (AIS Integrated) - extremely quiet (up to 13dBA-decibels reduction), impact, and vibration FREE with integrated double-sealed ball bearings!

PulleySUSPENSION™
Patented independent dual pulley suspension system (AIS Integrated) - extremely quiet, impact, and vibration FREE with integrated double-sealed ball bearings!

BowDAMP™ Material
The BowDAMP™ material incorporates a proprietary material formulation that is 20 times better than any steel against abrasion and is completely unaffected by weather or temperature.

A 30 LB. BOW IN NOISE LEVELS

70 LB. BOW EQUIVALENT TO

Draw Length	26" - 30"
Draw Weight	40lb - 70lb
Brace Height	Approx. 7"
Axle To Axle	Approx. 31"
Let-Off	65% or 80%
Mass Weight	4.4lbs
IBO Speed	Approx. 310fps
Noise	Approx. 65 dBA (Decibels)
Perimeter Weight Technology
